by the epithet *horribile*, in some cases even produced death, and the nature of the wound caused by it is always specified by words which are descriptive of cutting, such as *caedere, secare, scindere*, etc. The flagrum was frequently knotted with bones or heavy bits of bronze (*ἀστραγαλωτή*), or even furnished with hooks, in which case it was called *scorpio*. A whip with a single lash was known as *scutica*. A scourged slave was styled *flagrio*. During the Saturnalia (q. v.) the scourge

was put away under the seal of the master. See SERVUS.

Flags. See SIGNUM; VEXILLUM.

Flamen (from *flare*, one who blows or kindles the sacrificial fire; or from the root of *flagro*, to burn). The special priest of a special deity among the Romans (Cic. *De Leg.* ii. 8). There were fifteen flamines—three higher ones (*flamines maiores*) of patrician rank: these were the *flamen Dialis* (of Iupiter), *Martialis* (of Mars), and *Quirinalis* (of Quirinus). The remaining twelve were *flamines minores*, plebeians, and attached to less important deities, as Vulcanus, Flora, Pomona, and Carmenta. Their office was for life, and they could be deprived of it only in certain cases. The emblem of their dignity was a white conical hat (*apex*) made out of the hide of a sacrificed animal, and having an olive branch and woollen thread at the top. This the flamines were obliged to wear always out of doors—indeed, the *flamen Dialis* had originally to wear it indoors as well. They were exempted from all the duties of civic life, and excluded at the same time from all participation in politics. In course of time they were allowed to hold urban offices, but even then they were forbidden to go out of Italy.

The flamen Dialis was originally not allowed to spend a night away from home; in later times,

Coin of a Flamen Martialis. (Spanheim.)

under the Empire, the pontifex could allow him to sleep out for two nights in the year. Indeed, the flamen Dialis, whose superior position among the flamens conferred upon him certain privileges, as the *toga praetexta*, the *sella curulis*, a seat in the Senate, and the services of a lictor, was in proportion obliged to submit to more restrictions than the rest. He, his wife, their children, and his house on the Palatine were dedicated to this god. He must be born of a marriage celebrated by *confarreatio*, and live himself in indissoluble marriage. If his wife died, he resigned his office. In the performance of his sacred functions he was assisted by his children as *camilli*. (See CAMILLUS.) Every day was for him a holy day, so that he never appeared without the insignia of his office, the conical hat, the thick woollen *toga praetexta* woven by his wife, the sacrificial knife, and a rod to keep the people away from him. He was preceded by his lictor, and by heralds who called on the people to stop their work, as the flamen was not permitted to look upon any labour. He was not allowed to set eyes on an armed host; to mount, or even to touch, a horse; to touch a corpse, or grave, or a goat, or a dog, or raw meat, or anything unclean. He must not have near him or behold anything in the shape of a chain; consequently there must be no knots, but only clasps, on his raiment; the ring on his finger was broken, and any one who came into his house with chains must instantly be loosened. If he were guilty of any carelessness in the sacrifices, or if his hat fell from his head, he had to resign. His wife, the *flaminica*, was priestess of Iuno. She had, in like manner, to appear always in her insignia of office—a long woollen robe, with her hair woven with a purple fillet (*tutulum*) and arranged in pyramidal form, her head covered with a veil and a kerchief, and carrying a sacrificial knife. On certain days she was forbidden to comb her hair. The chief business of the flamines consisted in daily sacrifices; on certain special occasions they acted with the pontifices and the Vestal Virgins. The three superior flamines offered a sacrifice to Fides Publica at the Capitol on the Kalends of October, driving there in a two-horse chariot. During the imperial period flamines of the deified emperors were added to the others. See the illustration under APEX.

Flaminia Via. See VIAE.

Flaminĭca. See FLAMEN.

Flamininus. (1) TITUS QUINCTIUS. A distinguished Roman general, made consul B.C. 198, before he was thirty years of age, and had the province of Macedonia assigned to him, with the charge of continuing the war against Philip, which had then lasted for two years, without any definite success on the part of the Romans. In his first campaign he drove Philip from the banks of the Aoüs, and, among other important movements, succeeded in detaching the Achaeans from the Macedonian alliance. In the following year Flamininus, being confirmed by the Senate in his command as proconsul, before commencing hostilities afresh, held a conference with Philip on the coast of the Maliac Gulf, and allowed him to send ambassadors to Rome to negotiate a peace. These negotiations, however, proving fruitless, Flamininus marched into Thessaly, where Philip had taken up a position, and totally defeated him in the battle of Cynoscephalae, in a spot broken by small hills, between Pherae and Larissa. The Macedonians lost 8000 killed and 5000 prisoners. After granting peace to the Macedonian monarch on severe and humiliating terms, Flamininus was continued in his command for another year, B.C. 196, to see these conditions executed. In that year, at the meeting of the Isthmian Games, where multitudes had assembled from every part of Greece, Flamininus caused a crier to proclaim, "that the Senate and people of Rome, and their commander Titus Quinctius, having subdued Philip and the Macedonians, now restored the Corinthians, Phocians, Locrians, Euboeans, Thessalians, Achaeans, etc., to their freedom and independence, and to the enjoyment of their own laws." Bursts of applause followed this announcement, and the crowd pressed forward to express their gratitude to Flamininus, whose conduct throughout these memorable transactions was marked by a wisdom, moderation, and liberality seldom found united in a victorious Roman general. He was thus the means of prolonging the independence of the Greek States for half a century more. In the following year, B.C. 195, Flamininus was intrusted with the war against Nabis, tyrant of Lacedaemon, who had treacherously seized upon the city of Argos. The Roman commander marched into Laconia, and laid siege to Sparta, but met with a brave resistance, and at last agreed to grant peace to Nabis on condition that he should give up Argos and all the other

places which he had usurped, and restore their lands to the descendants of the Messenians. His motives for granting peace to Nabis were, he said, partly to prevent the destruction of one of the most illustrious of the Greek cities, and partly the great preparations which Antiochus, king of Syria, was then making on the coast of Asia. Livy suggests, as another probable reason, that Flamininus wished to terminate the war himself, and not to give time to a new consul to supersede him and reap the honours of the victory. The Senate confirmed the peace with Nabis, and in the following year, B.C. 194, Flamininus, having settled the affairs of Greece, prepared to return to Italy. Having repaired to Corinth, where deputations from all the Grecian cities had assembled, he took a friendly leave of them, withdrew his garrisons from all their cities, and left them to the enjoyment of their own freedom. On returning to Italy, both he and his soldiers were received with great demonstrations of joy, and the Senate decreed him a triumph for three days. Before the chariot of Flamininus, in the celebration of this triumph, appeared, among the hostages, Demetrius, son of Philip, and Armenes, son of Nabis; and in the rear followed the Roman prisoners, who had been sold as slaves to the Greeks by Hannibal during the Second Punic War, and whose liberation Flamininus had obtained from the gratitude of the Grecian States. The Achaeans alone are said to have liberated 1200, for whom they paid 100 talents (about $110,000) as compensation-money to their masters. In the year B.C. 183, Flamininus was sent to Prusias, king of Bithynia, upon the ungracious mission of demanding the person of Hannibal, then in his old age, and a refugee at the court of Prusias. The monarch was prevailed upon to violate the claims of hospitality, but the Carthaginian prevented this treachery by destroying himself with poison. In the year B.C. 168, Flamininus was made augur, in the room of C. Claudius deceased (Livy, xlv. 44), after which he is no longer mentioned in history (Plut. *Flamin.*).

(2) LUCIUS, brother of the preceding, commanded the Roman fleet during the first campaign of Quinctius, and scoured the coasts of Euboea, Corinth, and other districts at that time allied or subject to the king of Macedonia. He was afterwards expelled from the Senate by Cato, when censor, for having put to death a Gallic prisoner to gratify a favourite of his (Plut. *Flamin.*).

Flaminius. (1) GAIUS, consul for the first time in B.C. 223, when he gained a victory over the Insubrian Gauls; and censor in 220, when he executed two great works which bore his name—viz., the Circus Flaminius and the Via Flaminia. In his second consulship (217) he was defeated and slain by Hannibal, at the battle of the Lake Trasimenus (Livy, xxi. 57; 63; id. xxii., etc.; Polyb. ii. 32, etc.). (2) GAIUS, a son of the preceding, was curule aedile in B.C. 196, when he distributed great quantities of grain among the people at a nominal price, this grain having been given him by the Sicilians as a memorial of gratitude to his father, who had governed them with much integrity. He was praetor in 193 and consul in 185, when he defeated the Ligurians.

Flammearii. Makers of *flammea*. See FLAMMEUM.

Flammeŏlum. See FLAMMEUM.

Flammeum, dim. **Flammeŏlum.** The marriage veil, worn by a Roman bride on her wedding-day. It was of a brilliant yellow colour (Plin. *H. N.* xxi. 22), like a flame, from which circumstance the name arose; and of large dimensions, sufficient to cover the whole person from head to foot. During the ceremony it was worn over the head, to shield the downcast looks of virgin modesty (Lucan. ii. 361), as exhibited in the annexed figure, from a Roman marble, representing a bride (*nupta*) at her wedding; and was so retained until she arrived at her new home, when she was unveiled by her husband; as is exemplified by the following figure, also from a Roman marble, in which the bride is seen sitting unveiled upon a couch, but with the flammeum still on her shoulders, and exhibiting a very natural gesture of feminine modesty, or regret for the loss of her old friends and companions. See MATRIMONIUM.

Flammeum. (Rich.)

Flammeum. (Rich.)

Flanatĭcus Sinus. A gulf lying between Istria and Liburnia, in the Adriatic. It was also called Polaticus Sinus, from the town of Pola in its vicinity. The name Flanaticus was derived from the adjacent town of Flanona. The modern name is the Gulf of Quarnaro (Plin. *H. N.* iii. 19).

Flavia Domitilla. See DOMITILLA.

Flavia Gens. Celebrated as the house to which the emperor Vespasian belonged. During the later period of the Roman Empire the name Flavius descended from one emperor to another, Constantius, the father of Constantine the Great, being the first in the series.

Flavian Emperors. A name applied specifically to three Roman emperors—Vespasian, Titus, and Domitian—as belonging to the *gens Flavia* (Suet. *Vesp.* 1).

Flavianum Ius. See IURISPRUDENTIA.

Flavius, GNAEUS. The secretary to the censor Appius Claudius Caecus, and memorable for having made public certain technicalities of legal procedure that had previously been known to the patricians alone. These were the *actiones legis*, the rules of the Calendar, the *formulae*, etc. He was made a senator by Claudius, and was curule aedile in B.C. 303, a choice which so disgusted the patricians that the greater part of the nobles laid aside their insignia—the gold rings and *phalerae*. Flavius met their contemptuous treatment with great coolness and hauteur, and a number of anecdotes are preserved of this rivalry. See Pliny, *H. N.* xxxiii. 1; Cic. *Pro Mur.* 11; Livy, ix. 46; Gell. vii. 9.

Flavius. A brother of the German patriot Arminius (q. v.) and a distinguished officer in the Roman army (Tac. *Ann.* ii. 9).

Flavius Fimbria. See FIMBRIA.

Flavius Iosēphus. See IOSEPHUS.

Flavius Vopiscus. See VOPISCUS.

Flavus. (1) L. Caesetius, a tribune of the people, deposed from his office in B.C. 44 by Julius Caesar for having removed the crowns from Caesar's statues and for imprisoning a person who had saluted Caesar by the title of *rex*. At the next election for consul, Flavus received many votes, and for his defiant bearing towards the dictator enjoyed a considerable popularity (Suet. *Caes.* 79, 80; Plut. *Caes.* 61; *Ant.* 12). (2) Subrius, an officer in the Praetorian Guards who took an active part in Piso's conspiracy against Nero in A.D. 66 (Dio Cass. lxii. 24).

Flax. See Linum.

Fleet. See Classis; Navis.

Flesh. See Diaetetica; Victus.

Flevum, Flevo. See Rhenus.

Flora. The goddess of flowers, and a very ancient Italian deity, being one of those said to have been worshipped by Tatius. Her festival was termed Floralia, and was celebrated at the end of April and beginning of May. It greatly degenerated, however, in the course of time, and became so offensive to purity as not to bear the presence of virtuous characters. The story of Cato the Censor in relation to this festival is well known (Val. Max. ii. 10). The Romans, who in general displayed great crudity in the legends which they invented for their deities, said that Flora had been a courtesan, who, having acquired immense wealth at Rome in the early days of the Republic, left it to the Roman people, on condition of their always celebrating her birthday with feasts (Plut. *Quaest. Rom.* 35; Lactant. 1, 24). Flora being an ancient Latin deity, was addressed by the title of *Mater* (Cic. *in Verr.* v. 14; Lucret. v. 738). In later times, Flora was identified with the Greek Chloris. See Horae.

Flora. (From an ancient statue.)

Floralia or Florāles Ludi. A festival which was celebrated at Rome in honour of Flora or Chloris. It was said to have been instituted in B.C. 238, on the occasion of the dedication of a temple to Flora by the aediles L. and M. Publicius in the Circus Maximus (*C. I. L.* i. 392), at the command of an oracle in the Sibylline Books, for the purpose of obtaining from the goddess her protection of the blossoms (Plin. *H. N.* xviii. § 286). In the consulship of L. Postumius Albinus and M. Popilius Laenas (B.C. 173), it was made an annual festival, at the command of the Senate, by the aedile C. Servilius (Mommsen, *Röm. Münzw.* p. 645), as the blossoms in that year had severely suffered from winds, hail, and rain. By degrees it was extended to six days (April 28–May 3).

The celebration was, as usual, conducted by the aediles, and was carried on with excessive merriment, drinking, and lascivious games (Mart. i. 3; Sen. *Epist.* 96). From Valerius Maximus we learn that theatrical and mimic representations formed a principal part of the various amusements, and that it was customary for the assembled people on this occasion to require the actresses to appear naked on the stage, and to amuse the multitude with indecent gestures and dances. The last day was devoted to a beast-hunt in the Circus, but there were no races. Similar festivals, chiefly in spring and autumn, are in Southern countries seasons for rejoicing, and, as it were, called forth by the season of the year itself, without any distinct connection with any particular divinity; they are to this day very popular in Italy, and in ancient times we find them celebrated from the southern to the northern extremity of Italy. (See Anthesphoria, and Justin, xliii. 4.) The Floralia were originally festivals of the country people (Preller, *Röm. Myth.* 379), which were afterwards, in Italy as in Greece, introduced into the towns, where they naturally assumed a more dissolute and licentious character, while the country people continued to celebrate them in their old and merry but innocent manner; and it is highly probable that such festivals did not become connected with the worship of any particular deity until a comparatively late period. This would account for the late introduction of the Floralia at Rome, as well as for the manner in which we find them celebrated there.

Florentia. The modern Firenze, or Florence; a town in Etruria, sprung from the ancient Fiesolé, and subsequently a Roman colony, situated on the Arnus (Arno). The Florentini are mentioned by Tacitus (*Ann.* i. 79) as sending a deputation to Rome in A.D. 16. Its greatness as a city dates from the Middle Ages. See Perrens, *Histoire de Florence* (1877–80); Yriarte, *Florence* (1882).

Flōrus. (1) L. Annaeus (in one MS. called Iulius), a Latin historian, who was born, according to the common opinion, in Spain, but, as others maintain, in Gaul, and who wrote in the reign of Trajan. He was still living in the time of Hadrian, and is perhaps the same individual to whom, according to Spartianus, this emperor addressed some sportive verses. Florus has left an abridgment of Roman History, entitled *Epitome de Gestis Romanorum*, divided into two (in some MSS. four) books. It commences with the origin of Rome, and extends to A.U.C. 725, when Augustus closed the Temple of Ianus, a ceremony which had not taken place for 206 years previous. This work is based not merely upon Livy, but upon many earlier historians, no part of whose works any longer remains. It is less a history than a eulogy of the Roman people, written with elegance, but at the same time, in an oratorical style, and not without affectation. Oftentimes facts are merely hinted at, and events are passed over with a flourish of rhetoric; while the declamatory tone which everywhere prevails, and the concise and sententious phrases in which Florus is fond of indulging, impart an air of formality to his writings, and render them monotonous, and sometimes obscure. Florus likewise commits many errors of a geographical nature, and on many occasions is defective in point of chronology. His text has reached us in a very corrupt state, and abounds with interpolations. The epitome was very popular in the Middle Ages. The best edition of Florus is that of Jahn (1852), revised by Halm (Leipzig, 1854). See Heyn, *De Floro Historico* (Bonn, 1866); Bizos, *Flori Hist.*

etc. *de Vero Nomine, Aetate, Scriptis* (Paris, 1876); and on the style, Egen, *De Floro Hist. Elocutionis Tacit. Imitatore* (Münster, 1882), and Thomé, *De Flori Elocutione* (Frankenstein, 1881). Florus is possibly identical with the author of a school theme on Vergil, of which the introduction has been preserved, and is printed in Halm's edition of the epitome, and with the poet on whom Hadrian cracked the joke preserved by Spartianus (*Hadr.* 16). This Florus, however, is called PUBLIUS in one MS. See E. Müller, *De P. Annio Floro Poeta* (Berlin, 1855), and Eyssenhardt, *Hadrian und Florus* (Berlin, 1882). (2) IULIUS, a poet of the time of Horace (*Epist.* i. 3; ii. 2). (3) GESSIUS or CESTIUS, a procurator of Iudaea, A.D. 64–65, whose oppression was the chief cause of the Jewish revolt in 66 (Tacit. *Hist.* v. 10).

Flowers. See HORTUS.

Flowers, GODDESS OF. See CHLORIS; FLORA.

Flute. See TIBIA.

Focāle. A covering for the throat (*fauces*), sometimes drawn also over the ears (Mart. iv. 41). It was made of wool and worn by infirm and delicate persons. Its use by others was regarded as effeminate (Hor. *Sat.* ii. 3, 255).

Focus, dim. **Focŭlus** (*ἑστία*: *ἐσχάρα, ἐσχάριs,* dim. *ἐσχάριον*). A fireplace; a hearth; a brazier. The fireplace, while serving all the requirements of ordinary life, possessed a sacred character both among the Greeks and Romans. In the primitive Greek house the *ἐσχάρα* stood against, or near, the back wall of the *μέγαρον*, the kitchen and living-room of the family; in the more spacious dwellings of a later age it was transferred, with other objects of domestic worship, to a small private chapel, vaulted so as to resemble the Tholos, the dome-shaped *ἑστία* of the State. The well-known use of the hearth as a sanctuary for suppliants occurs as early as Homer (*Od.* vii. 153–169). See DOMUS.

Among the Romans the fireplace was dedicated to the Lares of each family (Plaut. *Aul.* ii. 8, 16); a consecration which did not interfere with its homely uses. On festivals the housewife decorated the hearth with garlands (Ovid, *Trist.* v. 5, 10); a woollen fillet was sometimes added, nor were animal sacrifices unknown (Propert. v. 6, 1–6). The phrase *pro aris et focis* expressed attachment to all that was most dear and venerable (Cic. *N. D.* iii. 40, § 94). At Rome, too, the progress of wealth and refinement led to the removal of the focus and Penates to an inner apartment (Marquardt, *Privatl.* 234). In the Pompeian houses we see the *atrium*, now become a reception-room, adorned with a fountain and a marble table (*cartibulum*), but no longer with a hearth. See LARARIUM.

The focus was usually a fixture, constructed of stone or brick, and elevated a few inches above the ground. It was also frequently made of bronze, variously ornamented, and could then be carried from room to room.

Focus from Caeré. (British Museum.)

The small portable brazier or chafing-dish, called *foculus* or *ἐσχάριον*, was especially used in sacrifices; and the same name was applied to the hollow or fire-pan at the top of an altar (Livy, ii. 12; Cic. *Pro Domo*, 47, § 123; see ARA). The movable focus or foculus was also employed in the kitchen (Plaut. *Capt.* iv. 2, 68; Juv. iii. 262), and for keeping things hot was brought into the dining-room (Sen. *Ep.* 78, § 23). See CALDARIUM, and the illustration under AUTHEPSA.

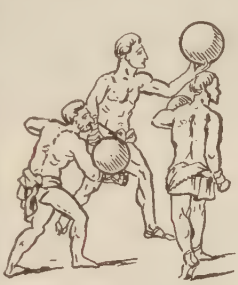
Bronze Foci from Pompeii. (Overbeck.)

Fodīna. See METALLUM.

Foederātae Civitātes, Foederāti, Socii. In extending her influence and dominions beyond the seven hills, Rome followed two alternative courses. One was to conclude a treaty of alliance with a community between which and herself there had previously been no relation; the other was to reduce such community to complete subjection by conquest or enforced surrender (Livy, xxxiv. 17; iv. 30; viii. 2). Where there was a treaty of alliance (*foedus*), the allied community was described by the terms prefixed to this article. At first, of course, such allies were exclusively Italian; in particular the Socii and Latini, who forced on the Social War, B.C. 90, though no town which had obtained the Roman civitas, or which was a Roman or Latin colony (see COLONIA), was said to be foederata. But even long before that war Rome had attached allies to herself by treaty outside Italy, both states governed on the republican principle and foreign princes (e. g. Ptolemaeus Philadelphus, B.C. 273, Dio Cass. 147; and Hiero of Syracuse, a year later, Polyb. i. 16). After the extension of the Roman imperium into the provinces, two kinds of foederati populi or civitates have to be distinguished: those whose territory lay within the bounds of a Roman province, and those which were genuinely foreign. The latter, however, after the subjection of the kings of Macedon and Syria, were constantly becoming mere tribute-payers to Rome (Livy, xlii. 6; xlv. 13, 44), and as a general rule had to be content with concealing their practical vassalage (Sall. *Iug.* 14) under the thin disguise of "friends and allies of the Roman people" (Caes. *B. G.* i. 3, 35, 43; iv. 12; vii. 31; Cic. *Pro Lege Manilia*, 5, 12).

The foedera were of three kinds, stipulating merely for friendship between the contracting parties, or for reciprocal hospitality, or for military subvention. Those of the first kind (Polyb. iii. 22; Livy, xxxviii. 38) provided that the two States should not engage in war with one another without first making every attempt at an amicable settlement (e. g. the treaty with Alba, Dionys. iii. 3), and contained regulations as to the sojourn of the citizens of each on the territory of the other, and the measure of legal protection they should enjoy (e. g. Carthage, Polyb. iii. 22–24). Other terms in

such treaties, especially when concluded after a war, are exemplified by those with Carthage after the Sicilian and Second Punic Wars, with Philip of Macedon, and with Antiochus. Treaties of the second kind, which bargained for greater intimacy between the two States, are exemplified by that with the Aedui (Caes. *B. G.* i. 31). Those providing for military assistance varied with the power and eminence of the allied State; sometimes they placed the parties on an absolute equality (Livy, xxxiv. 57)—e. g. those with Camerinum and Heraclea, with the Aetolians, the Jews (Iosephus, *Ant. Iud.* xii. 10, 6), and Rhodians; in other cases the *socius* was subordinated to Rome, being required to "respect her majesty" (Cic. *Pro Balb.* 16, 35; *Dig.* xlix. 15, 7, 1); it remained free, but practically was at Rome's orders, as a client at those of his patron, though the Romans admitted their obligation to afford full protection (Livy, xxx. 42), and included the *socius* in their own treaties with neighbouring peoples (Polyb. iii. 22 foll., xv. 18; Livy, xxx. 37, xxxviii. 11, 38).



The condition of the socii and foederati was originally one of tolerable independence, subject to the obligation of furnishing a contingent to the Roman army; but it was continuously depressed by the increasing power of Rome, and the resulting discontent culminated in the Social War, at the termination of which the Leges Iulia and Plautia Papiria brought the Roman civitas within the reach of all who were domiciled in Italy (see CIVITAS), from whose territories this class of community now disappeared. Civitates foederatae seem, however, to have acquired the benefits of these statutes only on condition of becoming *fundus* (see below).

There were also foederatae civitates in most of the provinces, their treaty of course being anterior to the formation of the province itself; thus there were three in both Sicily and Baetica, and others in Asia Minor; Athens, Rhodes, and Tyre were also federate towns, and Cicero (*Pro Scauro*, 44) regards it as a dishonour to Sardinia that in all that island there was no town which "was free and united by friendship with the Roman people." These federate towns in the provinces enjoyed certain privileges not shared by the ordinary provincial town. Their citizens were exempted from payment of the land impost (*vectigal*), and perhaps from some of the other ordinary taxes of the State; and they possessed *αὐτονομία*, the independent control of their own affairs, with some measure of legislative and judicial power, excluding the authority of the provincial governor; but this perhaps was more theoretical than practical, especially when a Roman army came their way (Plut. *Pomp.* 10). It is hardly necessary to say that the foederatae civitates were forbidden to embark on any independent foreign policy. They were free to adopt the civil law of Rome in whole or part. Thus even before the Social War it was not unusual for the Socii and Latini to adopt Roman laws into their own system. In such cases the State which adopted a Roman statute was said *in eam legem fundus fieri*; but of course it did not thereby obtain for its citizens any privileges with respect to the Roman State.

Foedus. See FOEDERATAE CIVITATES.

Foenus. See FENUS.

Follis, dim. **Follicŭlus.** (1) An inflated ball of leather, no doubt originally the skin of a quadruped filled with air. The Roman games of ball, of which Marquardt reckons five, are described under PILA. The follis was the largest as well as the lightest and softest ball in use, as the *pila* was the hardest, the *paganica* being intermediate between the two (Mart. xiv. 45; cf. vii. 32). According to Marquardt, the follis might be either filled with air (*κενή*), or lightly stuffed with feathers; but this is perhaps a wrong inference, as the *plumea pondera follis* (Mart. iv. 19) may simply mean "light as a feather"; and it is only the *paganica* and *pila* which are expressly stated to have been so stuffed. It was not the same, however, as the tightly-blown modern football; it was much more like a child's ball, so soft that it could hurt no one, and hence is recommended as a gentle exercise, fit for small boys and old men, but to which *iuvenes* would not condescend (Mart. xiv. 47). The *folliculus* (*τὸ φούλλικλον καλούμενον*) is said to have been invented by one Atticus of Naples, a teacher of gymnastics (*παιδοτρίβης*), for the benefit of Pompeius Magnus (Athen. i. p. 14 foll.). Augustus, who was rather delicate in health, took to it comparatively early in life, soon after the Civil Wars (Suet. *Aug.* 83). For the *follis pugilatorius* of Plautus (*Rud.* iii. 4, 16), see CORYCUS. (Becker-Göll, *Gallus*, iii. 171 foll.).

Folles. (From a Coin of Gordianus III.)

(2) An air-cushion or mattress (Lamprid. *Elagab.* 25).

(3) A pair of bellows (*φῦσα*), consisting of two boards, with an air-valve (*parma*), united by a skin of ox or cow hide, so as to form a machine similar to what we now use, as shown in the annexed figure, from a terra-cotta lamp (Cic. *N. D.* i. 20; Pers. v. 11). Bellows, also made of goat's skin (*folles hircini*), are mentioned by Horace (*Sat.* i. 4, 19).

Folles. (Rich.)

(4) Under the later Empire, follis was the name of a small debased coin. In the absence of a better currency, large sums had to be paid in this coinage, which for the purpose was done up in bags, also called *folles*, analogous to the "purses of piastres" still used in reckoning in the East. The number of coins that went to a bag was probably 500, and its worth $\frac{1}{72}$ of a *solidus*, or about $0.25. From this the follis became, under Constantine and his successors, a "money of account," which was used in reckoning gold and silver as well as copper (Euseb. *H. E.* x. 6, § 1; Cod. Theod. vi. 2, 8).

Fons. (1) A spring. (2) A fountain. Ornamental edifices were erected by both the Greeks and Romans over natural springs, such as the temple of Erechtheus at Athens and of Poseidon at Mantinea (both over salt springs), that of Salmacis at Halicarnassus (Vitruv. ii. 8, § 12), and that of the so-called Grotto of Egeria near Rome. (Cf. Vitruv. viii. 3, § 7; Plin. *H. N.* xxxvi. § 154.)

At Rome, also, a good proportion of the water brought into the city by the aqueducts was devoted to the public fountains. Of these there were

two classes, the *lacus* (ponds or reservoirs) and the *salientes* or *jets d'eau*. Agrippa alone is said to have constructed 700 *lacus* and 500 *salientes*. Fountains

Street Fountain. (Pompeii.)

were also used in the *atria* of houses (see DOMUS), and the basins exhibited a great variety of ornament, sculptural and otherwise. On the Monte Cavallo at Rome is a fountain representing the colossal figure of a river-god, perhaps the Rhine, which pours a stream into a basin of granite

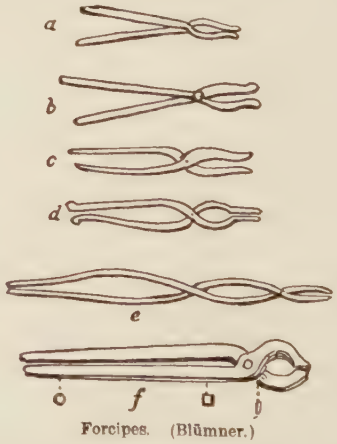
Statues at a Fountain. (Pompeii.)

twenty-seven feet in diameter. There are other excellent examples in the Capitoline Museum, and the celebrated group of the Farnese Bull (q. v.) probably once adorned a fountain. Some of the fountain-statuettes are of the finest artistic workmanship. See Stieglitz, *Archäol. d. Baukunst*, ii. pt. 2, pp. 76, 79; Middleton, *Remains of Ancient Rome*, ii. pp. 329, 349, 350, 351 (London, 1892).

Fontēius, Capĭto. See CAPITO.

Fonteius, Marcus. Propraetor in Narbonese Gaul, between B.C. 76 and 73, accused in 69 of extortion in his province, and defended by Cicero in an oration, part of which is extant.

Fontus. The Roman god of springs, son of Ianus and Iuturna. He had an altar in Rome on the Ianiculum. A special festival, the Fontinalia, was held in his honour on the 13th October, at which garlands were thrown into the springs, and laid round the wells (Varr. *L. L.* vi. 22).



Food and Drink. See CENA; DIAETETICA.

Fools. See MORIO.

Fools, Feast of. See FORNACALIA.

Forcellini, Egidio. A distinguished Italian lexicographer, born near Padua, August 26th, 1688. Being of humble parentage, he had few opportunities for early training, so that he was of mature age when he began a course of advanced study in the philological seminary of Padua under Facciolati (q. v.). His great ability, zeal, and industry, however, soon gave him an honourable rank, so that he was appointed an assistant to his teacher, with whom his name is inseparably associated in their joint work, the great Latin lexicon (*Totius Latinitatis Lexicon*) whose completion was in great part due to the untiring labour of Forcellini. Notebook in hand, he read through not only the entire body of Latin literature, but also the whole collection of inscriptions, including those on coins and medals, and thus compiled the most comprehensive and valuable vocabulary of the language that had ever been made, with both the Greek and the Italian equivalent of every word. The lexicon appeared in 1771 in 4 vols., three years after Forcellini's death, which occurred April 4th, 1768. Besides this *magnum opus*, Forcellini had assisted his master in the preparation of the so-called Calepine Vocabulary, and from 1724 to 1731 was Professor of Rhetoric in the seminary at Ceneda. See LEXICON.

Forceps. Tongs, pincers, nippers, or pliers, used in antiquity for various purposes. (1) A pair of tongs (*πυράγρα, θερμαστρίς*) for taking heated metal out of the fire, or holding it upon the anvil; used by smiths, and therefore attributed to Vulcan and the Cyclopes. (See INCUS.) (2) As a surgical

Forcipes. (Blümner.)

a, *b*, and *e*, from vase-paintings; *c*, from the altar of Vulcan at Veii; *d*, from a bas-relief; *f*, from an original now in the Zürich Museum.

instrument, a forceps (*λαβίς*, Hippocr.). Several specimens found at Pompeii are figured under CHIRURGIA. (3) In military language, a tenaille; in which sense, however, *forfex* is more used (Amm. Marc. xvi. 11, § 3). See FORFEX.

Fordicidia or **Hordicidia**. A festival celebrated in Rome in honour of Tellus, goddess of the earth, on 15th April. See TELLUS.

Forentum or **Ferentum**. A town in Apulia, surrounded by fertile fields and in a low situation, according to Horace (*Carm.* iii. 4, 16).

Fores. See IANUA.

Forfex, dim. **Forficŭla** (ψαλίς, dim. ψαλίδιον). Shears (Serv. *in* Verg. *Aen.* viii. 453), used (1) in shearing sheep, as represented in the annexed illustration, which is taken from a carnelian in the Stosch collection of antique gems at Berlin; (2) in cutting hair (Schol. *in* Eurip. *Orest.* 954); (3) in clipping hedges, myrtles, and other shrubs (ψαλιστοὶ μυρρινῶνες, Hierocles, *ap.* Stob. *Serm.* 65, p. 415).

Forfex, shears. (From a gem.)

In military manœuvres the forfex was a body of troops arranged in the form of a V, so as to receive and overcome the opposite body, called a *cuneus* (Gell. x. 9).

In architecture the term ψαλίς denoted a construction which was probably the origin of the arch, consisting of two stones leaning against each other so as to form an acute angle overhead, as is seen in the ruins of Tiryns. See p. 117.

Fori. Gangways. See CIRCUS; NAVIS.

Forĭca (θάκος), generally in the plural **Forĭcae**. A set of public water-closets, like the *cabinets d'aisance* of French cities, and put at the disposal of the passers-by for a small fee. They were farmed out by contractors, as we learn from Juvenal (iii. 38). See the anecdote in Theophrast. *Char.* 14. The *foricae* are not to be confounded with the public urinals (*dolia*) set at the street corners, and whose contents were sold to the laundries for bleaching clothes. See FULLO.

Fork. See FURCA.

Forma, dim. **Formŭla**, **Formella** (τύπος). A pattern, a mould; any contrivance adapted to convey its own shape to some plastic or flexible material, including moulds for making pottery, pastry, cheese, bricks, and coins. Several moulds for use in cookery are among the kitchen utensils found at Pompeii. The moulds for coins were made of a kind of stone which was indestructible by heat (Pliny, *H. N.* xxxvi. § 168). The mode of pouring into them the molten metal for casting the coins will be best understood from the preceding illustration, which represents one side of a mould, engraved by Seroux d'Agincourt. For the moulds used in casting terra-cottas, see ECTYPUS. The shoemaker's last was also called *forma*, *formula*, and *tentipellium*, and in Greek καλόπους (Plat. *Symp.* 191 A). The spouts and channels of aqueducts were likewise styled *formae*.

Forma, Mould for Coins.

Formello Alphabet. See EPIGRAPHY, p. 607.

Formiae (Mola di Gaëta). A very ancient town in Latium, on the Via Appia, in the innermost corner of the beautiful Sinus Caietanus (Gulf of Gaeta). It was founded by the Pelasgic Tyrrhenians, and was the fabled abode of Lamus and the Laestrygones (Hom. *Od.* x. 81). Near this place were numerous villas of the Roman nobles; of these the best known is the Formianum of Cicero, in the neighbourhood of which he was killed, and whose remains are still visible at the Villa Marsana. The hills of Formiae produced good wine (Hor. *Carm.* i. 20, 11).

Formiānum. A villa of Cicero near Formiae, and in whose vicinity he was murdered by order of Antony.

Formŭla. See ACTIO in the Appendix.

Fornacalia. A Roman festival held in February in honour of Fornax, the goddess of ovens. It was said to have been founded by Numa, and may be described as a thanksgiving for the earliest enjoyment of the newly-gathered corn. It was held in the Forum by the Curiae, or ancient unions of kinsmen, under the superintendence of the Curio Maximus, or president of the masters of the curiae. Corn was baked in ovens in the ancient fashion. All who missed the festival were called fools (*stulti*), as being supposed not to know which was their curia, and had to make an offering at the so-called Feast of Fools (*stultorum feriae*) on the 17th February, the day of the Quirinalia. See Pliny, *H. N.* xviii. 8; Ovid, *Fasti*, ii. 513–532; Varro, *L. L.* vi. 13; Festus, s. v. *Stultorum Feriae*.

Fornax (κάμινος), dim. **Fornacŭla**. (1) An oven or kiln for baking pottery. (See FICTILE.) (2) A smelting-furnace (*fornax aeraria*). (3) A lime-kiln (*fornax calcaria*). (4) The furnace of a bath (*fornax balinei*). See BALNEAE.

Fornax. A Roman goddess, who presided over baking the corn in the oven (*fornax*), and who was worshipped at the festival of the Fornacalia (Ovid, *Fasti*, ii. 525).

Fornix. A vaulted arch or vaulted chamber, such as were common at Rome below the level of the sidewalks, and were so frequently used by prostitutes that the name *fornicaria* = *meretrix* (Tertull. *De Anima*, 35). See MERETRIX.

Forpex. A pair of curling irons; the word is sometimes treated as a mere corruption of *forceps*. But the derivation from *pecto* is obviously appropriate; and it seems to have been an old word (Cat. *R. R.* x. 3) revived, like many others, by late authors (Sidon. Apoll. *Epith.* xv. 184). See CALAMISTRUM.

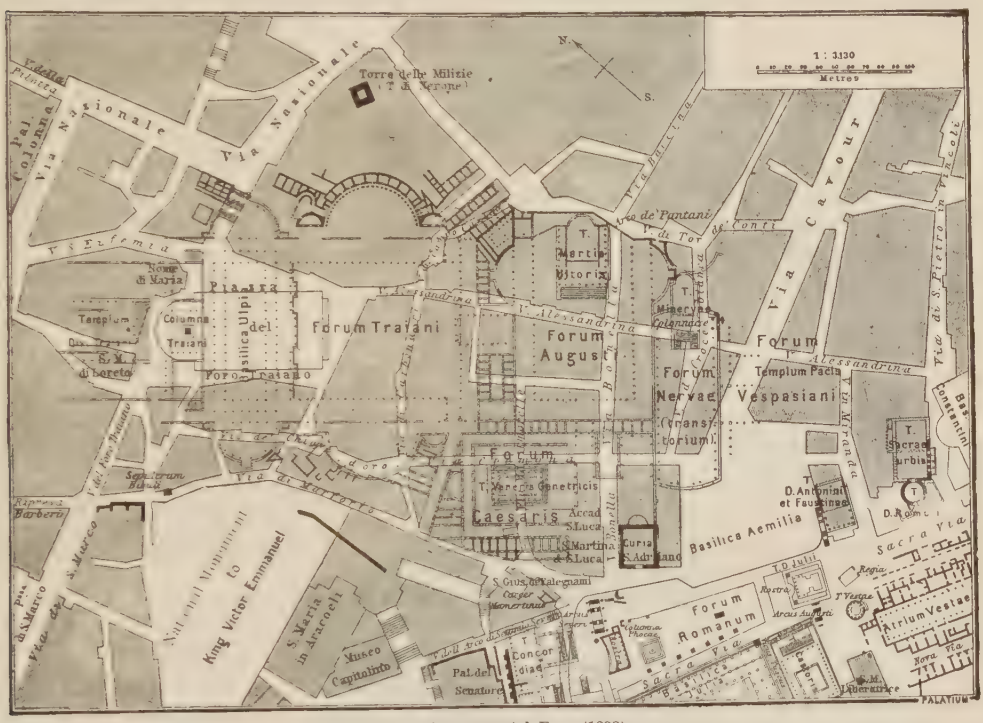
Fortūna (Τύχη). The goddess of good luck, worshipped from remote antiquity in Italy. Her cul-

tus was supposed to have been introduced into Rome by King Servius Tullius, popularly believed to be her favourite and confidant. He was said to have founded her oldest sanctuaries, as, for instance, that of Fors Fortuna, or lucky chance, on the right bank of the Tiber below Rome. To this a pilgrimage was made down the river by land and water on the anniversary of its foundation (June 26). As time went on, the worship of Fortuna became one of the most popular in Italy. She was worshipped at a great number of shrines under various titles given according to the various circumstances of life in which her influence was supposed to have effect. These titles were *Fortuna Primigenia*, who determines the destiny of the child at its birth; *Fortuna Publica* or *Populi Romani*, the tutelary goddess of the State; *Fortuna Caesaris* or *Augusta*, the protectress of the emperor; *Fortuna Privata*, or of family life; *Fortuna Patricia, Plebeia, Equestris*, of the different orders, classes, and families of the population; *Fortuna Liberûm*, of children; *Virginalis*, of maidens; *Muliebris*, of women. *Fortuna Virilis* was the goddess of woman's happiness in married life, of boys and of youths, who dedicated to her the first cuttings of their beards, calling her from this *Fortuna Barbata*. Other epithets of Fortuna were *Victrix*, or giver of victory; *Conservatrix*, or preserver; *Dux* or *Comes*, the leader or attendant; *Redux*, who brings safe home; *Tranquilla*, the giver of prosperous voyages. This Fortuna was worshipped with Portunus in the harbour of Rome. There were also *Fortuna Bona* and *Mala*, good and evil Fortune; *Blanda* or flattering, *Obsequens* or yielding, *Dubia* or doubtful, *Viscata* or enticing, *Brevis* or fickle, and *Manens* or constant. Trajan at last founded a special temple in her honour as the all-pervading power of the world. Here an annual sacrifice was offered to her on New Year's Day. In works of art she was represented with the same attributes as the Greek Τύχη (see TYCHÉ). Fortuna, in her general character as a goddess of Nature and of Fate, had an ancient and celebrated temple, in which oracles were delivered, at Praenesté and Antium. See PRAENESTÉ.

Goddesses of Fortune. (*Fortunae Antiates*, coin of the *gens Rustia*, from Gerhard, *Ant. Bildw.* taf. lv. 3, 4.)

Fortunātae Insŭlae or **Fortunatōrum Insŭlae** (*αἱ τῶν μακάρων νῆσοι*). "The Islands of the Blessed." The early Greeks, as we learn from Homer, placed the Elysian Fields, into which favoured heroes passed without dying, at the extremity of the earth, near the river Oceanus. (See GEOGRAPHIA). In poems later than Homer, an island is spoken of as their abode; and though its position was of course indefinite, the poets, and the geographers who followed them, placed it beyond the pillars of Hercules. Hence, when the Canary and Madeira Islands were discovered in the ocean, off the west coast of Africa, the name of Fortunatae Insulae was applied to them. See ELYSII CAMPI.

Fortunatiānus. (1) ATILIUS, the author of a manual on metres (*Ars Atilii Fortunatiani*) dedicated to a young Roman who had asked for a work on the metres of Horace, which this manual specifically treats near the end. It is drawn from Caesius Bassus, Iuba, and probably from some Greek source. It has been edited by Keil in his *Grammatici Latini*, vi. 278, and separately (Halle, 1885). (2) C. CHIRIUS, author of a text-book on rhetoric in the form of a catechism. The chief sources are Quintilian and Cicero. The text of this work, which is in three books, can be found in Halm's *Rhetorici Latini Minores*, pp. 79 foll.



Forŭli. A small town of the Sabines, near the junction of the Himella with the Tiber.

Forŭlus. A small book-case, differing from the *armarium* (q. v.) in not being stationary, but easily portable (Suet. *Aug.* 31).

Forum. A word which first signified an open space (*area*) before any building, especially before a sepulchre (Fest. s. v.). It is no doubt connected with *foris*, and so means any place "out of doors." The characteristic features of a Roman forum were, that it was a levelled space of ground of an oblong form, and surrounded by buildings, houses, temples, basilicas or porticoes (Vitruv. v. 1, 2). The forum at Pompeii, now completely excavated and showing very handsome architectural surroundings, affords a good general notion of the usual appearance of these places and the way they were laid out. A forum was originally used as a place where justice was administered, and where goods were exhibited for sale (Varro, *L. L.* v. 145). One must accordingly distinguish between two kinds of fora, of which some were real market-places, while others were places of meeting for the popular assembly and for the courts of justice. Mercantile business, however, was not altogether excluded from the latter, and it was especially the bankers and usurers who kept their shops in the buildings and porticoes by which they were surrounded. The latter kinds of fora were sometimes called *fora iudicialia*, to distinguish them from the mere market-places.

Among the *fora iudicialia* the most important was the FORUM ROMĀNUM, which was simply called *Forum*, as long as it was the only one of its kind which existed at Rome. At a late period of the Republic, and during the Empire when other *fora iudicialia* were built, the Forum Romanum was distinguished from them by the epithets *vetus* or *magnum*. It was situated between the Palatine, the Capitoline, and the Quirinal Hills, and its extent was seven *iugera* (Varro, *R. R.* i. 2). It was originally a swamp or marsh, but was said to have been filled up by Romulus and Tatius, and to have been set apart as a place for the administration of justice, for the assemblies of the people, and for other kinds of public business. It was drained by the construction of the Cloaca Maxima in the time of the last kings. (See CLOACA; EMISSARIUM.) In the larger sense, as applied to the whole valley surrounded by the three hills just named, the Forum included the Comitium, or the open place of assembly for the curiae (Varro, *L. L.* v. 155) in the centre of the Forum proper. Ancient rostra were an elevated platform (*suggestum*), from which the orators addressed the people, and which derived their name from the circumstance that, after the subjugation of Latium, the sides of the platform were adorned with the beaks (*rostra*) of the ships of

the Antiates (Livy, viii. 14). In subsequent times, when the curiae had lost their importance, the accurate distinction between Comitium and Forum likewise ceased, and the Comitia Tributa were sometimes held in the Circus Flaminius; but towards the end of the Republic the Forum seems to have been chiefly used for judicial proceedings, and as a sort of Exchange. The orators, when addressing the people from the rostra, and even the tribunes of the people in the early times of the Republic, used to front the Comitium and the Curia; but C. Gracchus, or perhaps C. Licinius, introduced the custom of facing the Forum, thereby acknowledging the sovereignty of the people. In B.C. 308 the Romans adorned the Forum, or rather the bankers' shops (*argentariae*) around, with the gilded shields which they had taken from the Samnites: and this custom of adorning the Forum with these shields and other ornaments was subsequently al-

Septimius Severus (see page 118), in 1813 the Column of Phocas, and in 1816–19 the Capitoline Hill with its temples were disinterred by Carlo Fea. Subsequently to 1835, the Basilica Iulia was in part recovered by Canina, and since 1871, when the Italian government occupied Rome as the capital of Italy, the work of excavation has been pushed with vigour. The Temples of Castor, Caesar, Faustina, Vespasian, etc., the Atrium Vestae, and the rest of the Basilica have been exhumed, besides a good part of the adjacent streets.

In the period between Iulius Caesar and Trajan the five imperial fora were erected.

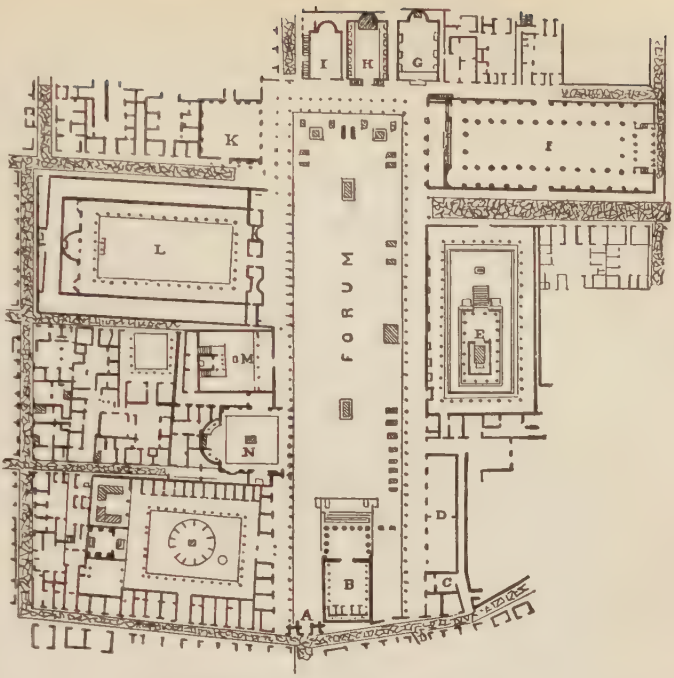
(1) The first of these, and the second *forum iudiciarium*, was built by the dictator Caesar out of the spoils of the Gallic War, and was called FORUM CAESĂRIS or IULII. The site chosen was exceptionally crowded and valuable, immediately to the northeast of the Forum Romanum, and a hundred million sesterces ($4,000,000) were paid for it. The levelling of the ground cost large additional sums; in the centre stood the magnificent temple of Venus Genetrix, the tutelary goddess of Caesar's family, which he had vowed at the battle of Pharsalia (Suet. *Iul.* 26). Nothing now remains of this Forum but five half-buried arches.

(2) The FORUM AUGUSTI, the next in date, stood back from the Forum Iulii in the same direction. The central area was occupied by the temple of Mars Ultor, commemorating the battle of Philippi, though it was not finished until forty years later, and dedicated in B.C. 2 (Vell. Pat. ii. 109, § 2). Augustus further adorned his Forum with statues of the most distinguished men of the Republic, and issued a decree that only the *iudicia publica* and the *sortitiones iudicum* should take place in it (Suet. *Aug.* 29 and 31). After the Forum Augusti had severely suffered by fire, it was restored by Hadrian (Spart. *Hadr.* 19).

(3) The FORUM PACIS was built to enclose the Temple of Peace, dedicated by Vespasian A.D. 75. It commemorated the close of the civil wars which had filled the short reigns of Galba, Otho, and Vitellius, the undisputed authority of the emperor, and the taking of Jerusalem (Suet. *Vesp.* 9; Dio Cass. lxvi. 15). According to Pliny (*H. N.* xxxvi. § 102) the three most magnificent buildings in Rome were the Basilica of Paullus, the Forum of Augustus, and Vespasian's Temple of Peace. The site was to the southeast of the Forum of Augustus, but did not quite join it, a wide street from the Subura to the Forum Romanum being left between. This narrow strip afterwards became the Forum Transitorium of Nerva. There are no remains of the Temple of Peace.

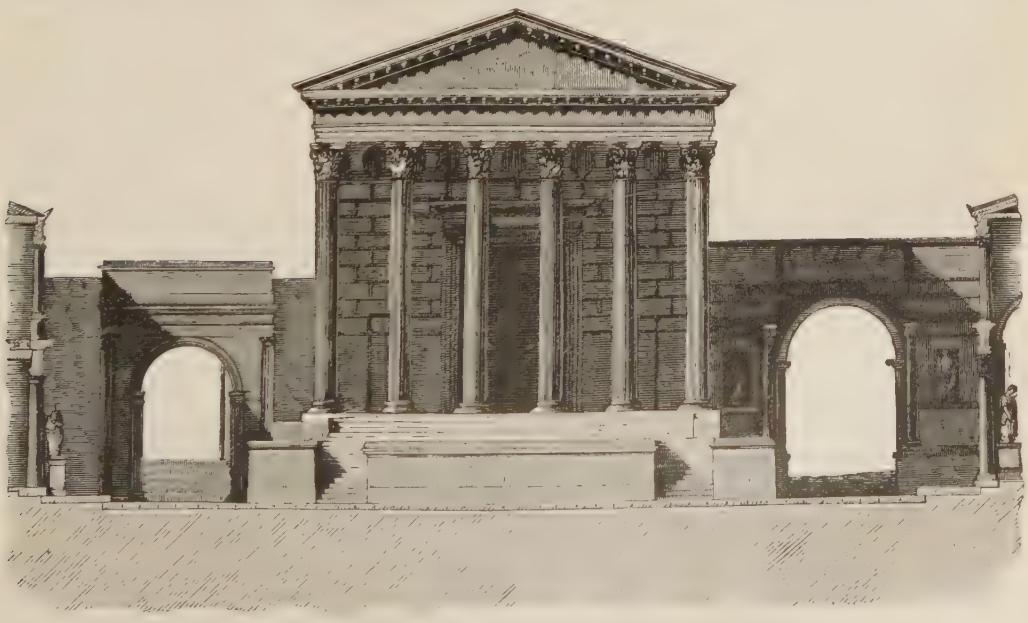
(4) The situation of the FORUM OF NERVA has been already indicated. It was called TRANSITORIUM, on account of the highway which ran through it; or PALLADIUM, from containing a Temple of Minerva. The two Corinthian columns, buried to about half their height, and now called Colonnacce, belonged to this temple; part of the outer wall of the Forum is also extant.

(5) The FORUM TRAIĀNI was probably the most magnificent of all. It occupied a large space between the Capitoline and Quirinal Hills, the latter of which was cut back to a height of 100 Roman feet, as shown by the inscription on the Column of Trajan. The entrance was at the lower or southern end, where a triumphal arch, surmounted by a statue of Trajan in a six-horse chariot, divided it from the Forum of Augustus. The open space was surrounded by a double row of porticos, and enlarged by four enormous apses or semicircular extensions, one of which can still be traced in the slope of the Quirinal. In the centre stood the Basilica Ulpia, which fills the greater part of the modern Foro Traiano; beyond it was a cloistered court (*atrium*) surrounding the celebrated column which bears Trajan's name, and flanked by two libraries—one for Greek, the other for Latin MSS. At the upper end it was closed by the Temple of Trajan, dedicated by his successor. The splendour of the Forum Traiani greatly impressed the later Romans. Ammianus Marcellinus, in an account of a visit made to Rome by the emperor Constantius, describes a guest of that prince, a Persian, as amazed by this great work, "so exquisite," says the historian, "that the gods themselves would find it hard to refuse their admiration" (xvi. 14).



Different from these fora were the numerous markets at Rome, some of them reaching back to a very high antiquity. The most important was the FORUM BOARIUM, or cattle market, occupying a large space between the Velabrum and the Tiber; the notion that it derived its name from the statue of an ox, whencesoever imported (Ovid, *Fast.* vi. 477), can hardly be right, as it was almost certainly so named long before statues were introduced at Rome. Others which took their names from the goods sold in them were the FORUM OLITORIUM and PISCATORIUM, for vegetables and fish, SUARIUM for pigs, CUPEDĬNIS or CUPEDINARIUM for dainties.

Of the Forum Romanum the bearings and dimensions form one of the most disputed points of Roman topography. The excavations at Pompeii, however, have opened the Forum of that city, the remains of which are sufficiently preserved to enable us to trace the ground-plans of the various edifices surrounding it, and to assign some probable use to each of them; and will thus



Roman Forum Restored.

afford a general notion of the usual appearance of these places, and of the manner in which they were laid out. The central area is paved with large square flags, on which the bases for many statues still remain, and surrounded by a Doric colonnade of two stories, backed by a range of spacious and lofty buildings all round. The principal entrance is through an archway (*fornix*) (A), on the lower end of the annexed plan, and by the side of a temple of the Corinthian order (B), supposed to have been dedicated to Iupiter. On the opposite flank of this temple is another entrance into the Forum, and by its side the public prison (*carcer*) (C), in which the bones of two men with fetters on their legs were found. Adjacent to this is a long shallow building (D), with several entrances from the colonnade, surmised by the Italian archaeologists to have been a public granary (*horreum*). The next building is another temple of the Corinthian order (E), dedicated to Apollo, as is learned from an inscription found on the spot. It stands in an area enclosed by a blank wall and peristyle, to which the principal entrance is in a side street, abutting on the Forum, and flanking the basilica (F), beyond which there are three private houses out of the precincts of the Forum. The farther or southern side of the square is occupied by three public edifices (G, H, I), nearly similar to one another in their plans and dimensions. All these were decorated with columns and statues, fragments of which were found upon the floor; but there are no sufficient grounds for deciding the uses for which they were destined. The first is merely conjectured to have been a council chamber (*curia*); the second, the treasury (*aerarium*); and the last, another curia. Beyond these is another street, opening on the Forum; and, turning the angle, are the remains of a square building (K), for which no satisfactory use can be suggested. The space behind is occupied by the sites of three private houses. The next object is a large plot of ground (L), surrounded by a colonnade (*porticus*) and a cloister (*crypta*), and decor-

Plan of the Forum at Pompeii. (Rich.)

Restoration of the North Side of the Forum at Pompeii. (Overbeck.)

ated in front, where it faces the Forum, by a spacious entrance porch or vestibule (*chalcidicum*), all of which were constructed at the expense of a woman named Eumachia. Beyond this is a small temple (M) upon a raised basement, attributed by some to Mercury, by others to Quirinus; and adjoining it, an edifice (N), with a large semicircular tribune or absis at its farther extremity, supposed to have been a meeting-hall for the Augustales, or a town-hall (*senaculum*) for the Pompeian Senate. The rear of both these structures is covered by the premises belonging to a fuller's establishment (*fullonica*). The last structure (O) is a magnificent building, with various appurtenances behind it, commonly called the Pantheon, from twelve pedestals placed in a circle round an altar in their centre, supposed to have supported the statues of the Dii Magni, or twelve principal divinities.

On the whole subject see Marucchi, *Descrizione del Foro Romano* (Rome, 1883); Lanciani, *Ancient Rome in the Light of Recent Discoveries* (Boston, 1888); Nichols, *The Roman Forum* (London, 1877); Jordan, *Capitol, Forum, und Via Sacra* (Rome, 1884); Ziegler, *Das Alte Rom* (Stuttgart, 1882); Middleton, *Ancient Rome in 1885*, chaps. v. vi. viii.; id. *Remains of Ancient Rome*, vol. i. chaps. vi. vii. and vol. ii. chap. i. (London, 1892); and the article ROMA.

Forum. The name of several towns, originally simply markets or places for the administration of justice. (1) APPII, in Latium, on the Appia Via, in the midst of the Pomptine marshes, forty-three miles southeast of Rome, founded by the censor Appius Claudius when he made the Appia Via. Here the Christians from Rome met the apostle Paul. (2) GALLŌRUM, now Castel Franco, between Mutina and Bononia, memorable for the two battles fought there between M. Antonius and the consuls Pansa and Hirtius. (3) IULII or IULIUM (Fréjus), a Roman colony founded by Iulius Caesar, B.C. 44, in Gallia Narbonensis, on the coast; the birthplace of Agricola. (4) IULIUM. (See ILLITURGIS.) (5) POPILII, in Lucania, east of Paestum. (6) SEGUSIANŌRUM, now Feurs, in Gallia Lugdunensis, on the Liger (Loire). (7) VOCONTII, now Vidaubau, east of Canet, in Gallia Narbonensis.

Fosi. A people of Germany, the neighbours and allies of the Cherusci, in whose fate they shared (Tac. *Germ.* 36). See CHERUSCI.

Fossa. See CASTRA.

Fossa or **Fossae.** A canal. (1) CLUILIA or CLUILIAE, a trench about five miles from Rome, said to have been the ditch with which the Alban king Cluilius protected his camp when he marched against Rome in the reign of Tullus Hostilius. (2) CORBULŌNIS, a canal cut in the reign of Claudius, by Corbulo, between the Rhine and the Meuse (Tac. *Ann.* xi. 20). (3) DRUSIĀNAE or DRUSĪNAE, a canal which Drusus caused his soldiers to dig in B.C. 11, uniting the Rhine with the Yssel. (4) MARIĀNA or MARIĀNAE, a canal dug by command of Marius during his war with the Cimbri, in order to connect the Rhone with the Mediterranean. (5) XERXIS. See ATHOS.

Framea. See HASTA.

France. See GALLIA.

Franci. A confederation of Germanic tribes, which first appeared on the stage of history in the last quarter of the second century of our era. It was formed in place of the earlier league of the Cherusci (q. v.), and comprised the Sigambri, the Chamavi, Ampsivarii, Bructeri, Chatti, Salii, etc., along the Middle and Lower Rhine. As the Franks are first mentioned during the reign of Antoninus (A.D. 240), Mannert concludes that their confederation was not the result of aggression from Rome, but of internal wars; and these wars he conceives to have been chiefly of self-defence against the Saxon confederation, which, occupying the north of Germany, sought to extend itself westward to the Rhine. The Germans lying between the Saxons and that river found it necessary to unite in order to resist their northern invaders, and did so successfully under their new name of Franks. Various etymologies have been assigned to this appellation; but it probably comes from the German term *frank*, meaning "free," and indicating a race of freemen; and is the source of the name France, which first came into use in the ninth century A.D. The Franks soon became powerful enough to act on the offensive, and, crossing the Rhine to meet other foes, they spread their devastations from the banks of that river to the foot of the Pyrenees; nor were they stopped by these mountains. Spain, in turn, was overrun; and when the exhausted country no longer supplied a variety of plunder, the Franks seized on some vessels and transported themselves into Mauritania. They were afterwards driven out of Gaul by the Roman arms, and from the reign of Probus (A.D. 277) to that of Honorius seem to have contented themselves with occasional irruptions. They obtained a permanent footing in Gaul during the last years of the reign of Honorius. About the year 496, Clovis, or Chlodowig (his proper Teutonic name), by reducing the several Frankish principalities under his own sceptre and conquering the last remnant of the Western Roman Empire in Gaul, is held to have founded the French monarchy (481–511). His Frankish kingdom was, nevertheless, by no means commensurate with modern France, consisting merely of the northern German provinces on probably both banks of the Rhine, of the present kingdom of the Netherlands, and of so much of France as lies north of the Loire, with the exception of Brittany, where large bodies of Britons, expelled from their insular home by the Saxons, had established themselves and long maintained their independence. Of the southern half of France, the larger part, situated to the west of the Rhone, was included in the Visigothic kingdom of Spain; while the provinces to the east of that river were held, together with Savoy and Switzerland, by the Burgundians. Chlodowig attacked both. Against the Burgundians he effected little or nothing, but he was more successful against their western neighbours. Assisted by the hatred which the Catholic natives entertained towards their Arian master, he, before his death, reduced the Visigothic dominions in Gaul to the single province of Languedoc, incorporating all the rest in his Frankish realm. His sons and grandsons, in time, not only subdued Burgundy, but brought many German nations, as the Thuringians, Allemanni, and Bavarians, into complete feudal subjection. There were two great divisions of the Franks—the Salian Franks and the Ripuarian Franks—with separate laws, afterwards collected into two codes, the Lex Salica and the Lex Ripuariorum. See GALLIA.

Fratres Arvāles. The Arval Brethren; a Ro-

man *collegium* or company of priests, twelve in number, and so called, according to Varro (*L. L.* v. 85), from offering public sacrifices for the fertility of the fields (*arva*). Their extreme antiquity is proved by the legend which refers their institution to Romulus, of whom it is said that when his nurse Acca Larentia lost one of her twelve sons, he allowed himself to be adopted by her in his place, and called himself and the remaining eleven "Fratres Arvales" (Gell. vi. 7).

The office of the Fratres Arvales was for life, and was not taken away even from an exile or captive. They wore, as a badge of office, a chaplet of ears of corn (*spicea corona*) fastened on their heads with a white band (*infula*) (Plin. *H. N.* xviii. § 6). These passages, with a single reference in Minucius Felix (*Oct.* 25), comprise all the extant notices of the Fratres Arvales in the ancient writers. But the discovery of a large number of inscriptions has placed the locality of their sanctuary beyond a doubt, and has thrown a flood of light on their constitution and ceremonial as well as on that of other Roman priesthoods. In the Vigna Ceccarelli, at a place called Affoga l'Asino, on the Via Portuensis, inscriptions upon stone tablets have been found at intervals from 1570 to the present time, which sufficiently identify that spot as the grove of the Dea Dia where the chief festival of the Arvales was held. By the end of the last century, sixty-seven documents had been recovered, and these were published with a valuable commentary by Marini (Rome, 1795). In 1867 more systematic excavations were undertaken with the aid of funds supplied by the King and Queen of Prussia, and the results were given to the world by Henzen in the works mentioned at the end of this article. We have now the *acta* of ninety-six annual meetings of the college, ranging in date from A.D. 14, the last year of Augustus, to 241, in the reign of Gordian; besides a number of fragments found at various times in Rome itself. From these we are able to form a clear idea of the officers of the college, the ceremonies they performed, and the mode of filling up vacancies in their body. Some of these minutes of proceedings, as they may be called, are much fuller than others, the most important being that of 218, the first year of Elagabalus, which includes the celebrated Hymn. The passage in Varro being the only mention of the Arvales that dates from republican times, it is a highly probable conjecture that this may have been one of the obsolete or half-forgotten cults, several of which, we know, were revived by Augustus. The *sacrificium Deae Diae in luco* is named in the law of Constantius and Constans, about 346, which, in the interest of the public amusement, provided for the maintenance of such temples as had games connected with them. In 382, by a decree of Gratian, the disestablishment of all pagan worships was completed, and their remaining endowments confiscated.

The regular number of brethren was twelve; the attendance at the annual meetings, as shown by the inscriptions, varied between three and nine. An exception occurs early in the reign of Nero; in the year 57 twelve Fratres met, exclusive of the emperor, who was also a member according to the invariable practice, and in this instance, it would appear, a supernumerary. From the time of Augustus it had become usual to appoint princes of the imperial family as extra members of the most dignified priestly colleges (Dio Cass. li. 20). Vacancies as they occurred were filled up by co-optation, originally free, but under the empire usually controlled by an imperial rescript indicating the person to be elected, like the *congé d'elire* of modern times. For the purpose of an election the brethren met on the summons of the *magister* in the Regia, the temple of Iupiter Stator, that of Divus Iulius, or latterly in the temple of Concord; and the votes were given in writing (*per tabellas*). The newly elected member was solemnly admitted by the *magister*, for which the phrase used is *ad sacra vocat.*

Like most Roman *collegia*, the Arvales had their presiding officer, called *magister*, elected annually in the grove of the Dea Dia on the second or great day of the May festival, but not coming into office until the 17th of December following: *a Saturnalibus primis ad Saturnalia secunda* is the oft-recurring formula. The *promagister*, who acted in the absence of the *magister*, appears to have been nominated by him for an indefinite period, and was not a regularly elected officer of the college. Next in importance to the *magister* was the *flamen*, elected annually upon the same occasion to assist in the sacrifices; he could also be represented by a *proflamen*, or by a member without that title *qui vice flaminis fungebatur.* Either of these dignities was often conferred by way of compliment on the emperor, who usually discharged its duties by deputy, and either might be re-elected in consecutive years or after an interval. There were, besides, four *pueri ingenui patrimi et matrimi, senatorum filii* (called also *Camilli*), who waited on the brethren during the sacrificial feast, and shared it themselves sitting on *cathedrae*, while their elders reclined. The college had also its staff of servants; some *servi publici*, assigned to its use by the emperor and reckoned as belonging to his *familia*, an *aedituus* in charge of the sacred precinct, and lastly the *calatores.*

The principal duty of the Arvales was to celebrate a three days' festival in honour of the Dea Dia, supposed by Marini to be Ceres, but now identified with Ops. This festival was sometimes held on the XVI., XIV., and XIII., sometimes on the VI., IV., and III. Kal. Iun.—i. e. on the 17th, 19th, and 20th, or the 27th, 29th, and 30th of May; in either instance, it will be seen, with a bye-day between the first and second feast days, while the third immediately followed the second. The precise time was fixed in the January of each year, and solemnly proclaimed by the *magister* or his deputy from the temple of Concord on the Clivus Capitolinus. The festival undoubtedly belonged to the order of *feriae conceptivae*, or those fixed by proclamation. On the first and last of the three days the college met in Rome, usually at the house of the *magister*, but sometimes also *in Palatio in templo Divorum;* offered fruits, incense, and wine at sunrise to the Dea Dia; anointed her statue; bathed, and changed the *praetexta* in which they had sacrificed for a white dinner-dress (*album cenatorium;* cf. SYNTHESIS). Between dinner and dessert (*mensa prima* and *mensa secunda bellariorum*) they rose from table, reclined on more magnificent couches than those of the *triclinium* (*toralibus segmentatis*), repeated the offerings of wine, incense, and first-fruits (*fruges libatae*); then divided the *bellaria*, and received each man a *sportula* or perquisite for attendance. This, in the period from Trajan to

the Antonines amounted to 100 denarii, the boys receiving 25; in the impoverished times of the third century it was reduced to 25 denarii for members of the college.

On the second day of the feast, which was the most important of the three, the Arvales assembled in the grove of Dea Dia already described. The grove included a circus for games and several temples, among which the Caesareum or *aedicula* of deified emperors and the Tetrastylum are mentioned. The sacrifices were begun early in the day by the *magister* or his deputy, acting alone; he first offered two young pigs in order to expiate the unavoidable desecration of the sacred grove by the use of the axe in pruning and felling it, then a white heifer (*vacca honoraria*) as a victim to the Dea Dia herself. In the forenoon he was joined by his colleagues, who breakfasted on the offerings already made, and then proceeded to fresh ceremonies. They sacrificed a fat lamb; made an offering, not further described, with earthenware pots placed on a table; sent out two of their number to collect grains of corn, probably from the crowd collected at the temple doors, passed them on to one another, receiving them in the left hand and giving with the right, and finally handing them to the attendants; placed the *ollae* on the altar, and then threw them away that they might not be used again (this is the probable explanation of the obscure phrase *ollas precati sunt et ostiis apertis per clivum iactaverunt*); and shared *panes laureati*, followed by turnips and another vegetable mysteriously described (*lumemulia cum rapinis*). The images were now anointed (the plural *deas* is used here only, and seems to refer to Acca Larentia and the Dea Dia as separate divinities); the temple was cleared of all but the priests, and the doors shut. Then with their tunics girded up for the dance, taking written copies of the formula from their attendants, and dividing right and left into two bodies, they proceeded to recite the hymn which had made the name of Fratres Arvales so interesting (*ibi sacerdotes clusi succincti, libellis acceptis, carmen descindentes tripodaverunt in verba haec*).

The text here given is that of Mommsen (*Hist.* i. 231, Eng. trans.), with which those of Preller (*Röm. Myth.* p. 428) and Marquardt, after Bücheler (*Index Schol. Bonnens. Aest.* 1876), agree in the main. A rude Saturnian metre is discernible in the hymn:

Enos, Lases, iuvate,
Neve lue rue, Marmar, sins incurrere in pleores.
Satur fu, fere Mars! limen sali! sta! berber!
Semunis alternei advocapit conctos.
Enos Marmar iuvato.
Triumpe.

In Mommsen's rendering:

To the gods—
Nos, Lares, iuvate,
(*Aid us, ye Lares*),
Neve luem ruem (= ruinam) sinas incurrere in plures.
(*Nor suffer pestilence and destruction to come upon the people*).
Satur esto, fere Mars.
(*Be thou satiate, fierce Mars*).

To the individual brethren—
In limen insili! sta! verbera!
(*Leap o'er the threshold! Halt! Beat* [the ground]).

To all the brethren—
Semones alterni advocate cunctos.
(*Call alternately the heroes all*).

To the god—
Nos, Mamers, iuvato!
(*Aid us, Mars*).

To the individual brethren—
Triumpe.
(*Hurrah!*)

Each of the first five lines was repeated thrice, *triumpe* five times in the inscription, but probably six were intended. There are other indications of mistakes on the part of the stonecutter. Comments on the text, etc., will be found in Marini, *Atti e Monumenti dei Fratelli Arvali* (Rome, 1795); Henzen, *Scavi vel Bosco Sacro dei Fratelli Arvali* (Rome, 1868); id. *Acta Fratrum Arvalium* (Berlin, 1874); the *Corp. Inscript. Lat.* vi. 2021–2119; Wordsworth, *Fragments and Specimens of Early Latin* (London, 1874); Mommsen, *Hist. of Rome*, i. pp. 175 foll.; Marquardt, vi. 428–443; Allen, *Remnants of Early Latin* (Boston, 1880).

After the recitation the doors were thrown open and the service-books handed back to the attendants; and the brethren now proceeded to the election of a Magister and a Flamen for the ensuing year, followed by the distribution of the *sportula* and of roses. Next came races in the circus of the grove, in which *bigae*, *quadrigae*, and *desultores* are mentioned: the Magister or his deputy presided at the games, habited in the *ricinium* (see RICINIUM), and gave away the prizes. The brethren then returned to Rome and dined together, usually in the house of the Magister.

Of the other functions of the Fratres Arvales a short account will be sufficient. Whenever iron was brought into the grove, as for cutting the inscriptions for the *acta*, or the lopping and felling of the trees (already mentioned), there were sacrifices *ob ferrum illatum*, and, when the work was done, *ob ferrum elatum*. When the trees fell from decay or, worse still, were struck by lightning, and when replanting was undertaken, still more solemn sacrifices (*suovetaurilia maiora*) were offered on the spot. The Arvales also met for the *nuncupatio* or solemn pronouncing of vows for important events in the imperial family—the birthday, marriage, illness or recovery of the emperor, his setting out for or returning from serious undertakings, the confinement of an empress, etc. The Ambarvalia (q. v.), according to the most probable opinion, were entirely separate from the functions of the Fratres Arvales.

Freedmen. See LIBERTI.

Fregellae. The modern Ceprano; a town of the Volsci on the Liris in Latium, conquered by the Romans, and colonized in B.C. 328.

Fregēnae, sometimes called FREGELLAE. A town of Etruria, on the coast between Alsium and the Tiber, colonized by the Romans, B.C. 245.

Frentāni. A Samnite people dwelling on the coast of the Adriatic, from the river Sagrus on the north (and subsequently almost as far north as from the Aternus) to the river Frento on the south, from which they derived their name. They submitted to the Romans in B.C. 304.

Frento. The modern Fortore; a river in Italy, forming the boundary between the Frentani and Apulia, and falling into the Adriatic Sea.

Frenum (χαλινός). A horse's bridle, comprising, as with us, the bit (στόμιον) and reins as well as the head-stall. Xenophon, in his treatise *De Re Eq.* (vi. § 7), describes the curb-bit as having sharp prickles. See illustration on opposite page.

Frieze. See ZOPHORUS.

Frigidarium. See BALNEAE.

Frisii. A people in Germany inhabiting the

Ancient Bronze Bridle. (British Museum.)

coast from the east mouth of the Rhine to the Amisia (Ems), and coterminous on the south with the Bructeri. They were allies of the Romans before A.D. 28, when the oppression of the governor Olennius led to their revolt, and they were never again subject to Rome (Dio Cass. liv. 32; Tac. *Ann.* xiii. 54). In the fifth century they joined the Saxons and Angli (q. v.) in their invasion of Britain.

Fritillus (*φιμός*). A dice-box. See TESSERA.

Frogs OF ARISTOPHANES. See BATRACHAE in the Appendix.

Frontālé. See AMPYX.

Frontīnus, SEXTUS IULIUS. A Roman writer and soldier, born about A.D. 40, and governor of Britain A.D. 75–78, where he distinguished himself by the conquest of the Silures. He was the author of two treatises that are still extant —one on the art of war and another on the Roman aqueducts. He was nominated Curator Aquarum, or Superintendent of the Aqueducts, in 97, and died in 106. His military treatise is in three books (*Strategematon Libri Tres*), and was published as a supplement to another work now lost, which related to the theory of war. To these three books a fourth book has been added by some unknown writer, on which see the dissertation by Fritze (Halle, 1889). The treatise on aqueducts (*De Aquis Urbis Romae*) is in two books, and contains many valuable historical notices. Fragments of a treatise on gromatics (see GROMATICI) have also descended to us. The first complete edition of Frontinus was that of Keuchen (Amsterdam, 1661). A good text is that of Dederich (Leipzig, 1855). The principal edition of the *Strategemata* (with notes) is still that of Oudendorp (2d ed. Leipzig, 1779), lately re-edited by Gundermann (Leipzig, 1888); of the *De Aquis*, that by Dederich (with notes and a German version). See Lanciani, *Topografia di Roma Antica*, etc. (Rome, 1881).

Fronto, M. CORNELIUS. (1) A Latin writer, born at Cirta, in Africa, of an Italian family, about A.D. 100. After studying in his own country, he came to Rome in the reign of Hadrian, and acquired great reputation as a rhetorician and grammarian. Antoninus Pius appointed him preceptor to his two adopted sons, Marcus Aurelius and Lucius Verus, whose confidence and affection he gained, as is proved by their letters. After being consul (A.D. 143), Fronto was appointed to a government in Asia, which his bad health prevented him from filling. His learning and conversation are mentioned with praise by Aulus Gellius, the historian Appian, and others of his contemporaries. He died in the reign of Marcus Aurelius, at an advanced age. Until this century we had nothing of Fronto's works, except fragments of his treatise *De Differentia Verborum*, being a vocabulary of the so-called synonyms; but in 1815, Angelo Mai, having discovered in the Ambrosian Library at Milan a palimpsest MS., on which had been originally written some letters of Fronto to his two pupils, deciphered the text wherever the writing was not entirely obliterated, and published it with notes. It happened, by singular good fortune, that Mai, being some years after appointed librarian of the Vatican, discovered in another palimpsest volume another part of Fronto's letters, with the answers of Marcus Aurelius and Verus. Both the volumes came originally from the monastery of St. Columbanus, at Bobbio, the monks having written them over with the Acts of the First Council of Chalcedon, and it had happened that one of the volumes was transferred to Milan and the other to Rome. Mai published the whole in a new edition (Rome, 1823 and 1846). The MSS. have been subsequently collated by Du Rieu (revision by Naber, Leipzig, 1867). These letters are very valuable, as throwing additional light on the age of the Antonines, confirming what we know of the excellent character of Marcus Aurelius, and also showing his colleague Verus in a more favourable light than he had been viewed before. Two or three short epistles of Antoninus Pius are also interesting. There are, besides, many letters of Fronto to various friends, some of which are in Greek. Fronto's style is excessively mannered, monotonous, and pedantic; he mixes Latin and Greek in a macaronic fashion; and shows himself to be a conceited prig. He was, however, an admirer of the early Roman literature and a man of upright and independent character. See Droz, *De M. Corn. Frontonis Institutione Oratoria* (Besançon, 1885); and on the diction, the treatise of Priebe (Stettin, 1885). (2) A native of Emesa, a rhetorician, who lived at Rome in the time of Alexander Severus. He taught eloquence also at Athens, and was the rival of the first Philostratus. The critic Longinus was his nephew. He has left two epigrams on points of grammar (Jacobs, *Anth. Graec.* iii. 56; xiii. 398).

Fruit, GODS OF. See HORAE; POMONA; VERTUMNUS.

Frumentariae Leges. From the earliest times the supply of corn at Rome was considered one of the duties of the government. Not only was it expected that the government should take care that the corn-market (*annona*) was properly supplied, but likewise that in all seasons of scarcity it should purchase corn in the surrounding countries and sell it to the people at a moderate price (Livy, ii. 9, 34; iv. 12, 52; x. 11, etc.; xxvi. 40). This price, which is spoken of as *annona vetus*, could not rise much without exciting formidable discontent; and the administration was in all such cases considered to have neglected one

of its most important duties. The superintendence of the corn-market belonged in ordinary times to the aediles; but when great scarcity prevailed, an extraordinary officer was appointed for the purpose, under the title of Praefectus Annonae (Livy, ii. 27, 5; iv. 12, 8).

With the decay of agriculture in Italy, the government had to pay still further attention to the supply of corn for the city. In addition to this, an indigent population gradually increased in Rome, which could not purchase corn even at the moderate price at which it was usually sold, and who demanded to be fed at the expense of the State. Even in early times it had been usual for the State on certain occasions, and for wealthy individuals who wished to obtain popularity and influence, to make occasional donations of corn to the people (Mommsen, *Rom. Hist.* ii. 372). But such donations were only casual; and it was not till the year B.C. 123 that the first legal provision was made for supplying the poor at Rome with corn at a price much below its market value. In that year, C. Sempronius Gracchus brought forward the first *lex frumentaria*, by which each citizen was entitled to receive every month a certain quantity of wheat (*triticum*) at the price of 6⅓ asses (about $0.06) for the modius, which was equal to nearly 1 peck English (cf. Mommsen, *Die römischen Tribus*, p. 179, n. 4, and p. 182, n. 18; Livy, *Epit.* 60; Appian, *B. C.* i. 21)—only a trifle more than half the market price. It must not be supposed that each person was allowed to receive as much as he pleased every month; the quantity must of course have been fixed, and was probably five modii monthly, as in later times. This quantity was given only to fathers of families; but it was not confined to the poor, for every citizen had a right to it, whether he were rich or poor (*viritim*, Cic. *Tusc. Disp.* iii. 20, 48); and even Piso, who had been consul, applied for his share at the distribution (Cic. l. c.). It appears, however, from the anecdote which Cicero relates about Piso, that each citizen had to apply in person, a regulation which would of itself deter most of the rich. The example that had been set by Gracchus was too tempting not to be followed, although it emptied the treasury and at the same time taught the poor to become State-paupers instead of depending upon their own exertions for obtaining a living. It thus crowded the city with an idle population.

The demagogue Apuleius Saturninus went still further. In B.C. 100 he brought forward his Lex Apuleia, by which the State was to sell corn at ⅓ of an *as* for the modius. The city quaestor Q. Caepio pointed out that the treasury could not bear such an expense (cf. Mommsen, *Gesch. d. röm. Münzwesen*, p. 560), and the most violent opposition was offered to the measure. It is doubtful whether it ever passed into a law; and it is at all events certain that it was never carried into execution. The Lex Livia, which was proposed by the tribune M. Livius Drusus in B.C. 91, was likewise never carried into effect, as it was annulled by the Senate, together with all his other laws, as passed in opposition to the auspices. Of the provisions of this Lex Frumentaria we have no account (Livy, *Epit.* lxxi.). About the same time, either shortly before or shortly after the Lex Livia, the tribune M. Octavius, supported by the aristocracy, brought forward the Lex Octavia, which modified the law of Gracchus to some extent, so that the public treasury did not suffer so much. He probably either raised the price of the corn, or diminished the number of modii which each citizen was entitled to receive (Cic. *Brut.* 62, 222). Sulla went still further, and by his Lex Cornelia, B.C. 82, did away altogether with these distributions of corn (Sall. *Hist. Fragm.* i. 45, 11, Kritz). But the Senate soon found it inexpedient to deprive the people of their customary largesses, as the popular party began to increase in power; and it was accordingly at the desire of the Senate that the consuls in B.C. 73 brought forward the Lex Terentia Cassia, which was probably only a renewal of the Lex Sempronia, with one or two additions respecting the manner in which the State was to obtain the corn. The law enacted that each Roman citizen should receive 5 modii a month at the price of 6⅓ asses for each modius. Occasionally extraordinary distributions of corn were made in virtue of decrees of the Senate.

All the *leges frumentariae* that have been hitherto mentioned had sold corn to the people, although at a price much below what the State had paid for it; but as the great party-leaders towards the close of the Republic were ready to purchase the support of the people at any sacrifice to the State, the distribution of corn became at length quite gratuitous. Caesar, in his consulship, B.C. 59, had threatened to make it so (Cic. *Ad Att.* ii. 19); and this threat was carried into execution in the following year, B.C. 58, by the Lex Clodia of the tribune Clodius. The corn was thus in future distributed without any payment; and the abolition of the payment cost the State a fifth part of its revenues (Cic. *Pro Sest.* 25, 55, with Schol. Bob. p. 301, ed. Orelli). In B.C. 57, Pompey received by the Lex Cornelia Caecilia the superintendence of the corn-market (*cura annonae*) for a period of five years; but no alteration was made in the distribution of corn by virtue of this measure. At this time the distribution of corn must have cost the State nearly $3,500,000 a year.

The consequences of such a system did not escape the penetration of Caesar; and accordingly, when master of the Roman world, he resolved to remedy the evils attending it, as far as he was able. He did not venture to abolish altogether these distributions of corn, but he did the next best thing in his power, which was the reduction of the number of recipients. During the Civil Wars numbers of persons who had no claim to the Roman franchise had settled at Rome, in order to obtain a share in the distributions of corn. The first thing, therefore, that Caesar did was to have an accurate list made out of all the corn-receivers, and to exclude from this privilege every person who could not prove that he was a Roman citizen. By this measure the 320,000 persons who had previously received the corn were at once reduced to 150,000. Having thus lessened the number of corn-receivers, he enacted that this number should not be exceeded for the future, and that vacancies which occurred by death should be filled up every year by lot by the praetor urbanus (Suet. *Caes.* 55; Dio Cass. xliii. 21). It is further exceedingly probable that, as a general rule, the corn was not *given* even to these 150,000, but sold at a low price, as had been the case at an earlier period; and that it was only to the utterly destitute that the corn was supplied gratuitously; the lat-

ter class of persons were furnished with tickets, called *tesserae nummariae* or *frumentariae* (Suet. *Octav.* 41).

The useful regulations of Caesar fell into neglect after his death, and the number of corn-receivers was soon increased beyond the limits of 150,000, which had been fixed by the dictator. This we learn from the Monumentum Ancyranum, in which Augustus (§ 15) enumerates the number of persons to whom he had given congiaria at different times; and there can be no doubt that the receivers of the congiaria and of the public corn were the same. Thus, in B.C. 44, and on the three following occasions, he distributed the congiaria to 250,000 persons; and in B.C. 5 the number of recipients had amounted to 320,000. At length, in B.C. 2, Augustus reduced the number of recipients to 200,000, and renewed many of Caesar's regulations (Suet. *Octav.* 40; Dio Cass. lv. 10). The chief regulations of Augustus seem to have been: (1) That every citizen should receive monthly a certain quantity of corn (probably 5 modii) on the payment of a certain small sum. As the number of recipients was fixed by Augustus at 200,000, there were consequently 12,000,000 modii distributed every year. Occasionally, in seasons of scarcity, or in order to confer a particular favour, Augustus made these distributions wholly gratuitous; they then became congiaria. (2) That those who were completely indigent should receive the corn gratuitously, as Iulius Caesar had determined, and should be furnished for the purpose with *tesserae nummariae* or *frumentariae*, which entitled them to the corn without payment (Suet. *Octav.* 41).

The system which had been established by Augustus was followed by his successors; but as it was always one of the first maxims of the State policy of the Roman emperors to prevent any disturbance in the capital, they frequently lowered the price of the public corn, and frequently distributed it gratuitously as a congiarium. Hence the cry of the populace, *panem et circenses*. No emperor ventured to abolish the public distributions of corn; the most that he dared do was to raise the price at which it was sold. When, therefore, we find it stated in Dio Cassius (lxii. 18) that Nero did away with the distributions of corn after the burning of Rome, we cannot understand this literally, but must suppose that he either raised the price of the commodity, or, what is more probable, obliged those poor to pay for it who had previously received it gratuitously. The care which the emperors took to keep Rome well supplied with corn is frequently referred to in their coins by the legends, *Annona*, *Ubertas*, *Abundantia*, *Liberalitas*, etc. We find in a coin of Nerva the legend *plebei urbanae frumento constituto* (Eckhel, vol. vi. p. 406).

In course of time, the sale of the corn by the State seems to have ceased altogether, and the distribution became altogether gratuitous. Every corn-receiver was therefore now provided with a *tessera*, or ticket, and this tessera, when once granted to him, became his property. Hence it came to pass that he was not only allowed to keep the tessera for life, but even to dispose of it by sale, and bequeath it by will (*Dig.* v. 1, 52; xxxix. 1, 49; xxxix. 1, 87). Every citizen living in Rome, even freedmen and criminals (Sen. *De Benef.* iv. 28, 2), was competent to hold a tessera, with the exception of senators.

Another change was also introduced at a later period, which rendered the bounty still more acceptable to the people. Instead of distributing the corn every month, wheaten bread, called *annona civica*, was given to the people. It is uncertain at what time this change was introduced, but it seems to have been the custom before the reign of Aurelian (A.D. 270–275), as it is related of this emperor that on his return from his eastern expedition he distributed among the people a larger quantity of bread, and of a different form from that which had been usually given (Vopisc. *Aurel.* 35; Zosim. i. 61). The bread was baked by the *pistores*, who delivered it to the various depots in the city, from which it was carried away on certain days by the holders of the tesserae (Orelli, *Inscript.* no. 3358). These depots had steps (*gradus*) leading to them, whence the bread was called *panis gradilis;* and there were the strictest regulations that the bread should only be distributed from these steps, and should never be obtained at the baker's (Cod. Theod. xiv. 17, 3, 4). When Constantine transferred the seat of government to Constantinople, the system of gratuitous distribution of bread was also transferred to that city; and in order to encourage the building of houses, all householders were entitled to a share of the imperial bounty (Zosim. iii. 32). The distribution of bread at Rome was, however, still continued.

Tesserae Frumentariae. (Rich.)

Frumentarii, sc. *negotiatores*. Corn-dealers or corn-merchants (Cic. *De Off.* iii. 13, § 57; Livy, iv. 12). The latter passage shows their unpopularity in times of scarcity; they were liable to the same charges of "forestalling and regrating" as the Athenian *σιτοπῶλαι*, and as the corn-dealers of modern times until the present century. On the frumentarii of the legions, see LEGIO.

Frumentatio. See FRUMENTARIAE LEGES.

Frusĭno. Now Frosinone; a town of the Hernici in Latium, and subsequently a Roman colony. It was celebrated for its prodigies and portents.

Fucentis, Fucentia. See ALBA (1).

Fucĭnus Lacus. Now the Lago di Celano or Capistrano. A large lake in the centre of Italy and in the country of the Marsi, about thirty miles in circumference, into which all the mountain streams of the Apennines flow. As the waters of this lake frequently inundated the surrounding country, the emperor Claudius constructed an *emissarium* or artificial channel for carrying off the waters of the lake into the river Liris. This emissarium, which is nearly perfect, is almost three miles in length. See EMISSARIUM.

Fucus (*φῦκος*). A general term to signify the cosmetic which the Greek and Roman ladies employed in painting their cheeks, eyebrows, and other parts of their faces. The practice of painting the face was very general among the Greek ladies, and probably came into fashion in consequence of their sedentary mode of life, which robbed their complexions of their natural freshness, and induced them to have recourse to artificial means for restoring the red and white of nature (Xen. *Oecon.* 10, § 10). The practice was of great antiq-

uity, and was probably first introduced among the Asiatic Ionians from the East, where the custom has prevailed from the earliest times. The resemblance between the Hebrew *pūch*, "paint," and φῦκος, is probably not accidental; the connection is accepted by Muss-Arnolt, the original meaning of both words being sea-weed, from which an alkaline dye was prepared.

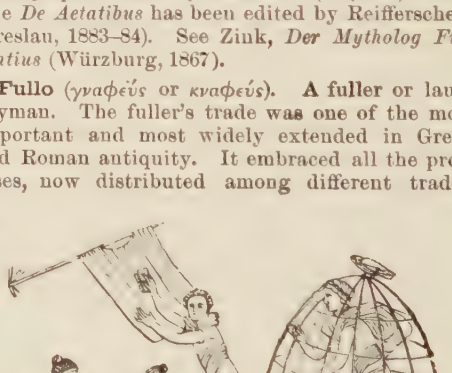
The ladies at Athens did not always paint their faces when at home, but only when they went abroad, or wished to appear beautiful or captivating. Of this we have an example in the speech of Lysias on the murder of Eratosthenes, in which it is related (§ 17) that the wife, on leaving her husband to visit her paramour, painted herself (cf. Aristoph. *Lys.* 149, *Eccl.* 878, *Plut.* 1064; Plut. *Alcib.* 39). In order to produce a fair complexion, white lead (ψιμύθιον, *cerussa*) was employed (Alexis, fr. 96, 17 M). In order to give a blooming tinge to the cheeks, "rouge" was prepared from vegetable reds (Aristoph. *Lys.* 48). Ancient cosmetics were not always free from noxious drugs; and besides ψιμύθιον, already mentioned, red lead (μιλτός, *minium*) and mineral alkali (νίτρον, Att. λίτρον) were employed. The usual word for applying paint is ἐντρίβεσθαι, "to rub in," whence the dyes themselves are called ἐντρίμματα (Plut. *Crass.* 24). The eye-brows and eyelids were stained black with στίμμα or στίμμις, *stibium*, a sulphuret of antimony, which is still employed by the Turkish ladies for the same purpose. The eye-brows were likewise stained with ἄσβολος, a preparation of soot (cf. Juv. ii. 93 foll.). Ladies who used paint were occasionally betrayed by perspiration, tears, etc., of which a humorous picture is given by Xenophon (*Oecon.* 10, § 8; cf. Plaut. *Most.* i. 3, 119).

Woman Painting her Face (Tischbein).

Among the Romans the art of painting the complexion was carried to a still greater extent than among the Greeks; and even Ovid did not disdain to write a poem on the subject (*A .A.* iii. 206), though the genuineness of the fragment of the *Medicamina Faciei*, ascribed to this poet, is doubtful. The Roman ladies even went so far as to paint with blue the veins on the temple, as has been inferred from Propertius (iii. 11, 9, L. Müller). The favourite rouge was from a kind of moss; another was *purpurissum*, a mixed composition (Plaut. *Most.* i. 3, 104). The ridiculous use of patches (*splenia*), which was common among the English ladies in the reign of Queen Anne and the early Georges, was not unknown to the Roman ladies (Mart. ii. 29, 9; viii. 33, 22; x. 22). The more effeminate of the male sex at Rome also employed paint. Cicero speaks (*In Pison.* 11, § 25) of the *cerussatae buccae* of his enemy, the consul Piso.

On a Greek vase (Tischbein, *Engravings*, ii. 58) we see the figure of a woman engaged in putting the paint upon her face with a small brush (cf. Böttiger, *Sabina*, i. 24 foll., 51 foll.; Becker-Göll, *Charikles*, i. 261 foll.; *Gallus*, iii. 164 foll.).

Fufia Caninia Lex. See LEX.



Fugitivarius. See SERVUS.

Fugitīvus. See SERVUS.

Fulcra. The ends of the framework on which the pillows of a couch or the cushions of a chair were placed, resembling the head of a modern sofa. They are invariably ornamented with inlaid bronze, sometimes of the richest kind, and are surmounted by bronze ornaments often representing the head and shoulders of a mule or ass, turning sideways and backwards, with ears put down and a vicious expression. For the head of the ass is sometimes substituted that of a boy, or the head and neck of a goose. The lower part is decorated with a round boss from which springs a bust of a *genius* in full relief, or of some youthful divinity, such as Bacchus or Hercules. The framework to which these ornaments are attached is described in Juvenal (xi. 93–98). The *genius fulcri* is mentioned ib. vi. 22 and elsewhere. See W. C. F. Anderson in the *Classical Review* for 1889, p. 322; and the article LECTUS.

Fulgentius, FABIUS PLANCIĂDES. A Latin grammarian, a native of Carthage, who wrote towards the end of the fifth century A.D. His works include, among other things, an allegorical interpretation of the ancient mythology in three books (*Mythologiae*), the form of which reminds one of Martianus Capella (q.v.); an allegorical exposition of the *Aeneid* (*Vergiliana Continentia*); an explanation of strange and antiquated words illustrated by forged citations (*Expositio Sermonis Antiqui*); and a sort of universal history (*De Aetatibus Mundi*), of which fourteen books are extant. The plan of this last work is the absurd one called λειπογράμματος — that is, in the respective books, one letter of the alphabet in succession remains unemployed, a fact which is duly announced at the beginning and close of each book. Of the first three works, the text is printed in the edition of the *Mythographi Latini* by Staveren (Leyden, 1742). The *De Aetatibus* has been edited by Reifferscheid (Breslau, 1883–84). See Zink, *Der Mytholog Fulgentius* (Würzburg, 1867).

Fullo (γναφεύς or κναφεύς). **A fuller** or laundryman. The fuller's trade was one of the most important and most widely extended in Greek and Roman antiquity. It embraced all the processes, now distributed among different trades,

Mural Painting from the Fullonica, Pompeii. (Overbeck.)

necessary for converting the rough web into smooth cloth, the chief material used by the ancients for clothing. It was also usual to send clothes to the fuller for cleaning and working up. Clothes when sent to be cleaned were stamped with the feet

in pits or troughs filled with warm water and substances which separated the fat from them, as urine, nitre, and fuller's earth. Soap was not known before the time of Pliny, who speaks of *sapo* (q. v.) as a Gallic invention (*H. N.* xxviii. § 191). If the object was to felt the web and make it thicker and stronger, the same process was gone through, and the cloth was then beaten with rods, washed out in clean water, dried, carded with a kind of thistle or with the skin of a hedgehog, fumigated with sulphur, rubbed in with fuller's earth to make it whiter and stronger, and finally dressed by brushing, shearing, and pressing. The fuller's earth, when well rubbed in, prevented the clothes from becoming soiled too soon, and freshened up the colours which the sulphur had destroyed. Some frescoes preserved on the walls of an ancient fuller's shop at Pompeii give a clear notion of the different processes. The *fullones* at Rome formed one of the oldest guilds. Like all mechanics, they worshipped Minerva as their tutelary goddess, and took a prominent part in her chief festival, the Quinquatrus. See Schöttgen, *Antiquitates Tituraе et Fulloniae;* Beckmann, *Hist. of Inventions*, vol. ii. pp. 92 foll. (ed. Bohn); Blümner, *Technol. und Terminol.* i. pp. 157 foll.

Fullo. (From a Pompeian Painting.)

Fullonĭca. A fuller's shop. See FULLO.

Fulmenta (*κάσσυμα*). An extra thick sole for the shoe or sandal frequently used to increase the height of the wearer. They were made of cork (Pliny, *H. N.* xvi. 13).

Fulvia Gens. An illustrious family at Rome, the branches of which were those of Curvus, Nobilior, Flaccus, Paetinus, Maximus, Centumalus, etc.

Fulvia. (1) A woman of good family, but loose character. She disclosed to Cicero the details of the conspiracy of Catiline, which she had learned from Quintus Curius, whose mistress she was (Sall. *Cat.* 23). (2) A bold, ambitious woman, at first the wife of Clodius Pulcher (q. v.), the demagogue, and, after his death, of Marcus Antonius the triumvir. She first came into notice on the assassination of Clodius, when, having caused the corpse to be brought into the vestibule of her dwelling and having assembled the populace, she caused, by her tears and language, a violent outbreak. Some years after this, on having become the wife of Antony, she took an active part in the proscriptions of her husband, and is said to have even sacrificed to her own vengeance several individuals who had given her offence. After the head of Cicero was brought to Antony, she took it on her knees, broke forth into insults to the character of the dead orator, and then, with fiendish malice, pierced the tongue with a golden needle. Having been left at Rome by Antony during the war against Brutus and Cassius, she became all-powerful in that city, named the praetors at her own pleasure, sold the government of the provinces, and even decreed a triumph to Lucius, the brother of Antony, who had no claim whatever to one. When, after the battle of Philippi, Antony visited the East to regulate affairs in that quarter, Fulvia, irritated by his intercourse with Cleopatra, tried to induce Octavianus to take up arms against him. Not succeeding in this, she took them up against Octavianus himself, in conjunction with her brother-in-law Lucius, who now professed open opposition to the illegal power of the Triumvirate. After very bold and spirited efforts, however, on her part, she was besieged with her brother-in-law at Perusia and compelled to surrender to the power of Octavianus. Fulvia, after this, retired to Greece, and rejoined her husband, but was coldly received by him. She died at Sicyon, in B.C. 40, through chagrin and wounded pride, as was believed, at her husband's attachment to Cleopatra (Vell. Paterc. ii. 74; Plut. *Ant.;* id. *Cic.*).

Fulvius. (1) L. CURVUS. Consul in the year B.C. 322, and, six years after, master of the horse to the dictator L. Aemilius (Livy, viii. 38; ix. 21). (2) M. CURVUS PAETĪNUS. Consul in place of T. Minucius, B.C. 305. He took the city of Bovianum, in the country of the Samnites (Livy, ix. 44). (3) CN. PAETĪNUS. Consul B.C. 300. He gained a memorable victory over the Samnites near Bovianum, and enjoyed a triumph. Three years after he carried on successful operations in Etruria as propraetor (Livy, ix. 44; xv. 91). (4) SER. PAETĪNUS NOBILIOR. Consul in B.C. 255, along with Aemilius Paulus Lepidus. These two commanders sailed for Africa after the overthrow of Regulus by the Carthaginians, gained a naval victory, compelled the foe to raise the siege of Clypea, and carried off an immense booty from the Carthaginian territories. They were shipwrecked, however, on their return to Italy, and of 200 vessels only eighty were saved. (5) Q. FLACCUS. Consul in B.C. 237, 224, 212, and 209. He defeated Hanno near Bovianum, and laid siege to Capua, which surrendered to him after the lapse of a year. The conquered were treated with great cruelty. (See CAPUA.) Some time subsequent to this, he marched against the Hirpini, Lucanians, and other nations of Italy, who, alarmed at the severities inflicted on Capua, surrendered to him the garrisons which had been placed in their cities by Hannibal (Livy, xxiii. 21; xxiv. 29; xxv. 2). (6) M. NOBILIOR. Praetor in Spain B.C. 193. He carried the Roman arms to the Tagus, making himself master also of Toletum (Toledo), up to that period deemed impregnable. Having obtained the consulship, in B.C. 189, he was intrusted with the war in Greece, during which he took Ambracia, traversed Epirus as conqueror, and reduced to submission the island of Cephallenia. Two years after this he was accused before the Senate of having maltreated the allies of the Roman people, but was acquitted of the charge, and received the honour of a triumph. In the year 179 he was elected censor along with Aemilius Lepidus, his bitter foe. Apprehending injury to the State from their known enmity, the leaders of the Senate adjured both individuals to lay aside their differences for the good of their country. A reconciliation accordingly took place, and nothing occurred to disturb these friendly feelings during the rest of their joint magistracy. Fulvius raised many public structures, a basilica, a forum, etc. He also constructed a port at the mouth of the Tiber (Livy, xxxiii. 42; xxxv. 7; xx. 22, etc.). His friendship with the poet Ennius and other literary men is well known, and caused Cato the Censor to criticise him severely. (7) Q. FLACCUS. Praetor B.C. 182. He took, in this capacity, the city of Urbicua in farther Spain, and defeated the

Celtiberi in the battle of Ebura, killing in this and in another encounter 35,000 men. On his return to Rome he received a triumph, and in the same year (179) the consulship. In B.C. 174 he was elected censor along with Posthumius Albinus. These two censors were the first that paved the streets of Rome, B.C. 174. The next year he built a temple to Fortune, and, to adorn it, carried off a large portion of the marble tiles from the Temple of the Lacinian Juno in Lower Italy. The Senate compelled him to restore these. The popular account made him to have been deprived of reason for this act of sacrilege, as he committed suicide soon after (Livy, xxxix. 56, 40; xl. 16; Vell. Paterc. i. 10). (8) M. FLACCUS. Consul B.C. 125. He seconded the projects of Tiberius Gracchus to obtain for the States of Italy the rights of citizenship. Being afterwards sent against the Gauls, he defeated them, and obtained a triumph. Four years subsequently he became involved in the extreme measures of the Gracchi relative to the agrarian law, and perished in an affray which arose. See GRACCHUS.

Fumarium. See VINUM.

Funālis. A taper, used in the same manner as a torch (see FAX), but made of papyrus and other fibrous plants, twisted like a rope and smeared with pitch and wax. It was, indeed, as Antipater describes it, "a light coated with wax" (*Anth. Pal.* vi. 249). At the Saturnalia, funales were presented by clients to their patrons, and were lighted in honour of Saturn, sometimes on other occasions (Cic. *De Off.* iii. 20). The neuter, *funale*, denotes a sort of chandelier for holding torches (Ovid, *Met.* xii. 247).

Funālis Equus (*παράσειρος, σειράφορος*). An outrigger to a chariot drawn by horses abreast of each other (Stat. *Theb.* vi. 462). When the chariot

Funalis Equus. (Ginzrot.)

had four horses attached, two outriggers were added, one on each side of the yoke-horses (*iugales*), and called respectively *dexter* and *sinister* (Suet. *Tib.* 6). The name *funarius* is also used. See Isidor. *Orig.* xviii. 35.

Funambŭlus (*σχοινοβάτης*). A rope-dancer. The art of dancing on the tight rope was carried to as great perfection among the Romans as it is with us (Terence, *Heeyr. prol.* 4; Hor. *Epist.* ii. 1, 210; Juv. iii. 77; xiv. 265, 272, with Mayor's note). If we may judge from a series of paintings discovered in the excavations at Herculaneum the performers placed themselves in an endless variety of graceful and sportive attitudes. The emperor M. Aurelius, in consequence of the fall of a boy, caused feather-beds (*culcitrae*) to be laid under the rope to obviate the danger of such accidents (Capitol. *M. Ant. Phil.* 12). One of the most difficult exploits was running down the rope (Suet. *Nero*, 11) at the conclusion of the performance. Ger-

Rope-dancers. (From a painting at Herculaneum.)

manicus and the emperor Galba attempted to exhibit elephants walking on the rope (Plin. *H. N.* viii. § 5; Suet. *Galba*, 6). See SALTATIO.

Funarius Equus. See FUNALIS EQUUS.

Funda (*σφενδόνη*). (1) A sling for discharging stones, or leaden plummets (*glandes*) — a weapon commonly used in warfare by the Spaniards, Persians, Egyptians, and other foreign nations; and also occasionally by the Romans, as is shown by the annexed illustration, representing a Roman soldier in the army of Trajan, from the column erected in honour of that emperor (Plin. *H. N.* vii. 37; Verg. *Georg.* i. 309). (2) (*ἀμφίβλήστρον*). A casting-net; employed, like our own, for taking fish in rivers (Verg. *Georg.* i. 141; Serv. ad l.; Isidor. *Orig.* xix. 5, 2); but apparently cast from behind, and over the right shoulder, instead of being discharged from the left shoulder and in front of the person throwing it, as is now the practice. (3) A bag or pack slung over the shoulders, for the convenience of carrying money, or any other small articles (Macrob. *Sat.* ii. 4); probably so called because, with the straps which fastened it, it had the appearance of a sling, as shown by the annexed illustration, from the device on a bronze lamp. (4) (*σφενδόνη, πυελίς*). The bezel of a ring—that is, the rim in which the gem is set and which holds it as a sling does its stone; more especially so called when the setting is transparent (Plin. *H. N.* xxxvii. 37, 42).

Funditor.

Funda (bag).

Funda. (Rich.)

Fundānus. A lake near Fundi in Italy, which discharges itself into the Mediterranean. According to Pliny (*H. N.* xiv. 6), the Lacus Fundanus was

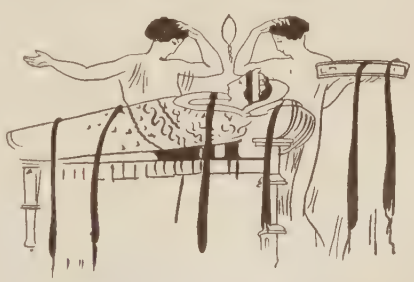
originally called Amyclanus, from the city of Amyclae in its vicinity.

Fundi. The modern Fondi; an ancient town in Latium on the Appia Via, at the head of a narrow bay of the sea running a considerable way into the land, called the Lacus Fundanus. The surrounding country produced good wine (Mart. xiii. 113).

Funditōres (*funda*, "a sling"). The light-armed slingers in the Roman army. They were usually raised by recruiting, or contributed by the allies. See EXERCITUS; FUNDA.

Fundŭla. A *cul-de-sac*, or blind-alley (Varro, *L. L.* v. 145).

Funus. A funeral, so termed because, in ancient times, the Romans were buried by torch light, twisted ropes (*funalia*) smeared with pitch being carried by the mourners for the purpose (Isidor. *Orig.* xi. 2, 34; Donat. *ad* Terent. *Andr.* i. 1, 81). Under this title, it is here intended to give an account of the burial rites of the Greeks and Romans. The tombs will be explained in the article SEPULCRUM.



(1) GREEK. The Greeks attached great importance to the burial of the dead. They believed that souls could not enter the Elysian Fields till their bodies had been buried; and accordingly we find the shade of Elpenor in the *Odyssey* (xi. 66, etc.) earnestly imploring Odysseus to bury his body. So strong was this feeling among the Greeks that it was considered a religious duty to throw earth upon a dead body which a person might happen to find unburied (Hor. *Carm.* i. 28, 36); and among the Athenians, those children who were released from all other obligations to unworthy parents were nevertheless bound to bury them (Aesch. *c. Timarch.* § 14). The neglect of burying one's relatives is frequently mentioned by the orators as a grave charge against the moral character of a man, since the burial of the body by the relations of the dead was considered a religious duty by the universal law of the Greeks. The common expressions for the funeral rites, *τὰ δίκαια, νόμιμα* or *νομιζόμενα, προσήκοντα*, show that the dead had, as it were, a legal and moral claim to burial.

At the moment of death the eyes and mouth were closed by one of those present (Plat. *Phaed.* 118). According to Lucian, the obolus to serve as Charon's fare was at once placed in the mouth of the corpse. This coin was also called *δανάκη* (Hesych. s. v.). The custom is first mentioned by Aristophanes (*Frogs*, 139), and does not appear to have been in use at a very early date. Confirmation of the practice is given by actual discoveries, for coins are frequently found in Greek tombs, and in some between the teeth of the skeleton. The body was then washed (Eurip. *Phoen.* 1319, 1667), anointed with perfumes, and clothed in rich garments, generally white in colour. These were buried or burned with the body, but the number of them was limited by a law of Solon (Plut. *Sol.* 21). A wreath of flowers was placed upon the head (Eurip. *Phoen.* 1632). Golden wreaths, in imitation of laurel or other foliage, were sometimes used, and have been found in graves.

The corpse, thus prepared, was laid out (*πρόθεσις, προτίθεσθαι*) on a bed (*κλίνη*), which appears to have been of the ordinary kind, with a pillow (*προσκεφάλαιον*) for supporting the head and back (Lys. *c. Eratosth.* § 18). By a law of Solon it was ordered that the *πρόθεσις* should take place inside the house (Lex *ap.* Demosth. *c. Macart.* p. 1071, § 62). As among the Romans, the feet were turned towards the door (Hom. *Il.* xix. 212). Vases of a special kind (*λήκυθοι*), probably containing perfumes, were placed beside the body (Ar. *Eccl.* 1032, 538). These vases were also buried with the coffin, and a large number of them have been found in graves in Attica. A few of them are in the ordinary black and red figured styles, but the greater number are of a special ware of great beauty, manufactured for funeral purposes. In this ware the ground is white, and scenes are painted upon it in bright colours, in a freer and less rigid style than in the vases with red or black figures. See E. Pottier, *Étude sur les Lécythes Blancs Attiques, à. Représentations Funéraires* (Paris, 1883); Benndorf, *Griechische und sicilische Vasenbilder* (Berlin, 1869); and the article VAS. A honey-cake (*μελιτοῦττα*), intended as a sop for Cerberus, was also placed by the side of the corpse (Aristoph. *Lys.* 601). Before the door, a vessel of water was placed (*ἀρδάνιον*), in order that persons who had been in the house might purify themselves from the pollution of death by sprinkling water on their persons (Eurip. *Alc.* 98).

The near relatives of the deceased assembled round the bed on which he was laid, and uttered loud lamentations. Although more violent signs of grief were forbidden by Solon (Plut. *Sol.* 21), we find that Lucian (*De Luctu*, 12) mentions as accompaniments of the *πρόθεσις*, not only groaning and wailing, but also beating of breasts, tearing of hair, laceration of cheeks, rending of garments, and sprinkling of ashes upon the head. It was perhaps with the object of limiting the time for these excesses of grief that Solon ordained that the burial should take place on the day after the *πρόθεσις*, before sunrise, and that Plato (*Leges*, xii. 959 A) declared that the *πρόθεσις* should not last longer than was necessary to show that death had really taken place. It appears that singers were hired to lead the mourning chant at the *πρόθεσις* (Lucian, *De Luctu*, 20).

The accompanying illustration, representing the *πρόθεσις*, is taken from Pottier. The corpse lies

The *πρόθεσις*. (From a Greek vase.)

upon a couch, and is covered with a rich garment. The head alone is unveiled, and is surrounded with a fillet (*ταινία*). Two female figures stand beside the couch, with gestures of grief. One of them carries a tray or basket, across which two fillets are laid. Other fillets are placed across the couch. In the background is a mirror, or fan, perhaps intended for the keeping away of flies (cf. Dio Cass. lxxiv. 4, 2).

The ἐκφορά. (From a stamped terra-cotta plaque found at the Piraeus.)

The funeral (*ἐκφορά, ἐκφέρειν*) took place legally, as has been already remarked, on the day following the *πρόθεσις*. It might, however, be put off several days to allow of the arrival of distant friends (Plut. *Timol.* 39). The early morning was the usual time (Plat. *Leges*, xii. 960 A). The bier was borne either by hired bearers (*νεκροφόροι*, Poll. vii. 195), or, in cases where it was decided to honour the dead, by specially selected citizens (Plut. *Timol.* 39). The men walked before the corpse and the women behind, and it appears that musicians were hired to play mournful tunes on the flute and sing dirges (*θρῆνοι*) at the *ἐκφορά* as well as at the *πρόθεσις*. Those who accompanied the funeral wore mourning garments of a black or dark colour (Eurip. *Alc.* 427). The head was also shaved or the hair cut as a sign of grief (Hom. *Od.* iv. 197; *Il.* xxiii. 46, 135, 141, 146; Bion. *Idyll.* i. 81).

Representations of the *ἐκφορά* are rare. The foregoing illustration represents a stamped terra-cotta plaque found at the Piraeus (in the collection of M. Rayet, *Convoi Funèbre*, No. 75). The corpse lies upon a couch. The head is bare; the rest of the body covered. The couch is placed upon a car drawn by two horses, though mules were oftener used. Mourners accompany it with gestures of grief. A female attendant carries upon her head a vessel, probably to serve for libations. Another attendant plays upon the double flute.

It was the custom, at Athens at any rate, to hold public funerals for those who had fallen in war. Thucydides (ii. 34) describes with some minuteness the proceedings usual on such occasions. The *πρόθεσις* of the bones took place on a platform (or perhaps in a booth or tent) erected for the purpose in some public place. On the day of the funerals, coffins of cypress wood, one for each tribe, were carried upon wagons. Each coffin contained the bones of the members of the tribe to which it was assigned. An empty couch, adorned as for a funeral, was borne in the procession to represent those whose bodies had not been found. The procession was accompanied by any citizens and aliens who wished to attend, and by women who were related to those who had fallen. In Greece, funeral orations were pronounced only at public funerals of the kind described, not, as at Rome, over individuals, even though they were specially distinguished (Dion. Hal. v. 17). This custom seems to have arisen about the time of the Persian Wars. In other respects the procedure at a public funeral does not seem to have differed from that in use at private burials.

In spite of the statement of Lucian (*De Luctu*, 21) that the Greeks burned their dead and the Persians buried them, it is certain, both from literary evidence and also from the excavation of tombs, that burning and burying were both practised by the Greeks. The word *θάπτειν* is used of the burial of the ashes after cremation, but *κατορύττειν* refers only to the burial of an unburned body. We hear of burial also among the Spartans (Plut. *Lyc.* 27; Thuc. i. 134). In Homer there is no mention of any burial without burning; but in graves at Mycenae, skeletons have been found which showed no traces of fire. Evidence both of burning and burying has been found in graves of a later date in many parts of the Greek world. See Hermann-Blümner, *Privatalterth.* p. 375.

Funeral Pyre.

The pile of wood (*πυρά*) upon which the body was burned was sometimes erected over the grave in which the ashes were to be buried. There is a full description of cremation in the Homeric period in *Iliad* (xxiii. 161 foll.), where Achilles celebrates the funeral of Patroclus. The pyre was made a hundred feet in length and breadth, and the bodies of sheep, oxen, horses, dogs, and twelve Trojan captives were placed upon it. Honey and perfumes were also poured upon it before it was lighted. When the pyre had burned down, the remains of the fire were quenched with wine, and the relatives and friends collected the bones or ashes (*Il.* xxiv. 791). The remains thus collected were placed in a receptacle sometimes of gold, but generally of a less precious material, and buried. A description of these receptacles, of the other articles placed in the tomb, and of the tomb itself will be found in the article SEPULCRUM.

When bodies were buried without previous cremation, they were generally placed in coffins, which were called by various names, as σοροί, πύελοι, ληνοί, λάρνακες, δροῖται, though some of these names were also applied to the urns in which the bones were collected. For further information upon this point, see the article SEPULCRUM.

Immediately after the funeral was over, the relatives partook of a feast which was called περίδειπνον or νεκρόδειπνον (Lucian, *De Luctu*, 24). It was the custom that this feast should be given at the house of the nearest relative (Demosth. *De Cor.* p. 321, § 355).

Funeral Banquet. (From a bas-relief; *Marmora Oxon.*)

Other ceremonies were performed on the third, the ninth, and the thirtieth days after the funeral, and were called respectively τρίτα, ἔνατα, and τριακάς or τριακάδες (Poll. viii. 146). The rites on the thirtieth day (Poll. i. 66, iii. 102) included a repetition of the funeral feast.

It was also the custom to bring offerings to the tomb on certain days in each year (Plato, *De Leg.* iv. 717 E). Herodotus mentions that these annual sacrifices to the dead were called γενέσια (iv. 26), from which it is inferred that they were offered on the birthday of the deceased (cf. Diog. Laërt. x. 18). The name νεκύσια was also used in the same sense. The ceremonies which were performed at these stated intervals might be used at any other time, if for some reason it was necessary to appease the departed spirit. The word ἐναγίζειν was used for the act of offering, ἐναγίσματα for the things offered on these occasions. These consisted of libations (χοαί) of wine, oil, milk, honey mixed with water or milk (Aesch. *Pers.* 609 foll.), which were poured upon the ground (γάποτοι, Aesch. *Pers.* 621). Elaborate banquets were sometimes prepared, burned in honour of the dead, and buried in a trench (Lucian, *Char.* 22). Wreaths were also placed upon the grave-stones, and they were anointed with perfumes.

The period of mourning varied in length at different places. At Athens the τριακάς seems to have ended it on the thirtieth day after the funeral (Lysias, *De Caede Erat.* § 14). At Sparta it lasted only eleven days (Plut. *Lyc.* 27).

Certain special rites were used in particular cases. A spear was carried in front of the body of any person who had died a violent death, as a symbol of the revenge which was to follow the murderer (Eurip. *Troad.* 1148). In the case of those who had committed suicide, the hand which had done the deed was cut off and buried separately (Aeschin. *in Ctes.* § 244). Certain criminals, who were put to death by the State, were also deprived of burial, which was considered to be an additional punishment (Plut. *Them.* 22; Thuc. i. 134). The bodies of those persons who had been struck by lightning were regarded as sacred (ἱεροὶ νεκροί); they were not buried with others (Eurip. *Suppl.* 935), but usually on the spot where they had been struck (Artemid. *Oneirocr.* ii. 9, p. 146).

It has been already mentioned that in the public funerals of those killed in war, an empty couch was carried in the procession to represent those whose bodies had not been found. In other cases, where a person was supposed to be dead, though his body was not found, funeral rites were performed for him (Eurip. *Hel.* 1241 foll.). If such a person was afterwards found to be alive, he was considered impure, and was not allowed to enter temples till certain rites had been performed. These rites consisted in a symbolism of birth and the ceremonies connected with it. The δευτερόποτμος or ὑστερόποτμος was washed, wrapped in swaddling clothes, and fed with milk. Having been thus born again into life, he was freed from his impurity (Plut. *Q. R.* 5).

(2) ROMAN.—Among the Romans also the burial of the dead was a most solemn duty. It was incumbent upon any one who found an unburied body at least to cast earth upon it three times (Hor. *Od.* i. 28). If no funeral rites had been performed, the soul of the dead man could not be received among the shades, but wandered homeless upon the earth (Tertull. *De Anim.* 56).

A near relative of the dying person caught the last breath in his mouth (Verg. *Aen.* iv. 684). As soon as he was dead his eyes were closed by one of those present (Lucan. *Phars.* iii. 740). Then followed the *conclamatio*, variously explained as (1) a cry *in articulo mortis*, which seems probable from Propertius (v. 7, 23; cf. Ovid, *Trist.* iii. 3, 43);

The *Conclamatio*, or lamentation for the dead. (From a Roman relief.)

(2) the recall of the dead by uttering his or her name three times, in order to ascertain the fact of death if there was no answer—a custom still in use at the death-bed of a Pope; (3) as commonly understood, the lamentation for the dead when there was no longer any possibility of doubt. The mourners called repeatedly the name of the deceased, with loud cries, and exclamations such as *vale* (Lucan, *Phars.* ii. 22; Catullus, ci.; Ovid, *Met.* x. 62, *Fasti*, iv, 852).

The body was then washed with warm water and anointed with perfumes and spices (Pers. iii. 103). That this took place after the *conclamatio* is learned from Ammianus Marcellinus (xxx. 10). The corpse was then clothed either in the toga (Juv. iii. 173 with Mayor's note), or in the state robes of any office which had been held by the deceased (Livy, xxxiv. 7; Polyb. vi. 53). The garments in which the corpse was clothed were sometimes splendid and costly (*vestes purpureae*, Verg. *Aen.* vi. 221; *pretiosae*, Val. Max. v. 5, 4). Precious ornaments were often added. Rings, for example, are often found in graves, and we learn from Propertius (iv. 7, 9) that they were sometimes burned with the body. Flowers were also used for the adornment of the couch on which the corpse was laid; and a censer (*acerra*) was placed beside it (Fest. *Epit.* p. 18). The following illustration from a Roman relief in the Lateran Museum (Baumeister, p. 239) represents the *lectus funebris*, on which the corpse of a woman lies dressed. Two women mourners (*praeficae*) stand behind, and by their side a man in the act of putting a garland on the head of the corpse. On each side of the *lectus funebris* is a torch. On the left side is a woman blowing the flute, and above another with folded hands; on the right side sit three women, wearing the *pilleus* (probably manumitted slaves); below is the family of the deceased. Among the Romans, as among the Greeks, it was customary to place a small coin in the mouth of the deceased, for the purpose of paying Charon's passage-money.

The Lectus Funebris. (Lateran Museum, Rome.)

This is alluded to by Juvenal (iii. 267) and Propertius (iv. 11, 7), but not by earlier writers. Coins, however, have been found in graves of an earlier date than the Second Punic War (*C. I. L.* i. p. 27); and in graves at Praenesté, dating from the third century B.C., coins were actually found in the mouths of the skeletons (*C. I. L.* i. 28). In imperial times the practice was common.

The preparations necessary for the due laying out of the body were performed by the *pollinctores* (Plaut. *Asin.* v. 2, 60), who probably took the cast of the dead man's face, from which the wax *imago* was made, to be kept in the *atrium* of the house by his descendants, and used in funeral processions in a way shortly to be described. The *pollinctor* was furnished by the *libitinarius* or undertaker, who entered into a contract for conducting the whole funeral. The latter got his name from the fact that he exercised his business at the temple or grove of Libitina, the goddess of corpses and funerals (Plut. *Num.* 12, § 1; *Quaest. Rom.* 23). Deaths were also registered at this temple (Suet. *Ner.* 39), and the offering called *lucar Libitinae* was made. See LUCAR.

When the body had been thus prepared and adorned, it was laid upon a couch of state, generally in the *atrium* of the house, with the feet towards the door (Pers. iii. 105). Outside the door of the house were placed branches of cypress or pine (Serv. *ad Aen.* iii. 64), for the purpose of warning those who might be polluted by entering a house in which was a corpse. The cypress was apparently only used by those of good position. We are told by Servius (*ad Aen.* v. 64) that the corpse lay in state for seven days before burial. This can only have been the case in exceptional circumstances, when some form of embalming was used.

Funerals were conducted by the family of the deceased (*funus privatum*), except in cases where a public funeral (*funus publicum*) was voted, either by the Senate (Cic. *Phil.* ix. 7) or in provincial towns by the *decuriones*, as a mark of honour or respect to the deceased. This honour was paid in the case of foreign kings who died in Italy (Val. Max. v. 1, 1); and men who had fallen in the service of their country (Val. Max. v. 2, 10).

A public invitation was given to all important funerals by a herald (*praeco*). Hence the phrases *funus indicere, funus indictivum* (Suet. *Iul.* 84; Cic. *De Leg.* ii. 24, 61). The formula of invitation has been preserved: "OLLUS QUIRIS LETO DATUS. EXSEQUIAS, QUIBUS EST COMMODUM, IRE IAM TEMPUS EST. OLLUS EX AEDIBUS EFFERTUR." (Fest. p. 254 d, 34.) *Translaticium funus* is used for an unceremonious burial (Suet. *Ner.* 33).

In ancient times all funerals took place by night (Serv. *ad Aen.* xi. 143); in later times only those of children (Serv. l. c.), and poor people whose means did not admit of sufficient display for the day-time (Mart. viii. 75). The torches with which funerals were always accompanied were probably a relic of burial by night, though no doubt they also served for lighting the pyre.

An opportunity for the display of splendour was given by the funeral procession, and was so largely used by families of wealth and position that sumptuary laws to regulate such expenses are found among the Tables of the Decemviri (Cic. *De Leg.* ii. 23, 59) and the enactments of Sulla (Plut. *Sull.* 35). The order of the funeral procession was regulated by the *designator* or *dissignator*, whose attendants were dressed in black. The order in which the various parts of the procession came is uncertain, but it is generally supposed that at the head of it were the musicians (*siticines*), who made

use of *tubae*, *tibiae*, and *cornua*. The number of *tibicines* was by the Twelve Tables limited to ten (Cic. *De Leg.* ii. 23, 59). Then followed (at any rate in earlier times) the mourning women, called *praeficae*, who sang the *nenia* or *lessus*, a mournful song in praise of the dead man (Cic. *De Leg.* ii. 24, 62). Then followed in some cases dancers and *mimi* (Suet. *Iul.* 84), who were allowed, as at a triumph, free license of jesting. We learn from Suetonius (*Vesp.* 19) that it was the custom for the *archimimus* to wear a mask in the likeness of the deceased, to imitate his speech and manners, and even to make jests at his expense.

The most striking part of the procession was probably formed by the *imagines*. It is said by Polybius (vi. 53) that the *imagines*, or wax masks representing distinguished ancestors of the deceased, were brought out from their resting-place in the *atrium*, and each was worn by a man chosen to resemble as nearly as possible the person whom he was supposed to represent and clothed in the dress of the office which the prototype of the mask had held. Each rode upon a chariot, and was accompanied with due pomp of lictors and other insignia of his office. Thus all the distinguished ancestors of the dead man were present in effigy at his funeral. If he was of good birth, many families to which he was related were represented by their *imagines* (Tac. *Ann.* iii. 76), and the actual number was sometimes very great. At the funeral of Marcellus there are said to have been 600 (Serv. *ad Aen.* vi. 802). Sometimes, as a special honour, spoils, crowns, and other records of victories and triumphs were carried before the bier. The procession was also swelled by the slaves who were liberated by the will of the deceased, all with shorn heads, wearing the *pilleus* (Livy, xxxviii. 55). The bier itself was sometimes carried by these liberated slaves (Pers. iii. 106); or in the case of emperors, by magistrates and senators (Suet. *Aug.* 100). The body was placed uncovered on a bier or couch (*feretrum*, *torus*), which in great funerals was elaborately decorated (Suet. *Iul.* 84). In some cases, probably when decay had begun to disfigure the features, the body was placed in a coffin (*capulus*), and a waxen representation (*effigies*) was exposed to view instead (Tac. *Ann.* iii. 5).

In the burial of the poor and of slaves of course this pomp was absent. Hired bearers (*vespillones*), six (Mart. vi. 77, 10) or four (id. viii. 75, 9) in number, carried the body in a simple wooden coffin or bier, which was not buried with the body (*sandapila*, Mart. ii. 81).

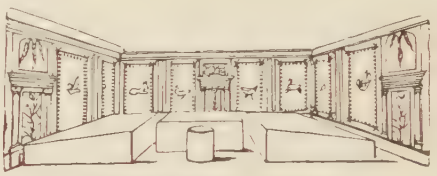
The relatives of the deceased followed behind the bier, dressed in mourning. The sons of the deceased had their heads veiled, while the daughters went uncovered and with dishevelled hair (Plut. *Quaest. Rom.* 11). Mourning was shown by very much the same signs as in modern times—viz., by the absence of adornment and the wearing of black garments (Juv. x. 245; Prop. v. 7, 28; Tac. *Ann.* iii. 2; *pullus*, Juv. iii. 213). Under the emperors white seems to have been substituted for black as the mourning colour for women (Plut. *Quaest. Rom.* 26; Stat. *Silv.* iii. 3, 3). The women were also in the habit of crying aloud, tearing their hair and lacerating their cheeks in the funeral procession itself (Prop. iii. 13, 27).

In this order the funeral train proceeded to the Forum. There it halted before the Rostra, the wearers of the *imagines* took their seats upon curule chairs, and the *laudatio funebris* was pronounced, generally by a near relative of the deceased (Polyb. vi. 53), though in the case of a *funus publicum* this function might be assigned by a *senatusconsultum* to one of the magistrates (Quint. *Instit.* iii. 7, 2).

From the Forum the procession moved on to the place of burning or burial, which, according to a law of the Twelve Tables, was obliged to be outside the city, though special exceptions were sometimes made (Cic. *De Leg.* ii. 23, 58). Both burning and burial were in use among the Romans. Cicero (*De Leg.* ii. 22, 56) and Pliny (*H. N.* vii. § 187) both hold the view that burial was the more ancient custom. Pliny further says that burning was introduced because it was found that the bodies of those killed in distant countries and buried there were dug up and scattered by the enemy. It is conjectured, however, that the change was partly brought about by motives of health and convenience. In certain families the practice of burial was kept up, after burning had become general. Sulla was the first of the Cornelii to be burned. The reason, according to Cicero and Pliny, of the departure from the custom of his family was, that he feared lest his own bones should receive the same treatment as he had given to those of Marius. In later times burning became far more common than burial, though the latter was always used in the case of children who died before they had cut their teeth (Plin. *H. N.* vii. 72; Juv. xv. 140), and in the case of those who had been struck by lightning. It seems also that persons of the poorest classes were always buried. After the introduction of Christianity burial again came into use instead of burning. The view that burial was older than cremation is confirmed by some Roman customs. According to pontifical law, the essential part of the funeral ceremony was the casting of earth upon the face of the corpse (Cic. *De Leg.* ii. 22, 57). Again, when a body was to be burned, it was the custom to cut off some portion of it, called *os resectum*, which was subsequently buried (Fest. *Epit.* p. 148). By this means the newer and more convenient method was adopted, while the ancient regulation which prescribed burial was still carried out.

The remaining rites varied, according as the body was to be buried or burned. In the case of burial the body was placed in the grave either on the bier on which it had been carried, or in a sarcophagus. Numerous objects were also placed in the grave. (See SEPULCRUM.) The ceremonies which followed had the double object of making the grave a *locus religiosus*, and of purifying the family and house which had been defiled by the presence of a corpse. Earth was thrown upon the face of the dead (Cic. *De Leg.* ii. 22, 57), a pig was sacrificed, and an offering was made to the Lares. The day on which these sacrifices took place was called *feriae denicales* (Fest. *Epit.* p. 70). A funeral feast called *silicernium* was also held, apparently on the day of the funeral, and by the grave (Varr. *ap.* Non. p. 48, 8). The period of mourning lasted nine days (*novendiale*), though it is uncertain whether this period was reckoned from the day of death or the day of burial (Serv. *ad Aen.* v. 64). At the end of this period a *sacrificium novendiale* was offered to the dead, and a *cena novendialis* was held (Tac. *Ann.* vi. 5).

MARSHALL HIGH SCHOOL
LIBRARY



The burning of a body sometimes took place at the spot where the ashes were to be interred. In this case the funeral pile (*rogus, pyra*) was erected over the trench which was subsequently to be the grave (*bustum*). The body, however, was often burned at a place near the monument, specially destined for this purpose, *ustrinum, ustrina* (Fest. *Epit.* p. 32). The pyre was built of wood, in the form of an altar (Verg. *Aen.* vi. 177). A law of the Twelve Tables ordered that it should not be smoothed with an axe (Cic. *De Leg.* ii. 23, 59). Pyres were sometimes painted (Plin. *H. N.* xxxv. § 49), and cypress-trees were placed in front (Ovid, *Trist.* iii. 13, 21). On the top of the pile the corpse was placed, with the couch on which it had been carried. Many things were placed on the pyre by the relations and mourners, such as clothes, arms, ornaments, hunting nets and apparatus, horses, dogs, birds (Plin. *Epist.* iv. 2). It was also sprinkled with perfumes, gums, and spices.

The pyre was lighted by one of the relatives, with face turned away (Verg. *Aen.* vi. 224). When it was burned down, the glowing ashes were extinguished with water or wine (Verg. *Aen.* vi. 226). Those who had taken part in the funeral uttered a last farewell (Verg. *Aen.* ii. 644) and departed, while the nearest relatives remained to collect the bones and ashes when they were dry. This was probably done as a rule on the day of the funeral. The bones were sprinkled with wine (though it is not certain that this sprinkling is to be separated from that mentioned above), dried with a linen cloth, and placed in an urn or box with perfumes and spices. The urn was then placed in the sepulchre.

It has already been mentioned that if the body was burned, the *os resectum* was buried separately. The ceremonies of the *feriae denicales* were used, as in the case of the burial, including the throwing of earth upon the remains of the dead (Cic. *De Leg.* ii. 22, 57). It does not appear at what moment this was done; but the object of it was to consecrate the place of burial, to make it a *locus religiosus*. After the bones and ashes of the deceased had been placed in the urn, the persons present were thrice sprinkled by a priest with pure water from a branch of olive or laurel, for the purpose of purification (Verg. *Aen.* vi. 229); after which they were dismissed by the *praefica* or some other person, by the solemn word *Ilicet*, that is, *ire licet*. In the case of burning, the practices connected with the *silicernium* and the *novendiale* seem to have been the same as in the case of burial (see above). When those who had accompanied the funeral returned home, they underwent a purification called *suffitio*, which consisted in being sprinkled with water and stepping over a fire (Fest. p. 3). It was then also, perhaps, that the house was swept with a special kind of broom (Fest. p. 58, s. v. *Everriator*).

In the case of important funerals, scenic or gladiatorial exhibitions were often given. (See GLADIATORES.) Scenic exhibitions were less common; but the Didascalia to the *Adelphoe* of Terence states that that play was performed at the *ludi funebres* of Aemilius Paullus (B.C. 160), and we are informed by Livy that *ludi scenici* as well as gladiatorial combats were exhibited at the death of T. Flamininus (B.C. 174). There were also distributions of food (*viscerationes*) and public banquets (Suet. *Iul.* 26).

It remains to give some account of the annual rites performed at the tombs in honour of the Manes. Certain days in February (13th–21st) were set apart as *dies parentales*, or *parentalia*. The last of these days was specially known as *feralia* (Ovid, *Fasti*, ii. 569). The ceremonies performed at this time are described by Ovid (*Fasti*, ii. 533 foll.). Offerings to the Manes (*inferiae*) were brought to the tomb. These consisted of wine and milk, honey and oil, the blood of victims, especially of black sheep, pigs, and cattle (Arnob. vii. 20), various fruits, bread, salt, and eggs (Juv. v. 84). The tomb was adorned with wreaths and flowers, especially roses and violets (Ovid, l. c.). A meal was also eaten at the grave. A *triclinium funebre*, intended apparently for this purpose, was found at Pompeii and is represented in the accompanying illustration. During the *dies parentales* temples were

Funereal Triclinium. (Pompeii.)

shut and marriages forbidden (Ovid, *Fasti*, ii. 557 foll.), and the magistrates laid aside the insignia of their office (Lydus, *De Mens.* iv. 24). The terms *parentare, parentatio*, were also applied to similar rites performed on other days of the year, such as the day of birth, death, or burial of the person to be honoured. Special days were also appropriated to roses and violets (*rosatio, rosaria, rosalia, violatio*; Plin. *H. N.* xxi. § 11).

BIBLIOGRAPHY. — References may be made to Feydeau, *Histoire des Usages Funèbres*, etc. (Paris, 1856). For the Greek usages, see Becker-Göll, *Charikles*, iii. 114–167; Hermann-Blümner, *Privatalterth.* pp. 361 foll.; and Graves, *Burial Customs of the Ancient Greeks* (Brooklyn, 1891). For the Roman usages, see Becker-Göll, *Gallus*, iii. 481–547; and Marquardt, *Privatleben*, pp. 340–385.

Fur (*φώρ*). A thief; humorously called "a man of three letters" (*homo trium litterarum*, Plaut. *Aul.* ii. 4, 46). See FURTUM.

Furca (*δίκρανον*). (1) A two-pronged fork, a hay-fork, pitchfork, etc. (Verg. *Georg.* i. 264). The name is also given to a flesh-fork (Petron. 95), and to any forked prop or stay—e. g. for vines (Verg. *Georg.* ii. 259); for planks (Livy, i. 35); for fishing-nets (Pliny, *H. N.* ix. § 9). Table-forks were not used by the ancients, who took their food from the plate with their fingers, except in the case of shell-fish and eggs, for which they had a sort of combination fork and spoon. (See CENA, p. 313, and COCLEAR.) The diminutive FURCILLA denotes a smaller fork, but still a large one according to our notions. (2) As an instrument of punishment, *furca* means a contrivance something like a yoke passing around the back of the neck and down each arm. This the criminal or slave wore while being whipped through the streets—whence FURCĬFER is an expression equivalent to our "gallows-bird" (Plaut. *Amphit.* i. 1, 132, and often). (3) The word is also used of the gibbet or gallows (Paul. *Dig.* 33). (4) (*στῆριγξ, στήριγμα*). The part of a carriage-pole which fastens into the axle.

Furcŭlae Caudĭnae. See CAUDIUM.

Furiae. See EUMENIDES.

Furii. A family which migrated from Medullia in Latium, and came to settle at Rome under Romulus, and was admitted among the patricians. Camillus (q. v.) was of this family, and it was he who first raised it to distinction.

Furīna. An early Latin goddess, whose name, in the time of Varro, was known to very few (Varr. *L. L.* v. 3). There was a sacred grove of this goddess beyond the Tiber (in which Gaius Gracchus was slain), and this, with the similitude of the name, led Cicero and others to identify Furian with the Furies (Cic. *N. D.* iii. 18). The Furinalia were celebrated on the 25th of July.

Furius Bibaculus. See BIBACULUS.

Furnus (*ἰπνός*). (1) An oven, usually a baker's oven (Plaut. *Cas.* ii. 5, 1). (See PISTOR.) (2) A baker's shop (Hor. *Sat.* i. 4, 37). (See PISTOR.) (3) A hot-air, or vapour-bath, as distinguished from *balneum*, which is a warm water bath. See BALNEAE.

Furtum. Theft; the robbery of movable things, though furtum could be committed without actually carrying off the object, as in the case of a thing deposited (*depositum*), the unlawful use of which was furtum. Furtum was either *manifestum* or not, the former when the thief was caught in the act. It was called *furtum conceptum* when a stolen object was found in a person's possession; and if a person gave to a third person stolen goods, the third person could bring an *actio furti oblati* against the giver. The punishment for *furtum manifestum* was *capitalis*—i. e. affecting one's *caput* (q. v.). A thief killed while committing robbery at night was held by the Twelve Tables to be lawfully killed; but in the daytime he could be killed only when he resisted with a deadly weapon (*telum*). See KLOPES DIKÉ.

Fuscĭna (*τρίαινα*). A trident, i. e. a large fork with several branches (usually three) employed by fishermen in spearing fish. It was the symbol of Neptune as the god of the ocean. By the class of gladiators known as *retiarii* it was used as a weapon. See GLADIATORES.

Fustibălus. A kind of sling. See FUNDA.

Fustuarium (*ξυλοκοπία*). A punishment inflicted upon soldiers for desertion or other serious offences, in which the offender was beaten to death with heavy sticks (*fustes*) laid on by his comrades (Livy, v. 6).

Fusus (*ἄτρακτος*). A spindle; usually made of a stick about twelve inches in length, and used with the distaff (*colus*), for twisting or spinning the fibres of wool or flax into thread (Pliny, *H. N.* xi. 27; Ovid, *Met.* vi. 22). Golden spindles were sent to ladies of rank (Herod. iv. 162). In the rural districts of Italy, women were forbidden to spin when they were travelling on foot, the act being considered of evil omen (Pliny, *H. N.* xxviii. 5). The distaff and spindle, with the wool and thread upon them, were carried in bridal processions; and without the wool and thread, they were often suspended by women as offerings of religious gratitude, especially in old age, or on relinquishing the constant use of them. They were most frequently dedicated to Minerva, the patroness of spinning, and of the arts connected with it. The spindle was kept in the *calathus* (q. v.).

Woman with Distaff and Spindle. (Frieze of the Forum Palladium, Rome.)

G

G, as a symbol.

IN GREEK.—Γ = Γαῖος, *γερουσίας* (Ψ·Γ).

⌐ = 5 ⌈Δ⌉ = 50 ⌈Χ⌉ = 5000 ⌈Μ⌉ = 50,000 (decimal system).

$\gamma' = 3$ $,\gamma = 3000$. See ABACUS.

IN LATIN.—G = Galeria, Galli, Gallica, gener, Genius, gens (in Africa), centuria (*C. I. L.* xiv. 2278).

G = Gaius (instead of the usual C — rare), cf. Orelli, *Inscript.* 467, 1660, 4680. See GAIUS; GAIA.

G·D·N = Genius domini nostri.

G·F = garum factum, Gemina felix (legio).

G·H·L = genius huius loci.

G·M = genius municipii.

G·P·R·F = genio populi Romani feliciter.

G·R = Germani Raeti.

G·S = Germania superior.

Gabae (Γάβαι). (1) A city of Persia, in the province of Persis, placed by Ptolemy southeast of Pasargada, on the confines of Carmania. (2) A city of Sogdiana, southwest of Cyreschata. Gabae was one of the first places to which the exploits of Alexander gave celebrity in that country. It is the same with the Gabaza of Curtius (Quint. Curt. viii. 4, 1).

Gabăli (Γαβάλεις). A people in Gallia Aquitanica, whose chief town was Anderitum (Antérieux or Javoux) (Caes. *B. G.* vii. 75).

Gabălus. A word said to be formed from the Hebrew language, and equivalent to the Latin *crux* (q. v.): a cross or stake upon which criminals were impaled (Varr. *ap.* Non. s. v. p. 117); whence the same word is also used to designate a worthless fellow, or one who deserved impalement (Capitol. *Macrin.* 11).

Gabăta. A particular kind of dish for table service, in fashion at Rome during the time of Martial; but respecting its characteristics nothing is known (Mart. vii. 48; xi. 31).

Gabiāna (Γαβιανή) or **Gabiēné** (Γαβιηνή). A district of the Persian province of Susiana (q. v.), west of Mount Zagros.

Gabii (Γάβιοι). A town in Latium, on the Lacus Gabinus between Rome and Praenesté, a colony from Alba Longa; and the place, according

to tradition, where Romulus and Remus were brought up. It was taken by Tarquinius Superbus by stratagem (Livy, i. 53, 54), and was in ruins in the time of Augustus. In its neighbourhood are the stone quarries from which a part of Rome was built. The modern name is Castiglione.

Gabīna. The name of Iuno, worshipped at Gabii (Verg. *Aen.* vii. 682).

Gabinia Lex. See LEX.

Gabinius, AULUS. A tribune of the plebs in B.C. 66, when he carried a law conferring upon Pompey the command of the war against the pirates; and consul in 58, when he took part in the banishment of Cicero. In the year 57 he went to Syria as proconsul, and restored Ptolemy Auletes to the throne of Egypt, in opposition to a decree of the Senate. On his return to Rome in 54 he was accused both of *maiestas* and the *crimen repetundarum*, for the illegal receipt of 10,000 talents from Ptolemy, and was defended by Cicero. He was condemned on the latter charge, and went into exile. In the civil war he fought on the side of Caesar. He died about B.C. 47.

Gabīnus Cinctus. See TOGA.

Gadăra (*τὰ Γάδαρα*). A large fortified city of Palestine, situated on an eastern tributary of the Jordan. Vespasian, in his first campaign in Galilee, took it, slaughtered the inhabitants, and burned the city (Ioseph. *B. I.* iii. 7 § 1).

Gades (Semitic *gadir*, "a hedge," "stockade"; *τὰ Γάδειρα*). The modern Cadiz; a very ancient town in Hispania Baetica, founded by the Phœnicians, and one of the chief seats of their commerce in the west of Europe, situated on a small island of the same name (Isla de Leon), separated from the mainland by a narrow channel. Herodotus says (iv. 8) that the island of Erythia was close to Gadeira; whence most later writers supposed the island of Gades to be the same as the mythical island of Erythia, from which Hercules carried off the oxen of Geryon. Its inhabitants received the Roman franchise from Iulius Caesar, and Strabo mentions as a striking proof of its wealth and importance that, in the census taken under Augustus, Gades was the residence of some 500 equites—a number greater than in any town of Italy except Patavium (Padua). Gades was allied with Rome in the Second Punic War (Livy, xxxii. 2). The city was rich, luxurious, and immoral. Its dancing girls with their lascivious dances are often spoken of in Roman literature. See SALTATIO.

Gadfly. See OESTRUS.

Gaditānum Fretum. Now the Strait of Gibraltar. See ABYLA; CALPÉ.

Gaditānus Sinus. Now the Bay of Cadiz.

Gaea (*Γαῖα*). The Greek goddess of the earth. According to Hesiod she came into being after Chaos, and brought forth of herself the Sky (*Οὐρανός*), the mountains, and the Sea (*Πόντος*). By Uranus she was mother of the Titans, Cyclopes, and Hecatoncheires. From the blood of her mutilated husband sprang the Erinyes, Giants, and Melian nymphs; to Pontus she bore Nereus, Thaumas, Phorcys, Ceto, and Eurybia. Other terrible beings, such as the giants Typhon, Antaeus, and Tityus, were her offspring, as also the *autochthones* or aborigines, such as Erechtheus and Cecrops. In Homer she is invoked with Zeus, the Sun, Heaven, and Hell as a witness to oaths, and was worshipped with the sacrifice of a black lamb; but she was especially honoured as the mother of all, who nourishes her creatures and pours rich blessings upon them. In Athens, in particular, she was worshipped as *κουροτρόφος*, or the nourisher of children, and at the same time as the goddess of death, who summons all her creatures back to her and hides them in her bosom. She was honoured also as the primeval prophetess, especially in Delphi, the oracle of which was at first in her possession as the power who sent forth the vapours which inspired the seer. The corresponding Roman goddess was Tellus (q. v.).

Gaesum (*γαῖσον*). A very strong and weighty javelin, which appears to have been made, both head and stock, of solid iron (Poll. vii. 156), and to have been employed as a missile rather than as a spear, each warrior carrying two as his complement (Varr. *ap.* Non. s. v. p. 555). The weapon was of Gallic origin (Verg. *Aen.* viii. 662); though it was sometimes used by the Romans, the Iberians, the Carthaginians (Livy, xxvi. 6), and the Greeks. See HASTA.

Gaetulia (*Γαιτουλία*). The interior of Northern Africa, south of Mauretania, Numidia, and the region bordering on the Syrtes, reaching to the Atlantic Ocean on the west, and of very indefinite extent towards the east and south. The pure Gaetuli were not an Aethiopic (i. e. Negro), but a Libyan race, and were most probably the ancestors of the Berbers (Ritter, *Erdkunde*, i. pp. 1034 foll.). Cossus Lentulus brought the Gaetulians under Roman rule, receiving for this a triumph and the surname Gaetulicus.

Gagae (*Γάγαι*). A town on the coast of Lycia, whence came quantities of jet (*γαγάτης λίθος*, *Gagates lapis*) still called in German *gagat* (Plin. *H. N.* xxxvi. 19 § 34).

Gagātes lapis. See GAGAE.

Gainas. A Goth, the minister of the emperor Arcadius from 399 to 401. He succeeded the eunuch Eutropius, whose death he had contrived, and soon after revolted against the imperial authority, uniting his forces with those of his countryman Tribigild. He then received from the weak Arcadius the title of Commanding General of the Roman Armies, and practically became emperor, but was slain in a conflict with the Huns (A.D. 401).

Gaisford, THOMAS. A distinguished classical scholar, born at Ilford, England, in 1779. He studied at Christ Church College, Oxford, where he took his degree in 1804. After publishing an elaborate edition of the *Enchiridion* of Hephaestion, he was made Public Examiner (1810), and in 1811 Regius Professor of Greek. From 1819 to 1847 he was rector of the parish of Westwell, and from 1831 was Dean of Christ Church. He died in 1855. Among the most valuable of his classical publications are an edition of the *Poetae Graeci Minores* (1814–20), Suidas, 3 vols. (1834), of the *Etymologicum Magnum* (1848), of the *Scriptores Latini Rei Metricae* (1837), of the *Paroemiographi Graeci* (1836), of Stobaeus (1822), of Herodotus (1824), of Sophocles (1826), and of Eusebius (1852).

Gaius, Gaia. A praenomen very common at Rome to both sexes. (On the name see F. D. Allen in *Harvard Studies in Class. Philology*, iii. pp. 71–87 [1891]). C (the old form of G), in its

natural position, denoted the name of the male, and when reversed, that of the female; thus, C was equivalent to Gaius; but Ↄ to Gaia. Female praenomina, which were marked with an inverted capital, were, however, early disused among the Romans. The custom after this was, in case there was only one daughter, to name her after the *gens*. If there were two, to distinguish them by *maior* and *minor* added to their names; if there were more than two, they were distinguished by their number, Prima, Secunda, etc. Thus we have, in the first case, Tullia, the daughter of Cicero; Iulia, the daughter of Caesar; and in the second, Cornelia Maior, Cornelia Minor, etc. (See NOMEN.) Gaius and Gaia are the typical names of husband and wife in Roman usage; and at weddings the bridegroom and bride were called respectively Gaius and Gaia (cf. Festus, s. v. *Gaia;* and the marriage formula pronounced by the bride, *Ubi tu Gaius, ego Gaia*).

Gaius. One of the most accomplished professors of Roman law and writers on that subject. He was a native of the Asiatic provinces, and spent his days in Rome under Hadrian, Antoninus Pius, and Marcus Aurelius (about A.D. 110–180). His writings were numerous; but we possess in a tolerably complete form nothing but his *Institutiones*, or introduction to the private law of the Romans. This was discovered by Niebuhr in 1816 on a palimpsest of the fifth century at Verona, having before been known in quotations only. The work is in four books, the first of which treats of the family, the second and third of property, and the fourth of legal procedure. Popular and intelligible without being superficial, it was a favourite hand-book of law, and served as a foundation for the *Institutiones* of Justinian. As a jurist Gaius belongs to the conservative school of the Sabiniani. (See ATEIUS CAPITO.) The first edition of Gaius was that of Göschen and Hollweg (Berlin, 1820), the third edition being revised by Lachmann (Berlin, 1842). The best text is now that of Huschke in the Teubner series; while translations into English with commentaries have been made by Abdy and Walker (Cambridge, 1870), E. Poste (Oxford, 1875), Muirhead (Edinburgh, 1880), and Mears (London, 1882).

Gaius Caesar. See CALIGULA.

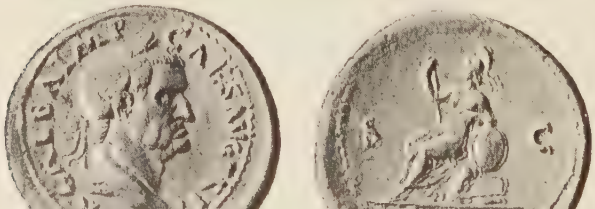
Galaesus (Γαλαῖσος) and **Galēsus.** A river in the south of Italy, now the Galeso, flowing into the Gulf of Tarentum through the meadows where the sheep grazed, whose wool was so celebrated in antiquity (Livy, xxv. 11).

Galanthis. See GALINTHIAS.

Galatēa (Γαλάτεια, "the milk-white"). A sea-nymph, daughter of Nereus and Doris. According to a Sicilian story, which the poets Philoxenus and Theocritus have made famous, she was pursued by the uncouth monster Polyphemus (q. v.), being herself in love with the beautiful Acis. The jealous giant crushed Acis with a rock, and the nymph changed her beloved into the Sicilian river which bears his name. The legend of Acis and Galatea has been a favourite theme in English literature. Adaptations of it are to be found in Gay's *Acis and Galatea*, J. S. Blackie's *Galatea*, Proctor's *Death of Acis*, R. Buchanan's *Polypheme's Passion*, and Austin Dobson's *Tale of Polypheme*.

Galatea. (Naples Museum.)

Galatia (Γαλατία). A country of Asia Minor, composed of parts of Phrygia and Cappadocia, and bounded on the west, south, and southeast by those countries, and on the northeast, north, and northwest by Pontus, Paphlagonia, and Bithynia. It derived its name from its inhabitants, who were Gauls that had invaded and settled in Asia Minor at various periods during the third century B.C. They speedily overran all Asia Minor within the Taurus, and exacted tribute from its various princes; but Attalus I. gained a complete victory over them (B.C. 230), and compelled them to settle down within the limits of the country thenceforth called Galatia, and also, on account of the mixture of Greeks with the Celtic inhabitants which speedily took place, Graeco-Galatia and Gallograecia. The people of Galatia adopted to a great extent Greek habits and manners and religious observances, but preserved their own language, so that even in the fourth century A.D. Jerome says that the speech of the Galatians resembles the local dialect of the Treviri in Gaul. They retained also their political divisions and forms of government. They consisted of three great tribes—the Tolistobogi, the Trocmi, and the Tectosages—each subdivided into four parts,



Coin of Galatia, with the head of Roman emperor.

called by the Greeks τετραρχίαι. At the head of each of these twelve tetrarchies was a chief or tetrarch. At length one of the tetrarchs, Deiotarus, was rewarded for his services to the Romans in the Mithridatic war by the title of king, together with a grant of Pontus and Armenia Minor; and after the death of his successor,

Amyntas, Galatia was made by Augustus a Roman province (B.C. 25). Its only important cities were: in the southwest, Pessinus, the capital of the Tolistobogi; in the centre, Ancyra, the capital of the Tectosages; and in the northeast, Tavium, the capital of the Trocmi. From the Epistle of St. Paul to the Galatians, we learn that the Christian churches in Galatia consisted in great part of Jewish converts. See Thierry, *Hist. des Gaulois.*

Galaxius (Γαλάξιος). A small river in Boeotia, near which stood the temple of Apollo Galaxius. The name is derived from the fact that its waters were of the colour of milk (γάλα), due to the chalky nature of the soil.

Galba. (1) SERGIUS, an orator anterior to Cicero. While holding the government of Spain, he treacherously murdered 30,000 Lusitanians. Having been accused for this by Cato the Censor, he was about to be condemned, when he wrought upon the feelings of the people by embracing before them his two sons, still quite young, an act which saved him (Cic. *Orat.* i. 53). In the year B. C. 144 he was consul. (2) GAIUS SULPICIUS, a Roman lawyer, father of the emperor. He was consul in A.D. 22. (3) SERVIUS SULPICIUS, born in the reign of Augustus, of a patrician family. He served with distinction in Germany, and was afterwards proconsul, first in Africa, and subsequently in Hispania Tarraconensis, in which office he gained a reputation for justice and moderation. He was still in Spain when Iulius Vindex, the proconsul of Upper Gaul, rose against Nero. Galba joined Vindex, and Otho, governor of Lusitania, followed his example. The assembled multitudes saluted Galba as emperor and Augustus; but he declared that he was acting only as the lieutenant of the Senate and people of Rome, in order to put an end to the disgraceful tyranny of Nero. The Praetorian Guards soon after, having revolted against Nero, proclaimed Galba, and the Senate acknowledged him as emperor. Galba hastened from Spain to Rome, where he began by calling to account those favourites of Nero who had enriched themselves by proscriptions and confiscations and by the extraordinary prodigality of that emperor; but it was found that most of them had already dissipated their ill-gotten wealth. Galba, or, rather, the intimates who governed him, then proceeded against the purchasers of their property, and confiscations became again the order of the day. The new emperor, at the same time, exercised great parsimony in his administration, and endeavoured to enforce strict discipline among the soldiers, who had been used to the prodigality and license of the previous reign. Being past seventy years of age, Galba, on this and other accounts, soon became the object of popular dislike and ridicule, and revolts against him broke out in various quarters, several of which were put down and punished severely. Galba thought of strengthening himself by adopting Piso Licinianus, a young patrician of considerable personal merit, as Caesar and his successor; upon which Otho, who had expected to be the object of his choice, formed a conspiracy among the Guards, who proclaimed him emperor. Galba, unable to walk, caused himself to be carried in a litter, hoping to suppress the mutiny; but, at the appearance of Otho's armed partisans, his followers left him, and even the litter-bearers threw the old man down and ran away. Some of the legionaries came up and put Galba to death, after a reign of only seven months, counting from the time of Nero's death, A.D. 68. Galba was seventy-two years old when he was taken off. He was succeeded by Otho (Suet. *Galba;* Tac. *Hist.* i. 4 foll.; Dio Cass. lxiii. 29, lxiv. 1 foll.).

Coin of the Emperor Galba.

Galé (γαλῆ). Probably a species of weasel. See FAELIS.

Galea (κράνος, poet. κόρυς, πήληξ). A helmet, casque. The helmet was originally made of skin or leather, whence is supposed to have arisen its appellation, κυνέη, meaning properly a helmet of dog-skin, but applied to caps or helmets made of the hide of other animals, not necessarily worn as armour (ταυρείη, κτιδέη, Hom. *Il.* x. 258, 335; αἰγείη, *Od.* xxiv. 230; Herod. vii. 77; *galea lupina,* Propert. iv. 11, 19), and even to those which were entirely of bronze or iron (*Od.* xviii. 377). The leathern basis of the helmet was also very commonly strengthened and adorned by the addition of either bronze or gold (*Il.* xi. 352). Helmets which had a metallic basis were in Latin properly called *cassides* (Tac. *Germ.* 6), although the terms *galea* and *cassis* are often confounded. A casque (*cassis*) found at Pompeii is preserved in the collection at Goodrich Court in England. The perforations for the lining and exterior border are visible along its edge. Among the materials used for the lining of helmets were felt (πῖλος, *Il.* x. 265) and sponge (Aristot. *H. A.* v. 16).

Helmets. (From the collection at Goodrich Court.)

The helmet, especially that of skin or leather, was sometimes a mere cap conformed to the shape of the head, without either crest or any other ornament. In this state it was probably used in hunting (*galea venatoria,* C. Nep. *Dat.* iii. 2), and was called καταῖτυξ, in Latin *cudo.* The preceding illustration shows an example of it as worn by Diomede in a small Greek bronze, which is also in the collection at Goodrich Court. The additions by which the external appearance of the helmet was varied, and which served both for ornament and protection, were the following: (1) The φάλος, which was either single, double (ἀμφίφαλος, δίφαλος), or quadruple (τετράφαλος). It has been held that the φάλος was the projecting peak of the helmet. According to this

view, τετράφαλος is admittedly unintelligible, and it is certain that the φάλος was a ridge of metal, afterwards called κῶνος (Buttmann), which served as a support for the crest. Instances occur where there are two or more such ridges. In the illustration below, from a gem with the head of Athenê Parthenos, the φάλοι are represented by

Helmets. (From gems.)

a Sphinx and two Pegasi. (2) The helmet thus adorned was very commonly surmounted by the crest (*crista*, λόφος), which was often of horse-hair (ἱππουρις, ἱπποδάσεια, *hirsuta iuba*, Propert. iv. 11, 19), and made so as to look imposing and terrible. The helmet often had two or even three crests (cf. the illustration above with the head of Athenê, having a helmet with a triple crest). In the Roman army of later times the crest served not only for ornament, but also to distinguish the centurions (Veget. ii. 13). The annexed illustration from a part of a centurion's tomb, from Petronell, shows the transverse crest. (3) The two cheek-pieces (*bucculae*, παραγναθίδες), which were usually attached to the helmet by hinges, so as to be lifted up and down. They had buttons or ties at their extremities for fastening the helmet on the head. A strap passed under the wearer's chin, in the case of the Homeric helmet (*Il.* iii. 371), but apparently cheek-pieces were not movable. (4) The beaver, or visor, a peculiar form of which is supposed to have been the αὐλῶπις τρυφάλεια—i. e. the perforated beaver (Hom. *Il.* xi. 353). The gladiators wore helmets somewhat of this kind (Juv. viii. 203), and specimens of them, not unlike those worn in the Middle Ages, have been found at Pompeii. See the illustration to GLADIATORES.

Helmet. (Baumeister.)

Galēnus, CLAUDIUS (Κλαύδιος Γαληνός). A celebrated Greek physician, born at Pergamus about A.D. 131. His father gave him a liberal education. His anatomical and medical studies were commenced under Satyrus, a celebrated anatomist; Stratonicus, a disciple of the Hippocratic School; and Aeschrion, a follower of the Empirics. After the death of his father he travelled to Alexandria, at that time the most famous school of medicine in the world. His studies were so successfully pursued that he was publicly invited to return to his native country. At the age of thirty-four he settled at Rome, where his celebrity became so great from the success of his practice, and more especially from his great knowledge of anatomy, that he quickly drew upon himself the jealousy of all the Roman physicians. He became physician to the emperor Marcus Aurelius, and at the solicitation of many philosophers and men of rank, he commenced a course of lectures on anatomy; but the jealousy of his rivals quickly compelled him to discontinue them, and eventually to leave Rome altogether, being in daily fear of assassination. Many particulars of his life may be gathered from his own writings; nothing is known, however, about the period of his return home as well as that of his death. All that can be learned is merely that he was still living in the reign of Septimius Severus.

Galen was a most prolific writer. Though several of his works were destroyed in the conflagration of his dwelling, and others by the lapse of time, still the following productions of his now exist in print: (1) Eighty-three treatises, the genuineness of which is now well established. (2) Nineteen of rather doubtful origin. (3) Forty-five that are certainly spurious. (4) Nineteen fragments, more or less extensive in size. (5) Fifteen commentaries on the works of Hippocrates.

Among the productions of Galen that are of a philosophical character may be enumerated the following: A treatise against Favorinus; a dissertation on the opinions of Hippocrates and Plato; a commentary on the Timaeus of Plato, and several discourses on Dialectics. See Diels, *De Galeni Historia Philosopha* (Bonn, 1870).

Operative surgery is the department of his profession which is least indebted to him; and yet even here he has left some monuments of his boldness and ingenuity. He has described minutely an operation performed by him upon the chest of a young man, by which he perforated the breast-bone and laid bare the heart, in order to give vent to a collection of matter seated in the thorax. The subject of ulcers is handled by him very scientifically in his book *De Methodo Medendi* (Θεραπευτικὴ Μέθοδος). His commentaries on Hippocrates show his acquaintance with fractures and dislocations. The subject of hygiene (Ὑγιεινά) he treated at great length in a work consisting of six books. His treatise *De Facultate Alimentorum* (Περὶ Τροφῶν Δυνάμεως) contains very important observations on the nature of foods, and furnishes an exposition of his opinion on the subject of dietetics. Materia Medica and Pharmacy appear to have been the objects of his particular study, and both are handled by him in several of his works. His treatise *De Compositione Medicamentorum Secundum Locos* (Περὶ Συνθέσεως Φαρμάκων τῶν κατὰ Τόπους) contains a copious list of pharmaceutical preparations. Of all his works, none was long so much studied and commented upon as the one entitled *Ars Medica* (Τέχνη Ἰατρική), a general outline of medicine. In several works he gives an elaborate system of the arterial pulses, which, as usual with his doctrines, was taken up by all subsequent writers; and abridged expositions of it may be found in Philaretus, Paulus Aegineta, Actuarius, Rhazes, and Avicenna. The best edition of Galen is that of Kühn, 20 vols. (Leipzig, 1821–1833). See Daremberg, *Des Connaissances de Galien* (Paris, 1841); the epitome in English by Coxe (Philadelphia, 1846); Berdoe, *Origin and Growth of the Healing Art* (London, 1893); and the articles CHIRURGIA; MEDICINA.

Galeomyomachia (Γαλεομυομαχία). "The Battle of the Cats and Mice;" a poem written in the mock-heroic vein by a Greek monk, Theodorus Prodromus (q. v.), who lived in the twelfth century A.D. It is in the main imitated from the

pseudo-Homeric Batrachomyomachia (q. v.). An edition of it was published by Ilgen (Halle, 1796).

Galeōtae. See GALEUS.

Galepsus (Γαληψός) (1) A town in Macedonia, on the Toronaic Gulf (Herod. vii. 122). (2) A colony of Thasos, on the coast of Thrace (Thuc. iv. 107).

Galericŭlum. See GALERUS.

Galerius Maximiānus. See MAXIMIANUS.

Galerius Trachălus. See TRACHALUS.

Galērus or **Galērum**, dim. **Galericŭlum** (probably connected with *galea*, and so with γαλέη). Originally a cap of skin or fur, fitting close to the head, worn by rustics (Verg. *Moret.* 122), hunters (Grat. *Cyneg.* 340, where it is of badger-skin), gymnasts in the palaestra to keep the hair clean (Mart. xiv. 50), and by the old inhabitants of Latium instead of a helmet (Verg. *Aen.* vii. 688; cf. CUDO). For the galerus worn by various priests—e. g. the Pontifices Salii and Flamines and the *albogalerus* or *albus galerus* of the Dialis—see APEX. The word is also applied to a wig, the *empti capilli* of Ovid (*A. A.* iii. 165; cf. CALIENDRUM; COMA); worn not only from vanity or to conceal baldness (Suet. *Oth.* 12), but for the sake of disguise by profligates of both sexes in their nocturnal rambles (Juv. vi. 120, with the schol.); and on the stage as part of the make-up (Guhl and Koner, 5th ed. p. 762).

Galerus (Du Choul, *Castramet.* p. 100).

Galēsus. See GALAESUS.

Galeus (Γάλεος). That is "the lizard," son of Apollo and Themisto, from whom the GALEŌTAE, a family of Sicilian soothsayers, derived their origin. Their principal seat was Hybia.

Galgăcus. See CALGACUS in Appendix.

Galilaea (Γαλιλαία, from the Hebrew *galil*, "a circle" or "circuit"). A celebrated country of Palestine, forming the northern division. Iosephus (*Bell. Iud.* iii. 3) divides it into Upper and Lower, and he states that the limits of Galilee were, on the south, Samaris and Scythopolis to the flood of Jordan. It contained four tribes—Issachar, Zebulon, Naphthali, and Asher—a part also of Dan, and part of Peraea, or the country beyond Jordan. Upper Galilee was mountainous, and was called Galilee of the Gentiles from the heathen nations established there who were enabled, by the mountainous nature of the country, to maintain themselves against all invaders. Strabo enumerates among its inhabitants, Egyptians, Arabians, and Phœnicians. Lower Galilee, which contained the tribes of Zebulon and Asher, was adjacent to the Sea of Tiberias or Lake of Gennesareth. Galilee, according to Iosephus, was very populous, contained 204 cities and towns, and paid 200 talents in tribute. Its principal city was Caesarea Philippi. The inhabitants of Galilaea were very industrious, and, being bold and intrepid soldiers, they bravely resisted the nations around them. The Jews of Iudaea regarded them with much contempt. Their language was a corrupt and unpolished dialect of Syriac, with a mixture of other languages. It was probably this corrupt dialect that led to the detection of Peter as one of Christ's disciples (Mark, xiv. 70). The Saviour was called a Galilean (Matt. xxvi. 69), because he was brought up at Nazareth, a city of Galilaea; and as his apostles were mostly, if not all, natives of this province, they also are called Galileans and "men of Galilee" (Acts, i. 11). See Merrill, *Galilee in the Time of Christ* (2d ed. 1885).

Galinthias (Γαλινθιάς), or, in Latin, **Galanthis.** Daughter of Proetus of Thebes, and a friend of Alcmené. When Alcmené was on the point of giving birth to Heracles, and the Moerae and Ilithyae, at the request of Heré, were endeavouring to delay the birth, Galinthias suddenly rushed in with the false report that Alcmené had given birth to a son. The hostile goddesses were so surprised by this information that they dropped their arms. Thus the charm was broken and Alcmené was enabled to give birth to Heracles. The deluded goddesses avenged the deception practised upon them by metamorphosing Galinthias into a weasel (γαλῆ). Hecaté, however, took pity upon her and made her her attendant, and Heracles afterwards erected a sanctuary to her (Ovid, *Met.* ix. 306).

Galla. (1) The wife of Constantius, son of Constantius Chlorus. She was the mother of Gallus Caesar. (2) The second wife of Theodosius the Great. (3) PLACIDIA, daughter of the preceding by Theodosius. When Alaric took Rome in A.D. 410, she fell into his hands, and four years later was married by Ataulphus, king of the Goths. Upon his death she was returned to her country, and in 417 married Constantius III., by whom she had the emperor Valentinian III. During the minority of her son she was regent of the Western Empire, dying about the year 450. See Gibbon, *Decline and Fall*, chapters xxxi., xxxiii., xxxv.

Gallaecia (Καλλαικία). The country of the Gallaeci or Callaeci in the north of Spain, between the Astures and the Durius (Dio Cass. xxxvii. 53). Its inhabitants were some of the most uncivilized in Spain. They were defeated with great slaughter by D. Brutus, consul B.C. 138, who obtained in consequence the surname of Gallaecus.

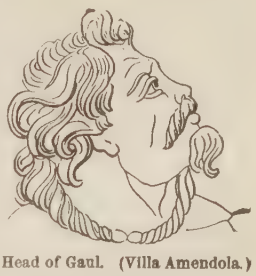
Gallery. See CAVEA; PORTICUS.

Galley. See NAVIS.

Galli. See CELTAE; GALLIA.

Galli (Γάλλοι, in post-classical authors only). The eunuch priests of Cybelé or the Great Mother, whose worship, so far as it can be traced historically, had its original seat in Phrygia (Marmor Parium, *ap.* C. Müller, *Fragm.* i. 544, where it is placed under the reign of Erichthonius, king of Attica, B.C. 1506; Strabo, x. pp. 469, 472, xii. p. 567, where the names Κυβέλη, Δινδυμήνη, etc., are said to be derived from Phrygian localities; Κυβέλην ἀπὸ τοῦ τόπου, Diod. iii. 58). The Phrygian language was Indo-European, as appears from the extant inscriptions (Rawlinson's *Herod.* vol. i. App. 666); and the worship of Cybelé has been thought to be also Indo-European; Avestan names have been traced in it — Berecyntus = *Berezat;* Corybantes = *Gereuantó* (Labatut in *Rev. Numism. Belge*, 1868, p. 286). Other names, however, are of distinctly Semitic affinities; Rhea perhaps = the Babylonian Ri (Mulita or Mylitta), and Nana more certainly = the Babylonian *Nana*, modern Syrian *Nani*.

The origin of the name of Galli is not absolutely certain, but it was doubtless a native Phrygian word; of course it has nothing to do with the Galatae or Gauls, whose first appearance in these countries dates only from B.C. 278. There is no reason to reject the tradition which derives



it from a river in Phrygia; there were two small rivers called Gallus, both tributaries of the Sangarius, and the one which flows by Pessinus must be meant, whose water was fabled to cause this particular form of religious madness (Ovid, *Fast.* iv. 363; Plin. *H. N.* v. § 147, xi. § 261, xxxi. § 9). A form *gallantes*, as if from *gallare*, "to rave like a priest of Cybelé," is cited from Varro (*ap.* Non. p. 119, 5). In their wild, enthusiastic, and boisterous rites the Galli recalled the legends of the Corybantes (q. v.). According to an ancient custom, they were always castrated (*spadones, semimares, semiviri, nec viri nec feminae*), and it would seem that, impelled by religious enthusiasm, they performed this operation on themselves (Ovid, *Fast.* iv. 237; Plin. *H. N.* xi. § 261, xxxv. § 165; Martial, iii. 81, xi. 74; Juv. vi. 512 foll.; Catull. *Attis*). See RHEA.

Gallia. An extensive and populous country of Europe, bounded on the west by the Atlantic, on the north by the Insula Batavorum and part of the Rhenus (Rhine), on the east by the Rhenus and the Alps, and on the south by the Pyrenees. The greatest breadth was 600 English miles, but much diminished towards each extremity. Its length was from 480 to 620 miles. It was therefore more extensive than modern France before the Revolution, though inferior to the Empire under Napoleon I. Gaul was originally divided among the three great peoples—the Belgae, the Celtae, and the Aquitani. The Romans called the inhabitants of this country by one general name, Galli, while the Greeks styled them Κελταί. (See CELTAE.) The Greeks called the country itself Galatia (Γαλατία) and Celtica (Κελτική). Of the three great nations of Gaul, the Celtae were the most extensive and the Belgae the bravest. The Belgae and Celtae were of like blood, though differing in temperament, the Belgae being more staid and less impulsive and vivacious, while the Celtae showed the mercurial disposition of the modern French. The Aquitani, on the south, were of a different (Iberian) stock, unlike the rest of the Gauls both physically and temperamentally, being dark of complexion, less sociable, and somewhat less intelligent, but more tenacious of purpose and enduring—traits which still mark the inhabitants of the Basque provinces to-day. The Celtae extended from the Sequana (Seine) in the north to the Garumna (Garonne) in the south. Above the Celtae lay the Belgae, between the Seine and the Lower Rhine. They were intermixed with Germanic tribes. The Aquitani lay between the Garonne and the Pyrenees, and were intermingled with Spanish tribes. These three great divisions, however, were subsequently altered by Augustus (B.C. 27), who extended AQUITANIA into Celtica as far as the Liger or Loire; the remainder of Gallia Celtica above the Liger was called GALLIA LUGDUNENSIS, from the colony of Lugdunum (Lyons); while the territory towards the Rhine was added to the Belgae under the title of GALLIA BELGĬCA. Lastly, the south of Gaul, which, from having been the first provinces possessed by the Romans, had been styled Gallia Provincia, was distinguished by the name of NARBONENSIS, from the city of Narbo (Narbonne). This province was also anciently called Gallia Bracata, from the *bracae* or trousers worn by the inhabitants; while Gallia Celtica was styled Comata, from the long hair (*coma*) worn by the natives. These four great provinces, in later ages, were called the four Gauls, and subdivided into seventeen others.

As far back as one can penetrate into the history of the West, we find the race of the Gauls occupying that part of the continent comprehended between the Rhine, the Alps, the Mediterranean, the Pyrenees, and the Ocean, as well as the two great islands situated to the northwest, opposite the mouths of the Rhine and Seine. Of these two islands, the one nearer the continent was called *Alb-in*, "White Island" (cf. the remark of Pliny, *H. N.* xiv. 16, *Albion insula, sic dicta ab albis rupibus quas mare alluit*"). The other island bore the name of *Er-in*, "Isle of the West" (from *Eir* or *Iar*, "the west"). The continental territory received the special appellation of *Galltachd*, "Land of the Gauls." From this word the Greeks formed Γαλατία, and from this latter the generic name of Γαλάται. The Romans proceeded by an inverse method, and from the generic term Galli deduced the geographical denomination Gallia.

The population of Gaul was divided into families or tribes, forming among themselves many distinct communities or nations. Oftentimes they united together, in their turn, and formed confederations or leagues. Such were the confederations of the Celtae, Aedui, Armorici, Arverni, etc.

The Gaul was robust and of tall stature. His complexion was fair, his eyes blue, his hair of a blond or chestnut colour, to which he endeavoured to give a red or flaming hue by certain applications (Pliny, *H. N.* xxviii. 12; Mart. viii. 33). The hair itself was worn long (Diod. Sic. v. 28). The beard was allowed to grow by the people at large; the nobles, on the other hand, removed it from the face, excepting the upper lip, where they wore thick moustaches. The attire common to all the tribes consisted of trousers or *bracae* (Armoric). These were of striped materials. They wore also a short cloak, having sleeves, likewise formed of striped materials, and descending to the middle of the thigh. Over this was thrown a short cloak or *sagum* (*sae*, Armoric; cf. Isidor. *Orig.* xix. 24), striped like the shirt, or else adorned with flowers and other ornamental work, and, among the rich, superbly embroidered with silver and gold (Verg. *Aen.* viii. 660; Sil. Ital. iv. 152; Diod. Sic. v. 28). It covered the back and shoulders, and was secured under the chin by a clasp of metal. The lower classes, however, wore in place of it the skin of some animal, or else a thick and coarse woollen covering. The offensive arms of the nation were, at first, hatchets and knives of stone; arrows pointed with flint or shells; clubs; spears hardened in the fire, and named *gaïs* (in Latin *gaesum*, in Greek γαισόν and γαισός); and others called *cateïa*, which they hurled while on fire against the enemy. Foreign traffic, however, made them acquainted, in process of time, with arms of iron, as well as with the art of manufacturing them for themselves from the copper and iron of their own mines. Among the arms of metal which thenceforward came into use may be mentioned the long sabre of iron or copper and a pike resembling the halberd, the wound in-

Head of Gaul. (Villa Amendola.)

flicted by which was considered mortal. For a long time the Transalpine as well as the Cisalpine warriors of the Gallic race had rejected the use of defensive armour as inconsistent with true courage, and a point of honour had induced them even to strip off their vestments and engage naked with the foe. This prejudice, however, was almost entirely effaced in the second century when the military costume of Rome and Greece formed a singular combination with the ancient array of the Gaul. To a helmet of metal, of greater or less value according to the fortune of the warrior, were attached the horns of an elk, buffalo, or stag; while for the rich there was a headpiece representing some bird or savage beast, the whole being surmounted by a bunch of feathers, which gave to the warrior a gigantic appearance (Diod. Sic. v. 28). Similar figures were attached to their bucklers, which were long, quadrangular, and painted with the brightest colours. A buckler and casque after this model, a cuirass of wrought metal, after the Greek and Roman fashion, or a coat of mail formed of iron rings, after the manner of Gaul (Varr. *L. L.* iv. 20); an enormous sabre hanging on the right thigh, and suspended by chains of iron or brass from a belt glittering with gold and silver, and adorned with coral; a collar, bracelets, rings of gold around the arm and on the middle finger (Pliny, xxxiii. 1); trousers; a *sagum* hanging from the shoulder; and long red moustaches — such was the Gallic warrior.

Hardy, daring, impetuous, born, as it were, for martial achievements, the Gallic race possessed, at the same time, an ingenious and active turn of mind. They were not slow in equalling their Phœnician and Grecian instructors in the art of mining. The same superiority to which the Spaniards had attained in tempering steel, the Gauls acquired in the preparation of brass. Antiquity assigns to them the honour of various useful inventions, which had hitherto escaped the earlier civilization of the East and of Italy. The process of tinning was discovered by the Bituriges; that of veneering by the Aedui (Pliny, *H. N.* xxxiv. 17). The dyes, too, of Gaul were not without reputation (Pliny, viii. 48). In agriculture, the wheel-plough and boulter were Gallic discoveries (Pliny, *H. N.* xviii. 18; xviii. 11). With the Gauls, too, originated the employment of marl for enriching the soil (Pliny, xviii. 6 foll.). The cheeses of Mount Lozère, among the Gabali; those of Nemausus; and two kinds made among the Alps, became, in time, much sought after by the inhabitants of Italy (Pliny, xi. 49). The Gauls also prepared various kinds of fermented drinks, such as barley-beer, called *cervisia* (Pliny, xxii. 15); and likewise another kind of beer, made from corn, and in which honey, cumin, and other ingredients were mingled. (See CERVISIA.) The froth of beer was employed as a means for leavening bread: it was used also as a cosmetic, and the Gallic women frequently applied it to the face, under the belief that it imparted a freshness to the complexion (Pliny, xxii. 25). It was from the Greeks of Massilia that they learned the process of making wine, as well as the culture of the grape.

The dwellings of the Gauls, spacious and of a round form, were constructed of posts and hurdles, and covered with clay both within and without; a large roof, composed of oak-shingles and stubble, or of straw cut and kneaded with clay, covered the whole (Vitruv. i. 1). Gaul contained both open villages and cities: the latter, surrounded by walls, were defended by a system of fortification, of which we find no example elsewhere. Caesar gives a description of these ramparts (*B. G.* vii. 23). To the

Restoration of Wall of Murseints. (Duruy.)

north and east, among the more savage tribes, there were no cities properly so called; the inhabitants resided for the most part in large enclosures, formed of trunks of trees.

It was, as has been already remarked, in war, and in the arts applicable to war, that the genius of the Gauls displayed itself to most advantage. This people made war a regular profession, while the management of arms became their favourite employment. To have a fine martial mien, to retain for a long period strength and agility of body, was not only a point of honour for individuals, but a duty to the State. At regular intervals, the young men went to measure their size by a girdle deposited with the chief of the village, and those whose corpulence exceeded the official standard were severely reprimanded as idle and intemperate persons, and were, besides, punished with a heavy fine. In preparing for foreign expeditions, a chieftain of acknowledged valour generally formed a small army around him, consisting, for the most part, of adventurers and volunteers who had flocked to his standard; these were to share with him whatever booty might be obtained. In internal wars, however, or defensive ones of any importance, levies of men were forcibly made; and severe punishments were inflicted on the refractory, such as the loss of noses, ears, an eye, or some one of the limbs (Caes. *B. G.* vi. 4). If any dangerous crisis arrived, the supreme chief convened an armed council (Caes. *B. G.* v. 66). All persons able to bear arms were compelled to assemble at the place and day indicated, for the purpose of deliberating on the situation of the country, of electing a chief, and of discussing the plan of campaign. It was expressly provided by law that the individual who came last to the place of rendezvous should be cruelly tortured in the presence of the assembled multitude (Caes. *B. G.* v. 66). This form of assembly was, however, of rare occurrence, and was only resorted to in the last extremity. Neither infirmities nor age freed the Gallic noble from the necessity of accepting or seeking military commands. Oftentimes were seen, at the head of the forces, chieftains hoary and almost enfeebled by age, who could even scarcely retain their seats on the horse which supported them (Hirt. *B. G.* viii. 12). This people would have believed that they dishonoured their aged warriors by making them die elsewhere than on the field of battle.

To the ferocity of the attack and to the violence of the first shock were reduced nearly all the military tactics of the Gauls on level ground and in pitched battle. In the mountainous regions, on the other hand, and especially in the vast and thick forests of the North, war had a close resemblance to the chase: it was prosecuted in small parties, by ambuscades and all sorts of stratagems; and dogs, trained up to pursue men, tracked out and aided in conquering the foe (Silius Ital. x. 77; Ovid, *Met.* i. 533; Mart. iii. 47). A Gallic army generally carried along with it a multitude of chariots for the baggage, which embarrassed its march (Hirt. *B. G.* viii. 14; Caes. *B. G.* i. 51). Each warrior bore a bundle of straw, put up like a sack, on which he was accustomed to sit in the encampment, or even in the line of battle while waiting the signal to engage (Hirt. *B. G.* viii. 15).

The Gauls, like other nations, for a long period were in the habit of killing their prisoners of war, either by crucifixion, or by tying them to trees as a mark for their weapons, or by consigning them to the flames amid cruel rites. Long prior, however, to the second century of our era, these barbarous practices were laid aside, and the captives of transalpine nations had nothing to fear but servitude. Another custom, not less savage, that of cutting off the heads of their slain enemies on the field of battle, was not slower in disappearing. It was long a settled rule in all wars that the victorious army should possess itself of such trophies as these; the common soldiers fixed them on the points of their spears, the horsemen wore them suspended by the hair from their horses; and in this way the conquerors returned to their homes, making the air resound with their triumphal shouts. Each one then hastened to nail up these hideous testimonials of his valour to the gate of his dwelling; and, as the same thing was done with the trophies of the chase, a Gallic village bore a strong resemblance to a charnel-house. Carefully embalmed and saturated with oil of cedar, the heads of hostile chieftains and of famous

Tomb of Gallic Chief. (Musée de Cluny, Paris.)

warriors were deposited in large coffers, and arranged by their possessor according to the date of acquisition. Sometimes the skull, cleansed and set in gold or silver, served as a cup in the temples, or circulated in the festivities of the banquet, and the guests drank out of it to the glory of the victor and the triumphs of their country. These fierce and brutal manners prevailed for a long period over the whole of Gaul. Civilization, in its onward march, abolished them by degrees, until, at the commencement of the second century, they were confined to the savage tribes of the North and West. It was there that Posidonius found them still existing in all their vigour, when the sight of so many human heads, disfigured by outrages and blackened by the air and the rain, roused in him mingled emotions of horror and disgust.

The Gauls affected, as more manly in its character, a strong and rough tone of voice (Diod. Sic. v. 31). They conversed but little, and by means of short and concise phrases, which the constant use of metaphors and hyperboles rendered obscure and almost unintelligible to strangers. But, when once animated by dispute, or incited by something that was calculated to interest or arouse, at the head of armies or in political assemblies, they expressed themselves with copiousness and fluency.

The Gauls, in general, were accused of drinking to excess—a habit which took its rise both in the grossness of their manners and in the wants of a cold and humid climate. The Massilian and Italian traders were not slow in furnishing the necessary means for the indulgence of this vice. Cargoes of wine found their way, by means of the navigable rivers, into the very heart of the country. Drink was also conveyed over land in wagons (Diod. Sic. v. 26). About the first century, however, of our era, drunkenness began gradually to disappear from among the higher classes, and to be confined to the lower orders, at least with the nations of the South and East.

Milk and the flesh of animals, especially that of swine, formed the principal food of the Gauls. A curious account of their repasts is given by Posidonius (*ap.* Athen. iv. p. 13). After an excessive indulgence in the pleasures of the banquet, they loved to seize their arms and defy each other to the combat. At first it was only a sportive encounter; but, if either party chanced to be wounded, passion got so far the better of them that, unless separated by their friends, they continued to engage till one or the other of them was slain. So far, indeed, did they carry their contempt of death and their ostentatious display of courage, that they might be seen agreeing, for a certain sum of money or for so many measures of wine, to let themselves be slain by others; mounted on some elevated place, they distributed the liquor or gold among their most intimate friends, and then reclining on their bucklers, presented their throats to the sword (Posidon. l. c.). Others made it a point of honour not to retire from their dwellings when falling in upon them, nor from the flames, nor from the tides of ocean and the inundations of rivers; and it is to this foolish daring that the Gauls owed their fabulous renown of being an impious race, who lived in open war with nature.

The working of mines, and certain monopolies enjoyed by the heads of tribes, had placed in the hands of some individuals enormous capital; hence the reputation for opulence which Gaul enjoyed at the period of the Roman invasion, and even still later. It was the Peru of the ancient world. The riches of Gaul even passed into a proverb (Ioseph. ii. 28; Plut. *Caes.*; Suet. *Caes.*, etc.). Posidonius makes mention of a certain Luern or Luer (Λουέρνιος, Posidon. *ap.* Athen. iv. p. 13; Λουέριος, Strab. 191), king of the Arverni, who caused a shower of gold and silver to descend upon the crowd as often as he appeared in public. He also gave entertainments in a rude style of barbarian magnificence; a large space of ground was enclosed for the purpose, and cisterns were dug in it, which were filled with wine, mead, and beer.

Properly speaking, there was no domestic union

or family intercourse among the Gallic nations; the women were held in dependence and servitude. The husband had the power of life and death over his wife as well as over his offspring. When a person of high rank suddenly died, and the cause of his death was not clearly ascertained, his wife or wives (for polygamy was practised among the rich) were seized and put to the torture; if the least suspicion was excited of their having been privy to his death, the victims perished in the midst of the flames, after the most frightful punishments (Caes. *B. G.* vi. 19). One custom, however, shows that even then the condition of women had undergone some degree of melioration: this was the community of goods between husband and wife. The children remained under the care of their mother until the age of puberty (Caes. *B. G.* vi. 18).

Among some nations of Belgic Gaul, where the Rhine was an object of superstitious adoration, a curious custom prevailed; the river was made the means of testing the fidelity of the wives. When a husband had doubts respecting its paternity, he took the new-born infant, placed it on a board, and exposed it to the current of the stream. If the plank and its helpless burden floated safely upon the waters, the result was deemed favourable, and all the father's suspicions were dissipated. If, on the contrary, the plank began to sink, the infant perished, and the parent's suspicions were confirmed.

Government and Religion.—Two privileged orders ruled in Gaul over the rest of the population—the priests and the nobles. The people at large were divided into two classes—the inhabitants of the country and the residents of cities. The former of these constituted the tribes or clients appertaining to noble families. The client cultivated his patron's domains, followed his standard in war, and was bound to defend him with his life. To abandon his patron in the hour of peril was regarded as the blackest of crimes. The residents of cities, on the other hand, found themselves beyond the control of this system of clientship, and, consequently, enjoyed greater freedom. Below the mass of the people were the slaves, who do not appear, however, to have been at any time very numerous.

When we examine attentively the character of the facts relative to the religious belief of Gaul, we are led to recognize the existence of two classes of ideas, two systems of symbols and superstitions entirely distinct from each other; in a word, two religions—one, altogether reasonable in its character, based on the personification of natural phenomena and recalling by its forms much of the polytheism of Greece; the other, founded on a material, metaphysical, mysterious, and sacerdotal pantheism, presenting at least a superficial conformity with the religions of the East. This latter has received the name of Druidism, from the Druids, who were its first founders and priests; the other system has been called the Gallic Polytheism. (See Druidae.) Druidism was said to have been established in Gaul by Heus or Hesus, a warrior and law-giver who was subsequently deified. The polytheistic system which prevailed, more especially in Southern Gaul, was fundamentally like that of the Greeks and Romans themselves. In its list of deities were Tarann, the god of thunder, the Gallic Zeus, though in parts of Gaul Hesus held this supremacy; Pennin, the god of the mountains (Livy, xxi. 38); Bel or Belew, the sun-god, the Gallic Apollo (Auson. *Carm.* 2); Teutates, the Gallic Hermes, presiding over the useful arts and commerce (Minuc. Fel. 30; Lactant. *Div. Inst.* i. 21); Ogmius, represented as leading a train of captives by chains of gold and amber proceeding from his mouth, typifying the power of eloquence; and Arduenna, the goddess of the forests. These deities, as was natural, were identified by Caesar with the gods of the Roman system (Caes. *B. G.* vi. 7).

The God Tarann. (Gadoz, *Relig. Gaul.* pl. i.)

This resemblance between the two systems of religion changed into identity when Gaul, subjected to the dominion of Rome, had felt for some years the influence of Roman ideas. It was then that the Gallic polytheism, honoured and favoured by the emperors, ended its career by becoming totally merged in the polytheism of Italy; while, on the other hand, Druidism, its mysteries, its doctrine, and its priesthood, were utterly proscribed. See Druidae.

General History.—The history of Gaul divides itself naturally into four periods. The first of these comprises the movements of the Gallic tribes while yet in their nomadic state. None of the races of the West ever passed through a more agitated or brilliant career. Their course embraced Europe, Asia, and Africa; their name is recorded with terror in the annals of almost every nation. They burned Rome; they wrested Macedonia from the veteran legions of Alexander; they forced Thermopylae and pillaged Delphi; they then proceeded to pitch their tents on the plains of the Troad, in the broad parks of Miletus, on the borders of the Sangarius, and those of the Nile. They besieged Carthage, menaced Memphis,

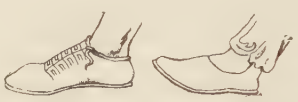
and numbered among their tributaries the most powerful monarchs of the East; they founded in Upper Italy a powerful empire, and in the bosom of Phrygia they reared another—Galatia, which for a long time exercised its sway over the whole of Lower Asia. See GALATIA.

During the Second Period—that of their sedentary state—we see the gradual development of social, religious, and political institutions, conformable to their peculiar character as a people; institutions original in their nature, and a civilization full of movement and of life, of which Transalpine Gaul offers the purest and most complete model. One might say, in following the animated scenes of this picture, that the theocracy of India, the feudal system of the Middle Ages, and the Athenian democracy had met on the same soil for the purpose of contending with each other and reigning by turns. Soon this civilization undergoes a change; foreign elements are introduced, brought in by commerce, by the relations of neighbourhood, by reaction from subjugated nations. Hence arose and multiplied a variety of social combinations. In Italy it is the Roman influence that exerts itself on the manners and institutions of the Gauls; in the south of Gaul it is that of the Massiliots; while in Phrygia one finds a most singular compound of Gallic, Grecian, and Phrygian civilization. To this succeeds the Third Period in the history of the Gallic race—that of national struggles and subjugation. By a singular coincidence, it is always by the Roman sword that the power of the Gallic tribes is destined to fall; in proportion as the Roman dominion extends, that of the Gauls recedes and declines. It would seem, indeed, that the victors and the vanquished, in the battle on the banks of the Allia, followed each other over the whole earth to decide the ancient quarrel of the Capitol. In Italy, the Cisalpine Gauls were reduced, but only after two centuries of obstinate resistance. When the rest of Asia had submitted to the yoke, the Galatae still defended against Rome the independence of the East. Gaul eventually fell, but through complete exhaustion, after a century of partial conflicts and nine years of general war under Caesar. Finally, the names of Caractacus and Galgacus shed a splendour on the last and ineffectual efforts of Keltic freedom. It is everywhere an unequal conflict between ardent and undisciplined valour on the one hand, and cool and steady perseverance on the other. The Fourth Period comprehends the organization of Gaul into a Roman province, and the gradual assimilation of transalpine manners to the customs and institutions of Italy—a work commenced by Augustus and completed by Claudius. See Thierry, *Histoire des Gaulois* (1827, last ed. 1872); the *Recueil des Historiens des Gaules et de la France*, edited by Bouquet and others, 26 vols. (1738–1885); Marin de Tyr, *La France avant César* (Paris, 1865); De la Forte Maison, *Les Francs* (Paris, 1868); Godwin, *Hist. of France*, vol. i. (New York, 1860), the best account of ancient Gaul in the English language; Martin, *Histoire de France* (4th ed. 1865); Fauriel, *Histoire de la Gaule Méridionale* (Paris, 1836); Coulanges, *Histoire des Institutiones Politiques de l'Ancienne France* (Paris, 1877); and the authors cited in the articles CELTAE and DRUIDAE (q. v.).

Gallia Bracāta. See GALLIA.

Gallia Cisalpīna. "Gaul this side of the Alps," with reference to Rome, a name given to the northern part of Italy, as occupied by the Gallic tribes which had poured over the Alps into this extensive tract of country. It is also called GALLIA CITERIOR. Livy assigns to these migrations of the Gauls as early a date as B.C. 600. Having securely established themselves in their new possessions, they proceeded to make further inroads into various parts of Italy, and thus came into contact with the forces of Rome. More than two hundred years had elapsed from the time of their first invasion, when they totally defeated the Roman army on the banks of the Allia, and became masters of Rome itself. The defence of the Capitol and the exploits of Camillus (Livy, v. 47 foll.), or, rather, if Polybius be correct (ii. 18), the gold of the vanquished and the dangers which threatened the Gauls at home, preserved the State. From that time, the Gauls, though they continued by frequent incursions to threaten and even to ravage the territory of Rome, could make no impression on that power. Though leagued with the Samnites and Etruscans, they were almost always unsuccessful. Defeated at Sentinum in Umbria, near the Lake Vadimonis in Etruria, and in a still more decisive action near the port of Telamo in the same province (Polyb. ii. 19 foll.), they soon found themselves forced to contend, not for conquest, but for existence. The same ill success, however, attended their efforts in their own territory. The progress of the Roman arms was irresistible; the Gauls were beaten back from the Adriatic to the Po, from the Po to the Alps, and soon beheld Roman colonies established and flourishing in many of the towns which had so lately been theirs. Notwithstanding these successive disasters, their spirit, though curbed, was still unsubdued; and when the enterprise of Hannibal afforded them an opportunity of retrieving their losses and wreaking their vengeance on the foe, they eagerly embraced it. It is to their zealous co-operation that Polybius ascribes in a great degree the primary success of that expedition. By the efficient aid which they afforded Hannibal, he was enabled to commence operations immediately after he had set foot in Italy, and to follow up his early success with promptitude and vigour (Polyb. iii. 66). As long as this great commander maintained his ground and gave employment to all the forces of the enemy, the Gauls remained unmolested, and enjoyed their former freedom, without being much burdened by a war which was waged at a considerable distance from their borders; but when the tide of success had again changed in favour of Rome and the defeat of Hasdrubal, together with other disasters, had paralyzed the efforts of Carthage, they once more saw their frontiers menaced; Gaul still offered some resistance, even after Carthage itself had been obliged to sue for peace; but it was weak and unavailing; and about twelve years after the termination of the Second Punic War, it was brought under entire subjection and became a Roman province. Under this condition it continued to receive various accessions of territory as the Romans extended their dominions towards the Alps, till it comprised the whole of that portion of Italy which lies between those mountains and the rivers Magra and Rubicon. It was sometimes known by the name of Gallia Togata (Mela, ii. 4; Plin. iii. 14), to distinguish it from Transalpine Gaul, to which the name of Gal-

lia Comata was applied (Cic. *Phil.* viii. 9). The epithet Togata alludes to the rights of citizenship conferred on the natives of the country. The towns of Cisalpine Gaul obtained the privileges of Latin cities, and, consequently, the right of wearing the Roman toga, by a law of Pompeius Strabo (Ascon. *Com. in Or. in Pison.* p. 490), about B.C. 88.



According to Polybius, Cisalpine Gaul was included in the figure of a triangle, which had the Alps and Apennines for two of its sides, and the Adriatic, as far as the city of Sena Gallica, for the base. This is, however, but a rough sketch. (See ITALIA.) Polybius describes the country as abounding in wine, corn, and every kind of grain, and in fine wool. Herds of swine, both for public and private supply, were bred in its forests; and such was the abundance of provisions of every kind that travellers when at an inn did not find it necessary to agree on the price of any article which they required, but paid so much for the whole amount of what was furnished them; and this charge, at the highest, did not exceed half a Roman *as* (Polyb. ii. 15).

Gallia Comāta. See GALLIA.

Gallia Togāta. See GALLIA CISALPINA.

Gallia Transalpīna. A name given to Gaul Proper, to distinguish it from Gallia Cisalpina.

Gallĭcae. Gallic shoes, the French *galoches*, English *goloshes*. They were low shoes, not reaching quite so high as the ankle, had one or more thick soles, and small upper leather, which was entirely open over the front of the instep, like the modern golosh and the right-hand figure in the illustration; or laced in front, and fastened by a ligature round the top, as in the left-hand example; whence they are classed among the *soleae* by the Latin writers, to distinguish them from the regular *calcei*, which were close-fitting high-lows that completely enveloped the foot and ankle. They were partially adopted at Rome before the age of Cicero, and were worn with the *lacerna;* but such a style of dress was regarded as indecorous and anti-national (Cic. *Phil.* ii. 30; Gell. xiii. 21). Under the Empire they came into more common use, and were made for all classes.

Gallicae. (From a sarcophagus, Villa Amendola, Rome.)

Gallĭēnus, PUBLIUS LICINIUS VALERIANUS EGNATIUS. A son of the emperor Valerian, made Caesar and colleague to his father in A.D. 253. He defeated, in a great battle near Mediolanum (Milan), the Alemanni and other northern tribes which had made an irruption into Upper Italy, and gave evidence on that occasion of his personal bravery and abilities. He was also well-informed in literature, and was both an orator and a poet, winning some distinction by an epithalamium. When Valerian was taken prisoner by the Persians, A.D. 260, Gallienus took the reins of government, and was acknowledged as Augustus. He appears to have then given himself up to debauchery and the company of profligate persons, neglecting the interests of the Empire, and taking no pains to effect the release of his father from the hard captivity in which he died. The barbarians attacked the Empire on every side, revolts broke out in various provinces, where several commanders assumed the title of emperor, while Gallienus was loitering at Rome with his favourites. Yet now and then he seemed to awaken from his torpor at the news of the advance of the invaders; and, putting himself at the head of the legions, he defeated Ingenuus, who had usurped the imperial title in Illyricum. Gallienus disgraced his victory by horrible cruelties. Mean-

Gallienus.

time Probus, Aurelianus, and other able commanders were strenuously supporting the honour of the Roman arms in the East, where Odenatus of Palmyra acted as a useful ally to the Romans against the Persians. Usurpers arose in Egypt, in the Gauls, in Thrace, in almost every province of the Empire, from which circumstance this period has been styled the Reign of the Thirty Tyrants. At last Aureolus, a man of obscure birth, some say a Dacian shepherd originally, but a brave soldier, was proclaimed emperor by the troops in Illyricum, entered Italy, took possession of Mediolanum, and even marched against Rome while Gallienus was absent. Gallienus returned quickly, repulsed Aureolus, and defeated him in a great battle, near the Addua, after which the usurper shut himself up in Mediolanum. Here he was besieged by Gallienus; but, during the siege (A.D. 268), the emperor was murdered by conspirators (Aurel. Vict. 33; Eutrop. ix. 8; Trebell. Poll. *Gallien.*, Zonaras, xii. 24 foll.). The reign of Gallienus is memorable for the plague that swept over the Empire. During its height, it is said that there were 5000 deaths daily in the city of Rome; while the population of Alexandria was diminished nearly two thirds. The plague was followed by a general famine.

Gallīna. A fowl; a chicken. Of the different species of domestic fowls, the most important were *gallinae*, which were divided into three classes: (*a*) *gallinae villaticae*, the common chicken; (*b*) *gallinae Africanae* or *Numidicae*, the same probably with the μελεαγρίδες of the Greeks; and (*c*) *gallinae rusticae*. The last were found in great abundance in the Insula Gallinaria, but it is so difficult to determine from the descriptions transmitted to us what they really were, that it is uncertain whether they ought to be regarded as pheasants, as red-legged partridges, as wood-grouse, or as some species of game different from any of these. The *Africanae*, always scarce and dear, were treated almost exactly in the same manner as peacocks, and never became of importance to the farmer. The *rusticae* are little spoken of except as objects

of curiosity, and Columella declares that they would not breed in confinement.

Among the breeds celebrated for fighting were the Tanagrian, the Rhodian, and the Chalcidian; but these were not the most profitable for the market. The points of a good barn-yard fowl are minutely described by Varro, Columella, and Palladius. Some were permitted to roam about (*vagae*) during the day, and pick up what they could, but the greater number were constantly shut up (*clausae*) in a poultry-yard (*gallinarium*, ὀρνιθοβοσκεῖον), which was an enclosed court (*saeptum*) with a warm aspect, strewed with sand or ashes wherein they might burrow, and covered over with a net. It contained hen-houses (*caveae*), to which they retired at night and roosted upon poles stretched across (*perticae*) for their convenience, nests (*cubilia*) for the laying hens being constructed along the walls. The whole establishment was under the control of a poultryman (*aviarius custos* or *curator gallinarius*).

Chickens, when fattened for sale, were shut up in dark, narrow cribs, light and motion being unfavourable to the process; or each bird was swung separately in a basket, with a small hole at each end, one for the head, the other for the rump, and bedded upon the softest hay or chaff, but so cramped in space that it could not turn round. In this state it was crammed with wheat, linseed, barley-meal kneaded with water into small lumps (*turundae*), and other farinaceous food, the operation requiring from twenty to twenty-five days (Varr. iii. 9; Colum. viii. 2, etc., 12; Plin. *H. N.* x. § 46 foll.; Pallad. i. 27, 29).

Gallinaria. (1) An island off the coast of Liguria, celebrated for the number of its hens, whence its name (Varro, *R. R.* iii. 9, 17). (2) Silva, a forest of pine-trees near Cumae in Campania (Cic. *Ad Fam.* ix. 23).

Gallinarium (ὀρνιθοβοσκεῖον). A poultry-yard. See Gallina.

Gallio, Iunius. (1) A Roman rhetorician, the friend of the elder Seneca, whose son he adopted. He was put to death by Nero. (2) The son of the elder Seneca, adopted by the preceding.

Gallius, Quintus. A Roman who stood for the praetorship in B.C. 64. As a result of the election, he was accused of bribery by M. Calidius, and defended by Cicero in an oration of which only fragments remain. He was praetor in B.C. 63, and presided at the trial of C. Cornelius. His son, Q. Gallius, was praetor in B.C. 43, and was put to death by the Second Triumvirate.

Gallograecia. See Galatia.

Gallows. See Crux.

Gallus (Γάλλος). A river in Galatia, falling into the Sangarius, near Pessinus. From it the priests of Cybelé are said to have obtained their name of Galli. See Galli; Rhea.

Gallus, Sulpicius. (1) A distinguished orator, was praetor B.C. 169, and consul 166, when he fought against the Ligurians. In 168 he served as tribune of the soldiers under Aemilius Paulus in Macedonia, and during this campaign predicted an eclipse of the moon. (2) C. Cornelius, was born at Forum Iulii (Fréjus) in Gaul, of poor parents, about B.C. 66. He went to Italy at an early age, and began his career as a poet when he was about twenty years of age. He had already attained considerable distinction at the time of Caesar's death, 44; and upon the arrival of Octavianus in Italy after that event, Gallus embraced his party, and soon acquired great influence with him. In 41 he was one of the triumvirs appointed by Octavianus to distribute lands in the north of Italy among his veterans, and on that occasion he afforded protection to the inhabitants of Mantua and to Vergil. He afterwards accompanied Octavianus to the battle of Actium, 31, and commanded a detachment of the army. After the battle, Gallus was sent with the army to Egypt, in pursuit of Antony; and when Egypt was made a Roman province, Octavianus appointed Gallus the first prefect of the province. He remained in Egypt for nearly four years; but he incurred at length the enmity of Octavianus, though the exact nature of his offence is uncertain. According to some accounts he spoke of the emperor in an offensive and insulting manner; he erected numerous statues of himself in Egypt, and had his own exploits inscribed on the pyramids. The Senate deprived him of his estates, and sent him into exile; whereupon he put an end to his life by falling upon his own sword, B.C. 27. The intimate friendship existing between Gallus and the most eminent men of the time, as Asinius Pollio, Vergil, Varus, and Ovid, and the high praise they bestow upon him, prove that he was a man of great intellectual powers and acquirements. Ovid (*Trist.* iv. 10. 5) assigns to him the first place among the Roman elegiac poets; and we know that he wrote a collection of elegies in four books, the principal subject of which was his love of Lycoris. (See Vergil's Tenth Eclogue.) But all his productions have perished; for the four epigrams in the Latin Anthology attributed to Gallus could not have been written by a contemporary of Augustus. Gallus translated into Latin the poems of Euphorion of Chalcis, but this translation is also lost. Some critics attributed to him the poem *Ciris*, usually printed among the works of Vergil. See Völker, *De C. Galli Vita et Scriptis*, pt. i. (Bonn, 1840), pt. ii. (Elberfeld, 1844); A. Nicolas, *De la Vie et des Ouvrages de C. Gallus* (Paris, 1851). His story is made the basis of the well-known work of W. Becker on Roman antiquities. See Becker. (3) Trebonianus. A Roman emperor, who reigned A.D. 251–254. His full name was C. Vibius Trebonianus Gallus. He served under Decius in the campaign against the Goths, 251, and is said to have contributed by his treachery to the disastrous issue of the battle, which proved fatal to Decius and his son Herennius. Gallus was thereupon elected emperor, and Hostilianus, the surviving son of Decius, was nominated as his colleague. He purchased a peace of the Goths by allowing them to retain their plunder, and promising them a fixed annual tribute. In 253, the Goths again invaded the Roman Empire, but they were driven back by Aemilianus, whose troops proclaimed him emperor in Moesia. Aemilianus thereupon marched into Italy; and Gallus was put to death by his own soldiers, together with his son Volusianus, before any collision had taken place between the opposing armies. The name of Gallus is associated with nothing but cowardice and dishonour. In addition to the misery produced by the inroads of the barbarians during this reign, a deadly pestilence broke out in 252, and continued its ravages over every part of the Empire for fifteen years.

Gallus (*ἀλέκτωρ, ἀλεκτρυών*). The cock; a bird not mentioned in the earlier Greek writers, but found figured on the silver coins of Samothrace and Himera in the sixth century B.C. Athenaeus says that it was introduced into Greece from Persia. The cock was used by the Greeks in divination (see ALECTRYOMANTIA), and was carefully bred by both the Greeks and Romans for fighting. (See ALECTRYOMACHIA; VENATIONES.) The finest game-cocks were bred at Rhodes and Tanagra. The cock was sacred to Mars and to Aesculapius, Nox, and the Lares.

Gambling. See ALEA.

Gamelia (*γαμηλία*). A feast accompanied by offerings given by the father of a bridegroom or by the bridegroom himself to the members of his phratry, or rather to the *οἰκεῖοι* among the phratores, on which occasion the bride was introduced to and enrolled among the phratores (Harpocr. s. v. *ἡ εἰς τοὺς φράτορας εἰσαγωγὴ τῶν γυναικῶν*. Cf. *Etym. Mag.* p. 220, 50 foll.). Thus she became a sharer in her husband's *sacra*. This ceremony probably took place in the month of Gamelion (Mommsen, *Heortol.* p. 344). In Mommsen's opinion there is no difference in meaning between *ἡ γαμηλία* and *τὰ γαμήλια*.

Gamelion (Γαμηλιών). The seventh month of the Attic year, answering to the last half of January and the first half of February. Its earlier name was Ληναίων. See CALENDARIUM.

Games. See LUDI.

Gamŏri (*γάμοροι*). See GEOMORI.

Gamos (*γάμος*). See MATRIMONIUM.

Gandarĭdae (Γανδαρίδαι), **Gandarītae** (Γανδαρῖται), or **Gandărae** (Γανδάραι, Skt. Gandháras). An Indian people, in the middle of the Punjâb, between the rivers Acesines (Chenab) and Hydraotes (Ravee), whose king, at the time of Alexander's invasion, was a cousin and namesake of the celebrated Porus. From them the Afghan city of Kandahar gets its name.

Ganea. A low eating-house, generally used at Rome for immoral purposes. See CAUPONA.

Gangarĭdae (Γαγγαρίδαι). A people near the mouths of the Ganges. Ptolemy assigns them a capital, called Ganga Regia, on the western side of the Ganges. The Gangaridae were allies of the Prasii, who lay nearer the Indus towards the northwest. The united forces of these two nations awaited the army of Alexander on the other side of the Hyphasis; but report made them so formidable in numbers and valour that the wearied and alarmed Macedonians refused to cross the stream, in spite of all the efforts and remonstrances of their king (Justin, xii. 8; Q. Curt. ix. 2; Verg. *Georg.* iii. 27).

Ganges (Γάγγης, Ind. *Gangâ*). A famous river of India, which, in the language of Hindustan, is called Padda, and is also named Burra Gangâ, or the Great River, and Gangâ, or the river, by way of eminence; and hence the European name of the stream is derived. The Sanskrit name of the Ganges (Padda) signifies "foot," because the Brahmins, in the *Vishnu-Purana*, make the river to flow from the great toe of the left foot of Vishnu, the preserving deity. This mighty stream, together with the Brahmaputra, whose twin-sister it has been denominated, has its source in the vast mountains of Thibet. This river was unknown to Herodotus, as he does not mention it, though it became famous a century afterwards. Its source was for a long period involved in obscurity. A survey, however, was made by the Anglo-Indian government, and it was found to issue in a small stream, under the name of Bhagirathi, from under a mass of perpetual snow, accumulated on the southern side of the Himalayah Mountains. It is computed to be 1557 miles in length, and at five hundred miles from its mouth is, during the rainy season, four miles broad and sixty feet deep. Its principal tributaries are the Jumna, the Jahnavi, and the Brahmaputra. The whole number of streams which flow into it is eleven.

The name is also applied by the ancient writers to a large city on the Ganges at its great bend towards the east, perhaps the same as Allahabad. See INDIA.

Gangetĭcus Sinus (Κόλπος Γαγγητικός). Now the Bay of Bengal, into which the Ganges falls (Ptol. i. 13, § 4).

Gangra (Γάγγρα). A city of Paphlagonia, near the borders of Galatia. In the time of King Deiotarus (q. v.) it was a royal residence, and under the Empire, the capital of Paphlagonia.

Ganymēda (Γανυμήδα). See HEBÉ.

Ganymēdes (Γανυμήδης). The son of Tros, king of Dardania, brother of Ilus and Assaracus. According to Homer he was carried away by the gods for his beauty, to be the cup-bearer of Zeus, and one of the immortals. In the later legend he is carried away by Zeus himself in the shape of an eagle, or by the eagle of Zeus. To make amends to his father, Zeus presented him with four immortal horses for his chariot. Ganymedes was after-

Ganymedes and the Eagle. (Thorwaldsen.)

wards regarded as the genius of the sources of the Nile, and the astronomers made him into the constellation Aquarius. The rape of Ganymede was represented in a group by the sculptor Leochares (q. v.).

Gaol. See CARCER.

Garăma (Γαράμη). See GARAMANTES.

Garamantes (Γαράμαντες). The southernmost people known to the ancients in North Africa, dwelt far south of the Great Syrtis in the region called Phazania (Fezzan), where they had a capital city, Garama. They are mentioned by Herodotus as a great people (iv. 183). He tells a number of curious things about them and their country—that the land is fertilized with salt, that their oxen have horns bending so far forward as to compel them to walk backward as they feed, etc. For other notices, see Plin. *H. N.* v. 5, § 8; Mela, i. 8.

Gardens. See HORTUS.

Gargānus Mons (τὸ Γάργανον). The modern Monte Gargano; a mountain and promontory in Apulia, on which were oak forests (Hor. *Carm.* ii. 9, 7).

Gargaphia (Γαργαφία). A valley near Plataea, with a fountain of the same name, where Actaeon was torn to pieces by his dogs (Ovid, *Met.* iii. 156). The fountain of Gargaphia was situated about a mile and a half distant from Plataea, on Mount Cithaeron, towards the Athenian frontier (Herod. ix. 25).

Gargăra (τὰ Γάργαρα). The southern summit of Mount Ida, in the Troad, with a city of the same name at its foot (Hom. *Il.* viii. 48).

Gargettus (Γαργηττός). A deme of Attica, on the northwest slope of Mount Hymettus; the birthplace of the philosopher Epicurus. See the monograph by Young, *Gargettus, an Attic Deme*, in the *Classical Studies in Honour of Henry Drisler* (N. Y. 1894).

Gargilius Martiālis. A Roman writer, who flourished in the third century A.D., and was the author of a great work, based upon Greek and Latin sources, on agriculture and veterinary science. Considerable fragments remain, dealing with the treatment of cattle (*De Cura Boum*) and the medical uses of herbs and fruit (*Medicina ex Holeribus et Pomis*). These fragments are found chiefly in the fourth book of the so-called Plinius Valerianus (q. v.). The chief sources of Martialis were Dioscorides, Galen, Hippocrates, Aristotle, and Celsus. The fragments of the treatise *De Cura Boum* were edited by Schuch (Donaueschingen, 1857); see also Rose, *Anecdota Graeca et Graecolatina* (Berlin, 1870).

Garītes. A people in Aquitania, neighbours of the Ausci (Caes. *B. G.* iii. 27).

Garlands. See CORONA.

Garmantis or Garamantis. A nymph, mother of Iarbas by Iupiter. See Verg. *Aen.* iv. 198.

Garments. See CLOTHING.

Garret. See DOMUS, p. 545.

Garum (γάρον). A sauce made of the blood and entrails of fish salted, and resembling caviare (Plin. *H. N.* xxxi. § 43; and Hor. *Sat.* ii. 8. 46).

Garumna. Now the Garonne, a river of Gaul, which rises in the valley of Arran, to the south of Bertrand, among the Pyrenees, and falls into the Oceanus Cantabricus, or Bay of Biscay. The general course of this river, which extends to about 250 miles, is northwest. It unites with the Duranius (Dordogne), below Burdigala (Bourdeaux). According to Iulius Caesar's division of Gallia, the Garumna was the boundary of Aquitania, and separated that district from Gallia Celtica. This river is navigable to Tolosa (Toulouse) (Mela, iii. 2).

Garumni. A Gallic people in Aquitania, on the Garumna.

Gates. See IANUA; PORTA.

Gatheae (Γαθεαί). A town in Arcadia on the river Gatheatas. (Pausan. viii. 34.)

Gaugamēla (τὰ Γαυγάμηλα). A village of Assyria, in the district of Aturia, and about 500 stadia from Arbela (Arrian, vi. 1). The decisive battle between Alexander and Darius took place near this spot in B.C. 331; but, as Arbela was a considerable town, the Greeks chose to distinguish the conflict by the name of the latter. Gaugamela signified, in Persian, "the house of the camel," and is said to have been so called because Darius, the son of Hystaspes, having escaped upon his camel across the deserts of Scythia, when retreating from the latter country, placed the animal here, and devoted the revenue of certain villages for its maintenance (Plut. *Alex.* 31).

Gaulus (γαυλός). A large full-bodied vessel used either as a goblet (Plaut. *Rud.* v. 2, 32), a milk-pail (Hom. *Od.* ix. 223), a water-bucket (Herod. vi. 119), etc.

Gaulus (Γαῦλος). (1) A small island adjacent to Melité or Malta, now called Gozo (Plin. *H. N.* iii. 8). (2) Another below the south shore of Crete, now called Gozo of Candia, for distinction's sake from Gozo of Malta.

Gaurus Mons or **Gaurānus Mons.** A volcanic range of mountains in Campania, between Cumae and Neapolis, in the neighbourhood of Puteoli, producing good wine, and memorable for the defeat of the Samnites by M. Valerius Corvus, B.C. 340 (Livy, vii. 32, 33).

Gausăpa, Gausăpé, and Gausăpum (γαύσαπης). A woollen cloth with a long nap on one side, but smoother on the other, used by both sexes for clothing, as well as for table-cloths, napkins, bed-covers, etc. (Plin. *H. N.* viii. 73; Ovid, *A. A.* ii. 300; Mart. xiv. 152). The name is also used of wigs of light flaxen hair—a colour much admired by the Roman ladies. See CALIENDRUM; COMA.

Gauze. See COA VESTIS.

Gaza (Γάζα). (1) One of the five Philistine principalities, situated towards the southern extremity of Canaan, about sixteen miles south of Ascalon, and a small distance from the Mediterranean. Its port was called Gazaeorum Portus. As the name of the city of Gaza appears in the first book of Moses (x. 18), Mela must of course be mistaken, who says it is of Persian origin, and states that Cambyses made this place his chief magazine in the expedition against Egypt (Mela, i. 11). It was, however, an important and strongly-fortified place, as being situated so near the borders of that country. Alexander took and pillaged it, after it had made a powerful resistance for the space of three months (Arrian, ii. 27; Quintus Curtius, iv. 6). Antiochus the Great sacked it, and it was several times taken from the Syrians by the Maccabees (Iosephus, *Ant. Iud.* xiii. 21). It was afterwards subjected to new losses, so that St. Luke states (*Acts*, viii. 26) that it was, in his time, a desert place. The town

was subsequently called Constantia. It is now termed by the Arabs, Ghuzzeh. The ancient name in Hebrew signifies "strong." (2) A city in the Persian province of Sogdiana. It was one of the seven cities that rebelled against Alexander the Great in B.C. 328.

Gazette. See ACTA.

Gé (Γῆ). See GAEA.

Gebenna Mons. See CEBENNA.

Gedrosia (Γεδρωσία). The farthest province of the Persian Empire on the southeast, and one of the subdivisions of Ariana, bounded on the west by Carmania, on the north by Drangiana and Arachosia, on the east by India, or, as the country about the lower course of the Indus was called, Indo-Scythia, and on the south by the Mare Erythraeum, or Indian Ocean. It is known in history chiefly through the distress suffered for want of water by the army of Alexander in passing through it (Arrian, *Anab.* vi. 24).

Gela (Γέλα or Γέλη). A city on the south coast of Sicily, on a river of the same name, founded by Rhodians from Lindus, and by Cretans, B.C. 690. It soon obtained great power and wealth; and, in 582, it founded Agrigentum. Gelon transported half of its inhabitants to Syracuse: the place gradually fell into decay, and in the time of Augustus was not inhabited. The poet Aeschylus died here. See GELON.

Gelānor (Γελάνωρ). A descendant of Inachus, king of Argos. When Danaüs, likewise a descendant of Inachus, came to Argos, and laid claim to the sovereign power, the citizens were doubtful in whose favour they should decide. While they were hesitating, a wolf fell upon the cattle which were feeding before the city, and killed the bull who was defending them. The citizens regarded this as a sign from heaven, and, interpreting the wolf as meaning Danaüs, they compelled Gelanor to retire in his favour. (See DANAÜS.) In the *Supplices* of Aeschylus, Pelasgus is king of Argos. He gives Danaüs a friendly welcome, and defends him against the sons of Aegyptus. But he is vanquished by them, retires from the sovereignty spontaneously in favour of the stranger, and leaves the country.

Geldŭba. The modern Gelb, below Colonia Agrippina (Cologne), a fortified place of the Ubii, on the Rhine, in Lower Germany (Tac. *Hist.* iv. 26, etc.).

Gellia Gens. A plebeian gens at Rome of Samnitic origin. To it belonged the generals Gellius Statius and Gellius Egnatius. (See EGNATII.) The chief branch of the Gellii at Rome bore the name Publicola.

Gellius. (1) CN. An early Roman historian, a contemporary of the Gracchi. His history of Rome, though lost, is frequently quoted by the later writers. (2) AULUS. A Latin grammarian, born at Rome in the early part of the second century, and who died at the beginning of the reign of Marcus Aurelius. We have but few particulars of his life, though it is known that he studied rhetoric under Antonius Iulianus and Sulpicius Apollinaris at Rome, and philosophy under Favorinus at Athens, and that, on his return to Rome, while still at an early age, he was made one of the centumviri or judges in civil causes (*Noct. Att.* xiv. 2). Gellius has left behind him one work, entitled *Noctes Atticae*, "Attic Nights." It was written, as he informs us in the preface, during the winter evenings in Attica, to amuse his children in their hours of relaxation. It appears from his own account that he had been accustomed to keep a commonplace book, in which he entered whatever he heard in conversation, or met with in his private reading, that appeared worthy of remembrance. In composing his *Noctes Atticae*, he seems merely to have copied the contents of his commonplace book, with a little alteration in the language, but without any attempt at classification or arrangement. It is, in fact, a huge scrap-book containing anecdotes and arguments, bits of history and pieces of poetry, and dissertations on various points in philosophy, geometry, and grammar. Amid much that is trifling and puerile, it gives information on many subjects relating to antiquity of which we must otherwise have been ignorant. It is divided into twenty books, which are still extant, excepting the eighth and the first part of the preface to the whole. Of the eighth book, the table of contents has come down. He mentions, in the conclusion of his preface, his intention of continuing the work, which purpose he probably, however, never carried into effect. The style of Aulus Gellius is in general unfit for imitation. In his fondness for archaisms, he is often carried too far, and introduces too many forms of expression from the earlier comic poets, whom he seems most anxious to take for his models in this respect. That he invented, however, any new terms himself seems hardly probable. His language, in fact, belongs to the so-called African style of Latinity, with a mingling of archaic forms and those that are characteristic of the plebeian speech. (See AFRICAN PERIOD OF LATINITY; SERMO PLEBEIUS.) The standard editions of Aulus Gellius are those of Carrio (Paris, 1585); Gronovius (Leyden, 1706; revised by Conradi, 1762); Lion (Göttingen, 1824); and M. Hertz (Berlin, 1883; smaller ed. Leipzig, 1886). The *Noctes Atticae* has been translated into English by Beloe (London, 1800); into French by De Chaumont, Flambart, and Buisson (Paris, 1862); and into German by Weiss (Leipzig, 1875). For a valuable analysis of the *Noctes Atticae*, and a critical estimate of Gellius, see Prof. Nettleship's *Essays in Latin Literature* (Oxford, 1885). On the language, see Gorges, *De Quibusdam Sermonis Gell. Proprietatibus* (Halle, 1883); and Cooper, *Sermo Plebeius* (N. Y. 1895).

Gelon (Γέλων). (1) A native of Gela in Sicily, who rose from the station of a private citizen to be supreme ruler of Gela and Syracuse. He was descended from an ancient family, which originally came from Telos, an island off the coast of Caria, and settled at Gela, when it was first colonized by the Rhodians. During the time that Hippocrates reigned at Gela (B.C. 498–491), Gelon was appointed commander of the cavalry, and greatly distinguished himself in the various wars which Hippocrates carried on against the Grecian cities in Sicily. On the death of Hippocrates, who fell in battle against the Siculi, Gelon seized the supreme power (B.C. 491). Soon afterwards a more splendid prize fell in his way. The nobles and landholders (*γάμοροι*) of Syracuse, who had been driven from the city by an insurrection of their slaves, supported by the rest of the people, applied to Gelon for assistance. This crafty leader, gladly availing himself of the

opportunity of extending his dominions, marched to Syracuse, into which he was admitted by the popular party (B.C. 485), who had not the means of resisting so formidable an opponent (Herod. vii. 154 foll.). Having thus become master of Syracuse, he appointed his brother Hiero governor of Gela, and exerted all his endeavours to promote the prosperity of his new acquisition. In order to increase the population of Syracuse, he destroyed Camarina, and removed all its inhabitants, together with a great number of the citizens of Gela, to his favourite city. By his various conquests and his great abilities, he became a very powerful monarch; and therefore, when the Greeks expected the invasion of Xerxes, ambassadors were sent by them to Syracuse, to secure, if possible, his assistance in the war. Gelon promised to send to their aid two hundred triremes, twenty thousand heavy-armed troops, two thousand cavalry, and six thousand light-armed troops, provided the supreme command were given to him. This offer being indignantly rejected by the Lacedaemonian and Athenian ambassadors, Gelon sent, according to Herodotus, an individual named Cadmus to Delphi, with great treasures, and with orders to present them to Xerxes if he proved victorious in the coming war (Herod. vii. 157–164). This statement, however, was denied by the Syracusans, who said that Gelon would have assisted the Greeks, if he had not been prevented by an invasion of the Carthaginians, with a force amounting to three hundred thousand men, under the command of Hamilcar. This great army was entirely defeated near Himera by Gelon and Theron, monarch of Agrigentum, on the same day, according to Herodotus, on which the battle of Salamis was fought (Herod. vii. 165 foll.). An account of this expedition is also given by Diodorus Siculus (xi. 21), who states that the battle between Gelon and the Carthaginians was fought on the same day as that at Thermopylae. There seems, indeed, to have been a regular understanding between Xerxes and the Carthaginians, in accordance with which the latter were to attack the Greeks in Sicily, while the Persian monarch was to move down upon Attica and the Peloponnesus.

Gelon appears to have used with moderation the power which he had acquired by violence, and to have endeared himself to the Syracusans by his just government, and by the encouragement he gave to commerce and the fine arts. Plutarch states that the Syracusans would not allow his statues to be destroyed together with those of the other tyrants, when Timoleon became master of the city (Plut. *Timol.*). He died B.C. 478, and was succeeded by his brother Hiero (Aristot. *Polit.* v. 12).

(2) The son of Hiero II., king of Syracuse, who died before his father.

Gelōni (Γελωνοί). A Scythian people, dwelling in Sarmatia Asiatica, to the east of the river Tanaïs (Don) (Herod. iv. 108). Their chief city was called Gelonus.

Gemīnus (Γεμῖνος). A Rhodian astronomer who flourished about B.C. 77, and wrote an extant work (Εἰσαγωγὴ εἰς τὰ Φαινόμενα), a descriptive treatment of elementary astronomy. The text is given in Halma's edition of Ptolemy (Paris, 1819).

Gelotopoei (γελωτοποιοί). See PARASITI.

Gemma (λίθος). A precious stone. The art of cutting gems was learned by the Greeks, at an early period, from the Egyptians, who had practised it from remote antiquity. The Aethiopians used engraved stones as coins (λίθοι ἐγγεγλυμένοι), and engraved seals may have been used for money in Greece prior to the invention of coinage. (See NUMISMATICS.) At first the cutting was only con-

Phœnician Gem. (King Collection.)

cave, the gems being set in rings and used as seals. The subjects are usually human or animal forms, especially lions, bulls, and horses. The oldest Greek gems, numbers of which have been found at Mycenae and Ialysus, are bean-shaped ("lenticular") or pebble-shaped ("glandular"), differing thus from the cylinders and scarabs of Assyria and Egypt. Cameos or stones carved in relief first came into use, it would seem, in the time

Athené, by Aspasios. (Red jasper, in Vienna Cabinet.)

The Strozzi Medusa, by Solon. (Chalcedony, in British Museum Cabinet.)

of Alexander the Great, and were used as ornaments. For cameos precious stones of various colours were used, especially the onyx. The layers of the stone were so treated that the figures stood out vividly on a dark ground. Mnesarchus of Samos, the father of the philosopher Pythagoras (about B.C. 600) is the oldest Greek jeweller whose name has come down to us. In the fourth centu-

Artemis. Perseus.

Gems from Pompeii. (Naples Museum.)

ry B.C. the most celebrated master was Pyrgoteles, the only artist whom Alexander the Great would allow to cut his likeness. In the age of Augustus we hear of Dioscorides, who cut the emperor's likeness on a stone which was used as a seal by the succeeding Caesars. The Etruscans and Romans took up the art very early, but never attained the same perfection as the Greeks, importing gems largely from both Greece and Egypt. The scarab or beetle-shaped gems, so little valued by the Greeks, were intensely admired by the Etruscans, whose art in so many respects exhibits Egyptian characteristics.

Dancing Satyr.

Satyr with infant Dionysus.

Cameos. (Naples Museum.)

The fashion of making collections of beautiful gems arose as early as the first century B.C. The intaglios, or cut stones, have come down to us in greater numbers than any of the monuments of ancient art. Those which belonged to the advanced periods of style present examples of the most beautiful workmanship, the most original composition, and the most interesting subjects, the latter being mainly taken from mythology. Among the remaining Greek cameos an important place, both for size and beauty, must be given to the Gonzaga Cameo in St. Petersburg. This, it has been conjectured, represents the bust of Ptolemy Philadelphus and Arsinoé, his sister and wife; though it more probably commemorates Nero and Agrippina. The largest and most splendid of the cameos which have come down from the Roman period are those at Vienna and Paris, representing, in groups and figures, the family of Augustus. Gems engraved with humorous designs were called *grylli*. (See ANTIPHILUS.) These usually combined half a dozen incongruous forms arranged into the semblance of some well-known object, and occasionally with a hidden meaning. Thus, the accompanying example from a gem in the King Collection is made up of a wolf, a boar, and a lizard so blended as to form a helmet, the emblems respectively of Mars, Minerva, and Mercury.

Gryllus. (King Collection.)

Whole vessels were sometimes made of single stones, and adorned with reliefs. An instance is the Mantuan Vase now at Brunswick, 6½ inches high, 2⅛ inches thick, consisting of a single onyx. The lid, handle, and base are of gold. Two parallel lines of gold divide the surface into three parts, the middle one of which has twelve figures, representing the festival of the Thesmophoria, in three groups; while the highest and lowest are adorned with leaves, flowers, ears of corn, fruits, bulls' heads, and other objects connected with the worship of Demeter. Works of this kind were sometimes made of coloured glass. The most celebrated instance of this sort is the Portland Vase, found filled with ashes in the tomb of Alexander Severus, and now in the British Museum. Its height is about 10 inches. The material is a dark blue transparent glass, with beautiful reliefs in white opaque enamel.

Herodotus (vii. 69) speaks of a sharp stone as being used in engraving gems. Many of the ancient gems, especially those used as coins, were engraved with obsidian, of which knives were made. A minute metal disk with a sharp edge and worked by a drill was used in cutting the deeper parts of the pattern. (Cf. Pliny, *H. N.* xxvii. 76; and Murray, *Handbook of Greek Archaeology*, pp. 147–148). A sort of emery-powder (*smyris*) was employed to charge the tools. The *crustae* of diamonds and fragments of *ostracitis* were used as diamond-points.

For some account of the extraordinary profusion of precious stones in the East and among the successors of Alexander, see Diod. Sic. xviii. 26: Athen. xi. p. 781; Strab. xv. p. 718, and other passages quoted by Krause, *Pyrgoteles*, p. 113. The extravagant luxury of the Romans of the Empire rivalled that of the Diadochi.

The Gonzaga Cameo, Nero and Agrippina (?). (Sardonyx, Russian Imperial Cabinet.)

Pearls and emeralds were the favourite stones of the Romans. Iulius Caesar gave Servilia, the mother of Brutus, a pearl worth 6,000,000 sesterces ($240,000). The famous pearl which Cleopatra dissolved and drank was one of a pair set in ear-rings, and worth 10,000,000 sesterces ($400,000). Claudius Aesopus, son of the great actor, in imitation of this feat, did the same thing, snatching, however, the gem from the ear of Caecilia Metella, a beauty of the day. Caligula wore pearls on his shoes; Nero had them sprinkled over his bed-coverings. Pliny tells how, at a wedding party—a rather quiet affair—Lollia Paulina, the wife of Caligula, was covered with pearls and emeralds which shone in alternate rows on her head, neck, and fingers, and of which the cost was 40,000,000 sesterces ($1,600,000), as she proved by showing to him the receipted bills for them. "Pearls," he says in another place, "are the quintessence of extravagance." Claudius used an emerald as an eye-glass with

The Gemma Augustea, at Vienna.

Augustus and Livia receiving Drusus and Tiberius on their return from their Vindelic and Rhaetian campaigns. (Sardonyx, Vienna Cabinet.)

which to watch the circus games. The opal was also much admired, and Pliny tells how one Nonius was proscribed by Antony the triumvir so that he might be robbed of a magnificent opal in his possession. Pliny also speaks of the ruby (*carbunculus*) and the amethyst as much esteemed. (See AMETHYSTUS.) The ancients perhaps knew of the diamond, but could not have properly valued it, since the art of polishing and cutting it was not learned until it was discovered in modern times by Berquier of Bruges in the fifteenth century. (See ADAMAS.) Besides being worn in rings, gems were set in *armillae* or bracelets in many forms, including spirals and bangles; in *monilia* or necklaces of consecutive rows, one found at Pompeii having seventy-one pendants; and in ear-rings. (See INAURIS.) Jewels also profusely adorned the drinking-cups used at banquets, and the dainty little boxes of gold and silver used by the ladies in the mysteries of their toilets.

As might be expected, there was a large traffic in imitations of the precious stones, executed in both paste and glass, and with much fidelity. Pliny (*H. N.* xxxvii. 197) speaks of "glass jewels in cheap rings" for the lower classes; and there exist

The Portland Vase. (British Museum.)

to-day at Rome collections of these imitations which cannot be distinguished from the genuine stones by the eye. (See VITRUM.) The stone most successfully copied was the emerald, but we hear of counterfeits of the amethyst, ruby, and sapphire.

This passion on the part of the wealthy for precious stones was naturally favourable to the growth of mineralogical knowledge. Pliny quotes a large number of writers who had treated of gems between Theophrastus and himself. Some of these writers seem to have had a personal knowledge of India. Pliny devotes the final book of his *Historia Naturalis* to gems, regarding them as the most perfect works of nature. The book consists of an historical introduction (§§ 1–5); of an account of the most important gems, arranged by colours (§§ 6–54); and an account of minor gems in alphabetical order. The book concludes with a few general instructions for detecting fraud. This book, which is the best representative of ancient science in this branch of mineralogy, shows us that the ancients were remarkably close observers of gems, availing themselves of all methods, short of chemical analysis and other instruments of modern physical research. Moreover, in the case of precious stones, minuteness of observation was stimulated by the desire of guarding against or of committing a fraud (*H. N.* xxxvii. § 197 foll.). Besides a minute study of colours of gems, frequently illustrated by Pliny's felicitous comparisons, the tests enumerated involve a study of weight, consistency (*corpus*), hardness, conductivity, transparency, diffractive power, friction, taste, and smell.

There are no traces in Theophrastus of magical properties attributed to gems. In Pliny, the doctrines of the Magi are frequently quoted, but usually with ridicule. Some of the medicinal virtues of gems apparently accepted by Pliny may appear little better than the doctrines of the Magi. But while Pliny is not in a position to criticise the alleged virtues of gems applied as medicine, he consistently rejects their supernatural powers under other conditions. The magical system is seen fully developed in the *Lithica* of Orpheus. (See AMULETUM.) This poem claims to be a statement of the magic properties of gems made by the seer Theodamas to the poet Orpheus. The work is generally assigned to a time subsequent to the edict of Constantius against magic, in A.D. 357, and not long after Valens, although Krause (*Pyrgoteles*, p. 6) ascribes it to the fifth century B.C.; and King dates it "at least as early as the second century B.C." The latter scholar gives an English verse translation (*Precious Stones*, p. 375).

Intaglio, with head of Africa. (King Collection.)

Much confusion and uncertainty exist as to the true nomenclature of gems. Both in ancient and modern times there has been considerable looseness of usage as to the meaning of names. In many

instances where the ancient word exists in modern language, it denotes a stone entirely different from that originally signified. For example, *σάπφειρος* is certainly the *lapis lazuli*, and has no connection with the sapphire, which was called *hyacinthus*.

See Krause, *Pyrgoteles, oder die edlen Steine der Alten* (Halle, 1856); Lenz, *Mineralogie der alten Griechen und Römer* (Gotha, 1861); C. W. King, *Natural History of Precious Stones and Gems, and of Precious Metals* (London, 1870); id. *Hand-book of Engraved Gems* (London, 1866); id. *Antique Gems and Rings* (London, 1873); Middleton, *The Engraved Gems of Classical Times* (London, 1891); Blümner, *Technologie*, iii. 227 (Leipzig, 1875–87); Murray, *Hand-book of Greek Archaeology*, pp. 40–50, 146–173 (London, 1892); and an article in *Harper's Magazine* for 1879, vol. lix. pp. 532–541. On the use of gems in rings, see ANULUS; on the art of gem engraving, see SCALPTURA.

Gemoniae (sc. *scalae*) or **Gemonii** (sc. *gradus*). A flight of steps cut out of the Aventine, down which the bodies of criminals strangled in the prison were dragged, and afterwards thrown into the Tiber (Val. Max. vi. 3, 3). See CARCER, p. 278.

Genăbum or **Cenăbum**. The modern Orléans; a town in Gallia Lugdunensis, on the north bank of the Ligeris (Loire), the chief town of the Carnutes, subsequently called Civitas Aurelianorum, or Aurelianensis Urbs, whence its modern name.

Genauni. A people in Vindelicia, the inhabitants of the Alpine valley now called Valle di Non, subdued by Drusus (Hor. *Carm.* iv. 14, 10).

Genius of Wine. (Pompeian Mosaic.)

Genesia. See FUNUS, p. 697.

Genesius, Iosēphus. A Byzantine historian who wrote (about A.D. 940) a history of the emperors from A.D. 813 to 886. Edition by Lachmann (Bonn, 1834).

Genĕtrix. "The mother," a name used by Ovid, as a title of Cybelé, in the place of *mater*, or *magna mater*; but it is better known as a surname of Venus (Lucret. i. 1), to whom Caesar dedicated a temple at Rome, as the mother of the Julian gens.

Genetyllis (*Γενετυλλίς*). A name applied to Aphrodité as protecting births, and also to her companions (*Γενετυλλίδες*).

Genēva or **Genāva**. The modern Geneva; the last town of the Allobroges, on the frontiers of the Helvetii, situated on the south bank of the Rhone, at the spot where the river flows out of the Lacus Lemannus. There was a bridge here over the Rhone. (Caes. *B. G.* i. 6.)

Genius ("creator, begetter," from *gigno*). The Italian peoples regarded the Genius as a higher power which creates and maintains life, assists at the begetting and birth of every individual man, determines his character, tries to influence his destiny for good, accompanies him through life as his tutelary spirit, and lives on in the Lares after his death. (See LARES.) As a creative principle, the Genius is attached, strictly speaking, to the male sex only. In the case of women his place is taken by Iuno, the personification of woman's life. Thus, in a house inhabited by a man and his wife, a Genius and a Iuno are worshipped together. But in common parlance, it was usual to speak of the Genius of a house, and to this Genius the marriage bed (*lectus genialis*) was sacred. A man's birthday was naturally the holiday of his attendant Genius, to whom he offered incense, wine, garlands, cakes, everything, in short, but bloody sacrifices, and in whose honour he gave himself up to pleasure and enjoyment; for the Genius wishes a man to have pleasure in the life that he has given him. Hence the Romans spoke of enjoying one's self as indulging one's Genius, and of renunciation as spiting him (Hor. *Carm.* iii. 17, 14; Pers. iv. 27). Men swore by their Genius as by their higher self, and by the Genius of persons whom they loved and honoured. The philosophers originated the idea of a man having two Genii, a good and a bad one; but in the popular belief the notion of the Genius was that of a good and beneficent being. Families, societies, cities, and peoples had their Genius as well as individuals. The Genius of the Roman people (*Genius Publicus* or *Genius Populi Romani*) stood in the Forum, represented in the form of a bearded

Harpocrates, and Snake as Genius Loci. (*Pitture d'Ercolano*, i. 207.)

man crowned with a diadem, a cornucopia in his right hand, and a sceptre in his left. An annual sacrifice was offered to him on the 9th of October. Under the Empire the Genius of Augustus, the founder of the Empire, and of the reigning emperor, were publicly worshipped at the same time. Localities also, such as open spaces, streets, baths, and theatres, had their own Genii (Inscr. Orell. 343, 1697). These were usually represented under the form of snakes; and hence the common habit of keeping tame snakes. See ANGUIS.

The Greeks also had a similar belief in Genii, calling them δαίμονες, or daemons, of whom Hesiod mentions the number as 30,000, who are appointed to be the ministers of Zeus and the guardians of men. He regards them as the souls of the righteous. Pindar speaks of a γενέθλιος δαίμων, which seems to be exactly the equivalent of the Roman Genius. See DAEMON.

Gennadius. A presbyter of Marseilles, who in the fifth century A.D. continued St. Jerome's list of ecclesiastical writers (*viri illustres*). See HIERONYMUS.

Gennētae (οἱ γεννῆται). The Athenian term for the members of the 360 ancient families (γένναι), thirty of which made up one of the twelve φρατρίαι of the four old Ionic tribes. These families consisted of some thirty houses, who referred their origin and name to a common ancestor, and observed a common worship, with special priests to superintend it. The objects of this worship were Zeus Herkeios (the god of house and home), Apollo Patroös (the god of the family), the heroes of the family, and other tutelary deities. In case a family worship rose to the dignity of a state ceremonial, the priestly office remained hereditary in the family (γένος). If there were no nearer relations, the members of the γένος had a law of inheritance which they observed among themselves. Maintained by these religious and legal ties, the γένναι and the φρατρίαι survived the old Ionic tribes, after the abolition of the latter by Clisthenes. The president of the γένος superintended the enrolment of new members into it at the feast of the Apaturia, the occasion on which the new members of the φρατρίαι were also enrolled. (See APATURIA.) A citizen who did not belong to a γένος could only become a member of one by adoption, and under certain conditions. See PHRATRIA.

Gens (from the root GEN of *geno* = *gigno*). A Roman family in the widest sense of the word, descended on the male line from a common ancestor, and therefore bearing a common name. So long as the patricians were the only citizens with full rights, there could of course be no gentes not patrician. The oldest gentes belonged to the tribes of the Latin Ramnes and the Sabine Tities. Besides these there were the gentes belonging to the Alban families, brought to Rome by King Tullus Hostilius; and embodied by the other gentes in the community as a third tribe, the Luceres. These, the most ancient, were called *gentes maiores* as distinguished from the *gentes minores*, which included the plebeians whom Tarquinius Priscus raised to the rank of patricians. There were in later times instances of plebeian gentes being raised to patrician rank; but these became rarer and rarer, so that the number of patrician gentes was finally much reduced. During the last years of the Republic we hear of only fourteen still in existence, including thirty *familiae* (or families in the narrower sense). Many large gentes were divided into houses (*stirpes*) who had a common cognomen in addition to the name of their gens; thus the gens Cornelia included the Cornelii Maluginenses, Cornelii Cossi, Cornelii Scipiones, Cornelii Rufini, Cornelii Lentuli, Cornelii Dolabellae, Cornelii Cethegi, Cornelii Cinnae, Cornelii Sullae. Among the plebeians, as among the patricians, the *familia* naturally developed into a larger circle of relationship; but gentes in the old sense were not formed by the process. Though the plebeian had his gentile name, and afterwards his *cognomen*, he had not the real *ius gentilicium*. See IUS.

All *gentiles*, or members of a gens, had a right to its common property, which included a common burial-place. They also had a testamentary law of their own which lasted on into the imperial period. When a member of a gens died without heirs of his body, the next to inherit (as in the case of the plebeians) were the *agnati*, or *gentiles* on the male side, who could prove their relationship: failing these, the *gentiles* divided the inheritance. The existence of this law rendered it, in old times, necessary to obtain the *consensus* of the whole gens in cases of adoption and testamentary bequest. Another consequence of it was, that it was the duty of the *gentiles* to provide a *curator* for insane persons and spendthrifts, and a guardian for minors. See CURATOR.

Every gens had its meetings, at which resolutions were passed binding its individual members in matters affecting the gens. It was a decree of the gens Manlia, for instance, which forbade any one of its members to bear the praenomen Marcus. As every *familia*, whether patrician or plebeian, had certain sacrifices which it was bound to perform, so had every gens, as a larger or extended *familia*. All members of the gens were entitled, and indeed bound, to take part in the *sacra gentilicia*, or common worship of the gens. These *sacra* ceased to exist with the extinction of a gens; and if a member of a gens left it, this right and duty also came to an end. It should be added that certain public religious services were assigned to particular gentes, that of Hercules, for instance, to the gens Pinaria. See Mommsen, *Römisches Staatsrecht*, iii. i. pp. 15–22; Becker, *Handbuch*, ii. 1.

Genseric (more correctly **Gaiserich**). A king of the Vandals, was the illegitimate son of Godigiselus, succeeding his brother Gonderic in A.D. 429. In the same year he left Spain, which had been partly conquered by the Vandals, and crossed over into Africa, at the solicitation of Boniface, governor of that province, who had been induced, by the arts of his rival Aetius, to rebel against Valentinian III., emperor of the West. Boniface soon repented of the step he had taken, and advanced to meet the invader. But his repentance came too late. The Moors joined the standard of Genseric, and the powerful sect of the Donatists, who had been bitterly attacked by the Catholics, assisted him against their adversaries. Boniface was defeated, and obliged to retire into Hippo Regius, where he remained till he obtained a fresh supply of troops. Having ventured upon a second battle, and being again defeated, he abandoned the province to the barbarians, and sailed away to Italy. Hippo Regius fell after a siege of thirteen months, and was sacked with an almost infernal fury, which laid waste indiscriminately churches, fields, and houses,

and earned for the name of Vandal the enduring infamy which a proverb can confer. A peace was concluded between Genseric and the Emperor of the West, by which all Africa to the west of Carthage was ceded to the Vandals. This peace, however, did not long continue, and the city of Carthage was taken by the Vandals, by surprise, A.D. 439. The Emperors of the West and East made great preparations for the recovery of the province, but an alliance which Genseric made with Attila, king of the Huns, effectually secured him against their attempts. Genseric's next object was the formation of a naval power. An immense number of ships were built, and his fleets ravaged the shores of Sicily and Italy. (See ATTILA.) Invited by the empress Eudoxia, he sailed up the Tiber, A.D. 455, and permitted his soldiers, for the space of fourteen days, to pillage Rome. In A.D. 460 he destroyed the fleet which the emperor Majorian had collected for the invasion of Africa; and, as his power increased, his ravages became more extensive. The island of Sardinia was conquered, and Spain, Italy, Sicily, Greece, Egypt, and Asia Minor were plundered every year by the Vandal pirates. Leo, the emperor of the East, at last resolved to make a vigorous effort for the recovery of Africa. A great army was assembled, and the command was given to Basilicus. He landed at Bona, and at first met with considerable success, but was at length obliged to retire from the province. After this victory Genseric met with no further opposition, but remained undisturbed master of the sea till his death, which happened A.D. 477. He was succeeded by his son Hunneric. Genseric was an Arian, and is said to have persecuted the Catholics with great cruelty (Procopius, *De Bell. Vand.*; Gibbon, *Decline and Fall*, chaps. xxxiii.–xxxvi.). See VANDALI.

Gentiles. Persons belonging to the same *gens*. See GENS.

Gentilicium Nomen. See NOMEN.

Gentius. A king of the Illyrians, allied with Perseus, King of Macedonia, and conquered by the Romans under Anicius Gallus, B.C. 167.

Genua. The modern Genoa, a thriving commercial town in Liguria, situated at the extremity of the Ligurian Gulf (Gulf of Genoa), and subsequently a Roman municipium. For some time during the Second Punic War it was held by Mago, the Carthaginian. The place had no political importance before the Middle Ages, when it was called Janua.

Genucia Gens. A patrician gens at Rome, of which the chief families bore the names Aventinensis and Augurinus.

Genucia Lex. See LEX.

Genūsus. A river in Greek Illyria, north of the Apsus (Livy, xliv. 30).

Geographia (*γεωγραφία*). The world, as conceived of in the *Iliad*, is a round plain encircled by a great river, Oceanus—not the Atlantic, of which Homer seems to have no knowledge at all, but a purely mythical stream. The sky is a great concave roof propped up by pillars which the mighty Atlas (q. v.) upholds. On the large, flat disc of the earth is a sort of belt or zone, of which Homer appears to have a definite notion. It includes Greece, for which, however, he has no collective name, since with him Hellas denotes only a district of Thessaly (*Iliad*, ii. 683). Acarnania and Epirus are not mentioned by name. On the north of the Aegean, the Thracians are known, including the Paeonians along the Axius (ii. 850). In Asia Minor, the topography of the Troad is familiar to the poet; Lydia is mentioned as Maeonia; while his references to the interior of Asia Minor—Phrygia, Pamphylia, etc.—are vaguely indefinite. Of the Aegean islands, Crete, Rhodes, Tenedos, Imbros, Samothrace (Samos), Lesbos, and Lemnos are specifically mentioned. Beyond this belt, Homer knows little or nothing of the world. In the North, the milk-fed nomads are noted (xiii. 5); in the South, the Aethiopes, "remotest of men," are indicated. Near the banks of Oceanus dwell the Pygmies. The Egyptian Thebes (ix. 381) and Sidon (vi. 289) occur, and the word "Phœnician" appears once (xxiii. 744).

The *Odyssey* represents a more extended geographical knowledge. Chios is mentioned; and so are Delos, the Dorians, Ithaca, and Sicily. The Phœnicians are now well known; the Aethiopes

The World according to Homer.

are now clearly defined and divided into two sections, the eastern and the western. Scylla and Charybdis, the Lotus-eaters, and the Phaeacians are new. All this, however, is hazy and obscure. (See Jebb, *Homer*, ch. ii. [Glasgow, 1887].)

The Phœnicians and their kinsmen, the Carthaginians, by their commercial enterprise, did much to secure a knowledge of the coast of Africa, and sailed westward as far as the Canaries. Herodotus speaks of them as circumnavigating Africa. A famous voyage was that of Hanno (q. v.), the Carthaginian, who seems to have gone beyond what is now Sierra Leone. But geographical study and geographical literature took their rise, like historical literature, among the Ionian Greeks of Asia Minor. Their extensive commerce and their activity in founding colonies enlarged their geographical horizon. The necessity was thus felt of utilizing and recording the knowledge already

The World as known to the Romans.

acquired for the purpose of discovering the form and constitution of the earth. The first attempt at outlining a map of the world was made by Aristagoras of Miletus about B.C. 550. His kinsman Hecataeus, one of the writers called λογογράφοι, who flourished about fifty years later, corrected and enlarged this map and added a commentary. (See LOGOGRAPHI.) This commentary, of which only fragments are preserved in quotations, is the oldest piece of purely geographical writing in Greek. The geographical chapters in the history of Herodotus (about B.C. 450) compensate us to a certain extent for the loss of this work, and of the other works of the λογογράφοι on history and geography; but they treat only the eastern half of the then known world. It became, indeed, in the absence of a regular tradition of geographical science, a usual thing for historians to insert geographical disquisitions into their works. The writings of Thucydides, Xenophon, Ctesias, Ephorus, Theopompus, Timaeus, and others down to the time of Polybius, afford examples of this.

The first purely geographical work which has come down to us in a complete state is the *Periplus* (Περίπλους), bearing the name of Scylax, written in the first part of the fourth century B.C. It is a description of the coast of the Mediterranean Sea. About the same time the astronomer Eudoxus of Cnidus made a great advance in the theory of physical geography. It was he who first adduced mathematical proof of the spherical shape of the earth, which had been asserted before his time by Pythagoras. The division of the globe into five zones (two frigid, two temperate, and one torrid) is also

due to him. About B.C. 330, Pytheas of Massilia (Marseilles) explored towards the northwest as far as the northern end of the British Islands and the coasts of the German Ocean. About the same time, the campaigns of Alexander the Great opened up Asia as far as India to Greek research. Nearchus made a report of exceptional value on his coast voyage from the Indus to the Euphrates. All these discoveries were embodied, about B.C. 320, in a new map by Dicaearchus of Messana, a disciple of Aristotle. He was the first scholar who treated physical geography in a scientific manner. He assumed the existence of a southern hemisphere, and made an estimate of the earth's circumference, to which he gave the exaggerated measurement of 40,000 miles. His map remained for a long time the standard work of the kind. The southern and eastern parts of India were still further opened out under Alexander's successors, in consequence of the campaigns of the Seleucidae, and several journeys were undertaken by ambassadors, among which that of Megasthenes should be mentioned. The commercial expeditions of the Ptolemies resulted in fresh knowledge of the coasts of Arabia and East Africa.

The first person to arrange the mass of geographical material, hitherto collected, into a really scientific system, was Eratosthenes (q. v.) of Cyrené (about B.C. 276–175). He found his materials in the rich collections of the Alexandrian Library, Alexandria being then the central point of the commerce of the world. He was fully equipped for his task by his acquirements both in physical science and mathematics, and in history and philology. He endeavoured for the first time to estimate the earth's circumference by a measurement of degrees carried out over a space of fifteen degrees of latitude, though the imperfection of his method brought out too large a quantity. The name of Hipparchus of Nicaea (about B.C. 140) marks a considerable advance. He may be called the founder of mathematical geography, as he applied geographical length and breadth to determine the position of places on the earth's surface. He also superseded the rectangular and equidistant projection of parallels and meridians, hitherto used in maps, by a projection which, with few modifications, is identical with the one now in use. The parallels were represented by segments of a circle, the meridians by straight lines or curves, corresponding with the portion of surface to be represented, drawn at distances corresponding to the actual distances on the surface of the globe. The estimate of the earth's circumference, which was accepted as correct down to the tenth century A.D., was that of Posidonius of Apamea (about B.C. 90). Taking as his basis the measurement of the shortest distance from Alexandria to Rhodes, he brought out the result as 4500 geographical miles, or too little by nearly one-sixth.

Only fragments remain of the writings of these geographers, and others contemporary with them; but we possess the great work of Strabo of Amasia, finished about A.D. 20, the most important monument of descriptive geography and ethnology which has come down from Greek antiquity. Thanks to the Roman conquest, he was in a position to give a more accurate description of the West than his predecessors. Up to this time all that the Romans had done for geographical research was to open up Western Europe and Northern Africa to the Greek scientists. An immense service was rendered to science by Agrippa, under the direction of Augustus. He measured and indicated on a map the distance between the stations on the great military roads and along the coasts of the Roman Empire, thus contributing enormously to our knowledge of ancient topography, and laying a foundation for our maps. These data formed the basis of a new map of the world, which was first set up in Rome. Numerous copies were probably taken for the larger cities of the Empire, and smaller portable ones distributed among the military and the administrative officers. It is probably upon copies of this kind that the *Itineraria* and the *Tabula Peutingeriana* are based. See ITINERARIA.

In the first century A.D. much was added to geographical knowledge by the expeditions of the Romans into the interior of North Africa and the North of Europe. About A.D. 50 Apollonius of Antioch explored India, going beyond the Punjab and possibly as far as the Ganges. The most important literary works of the Romans on geography belong to this period. These are (1) the compendium of Pomponius Mela; (2) the geographical books of Pliny the Elder's great encyclopaedia (*Historia Naturalis*), an uncritical compilation, but the only representative we have of a number of lost works; and (3) the *Germania* of Tacitus, an essay mainly of an ethnographic character.

The World according to Ptolemy.

The last great contribution made to geographical science in antiquity is the work of the Alexandrian astronomer Ptolemy (about A.D. 150). This consists mainly of lists of the places marked on the current maps which he makes his authorities, with their latitude and longitude. After Ptolemy, the geographical literature of the Greeks and Romans alike has nothing to show but compilations and extracts. Towards the end of the sixth century, Stephanus of Byzantium compiled a dictionary of geography, which is valuable for the quantity of in-

formation taken from the older and lost writings which it embodies. The book of Pausanias (about A.D. 175) is valuable as bearing on the special topography of Greece. Cosmus, called Indicopleustes, wrote in the reign of Justinian a work called *Topographia Christiana*, giving an account of India. In it occurs the first mention by name of China. See Bunbury, *History of Ancient Geography*, 2 vols. (1883); St. Martin, *Histoire de Géographie;* Riese, *Geographica* (1881); Schmidt, *Zur Geschichte der geographischen Litteratur bei Griechen und Römern* (1887); Berger, *Geschichte der wissenschaftl. Erdkunde bei den Griechen* (1891); and Antichan, *Les Grands Voyages de Découvertes des Anciens* (1891). The remains of the *Geographici Graeci Minores* are edited by C. Müller, 2 vols. (Paris, 1882); the *Geographi Latini* by Riese (Frankfort, 1878).

Geomŏri (*γεωμόροι*). In many Doric States, particularly in Syracuse, a term denoting the territorial aristocracy; but in Athens it was applied to the landed commonalty, distinguished from the *Εὐπατρίδαι*, or nobles, on the one side, and the *Δημιουργοί*, on the other. See Solonian Constitution.

Geoponĭci (*γεωπονικοί*). The ancient writers on agriculture; for instance (among the Greeks), the philosopher Democritus, and in later times, Xenophon, in his *Oeconomicus*. No other Greek works of the kind have come down to us, except the collection called *Geoponica*. This consists of twenty books, and contains extracts from writers of the most widely distant periods. The compiler was a Bithynian, Cassianus Bassus, who lived about the middle of the tenth century A.D., and undertook the work at the suggestion of the emperor Constantine VII. He based it upon a collection of extracts made by a certain Vindanius Anatolius. Agriculture was held in high esteem by the Romans, and the subject was in consequence a favourite one with their men of letters. A number of their works on it have come down to us: the *Res Rustica* of the elder Cato, a similar work by the encyclopaedic scholar, Marcus Terentius Varro, the *Georgica* of Vergil; and after Christ the writings of Columella, Gargilius Martialis, and Palladius. The *Georgica* of Vergil are in verse; as is one book of Columella. See Beckh, *De Geoponicorum Codicibus Manuscriptis* (1886); and the work by Gemoll (1887). See Scriptores Rei Rusticae.

Georgĭca (*γεωργικά*). The title of Vergil's poem on husbandry. See Vergilius.

Gephyraei (*Γεφυραῖοι*). An Athenian family to which Harmodius and Aristogiton belonged.

Gepĭdae. A Gothic people who fought under Attila, and afterwards settled in Dacia, on the banks of the Danube. They were conquered by the Langobardi or Lombards.

Geraerae (*γεραιραί*). The fountain priestesses who took part in the Anthesteria. See Dionysia.

Geraestus (*Γεραιστός*). A promontory and harbour at the southern extremity of Euboea, with a celebrated temple of Poseidon (Thuc. iii. 3).

Geranēa (*Γεράνεια*). A range of mountains running along the western coast of Megaris, terminating in the promontory Olmiae in the Corinthian territory (Thuc. i. 105).

Gerănos (*γέρανος*). A dance. See Hyporchema.

Gerăsa (*Γέρασα*). A city of Coele-Syria (Ptol. v. 15), about thirty-five miles east of the Jordan. The historical notices of this place are very scanty, yet the extent and magnificence of the existing ruins show it to have been once a great and wealthy city. Its site is now called Djerash, and there are

Temple at Gerasa.

remains of two theatres, two large temples and five or six smaller ones, a forum, two fine baths, a triumphal arch, a large reservoir, and two bridges. See Thomson, *The Land and the Book*, vol. iii. (N.Y. 1886).

Gergis (Γέργις) or **Gergītha** (τὰ Γέργιθα). A city of Dardania in Troas, a settlement of the ancient Teucri, and, consequently, a town of very great antiquity (Herod. iv. 122). Gergis, according to Xenophon, was a place of much strength. It had a temple sacred to Apollo Gergithius, and was said to have given birth to the Sibyl, who is sometimes called Erythraea, from Erythrae, a small place on Mount Ida (Dion. Hal. i. 55), and at others Gergithia.

Gergovia. A fortified town of the Arverni in Gaul, situated on a high and inaccessible hill, west or southwest of the Elaver (Allier), probably in the neighbourhood of the modern Clermont.

Germāni. See GERMANIA.

Germania (Γερμανία). The Roman name for the territory bounded on the west by the river Rhenus (Rhine); on the east by the river Vistula and the Carpates (Carpathian) Mountains; on the south by the river Hister or Danubius (Danube); and on the north by the German Ocean. The northern and northeastern parts of Gallia Belgica were also called GERMANIA PRIMA and GERMANIA SECUNDA under the Empire, in contrast to which Germany Proper was styled GERMANIA MAGNA, GERMANIA BARBĂRA, and GERMANIA TRANSRHENĀNA.

Germania. (Kiepert.)

The Roman writers describe it as a dreary waste, covered for the most part with dense forests and morasses, and subject to heavy frosts and almost continuous cold, so that it is probable that the clearing of the soil and the draining of the swamps have, since the days of the Roman Empire, considerably modified the climate of the country. The wooded mountains of Southern Germany were usually called Silvae by the Romans, the most famous being the Hercynia Silva or Hercynius Saltus, including the modern Schwarzwald or Black Forest, the Odenwald, the Thüringerwald, the Erzgebirge, the Harz, and the Riesengebirge (cf. Caes. *B. G.* vi. 24). The chief rivers of Germany were the Rhenus, Danubius, Vistula, Amisia (Ems), Visurgis (Weser), Albis (Elbe), and Viadus (Oder).

The people whom the Romans called Germani were a branch of the Teutonic race, and are first mentioned in history in the fourth century B.C. The name is of uncertain etymology, being by some derived from a Keltic root, meaning "the shouters" (i. e. *βοὴν ἀγαθοί*), by others from a second Keltic root meaning "neighbours," and by others from the German *ger, gwer* — i. e. *Heer*, = "the warriors." Tacitus says (*Germania*, 2) that the name Germani was applied to the Tungri, the first German people to cross the Rhine, and appears to have been extended in its use by the Gauls to the whole race. The name Teutones was not the generic name for them in the time of the Romans, but is the base of the modern appellation *Deutsch*; the same with the Gothic *Thiuda*, "the people." The modern French name for the Germans, *Allemands*, is derived from the name of the tribes, who formed a league on the upper Rhine under the appellation Alemanni or Alamanni (*alle Männer*).

The Germans, though having no common name, regarded themselves as having a common descent from Mannus, the first man, son of the god Tuisco.

Mannus was fabled to have had three sons, from whom sprang the three great German peoples—the Istaevones, Ingaevones, and the Herminones. The first of these are the people with whom the Romans were oftenest brought into contact, since they held both banks of the Rhine. Subdivisions of this race were the Ubii (near Cologne); the Usipetes, Tencteri, Sicambri, and Bructeri (from the Lippe to the Ruhr); the Chatti or Catti (Hesse), and the Batavi (q. v.). Famous groups of the Ingaevones were the Frisii, the Chauci, and the Cherusci, along the North Sea and the banks of the Weser and the Ems. The most numerous of the three great divisions were the Herminones in Central Germany, extending to the east as far as the Vistula and the Carpathians. They included the powerful Suevi (to whom belonged the Marcomanni of Bohemia and the Semnones of Brandenburg), the Hermunduri of the Thüringerwald, the Lombardi or Langobardi at the mouth of the Elbe, the Vandali along the upper banks of the same river, the Heruli west of the Vistula, and the Quadi in what is now Moravia. See Böttger, *Wohnsitze der Deutschen in dem von Tacitus beschriebenem Lande* (Stuttgart, 1877); and the accompanying map.

The Germani were a stalwart, vigorous, and warlike race, with long, blond hair, fresh complexions, and blue eyes, living in wooden huts, which they often shared with their cattle, and engaging in the chase and in the fierce joys of warfare. Though violent and often cruel, they were not given to treachery, but were, as a rule, kindly and hospitable. Chastity was highly esteemed in women and was rarely lacking among them. The wife was wholly subject to the husband, but was treated with great consideration by him and consulted in the important affairs of life. The children were bred up to be hardy and enduring, the boys being taught at an early age the use of weapons. The majority of the people were free (*ingenui*), though there was a second class, described by Tacitus as *liberti* (*leti*, A. S. *laet*), who had no political rights, and a third class composed of slaves (*servi*) who were either prisoners taken in war or those persons who had been sold for debt. Some tribes had kings, and there was a small body of nobles (*nobiles*). All freemen, however, were equal in respect to their political equality, the only difference between them being in the amount of the blood-money (A. S. *wergild*) imposed as a fine for the killing of a king, a noble, or an ordinary *ingenuus*. The special privilege of the famous warriors of the tribe was to gather around them bands of young men emulous of the fame of their chieftains (*principes*). Such bands are called by Tacitus *comitatus*, and contain the germ of the later feudal system. The central governing body was the general assembly of the freemen in arms, they constituting the *civitas* or nation. The king was elected from the nobles, and did not succeed by inheritance. The divisions of the people were hardly territorial, but corresponded to the divisions of the armed host. The *pagus* and *vicus*, of which the Roman historians speak, were in reality divisions of the people. At the time when Caesar wrote, the Germans were in a state of transition, passing from the nomadic to an agricultural, settled condition. In Tacitus, they have entirely ceased to be nomadic, but have become attached to a definite territory.

As to the religion of the Germans, the notices that have reached us are scanty. The chief deity

Head of Ancient German. (Baumeister.)

was Wotan, the same as the Scandinavian Odin, the god of the sky and the air, delighting in warfare and the chase, and represented as riding upon a white horse. Donar, the Scandinavian Thor, the god of thunder, was identified by the Romans with Hercules and afterwards with Iupiter. A third deity was Tyr or Ziu, the god of war, regarded by Tacitus as Mars. A goddess, Nerthus, was worshipped by the tribes along the Baltic, presiding over marriage, the household, the children, and the realm of the dead. She is the same as the Saxon Fria or Frigg, and the Frankish Holda. There were also three fatal sisters—two fair and beneficent, one dark and malign; besides giants, elves, and dwarfs. After death, the brave were believed to enter Walhalla. The priests were very influential among the Germans, offering sacrifices, and predicting the future from the neighing of horses and the flight of birds.

History.—The Germans first appear in history in the campaigns of the Cimbri and Teutones (B.C. 113), the latter of whom were undoubtedly a Germanic people. About fifty years afterwards, Ariovistus, a German chief, crossed the Rhine with a vast host of Germans and subdued a great part of Gaul; but he was defeated by Caesar with great slaughter in B.C. 58 and driven beyond the Rhine. Caesar twice crossed this river (in 55 and 53), but made no permanent conquest on the eastern bank.

In the reign of Augustus, his step-son Drusus carried on war in Germany with great success for four years (B.C. 12–9), and penetrated as far as the Elbe. In the course of his operations he cut a canal between the Yssel and the Rhine, and built no less than fifty forts along the latter river. On his death (B.C. 9), his brother Tiberius succeeded to the command; and under him the country between the Rhine and the Visurgis (Weser) was entirely subjugated, and seemed likely to become a Roman province. But in A.D. 9, the impolitic and tyrannical conduct of the Roman governor Quinctilius Varus provoked a general insurrection of the various German tribes, headed by Arminius (q. v.), the Cheruscan, who had himself been a soldier of Rome, and for his bravery had been made a knight. Varus and his legions were enticed into the Teutoburg Forest, where, in the narrow defiles, the Germans fell upon them with impetuous fury, so that they were defeated and destroyed,

Supposed Bust of Arminius. (Capitoline Museum.)

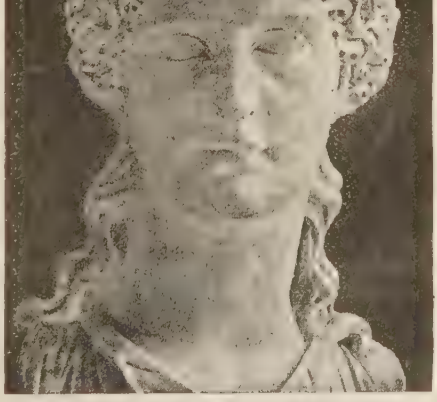
and the Romans lost all their conquests east of the Rhine. (See VARUS.) The defeat of Varus was avenged by the successful campaigns of Germanicus (q. v.), who would probably have recovered the Roman dominions east of the river, had not the jealousy of Tiberius recalled him to Rome in A.D. 16. (See Knoke, *Die Kriegszüge des Germanicus in Deutschland* [Berlin, 1887].) From this time the Romans abandoned all further attempts to conquer Germany; but in consequence of the civil dissensions which broke out there soon after the departure of Tiberius, they were enabled to obtain peaceable possession of a large portion of Southwestern Germany between the Rhine and the Danube, to which they gave the name of the Agri Decumates (q. v.). On the death of Nero, several of the tribes in Western Germany joined the Batavi in their insurrection against the Romans (A.D. 69–71). Domitian and Trajan were forced to repel the attacks of various German clans; but in the reign of Antoninus Pius, the Marcomanni, joined by other tribes, made a more formidable attack upon the Roman dominions, and even threatened the Empire with destruction. For thirteen years Marcus Aurelius with difficulty held in check the vast hordes of barbarians, who were striving to overwhelm the Roman lines of defence, which comprised powerful fortresses and a great wall, remains of which are still to be seen in Southern Germany. Around these forts sprang up towns, such as Vindobona (Vienna) and Iuvavum (Salzburg) in the east, and Moguntiacum (Mayence), Colonia Agrippina (Cologne), Argentoratum (Strassburg) and Bonna (Bonn) in the west. From this time the Romans were often called upon to defend the left bank of the Rhine against their dangerous neighbours, especially against the two powerful confederacies of the Alemanni and Franci; and in the fourth and fifth centuries the Germans obtained possession of some of the fairest provinces of the Empire.

The influence of the Germans upon the Romans was great and continued to increase as time went on. Large numbers of the northern warriors enlisted in the legions even as early as the time of Iulius and Augustus Caesar, and gradually the whole army became permeated with German customs. Brunner even regards the history of the later Empire as the history of a continual conflict between the Germans and the Western Iberian elements; and has massed a great number of curious and striking facts to support his view. See his *Deutsche Rechtsgeschichte*, I. pp. 32–39 (Leipzig, 1887).

The Goths founded a great Germanic kingdom in the fourth century; the Burgundians conquered the whole of the valley of the Rhone; and the Vandals swept over Spain. (See GOTHI; VANDALI.) The West Goths crossed the Danube, penetrated into Italy, and under Alaric captured Rome itself. In the fifth century they conquered Southern Gaul and nearly the whole of Spain. In the invasion of the Huns under Attila, the Goths fought against him with the Romans, routing him at Châlons (A.D. 451), and soon after, Odoacer, chief of the Heruli, became master of Italy in 476. See ODOACER.

BIBLIOGRAPHY.—The sixth book of Caesar, *De Bello Gallico*, and the *Germania* of Tacitus give the earliest accounts of the Germans. These are admirably summarized and discussed by Stubbs in his *Constitutional History of England*, i. pp. 12–57 (Oxford, 1875). Standard treatises are the following: Leo, *Vorlesungen über die Geschichte des deutschen Volks*; Suzenheim, *Geschichte des deutschen Volks*, 3 vols. (1866–69); Lewis, *History of Germany* (1874), based on the work of D. Müller; Arnold, *Ansiedelungen und Wanderungen deutscher Stämme* (1875); Penke, *Die Herkunft der Deutschen* (1884); Ozanam, *Les Germains avant le Christianisme* (1872); Waitz, *Deutsche Verfassungsgeschichte*, vol. i. 3d ed. (1880); Babsch, *Die alten Germanen* (1880); Geoffroy, *Rome et les Barbares*, 2d ed. (1874); Lehmann, *D. Volk d. Sueben von Cäsar bis Tacitus* (1883); Müller, *Geschichte des deutschen Volks*, 11th ed. (1884). See also C. Kingsley, *Roman and Teuton*, 2d ed. (1887).

Germania. A valuable monograph by Tacitus, descriptive of ancient Germany and the Germans. See GERMANIA; TACITUS.



Germanĭcus Caesar. The son of Nero Claudius Drusus, adopted son of his uncle Tiberius, and

Germanicus. (Louvre.)

grandson of Livia, the wife of Augustus, born B.C. 15. In A.D. 7 he became quaestor, five years before the legal age; and in the same year served with distinction in the war against the Pannonians and Dalmatians. In the year 11 he accompanied Tiberius in his campaigns against the Germans, who were flushed with the pride of their recent exploit in annihilating the Roman legions of Varus; but after a few desultory incursions he returned to Rome. In A.D. 14, however, he was put in command of eight legions stationed on the Rhine. He was first called upon to quell a formidable revolt of the Roman troops, who on the death of Augustus mutinied for increased pay and a shorter term of service. Tact and firmness, united to great affability of demeanor, on the part of Germanicus, made him successful in his task, and he became the idol of the army, though for a long time the disaffection smouldered and at times broke out into open rebellion. At last, however, a campaign against the enemy was begun. Germanicus crossed the Rhine and fell upon the hostile Marsi, laying waste their territory for fifty miles and sparing neither age nor sex. On his return he routed the formidable tribes of the Bructeri, the Tubantes, and the Usipetes, who tried to block his way. In A.D. 15 he attacked the Catti, took their chief town (Mattium), and treated the foe with the same unsparing severity. Soon afterwards, he took prisoner Thusnelda, the patriotic wife of the German hero Arminius. She was pregnant at the time, and her husband, infuriated at her capture, roused up not only his own people, the Cherusci, but all the neighbouring tribes, and hurled his forces upon the Romans. Near the Teutoburg Forest, where bleached the bones of Varus and his legions, Germanicus again met the Germans. The conflict was long and doubtful. The Romans finally prevailed over the undisciplined valour of the barbarian hosts; yet so uncertain was the result that the victors decided to retire to the Rhine, which was done amid continuous fighting. In the next year, with a flotilla of 1000 vessels, he undertook another campaign on the lower Rhine. A great battle was fought on the plain of Idistavisus (near Hausberg), in which Arminius and his warriors were utterly routed. Arminius himself only escaped by disguising his person. It was on the occasion of this battle that eight eagles were seen hovering over the forest. "Come!" cried Germanicus to his troops, "Follow the birds of Rome, your own divinities!"—an exhortation that excited the courage of the legions to the highest pitch. Later, he once more devastated the country of the Marsi and the Catti.

In A.D. 16, Tiberius, who was jealous of his growing fame, recalled him to Rome. The whole population poured out to meet him, and on the 26th of May he celebrated his triumph with great splendour, Thusnelda being led along the Via Sacra among the captives. Soon afterwards, Germanicus was placed over the Eastern Provinces with the highest *imperium;* but Tiberius set Cn. Piso in command of Syria, probably with secret instructions to thwart and embarrass Germanicus in every possible way. Piso's wife Plancina, also, a haughty and imperious woman, was incited by the ex-empress Livia, mother of Tiberius, to annoy, in innumerable petty ways, the noble wife of Germanicus, Agrippina, who had been his companion in all his campaigns, and whose influence had on one occasion even quelled a revolt of the soldiery (Tac. *Ann.* i. 41). As was to be expected, a bitter quarrel soon arose between Germanicus and Piso, and when Germanicus fell ill in A.D. 19, rumours that Piso had poisoned him were rife; though Germanicus himself attributed his illness to sorcery. His death took place on October 9th of the same year.

Agrippina, wife of Germanicus. (Capitoline Museum, Rome.)

Tacitus says that his body bore no marks of poison (*Ann.* ii. 73). Never had Rome more deeply lamented the death of an illustrious son. His liberal views, unostentatious demeanour, and kind heart, combined with courage and military genius, made the whole people his admirers. Unusual honours were granted to him on his death—a public tomb, a triumphal arch, and the insertion of his name in the Salian Hymns. He left six children, among whom were Gaius (Caligula), and Agrippina, the mother of Nero.

Distinguished as much for culture as for military accomplishments, he was an orator and author as well as a general. Ovid, who dedicated to him the second edition of his *Fasti*, praises his poetry. His paraphrase of the *Phaenomena* of Aratus in 725 lines, and three fragments (246 lines) of a paraphrase of the same writer's *Prognostica*, still survive. They are remarkable for learning, command of metre, and a pleasing style. The *Phaenomena* is dedicated to Tiberius, and described by the author himself as the work of a beginner. These poems used erroneously to be attributed to Domitian, who did not, however, take the title of Germanicus until he was emperor. Three collections of scholia upon them, by no means without value, have also survived. The best edition of the *Aratea* of Germanicus, with the scholia, is that of Breysig (Berlin, 1867). See Beaufort, *Hist. de César Germanicus* (Leyden, 1741); Beulé, *Tibère et l' Héritage d' Auguste* (1870); and Höfer, *Feldzug des Germanicus im Jahr* 16 (1885).

Geronthrae (Γερόνθραι). A town of Laconia, to the north of Helos, founded by the Achaeans long before the invasion of the Dorians and the Heraclidae, and subsequently colonized by the latter. When Pausanias visited Laconia, he found Geronthrae in possession of the Eleuthero-Lacones. It contained a temple and grove of Ares, and another temple of Apollo (Pausan. iii. 22).

Gerra (τὰ Γέρρα). One of the chief cities of Arabia, and a great emporium for the trade of Arabia and India, on the northeast coast of Arabia Felix. The inhabitants, called Gerraei, were said to have been originally Chaldaeans who were driven out of Babylon.

Gerrae (γέρρον). Anything made of wickerwork; hence trifles, trash (Plaut. *Epid.* ii. 2. 45).

Gerrhi (Γέρροι). A people of Scythia, in whose country the Borysthenes rises. The kings of Scythia were buried in their territories (Herod. iv. 71).

Gerrhus (Γέρρος). A river of Scythia, which flowed towards the sea and fell into the Hypacris (Herod. iv. 56).

Gerŭlus. A porter. See Baiulus.

Gerusia (γερουσία; a council of old men, γέροντες). The supreme deliberative authority among the Spartans, according to the constitution of Lycurgus. It consisted of twenty-eight men of at least sixty years of age, called γέροντες (*senatores*), elected by the public assembly for life. The meetings of the Gerusia were presided over by the two kings, who had the right of voting. The number of the council therefore amounted to thirty. It was their duty to deliberate beforehand on all important affairs of State, and to prepare preliminary resolutions upon them, to be voted upon by the public assembly. They had also jurisdiction in the case of all offences which were punishable by death or loss of civil rights. They sat in judgment, if necessary, even on the kings, in later times associating the ephors with them in this function. Their authority, like that of the kings, suffered considerable restriction at the hands of the ephors. They had a similar position in the Cretan constitution, according to which only the members of the highest magistracy, called the κόσμοι, or regulators, could enter the council, and that only after a blameless term of administration. See Busolt, *Griechische Geschichte*, i. 94–135; Grote, *Hist. of Greece*, ii. pt. ii. ch. vi.; Arnold, *Thucydides*, i. App. ii. in later edition.

Gerÿon (Γηρυών) or **Geryŏnes** (Γηρυόνης). A giant with three bodies and powerful wings, the son of Chrysaor and Callirrhoë. He dwelt in the island of Erythia, lying in the ocean, in the extreme west; and was the possessor of a herd of red cattle, watched by the shepherd Eurytion, and a two-headed dog called Orthrus. It was one of the twelve labours of Heracles (q. v.) to carry off these cattle, and after a violent contest to slay the pursuing Geryon with his arrows.

Gesner, Johann Matthias. A German classical scholar, born at Roth, April 9th, 1691. He studied philology at the University of Jena, and after receiving his degree became librarian at Weimar (1715), afterwards filling the offices of Rector of the Gymnasium at Ansbach (1729), and Rector of the Thomas School at Leipzig (1730). At the Thomas School he had for his colleagues Ernesti and Johann Sebastian Bach. When the University of Göttingen was founded, he was called to the chair of Rhetoric in that institution, acting also as librarian. He died at Göttingen, August 3d, 1761.

His published works include an edition of the *Philopatris* ascribed to Lucian (1714), of the *Scriptores Rei Rusticae* (2d ed. 1773), of Quintilian (1738), of Claudian (1759), of the younger Pliny (2d ed. 1770), of Horace (2d ed. 1772), and of the Orphic Hymns; besides a *Novus Linguae et Eruditionis Romanae Thesaurus*. See Ernesti, *Opuscula Oratoria* (1762); and *Göttinger Professoren* (1872).

Gesoriăcum. The modern Boulogne; a port of the Morini in Gallia Belgica, at which persons usually embarked to cross over to Britain (Mela, iii. 2). It was subsequently called Bononia, whence its modern name.

Gesta Romanōrum. See Novels and Romances.

Gestatio. A part of an ornamental garden or pleasure-ground, divided into shady walks and vistas of sufficient extent for the proprietor and his guests to be carried about them for exercise in a palanquin (*lectica*). See Pliny, *Epist.* v. 6, 17; ii. 17, 13.

Gesticularia. A pantomimic actress, who expressed the character she had to personate by dancing and mimetic action of the hands and feet (Gell. i. 5, 2).

Geta, Septimius. The brother of Caracalla, by whom he was assassinated, A.D. 212. See Caracalla.

Getae (Γέται). A Thracian people, called Daci by the Romans. Herodotus (iv. 95) and Thucydides place them south of the Ister (Danube), near its

mouths; but in the time of Alexander the Great they dwelt beyond this river and north of the Triballi.

Ghosts. See UMBRA.

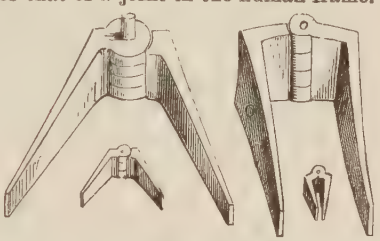
Gibbet. See CRUX.

Gig. See CISIUM.

Gigantes (Γίγαντες). In Homer the Gigantes are a wild and gigantic race of aborigines, kinsmen of the gods, as are the Cyclopes and Phaeacians. With their king Eurymedon, they are destroyed for their wickedness. Hesiod makes them the sons of Gaea, sprung from the blood of the mutilated Uranus. Neither Hesiod nor Homer knew anything of their struggle with the gods (*Gigantomachia*), the story of which seems to be a reflection of the myth of the Titans and their contest with the gods, and to be associated with local legends. The two are often confused by later poets. The place of the contest was Phlegra, or the place of burning; and Phlegra was always localized in volcanic regions. In the earlier stories it is on the Macedonian peninsula of Pallenē; and in later times on the Phlegraean plains in Campania between Cumae and Capua, or again at Tartessus in Spain. Led on by Alcyoneus and Porphyrion, they hurled rocks and burning trunks of trees against heaven. But the gods called Heracles to their assistance, a prophecy having warned them that they would be unable to destroy the giants without the aid of a mortal. Heracles slew not only Alcyoneus, but gave the others, whom the gods had struck down, their death-blow with his arrows. As Enceladus was flying, Athenē threw the island of Sicily upon him. Polybotes was buried by Poseidon under the island of Nisyros, a piece of the island of Cos, which Poseidon had broken off with his trident, with all the giants who had fled there. Besides these, the following names are given among others: Agrius, Ephialtes, Pallas, Clytius, Eurytus, Hippolytus, Thoön.

In the oldest works of art the Giants are represented in human form and equipped with armour and spears; but in course of time their attributes became terrific — awful faces, long hanging hair and beard, the skins of wild animals for garments, trunks of trees and clubs for weapons. In the latest representations, but not before, their bodies end in two scaly snakes instead of feet, as in the illustration. In the Gigantomachia of Pergamus, the grandest representation of the subject in antiquity, we find a great variety of forms; some quite human, others with snakes' feet and powerful wings, others with still bolder combinations of shape; some are naked, some clothed with skins, some fully armed, and others slinging stones. See Mayer, *Die Giganten und Titanen* (Leipzig, 1887); and the articles PERGAMENE SCULPTURES; TITANES.

Giant in Conflict with Artemis. (Roman relief in Vatican Museum.)



Gigantomachia. See GIGANTES.

Gigōnus (Γίγωνος). A town and promontory of Macedonia on the Thermaic Gulf.

Gildo. A Moorish chief who governed Africa for several years under the Western Empire, but in A.D. 397 became a subject of the Eastern Empire, of which Arcadius was then the head. He was taken prisoner by Stilicho, acting for the emperor Honorius, and hanged himself in despair in A.D. 398. The Latin poet Claudianus has made this war the subject of a poem (*De Bello Gildonico*). See CLAUDIANUS.

Gimlet. See TEREBRA.

Ginglȳmus (γίγγλυμος). Literally, a joint which moves in a socket, like the elbow; thence a hinge (Xen. *Eq.* xii. 6), the action of which resembles that of a joint in the human frame. The

Ginglymi.

cabinets of antiquities contain numerous specimens of these contrivances, framed in the different patterns in use at this day, and of all sizes. Of the two examples here given, the first is from Pompeii, the other is preserved in the British Museum. The Latin name is not met with in any Roman writer, and consequently requires authority; but the Greek one is undoubted.

Gingras (γίγγρας). A fife or flute. See TIBIA.

Girgillus. The roller turned by a windlass, in order to raise water from a well by means of a rope and bucket; a contrivance precisely similar to those used in many country places at the present day, as shown by the annexed example from a marble sarcophagus of the Vatican Cemetery (Isidor. *Orig.* xx 15).

Girgillus. (Rich.)

Gisco or Gisgo (Γίσκων, Γέσκων). (1) The son of Hamilcar, defeated and killed in the battle of Himera (B.C. 480). (2) The son of Hanno, who unsuccessfully opposed Timoleon after the latter had routed the Carthaginians at the Crimissus in B.C. 339. (3) A commander of the Carthaginian garrison at Lilybaeum at the close of the First Punic War. In B.C. 241 he was seized and murdered by the mutinous mercenary troops with whom the Carthaginian government had sent him to treat. See CARTHAGE.

Gitiădas (Γιτιάδας). The last Spartan artist of any distinction, flourishing about B.C. 516. He

completed the so-called Brazen House of Athenê at Sparta. He won some distinction as a poet.

Glabrio, MANIUS ACILIUS. (1) Consul, B.C. 191, when he defeated Antiochus at Thermopylae. (2) Praetor urbanus in 70, when he presided at the impeachment of Verres; and consul in 67, and subsequently the successor of L. Lucullus in the command of the war against Mithridates, in which, however, he was superseded by Cn. Pompey. (3) The son of the preceding. He was one of Caesar's lieutenants in the Civil Wars. He was twice defended by Cicero on capital charges, and acquitted.

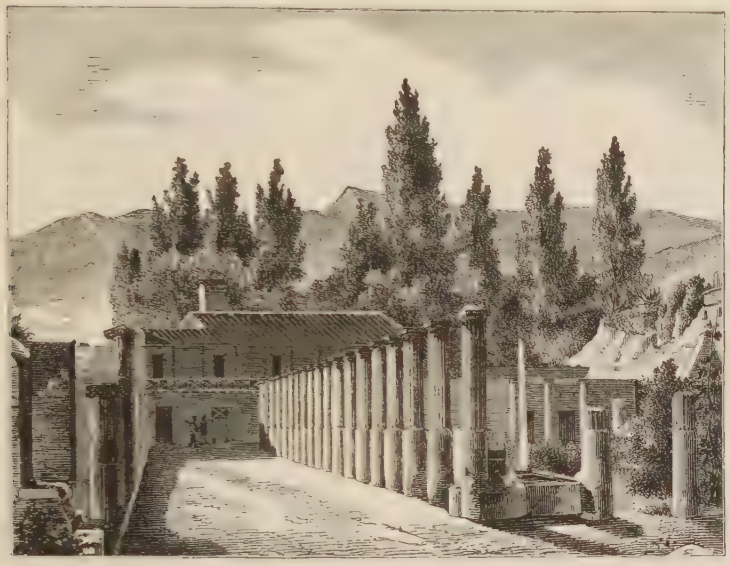
Gladiatōres (*μονομάχοι*). Persons who fought with swords (*gladii*) in the circus, the forum, or in later times in the amphitheatre, for the amusement of the Roman people (Quintil. *Declam.* 302). They are said to have been first exhibited by the Etruscans, and to have had their origin from the custom of killing slaves and captives at the funeral pyres of the deceased (Tertull. *De Spectac.* 12; Serv. *ad* Verg. *Aen.* x. 519). A show of gladiators was called *munus*, and the person who exhibited it, the *editor*, *munerator*, or *dominus*, who was honoured during the day of exhibition, if a private person, with the insignia of a magistrate (Flor. iii. 20).

Bustuarius. (From an Engraved Gem.)

Gladiators were first exhibited at Rome in B.C. 264, in the Forum Boarium, by Marcus and Decimus Brutus, at the funeral of their father (Val. Max. ii. 4, 17). They were at first confined to public funerals (*bustuarius*), but afterwards fought at the funerals of most persons of consequence, and even at those of women (Suet. *Iul.* 26). Private persons sometimes left a sum of money in their will to pay the expenses of such an exhibition at their funerals (Hor. *Sat.* ii. 3, 84). Combats of gladiators were also exhibited at entertainments by the degraded nobles of Campania (Sil. Ital. xi. 51), though not at Rome, and especially at public festivals by the aediles and other magistrates, who sometimes exhibited immense numbers with the view of pleasing the people. (See AEDILES.) Under the Empire the passion of the Romans for this amusement rose to its greatest height, and the number of gladiators who fought on some occasions appears almost incredible. After Trajan's triumph over the Dacians, there were more than 10,000 exhibited (Dio Cass. lxviii. 15).

Gladiators consisted either of captives, slaves, and condemned malefactors, or of freeborn citizens who fought voluntarily. Of those who were condemned, some were said to be condemned *ad gladium*, in which case they were obliged to be killed at least within a year; and others *ad ludum*, who might obtain their discharge at the end of three years. Freemen who became gladiators for hire were called *auctorati*, and their hire *auctoramentum* or *gladiatorium* (Suet. *Tib.* 7). They also took an oath on entering upon the service, similar to that which is preserved by Petronius (117): *In verba Eumolpi sacramentum iuravimus, uri, vinciri, verberari, ferroque necari, et quicquid aliud Eumolpus iussisset, tamquam legitimi gladiatores, domino corpora animasque religiosissime addicimus.* Even under the Republic, freeborn citizens fought as gladiators (Livy, xxviii. 21), but they appear to have belonged only to the lower orders, and the profession was considered degrading (cf. Mommsen, *C. I. L.* i. 1418), though to some it had many attractions. Under the Empire, however, both knights and senators fought in the arena (Suet. *Iul.* 39; *Aug.* 43; *Ner.* 12), and even women (Suet. *Dom.* 4); a practice which was at length forbidden in the time of Severus (Dio Cass. lxxv. 16).

Gladiators were kept in schools (*ludi*), where they were trained by persons called *lanistae*. The whole body of gladiators under one *lanista* was frequently called *familia*. They sometimes were the property of the *lanistae*, who let them out to persons who wished to exhibit a show of gladiators; but at other times belonged to citizens, who kept them for the purpose of exhibition, and engaged *lanistae* to instruct them. Thus Spartacus (q. v.) belonged to the school of Lentulus at Capua (Flor. iii. 8), and Caesar had one at the same place. Domitian built four *ludi* at Rome, and there were several others in Italy and the provinces. The number of gladiators which any citizen might keep was limited by the Senate in B.C. 68 (Suet. *Iul.* 10), but Caligula did away with the restriction (Dio Cass. lix. 14). The superintendence of the *ludi*, which belonged to the emperors, was intrusted to a person of high rank, called *curator* or *procurator*. The arrangements of a *ludus gladiatorius* are now known to us from one excavated at Pompeii. See illustration on next page.



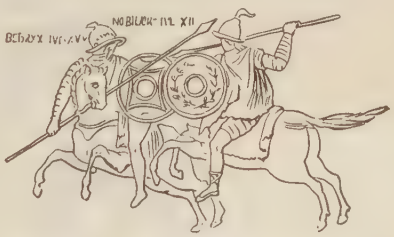
The gladiators fought in these schools with wooden swords, called *rudes* (Suet. *Cal.* xxxii. 54). Great attention was paid to their diet, in order to increase the strength of their bodies, and they were fed with nourishing food, called *gladiatoria sagina*.

Gladiators were sometimes exhibited at the funeral pyre, and sometimes in the forum, but more

Gladiators. (Overbeck.)

frequently in the amphitheatre. (See AMPHITHEATRUM.) The person who was to exhibit a show of gladiators published some days before the exhibition bills (*libelli*), containing the number and sometimes the names of those who were to fight; e. g. at Pompeii we have (*C. I. L.* iv. 1189): A. SUETTII CERTI AEDILIS FAMILIA GLADIATORIA PUGNABIT POMPEIIS PRID. KAL. IUN. VENATIO ET VELA ERUNT; and similar notices. When the day came,

Pompeian Barracks for Gladiators. (Overbeck.)



they were led along the arena in procession, and matched by pairs; and their swords were examined by the *editor* to see if they were sufficiently sharp (Suet. *Tit.* 9). At first there was a kind of sham battle, called *praelusio*, in which they fought with wooden swords, or the like (Sen. *Epist.* 117), and afterwards at the sound of the trumpet the real battle began. When a gladiator was wounded, the people called out "Habet!" or "Hoc habet!" and the one who was vanquished lowered his arms in token of submission. His fate, however, depended upon the people, who turned up their thumbs if they wished him to be killed (Hor. *Ep.* i. 18, 66; Juv. iii. 36), and ordered him to receive the sword (*ferrum recipere*), which gladiators usually did with the greatest firmness. A relief has been discovered at Cacillargues, showing a combat between a Samnite and a *retiarius*, with four spectators, one of whom, a woman, is holding up her thumbs. There is no clear evidence that the wish that mercy should be shown was expressed by pressing down the thumbs (Pliny, *H. N.* xxviii. § 25 is barely to the point); this was indicated rather by waving handkerchiefs (Mart. xii. 29, 7). If the life of a vanquished gladiator was spared, he obtained his discharge for that day, which was called *missio* (Mart. xii. 29, 7); and hence in an exhibition of gladiators *sine missione*, the lives of the conquered were never spared. This kind of exhibition, however, was forbidden by Augustus (Suet. *Aug.* 45).

Palms were usually given to the victorious gladiators, and hence a gladiator who had frequently conquered is called *plurimarum palmarum gladiator* (Cic. *Pro Rosc. Amer.* vi. 17); money also was sometimes given (Suet. *Claud.* 21). Old gladiators, and sometimes those who had only fought for a short time, were discharged from the service by the *editor* at the request of the people, who presented each of them with a rudis or wooden sword; whence those who were discharged were called *rudiarii* (Cic. *Phil.* ii. 29, 74; Hor. *Ep.* i. 1, 2). If a person was free before he entered the ludus, he became on his discharge free again; and if he had been a slave, he returned to the same condition again, unless he received the cap of freedom (*pilleus*). A man, however, who had been a gladiator, was always considered to have disgraced himself, and consequently it appears that he could not obtain the equestrian rank even if he afterwards acquired sufficient property to entitle him to it; and a slave who had been sent into a *ludus* and there manumitted, merely acquired the status of a *peregrinus dediticius*. See DEDITICII.

Shows of gladiators were abolished by Constantine, but appear notwithstanding to have been generally exhibited till the time of Honorius, by whom they were finally suppressed.

Gladiators were divided into different classes, according to their arms and different mode of fighting, or other circumstances. The names of the most important of these classes are given in alphabetical order:

Andabatae (Cic. *Ad Fam.* vii. 10) wore helmets without any aperture for the eyes, so that they were obliged to fight blindfold, and thus excited the mirth of the spectators. They are generally believed to have fought on horseback, but this is denied by Orelli (*Inscr.* 2577) and Friedländer; the name cannot be derived from ἀναβάτης. It is perhaps Keltic, with the meaning "blind-fighter" (Whitley Stokes, in *Academy*, Feb. 9, 1889).

Andabatae. (From the Amphitheatre, Pompeii.)

Bustuarii were those who fought on the funeral pyre. See illustration, p. 732.

Catervarii was the name given to gladiators when they did not fight in pairs, but when several fought together (Suet. *Aug.* 45).

Dimachaeri appear to have been so called, because they fought with two swords (Artemid. ii. 32; Orelli, *Inscr.* 2584).

Equites were those who fought on horseback (Orelli, *Inscr.* 2569, 2577).

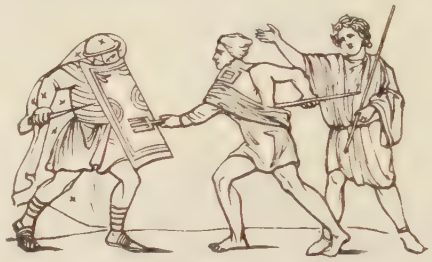
Essedarii fought from chariots (*esseda*), like the Gauls and Britons. They are frequently mentioned in inscriptions (Orelli, 2566, 2584, etc.; cf. Petron. 45).

Fiscales were those under the Empire who were trained and supported from the *fiscus* (Capitol. *Gord.* 33).

Hoplomachi appear to have been those who fought in a complete suit of armour (Suet. *Cal.* 35; Mart. viii. 74).

Laquearii were those who used a noose (*laqueus*) to catch their adversaries (Isid. xviii. 56).

Meridiani were those who fought in the middle of the day, after combats with wild beasts had taken place in the morning. These gladiators were very lightly armed (Suet. *Claud.* 34).



Myrmillones are said to have been so called from their having the image of a fish (*mormyr*, μορμύρος) on their helmets (Fest. s. v. *Retiarii*). Their arms were like those of the Gauls, and they did not differ much from the kind called Galli. They were usually matched with the *retiarii* or Thracians (Cic. *Phil.* iii. 12, 31; vii. 6, 17; Juv. viii. 200; Suet. *Cal.* 32, *Dom.* 10).

Ordinarii was the name applied to all the regular gladiators who fought in pairs in the ordinary way (Suet. *Aug.* 45, *Cal.* 26).

Postulaticii were such as were demanded by the people from the *editor*, in addition to those who were exhibited (Sen. *Epist.* 7).

Provocatores fought with the Samnites (Cic. *Pro Sest.* 64. 134), but we do not know anything respecting them except their name.

Retiarii carried only a three-pointed lance, called *tridens* or *fuscina*, a dagger (Val. Max. i. 7, 8), and a net (*rete*), which they endeavoured to throw over their adversaries, and then to attack them with the fuscina while they were entangled. The *retiarius* was dressed in a short tunic, and wore nothing on his head. If he missed his aim in throwing the net, he betook himself to flight, and endeavoured to prepare his net for a second cast, while his adversary followed him round the arena in order to kill him before he could make a second attempt. His adversary was usually a *secutor* or a *myrmillo* (Suet. *Cal.* 30, *Claud.* 34; Orelli, 2578). In the following illustration a combat is represented between a *retiarius* and a *myrmillo;* the former has thrown his net over the head of the latter, and is proceeding to attack him with the *fuscina*. The *lanista* stands behind the *retiarius*.

Myrmillo and Retiarius. (Mosaic in the Library at Madrid.)

Samnites were so called because they were armed in the same way as that people, with a helmet with a high crest (Juv. vi. 256), and were particularly distinguished by the oblong *scutum*.

Secutores are supposed by most writers to be so called because the *secutor* in his combat with the *retiarius* pursued the latter when he failed in securing him by his net. Other writers think that they were the same as the *suppositicii*, mentioned by Martial (v. 24), who were gladiators substituted in the place of those who were wearied or were killed (Suet. *Cal.* 30; Juv. vi. 108, with the Schol. viii. 210). If the old reading in a letter of Cicero's (*Ad Att.* vii. 14) is correct, Iulius Caesar had no less than 600 *secutores* in his *ludus* at Capua; but we probably ought to read *scutorum* instead of *secutorum*.

Suppositicii. See *Secutores*.

Thraces or *Thraeces* were armed, like the Thracians, with a round shield or buckler (Fest. s. v. *Thraeces*), and a short curved sword or dagger (*sica*, Suet. *Cal.* 32), which is called *falx supina* by Juvenal (viii. 201), and wore greaves on both legs. They were usually matched, as already stated, with the *myrmillones*.

Velites had light spears (Ovid, *Ib.* 45).

Paintings of gladiatorial combats, as well as of the other sports of the amphitheatre, were favourite subjects with the Roman artists (Pliny, *H. N.* xxxv. § 52). Several statues of gladiators have come down to us, which are highly admired as works of

Borghese Gladiator (?) of Agasias. (Louvre.)

art; of these, the most celebrated is the athlete by Agasias of the Borghese Collection, now in the Museum of the Louvre, and the Dying Gladiator, in the Capitoline Museum. The latter, which inspired the famous stanza in *Childe Harold*, is now, however, regarded as a wounded Gaul. Gladiatorial combats are represented in the bas-reliefs on the tomb of Scaurus at Pompeii, and illustrate in many particulars the brief account which has been given in this article of the several classes of gladiators. These bas-reliefs are represented in the following illustrations from Mazois (*Pomp.* i. pl. 32; and

Gladiators.

Overbeck, *Pompeii*, p. 165). The figures are made of stucco, and appear to have been moulded separately, and attached to the plaster by pegs of bronze or iron. In various parts of the frieze are written the name of the person to whom the gladiators belonged, and also the names of the gladiators themselves, and the number of their victories. The first pair of gladiators on the left hand represents an equestrian combat. Both wear helmets with visors, which cover the whole face, and are armed with spears and round bucklers. In the second pair the gladiator on the left has been wounded; he has let fall his shield, and is imploring the mercy of the people by raising his hands towards them. His antagonist stands behind him waiting the signal of the people. Like all the other gladiators represented on the frieze, they wear the *subligaculum* or short apron tied above the hips. The one on the left appears to be a *myrmillo*, and the one on the right, with an oblong shield (*scutum*), a Samnite. The third pair consists of a Thracian and a *myrmillo*, or Samnite, the latter of whom is defeated. The fourth group consists of four figures; two are *secutores* and two *retiarii*. The *secutor* on his knee appears to have been defeated by the *retiarius* behind him; but as the *fuscina* is not adapted for producing certain death, the other *secutor* is called upon to do it. The *retiarius* in the distance is probably destined to fight in his turn with the surviving *secutor*. The last group consists of a *myrmillo* and a Samnite; the latter is defeated.

In the second illustration two combats are represented. In the first a Samnite has been conquered by a *myrmillo;* the former is holding up his hand to the people to implore mercy, while the latter apparently wishes to become his enemy's executioner before receiving the signal from the people; but the *lanista* holds him back. In the other combat a *myrmillo* is mortally wounded by a Samnite. It will be observed that the right arm of every figure is protected by rings of armour, which the left does not require on account of the shield. See Lipsius, *Saturnalia* (1675) and *De Amphitheatro* in Graev. *Thesaur.* vol. ix.; Friedländer, *Sittengeschichte*, vol. ii.; Wallon, *Histoire de l'Esclavage* (Paris, 1879); and the article VENATIO.

Gladiatorium. The pay given to a freeman who trained and served as a gladiator. See Livy, xliv. 31, and the article GLADIATORES.

Gladius (*ξίφος*; poet. *ἄορ*, *φάσγανον*). A sword, by the Latin poets called *ensis*. The ancient sword had generally a straight, two-edged blade (*ἀμφήκες*), rather broad, and of nearly equal width from hilt to point. Gladiators, however, used a sword which was curved like a scimitar. In times of the remotest antiquity swords were made of bronze, but afterwards of iron. The Greeks and Romans wore them on the left side, so as to draw them out of the sheath (*κόλεος*, *vagina*) by passing the right hand in front of the body to take hold of the hilt with the thumb next to the blade. Hence Aeschy

Greek Swords and Scabbards. (Guhl and Koner.)

lus distinguishes the army of Xerxes by the denomination of *μαχαιροφόρον ἔθνος*, alluding to the obvious difference in their appearance in consequence of the use of the *acinaces* instead of the sword. See ACINACES.

The early Greeks used a very short sword. Iphicrates, who made various improvements in armour about B.C. 400, doubled its length, so that an iron sword found in a tomb at Athens, and represented by Dodwell, was two feet five inches long, including the handle, which was also of iron. The Roman sword, as was the case also with their other offensive weapons, was larger, heavier, and more formidable than the Greek. Its length gave occasion to the joke of Lentulus upon his son-in-law, who was of very low stature, "Who tied my son-in-law to his sword?" To this Roman sword the Greeks applied the term *σπάθη*, which was the name of a piece of wood of the same form used in weaving. (See TELA.) The ancient British sword was still larger than the Roman. The principal ornamentation of the sword was bestowed upon the hilt. See CAPULUS.

1. Monument of an Illyrian Soldier, found at Bingen. 2. Scabbard. (Mayence, Germany.)

Gladius is sometimes used in a wide sense, so as to include *pugio* (q. v.). In the republican period of Rome, the gladius was worn by magistrates only when exercising military command. Under the Empire it was one of the insignia of the emperor and of those nominated by him. The *ius gladii* is the right of criminal jurisdiction conferred by the emperor on provincial governors. See ARMA; MACHAERA; MUCRO.

Glans (*μολυβδίς*). A large leaden slug or plummet, cast in a mould, and used instead of a stone to be discharged from a sling (Livy, xxxviii. 20, 21, 29). The illustration represents an original found at the ancient Labicum; the letters FIR are for *firmiter*, "Throw steadily," or *Feri Roma* (Inscript. Orelli, 4932), "Strike, O Rome!" Others have been found in Greece, inscribed with the figure of a thunderbolt, or ΔΕΞΑΙ, "Take this."

Glans.

Glaphyra (Γλαφύρα). A mistress of Marcus Antonius who placed her son Archelaüs on the throne of Cappadocia as a favour to her. (Dio Cass. xlix. 32.)

Glass. See VITRUM.

Glaucé (Γλαύκη). (1) One of the Nereides, the name Glaucé being only a personification of the color of the sea (*γλαυκός*). (2) Daughter of Creon of Corinth, also called Creüsa. See CREON.

Glaucias (Γλαυκίας). (1) An Illyrian king who fought against Alexander the Great in B.C. 335. In 316 he offered a refuge to Pyrrhus, then an infant, and refused to give him up to Cassander. Nine years later he invaded Epirus and placed Pyrrhus on the throne of that country. See PYRRHUS. (2) An Aeginetan statuary who flourished in B.C. 488. He made a bronze chariot and statue of Gelon (q. v.).

Glaucon (Γλαύκων). The brother of Plato, who makes him one of the speakers in his dialogue *De Republica*.

Glaucus (Γλαῦκος). (1) A sea deity, probably only another form of Poseidon, whose son he is, according to some accounts. Like the marine gods in general, he had the gift of prophecy; and we find him appearing to the Argonauts (Apoll. Rh. i. 1310 foll.), and to Menelaüs (Eurip. *Orest.* 356 foll.), and telling them what had happened, or what was to happen. In later times sailors were continually making reports of his soothsaying (Pausan. ix. 22). Some said that he dwelt with the Nereides at Delos, where he gave responses to all who sought them. According to others, he visited each year all the isles and coasts, with a train of monsters of the deep (*κήτεα*), and, unseen, foretold in the Aeolic dialect all kinds of evil. The fishermen watched for his approach, and endeavoured by fastings, prayer, and fumigations to avert the ruin with which his prophecy menaced the fruits and cattle. At times he was seen among the waves, and his body appeared covered with mussels, seaweed, and stones. He was heard evermore to lament his fate in not being able to die (Plat. *Rep.* x. 611). This last circumstance refers to the common legendary history of Glaucus. He was a fisherman, it is said (Pausan. l. c.; Ovid, *Met.* xiii. 904 foll.), of Anthedon, in Boeotia. Observing one day the fish which he had caught and thrown on the grass to bite it, and then to jump into the sea, his curiosity incited him to taste it also. Immediately on his doing so he followed their example, and thus became a sea-god. Another account made him to have obtained his immortality by tasting the grass, which had revived a hare he had run down in Aetolia. He was also said to have built and steered the Argo, and to have been made a god of the sea by Zeus during the voyage. An account of the story of his love for Scylla will be found under SCYLLA. See Gädecken, *Glaukos, der Meeresgott* (Göttingen, 1860).

(2) A son of Sisyphus, king of Corinth, by Merope, the daughter of Atlas, born at Potniae, a village of Boeotia. According to one account, he restrained his mares from having intercourse with the stallions; upon which Aphrodité inspired the former with such fury that they tore his body to pieces as he returned from the games which Adrastus had celebrated in honour of his father. Another

version of the story makes them to have run mad after eating a certain plant at Potniae (*Etymol. Mag.* s. v. Ποτνιάδες; Hyg. *Fab.* 250; Verg. *Georg.* iii. 268).

(3) A son of Minos and Pasiphaë, who, when a child, pursuing a mouse, fell into a vessel of honey and was smothered. His father, ignorant of his fate, consulted the oracle to know where he was, and received for answer that there was a three-coloured cow in his herd, and that he who could best tell what she was like could restore his son to life. The soothsayers were all assembled, and Polyidus, the son of Coiranus, said that her colour was that of the berry of the briar, green, red, and, lastly, black. Minos thereupon desired him to find his son; and Polyidus, by his skill in divination, discovered where he was. Minos then ordered him to restore him to life; and, on his declaring his incapacity so to do, shut him up in a chamber with the body of his child. While here, the soothsayer saw a serpent approach the body, and he struck and killed it. Another immediately appeared, and seeing the first one dead, retired, and came back soon after with a plant in its mouth, and laid it on the dead one, which instantly came to life. Polyidus, by employing the same herb, recovered the child. Minos, before he let him depart, insisted on his communicating his art to Glaucus. He did so, but as he was taking leave he desired his pupil to spit into his mouth. Glaucus obeyed, and lost the recollection of all he had learned (Apollod. iii. 3. 1). Hyginus makes him to have been restored to life by Aesculapius (*Poet. Astron.* ii. 14).

(4) The grandson of Bellerophontes, and son of Hippolochus, prince of the Lycians. With his kinsman Sarpedon, he was leader of the Lycian auxiliaries of Priam, and met Diomedes in the *mêlée*. The two chieftains recognized each other as friends and guests of their grandfather Bellerophontes and Oeneus, and exchanged armour, Glaucus parting with his golden suit for the brazen arms of Diomedes. When the Greek intrenchments were stormed, Glaucus had reached the top of the wall when he was put to flight by an arrow shot by Teucer. He protected Hector when wounded by Achilles; with Apollo's aid he avenged Sarpedon, and took a prominent part in the struggle for the body of Patroclus. He finally met his death at the hand of Aias.

Glaucus Sinus. A gulf of Lycia, at the head of which stood the city of Telmissus or Macri, whence in ancient times the gulf was sometimes also called Sinus Telmissius.

Glossa (γλῶσσα) and **Glossēma** (γλώσσημα). In the language of text-criticism, a "gloss." The word underwent a gradual development of meaning, which may be described with brevity. By the earliest Greek commentators and editors of texts, γλῶσσα denoted any word in an author that required definition or explanation. Such were (*a*) archaisms; (*b*) ἅπαξ λεγόμενα and newly-coined words; (*c*) provincialisms; (*d*) barbarisms; and (*e*) technical terms (cf. Arist. *Poet.* 21, § 4–6; *Rhet.* iii. 3, 2; Quint. i. 8). In editing or transcribing a text it was usual for the editor or transcriber to define the γλῶσσα by writing opposite to it in the margin the more familiar synonym (ὄνομα κύριον). The term γλῶσσα soon came to be applied to the pair of words—the word in the text and the definition in the margin—the two being regarded as constituting a single whole. Finally, the explanation alone was called a γλῶσσα. With these glosses begins the history of lexicography; for collections of them began to be made, and published separately as *glossaria* or glossaries. Such was the compilation of the elegiac poet Philetas of Cos, whose collection was the first attempt at an Homeric glossary (cf. Susemihl, *Geschichte d. griech. Lit. in d. alexandr. Zeit*, i. p. 174 foll.). We know of glosses as early as the fifth century B.C., for Democritus of Abdera is said to have written a treatise Περὶ Ὁμήρου ἢ Ὀρθοεπείης καὶ Γλωσσάων. (See LEXICON.) Glosses soon ceased to be purely lexical, and from definitions became commentary—geographical, historical, philosophical, or philological—according to the taste or purpose of the glossographer. When these explanatory glosses are fairly brief, they are usually styled *scholia* (σχόλια); when long, they constitute ὑπομνήματα or regular commentaries, such as the Alexandrians wrote. See ALEXANDRIAN SCHOOL.

The principal glossographers among the Greeks were Philetas (about B.C. 290), Zenodotus of Ephesus (about B.C. 280), compiler of Γλῶσσαι Ὁμηρικαί; Aristophanes of Byzantium (B.C. 200), whose glosses are partly preserved by Pollux; Diodorus, Artemidorus, Nicander of Colophon, Aristarchus of Samothrace, Crates of Mallos, Zenodotus of Mallos, Didymus Chalcenteros, Apollonius Sophista (about B.C. 20), Neoptolemus, known distinctively as ὁ γλωσσογράφος; Apion (at Rome under Claudius), Erotion, Pamphilus, Aelius Herodianus, Pollux, Phrynichus in the second century A.D., Ammonius of Alexandria in the fourth century, the famous Hesychius (q. v.), Photius, Suidas, Zonaras, and the author of the *Etymologicum Magnum* (q. v.). Of the Romans, Aurelius Opilius, Aelius Stilo, Varro, Verrius Flaccus, and Festus deserve especial mention. Of technical glosses, those on the legal compilations of Justinian are very important. Of these, two famous compilers were Cyrillus and Philoxenus.

See Matthaei, *Glossaria Graeca* (1774–75); Vater, *Litteratur der Grammatiken, Lexica, und Wörtersammlungen*, etc. (2d ed. by Jülg, Berlin, 1847); Hübner, *Encyclopädie*, pp. 37–40; Löwe, *Prodromos Corporis Glossariorum Latinorum* (1876); id. *Glossae Nominum* (1884); and (now in preparation) the *Corpus Glossariorum* (by the Royal Saxon Soc. of Letters). On the legal glosses, see Biener, *Geschichte der Novellen*, pp. 225 foll.; and for Biblical glosses, the article "Gloss" in McClintock and Strong's *Cyclopaedia of Biblical Literature*, vol. iii. See also in this Dictionary, the articles LEXICON; SCHOLIUM; TEXTUAL CRITICISM.

Glossarium. See GLOSSA; LEXICON.

Glota or **Clota.** A river of Britain, now the Clyde, falling into the Glota Aestuarium, or Frith of Clyde.

Glycĕra, also dim. **Glycerium.** "Sweet one," a favourite name of Greek and Roman courtesans.

Glycerius. Head of the Western Empire for one year (A.D. 473–74), but dethroned by the Eastern Court in favour of Iulius Nepos. Glycerius later became Bishop of Salona in Dalmatia.

Glycon (Γλύκων). An Athenian artist, who probably flourished in the first century B.C. He executed the famous colossal statue of the Farnese Hercules, now at Naples. See HERACLES.

Gnatia. See EGNATIA.

Gnidus. See CNIDUS.

Gnipho, M. Antonius. A Roman rhetorician of Gallic birth (B.C. 114), whose school at Rome was attended by Cicero (Suet. *Gramm.* 7).

Gnomic Poets. See EPOS.

Gnomon (*γνώμων*). The index or pin on a sundial which marks the hour by the shadow it casts (Pliny, *H. N.* ii. § 74; Vitruv. i. 6, 6). See HOROLOGIUM.

Gnomon. (From a cup found at Antium.)

Gnostĭci (*Γνοστικοί*). A religious sect which flourished in the first century of the Christian era. In the New Testament, *γνῶσις* denotes the profound appreciation of Christian truth; with the Gnostics it means a sort of transcendental and mystic understanding, which saw and knew the allegories and subtleties which they professed to find in the sacred writings. They claimed a kinship between all the religions of the world, and asserted their possession of special traditions from certain of Christ's disciples, and the gift of prophecy. The sources of Gnosticism were three —Greek idealism, Oriental pantheism, and Christian revelation, and it was always a heresy of the learned rather than of the masses whom its subtleties repelled. The four points upon which nearly all the Gnostics agreed were as follows: (1) God is incomprehensible; (2) Matter is eternal and antagonistic to God in that it conditions and limits the divine efficiency; (3) Creation is the work of a Demiurgus, either subordinate to God or perhaps actually opposed to him; (4) The human nature of Christ was only a deception. See AEON.

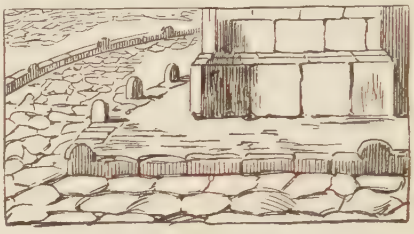
Gnosticism reached its highest point A.D. 150, after which it rapidly declined. Its importance is to be found in the fact that its arbitrary treatment of the Scriptures forced the Church to a more thorough study of the historical tradition, and to establish the principle that nothing is to be regarded as true Christianity which is not shown to be derived from Christ and his apostles. See Matter, *Histoire Critique du Gnosticisme* (2d ed. 1883); King, *The Gnostics and their Remains* (1873); and Mansel, *The Gnostic Heresies*, edited by Lightfoot (1875).

Gnosus, Gnossus. See CNOSSUS.

Gobrўas (*Γωβρύας*). A Persian, one of the seven noblemen who conspired against the usurper Smerdis. See DARIUS.

Gold. See AURUM; NUMISMATICS.

Gold and Ivory. See CHRYSELEPHANTINA.



Golden Ass. See APULEIUS; LUCIANUS; NOVELS AND ROMANCES.

Golden Verses (*ἔπη χρυσᾶ*). A name given to a number of gnomic sayings that have come down, traditionally, from the Pythagorean philosophers, often expressed obscurely, and containing much that is of later date than that of their professed origin. They contain the condensed morals of the older epics (see EPOS), and embody the teachings of practical virtue. They are printed at the end of Göttling's edition of Hesiod (2d ed. Gotha, 1843). See DEMOCRATES; PYTHAGORAS.

Golgi (*Γολγοί*). A town in Cyprus, of uncertain site, a Sicyonian colony, and one of the chief seats of the worship of Aphrodité.

Gomphi (*Γόμφοι*). A town in Hestiaeotis in Thessaly, a strong fortress on the confines of Epirus, commanding the chief pass between Thessaly and Epirus.

Gomphus (*γόμφος*). Properly a Greek word, which signifies a large wedge-shaped pin (Schol. Aristoph. *Ep.* 463; Tertull. *Apol.* 12) driven between two objects, to increase the firmness or tightness of contiguous members, whence the same term was adopted by the Romans to designate the large, round-headed, and wedge-shaped stones

Gomphi. (Pompeii.)

which they used to place at intervals between the ordinary curb-stones bounding the foot-path or *trottoir*.

Gonătas (*Γονατᾶς*). One of the Antigoni. See ANTIGONUS.

Gonni (*Γόννοι*) or **Gonnus** (*Γόννος*). A strongly fortified town of the Perrhaebi in Thessaly, on the river Peneus and at the entrance of the vale of Tempé (Herod. vii. 128).

Gordiaei or **Gordyaei** (*Γορδυαῖοι*). Mountains in Armenia, where the Tigris rises.

Gordian Knot. See GORDIUS.

Gordiānus. (1) MARCUS ANTONĪNUS AFRICĀNUS. A Roman, born during the reign of the first Antonine, of one of the most illustrious and wealthy families of Rome, and who made himself very popular during his quaestorship by his munificence, and the large sums which he spent in providing games and other amusements for the people. He also cultivated literature, and wrote several poems, among others one in which he celebrated the virtues of the two Antonines. Being intrusted with the government of several provinces, he conducted himself in such a manner as to gain universal approbation. He was proconsul of Africa in A.D. 237. When an insurrection broke out in that province against Maximinus, on account of his exactions, and the insurgents saluted Gordianus as emperor, he prayed earnestly to be excused, on account of his age, being then past eighty, and to be allowed to die in peace; but, the insur-

The Elder Gordianus. (Capitoline Museum.)

gents threatening to kill him if he refused, he accepted the perilous dignity, naming his son Gordianus as his colleague, and both made their solemn entry into Carthage amid universal applause. The Senate cheerfully confirmed the election, proclaiming the two Gordiani as emperors, and declaring Maximinus and his son to be the enemies of their country. Meantime, however, Capellianus, governor of Mauritania, collected troops in favour of Maximinus, and marched against Carthage. The younger Gordianus came out to oppose him, but was defeated and killed, and his aged father, on learning the sad tidings, strangled himself. Their reign had not lasted two months altogether, yet they were greatly regretted, on account of their personal qualities. (2) M. Antonius Africānus, son of Gordianus, was instructed by Serenus Samonicus, who left him his library, which consisted of 62,000 volumes. He was well informed, and wrote several works, but was rather too fond of pleasure, which latter circumstance seems to have recommended him to the favour of the emperor Elagabalus. Alexander Severus advanced him subsequently to the consulship. He afterwards passed into Africa as lieutenant to his father, and, when the latter was elevated to the throne, shared that dignity with him. But, after a reign of not quite two months, he fell in battle, at the age of forty-six, against Capellianus, a partisan of Maximinus. (See Gordianus, 1.) (3) Marcus Antonīnus Pius, grandson, on the mother's side, of the elder Gordianus, and nephew of Gordianus the younger, was twelve years of age when he was proclaimed Caesar by general acclamation of the people of Rome, after the news had arrived of the death of the two Gordiani in Africa. The Senate named him colleague of the two new emperors Maximus and Balbinus, but in the following year (A.D. 238) a mutiny of the Praetorians took place at Rome, Balbinus and Maximus were murdered, and the boy Gordianus was proclaimed emperor. His disposition was kind and amiable, but at the beginning of his reign he trusted to the insinuations of a certain Maurus and other freedmen of the palace, who abused his confidence, and committed many acts of injustice. In the second year of his reign a revolt broke out in Africa, where a certain Sabinianus was proclaimed emperor, but the insurrection was soon put down by the governor of Mauritania. In the following year Gordianus, being consul with Claudius Pompeianus, married Furia Sabina Tranquillina, daughter of Misitheus, a man of the greatest personal merit. Misitheus disclosed to Gordianus the disgraceful conduct of Maurus and his friends, who were immediately deprived of their offices and driven away from court. From that moment Gordianus placed implicit trust in his father-in-law, on whom the Senate conferred the title of "Guardian of the Republic." In the next year, news came to Rome that the Persians under Sapor had invaded Mesopotamia, had occupied Nisibis and Carrhae, entered Syria, and, according to Capitolinus, had taken Antioch. Gordianus opened the temple of Ianus, according to an ancient custom which had been long disused, and, setting out from Rome at the head of a fine army, marched through Illyricum and Moesia, where he defeated the Goths and Sarmatians, and drove them beyond the Danube. Gordianus presently crossed the Hellespont, and proceeded into Syria, delivered Antioch, defeated the Persians in several battles, retook Nisibis and Carrhae, and drove Sapor back to his own dominions. The Senate voted him a triumph. In the year after, A.D. 244, Gordianus advanced into Persian territory, and defeated Sapor on the banks of the Chaboras; but while he was preparing to pursue him, Philippus, an officer in the Guards, who had contrived to spread discontent among the soldiers by attributing their privations to the inexperience of a boyish emperor, was proclaimed by the army his colleague in the Empire. Gordianus consented, but soon after was murdered by Philippus. Gordianus was about twenty years old when he died. His body, according to Eutropius, was carried to Rome, and he was numbered among the gods (Herodian, vii. 10 foll.; viii. 6 foll.; Eutrop. ix. 2).

Gordium (Γόρδιον, also Γορδίειον). The ancient capital of Phrygia, situated on the Sangarius; the royal residence of the kings of the dynasty of Gordius, and the scene of Alexander's celebrated exploit of cutting the Gordian knot. See Gordius.

Gordius (Γόρδιος). An ancient king of Phrygia, and father of Midas, but originally a poor peasant. Internal disturbances having broken out in Phrygia, an oracle informed the inhabitants that a wagon would bring them a king, who would put an end to their troubles. Shortly afterwards Gordius suddenly appeared riding in his wagon in the assembly of the people, who at once acknowledged him as king. Gordius, out of gratitude, dedicated his chariot to Zeus, in the acropolis of Gordium. The pole was fastened to the yoke by a knot of bark; and an oracle declared that whosoever should untie the knot should reign over all Asia. Alexander, on his arrival at Gordium, cut the knot with his sword, and applied the oracle to himself (Plut. *Alex.* 18).

Gordyēné (Γορδυηνή) or **Corduēné**. A mountainous district in the south of Armenia Major, between the Arissa Palus (Lake Van) and the Gordyaei Montes (Mountains of Kurdistan). Its warlike inhabitants, called Gordyaei, or Cordueni, were no doubt the same people as the Carduchi of the earlier Greek geographers, and the modern Kurds. The Gordyaei Montes separate the valley of the Tigris from the great table-land of Iran.

Gorgé (Γόργη). Daughter of Oeneus (q. v.) and sister of Deianira, both of whom retained their original forms when their other sisters were metamorphosed by Artemis into birds.

Gorgias (Γοργίας). (1) A Greek sophist and rhetorician, known as "the Nihilist," a native of Leontini in Sicily. In B.C. 427, when already advanced in years, he came to Athens on an embassy from his native city, to implore aid against the Syracusans. The finished style of his speaking excited general admiration. He was successful in the object of his mission, and immediately returned home; but he soon came back to Athens, which he made his headquarters, travelling through Greece, like the other sophists, and winning much popularity and profit from a large number of disciples. He survived Socrates, who died in 399, and ended his days at Larissa in Thessaly in his hundred and fifth year.

His philosophy was a nihilistic system, which is summed up in three propositions: (*a*) Nothing exists; (*b*) If anything existed, it could not be known; (*c*) If anything did exist, and could be

known, it could not be communicated. He declined to assume the name of sophist, preferring that of rhetorician. He professed not to teach virtue, but the art of persuasion; in other words, to give his disciples such absolute readiness in speaking, that they should be able to convince their hearers independently of any knowledge of the subject. He did not found his instruction on any definite rhetorical system, but gave his pupils standard passages of literature to learn by heart and imitate, practising them in the application of rhetorical figures. He appeared in person, on various occasions, at Delphi, Olympia, and Athens, with model speeches which he afterwards published. It must be remembered that it was Gorgias who transplanted rhetoric to Greece, and who helped to diffuse the Attic dialect as the literary language of prose. There remain two works ascribed to him, but not genuine — the so-called *Apology of Palamedes*, and the *Encomium on Helen*. See the article by Baumstark in the *Rheinisches Museum* for 1860, pp. 624–626; and Blass, *Attische Beredsamkeit*, pp. 44–72.

(2) A Greek rhetorician of the second half of the first century B.C. He was tutor to the younger Cicero, and was the author of a treatise on the figures of speech, which is in part preserved in a Latin paraphrase by Rutilius Lupus. See RUTILIUS LUPUS.

Gorgo (Γοργώ). The wife of Leonidas, king of Sparta. A fine repartee of hers is given by Plutarch. When a woman, a stranger, observed to her, "You Spartan women are the only ones that rule men," she replied, "True, for we are the only ones that give birth to men" (Plut. *Lacon. Apophth.*).

Gorgo (Γοργώ). The capital of the Chorasmii in Bactriana. It is supposed to correspond to the modern Urghenz.

Gorgo (Γοργώ). Homer makes mention of the terrible head of the Gorgon, a formidable monster (*Odyss.* xi. 633). This head is a terror in Hades, and in the aegis of Zeus. Hesiod speaks of three Gorgons: Stheno (Valeria, the mighty), Euryalé (Lativolva, the wide-wandering), and Medusa (Guberna, the ruler). They are the daughters of the aged sea-god Phorcys and Ceto, and sisters of the Graiae. (See GRAIAE.) They dwell on the farthest shore of Ocean, in the neighbourhood of Night and of the Hesperides. They are awful beings, with hair and girdles of snakes, whose look turns the beholder to stone. They are also often represented with golden wings, brazen claws, and enormous teeth. Medusa is mortal, but the other two immortal. When Perseus cut off Medusa's head, Chrysaor and the winged horse Pegasus, with whom she was with child by Poseidon, sprang forth from the streaming blood. The head was given by Perseus to Athené, who set it in her shield. Heracles received a lock of the hair from Athené as a present. When endeavouring to persuade Cephalus of Tegea to take part in his expedition against Hippocoön of Sparta, the king represented that he feared an attack from his enemies the Argives in Heracles's absence. Heracles accordingly gave to Steropé, the daughter of Cephalus, the lock of Medusa's hair in a brazen urn, bidding her, in case the enemy approached, to avert her head and hold it three times over the walls, for the mere aspect of it would turn the enemy to flight.

Rondanini Medusa. (Glyptothek, Munich.)

In consequence of the belief in this power of the Gorgon's head, or Gorgoneion, to paralyze and terrify an enemy, the Greeks carved images of it in its most terrifying forms, not only on armour of all sorts, especially shields and breastplates, but also on walls and gates. Thus, on the south wall of the Athenian Acropolis, a large gilded Gorgoneion was set on an aegis (Pausan. i. 21, § 4). In the popular belief the Gorgon's head was also a means of protection against all enchantment, whether of word or act, and we thus find it throughout Greek history employed as a powerful amulet, and often carved with graceful settings on decorative furniture and costly ornaments. But the Greek artists, with their innate sense of beauty, knew, even in the case of the Gorgon, how to give adequate expression to the idea which lay at the root of the story. The story said that Medusa had been a fair maiden, whose luxuriant hair had been turned by Athené into snakes in revenge for the desecration of her sanctuary. Accordingly the head of Medusa is represented in works of art with a countenance of touching beauty, and a wealth of hair wreathed with snakes. The face was imagined as itself in the stiliness of death, and thus bearing the power to turn the living to stone. The most beautiful surviving instance of this conception is the Rondanini Medusa now at Munich. The story of Medusa has suggested several fine bits of English verse, among them D. G. Rossetti's *Aspecta Medusa* and Hake's sonnet, *The Infant Medusa*.

Gortyn (Γορτύν) or **Gortyna** (Γόρτυνα). An ancient city in Crete on the southern shore of the island, and situated on the banks of the river Lethaeus. By its two harbours, Metallum and Lebena, it communicated with the sea. Here were temples to Zeus, Apollo, and Artemis; and near the fountain of Saurus was a spring overhung by a palm-tree, a spot which tradition declared to be the scene of the loves of Zeus and Europa (q. v.). Next to Cnossus, Gortyn was the most powerful town of Crete, and between these two cities there existed an almost continuous feud. Under the

Romans, Gortyn became the capital of the island. In 1884, an archaic inscription was found on the site of Gortyn, by Halbherr, in the bed of a mill-stream. Two fragments of the same inscription had been previously found, the new discovery making a practically complete record of a collection of laws regulating the private relations of the people of the city, with regard to such subjects as inheritance, adoption, heiresses, marriage, and divorce. The inscription is regarded as a little earlier than the year B.C. 400. See Merriam, *The Law Code of the Cretan Gortyna* (1886) (text, translation, and commentary); and Simon, *Zur Inschrift von Gortyn* (Vienna, 1886).

Gossypium. The cotton-tree. See CARBASUS.

Gothi, Gotthi, or Gothōnes (in their own language GUTANS or GUTÔS). A powerful northern nation, who acted an important part in the overthrow of the Roman Empire. The name Gothi, or Goths, appears first in history in the third century, and it was then used by the Roman writers as synonymous with the more ancient one of Getae, a people who lived on the banks of the lower Danube, near the shores of the Euxine; but the identity of the two races, though maintained by Jakob Grimm, is now generally rejected. The old Scandinavian tradition in the Eddas makes their chief, Odin or Woden, to have come from the banks of the Dniester to the shores of the Baltic many centuries before the Christian era.

About the middle of the third century of our era, the Goths are recorded to have crossed the Dniester, and to have devastated Dacia and Thrace. The emperor Decius lost his life in opposing them in Moesia (A.D. 251), after which his successor Gallus induced them by money to withdraw again to their old dwellings on the Dniester. They then seem to have spread eastward, and to have occupied the country about the Cimmerian Bosporus, whence they sailed across the Euxine, occupied Trebizond, and ravaged Bithynia. In the year 269 they landed in Macedonia, but were defeated by the emperor Claudius II., hence styled Gothicus. Three years after, Aurelian gave up Dacia to a tribe of Goths, who are believed to have been the Visigoths or Western Goths, while those who ravaged Asia Minor were the Ostrogoths or Eastern Goths. This distinction of the race into two grand divisions appears about this time. Under Constantine I. the Goths from Dacia invaded Illyricum, but were repelled. Constantine II. afterwards allowed a part of them to settle in Moesia, who seem to have soon after embraced Christianity, as it was for them that Ulphilas (Wulfila) translated the Scriptures, about the middle of the fourth century, into the dialect called Moeso-Gothic. About the year 375, the Huns, coming from the East, fell upon the Ostrogoths, and drove them upon the Visigoths, who were living north of the Danube. The latter, being hard pressed, implored permission of the Roman commander to be allowed to cross that river, and take shelter in the territory of the Empire. The emperor Valens consented, and a vast multitude of them were allowed to settle in Moesia, where soon afterwards they quarrelled with the Roman authorities, invaded Thrace, and defeated and killed Valens, who came to oppose them (A.D. 378). From that time they exercised great influence over the Byzantine court, either as allies and mercenaries, or as formidable enemies. Towards the end of the fourth century, Alaric, being chosen king of the Visigoths, invaded Northern Italy, but was defeated by Stilicho near Verona (A.D. 402). He came again, however, about six years after, and plundered Rome (A.D. 410). His successor Ataulphus (Atawulf) made peace with the Empire, and repaired to the south of Gaul, where the Visigoths founded the kingdom of Toulouse, from which they afterwards passed into Spain, where a Visigothic dynasty reigned for more than two centuries, till it was conquered by the Moors.

Meanwhile the Ostrogoths or Eastern Goths, who had settled in Pannonia, after the destruction of the kingdom of the Huns, extended their dominion over Noricum, Rhaetia, and Illyricum, and about the year 489 they invaded Italy, under their king, Theodoric, and defeated Odoacer, king of the Heruli, who had assumed the title of King of Italy, a title which Theodoric then took for himself, with the consent of the Eastern emperor. Theodoric was an able prince: his reign was a period of rest for Italy, and his wise administration did much towards healing the wounds of that country. But his successors degenerated, and the Gothic dominion over Italy lasted only till 553, when it was overthrown by Narses, the general of Justinian.

From this time the Goths figure no longer as a power in the history of Western Europe, except in Spain. Their name, however, is found perpetuated long after in Scandinavia, where a kingdom of Gotha existed until the twelfth century, distinct from Sweden Proper, until both crowns were united on the head of Charles Swerkerson (A.D. 1161), who assumed the title of King of the Swedes and the Goths. It is probable, however, that the Gothland of Sweden is etymologically not "the land of the Goths," but "the land of the Gauts," a distinct though kindred people. An Ostrogothic people also settled the Crimea in the fourth century, so that the peninsula was officially styled Gothia by the Greek Church down to the eighteenth century. In 1750, the Jesuit Mondorf learned from a native of the Crimea that his countrymen spoke a dialect bearing some likeness to German. The Gothic language is now classed with the Scandinavian in the "East Germanic group." See INDO-EUROPEAN LANGUAGES.

On the early history of the Goths, consult Iordanis, *De Getarum sive Gothorum Origine et Rebus Gestis;* Isidorus, *Chronicon Gothorum;* and Procopius, *De Bello Gothico.* The first two, however, are not to be trusted implicitly when they treat of the remote genealogy and origin of the Gothic race. See H. Bradley, *The Goths* (1888).

Gothīni. A Celtic people in the southeast of Germany, subject to the Quadi (Tac. *Germ.* 43).

Gothōnes. See GOTHI.

Gown. See PALLA; STOLA; TOGA.

Grabātus (κράβατος or κράββατος, the French *grabat*). A small low couch or bed of the commonest description (Cic. *Div.* ii. 63; Verg. *Moret.* 5), such as was used by poor people, having a mere network of cords stretched over the frame (Lucil. *Sat.* vi. 13; Gerlach. Petron. 97. 4), to support the mattress, precisely as represented by the annexed illustration from a terra-cotta lamp.

Grabatus. (Rich.)

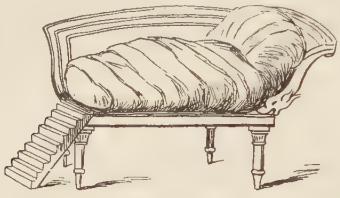
Gracchus. (1) TIBERIUS SEMPRONIUS, the father of the Gracchi, married Cornelia, daughter of Scipio Africanus the Elder. He died while his sons were young, having twice filled the office of consul, and, according to Plutarch, obtained two triumphs. He was censor in B.C. 169. As a soldier he carried on war with distinction against the Celtiberi in Spain (B.C. 181) and the Sardinians (177). He had twelve children by Cornelia. After the death of her husband, Cornelia refused all offers of marriage, and devoted herself to the charge and education of her children, who, as Plutarch tells us, were less the inheritors of manly virtue by being sprung from the noblest blood in Rome than they were its possessors from the careful nurture of their mother Cornelia (Plut. *Gracch.*). (2) TIBERIUS, elder son of the preceding, was born B.C. 163. Tiberius served his first campaign in Africa under his uncle Scipio, and having obtained the office of consul's quaestor, we find him next under Mancinus, the unfortunate commander in the Numantine War. His name, which the Numantines respected from remembering his father's virtues, is said to have procured the terms under which Mancinus obtained safety for his army; but the Senate, on his return, was so much displeased at the unfavourable nature of these conditions that it resolved on giving up all the principal officers to the Numantines. By the good-will, however, of the popular assembly, influenced, as it would seem, by the soldiers and their connections in the lower classes, it was decided to send Mancinus as the real criminal, and to spare the other officers for the sake of Gracchus. Treatment of this nature was likely to rouse Gracchus against the Senate, and make him the friend of the poor; and accordingly, in three years afterwards, we find him beginning his short career as a political agitator. He was elected tribune of the people B.C. 128, and immediately began to attempt the revival of the Licinian Rogations. (See AGRARIAE LEGES; ROGATIONES LICINIAE.) In so doing he appears to have had in view the two grand principles which that law involved—namely, the employment of freemen in preference to slaves in cultivating the soil, and especially the more generally recognized principle of the equitable division of the public land. Three commissioners were appointed to superintend the working of the new law which Gracchus had proposed, if Plutarch may be trusted, with the approval of some of the most eminent persons of the times, among whom were Mucius Scaevola and Crassus the orator. Such general interest was excited by the question, that crowds arrived from all parts of the country to support either side; and there appeared no doubt which way the matter would go when left to the tribes. The aristocracy, however, secured the veto of M. Octavius, one of the tribunes, and thereby quashed the proceedings whenever the law was brought on, which violent mode of opposition led Gracchus to exercise his veto on other questions, stop the supplies, and throw the government into the most complete helplessness.

Thus far the contest had been constitutional; but now, Gracchus, irritated by continual opposition, invited Octavius to propose his [Gracchus's] ejection from the office of tribune; and on his refusal, pleading the utter uselessness of two men so different in sentiment holding the same office, he put the question to the tribes that Octavius be ejected. When the first seventeen out of the thirty-five tribes had voted for it, Gracchus again implored him to resign; and, on his entreaty proving unsuccessful, polled another tribe, constituting a majority, and sent his officers to drag Octavius from the tribune's chair. The Agrarian Law was forthwith passed; and Gracchus himself, his brother Caius, and his father-in-law Appius Claudius, were appointed the commissioners. But the Senate, to show their opinion of the whole proceeding, withheld from him the usual allowance for a public officer. While things were in this state, Attalus, king of Pergamus, bequeathed his kingdom and treasures to the Roman people; and, to enhance his own popularity, Gracchus proposed to divide the treasure among the recipients of land under the new law, to enable them to stock their farms, and to commit the management of the kingdom of Pergamus to the popular assembly. This brought matters to a greater pitch of distrust than ever. Gracchus was accused by one senator of aspiring to tyranny, and by another of having violated the sanctity of the tribunitian office in deposing Octavius. On this point Gracchus strove to justify himself before the people, but his opponent seemed to have gained an advantage so great as to induce him to postpone the assembly. When at last he did make his defence, it rested, if Plutarch is correct, on false analogies, and on avoiding the question of the inviolability of a public officer. At this juncture Gracchus seems to have trembled for that popularity which alone preserved him from impeachment; and, lest it should fail, endeavoured to secure his own reëlection to the office of tribune. The other party had demurred as to his eligibility to the office two years in succession, and on the day of election this point occupied the assembly till nightfall. Next morning, accompanied by a crowd of partisans, he went to the Capitol; and, on hearing that the Senate had determined to oppose him by force, armed his followers with staves, and prepared to clear the Capitol. At this juncture, Publius Scipio Nasica, having in vain called on the consul to take measures for the safety of the State, issued from the Temple of Faith, where the Senate had assembled, followed by the whole nobility of Rome. He put the mob to flight, seized their weapons, and attacked all who fell in his way. About three hundred perished, and among the slain was Gracchus, who was killed by repeated blows on the head, B.C. 133 (Plut. *Tib. Gracch.*). See Mommsen, *Hist. of Rome*, vol. ii. pp. 92–126 (American ed. 1888). (3) GAIUS, was nine years younger than his brother Tiberius, and at his death was left with Appius Claudius as commissioner for carrying out the Agrarian Law. By the death of Appius, and of Tiberius's successor, Licinius Crassus, the agrarian commission consisted of Fulvius Flaccus, Papirius Carbo, and himself; but he refrained from taking any part in public affairs for more than ten years after the death of Tiberius. During this time the provisions of his brother's law were carried out by Carbo and Flaccus; but Gaius does not seem to have begun his career as an independent political leader until the year B.C. 123, when, on his return from Sardinia, where he had been for two years, he was elected tribune of the people. His first act was to propose two laws, one of which, directed against the degraded tribune Octavius, disqualified all who had been thus degraded from holding any magistracy; and

the other, having in view Pompilius, a prominent opponent of the popular party, denounced the banishment of a Roman citizen without trial as a violation of the Roman laws. The first was never carried through; to the latter was added a third, by which Pompilius was banished from Italy, or, according to technical phraseology, interdicted from fire and water. These measures were followed by others, by which he aimed at establishing his own popularity. One of them was a poor-law, by which a monthly distribution of corn was made to the people at an almost nominal price. (See FRUMENTARIAE LEGES.) The effect of this law was to make the population of Rome paupers, and to attract all Italy to partake of the bounty. Next came organic changes, as they would now be called; and of these the most important was the transference of the judicial power from the senators, wholly or in part, to the equestrian order. This measure, according to Cicero, worked well; but, in weighing his opinion, we must remember his partiality for the *equites*, and add to this the fact that his eulogies occur in an advocate's speech (*In Verr. Act.* i.).

Gracchus now possessed unlimited power with the populace; and, at the end of the year, not more than ten candidates for the office of tribune having appeared, he was again elected. His second tribuneship was mostly employed in passing laws respecting the colonies, in which matter the aristocratic agent, Livius Drusus, outdid him; and, having won the confidence of the people by his apparent disinterestedness, ventured (being himself a tribune) to interpose his veto to one of Gracchus's measures. The appointment of Gracchus, soon after, to the office of commissioner for planting a colony near Carthage removed him from the scenes of his popularity; and, soon after his return, a proposal was made to repeal the very law which he had been engaged in carrying out, relative to the colony in Africa. This law was not his own measure, but that of one Rubrius, another of the tribunes, and was one of those enactments which had alienated from Gracchus the favour of the people, it having been represented by his opponents as an impious act to build again the walls of Carthage, which Scipio had solemnly devoted to perpetual desolation. Gracchus was now a private person, his second tribuneship having expired; but yet, as such, he opposed the proposition to repeal, and, unfortunately for himself, united with M. Fulvius Flaccus, one of the commissioners of the Agrarian Law, and a man whose character was respected by no party in the Republic. The reputation of Gracchus had already suffered from his connection with Fulvius; and now he took part with him in designs which could be considered as nothing less than treasonable. Charging the Senate with spreading false reports, in order to alarm the religious scruples of the people, the two popular leaders assembled a numerous body of their partisans armed with daggers, and, being thus prepared for violence, they proceeded to the Capitol, where the people were to meet in order to decide on the repeal of the law of Rubrius. Here, before the business of the day was yet begun, a private citizen, who happened to be engaged in offering a sacrifice, was murdered by the partisans of Fulvius and Gracchus for some words or gestures which they regarded as insulting. This outrage excited a general alarm; the assembly broke up in consternation; and the popular leaders, after trying in vain to gain a hearing from the people, while they disclaimed the violence committed by their followers, had no other course left than to withdraw to their own homes. There they concerted plans of resistance, which were considered by the people as an open rebellion against the government of the country. The consul Opimius, exaggerating, perhaps, the alarm which he felt from the late outrage, hastily summoned the Senate together; the body of the murdered man was exposed to the view of the people, and the Capitol was secured at break of day with an armed force. The Senate, being informed by Opimius of the state of affairs, proceeded to invest him with absolute power to act in defence of the commonwealth, in the usual form of a resolution, "that the consul should provide for the safety of the Republic." At the same time Gracchus and Fulvius were summoned to appear before the Senate to answer for the murder laid to their charge. Instead of obeying, they occupied the Aventine Hill with a body of their partisans in arms, and invited the slaves to join them, promising them their freedom. Opimius, followed by the senators and the members of the equestrian order, who, with their dependants, had armed themselves by his directions, and accompanied by a body of regular soldiers, advanced against the rebels, who had made two fruitless attempts at negotiation, by sending to the consul the son of Fulvius. In the meantime the conduct of Gaius Gracchus was that of a man irresolute in the course which he pursued, and with too much regard for his country to engage heartily in the criminal attempt into which he had suffered himself to be drawn. He had left his house, it is said, in his ordinary dress; he had already urged upon Fulvius to propose the terms of a compromise to the Senate; and now, when the Aventine was attacked, he took personally no part in the action. The contest, indeed, was soon over. The rebels were presently dispersed. Fulvius was dragged from the place to which he had fled for refuge, and was put to death; while Gracchus, finding himself closely pursued, fled across the Tiber, and, taking shelter in a grove sacred to the goddess Furrina, was killed, at his own desire, by a servant who had accompanied his flight. His head, together with that of Fulvius, was cut off and carried to the consul, in order to obtain the price which had been set upon both by a proclamation issued at the beginning of the conflict; and the bodies, as well as those of all who had perished on the same side, were thrown into the Tiber. In addition to this, the houses of Gracchus and Fulvius were given up to plunder, their property was confiscated, and even the wife of Gracchus was deprived of her dowry. It is said that in this sedition there perished altogether of the partisans of the popular leaders about 3000, partly in the action and partly by summary executions afterwards, under the consul's orders.

There is little doubt that Gracchus aimed at monarchical power, but many writers, among them Mommsen, justify his purpose on the plea that an absolute monarchy is a less evil than an absolute oligarchy such as that which existed at Rome in the second century B.C. See Mommsen, *Hist. of Rome*, vol. ii. pp. 127–160 (American ed. 1888).



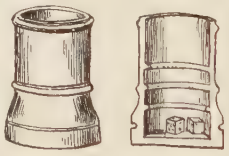
(4) SEMPRONIUS, a Roman nobleman, banished

to Cercina, an island off the coast of Africa, for his adulterous intercourse with Iulia, the daughter of Augustus. After an exile of fourteen years, he was put to death by a party of soldiers sent for that purpose by Tiberius (Tac. *Ann.* i. 53).

Graces. See CHARITES; GRATIAE.

Gradīvus. An epithet of Mars (q. v.) and usually derived from *gradior*, as though "the strider." Prof. Minton Warren suggests an alternative derivation from *grand-is*, *grand-ire*, with reference to growth (*American Journal of Philology*, iv. 71).

Gradus. (1) A set of bed-steps, consisting of several stairs (Varro, *L. L.* v. 168), which were



Gradus. (From the Vatican Vergil.)

requisite for ascending the highest couches. See LECTUS.

(2) A flight of steps leading to the *pronaos* of a temple (Cic. *Ad Att.* iv. 1). In Greek temples there were usually but three steps, but Roman architects added a dozen or more, dividing them into several flights. The number of steps, however, was always uneven, so that a person ascending, and commencing with the right foot (*pes dexter*), might place the same one on the topmost step when he entered the porch, to enter with the left foot being ill-omened (Vitruv. iii. 4. 4; Petron. 30).

(3) The seats on which the spectators sat in a theatre, amphitheatre, or circus. See AMPHITHEATRUM.

(4) The parallel ridges, like steps, on the inside of a dice-box (*fritillus*), for the purpose of mixing the dice when shaken, and giving them a disposition to rotate when cast from it (Auson. *Profess.* i. 28).

Gradus in a dice-box. (Rich.)

(5) A studied and feminine arrangement of the hair, when artificially disposed in parallel waves or gradations rising one over the other, like steps (Quint. xii. 10. 47), the same as now termed "crimping." Nero is said to have had his head always dressed in this manner (Suet. *Nero*, 51); and a statue representing that emperor in the character of Apollo Citharœdus (given under NERO) has the hair parted in the centre, and regularly crimped on both sides, like a girl's. (6) As a measure of length (βῆμα), the *gradus* was half a pace (*passus*), and contained 2½ feet, Greek and Roman respectively. The Greek βῆμα, therefore, was rather more and the Roman *gradus* rather less than 2½ feet English.

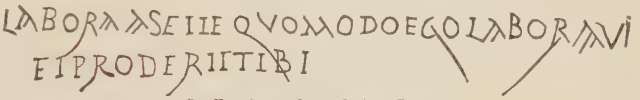
Gradus Cognatiōnis. See COGNATIO.

Graeae (Γραῖαι). "The old women," daughters of Phorcys and Ceto, and three in number—Pephredo, Enyo, and Dino, also called Phorcydes. They had gray hair from their birth, and only one tooth and one eye in common, which they borrowed from each other when they needed them. See Hesiod, *Theog.* 270.

Graecia. The Roman name of Hellas or Greece. See HELLAS.

Graecia Magna or **Graecia Maior.** A name given to the districts in the south of Italy inhabited by the Greeks. This name was never used simply to indicate the south of Italy; it was always confined to the Greek cities and their territories, and did not include the surrounding districts inhabited by the Italian tribes. It appears to have been applied chiefly to the cities on the Tarentine Gulf—Tarentum, Sybaris, Croton, Caulonia, Siris (Heraclea), Metapontum, Locri, and Rhegium; but it also included the Greek cities on the west coast, such as Cumae and Neapolis. Strabo extends the appellation even to the Greek cities of Sicily. See Lenormant, *La Grande-Grèce*, 3 vols. (Paris, 1881); and the article ITALIA.

Graecostăsis (Γραικόστασις). Professor Middleton defines the Graecostasis as a platform in the Forum, on which foreign ambassadors stood to hear the speeches from the Rostra or Comitium, like the Diplomatic Gallery in the American Senate and House. The Graecostasis got its name from the fact that the first envoys thus honoured were Greeks from Massilia (Marseilles), as stated by Iustinus (xliii. 5, § 10). Cicero speaks of it as being a place from which disorderly persons often interrupted the debates. It appears to have occupied a different place before and after the reconstruction of the Forum by Iulius Caesar. It is mentioned by Varro (*L. L.* v. § 155) as of stone, and standing to the right of the Curia—this statement referring to the older structure. Archaeologists formerly regarded the term as denoting the foreign embassy at Rome. See Burn, *Rome and the Campagna*, pp. 84, 107, 123; Mommsen, *History of Rome*, i. p. 577 (American ed. 1888); Middleton, *Remains of Ancient Rome*, i. pp. 237, 256 (London, 1892), and cf. the article FORUM.

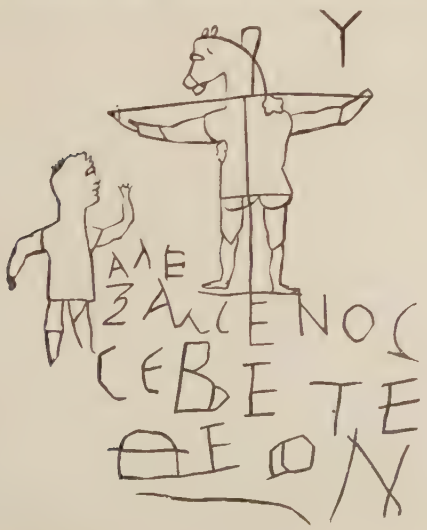


Graevius (GRAEFE), JOHANN GEORG. A German classical scholar who was born at Naumburg, January 29, 1632. He studied law for a time at Leipzig, but by the influence of Gronovius was led to remove to Deventer, where he turned his attention to literature, attending lectures, also, at Amsterdam, on history. In 1658 he became the successor of Gronovius at Deventer, and in 1661 was called to the University of Utrecht as Professor of Eloquence, to which chair in 1667 was attached the duty of lecturing on political history. He refused calls to the Universities of Heidelberg, Leyden, and Padua; but accepted a pension from Louis XIV. of France. He died January 11, 1703. He edited the works of Cicero (1684, foll.), and also published editions of Hesiod, Callimachus, Iustinus (1668), Catullus, Tibullus, Propertius, Suetonius (1674), and Florus (1680). He is best known, however, by his *Thesaurus Antiquitatum Romanarum*, in twelve vols. (1699). See L. Müller, *Geschichte der class. Philologie in den Niederlanden*, pp. 44 foll. (Leipzig, 1869).

Graffiti (plural of the Italian *graffito*, "a scratching"). A name used of the inscriptions, drawings, and scrawls found upon the walls, doorposts, pillars, and tombs of Rome, Pompeii, and other ancient cities. They are the work of idlers—schoolboys, slaves, loungers, etc.—and are valuable as giving an insight into the daily life, habits, and thoughts of the common people, as well as furnishing, at times, valuable hints as to the nature of

the popular language. (See SERMO PLEBEIUS.) They are usually scratched with some sharp instrument—for instance, a *stilus*, or written with charcoal or red chalk—and are of the most varied character, as might be expected, comprising quotations from the poets, doggerel verses, insulting, coarse, and often obscene words and figures, caricatures, popular catchwords, and amatory effusions, in each of the three languages common in southern Italy—Greek, Latin, and Oscan. They are often of a more serious character, intended as handbills. Of this class, we find advertisements of plays, election notices, public announcements, and admonitions to servants. The following is an example of the political *graffito:* A. VETTIVM FIRMVM AED. O.V.F.D.R.P.V.O.V. F. PILICREPI FACITE (*Aulum Vettium Firmum aedilem, oro vos faciatis, dignum re publica virum oro vos. facite pilicrepi, facite!*), an appeal to the *pilicrepi* or ball-players of the city to rally round a kindred spirit and friend of sport. Many quotations from the poets appear, Ovid and Propertius being great favourites, but only one complete line from Vergil is found among the *graffiti* collected by Garrucci. Of the poetic quotations from the *Aeneid*, the following (i. 1) is interesting as throwing light on the vulgar pronunciation of the letter R: ALMA VILVMQVE CANO TLO—. Occasionally a line from some poet is altered to suit the purposes of the writer, as the following: CANDIDA ME DOCVIT NIGRAS ODISSE PUELLAS, evidently a variation of the Propertian line: *Cynthia me docuit castas odisse puellas*, and intended to flatter some blonde. A love-quarrel between Virgula and her lover Tertius is indicated by the following: VIRGVLA TERTIO SVO: INDECENS ES. There are many allusions to athletic and gladiatorial games. One Epaphras, whose name often appears, is told that he "doesn't know how to play ball" (EPAPHRA PILICREPVS NON ES), and some friend of Epaphras has drawn a line through the last three words. School-boys have scratched their lessons by way of practice on the walls, since there are long lists of nouns, verbs, etc., and alphabets repeated again and again.

An interesting *graffito* is that represented in the preceding illustration. It was first published by Father Garrucci in 1857, and is now in the Kircherian Museum of the Jesuit College at Rome. Apparently it belongs to the third century A.D., and is in ridicule of a person, one Alexamenos, who is represented as worshipping a crucified figure depicted with the head of an ass. Beneath is scrawled in Greek the sentence ΑΛΕΞΑΜΕΝΟΣ ΣΕΒΕΤΕ [ΣΕΒΕΤΑΙ] ΘΕΟΝ, "Alexamenos worships (his) God." It was found in one of the subterranean chambers of the Palatine in 1856. Scholars are not wholly agreed as to the subject of this caricature, some believing it to be a blasphemous representation of Christ, while others think it refers to Anubis, the jackal-headed god of Egypt. Prof. Lanciani in his *Ancient Rome in the Light of Recent Discoveries* (Boston, 1888) mentions an interesting collection of *graffiti* discovered in 1868 on the walls of an *excubitorium*, or station-house, and made by the Roman policemen when off duty. These can be seen in the *Annali dell' Instituto* for 1869, edited by Henzen.



Graffito from the Palatine, Rome.

Another well-executed drawing from the Palatine walls is that given above. It represents an ass turning a mill with the inscription, LABORA ASELLE QVOMODO EGO LABORAVI ET PRODERIT TIBI ("Toil on, little ass, as I have done, and much good may it do you!"), possibly written by a slave who had been made to do a turn at the mill (*pistrinum*) as a punishment (cf. Ter. *Andr.* i. 2. 28). The subjoined *graffito*, which resembles the attempt of a modern school-boy, is from the barracks at Pompeii, and was executed on the barrack-wall with a piece of red chalk by a Roman soldier. It caricatures one Nonius Maximus, whose name appears elsewhere on the same walls coupled with insulting words, and who was probably a centurion whose strictness had made him unpopular.

Graffito in Chalk from Pompeii.

Another Pompeian wall-caricature refers to a fierce town-and-country fight in the amphitheatre between the Pompeians and Nucerians, as the result of which Nero forbade the Pompeians to open the amphitheatre for a period of ten years. The *graffito* represents an armed man descending into the arena bearing the palm of victory, while on the other side a prisoner is being dragged away in bonds. The legend in the corner gives a clue to the meaning of the caricature. It reads: CAMPANI VICTORIA VNA CVM NV-

Supposed Caricature of the Crucifixion.

Caricature from the Outer Wall of a Private House. (Pompeii.)

CERINIS PERISTIS ("Campanians, you suffered in the victory as well as the Nucerians!")

The first notice of this class of inscriptions appeared in the *Journal de Fouilles* for October 18th, 1765; and in 1792 the German archaeologist Murr published at Nuremberg a collection of *graffiti* that had been transcribed for him by a friend. A supplement to this appeared in 1793.

The first good collection published was that of Bishop C. Wordsworth in 1837, consisting wholly of *graffiti* from Pompeii, and reprinted in his *Miscellanies* in 1879. A large number of them in Latin are given in the *Corpus Inscriptionum Latinarum*, vol. iv. (ed. Zangemeister), under the title *Inscriptiones Parietariae Pompeianae, Herculanenses, et Stabianae*, and in the supplementary volume. Inscriptions in Oscan will be found in Fiorelli's *Inscriptionum Oscarum Apographa* (1854). See, also, Garrucci, *Graffiti de Pompéi* (Paris, 1856); Parton, *Caricature* (N. Y. 1878); and the article Pompeii.

Graffito from Pompeii, representing the Labyrinth. (*Mus. Borb.* xiv. *tav. a*, 1852.)

Grain, Public Distribution of. See Frumentariae Leges.

Grallae. A pair of stilts used by actors in personating Pan or the satyrs on the Roman stage (Fest. s. v. *grallatores*).

Grammar. See Grammatica.

Grammăteus (*γραμματεύς*). The Greek word for a writer, secretary, or clerk. At Athens the officials had numerous clerks attached to them, who were paid by the State and belonged to the poorer class of citizens. But there were several higher officials who bore the title of grammateus. The Boulé, or Senate, for instance, chose one of its members by show of hands to be its clerk or secretary for one year. His duty was to keep the archives of the Senate. So, too, a secretary was chosen by lot from the whole number of senators for each prytany to draft all resolutions of the Senate. (See Prytanis.) His name is therefore generally given in the decrees next to that of the president and the proposer of the decree. The name of the grammateus of the first prytany was also given with that of the archon, as a means of marking the year with more accuracy. At the meetings of the Ecclesia, a clerk, elected by the people, had to read out the necessary documents. The office of the *ἀντιγραφεῖς*, or checking clerks, was of still greater importance. The *ἀντιγραφεύς* of the Senate, elected at first by show of hands, but afterwards by lot, had to take account of all business affecting the financial administration. The *ἀντιγραφεύς* of the administration had to make out, and lay before the public, a general statement of income and expenditure, and exercised a certain amount of control over all financial officials. In the Aetolian and Achaean leagues the grammateus was the highest officer of the league after the *strategi* and *hipparchi*.

Grammatĭca (*γραμματική, litteratura*). (1) In Greece.—The term *γραμματική*, in the scientific sense, included, in antiquity, all the main philological branches, grammar proper, lexicography, prosody, the lower and higher criticism, antiquities—everything, in short, necessary to the understanding and explanation of *γράμματα*, or the treasures of literature, whether their form or their matter be in question. It was first developed into a special science during the Alexandrian Age, in Alexandria and Pergamum, where the great libraries gave ample opportunity for philological studies on the scale above indicated. It was the restoration of the text of the Homeric poems and the explanation of their words and contents that primarily exercised the minds of the scholars. (See Alexandrian School.) Hesiod, the lyric poets, the dramatists, and certain prose writers next engaged their attention. The progress and development of philology is marked by the names of Zenodotus (about B.C. 280), Aristophanes of Byzantium (260–183), and Aristarchus (about 170), the three chief representatives of the Alexandrian School. To these must be added Crates (about 160), the head of the school of Pergamum, and the opponent of the Alexandrians. The name of Aristarchus (q. v.) represents the highest point of philological learning and criticism in antiquity. He was the founder of the celebrated school of Aristarcheans, which continued to exist and to maintain an uninterrupted tradition down to the first century of the imperial age. His disciple, Dionysius Thrax, wrote the oldest manual of grammar that we possess, and his work compiled for the use of his students at Rome (Τέχνη Γραμματική) became the basis of all subsequent grammars and was used for centuries either in the original or in Latin translations. From it, through the Latin equivalents, came most of the technical terms of modern grammar. (See Dionysius Thrax, p. 523.) He did not, however, originate these terms. Some of them are

as old as the time of Plato, who recognizes two parts of speech, the noun (*ὄνομα*) and the verb (*ῥῆμα*). Aristotle names four—noun, verb, article (*ἄρθρον*), and conjunction (*συνδεσμός*). The Stoic grammarians give six—noun, verb, article, conjunction, proper noun (*προσηγορία*), and adverb. Aristarchus raised the number to eight—noun, verb, article, conjunction, pronoun (*ἀντωνομία*), adverb (*ἐπίρρημα*), participle (*μετοχή*), and preposition (*πρόθεσις*). The Greeks, who were accustomed to see in Homer all possible wisdom, claimed that he knew of the eight parts of speech, citing in proof of it two lines (*Iliad*, i. 185; xxii. 59), each of which contains them all. By far the most celebrated of the later Aristarcheans was Didymus Chalcenterus, born about B.C. 63. His writings are the chief foundation of the Byzantine collections of *scholia*. The science of *γραμματική* gradually narrowed its scope till it confined itself to grammar in the restricted sense of the word—namely, accidence and syntax, combined with lexical researches into the dialects, and into the usages of special periods of literature and special groups of authors. The most eminent scholars of the Empire are Apollonius Dyscolus (about A.D. 150), the founder of scientific syntax, who endeavoured to reduce the whole of empirical grammar to a system, and his son, Aelius Herodianus, a still more important personage. The writings of the latter form one of the chief authorities of the later grammarians, such as Arcadius. The lexical writings of the earlier scholars were often very comprehensive, and have only survived in fragments or in later extracts, such as that of Hesychius. They had consisted mainly of collections of glosses (*γλῶσσαι*) or strange and antiquated expressions. (See GLOSSA.) But in the second century A.D. the influence of the reviving sophistic literature and education turned the attention of lexicographers to the usage of the Attic writers. (See LEXICON.) This tendency is represented in the surviving works of Pollux, Harpocration, and others. To the same period belongs Hephaestion's manual of prosody, which is the only complete treatise on this subject. Athenaeus, at the beginning of the third century, wrote a work (the *Deipnosophistae*) of inestimable value to the student of antiquities. Longinus, who died A.D. 273, may be regarded as the last considerable scholar of the ancient world. The later grammarians restricted themselves to compiling extracts from the works of earlier ages.

(2) AT ROME.—After the middle of the second century B.C. a lively interest in the history of literature and the study of language arose in Rome. It had been excited by the lectures on Greek authors given by Crates of Mallos during his sojourn in Rome as ambassador (B.C. 159). Not only writers of repute, such as Attius and Lucilius, but men like Aelius Stilo, a member of the equestrian order, who was actively engaged in public life, took up these studies with eagerness. What was afterwards known of the primitive Latin language we owe mainly to Aelius Stilo. He was the master of the great encyclopaedist, Marcus Terentius Varro, Cicero's contemporary. This great scholar left his mark on every department of philological research, and his writings were the storehouse from which the following generations mainly drew their information. Besides Varro, other men of note occupied themselves with grammatical study in the Ciceronian age, notably Nigidius Figulus. Julius Caesar was the author of a treatise on accidence. There were numerous scholars in the Augustan Age, among whom Verrius Flaccus and Hyginus deserve especial notice. In the first century A.D. we have Remmius Palaemon, Asconius Pedianus, Valerius Probus, and the elder Pliny. It was Remmius Palaemon who is mainly responsible for having made Vergil the centre of scholastic instruction for the Latin world, as Homer was for the Greek. During the second century A.D., under Hadrian and the Antonines, we notice a revived interest in the older literature. This period is distinguished by the names of Suetonius, Terentius Scaurus, and Aulus Gellius. Suetonius aspired to the many-sided learning of Varro, and, like Varro, was much quoted by later writers.

After this time, the grammarians tended more and more to confine their studies to points of language, to abandon independent research, and to depend on the labours of their predecessors. The chief value of their writings consists in the fact that they have preserved many fragments of ancient learning. Their extracts are usually made for school purposes, and put together in *artes*, or manuals of accidence, orthography, prosody, and metre. Such are the books of Marius Victorinus, Donatus, Servius, Charisius, Diomedes, who are all to be assigned to the fourth century A.D. Nonius Marcellus belongs to the same period. He is the author of a work (*De Compendiosa Doctrina*) which, though dreary and uncritical, is invaluable for the stores of old Latin which it has preserved. The sixth century is marked by the name of Priscian, whose work in eighteen books (*Institutiones Grammaticae*) is the most important grammatical treatise that has come down to us from the Romans. It was the standard book on the subject through the Middle Ages, and more than 1000 MSS. of it have been preserved. We may further notice Terentianus Maurus, the author of a versified treatise on metre in the third century; Macrobius, who in the fifth century composed a miscellany of antiquities called *Saturnalia;* and Isidorus, bishop of Seville, in the seventh century, whose *Origines* is the last work founded on a real study of ancient authorities.

Müller's *Handbuch*, vol. i.; and the articles LIBERALES ARTES; PHILOLOGIA; RHETORICA.

Grammatĭcus (*γραμματικός*). See EDUCATION.

Grammatistes (*γραμματιστής*). See EDUCATION.

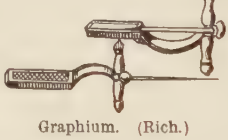
Grammatophylacium (*γραμματοφυλάκιον*). See TABLINUM.

Grampius Mons. A mountain of Caledonia, forming one of a large range of mountains extending from east to west through almost the whole

breadth of modern Scotland, from Loch Lomond to Stonehaven. The range is now called the Grampian Hills, and the name is derived from the Mons Grampius, which is mentioned by Tacitus as the spot where Galgacus waited the approach of Agricola (*Agric.* 29). Some scholars defend GRAUPIUS as the proper form.

Granīcus (Γράνικος). A small river of Mysia, rising in Mount Ida, and falling into the Propontis (Sea of Marmora) east of Priapus; memorable as the scene of the victory of Alexander the Great over the Persians (B.C. 334) (Arrian, *Exp. Alex.* i. 13), and, in a less degree, for a victory of Lucullus over Mithridates, B.C. 73.

Granius Licinianus. A Roman historian, who probably flourished in the second century A.D. He was the author of a work of some forty books, compiled in the style of *annales*, ending with the death of Caesar. Some considerable fragments have been found in modern times of books xxviii.–xxxvi., covering the history of the years B.C. 163–178. Licinianus was first edited from a codex in the British Museum by Pertz (Berlin, 1857). See Madvig, *Kleine philol. Schriften* (Leipzig, 1875).



Granūa (Γρανούα). A tributary of the Danube in Southeastern Germany.

Graphé (γραφή). See DIKÉ; JUDICIAL PROCEDURE.

Graphiarium (also **Graphiaria Theca**). A sheath or case for holding the *graphium* (q. v.) or *stilus*, used for writing on tablets (Mart. xiv. 20; Suet. *Claud.* 35). See WRITING AND WRITING MATERIALS.

Graphis (γραφίς). See PICTURA.

Graphium (γραφίον). A sharp-pointed instrument made of iron or bronze, used for writing on modern tablets covered with wax. The accompanying illustration shows the graphium shut (the top figure) and opened (the bottom figure) (Suet. *Caes.* 82; *Calig.* 28). It is some eight inches in length. See STILUS.

Graphium. (Rich.)

Grassatōres. See LATROCINIUM.

Gratiae. The Latin name for the Graces. See CHARITES.

Gratiānus. (1) The eldest son of Valentinian I., succeeding, after his father's death, A.D. 375, to a share of the Western Empire, having for his portion Gaul, Spain, and Britain. His brother, Valentinian II., then an infant under five years of age, had Italy, Illyricum, and Africa, under the guardianship, however, of Gratianus, who was therefore, in reality, ruler of all the West. His uncle Valens had the Empire of the East. Gratianus began his reign by punishing severely various prefects and other officers who had committed acts of oppression and cruelty during his father's reign. At the same time, through some insidious charges, Count Theodosius, father of Theodosius the Great, and one of the most illustrious men of his age, was beheaded at Carthage. In the year 378, Valens perished in the battle of Adrianople against the Goths, and Gratianus, who was hastening to his assistance, was hardly able to save Constantinople from falling into the hands of the enemy. In consequence of the death of his uncle, Gratianus, finding himself ruler of the whole Roman Empire during the minority of his brother Valentinian, called to him young Theodosius, who had distinguished himself in the Roman armies. Gratianus appointed him his colleague, a choice equally creditable to both and fortunate for the Empire, and gave him the provinces of the East. Gratianus now returned to Italy, but was obliged soon after to hasten to Illyricum to the assistance of Theodosius, and repelled the Goths, who were threatening Thrace. Thence he was forced to march to the banks of the Rhine, to fight the Alemanni and other barbarians. Having returned to Mediolanum in the year 381, he had to defend the frontiers of Italy from other tribes, who were advancing on the side of Rhaetia. Gratianus showed himself stern and unyielding towards the remains of the heathen worship. At Rome he overthrew the altar of Victory and confiscated the property attached to it, as well as all that which belonged to the other priests and the vestals. He also refused to assume the title and insignia of Pontifex Maximus, a dignity till then considered as annexed to that of emperor. These measures gave a final blow to the old worship of the Empire; and although the senators, who, for the most part, were still attached to it, sent him a deputation, at the head of which was Symmachus, they could not obtain any mitigation of his decrees. In the year 383, a certain Maximus revolted in Britain, and was proclaimed emperor by the soldiers, to whom he promised to re-establish the temples and the old religion of the Empire. He invaded Gaul, where he found numerous partisans. Gratianus advanced to meet him, but was forsaken by most of his troops, and obliged to hasten towards Italy. He was seized at Lugdunum, and put to death by the partisans of Maximus. He was little more than twenty-four years of age, and had reigned about eight years. (2) A usurper who assumed the imperial purple in Britain (A.D. 407), but was murdered by his troops in a few months. He was succeeded by Constantine. See CONSTANTINUS (3), p. 405.

Grattius. A contemporary of Ovid (cf. Ovid, *ex Pont.* iv. 16, 34) and the author of an extant poem on the chase (*Cynegetica*), of which 536 hexameters are extant and five fragments. From an allusion in the fortieth line, Grattius is without good reason regarded by some as a native of Falerii, and hence is often styled FALISCUS. The poem has been edited with a commentary by Stern (Halle, 1832), and revised by Haupt (Leipzig, 1838). The best text is that of Bährens (Leipzig, 1879). See CYNEGETICA.

Graviscae. An ancient city of Etruria, subject to Tarquinii, and colonized by the Romans B.C. 183. It was situated in the Maremma, and its air was unhealthful, whence Vergil calls it *intempestae Graviscae* (*Aen.* x. 184).

Greece. See HELLAS.

Greek, Pronunciation of. Three different methods of pronouncing Greek have been followed in the schools of America and England. They may be called, respectively, the English method; the Reuchlinian or modern Greek method; and the Erasmian method.

I. THE ENGLISH METHOD gives the letters their ordinary English sounds, but follows the Latin rules of accent (accenting the penult if it is long

in quantity, but otherwise the antepenult). This method is still current in England, but has almost disappeared in the United States.

II. The Reuchlinian method, called after Reuchlin (q. v.), a great scholar of the fifteenth century, who was one of its earliest advocates, aims to follow the pronunciation of the modern Greeks. Of the vowels, *η*, *υ*, *ει*, *οι*, and *υι*, all have the sound of *i* in *machine*; *αι* is pronounced much like *a* in *fate*. In the diphthongs *αυ*, *ευ*, *ηυ*, and *ωυ*, *υ* is pronounced like *v* when the diphthong stands before a vowel, or *β*, *γ*, *δ*, *ζ*, *λ*, *μ*, *ν*, *ρ*; otherwise like *f*. *π*, *κ*, *τ*, after nasals, are pronounced like *b*, *g*, *d*. *χ* has the two sounds of German *ch*. *δ* is pronounced like *th* in *then*, *β* like *v*, *γ* like *ch* in German *ach*, *ζ* like English *z*. It has been argued that scholars ought to agree to pronounce Greek as the Greeks of to-day pronounce it, but many changes and corruptions have crept in during the centuries since the classical period; so that the pronunciation which prevails in Athens at present differs widely from that of ancient times. This method has therefore found few adherents in England or America, though it has been strongly advocated by a number of eminent men.

III. The Erasmian method, first proposed by Erasmus in a humorous dialogue published at Basle in 1528 (see below), is the one which is now prevalent in the United States and on the continent of Europe, though with various modifications. In the United States the ordinary pronunciation is as follows: *α* like *a* in *father*; *η* like *a* in *fate*; *ε* like *e* in *met*; *ι* like *i* in *machine*; *ω* like *o* in *note*; *ο* the same sound, but shorter; *υ* as French *u* or German *ü*; *αι* like *ai* in *aisle*; *ει* like *ei* in *freight* (or more often like *ei* in *height*); *οι* like *oi* in *boil*; *υι* like *ui* in *quit*; *αυ* like *ou* in *out*; *ευ* like *eu* in *feud*; *ου* like *ou* in *soup*; *ᾳ*, *ῃ*, *ῳ* like *α*, *η*, *ω*. The consonants are pronounced as in English, except that *γ* is always hard; before a palatal it is pronounced like *n* in *anxious*; *ζ* like *dz*; *θ* like *th* in *thin* (not like *th* in *this*); *σ* never like *z*; *τ* never aspirated; *χ* like German *ch* in *ach*. The written accent is followed in pronunciation.

We have so far been describing the methods of pronunciation generally followed by modern scholars. How the ancient Greeks pronounced is very difficult to determine, but on many points a tolerable degree of certainty can be arrived at. When the comic poets transcribed the cry of a sheep with *βῆ*, *βῆ*, it is plain that *β* was not pronounced like *v*, or *η* like *i* in *machine*, as in modern Greek. So, too, *υ* cannot have been pronounced like *i* in *machine*, as is seen from the description of the two sounds in Dion. Hal. (*Comp.* xiv. 96), and from the existence of the diphthong *υι*. It is probable that *υ* originally received the sound of *oo* in *boot*, later that of French *u* (German *ü*), and not until the ninth or tenth century of our era the sound of *i* in *machine*. *αι* and *οι* were true diphthongal sounds until a late period (*αι* = *ah-ee* = *i* in *pine*; *οι* = *o-ee* = *oi* in *boil*, nearly). *ει* was at first a true diphthong (*ĕ-ει* = *e* in *ere*, nearly); about B.C. 400 it came to be the simple sound of *ei* in *rein*; and not till much later was it sounded like *ei* in *seize*. *αυ* and *ευ* were true diphthongs (*ah-oo* and *ĕ-oo*). *ου* was originally a diphthongal sound, but later assumed the sound of *ou* in *youth*. *υι* was probably like French *ui* in *lui*. In the so-called improper diphthongs, *ᾳ*, *ῃ*, *ῳ*, the *ι* was probably pronounced until about the second century B.C., when it became silent, and was often omitted, even in writing. Of the consonants *β*, which in modern Greek has the sound of *v*, was reckoned a mute by the ancient Greeks, and hence must have been sounded as in English. The same argument proves that *γ* and *δ* received their English, rather than their modern Greek, sounds. But *γ* before palatals had the sound of *n* in *anxious*. *σ* was pronounced like *s* in *sink*, except before middle mutes and liquids, when it was pronounced like *s* in *as*. *ζ* had the sound of *sd* or *zd*, as is seen from such compounds as *Ἀθήναζε* (for *Ἀθήνασ-δε*), and from the fact that the preposition *συν* loses *ν* before *ζ*, just as before *στ*, *σπ*, etc. The aspirates *φ*, *χ*, *θ* were pronounced as two sounds (*p-h*, *k-h*, *τ-h*), as in English *uphill*, *block-house*, *hothouse*. This conclusion is drawn from the fact that these consonants were classed as mutes and not as spirants. The ancient consonant called *digamma* or *vau* (*Ϝ*) was probably pronounced like English *w* rather than *v*, as the strong *v*-sound would not have disappeared so quickly or completely as the digamma did.

The accent in ancient Greek consisted in a raising of the pitch, and not in the stress or duration of the sound. But the latter element was added at the period of the decay of the language, and the Greeks of to-day make all accented vowels long and all unaccented vowels short. When this change took place can be determined only approximately, but it must have been during the Alexandrian period and before the beginning of our era, as may be gathered from some of the rules of prosody observed by such poets as Babrius and Nonnus. The difference between high pitch and low pitch, according to Dionysius of Halicarnassus, amounted to almost a fifth (Dion. Hal. *Comp.* 58).

Bibliography.—Erasmus, *De Recta Latini Graecique Sermonis Pronunciatione* (Basle, 1528); Seyffarth, *De Sonis Litterarum Gr.* (Leipzig, 1824); A. Kirchhoff, *Studien zur Geschichte des griech. Alphabets* (Berlin, 1877); K. Zacher, *Die Aussprache des Griech.* (Leipzig, 1888). More valuable than any of these is F. Blass, *The Pronunciation of Ancient Greek*, translated by Purton (Cambridge, 1890). Material for this article has been freely drawn from the latter.

Green Faction. See Circus, p. 356.

Gregŏras, Nicephŏrus. One of the most important Byzantine historians, born about A.D. 1295, and died about 1359. His principal work is entitled *Historia Byzantina*, in thirty-eight books. It begins with the capture of Constantinople by the Latins in 1204, and extends to 1359. It has been edited in part by Schopen (Bonn, 1830).

Gregoriānus Codex. See Codex Gregorianus.

Gregorius (*Γρηγόριος*). (1) Surnamed Nazianzēnus, and usually called Gregory Nazianzen. He was born in a village near Nazianzus in Cappadocia about A.D. 329, and prosecuted his studies at Athens, where he earned a great reputation for his knowledge of rhetoric, philosophy, and mathematics. Among his fellow students was Julian, the future emperor, and Basil, with the latter of whom he formed a most intimate friendship. Gregory remained at Athens about six years (350–356), and then returned home. Having received ordination,

he continued to reside at Nazianzus, where he discharged his duties as a presbyter, and assisted his father, who was bishop of the town. In A.D. 372 he was associated with his father in the bishopric; but after the death of the latter in 374, he refused to continue Bishop of Nazianzus, as he was averse to public life and fond of solitary meditation. After living some years in retirement, he was summoned to Constantinople in 379, in order to defend the orthodox faith against the Arians and other heretics. In 380 he was made Bishop of Constantinople by the emperor Theodosius; but he resigned the office in the following year (381), and withdrew altogether from public life. He lived in solitude at his paternal estate at Nazianzus, and died there in 389 or 390. His extant works are about 45 orations or sermons, 243 letters, and 407 poems of a very varied description, comprising hymns, prayers, epitaphs, epigrams, etc. His discourses, though sometimes really eloquent, are generally little more than favourable specimens of the rhetoric of the schools, more earnest than Chrysostom, but less attractive. The Benedictine edition was published at Paris (1778–1842). See the monographs by Ullmann (Eng. trans. 1851); and by A. Benoît (Paris, 1876). (2) NYSSĒNUS, bishop of Nyssa in Cappadocia, was the younger brother of Basil, and was born at Caesarea in Cappadocia, about A.D. 331. He was made bishop of Nyssa about 372, and, like his brother Basil and their friend Gregory Nazienzen, was one of the pillars of orthodoxy. He died soon after A.D. 394. Like his brother, he was an eminent rhetorician, though his oratory often offends by its extravagance. His works are printed in Migne's *Patrologia*, vols. xliv.–xlvi. (3) Styled THAUMATURGUS, from his miracles, was born at Neocaesarea in Cappadocia, of heathen parents. He was converted to Christianity by Origen about A.D. 234, and subsequently became the bishop of his native town. He died about the year 265. His celebrated Ἔκθεσις, or confession of faith, is a summary of the theology of Origen. It is said to have been divined by him through a revelation from the Virgin Mary and the Apostle John. Other treatises of doubtful authenticity are attributed to him. His works are printed in vol. x. of the Patristic collection of the Abbé Migne. See Ryssel, *Gregorius Thaumaturgus: sein Leben und seine Schriften* (Leipzig, 1880); and Harnack, *Dogmengeschichte*, vol. i. (Freiburg im Breisg. 1888). (4) OF TOURS, called "the Father of Frankish History," was born at Arverna (Clermont), about A.D. 540, his baptismal name being Georgius Florentius. He became Bishop of Tours in 573, and after the death of Chilperic, whom Gregory calls "the Nero and the Herod of our times," and by whom he was much harassed, he enjoyed general esteem and consideration down to the end of his life in 594. He is best known by his *Historiae sive Annalium Francorum Libri X.*, which is the chief authority for the history of Gaul in the sixth century, beginning with an epitome of universal history, and developing the narrative with greater fulness as he proceeds. In it the author shows himself unskilled in literary composition, and his Latinity is especially interesting as a specimen of the gradual blending of the classic Latin into the rustic Latin from which the Romance languages emerged. His works are printed in vol. lxxi. of the Abbé Migne's collection. There is a French translation by Bordier, 2 vols. (1859–61), and Jacobs, 2 vols. (1861). See Löbell, *Gregor von Tours und seine Zeit* (2d ed. 1869); Pattison, *Essays*, vol. i. (1889); and on his language, Bonnet, *Le Latin de Grégoire de Tours* (1891).

Gridiron. See CRATICULA.

Grimm's Law. The peculiar type or character of the Teutonic languages, distinguishing them as a class from the other Indo-European languages, is prominently determined by a general change in the pronunciation of those consonants commonly known as mutes or explosives. The other consonants remain in general unchanged, thus: *n* in Eng. *new*, Lat. *novus*; *m* in Eng. *name*, Lat. *nōmen*; *r* in Eng. *acre*, Lat. *ager*; *l* in Eng. *light*, Lat. *lux*; *w* in Eng. *will*, Lat. *velle*; *y* in Eng. *yoke*, Lat. *jugum*; *s* in Eng. *seven*, Lat. *septem*; but the explosives (*k, t, p, g, d, b, gh, dh, bh*) occupied so prominent a place in the mechanism of the parent speech, one or more of them appearing in almost every word, that the changes which they underwent in passing into the Teutonic form could not fail to impress upon the Teutonic languages a distinct mark of individuality. The credit of first discovering the uniformity of these changes is largely due to a Danish scholar, Rasmus Kristian Rask (1787–1832), but the formulation of them in the shape of a general law and the exhibition of the parallelism contained in the second or High German shifting are the work of Jakob Grimm (1785–1863), first made public in the second edition of the first volume of his *Deutsche Grammatik* (1822).

I. THE GENERAL TEUTONIC or first shifting. The most essential facts are the following:

(1) Indo-European	*gh*	*dh*	*bh*	become
Teutonic	3 (*g*)	*đ* (*d*)	*þ* (*b*)	
(2) Indo-European	*g*	*d*	*b*	become
Teutonic	*k*	*t*	*p*	
(3) Indo-European	*k*	*t*	*p*	become
Teutonic	*h*	*þ*	*f*	

(1) The Indo-European voiced aspirates (*gh, dh, bh*) represent an explosion of voiced breath followed by an after-puff; the pronunciation of *dh*, e. g. may be crudely illustrated by the sound of *d-h* in *sandhill*. These sounds passed readily and very early into the *affricatae* g3, *dđ* (cf. *dž* in the pronunciation of Eng. *j*), *bþ*, which double sounds were then unified into the pure spirants 3, *đ*, *þ*. The first of these (3) is the voiced form of German *ch*, and equivalent to the Modern Greek medial gamma, and may be produced by driving voiced breath over the tongue set nearly in the position for English *y*. The sound *đ* lies between English *th* in *then* and *z* (*ž*) in *azure*. Finally, *þ* may be produced by pronouncing English *v* with the two lips instead of with the under lip and upper teeth. These three spirants, 3, *đ*, *þ*, became quite generally changed to voiced explosives or mediae (*g, d, b*) in the West Germanic dialects (i. e. all except Scandinavian and Gothic), though the spirants 3 and *þ* (*v*) remained medially in all but the High German dialects; contrast Eng. *lay, day* with Germ. *legen, tag*, and Eng. *raven, have* with Germ. *rabe, haben*. With the understanding, therefore, that *g, d, b* represent sometimes spirants and sometimes explosives we may set the formula, Indo-European *gh, dh, bh* > Teutonic *g, d, b*. The regular correspondences in the cognate languages are as follows:

I.-E.	Sanskrit.	Gr.	Lat. Initial.	Lat. Medial.	Teuton.
gh	*h*	χ	*h*	*h* (*g*)	*g* (3)
dh	*dh*	θ	*f*	*d*	*d* (*d*)
bh	*bh*	φ	*f*	*b*	*b* (*ƀ*)

Examples:

Sanskrit.	Greek.	Latin.	Teutonic. Goth.	Teutonic. Eng.
haṅsá-, goose	χήν	(*h*)*anser*	*gans*	*goose*
váhati, convey	ὄχος, wagon	*veho*	*wigs*	*way*
dhā-, set, make	ἔθηκα, set	*fēci*	*gadēþs*	*deed*
vidhávā, widow	ἠίθεος, bachelor	*vidua*	*widuwō*	*widow*
bhárati, bears	φέρω	*fero*	*baíran*	*bear*
lúbhyati, desires		*lubet*	*liubs*	*lief* / *love*

(2) The Indo-European voiced explosives (*mediae*) become voiceless (*tenues*). The labial *b* was evidently a rare sound in Indo-European, and as an initial sound it seems not to have existed at all. The following are the regular correspondences:

Indo-Europ.	Sanskrit.	Greek.	Latin.	Teutonic.
g	*j*	γ	*g*	*k*
d	*d*	δ	*d*	*t*
b	*b*	β	*b*	*p*

Examples:

Sanskrit.	Greek.	Latin.	Teutonic. Goth.	Teutonic. Eng.
jánas-, race	γένος	*genus*	*kuni*	*kin*
jánu-, knee	γόνυ	*genu*	*kniu*	*knee*
ájra-, pasture	ἀγρός	*ager*	*akrs*	*acre*
dáça, ten	δέκα	*decem*	*taíhun*	*ten*
véda, I know	οἶδα	*video*	*wait*	*wot*
Lithuan. *dubùs*, deep			*diups*	*deep*

(3) The Indo-European voiceless explosives (*tenues*) become voiceless spirants:

Indo-Europ.	Sanskrit.	Greek.	Latin.	Teutonic.
k	*ç*	κ	*c*	*h*
t	*t*	τ	*t*	*þ* (*th*)
p	*p*	π	*p*	*f*

Examples:

Sanskrit.	Greek.	Latin.	Teutonic. Goth.	Teutonic. Eng.
çvan-, dog	κύων	*canis*	*hunds*	*hound*
aṣṭáu, eight	ὀκτώ	*octō*	*ahtáu*	*eight*
tráyas, three	τρεῖς	*trēs*	*þreis*	*three*
bhrátar-, brother	φράτωρ	*frāter*	*brōþar*	*brother*
pād-, foot	πούς	*pēs*	*fōtus*	*foot*
nápāt-, grandson	(νέποδες)	*nepōs*	Germ. *neffe*	*nephew*

In the interest of simplification we have thus far omitted all mention of another Indo-European series of gutturals, included in the group known as velars or back-gutturals, and which show in Greek, Latin, Keltic, and Teutonic a labial development. The most characteristic correspondences are the following:

Indo-Europ.	Sanskrit.	Greek.	Latin.	Teutonic.
q́	*k* (*c*)	π, τ, κ	*qu*, *c*	*hw*
g	*g* (*j*)	β, δ, γ	*gu* (*v*), *g*	*kw*
gh	*gh* (*jh*)	φ, θ, χ	*gu* (*v*), *f*	*gw*

In Sanskrit the palatals *c*, *j*, *jh* appear before vowels which *were* in Indo-European *e*, *i*, *ə*. In Greek, π, β, φ appeared before *o*-vowels, and I.-E. *m*, *n*, *r*, *l*; τ, δ, θ appeared before *e*-vowels (τ also before *i*-vowels). In Latin, *qu*, *gu* (*v*) appear in general before vowels (except *u*); *f* (< I.-E. *gh*) before *r*. Examples:

Sanskrit.	Greek.	Latin.	Teutonic. Goth.	Teutonic. Eng.
ka-, who	πόθεν, whence	*quod*	*hvas*	*who*
sácatē, follows	ἕπομαι	*sequor*	*saíhvan*	*see*
gámati, comes	βαίνω	*veniō*	*qíman*	*come*
jīvá-, alive	(βίος)	*vīvus*	*qius*	*quick*
gharmá-, warmth	θερμός	*formus*	*warmjan*	*warm*
Lithuan. *snẽgas*, snow	νίφα (acc.)	*nivis* (gen.)	*snáiws*	*snow*

The apparent exceptions to the laws stated may be chiefly summarized under the following heads:

1. Dissimilation of Indo-European aspirates in Sanskrit and Greek. In Greek it took place after the voiced aspirates had become voiceless, thus: I.-E. *dh-dh* > Sanskr. *d-dh*, Gr. τ-θ, Teuton. *d-d*; cf.:

Indo-Europ.	Sanskrit.	Greek.	Teutonic. (Gothic.)
dhədhēmi	*dádhāmi*	τίθημι	
bheudh-	*bódhati*	πεύθομαι	*anabiudan*
bheidh-		πείθω	*bidjan*
bhendh-	*bándhu-*	πενθερός	*bindan*
dhigh-	*dih-*	τεῖχος	*deigan*
bhāghú-	*bāhú-*	πῆχυς	OHG. *buog*

cf. Grassman, *Kuhn's Zeitschr.* xii. 81 foll.

2. Shifting of *k*, *t*, *p* checked by preceding spirant in the combinations I.-E. *sk*, *st*, *sp* and Teuton. *ht* (< I.-E. *kt*), *ft* (< I.-E. *pt*); cf. Lat. *piscis*, Goth. *fisks*; Lat. *stāre*, Goth. *standan*; Lat. *rectus*, Goth. *raíhts*; Gr. ἔστι, Goth. *ist*; Lat. *spuere*, Goth. *speiwan*; Lat. *noctis* (genit.), Goth. *nahts*; Gr. κλέπτης, Goth. *hliftus*; Lat. *captus*, Goth. *hafts*. See Brugmann, *Compar. Gramm.* i. § 528.

3. Interchange of mediae and tenues and of mediae and aspirates in Indo-European, especially at the end of roots. This dualism was probably due originally to the character of the following consonant. So are to be explained, e. g. Gr. πυθμήν, O.Eng. *botm*; Gr. ἀστεμφής, O.H.G. *stampfōn*; Goth. *táikns*, *teihan*, etc.

4. The phenomena discussed under article Verner's Law (q. v.).

II. The High German or second shifting. This affects only a portion of the West Germanic dialects. It began in the fifth century A.D. in the extreme south, affecting most powerfully the dialects of the Lombards, Allemans, Bavarians, and Southern Franks, but losing its force as it spread towards the north (cf. Braune, *Paul-Braune's Beitr.* i. 1 foll.). The frontier between the present High German and Low German dialects is formed without any reference to the older dialectal divisions by the final halt in the shifting of the *tenues*. The dialects which change initial *t* to *ts* (*z*), medial and final *t* to *s*, medial *p*, *k* to *f*, *ch* are High German, the others Low German. This frontier crosses Germany from west to east. Its course is approximately indicated by a line drawn from Aix-la-Chapelle through Düsseldorf, Siegen, Cassel, Magdeburg, Lübben, Fürstenberg (south of Frankfurt-on-the-Oder) to the Slavic language-frontier at Birnbaum on the Warthe. The most prominent features of this second shifting may be exhibited by a comparison of the sounds concerned as they at present stand in English and modern German. The English retains these sounds approximately in their original West Germanic values. The modern German as a normalized standard language occu-

pies in its adoption of the results of shifting a middle position between the south German dialects which shifted most and the northern which shifted least. The second shifting affected the dentals most radically.

		Tenues.			Mediae.			Spirants.		
English		*k*	*t*	*p*	*g (y)*	*d*	*b (v)*	*h*	*th (þ)*	*f*
Germ.	Initial and after conson.	*k*	*ts (=z)*	*pf*	*g*	*t*	*b*	*h*	*d*	*f*

Griphus (γρῖφος). Literally "a net;" then any intricate, puzzling, or "catch" question. A riddle, enigma (Gell. i. 4, 4). See ÆNIGMA.

Grōma. The measuring instrument used by land-surveyors, who were from it called *gromatici.* See AGRIMENSORES.

The groma is represented on the gravestone of a *gromaticus* found some years ago at Ivrea (Rossi, *Groma e Squadro*, 1877, p. 43). The design is not in perspective, but, if allowances be made for the inexperience of the artist, it explains fairly well the nature of the instrument. Two small planks crossing one another at right angles are supported on a column or post (*ferramentum*). Plummets (probably four, though there are only two in the monument) are suspended from the planks to guide the operator in securing a vertical position of the column, and a horizontal for the cross-pieces. The small circles at the point of section in the drawing may represent a hole in the continuation of the column for the operator to look through, or a large hole in the cross-pieces to allow of their being tipped up to a certain angle if necessary. The latter is the more likely, for in that case the continuation of the column would serve as a support to prevent the cross from falling. In any case it obstructs the view along the planks.

Groma. (From a gravestone at Ivrea.)

The use of the instrument is obvious. It is intended to guide a surveyor in drawing real or imaginary lines at right angles to one another, more especially in fixing the *cardo* (or north and south line) and *decumanus* (or east and west line) essential to the orientation of any *templum* or to the laying out of a Roman camp. See CASTRA.

Gromatĭci. Land-measurers. See AGRIMENSORES.

Gronovius (GRONOV). The name of three distinguished Dutch classical scholars.

(1) JOHANN FRIEDRICH, born at Hamburg, September 20th, 1613. He studied at Bremen and at the Universities of Leipzig, Jena, and Altdorf, after which he spent some time in travel in both France and Italy. In 1643 he became Professor of Rhetoric and History at Deventer in the Netherlands, and in 1658 succeeded Daniel Heinsius, at Leyden, as Professor of Greek. He died at Leyden, December 28th, 1671.

He edited, with commentaries, Statius (1653), Plautus (1664), Livy (1645), Pliny the Elder (1669), Tacitus (1672), the tragedies of Seneca (1661), and published separately various notes upon Phaedrus, Seneca, and other authors, these being subsequently incorporated with the works of his more distinguished son. A valuable contribution to the study of numismatics is the treatise *De Sestertiis*, in four books, which appeared in 1643.

(2) JAKOB, son of the preceding, born at Deventer, October 20th, 1645. He early distinguished himself at Leyden, and in 1668 visited England, where he became intimate with Casaubon, Pocock, and Pearson. While in England he spent several months in collating a number of rare MSS. at the Universities of Oxford and Cambridge. Soon after he declined a professorship at Deventer, and in 1671 visited France, where he made the acquaintance of some of the greatest scholars of that country. In the following year he travelled in Spain and Italy, accepting in the latter country a chair in the University of Pisa offered him by the Grand Duke of Tuscany. Resigning this at the end of two years, he returned to Leyden, where he soon after accepted the professorship, which he held to the end of his life, declining several calls from foreign universities, and passing his time in congenial work, though often embroiled in literary quarrels, in which he sustained his part with extreme violence of temper and a remarkable power of vituperative scurrility. He died October 21st, 1716.

His most important work is his *Thesaurus Antiquitatum Graecarum*, in thirteen vols. folio (Leyden, 1698–1702), reprinted at Venice (1732–37)—a work modelled on the great *Thesaurus Antiquitatum Romanarum* of Graevius (q. v.). He also brought out new editions of the authors edited by his father, and himself edited and annotated Macrobius (1670), Polybius (1670), Tacitus (1721), Cicero (1691), Ammianus Marcellinus (1709), Minucius Felix (1707), Gellius (1706), Herodotus (1715), Cebes (1689), the poems ascribed to Manetho, the *Dactylotheca* of Gorlaeus, the *Lexicon* of Harpocration, besides publishing a great number of pamphlets, theses, discourses, etc.

(3) ABRAHAM, son of the preceding, was born at Leyden in 1694, and died there in 1775. He was for a long time librarian to the University, and is known by his editions of Iustinus (1719), Tacitus (with his father, 1721), and Mela (1722).

Grote, GEORGE, the distinguished historian of Greece, was born at Clay Hill in Kent, England, November 17th, 1794. Educated at the Charterhouse, he did not enter one of the universities, but connected himself with a banking-house, in which he remained for thirty-two years, devoting his leisure to literary and political pursuits. In 1823 he began the special studies necessary for an exact and critical knowledge of Greek history, and in 1846 put forth the first two volumes of the great *History of Greece*, the twelfth and last volume of which appeared in 1856 (4th ed. London, 1872). It begins with the earliest period and carries on the narrative to the end of the generation contemporaneous with Alexander the Great. It is notable for its accurate geographical details, for the spirit and vigour of its passages descriptive of martial exploits, and, above all, for its obvious purpose of showing the elevating and inspiring influence of freedom upon human activity. In this last respect the history of Grote has been called a Liberal history of Greece, as that of Bishop Thirlwall is undeniably a Tory history. Each chapter is, in a way, a monograph in itself, and the work as a whole is one of the greatest masterpieces of historical research that have ever been put forth. It was followed by *Plato and the Other Companions of Socrates*, 3 vols. (London, 1865); and *Aristotle*, edited by Bain and Robertson, 2 vols. (London, 1872), forming a sort of supplement to the *History*.

In 1862 Grote was elected Vice-Chancellor of the University of London, and in 1868 President of the Council of University College. In 1869 a peerage was offered him by Mr. Gladstone, but was declined. Grote died June 18th, 1871, and was buried near Gibbon in Westminster Abbey. His life was written by his wife (1873); and a good critical review of his work as an historian by Professor Bain in the remarks prefixed to the edition of Grote's minor works (1873).

Grotefend. The name of several archaeologists of distinction. (1) GEORG FRIEDRICH, born at Münden in Hanover, June 9th, 1775. He was educated at Münden, Ilfeld, and the University of Göttingen. In 1797 he became master in the Göttingen Gymnasium, and soon after wrote his treatise *De Pasigraphia* (1799), which led to his being made Pro-rector of the Gymnasium at Frankfort-on-the-Main, and soon after Co-rector. In 1821 he was called to the rectorship of the Gymnasium at Hanover, which he held until 1849. He died December 15th, 1853.

In 1823–24 Grotefend revised Wenck's Latin grammar, and followed this publication with a smaller grammar for the use of schools (1826). His *Rudimenta Linguae Umbricae*, eight parts (1835–38), is an attempt to explain the remains of the Umbrian dialect (see UMBRIA); and soon after he put forth a similar work relating to the Oscan, *Rudimenta Linguae Oscae* (1839). In 1840–42 appeared, in five parts, his work *Zur Geographie und Geschichte von Altitalien*. He will, however, be longest remembered by his brilliant work in discovering a clue to the decipherment of the Persian cuneiform inscriptions that had so long defied all attempts at elucidation. Grotefend communicated his discovery to the Royal Society of Göttingen in 1800. The points that he was the first to establish were (*a*) that the Persian inscriptions contain three different varieties of cuneiform, so that the decipherment of one would give a clue to the decipherment of the others; (*b*) that the characters of the Persian cuneiform are alphabetic and not syllabic; (*c*) that they must be read from left to right; (*d*) that the alphabet consists of forty letters, including the signs for long and short vowels. These discoveries laid a solid basis for the work of those who followed and who finally solved the remaining problems. The details of the methods that led to his discoveries are given by Grotefend in his *Neue Beiträge zur Erläuterung der persepolitanischen Keilinschrift* (1837); and *Neue Beiträge zur Erläuterung der babylonischen Keilinschrift* (1840). See CUNEIFORM.

(2) KARL LUDWIG, son of the preceding, was born at Frankfort, December 22d, 1809. He studied at Göttingen, and held a post in the Royal Archives of Hanover from 1853. He died October 27th, 1874. His chief work was done in numismatics, epigraphy, and history. He published *Die Münzen der griechischen, parthischen, und indoskythischen Könige von Baktrien* (1839); *Imperium Romanum Tributim Descriptum* (1863); *Chronologische Anordnung der athenischen Silbermünzen* (1872); and a number of historical papers in the *Zeitschrift des historischen Vereins für Niedersachsen* (1850–74).

Grotius, HUGO (HUIG VAN GROOT). A Dutch scholar and jurist of great distinction, born at Delft, April 10th, 1583. As a boy he was extraordinarily precocious, entering the University of Leyden in his eleventh year, having already become well known for his skill in Latin versification. At Leyden he studied under Joseph Justus Scaliger, and when only fifteen years of age edited the very difficult, and, in fact, encyclopædic, work of Martianus Capella (Leyden, 1599). After a year spent in travel, he was admitted to the doctorate in law, and entered upon regular practice as an advocate. Though unusually successful in his chosen profession, he still reverted to letters, and in 1600 edited the remains of Aratus with the versions of Cicero, Germanicus, and Avienus. He also wrote much excellent Latin verse, and three dramas in Latin, one of which (*Adamus Exul*) is thought to have furnished a number of suggestions to Milton for his *Paradise Lost*. In 1614 he edited the *Pharsalia* of Lucan, of which edition a recension was published by Usener at Greifswald in 1862. Later, he put forth an edition of Silius Italicus, and a celebrated translation of the *Anthologia Graeca Planudea*. In 1657 he composed *Annales et Historiae de Rebus Belgicis*, an historical work of much value, and recalling by its terse and pointed style the Latinity of Tacitus. He is best known to the world at large, however, by his remarkable treatise *De Iure Pacis et Belli* (1625)—a work of profound and searching scholarship, which long remained the standard authority on international law. To describe his stormy career as a theologian and statesman would be beyond the scope of the present work. He died at Rostock, August 29th, 1645.

Few men have shown so great an aptitude for so many fields of intellectual labour. He was profoundly learned as a classical scholar, uniting elegance to accuracy. As a theologian he was probably the most soundly critical exegete of his age.

An able and acute historian, a philosopher of depth and ingenuity, an influential and original statesman and diplomat, a poet of much distinction, and a jurist who will always rank among the greatest in the history of jurisprudence—no wonder that an amazed contemporary styled him "a monster of learning."

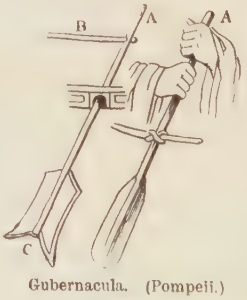
The fullest biography of Grotius, with a complete list of his works, is that of Lehmann (Delft, 1727). There is also a good life of him in English by C. Butler (London, 1826). See L. Müller, *Gesch. d. class. Philol. in den Niederlanden*, p. 38 (Leipzig, 1869); and Pökel, *Philolog. Schriftstellerlexikon*, s. v. "Grotius" (Leipzig, 1882).

Grove. See LUCUS.

Grudii. A people in Gallia Belgica, subject to the Nervii, north of the Scheldt.

Grumentum. A town in the interior of Lucania, on the road from Beneventum to Heraclea.

Grylli. See ANTIPHILUS; GEMMA.



Gryllus (Γρύλλος). The elder son of Xenophon, who fell at the battle of Mantinea, B.C. 362, after he had, according to some accounts, given Epaminondas his mortal wound (Pausan. x. 8, 11).

Grynēum (Γρύνειον) or **Grynēa** (Γρύνεια). One of the twelve cities of Aeolis, situated on the coast of Lydia, near the northern confines, and northwest of Cymé. It was celebrated for the worship of Apollo, who thence derived the surname of Gryneus (Verg. *Eclog.* vi. 72; *Aen.* iv. 345). The temple of the god was remarkable for its size, and for the beauty of its white marble.

Gryps (γρύψ) or **Gryphus.** A griffin; a fabulous animal, with the body of a lion and the head and wings of an eagle, dwelling in the Rhipaean Mountains, between the Hyperboreans and the one-eyed Arimaspi (q. v.), and guarding the gold of the north. The Arimaspi mounted on horseback, and attempted to steal the gold, and hence arose the hostility between the horse and the griffin. The belief in griffins came from the East, where they are mentioned among the fabulous animals which guarded the gold of India (Herod. iii. 116; iv. 13). See AURUM.

Guard. See CASTRA; PRAETORIANI; VIGILES.

Gubernăculum (πηδάλιον). A rudder; originally nothing more than a large oar with a broad blade, either fastened by braces (*funes*, ζεύγλαι) outside the quarters of the vessel or passed through an aperture in the bulwarks. Later, it was furnished with a cross-bar, which served as a tiller, like the left-hand figure, from a Pompeian painting. Its different parts were distinguished by the following names: *ansa*, the handle, *a*; *clavus*, the shaft, *b*; *pinna*, the blade, *c*. The word is frequently used in the plural; because the ancient vessels were commonly furnished with two rudders, one on each quarter, each of which had its own helmsman, if the vessel was a large one; but were both managed by a single steersman when it was small enough. See GUBERNATOR; NAVIS.

Gubernacula. (Pompeii.)

Gubernātor (κυβερνήτης). A helmsman or pilot, who sat at the stern to steer the vessel (Cic. *De Sen.* 9), gave orders to the rowers, and directed the management of the sails (Verg. *Aen.* x. 218; Lucan. viii. 193). He was next in command to the *magister* and immediately above the *proreta*.

Gubernator. (From a bas-relief found at Puteoli.)

Gugerni or **Guberni.** A people of Germany, who crossed the Rhine and settled on its left bank, between the Ubii and Batavi.

Guild. See COLLEGIUM.

Gulussa. A Numidian, second son of Masinissa, and brother to Micipsa and Mastanabal. He left a son, named Massiva. See IUGURTHA.

Gustatio. Any kind of delicacy taken as a relish or stimulant to the appetite before a meal (Petron. 21, 31). See CENA, p. 313.

Gustatorium. The tray upon which a *gustatio* (q. v.) was served up; often made of valuable materials, and lined with tortoise-shell (Petron. *Sat.* xxxiv. 1; Plin. *Ep.* v. 6, 37; cf. Mart. xiv. 88)

Guttae. Drops, in architecture, used principally under the triglyphs of the Doric order, in the

Guttae. (Rich.)

architrave, and under the taenia (Vitruv. iv. 3, 4), as in the above example; but sometimes also applied under the mutules of the order (Vitruv. iv. 3, 6). They are shaped like the frustra of cones, and represent the drops of water which distil from above, and hang in pendent drops below.

Guttōnes. See GOTHI.

Gutturnium (πρόχοος). A water-jug or ewer; employed especially for pouring water over the hands before and after meals (Fest. s. v.).

Gutturnium. (Pompeii.)

Guttus (λήκυθος). A vessel with a narrow mouth or neck, from which liquids were poured in drops (*guttae*); hence its name (Varr. *L. L.* v. 124 M). Varro goes on to say that for pouring out wine at the banquet it had been superseded by the *epichysis* and *cyathus;* but retained its place in sacrificial libations, especially of the domestic sort (Hor. *Sat.* i. 6, 118, with Orelli's note). The guttus was of the plainest shape and materials; it differed from the *capis* (also used in sacrifices), *epichysis*, and *urceus* in being without a handle; and was usually

Gutti. (British Museum.)

of coarse pottery. It was in common use as an oil-cruet, whether at table (Gell. xvii. 8, § 5), or at the bath (Juv. iii. 263).

Gyărus (Γύαρος). A small island of the Archipelago, classed by Stephanus of Byzantium among the Sporades, but belonging rather to the Cyclades. It lay southwest of Andros, off the coast of Attica. So wretched and poor was this barren rock, being inhabited only by a few fishermen, that they deputed one of their number to wait upon Augustus, then at Corinth, after the battle of Actium, to petition that their taxes, which amounted to 150 drachmae (about $25), might be diminished, as they were unable to raise more than 100. This island became subsequently notorious, as the spot to which criminals or suspected persons were banished by order of the Roman emperors (Juv. i. 73; x. 70). The modern name is Chioura.

Gyes (Γύης). See GYGES.

Gygaeus Lacus (Γυγαία Λίμνη). A small lake in Lydia, north of Sardis (Herod. i. 93).

Gȳges (Γύγης), more correctly **Gyes** (Γύης). A son of Uranus and Gaea, represented as having a hundred hands. He, with his brothers, made war against the gods, and was afterwards punished in Tartarus. See COTTUS; GIGANTES; TITANES.

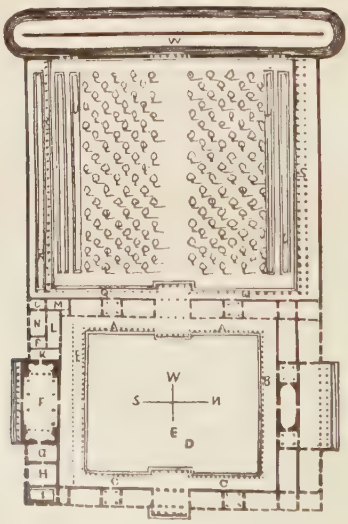
Gyges (Γύγης). A Lydian, to whom Candaules, king of the country, showed his wife with her person exposed. The latter, having discovered this, was so incensed, although she concealed her anger at the time, that, calling Gyges afterwards into her presence, she gave him his choice either to submit to instant death, or to slay her husband. Gyges chose the latter alternative, married the queen, and ascended the vacant throne, about 680 years before the Christian era. He was the first of the Mermnadae who ruled in Lydia. He reigned thirty-eight years, and distinguished himself by the presents which he made to the oracle of Delphi (Herod. i. 8 foll.). The wife of Candaules above mentioned was called Nyssia, according to Hephaestion. The story of Rosamund, queen of the Lombards, as related by Gibbon, bears an exact resemblance to this of Candaules (cf. Schlosser, *Weltgeschichte*, vol. ii. pt. 1, p. 82). Plato relates a curious legend respecting this Gyges, which differs essentially from the account given by Herodotus. He makes him to have been originally one of the shepherds of Candaules, and to have descended into a chasm, formed by heavy rains and an earthquake in the quarter where he was pasturing his flocks. In this chasm he discovered many wonderful things, and particularly a brazen horse having doors in it, through which he looked, and saw within a corpse of more than mortal size, having a golden ring on its finger. This ring he took off and reascended with it to the surface of the earth. Attending, after this, a meeting of his fellow-shepherds, who used to assemble once a month for the purpose of transmitting an account of their flocks to the king, he accidentally discovered that, when he turned the bezel of the ring inward towards himself, he became invisible, and when he turned it outward, again visible. Upon this, having caused himself to be chosen in the number of those who were sent on this occasion to the king, he murdered the monarch, with the aid of the queen, whom he previously corrupted, and ascended the throne of Lydia (Plat. *De Rep.* ii.; cf. Cic. *De Off.* iii. 9).

Gylippus (Γύλιππος). A Lacedaemonian, sent, B.C. 414, by his countrymen to assist Syracuse against the Athenians, which he effected by the overthrow of Nicias and Demosthenes. He afterwards joined Lysander off Athens, and aided him by his advice in the capture of that city. Lysander sent him to Lacedaemon with the money and spoils which had been taken, the former amounting to 1500 talents (B.C. 404). But Gylippus, unable to resist the temptation, unsewed the bottom of the bags, thus leaving the seals untouched at the top, and abstracted 300 talents. His theft, however, was discovered by means of the memorandum contained in each bag, and to avoid punishment he went into voluntary exile (Plut. *Nicias;* Diod. Sic. xiii. 106).

Gymnasiarches (*γυμνασιάρχης*). See GYMNASIUM.

Gymnasiarchia (*γυμνασιαρχία*). See LITURGIA.

Gymnasium (*γυμνάσιον*). Gymnastics were thought by the ancients a matter of such importance that this part of education alone occupied as much time and attention as all the others put together; and while the latter necessarily ceased at a certain period of life, gymnastics continued to be cultivated by persons of all ages. The word "gymnastics" is derived from *γυμνός* (naked), because the persons who performed their exercises in public or private gymnasia were either entirely naked, or merely covered by the short *χιτών*.



The great partiality of the Greeks for gymnastic exercises was productive of infinite good. It gave to the body that healthy and beautiful development by which the Greeks excelled all other nations, and which at the same time imparted to their minds power and elasticity. The plastic art also must have found its first and chief nourishment in the gymnastic and athletic performances. Respecting the advantages of gymnastics in a medical point of view, see ATHLETAE; MEDICINA.

Gymnastics, in the widest sense of the word, comprehended also the agonistic and athletic arts (*ἀγωνιστική* and *ἀθλητική*)—that is, the art of those who contended for the prizes at the great public games in Greece, and of those who made gymnastic performances their profession. In a narrower sense, however, the gymnasia had, with very few exceptions, nothing to do with the public contests,

but were places of exercise for the purpose of strengthening and improving the body, or, in other words, places for physical education and training; and it is chiefly in this point of view that they will be considered in this article.

Gymnastic exercises among the Greeks seem to have been as old as the Greek nation itself, as may be inferred from the fact that gymnastic contests are mentioned in many of the earliest legends of Grecian story; but they were, as might be supposed, of a rude and mostly of a warlike character. They were generally held in the open air, and in plains near a river, which afforded an opportunity for swimming and bathing. The Attic legends, indeed, referred the regulation of gymnastics to Theseus (Pausan. i. 39, § 3), but according to Galen it seems to have been about the time of Clisthenes that gymnastics were reduced to a regular and complete system. Great progress, however, must have been made as early as the time of Solon, as appears from some of his laws which are mentioned below. It was about the same period that the Greek towns began to build their regular gymnasia as places of exercise for the young, with baths, and other conveniences for philosophers and all persons who sought intellectual amusements. There was probably no Greek town of any importance which did not possess its gymnasium. In many places, such as Ephesus, Hierapolis, and Alexandria in Troas, the remains of the ancient gymnasia have been discovered in modern times. The oldest remains are those of the gymnasium at Olympia, which can not be earlier than the end of the fourth century B.C. (Bötticher, *Olympia*, p. 363 foll.).

Athens possessed three great gymnasia—the Lyceum (Λύκειον), Cynosarges (Κυνόσαργες), and the Academia (Ἀκαδημία), to which, in later times, several smaller ones were added. All places of this kind were, on the whole, built on the same plan, though, from the remains, as well as from the descriptions still extant, it is evident that there were many differences in their detail. We have no detailed account of a gymnasium of the best period. The most complete description of a gymnasium

Plan of Gymnasium.

which we possess is that given by Vitruvius (v. 11), which, however, is very obscure, and at the same time defective, in so far as many parts which seem to have been essential to a gymnasium are not mentioned in it. Of the numerous plans which have been drawn, that of W. Newton, in his translation of Vitruvius, may here be given with a few alterations, although some of the details are open to criticism.

The peristylium (D) in a gymnasium, which Vitruvius incorrectly calls palaestra, is in the form of a square or oblong, and is two stadia (1200 feet) in circumference. It consists of four porticoes. In three of them (A B C) spacious exedrae with seats were erected, in which philosophers, rhetoricians, and others, who delighted in intellectual conversation, might assemble. A fourth portico (E), towards the south, was double, so that the interior walk was not exposed to bad weather. The double portico contained the following apartments: The Ephebeum (F), a spacious hall with seats in the middle, and one-third longer than broad, destined for the exercises of youths. On the right is the Coryceum (G), used for exercises with the sack (κώρυκος), perhaps the same room which in other cases was called Apodyterium; then came the Conisterium (H) adjoining, where the body was sprinkled with dust; and next to the Conisterium, in the returns of the portico, is the cold bath, λουτρόν (I). On the left of the Ephebeum is the Elaeothesium, where persons were anointed by the aliptae (K). Adjoining the Elaeothesium is the Frigidarium (L), or more probably the Tepidarium, where there was a lukewarm bath. From thence is the entrance to the Propnigeum (M), on the returns of the portico; near which, but more inward, behind the place of the Frigidarium, is the vaulted sudatory (N), in length twice its breadth, which has on the returns the Laconicum (O) on one side, and opposite the Laconicum the hot bath (P). These are the more essential and primitive parts of a gymnasium. But in the time of Vitruvius important additions were made to it. On the outside three porticoes are built: one (Q), in passing out from the peristyle, and, on the right and left, the two stadial porticoes (R, S), of which the one (S) that faces the north is made double and of great breadth, the other (R) is single, and so designed that in the parts which encircle the walls, and which adjoin the columns, there may be margins for paths not less than ten feet; and the middle is so excavated that there may be two steps, a foot and a half in descent, to go from the margin to the plane (R), which plane should not be less in breadth than twelve feet; by this means those who walked about the margins in their apparel would not be annoyed by those who were exercising themselves. This portico is called by the Greeks ξυστός, because in the winter season the athletae exercised themselves in these covered stadia. The ξυστός had groves or plantations between the two porticoes, and walks between the trees, with seats of sigmine work. Adjoining the ξυστός (R) and double portico (S) are the uncovered walks (U), which in Greek are called περιδρομίδες, to which the athletae, in fair weather, went from the winter-xystus to exercise. Beyond the xystus is the stadium (W), so large that a multitude of people might have sufficient room to behold the contests of the athletae. In this description of Vitruvius, two

important parts of other Greek gymnasia (the Apodyterium and the Sphaeristerium) are not mentioned.

The Greeks bestowed great care upon the outward and inward splendour of their gymnasia, and adorned them with the statues of gods, heroes, victors in the public games, and of eminent men of every class. Hermes was the tutelary deity of the gymnasia, and his statue was consequently seen in most of them.

The earliest regulations which we possess concerning the gymnasia are contained in the laws of Solon. One of these laws forbade all adults to enter a gymnasium during the time that boys were taking their exercises, and at the festival of the Hermaea. The gymnasia were, according to the same law, not allowed to be opened before sunrise, and were to be shut at sunset (Lex *ap.* Aeschin. *c. Timarch.* § 12). Another law of Solon excluded slaves from gymnastic exercises (Aeschin. *c. Timarch.* § 138; Plut. *Solon*, 1). Boys who were children of an Athenian citizen and a foreign mother (*νόθοι*) were not admitted to any other gymnasium but the Cynosarges (Plut. *Them.* 1). Some of the laws of Solon, relating to the management and the superintendence of the gymnasia, show that he was aware of the evil consequences which these institutions might produce, unless they were regulated by the strictest rules. As we, however, find that adults also frequented the gymnasia, we must suppose that, at least as long as the laws of Solon were in force, the gymnasia were divided into different parts for persons of different ages, or that persons of different ages took their exercise at different times of the day. In the time of Plato the salutary regulations of Solon appear to have been no longer observed, and we find persons of all ages visiting the gymnasia (Plat. *De Rep.* v. p. 452; Xen. *Sympos.* 2, § 18). Athens now possessed a number of smaller gymnasia, which are sometimes called palaestrae, in which persons of all ages used to assemble, and in which even the Hermaea were celebrated by the boys, while formerly this solemnity had been kept only in the great gymnasia, and to the exclusion of all adults (Plat. *Lys.* p. 206). These changes, and the laxity in the superintendence of these public places, caused the gymnasia to differ very little from the schools of the athletae; and it is perhaps partly owing to this circumstance that writers of this and subsequent times use the words gymnasium and palaestra indiscriminately. But K. F. Hermann (*Privatalt.* § 36) seems to have proved that the gymnasium was never used for a place of training.

Married as well as unmarried women were, at Athens and in all the Ionian States, excluded from the gymnasia; but at Sparta, and in some other Doric States, maidens, dressed in the short *χιτών*, were not only admitted as spectators, but also took part in the exercises of the youths. Married women, however, did not frequent the gymnasia.

Respecting the superintendence and administration of the gymnasia at Athens, we know that Solon in his legislation thought them worthy of great attention; and the transgression of some of his laws relating to the gymnasia was punished with death. His laws mention a magistrate, called the Gymnasiarch (*γυμνασίαρχος* or *γυμνασιάρχης*), who was intrusted with the whole management of the gymnasia, and with everything connected therewith. His office was one of the regular liturgies, like the choregia and trierarchy, and was attended with considerable expense. He had to maintain and pay the persons who were preparing themselves for the games and contests in the public festivals, to provide them with oil, and perhaps with the wrestlers' dust. It also devolved upon him to adorn the gymnasium or the place where the contests took place (Xen. *De Rep. Athen.* 1, § 13). The Gymnasiarch was a real magistrate, and invested with a kind of jurisdiction over all those who frequented or were connected with the gymnasia; and his power seems even to have extended beyond the gymnasia, for Plutarch (*Amator.* c. 9, etc.) states that he watched and controlled the conduct of the ephebi in general. He had also the power to remove from the gymnasia teachers, philosophers, and sophists, whenever he conceived that they exercised an injurious influence upon the young. Another part of his duties was to conduct the solemn games at certain great festivals, espe-

Boxer. (Dresden.)

cially the torch-race (*λαμπαδηφορία*), for which he selected the most distinguished among the ephebi of the gymnasia. The number of Gymnasiarchs was, according to Libanius on Demosthenes (*c. Mid.* p. 510) ten, one from every tribe. They seem to have undertaken their official duties in turns, but in what manner is unknown. Among the external distinctions of a Gymnasiarch were a purple cloak and white shoes (Plut. *Anton.* 33). In early times the office of Gymnasiarch lasted for a year, but under the Roman emperors we find that sometimes they held it only for a month, so that there were twelve or thirteen Gymnasiarchs in one year. This office seems to have been considered so great an honour that even Roman generals and emperors were ambitious to hold it. Other Greek towns, like Athens, had their own Gymnasiarchs, but we do not know whether, or to what extent, their duties differed from the Athenian Gymnasiarchs. In Cyrené the office was sometimes held by women.

An office which is not mentioned before the time of the Roman emperors, but was never-

theless decidedly connected with the gymnasia, is that of Cosmetes. He had to arrange certain games, to register the names and keep the lists of the ephebi, and to maintain order and discipline among them. He was assisted by an Anticosmetes and two Hypocosmetae. This officer appears only after the reorganization of the gymnasia in the second century B.C., when they served also as places for intellectual instruction. See EDUCATION, p. 572.

An office of very great importance, in an educational point of view, was that of the Sophronistae (*σωφρονισταί*). Their province was to inspire the youth with a love of *σωφροσύνη*, and to protect this virtue against all injurious influences. In early times their number at Athens was ten, one from every tribe, with a salary of one drachma per day (*Etym. Mag.* s. h. v.). Their duty not only required them to be present at all the games of the ephebi, but to watch and correct their conduct wherever they might meet them, both within and without the gymnasium.

The Wrestlers. (Uffizi Gallery, Florence.)

The instructions in the palaestrae, sometimes attached to gymnasia, were given by the Gymnastae (*γυμναστaί*) and the Paedotribae (*παιδοτρίβαι*); at a later period Hypopaedotribae were added. The Paedotribes was required to possess a knowledge of all the various exercises which were performed by the gymnasia; the Gymnastes was the superior teacher, and was expected to know the physiological effects and influences on the constitution of the youths, and therefore assigned to each of them those exercises which he thought most suitable.

The anointing of the bodies of the youths, and strewing them with dust, before they commenced their exercises, as well as the regulation of their diet, was the duty of the Aliptae. (See ALIPTAE.) These men sometimes also acted as surgeons or teachers. Galen mentions among the gymnastic teachers a *σφαιριστικός*, or teacher of the various games at ball; and it is not improbable that in some cases particular games may have been taught by separate persons.

The games and exercises which were performed in the gymnasia seem, on the whole, to have been the same throughout Greece. Among the Dorians, however, they were regarded chiefly as institutions for hardening the body and for military training; among the Ionians, and especially the Athenians, they had an additional and higher object, namely, to give to the body and its movements grace and beauty, and to make it the basis of a healthy and sound mind.

Among the games we may mention: (1) The ball (*σφαίρισις*, *σφαιρομαχία*, etc.), which was in universal favour, and was here, in Greece, as at Rome, played in a variety of ways, as appears from the words *ἀπόρραξις*, *ἐπίσκυρος*, *φαινίνδα*, or *ἁρπαστόν*, etc. Every gymnasium contained one large room for the purpose of playing at ball in it (*σφαιριστήριον*). (2) *Παίζειν ἑλκυστίνδα*, *διελκυστίνδα*, or *διὰ γραμμῆς*, was a game in which one boy, holding one end of a rope, tried to pull the boy who held its other end across a line marked between them on the ground. (3) The top (*βέμβηξ*, *βέμβιξ*, *ῥόμβος*, *στρόβιλος*), which was as common an amusement with Greek boys as in our own days. (4) The *πεντάλιθος*, which was a game with five stones, which were thrown up from the upper part of the hand and caught in the palm. (5) *Σκαπέρδα*, which was a game in which a rope was drawn through the upper part of a tree or a post. Two boys, one on each side of the post, turning their backs towards one another, took hold of the ends of the rope and tried to pull each other up. This sport was also one of the amusements at the Attic Dionysia. These few games will suffice to show the character of the gymnastic sports.

The more important games, such as running (*δρόμος*), throwing of the *δίσκος* and the *ἄκων*, jumping and leaping (*ἅλμα*, with and without *ἁλτῆρες*), wrestling (*πάλη*), boxing (*πυγμή*), the pancratium (*παγκράτιον*, *πένταθλον*, *λαμπαδηφορία*), dancing (*ὄρχησις*), etc., are described in separate articles.

A gymnasium was, as Vitruvius observes, not a Roman institution, and Dionysius of Halicarnassus (*Ant. Rom.* vii. 70–72) expressly states that the whole *ἀγωνιστική* of the Romans, though it was practised at an early period in the Ludi Maximi, was introduced among the Romans from Greece. Their attention, however, to developing and strengthening the body by exercises was considerable, though only for military purposes. The regular training of boys in the Greek gymnastics was foreign to Roman manners, and even held in contempt (Plut. *Quaest. Rom.* 40). Towards the end of the Republic many wealthy Romans, who had acquired a taste for Greek manners, used to attach to their villas small places for bodily exercise, sometimes called gymnasia, sometimes palaestrae, and to adorn them with beautiful works of art. The emperor Nero was the first who built a public

gymnasium at Rome (Suet. *Ner.* 12); another was erected by Commodus (Herodian, i. 12, 4). But although these institutions were intended to introduce Greek gymnastics among the Romans, yet they never gained any great importance, as the magnificent thermae, amphitheatres, and other colossal buildings had always greater charms for the Romans than the gymnasia.

See Burette, *Histoire des Athlètes*, in the *Mém. de l'Acad. des Inscript.* i. 3; G. Löbker, *Die Gymnastik der Hellenen* (Münster, 1835); Wachsmuth, *Hellen. Alterth.* vol. ii. p. 344, etc., 2d ed.; Müller, *Dorier*, iv. 5, § 4, etc.; Becker-Göll, *Charikles*, ii. 213–251; *Gallus*, iii. 168–188; and especially J. H. Krause, *Die Gymnastik u. Agonistik der Hellenen* (Leipzig, 1841); and Dittenberger, *De Ephebis Atticis* (ib. 1863). The histories of education among the ancients, especially that of Grasberger, likewise contain much useful information on the subject. See ATHLETAE; EDUCATION.

Gymnastes (*γυμναστής*). See GYMNASIUM.

Gymnastics. See ATHLETAE; GYMNASIUM.

Gymnesiae (*Γυμνησίαι νῆσοι*). See BALEARES.

Gymnesii or **Gymnētes** (*γυμνήσιοι* or *γυμνῆτες*). A class of bond-slaves at Argos, who may be compared with the Helots at Sparta (Steph. Byz. s. v. *Χίος*; Pollux, iii. 83). Their name shows that they attended their masters on military service in the capacity of light-armed troops, but no particulars are known about them.

Gymnētae (*γυμνῆται*). A name for the different sorts of sharp-shooters employed in the Greek armies since the Persian Wars, in place of the light-armed slaves. It was only after the expedition of the Ten Thousand that they came to form an essential part of a Greek army. They were generally recruited from the barbarous nations who were specially distinguished in the use of particular missiles. The archers (*τοξόται*), for instance, were generally Cretans, the slingers (*σφενδονῆται*) Rhodians and Thessalians, while the javelin men (*ἀκοντισταί*) were taken from the semi-Hellenic populations in the west of Greece, notably the Aetolians and Acarnanians. The common characteristic of all these troops was the absence of all defensive weapons. It was among the Lacedaemonians that they were introduced latest. Alexander the Great had a corps of 2000 of them, with which he opened his campaign against the Persians. Half of these were spearmen and the other half archers. See EXERCITUS.

Gymnopaedia (*γυμνοπαιδία*). A great festival held at Sparta from about the 6th to the 10th of July in honour of Apollo, Artemis, and Leto (Pausan. iii. 11, § 7). It was an exhibition of all kinds of accomplishments in gymnastics, music, and dancing, given by boys, youths, and men for the benefit of the citizens and of the numerous strangers who flocked to Sparta for the occasion, and were hospitably entertained there. Old bachelors were excluded from the festivities (Schömann, *Antiq.* i. 264, Eng. transl.).

Gymnosophistae (*Γυμνοσοφισταί*). "Naked Sages." A name given by the Greek writers to a certain class of Indian ascetics belonging to the caste of the Brahmins, and who, in accordance with the prevalent belief, thought that, by subjecting the body to sufferings and privations, and by withdrawing from all intercourse with mankind, they could effect a reunion of the spiritual nature of man with the divine essence. Most of these ascetics dispensed almost entirely with the use of clothes, and many of them went entirely naked. Hence the name applied to them by the Greeks. Many of these hermits appear in former times to have studied the abstract sciences with great success, and they have always been considered by the orthodox Hindus as the wisest and holiest of mankind. The Gymnosophists often burned themselves alive, as Calanus did in the presence of Alexander (Arrian, *Anab.* vii. 18; Plut. *Alex.* 65 foll.; Diod. Sic. xvii. 107).

Gynaeconītis (*γυναικωνῖτις*). See DOMUS, p. 539.

Gynaecŏnŏmi (*γυναικονόμοι*). Magistrates in many Greek States, who exercised a censorship over the conduct of women and to some extent of men also, especially the young. At Sparta there were *παιδονόμοι*, but not *γυναικονόμοι*. The far-reaching Spartan discipline brought both sexes alike under the control of the authorities, and such special officers may not have been required. Aristotle mentions them as a well-known institution in two passages of the *Politica* (iv. 12 [15], § 9; vi. 5 [8], § 13), and each time observes that they were characteristic of aristocracies rather than of oligarchies or democracies — a remark which alone is almost sufficient to prove that they did not exist at Athens in his time. We find them at Chaeronea, Syracuse, Andania, and at Gambreion near Pergamum.

They were associated with the Areopagus in the maintenance of public decency and the enforcement of sumptuary laws. They superintended even the meetings of friends in their private houses — e. g. at weddings, and on other festive occasions. Meetings of this kind were not allowed to consist of more than thirty persons, and the *γυναικονόμοι* had the right of entering any house and sending away all the guests above that number. They also controlled the eccentricities of female attire; women who went unsuitably dressed in public were liable to a fine of 1000 drachmas, and these fines were recorded on a tablet suspended to a plane-tree in the Ceramicus (Harpocrat. s. v. *ὅτι χιλιάς*; Hesychius, s. v. *πλάτανος*). The number of these officers and the mode of their appointment are alike unknown.

Gyndes (*Γύνδης*). A river of Assyria, rising in the country of the Matieni (in the mountains of Kurdistan) and flowing into the Tigris, celebrated through the story that Cyrus the Great drew off its waters by 360 channels. See Herod. i. 189.

Gypsoplastes. One who takes casts in plaster of Paris (*gypsum*). See Cassiod. *Var. Ep.* vii. 5.

Gyrton or **Gyrtona** (*Γυρτών*, *Γυρτώνη*). An ancient town in Pelasgiotis in Thessaly, on the Peneus.

Gythĭum (*Γύθιον*, *Γυθεῖον*). An ancient seaport town of Laconia, situated near the head of the Laconian Gulf, southwest of the mouth of the river Eurotas. In the Second Persian War, the Spartan fleet was stationed here, and here the Athenians under Tolmides burned the Spartan arsenal in B.C. 455 (Thuc. i. 102).

H

H, as a symbol.

In Greek.—H = ἡμέρας, ἡμερῶν, ὑιός (*C. I. G.* 5762) ὥρας (ib. 3013).

In Latin.—H = habet (habens), hic (and its forms), heres, homo, hora. H H = heredes.

H·A = Herculaneus Augustalis.

H·B = homo bonus.

H·C = hic conditus, Hispania Citerior, honoris causa, honore contentus, horrearius cohortis.

H·F = heres fecit, honestissima femina, honore functus.

H·I = Hercules invictus.

H·L = haec lex, hic locus.

H·M = hoc monumentum (very frequent), honesta missione.

H·P = heres posuit, hic positus.

H·V = Hercules victor, honore usus.

H·B·F = homini bono fecit.

H·B·Q = hic bene quiescat.

H·D·S = heres de suo.

H·E·F = heres eius fecit.

H·E·P = hic est positus.

H·E·T = heredes ex testamento.

H·L·O = (uti) hac lege oportebit.

H·L·R = (ante) hanc legem rogatam.

H·M·V = honestae memoriae vir.

H·N·C = Hispania Nova Citerior.

H·P·C = heres ponendum curavit.

H·P·R = hostes populi Romani.

H·A·I·R = honore accepto impensam reliquit.

H·B·M·F = heres bene merenti fecit.

H·E·N·S = heredem exterum non sequetur.

H·M·I·A = huic monumento itus actus.

H·S·B·Q = hic situs bene quiescat.

H·S·O·B = hic situs; ossa bene.

H·V·V·S = Herculi victori votum solvit.

H·A·S·F·C = heres a se faciundum curavit.

H·C·E·C·E·B·Q = hic conditus est; cineres ei bene quiescant.

H·C·S·P·P = honore contentus sua pecunia posuit.

H·L·D·M·A = huic loco dolus malus abesto.

H·L·S·H·N·S = hic locus sepulturae heredem non sequetur.

H·L·T·C·S = hunc locum tessellávit cum suis.

H·M·A·H·N·P = hoc monumentum ad heredes non pertinebit.

H·M·D·M·A·B·M·M·C = huic monumento dolus malus abesto, bene merenti memoriae causa.

H·M·S·S·H·N·S = hoc monumentum, sive sepulcrum, heredem non sequetur.

H·O·T·B·Q = hic ossa tibi bene quiescant.

H·S·E·S·T·T·L = hic situs est, sit tibi terra levis.

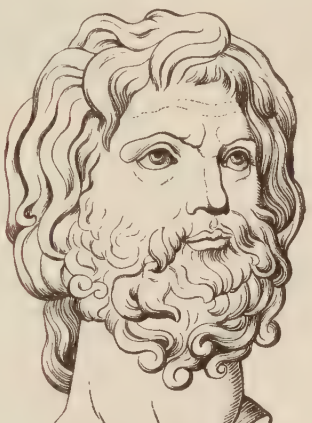
H·S·E·T·F·I·H·F·C = hic situs est, titulum fieri iussit, heres faciundum curavit.

H·S·H·A·N·L = hoc sepulcrum heredibus abalienare non licet.

H·V·O·B·Q = hic volo ossa bene quiescant.

H·V·S·R·L·D·D·D = honore usus sumptus remisit, loco dato decreto decurionum.

Habēna. (1) (ἡνίαι). Mostly in the plural. Reins for driving; hence ἡνίοχος, a charioteer or driver. (2) (ῥυταγωγεύς). A halter-rope (Ammian. xix. 8, 7). (3) The sheets of a sail—i. e. the ropes by which the lower ends of the sail are braced or slacked (Val. Flacc. iv. 679). (4) The word is also used in general of any strap or thong, as the strap of a spear (see Amentum), the thong of a sandal (Gell. xiii. 21, 2), of a helmet (Val. Flacc. vi. 365), the thong of a whip (Ovid, *Her.* ix. 81), and in medicine, a bandage (Suet. *Aug.* 80).



Hades (Ἅιδης). According to the belief current among the Greeks, the world of the dead, or the abode of Hades, with its wide doors, was in the depths of the earth. In the *Odyssey*, its entrance and outer court were on the western side of the river Oceanus, in the ground sacred to Persephoné, with its grove of barren willows and poplars. Here was the home of the Cimmerians, veiled in darkness and cloud, where the sun never shines. This court, and indeed the lower world in general, is a meadow of asphodel, an unattractive weed of dreary aspect usually planted on graves. The actual abode of the subterranean powers is Erebus (Ἔρεβος), or the impenetrable darkness. In later times entrances to the lower world were imagined in other places where there were cavernous hollows which looked as if they led into the bowels of the earth. Such places were Hermioné and the promontory of Taenarum in the Peloponnesus, Heraclea on the Euxine, and Cumae in Italy, where the mythical Cimmerii were also localized. The lower world of Homer is intersected by great rivers — the Styx, Acheron ("river of woe"), Cocytus ("river of wailing"), a branch of the Styx, Phlegethon and Pyriphlegethon ("rivers of fire"). The last two unite and join the waters of the Acheron. In the post-Homeric legend, these rivers are represented as surrounding the infernal regions, and another river appears with them, that of Lethé, or oblivion. In the waters of Lethé the souls of the dead drank forgetfulness of their earthly existence. The lower world once conceived as separated from the upper by these rivers, the idea of a ferryman arose. This was Charon (q. v.), the son of Erebus and of Nyx, a gloomy, sullen old man, who took the souls in his boat across Acheron into the realm of shadows. The souls were brought down from the upper world by Hermes, and paid the ferryman an obolus, which was put for this purpose into the mouths of the dead. Charon had the right to refuse a passage to souls whose bodies had not been duly buried. (See Funus, p. 697.) In Homer it is the spirits themselves who refuse to receive any one to whom funeral honours have not been paid. At the gate lies the dog Cerberus, son of Typhaon and Echidna. He is a terrible monster with three heads, and mane and tail of snakes. He is friendly to the spirits who enter, but if any one tries to escape he seizes him and holds him fast.

The ghosts of the dead were in ancient times conceived as incorporeal images of their former selves, without mind or consciousness. In the *Odyssey* the seer Tiresias is the only one who has retained his consciousness and judgment, and this as an exceptional gift of Persephoné. But they have the power of drinking the blood of animals, and having done so they recover their consciousness and power of speech. The soul, therefore, is

not conceived as entirely annihilated. The ghosts retain the outer form of their body, and follow, but instinctively only, what was their favourite pursuit in life. Orion in Homer is still a hunter, Minos sits in judgment, as when alive. Perhaps the punishments inflicted in Homer on Tityus, Tantalus, and Sisyphus (Ixion, the Danaides, Pirithoüs, and others belong to a later story) should be regarded in this light. The penalties inflicted on them in the upper world may be merely transferred by Homer to their ghostly existence; for the idea of a sensible punishment is not consistent with that of an unconscious continuance in being. It must be remembered, at the same time, that Homer several times mentions that the Erinyes punish perjurers after death. It must be concluded, then, that the ancient belief is, in this instance, found side by side with the later and generally received idea that the dead, even without drinking blood, preserved their consciousness and power of speech. Connected with it is the notion that they have the power of influencing men's life on earth in various ways. The most ancient belief knows nothing of future rewards of the righteous, or, indeed, of any complete separation between the just and the unjust, or of a judgment to make the necessary awards. The judges of the dead are in the later legend Minos, Rhadamanthys, Aeacus, and Triptolemus. It was a later age, too, which transferred Elysium and Tartarus to the lower world—Elysium as the abode of the blessed, and Tartarus as that of the damned. In the earlier belief these regions had nothing to do with the realm of Hades. The name Tartarus (*Τάρταρος*) was in later times often applied to the whole of the lower world. The spirits of those who had lived a life of average merit were imagined as wandering on the asphodel meadow. See in English literature the *Epic of Hades*, by Lewis Morris, and *Ades, King of Hell*, by Buchanan.

In general it must be said that the ancient ideas of a future life were always subject to considerable changes, owing to the influence of the doctrines taught in the mysteries, and the representations of poets, philosophers, sculptors, and painters. (See POLYGNOTUS.) The general tendency was to multiply the terrors of Hades, especially at the gates and in Tartarus. (For the deities of the lower world, see EUMENIDES; HADES; PERSEPHONÉ.) The Greek beliefs on the subject found their way to Rome through the instrumentality of the poets, especially Vergil; but they did not entirely supplant the national traditions. See Alger, *Critical History of the Doctrine of a Future Life*, with an exhaustive bibliography of the subject (10th ed. Boston, 1880); Ettig, *Acheruntica* (Leipzig, 1891); and the articles LARES; LARVAE; MANES; MANIA; ORCUS.

Hades (*Ἀΐδης*; Attic, *Ἄιδης* or *ᾍδης* [*ἀϊδής*]). In Greek mythology, the son of Cronus and Rhea, who received the dominion of the lower world at the division of the universe after the fall of Cronus, his brothers, Zeus and Poseidon, being made lords respectively of the sky and sea. With his queen Persephoné he held sway over the other powers of the infernal regions, and over the ghosts of the dead. The symbol of his invisible empire was the helmet that made men invisible. This was given to him by the Cyclopes to aid him in the battle of the gods with the Giants. Originally he was, to all appearance, conceived as bringing down the dead himself to the lower world in his chariot, or as driving them down with his staff; but in the later belief the office of conductor of souls belonged to Hermes. Hades is the enemy of all life, heartless and inexorable, and hated, accordingly, by gods and men. Sacrifice and prayer are of no avail with him, and he is therefore only worshipped on exceptional occasions. But, like Persephoné, he was sometimes represented in a milder light, being called Pluto (*Πλούτων*, *Πλοῦτος*), or the giver of wealth. This because it is from the depths of the earth that corn and its attendant blessings are produced. As old as Hesiod is the advice to the plougher to call upon Zeus of the lower world, as well as upon Demeter. He is also styled Polydectes and Polydegmon, as receiving at last all men in his realms.

Hades. (Palazzo Chigi, Rome.)

The most celebrated of the myths referring to Hades is that of the rape of Persephoné. In works of art he is represented as resembling his brothers Zeus and Poseidon, but with gloomy features and hair falling over his brow, the key of the infernal world in his hand, and the dog Cerberus at his side. Sometimes he appears as a god of agriculture, with a cornucopia, or a two-pronged pickaxe. The plants sacred to him were the cypress and the narcissus; black sheep were offered to him in sacrifice. When mortals invoked him, they struck the earth with the hand.

By the Romans Hades was identified partly with Orcus, partly with Dis.

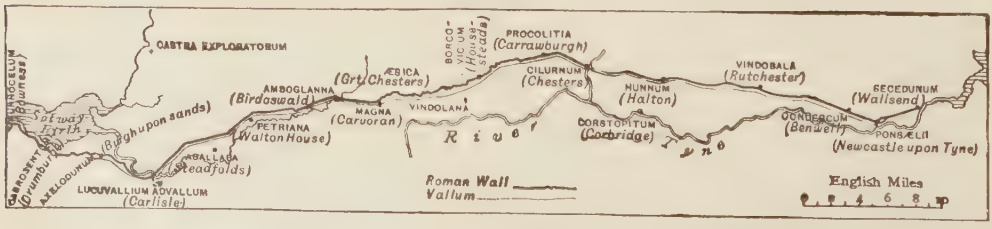
Hadrānum (*Ἄδρανον*). A town of Sicily, near Mount Aetna, having in its vicinity a river of the name of Hadranus. It was founded by Dionysius (Diod. Sic. xiv. 38).

Hadria. See HADRIATICUM MARE.

Hadrianopŏlis (*Ἀδριανόπολις*). The modern Adrianople. A town in Thrace, on the right bank of the Hebrus, situated in an extensive plain, founded by the emperor Hadrian. In the Middle Ages it ranked second to Constantinople alone.

Hadriānus, PUBLIUS AELIUS. (1) A Roman emperor, born at Rome A.D. 76. He lost his father when ten years of age, and had for his guardians Trajan, who was his relation, and Cornelius Ta-

tianus, a Roman knight. His father's name was Aelius Hadrianus Afer. It is conjectured that the surname of Afer was given the latter because he had been governor of Africa, and that he is the same Hadrianus who put the martyr Leontius to death at Tripolis in the reign of Vespasian. Hadrian's father was Trajan's first cousin; for he was the son of Ulpia, the sister of Marcus Ulpius Trajanus, the emperor Trajan's father. Hadrian began very early to serve in the army, and was tri-



Coin of Hadrian.

bune of a legion before Domitian's death. The forces in Lower Moesia chose him to congratulate Trajan upon his being adopted by Nerva, and it was he that acquainted Trajan with the first news of Nerva's death. He regained the emperor's favour, which he had almost entirely lost by his extravagant expenses and the debts which he had in consequence incurred, and finally married Trajan's grandniece, Sabina, chiefly through the aid of Plotina the empress. His subsequent rise was rapid, and he was the companion of Trajan in most of his expeditions. He particularly distinguished himself in the war against the Dacians, and was successively appointed praetor, governor of Pannonia, and consul. The orations he composed for Trajan increased his fame (Spart. *Hadr.*). After the siege of Atra, in Arabia, Trajan left him in command of his army, and when he found his death approaching, adopted him, although the reality of this adoption is disputed by some authorities, who attribute his elevation to the intrigues of Plotina.

On the death of Trajan he assumed the reins of government (A.D. 117), with the concurrence of the Syrian army. The Senate readily ratified the act. The first care of Hadrian was to make a peace with the Persians, and to restore all the provinces just taken from them, making the Euphrates the boundary of the Roman Empire. He had then to turn his attention to certain revolts and insurrections in Egypt, Libya, and Palestine; and, after quickly concluding a peace with the Parthians, returned to Rome, A.D. 118. The Senate decreed him a triumph, and honoured him with the title of Pater Patriae; but he refused both, and required that Trajan's image should triumph. He sought popularity by a repeal of fifteen years accumulation of arrears of public debt, by a vast reduction of taxation generally and by immense largesses to the people. He was less generous to certain senators accused of a plot against him, four of whom, although of consular rank and intimates of Trajan, he caused to be put to death.

A year after his return to Rome, Hadrian marched against the Alani, the Sarmatians, and the Dacians, but showed a greater desire to make peace with the barbarians than to extend the prowess of the Roman arms. This policy has been attributed to envy of the fame of his warlike predecessor; but a due consideration of the subsequent history of the Empire will amply justify him against the imputation; for it had reached an extent which rendered all increase to its limits a source of weakness rather than of strength. Hadrian was an active and incessant traveller, visiting every province in the Empire, not simply to indulge his curiosity, but to inspect the administration of government, repress abuses, erect and repair public edifices, and exercise all the vigilance of personal examination. (See Dürr, *Die Reisen des Kaisers Hadrian* [Vienna, 1881]). In A.D. 120, he passed over from Gaul to Britain, where he caused a wall to be built from the mouth of the Tyne to Solway Frith, in order to secure the Roman provinces from the incursions of the Caledonians.

Like Trajan, he lived familiarly with his friends, but was much more suspicious, and would not repose in them the same confidence. When at Rome he cultivated all kinds of literature, conversing with learned men, and giving and receiving information in their society. Hadrian had once again to visit the East to repress the Parthians, who paid little regard to treaties. On his return he passed the winter at Athens, and was initiated in the Eleusinian Mysteries. He published no edict against the Christians, yet they nevertheless suffered considerable persecution, until, upon the remonstrance of Quadratus, bishop of Athens, and Aristides, an eminent Christian, he ordered the persecution to cease; but no credit is due to the unauthorized assertion of Lampridius that he thought of building a temple to the Saviour. His treatment of the Jews, on the other hand, was extremely severe, though ample provocation had been given by that turbulent people, for they had raised disturbances towards the end of Trajan's reign, which were not completely quelled until the second year of Hadrian. But now a more formidable insurrection broke out under Barcochebas ("Son of a Star"), who, though a robber by profession, had given himself out as the Messiah. It required a war of three years to reduce the revolted Jews to complete subjection, and after this was accom-

Map of Hadrian's Wall, with the chief Stations. (After Collingwood Bruce.)

plished, there was scarcely any indignity that was not inflicted on the conquered nation. Jerusalem was rebuilt under the new title of Aelia Capitolina, uniting the family name of the emperor with

Hadrian. (British Museum.)

the Roman surname of Iupiter; and in the execution of his plan Hadrian studiously profaned all the places which had been most revered by both Jews and Christians, whom he seems to have confounded together. He built a temple in honour of Iupiter Capitolinus upon the mountain where had stood that of the true God; placed a marble hog upon that gate of the city which looked towards Bethlehem; erected in the place where Jesus was crucified a statue of Venus; and in that where he rose from the dead, an image of Iupiter. In the grotto of Bethlehem, where the Saviour was born, he established the worship of Adonis. The Jews were also forbidden the very sight of Jerusalem, which they were not permitted to enter save on one day in the year—the anniversary of the destruction of the city. After the conclusion of the Jewish War Hadrian returned to Italy, where a lingering illness put a stop to his unsettled mode of life, and eventually terminated his existence. Having no children of his own, Hadrian first adopted for his successor L. Ceionius Commodus, more generally known by the name of Verus, to which last he prefixed that of Aelius after his adoption by the emperor. Verus, however, who was remarkable for nothing but his excessive effeminacy and debauched mode of life, died soon after, and Hadrian made a very excellent selection in the person of Antoninus. (See ANTONINUS PIUS.) Hadrian died not long after at Baiae, A.D. 138, in the sixty-third year of his age and the twenty-second of his reign. His disorder was the dropsy, from which disease his sufferings were so great as apparently to affect his reason.

Hadrian was, in general, a just and able ruler, yet there were times when he showed himself revengeful, suspicious, and cruel. His treatment of his wife Sabina does no honour to his memory, his passion for Antinoüs (q. v.) taints it; while his excessive superstition, to which even that favourite fell a victim, entitles him to a large measure of contempt. He was, in fact, a peculiar character, full of paradoxes—witty, pedantic, droll, dull, impulsive, sociable, suspicious, morbidly self-conscious, and persevering in nothing. The greater portion of the Romans appear to have formed a just estimate of his character long before his death, and it was with difficulty that Antoninus could obtain from the Senate the usual compliment of having him ranked among the gods. Their dread of the soldiery, by whom Hadrian was greatly beloved, appears to have conquered their reluctance.

Hadrian did much towards restoring and improving the city of Rome. He also erected a splendid temple to Trajan, a temple to Venus and Roma, and the great Mausoleum in the district beyond the Tiber, now known as the Castle of St. Angelo. In this, he and a number of his successors were buried. For an illustration of it see the article MAUSOLEUM.

Hadrian wrote several works. He was fond of entering the lists against the poets, philosophers, and orators of the day, and Photius mentions several declamations of the emperor's, written for such occasions, as still existing in his time, and not devoid of elegance. Hadrian composed a history of his own times, which he published under the name of his freedman Phlegon; and Doritheus the grammarian made at a subsequent period a collection of his decisions and rescripts. All that we have of his productions at the present day are some speeches, decrees, and (Greek) epigrams, and an epigrammatic address to his soul, written a

Ruins of the Temple of Venus and Roma, built by Hadrian.

short time before his death, and remarkable for its beauty. It suggested to Pope his "Vital spark of heavenly flame," and runs as follows:

"Animula, vagula, blandula,
Hospes comesque corporis,
Quae nunc abibis in loca.
Pallidula, rigida, nudula,
Nec, ut soles, dabis jocos?"

(Spart. *Hadr.* 25.) See Gregorovius, *Geschichte des Kaisers Hadrianus* (1851).

(2) A philosopher of Tyre, who studied under Herodes, and taught rhetoric after him at Athens. He was also secretary to the emperor Commodus (*ἀντιγραφεὺς τῶν ἐπιστολῶν*). He died at Rome after having attained the age of eighty years. There are only fragments remaining of the works of this writer.

Hadriatĭcum Mare. The Adriatic Sea (*ὁ Ἀδρίας*), properly called by the Romans MARE SUPĔRUM or Upper Sea, as opposed to the Mare Inferum or Tyrrhenian Sea. The Romans also, in imitation of the Greeks, used the feminine form HADRIA or ADRIA. The Adriatic separated Italy from Illyricum, Dalmatia, and Epirus, and is connected at its southern extremity with the Ionian Sea. It was first explored by the Phocaeans of the Greeks (Herod. i. 163). The ancient writers frequently speak of it as dreaded by sailors for its sudden storms (Hor. *Carm.* i. 3, 15; iii. 9, 23, etc.). The name is derived from the Etruscan city Hatria, at the mouth of the Padus (Po).

Hadrumētum or Adrumētum (*Ἀδρούμητον*). A flourishing city founded by the Phœnicians in North Africa, and the capital of Bycazena under the Romans.

Haemon (*Αἵμων*). (1) The son of Pelasgus and father of Thessalus, from whom the ancient name of Thessaly, Haemonia or Aemonia, was believed to be derived. The Roman poets frequently use the adjective Haemonius as equivalent to Thessalicus. (2) Son of Creon of Thebes, and in love with Antigoné. He killed himself on hearing that she had been condemned by his father to be entombed alive.

Haemonia (*Αἱμονία*). See HAEMON.

Haemus (*Αἷμος*). The modern Balkans. A lofty range of mountains separating Thrace and Moesia. The pass over them most used in antiquity was in the western part of the range, called Succi or Succorum Angustiae, also Porta Traiani (Sulu Derbend), between Philippopolis and Serdica. The fabulous origin of the range is that Haemus and his wife Rhodopé were changed into mountains for daring to call themselves Zeus and Heré (Ovid, *Met.* vi. 87).

Haeres. See HERES.

Hagnus (*Ἀγνοῦς*). A deme of Attica, west of Paeania, and belonging to the tribe Acamantis.

Hair. See COMA.

Hairdressers. See TONSOR.

Hairpins. See ACUS.

Halae (*Ἁλαί*). (1) HALAE ARAPHENĬDES (*Ἀραφηνίδες*). A deme of Attica belonging to the tribe Aegeïs. It served as the harbour of Brauron and possessed a temple of Artemis. (2) HALAE AEXONĬDES (*Αἰξωνίδες*). A deme of Attica belonging to the tribe Cecropis. It was situated on the western coast. (3) A town on the Opuntian Gulf.

Halcyŏné or Alcyŏné (*Ἀλκυόνη*). (1) A Pleiad, daughter of Atlas and Pleioné, and beloved by Poseidon. (2) Daughter of Aeolus and Enareté or Aegialé, and wife of Ceÿx. They lived so happily that they were presumptuous enough to call each other Zeus and Heré, for which Zeus metamorphosed them into birds. Others relate that Ceÿx perished in a shipwreck; that Alcyoné, for grief, threw herself into the sea; and that the gods, out of compassion, changed the two into birds. It was fabled that during the seven days before, and as many after, the shortest day of the year, while the female bird was breeding, there always prevailed calms at sea — hence our expression "halcyon days." For the use of this myth in English literature, see F. Tennyson's *Halcyone;* E. W. Gosse, *Alcyone* (a sonnet in dialogue); and Mrs. Preston's *Alcyone.*

Hales (*Ἅλης*). (1) A river of Ionia, near Colophon, famous for the coldness of its water. (2) A river in the island of Cos.

Halēsa or Alaesa (*Ἅλαισα*). A town on the northern coast of Sicily, on the river Halesus, founded by the Greek mercenaries of Archonides, a chief of the Siculi, and originally called ARCHONIDION.

Halēsus. A chief of the Auruncans and Oscans, the son of a soothsayer, and an ally of Turnus, slain by Evander. He came to Italy from Argos in Greece, whence he is called Agamemnonius, Atrides, or Argolicus. He is said to have founded Falerii (Serv. *ad.* Verg. *Aen.* vii. 723).

Half-uncials. See PALAEOGRAPHY.

Halia (*ἁλία*). The Spartan Assembly.

Halia. See HELIOS, p. 780.

Haliacmon (*Ἁλιάκμων*). The modern Vistriza. An important river in Macedonia, rising in the Tymphaean mountains, forming the boundary between Eordaea and Pieria, and falling into the Thermaic Gulf. Caesar incorrectly makes it the boundary between Macedonia and Thessaly.

Haliartus (*Ἁλίαρτος*). An ancient town in Boeotia, south of the lake Copaïs, destroyed by Xerxes in his invasion of Greece (B.C. 480), but afterwards rebuilt. Under its walls Lysander lost his life (395).

Halias (*Ἁλίας*). A district on the coast of Argolis between Asiné and Hermioné, so called because fishing was the chief occupation of its inhabitants. Their town was called Haliae or Halies.

Halicarnassus (*Ἁλικαρνασσός*). The modern Budrum. A celebrated city of Asia Minor, stood in the southwestern part of Caria, opposite to the island of Cos. It was founded by Dorians from Troezen. With the rest of the coast of Asia Minor it fell under the dominion of the Persians, at an early period of whose rule Lygdamis made himself tyrant of the city, and founded a dynasty which lasted for some generations. His daughter Artemisia assisted Xerxes in his expedition against Greece. Halicarnassus was celebrated for the Mausoleum, a magnificent edifice which Artemisia II. built as a tomb for her husband Mausolus (B.C. 352), and which was adorned with the works of the most eminent Greek sculptors of the age. (See ARCHITECTURA.) Fragments of these sculpt-

ures, which were discovered built into the walls of the citadel of Budrum, are now in the British Museum. Halicarnassus was the birthplace of the historians Herodotus and Dionysius. See Newton, *Discoveries at Halicarnassus* (1862–63).

Halicȳae (Ἁλικύαι). A town in the northwest of Sicily, between Entella and Lilybaeum, long in the possession of the Carthaginians.

Halĭmus (Ἁλιμοῦς). A deme of Attica, a little south of Athens, and belonging to the tribe Leontis.

Halipĕdon (Ἁλίπεδον). A plain near the Piraeus in Attica.

Halirrhothius (Ἁλιρρόθιος). The son of Poseidon and Euryté, who attempted to violate Alcippé, daughter of Ares and Agraulos, but was slain by Ares. Ares was brought to trial by Poseidon for this murder, on the hill at Athens, which was hence called Areopagus, or Hill of Ares.

Haliūsa (Ἁλιοῦσα). Now Karavi; an island in the Argolic Gulf.

Halizōnes (Ἁλιζῶνες). A people of Bithynia, with a capital city Alybé (*Il.* ii. 856).

Halm, Karl. A distinguished classical scholar, born at Munich in 1809. He was educated at the University of Munich, and from 1839 to 1849 taught in Speier and Hadamar. In 1849 he was made Rector of the Maximilians Gymnasium at Munich, and in 1856 Professor of Classical Philology in the University of Munich and Director of the Royal Library. He died at Munich, October 10th, 1882. His principal works are critical editions of Cicero (1845–56), Quintilian (1868–69), Cornelius Nepos (1871); Cicero's Orations, with a commentary (1845-1848), and selected orations (1854–66); the fables of Aesop in the Teubner series (1852); Florus (1854); and Tacitus (4th ed. 1883). Among his shorter treatises are the *Lectiones Stobenses* (1841–42); a catalogue of the Fathers of the Latin Church (1865); and a most valuable catalogue of the Library at Munich (1876–81).

Halma (ἅλμα). See Pentathlon.

Halmydessus. See Salmydessus.

Halmȳris (Ἁλμυρίς, sc. λίμην). A bay of Moesia formed by the southern mouth of the Danube. Upon it was situated a town of the same name.

Halonnēsus (Ἁλόννησος), and **Halonēsus** (Ἁλόνησος). An island of the Aegaean Sea, off the coast of Thessaly, and east of Sciathos and Peparethos, with a town of the same name upon it. The possession of this island occasioned great disputes between Philip and the Athenians: there is a speech on this subject among the extant orations of Demosthenes, but probably written by Hegesippus. See Philippus.

Halosydné (Ἁλοσύδνη). "Sea-born." An epithet applied to Thetis and to Aphrodité.

Haltēres (ἁλτῆρες). Heavy weights of stone or lead, like our dumb bells, intended to increase the muscular exertion of gymnastic exercises, being held in each hand while leaping, running, dancing, etc. (Mart. vii. 67; xiv. 49).

Athlete with Halteres. (Tassie.)

Haluntium. See Aluntium.

Halus. See Alus.

Halўcus (Ἅλυκος). A river in the south of Sicily, flowing into the sea near Heraclea Minoa.

Halys (Ἅλυς). The modern Kizil-Irmak, i. e. "Red River;" the greatest river of Asia Minor, rising in the Anti-Taurus range of mountains, on the borders of Armenia Minor and Pontus, and after flowing through Cappadocia and Galatia, and dividing Paphlagonia from Pontus, falling into the Euxine Sea between Sinopé and Amisus. In early times it divided the Indo-European races which peopled the western part of Asia Minor from the Semitic (Syro-Arabian) races of the rest of southwest Asia; and it separated the Lydian Empire from the Medo-Persian (Herod. i. 6).

Hamadryădes (Ἁμαδρυάδες). See Nymphae.

Hamaxa (ἅμαξα). See Currus.

Hamaxĭtus (Ἁμαξιτός). A small town on the coast of the Troad. See Smintheus.

Hamaxobii (Ἁμαξόβιοι). A people in European Sarmatia, in the neighbourhood of the Palus Maeotis, were a nomad race, as their name, "dwellers in chariots," signifies.

Hamilcar (Ἁμίλκας). (1) A Carthaginian general, son of Mago, or, according to others, of Hanno, conquered by Gelon, in Sicily, the same day that Xerxes was defeated at Salamis. Herodotus (vii. 165) states that he was never seen either living or dead after the battle in which his army was defeated. According to Polyaenus, however (i. 27, 2), Gelon destroyed him by a stratagem while sacrificing. (2) Surnamed Rhodănus, a Carthaginian general of considerable talent. Perceiving his fellow-citizens to be greatly disquieted at the projects of Alexander of Macedon (B.C. 332), he betook himself to that prince, in order, if possible, to penetrate his designs, and give his countrymen timely notice of them. After the death of Alexander he returned to Carthage, where he was put to death, on false accusations of treason, as the recompense of his devotion to his country (Just. xxi. 5). (3) A Carthaginian general, in the time of Agathocles, tyrant of Sicily. He came to the succour of Syracuse when besieged by that usurper. Being gained over, however, by the gold of Agathocles, he prevailed on the Syracusans to make peace, and favoured by his inaction the schemes of the tyrant. The Carthaginian Senate condemned him to lose his head, but he died at Syracuse, B.C. 311, before the sentence could be made public (Just. xxii. 2). (4) The son of Giscon; a Carthaginian general, sent into Sicily about B.C. 311, to oppose the progress of Agathocles. On his arrival he gained a victory, which opened to him the gates of several large cities. In attempting to make himself master of Syracuse, during the absence of Agathocles in Africa, he was taken prisoner and put to death, B.C. 309. (5) Surnamed Barca, the leader of the popular party at Carthage, appointed in the eighteenth year of the First Punic War (B.C. 247) to the command of the Carthaginian armies. No particulars have been preserved respecting his early life or the time of his birth; but it is learned from Nepos (*Hamil.* 1) that he was very young when he obtained the command. He ravaged with his fleet the coast of the Bruttii and

the Epizephyrian Locrians, and afterwards seized upon a strong fortress in Sicily, which was situated between Eryx and Panormus. In this place he continued for some years, with very little support from the Carthaginian government; and, although the Romans were masters of almost the whole of the island, they were unable to dislodge him. He frequently ravaged the southern coasts of Italy as far as Cumae, and defeated the Roman troops in Sicily. On one occasion he took Eryx, which he held till the conclusion of the war. The Romans at length fitted out a fleet to cut off all communication between Hamilcar and Carthage; the Carthaginian fleet sent to his assistance was defeated by the Roman consul Lutatius Catulus (B.C. 241), and the Carthaginians were obliged to sue for peace. This was granted by the Romans; and Hamilcar led his troops from Eryx to Lilybaeum, whence they were conveyed to Africa. But a new danger awaited Carthage. The Carthaginian treasury was exhausted; and it was proposed to the troops that they should relinquish a part of the pay which was due to them. The soldiers rejected the proposal, appointed two of their number, Spendius and Matho, commanders, and proceeded to enforce their demands. Being joined by many of the native tribes of Africa, they defeated Hanno, the Carthaginian general sent against them, and brought Carthage to the brink of ruin. In these desperate circumstances Hamilcar was appointed to the command, and at length succeeded in subduing them after the war had lasted three years and four months. After the end of this war Hamilcar was sent into Spain (B.C. 238). He remained in Spain nearly nine years, during which time he extended the dominion of Carthage over the southern and eastern parts of that country. He fell in a battle against the natives (B.C. 229), leaving three sons, Hasdrubal, Mago, and Hannibal.

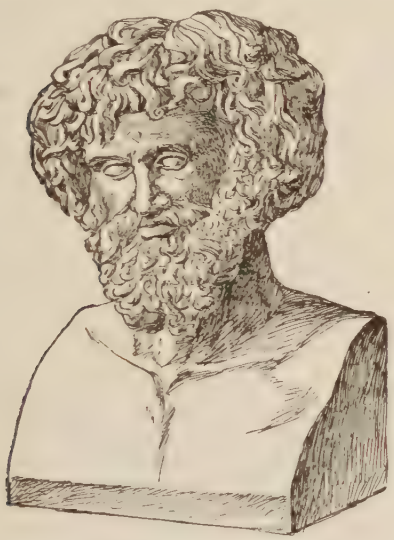
The abilities of Hamilcar were of the highest order; and he directed all the energies of his mind to diminish the power of Rome. Polybius states his belief (Bk. iii.) that his administration would soon have produced another war with the Romans, if he had not been prevented by the disorders in which his country was involved through the war of the mercenaries. Hamilcar was succeeded in his command in Spain by his son-in-law Hasdrubal, who must not be confounded with Hasdrubal, the brother of Hannibal. See Polyb. i., ii.; Corn. Nep. *Hamil.* 3, and the striking picture given in Flaubert's novel, *Salammbô*. (6) A Carthaginian general, son of Bomilcar, conquered by the Scipios (B.C. 215) when besieging Ilitingis, in Hispania Baetica, along with Hasdrubal and Mago. He is supposed by some to be the same with the Hamilcar who, fifteen years after, at the head of a body of Gauls, took and sacked Placentia, and was defeated and slain before Cremona. Others affirm that he was taken prisoner three years later in a battle fought near the Mincius, and served to grace the victory of the conqueror (Livy, xxiii. 49; xxxi. 10; xxxii. 23; Pliny, *H. N.* iii. 1).

Hammer. See MALLEUS.

Hamper. See CORBIS.

Hamus (*ἄγκιστρον*). A fish-hook, made by the ancients in shapes precisely like our own.

Hand, FERDINAND GOTTHELF. A German classical scholar born at Plauen in Saxony, 1786. He was Professor of Classical Philology at the Gymnasium of Weimar (1810–17), and in 1817 was transferred to the University of Jena as Professor of Greek Literature. In the same year he was made Aulic Counsellor, and Con-rector of the philological seminary. He died at Jena in 1851. He is best remembered by his treatise, in four vols., *De Particulis Latinis Commentarii* (Leipzig, 1829–45).



Hanging Gardens. See HORTUS.

Hannibal (*Ἀννίβας*, equivalent in Punic to *gratia Baalis;* cf. the Biblical *Hanniel*). (1) The son of Gisco who in B.C. 409 aided the Segestans against the Selinuntines. He took Selinus and Himera, but died in 406 while besieging Agrigentum. (2) Son of Gisco, the commander of Lilybaeum at the close of the First Punic War. He was besieged in Agrigentum by the Romans in B.C. 262, but broke through the lines and escaped. He ravaged the coast of Italy, was defeated by Duilius (260), and failed in the defence of Sardinia (259), being soon after slain by his mutinous soldiers. (3) Son of Hamilcar Barca (see HAMILCAR), and born in B.C. 247. At the age of nine he went to Spain with his father, who, previous to his departure, took his son to the altar, and, placing his hand on the sacrifice, made him swear that he would never be a friend to the Romans. It does not appear how long Hannibal remained in Spain, but he was at a very early age associated with Hasdrubal, who succeeded his father in the command of the Carthaginian army in that country.

On the death of Hasdrubal, B.C. 221, he obtained the undivided command of the army, and quickly conquered the Olcades, Vaccaeans, Carpesians and the other Spanish tribes that had not been subdued by Hasdrubal. The inhabitants of Saguntum, alarmed at his success, sent messengers to Rome to inform the Romans of their danger. A Roman embassy was accordingly sent to Hannibal, who was passing the winter at Carthago Nova, to announce to him that the independence of Saguntum was guaranteed by a treaty between the Carthaginians and Romans (concluded B.C. 226), and that they should consider any injury done to the Saguntines as a declaration of war against themselves. Hannibal, however, paid no regard to this remonstrance. More than twenty years had elapsed since the termination of the First Punic War, during which period the Carthaginians had recovered their strength, and had obtained possession of the greater part of Spain; and now a favourable opportunity had arrived for renewing the war with the Romans. In B.C. 219, Hannibal took Saguntum (q. v.) after a siege of eight months, and employed the winter in making preparations for the invasion of Italy. He first provided for the security of Africa and Spain by leaving an army of about 16,000 men in each country. The army in Africa consisted principally of Spanish troops, and that in Spain of Africans, under the command of his brother Hasdrubal. He had already received promises of support from the Gauls who inhabited the north of Italy, and who were anxious to deliver themselves from Roman domination. Having thus made every necessary preparation, he set out from Carthago Nova, late in the spring of B.C. 218, with an army of 80,000 foot and 12,000 horse. In his march from the Iberus to the Pyrenees he was opposed by a great number of the native tribes, but these were quickly defeated, though with loss. Before crossing the Pyrenees, he left

Hanno to secure his recent conquests with a detachment from his own army of 11,000 men. He sent back the same number of Spanish troops to their own cities, and with an army now reduced to 50,000 foot and 9000 horse he advanced to the Rhone.

Meanwhile, two Roman armies had been levied: one, commanded by the consul P. Cornelius Scipio, was intended to oppose Hannibal in Spain; and a second, under the consul T. Sempronius, was designed for the invasion of Africa. The departure of Scipio was delayed by a revolt of the Boian and Insubrian Gauls, against whom was sent the army which had been intended for the invasion of Spain, under the command of one of the praetors. Scipio was therefore obliged to remain in Rome until a new army could be raised. When the forces were ready, he sailed with them to the Rhone, and anchored at the eastern mouth of the river, being persuaded that Hannibal must still be at a considerable distance from him, as the country through which he had to march was difficult, and inhabited by many warlike tribes. Hannibal, however, quickly surmounted all these obstacles, crossed the Rhone, though not without some opposition from the Gauls, and continued his march up the left bank of the river. Scipio did not arrive at the place where the Carthaginians had crossed the river till three days afterwards; and, despairing of overtaking them, he sailed back to Italy with the intention of meeting Hannibal when he should descend from the Alps. Scipio sent his brother Gnaeus into Spain, with the greater part of the troops, to oppose Hasdrubal. Hannibal continued his march up the Rhone till he came to the Isara. Marching along that river, he crossed the Alps, descended into the valley of the Dora Baltea, and followed the course of the river till he arrived in the territories of the Insubrian Gauls. See Troger, *Hannibal's Zug* (Innsbruck, 1878); Buchheister, *Hannibal's Zug über die Alpen* (Hamburg, 1887).

Hannibal. (Von Falke.)

Hannibal completed his march from Carthago Nova to Italy in five months, during which time he lost a great number of men, especially in his passage over the Alps. According to a statement engraved by his order on a column at Lacinium, in the country of the Brutii, which Polybius saw, his army was reduced to 12,000 Africans, 8000 Spaniards, and 6000 cavalry when he arrived in the territories of the Insubrian Gauls. After remaining some time in the neighborhood of the Insubrians to recruit his army, he marched southward, and encountered P. Cornelius Scipio on the right bank of the river Ticinus. In the battle which ensued the Romans were defeated, and Scipio, with the remainder of the army, retreating along the left bank of the Po, crossed the river before Hannibal could overtake him and encamped near Placentia. He afterwards retreated more to the south, and intrenched himself strongly on the right bank of the Trebia, where he waited for the arrival of the army under the other consul, T. Sempronius. Sempronius had already crossed over into Sicily with the intention of sailing to Africa, when he was recalled to join his colleague. After the union of the two armies, Sempronius determined, against the advice of Scipio, to risk another battle. The skill and fortune of Hannibal again prevailed; the Romans were entirely defeated, and the troops who survived took refuge in the fortified cities. In consequence of these victories, the whole of Cisalpine Gaul fell into the hands of Hannibal; and the Gauls, who, on his first arrival, were prevented from joining him by the presence of Scipio's army in their country, now eagerly assisted him with both men and supplies.

In the following year, B.C. 217, the Romans made great preparations to oppose their formidable enemy. Two new armies were levied. One was posted at Arretium, under the command of the consul Flaminius, and the other at Ariminum, under the consul Servilius. Hannibal determined to attack Flaminius first. In his march southward through the swamps of the basin of the Arnus, his army suffered greatly, and he himself lost the sight of one eye. After resting his troops for a short time in the neighbourhood of Faesulae, he marched past Arretium, ravaging the country as he went, with the view of drawing on Flaminius to a battle. Flaminius, who appears to have been a rash, headstrong man, hastily followed Hannibal; and, being attacked in the basin of Lake Trasimenus, was completely defeated by the Carthaginians, who were posted on the mountains which encircle the valley. Three or four days afterwards, Hannibal cut off a detachment of Roman cavalry, amounting to 4000 men, which had been sent by Servilius to assist his colleague. Hannibal appears to have entertained hopes of overthrowing the Roman dominion, and to have expected that the other States of Italy would take up arms against Rome, in order to recover their independence. To win over the affections of the Italians, he dismissed without ransom all the prisoners whom he took in battle; and, to give them an opportunity of joining his army, he marched slowly along the eastern side of the peninsula, through Umbria and Picenum, into Apulia; but he did not meet with that co-operation which he appears to have expected. After the defeat of Flaminius, Q. Fabius Maximus was appointed dictator, and a defensive system of warfare was adopted by the Romans for the rest of the year.

In the following year, B.C. 216, the Romans resolved upon another battle. An army of 80,000

foot and 6000 horse was raised, which was commanded by the consuls L. Aemilius Paulus and C. Terentius Varro. The Carthaginian army now amounted to 40,000 foot and 10,000 horse. Both armies were encamped in the neighbourhood of Cannae in Apulia. In the battle which was fought near this place, the Romans were defeated with dreadful carnage, and with a loss which, as stated by Polybius, is quite incredible; the whole of the infantry engaged in battle, amounting to 70,000, was destroyed, with the exception of 3000 men, who escaped to the neighbouring cities, and also all the cavalry, with the exception of 300 belonging to the allies and 70 that escaped with Varro. A detachment of 10,000 foot, which had been sent to surprise the Carthaginian camp, was obliged to surrender as prisoners. The consul L. Aemilius and the two consuls of the former year, Servilius and Attilius, were also among the slain. Hannibal lost only 4000 Gauls, 1500 Africans and Spaniards, and 200 horse. This victory placed the whole of Lower Italy in the power of Hannibal, but it was not followed by such important results as might have been expected. Capua and most of the cities of Campania espoused his cause, but the majority of the Italian States continued true to Rome. The defensive system was now strictly adopted by the Romans, and Hannibal was unable to make any active exertions for the further conquest of Italy till he received a reenforcement of troops. He was in hopes of obtaining support from Philip of Macedon and from the Syracusans, with both of whom he formed an alliance; but the Romans found means to keep Philip employed in Greece, and Syracuse was besieged and taken by Marcellus, B.C. 214–12. In addition to this, Capua was taken by the Romans, B.C. 211. Hannibal was therefore obliged to depend upon the Carthaginians for help, and Hasdrubal was accordingly ordered to march from Spain to his assistance. Gnaeus Scipio, as already observed, had been left in Spain to oppose Hasdrubal. He was afterwards joined by P. Cornelius Scipio, and the war was carried on with various success for many years, till at length the Roman army was entirely defeated by Hasdrubal, B.C. 212. Both the Scipios fell in the battle. Hasdrubal was now preparing to join his brother, but was prevented by the arrival of the young P. Cornelius Scipio in Spain, B.C. 210, who quickly recovered what the Romans had lost. In B.C. 210 he took Carthago Nova; and it was not till B.C. 207, when the Carthaginians had lost almost all their dominions in Spain, that Hasdrubal set out to join his brother in Italy. He crossed the Alps without meeting with any opposition from the Gauls, and arrived at Placentia before the Romans were aware that he had entered Italy. After besieging this town without success, he continued his march southward; but, before he could effect a junction with Hannibal, he was attacked by the consuls C. Claudius Nero and M. Livius, on the banks of the Metaurus in Umbria; his army was cut to pieces, and he himself fell in the battle. This misfortune obliged Hannibal to act on the defensive; and from this time till his departure from Italy in B.C. 203, he was confined to Bruttium; but, by his superior military skill, he maintained his army in a hostile country without any assistance from his government at home. After effecting the conquest of Spain, Scipio passed over into Africa to carry the war into the enemy's country, B.C. 204. With the assistance of Masinissa, a Numidian prince, he gained two victories over the Carthaginians, who hastily recalled their great commander from Italy to defend his native State. Hannibal landed at Septis, and advanced upon Zama, five days' journey from Carthage towards the west. Here he was entirely defeated by Scipio, B.C. 202; 20,000 Carthaginians fell in the battle, and an equal number were taken prisoners. The Carthaginians were obliged to sue for peace, and thus ended the Second Punic War, B.C. 201. See ZAMA.

After the conclusion of the war, Hannibal vigorously applied himself to correct the abuses which existed in the Carthaginian government. He reduced the power of the perpetual judges (as Livy, xxiii. 46, calls them), and provided for the proper collection of the public revenue, which had been embezzled. He was supported by the people in these reforms; but he incurred the enmity of many powerful men, who represented to the Romans that he was endeavouring to persuade his countrymen to join Antiochus, king of Syria, in a war against them. A Roman embassy was consequently sent to Carthage to demand the punishment of Hannibal as a disturber of the public peace; and Hannibal, aware that he should not be able to resist his enemies supported by the Roman power, escaped from the city and sailed to Tyre. From Tyre he went to Ephesus to join Antiochus, B.C. 196, and contributed to fix him in his determination to make war against the Romans. If Hannibal's advice as to the conduct of the war had been followed, the result of the contest might have been different; but he was only employed in a subordinate command, and had no opportunity for the exertion of his great military talents. At the conclusion of this war Hannibal was obliged to seek refuge at the court of Prusias, king of Bithynia, where he remained about five years, and on one occasion obtained a victory over Eumenes, king of Pergamus. But the Romans appear to have been uneasy so long as their once formidable enemy was alive. An embassy was sent to demand him of Prusias, who, being afraid of offending the Romans, agreed to give him up. To avoid falling into the hands of his ungenerous enemies, Hannibal destroyed himself by poison at Nicomedia in Bithynia, B.C. 183, in the sixty-fifth year of his age.

The personal character of Hannibal is known to us only from the events of his public life, and even these have not been recorded by any historian of his own country; yet we cannot read the history of these campaigns, even in the narrative of his enemies, without admiring his great abilities and courage. Polybius remarks: "How wonderful is it that in the course of sixteen years, during which he maintained the war in Italy, he should never once dismiss his army from the field, and yet be able, like a good governor, to keep in subjection so great a multitude, and to confine them within the bounds of their duty, so that they never mutinied against him nor quarrelled among themselves. Though his army was composed of people of various countries—of Africans, Spaniards, Gauls, Carthaginians, Italians, and Greeks—men who had different laws, different customs, and different languages, and, in a word, nothing among them that was common—yet, so dexterous was his management that, notwithstanding

this great diversity, he forced all of them to acknowledge one authority, and to yield obedience to one command. And this, too, he accomplished in the midst of very varied fortune. How high as well as just an opinion must these things convey to us of his ability in war! It may be affirmed with confidence that if he had first tried his strength in the other parts of the world and had come last to attack the Romans, he could scarcely have failed in any part of his design" (Polyb. iii.; vii. 8, 9; xiv. 16; Livy, xxi. 39; Nepos, *Hannibal*).

See Hennebert, *Histoire d'Annibal* (Paris, 1870–78); Church, *Carthage* (London, 1886); Krumbholz, *D. Alpenübergang d. Hannibal* (Dresden, 1872); Maissiat, *Annibal en Gaule* (Paris, 1874); De Vandancourt, *Hist. des Campagnes d'Annibal en Italie*, 3 vols. (Milan, 1812); Perrin, *La Marche d'Annibal des Pyrénées au Pô*, with map (Paris, 1887); Dodge, *Hannibal* (New York, 1891); Mommsen, *Hist. of Rome*, vol. ii.; and the articles CANNAE; CARTHAGO; PUNIC WARS; SCIPIO.

Hannibaliānus. The son of Constantius Chlorus and Theodora, and hence half-brother to Constantine the Great, by whom he was put to death in A.D. 337 with the other members of the Flavian house whose existence was supposed to menace the interests of the new Augusti. See CONSTANTINUS.

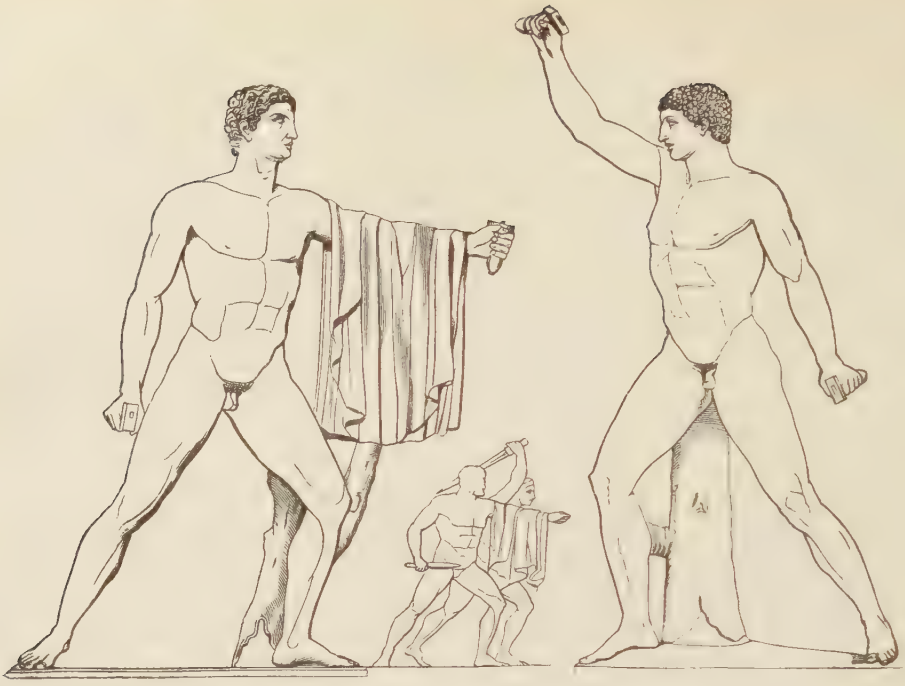
Hanno (Ἄννων, meaning in Punic "merciful" or "mild"). (1) A commander sent by the Carthaginians on a voyage of colonization and discovery along the Atlantic coast of Africa. This expedition is generally supposed to have taken place about B.C. 570. Gail, however, places it between B.C. 633 and 530. On his return to Carthage, Hanno deposited an account of his voyage in the temple of Moloch (Cronus). A translation of this account from the Punic into the Greek tongue has come down to us. The title of the Greek work is as follows: Ἄννωνος, Καρχηδονίων Βασιλέως, Περίπλους τῶν ὑπὲρ τὰς Ἡρακλέους Στήλας Λιβυκῶν τῆς Γῆς Μερῶν, ὃν καὶ Ἀνέθηκεν ἐν τῷ τοῦ Κρόνου Τεμένει. "The Voyage of Hanno, commander of the Carthaginians, round the parts of Libya beyond the Pillars of Heracles, which he deposited in the temple of Cronus." With regard to the extent of coast actually explored by this expedition, some remarks have been made in another article. (See AFRICA.) The *Periplus* was translated into English by Falconer (1797). See Mer, *Mémoire sur le Périple d'Hannon* (Paris, 1888); and Antichan, *Les Grands Voyages de Découvertes des Anciens* (Paris, 1891). (2) A Carthaginian commander, who aspired to the sovereignty of his native city. His design was discovered, and he thereupon retired to a fortress, with 20,000 armed slaves, but was taken and put to death with his son and all his relations (Just. xxi. 4). (3) A commander of the Carthaginian forces in Sicily along with Bomilcar (B.C. 310). He was defeated by Agathocles, although he had 45,000 men under his orders, and his opponent only about 14,000 (Just. xxii. 6). (4) A Carthaginian commander, defeated by the Romans near the Aegades Insulae (B.C. 242). On his return home he was put to death. (5) A leader of the faction at Carthage opposed to the Barca family. He voted for surrendering Hannibal to the foe, after the ruin of Saguntum, and also for refusing assistance to that commander after the battle of Cannae (Livy, xxi. 3, xxiii. 12). (6) A Carthaginian, who, wishing to pass for a god, trained up some birds, who were taught by him to repeat the words, "Hanno is a god" (Aelian, *Var. Hist.* xv. 32).

Haplography, also called **Lipography**. A common error found in classical MSS. by which a letter, syllable, or word which should be written twice is written only once. Thus *decus* often appears where the copyist intended to write *dedecus*, *dicit* where he meant *didicit*, etc. It is the opposite of Dittography (q. v.). See TEXTUAL CRITICISM.

Har. See HORUS.

Harēna. See ARENA.

Harlot. See MERETRIX.



Harma (Ἅρμα). A small place in Boeotia, near Tanagra (*Il.* ii. 499). It got its name traditionally from the chariot (ἅρμα) of Adrastus, which broke down at this place; or, according to others, from the fact that the chariot of Amphiaräus (q. v.) was here swallowed up by the earth (Pausan. ix. 19, § 4).

Harma (ἅρμα). See CURRUS.

Harmamaxa (ἁρμάμαξα). See CURRUS.

Harmătus (Ἁρματοῦς). A city and promontory on the coast of Aeolus in Asia Minor, on the north side of the Sinus Elaïticus.

Harmodius (Ἁρμόδιος). An Athenian who, together with ARISTOGĪTON (Ἀριστογείτων), became the cause of the overthrow of the Pisistratidae. The names of Harmodius and Aristogiton were immortalized by the gratitude of the Athenians. Aristogiton was a citizen of the middle class; Harmodius a youth distinguished by the comeliness of his person. They were both perhaps remotely allied to one another by blood, and were united by ties of the closest intimacy. The youth had received an outrage from Hipparchus, which roused both the resentment and the fears of his friend, lest Hipparchus should abuse his power to repeat the insult. But Hipparchus, whose pride had been wounded by the conduct of Harmodius, contented himself with an affront aimed at the honour of his family. By his orders, the sister of Harmodius was invited to take part in a procession, as bearer of one of the sacred vessels. When, however, she presented herself in her festal dress, she was publicly rejected, and dismissed as unworthy of the honour. This insult stung Harmodius to the quick, and kindled the indignation of Aristogiton. They resolved to engage in the desperate enterprise of overthrowing the ruling dynasty. They communicated their plan to a few friends, who promised their assistance; but they hoped that, as soon as the first blow should be struck, they would be joined by numbers, who would joyfully seize the opportunity of recovering their freedom. The conspirators fixed on the festival of the Panathenaea as the most convenient season for effecting their purpose. This festival was celebrated with a procession, in which the citizens marched armed with spears and shields, and was the only occasion on which, in time of peace, they could assemble under arms without exciting suspicion. It was agreed that Harmodius and Aristogiton should give the signal by stabbing Hippias, while their friends kept off his guards, and that they should trust to the general disposition in favour of liberty for the further success of their undertaking. When the day came, the conspirators armed themselves with daggers,

Harmodius and Aristogiton. (Copies in the Naples Museum.)

which they concealed in the myrtle-boughs that were carried on this occasion. But while Hippias, surrounded by his guards, was in the Ceramicus, directing the order of the procession, one of the conspirators was observed to go up to him, for he was easy of access to all, and to enter into familiar conversation with him. The two friends, on seeing this, concluded that they were betrayed, and that they had no hope left but of revenge. They instantly rushed into the city, and, meeting Hipparchus, killed him before his guards could come up to his assistance. These, however, arrived in time to avenge his death on Harmodius. Aristogiton escaped for the moment through the crowd, but was afterwards taken. When the news was brought to Hippias, instead of proceeding to the scene of his brother's murder, he advanced with a composed countenance towards the armed procession, which was yet ignorant of the event, and, as if he had some grave discourse to address to them, desired them to lay aside their weapons, and meet him at an appointed place. He then ordered his guards to seize the arms, and to search every one for those which he might have concealed upon his person. All who were found with daggers were arrested, together with those whom, on any other grounds, he suspected of disaffection. Aristogiton was put to death, according to some authors, after torture had been applied to wring from him the names of his accomplices. It is said that he avenged himself by accusing the truest friends of Hippias. The mistress of Aristogiton, one Leaena (q. v.), whose only crime was to have been the object of his affection, underwent the like treatment. She was afterwards celebrated for the constancy with which she endured the most cruel torments (Herod. v. 55; vii. 123; Thuc. i. 20; vi. 54 foll.). These events took place in B.C. 514.

After the expulsion of Hippias the tyrannicides received almost heroic honours. Statues were erected to them at the public expense, and their names never ceased to be repeated with affectionate admiration in the popular songs of Athens, which assigned them a place in the Islands of the Blessed, by the side of Achilles and Tydides; and when an orator wished to suggest the idea of the highest merit and of the noblest services to the cause of liberty, he never failed to remind his hearers of Harmodius and Aristogiton. No slave was ever called by their names. Plutarch has preserved a reply of Antipho, the orator, to Dionysius the elder, of Syracuse. The latter had asked the question, which was the finest kind of bronze? "That," replied Antipho, "of which the statues of Harmodius and Aristogiton were made." He lost his life in consequence. Their statues, made by Antenor and set up in the Agora, were carried away by Xerxes when he took Athens in B.C. 480, but were restored by Alexander the Great.

Harmonia (Ἁρμονία). The daughter of Ares and Aphrodité, and wife of Cadmus. (See CADMUS.) At her marriage all the gods were present on the Acropolis of Thebes, and offered her their wedding-gifts. Cadmus gave her a costly garment and a necklace, the workmanship of Hephaestus, which he had received from Aphrodité, or (according to another account) from Europa. These gifts, so the story runs, had everywhere the fatal property of stirring up strife and bloodshed. It was with them that Polynices corrupted Eriphylé, who drove her husband Amphiaraüs to his destruction in the Theban War, and was murdered in revenge by her son Alcmaeon. It was for their sake that Alcmaeon and Phegeus and his sons were slain. (See ALCMAEON; PHEGEUS.) The jewels were at length deposited by the sons of Alcmaeon in the sanctuary of Delphi. According to a later story, Phaÿllus, a leader of the Phocians in the war against Philip

of Macedon, carried off, among other treasures, the necklace of Harmonia, and gave it to his mistress, the wife of Ariston of Oeta; but her youngest son set fire to the house in a fit of madness, and the mother, with the necklace, was consumed.

Harmostae (*ἁρμοσταί*, "regulators"). A board consisting of twenty members, at Sparta; probably a kind of higher police, whose duty it was to maintain a supervision over the districts inhabited by the Perioeci. After the Peloponnesian War the name was given to the officials who were sent into the conquered cities to command the garrisons, and to see that the oligarchical constitution was maintained.

Harpa. A harp, with a curved back in the form of a sickle (*ἅρπη, falx*), like the annexed example, from an Egyptian painting. (See Venant. *Carm.* vii. 8. 63, in which passage it is expressly distinguished from the lyre, and as an instrument used by foreigners.)

Harpa. (Egyptian.)

Harpagĭa (*τὰ Ἁρπαγεῖα*), or **Harpagĭum** (*Ἁρπάγιον*). A small town in Mysia, between Cyzicus and Priapus, the scene of the rape of Ganymedes, according to some legends.

Harpăgo and **Harpăga** (*ἁρπάγη*). A hook or grappling-iron used in domestic economy for taking meats from the caldron, drawing up pails from wells, etc. In war, hooks of huge size (*ferreae manus*) were used by the Romans in grappling with hostile ships (Florus, ii. 2), and were said to have been invented by Pericles (Plin. *H. N.* vii. § 57).

Bronze Harpago or Flesh-hook. (British Museum.)

Harpăgus (*Ἅρπαγος*). (1) A noble Median, who is said to have preserved the infant Cyrus. He was afterwards one of the generals of Cyrus, and conquered the Greek cities of Asia Minor. See Cyrus. (2) A Persian general of Darius I. who made Histiaeus prisoner. See Histiaeus.

Harpălus (*Ἅρπαλος*). (1) A Macedonian, appointed by Alexander the Great superintendent of the royal treasury, with the administration of the satrapy of Babylon. Having embezzled large sums of money, he crossed over to Greece in B.C. 324, and employed his treasures in gaining over the leading men at Athens to support him against Alexander and his vicegerent, Antipater. He is said to have corrupted Demosthenes himself (Arr. *An.* iii. 6, 19), as well as Demades and Charicles, the son-in-law of Phocion. He failed, however, in his general object, for Antipater, having demanded his surrender from the Athenians, it was resolved to place him in confinement until the Macedonians should send for him. He succeeded in making his escape from prison, and fled to Crete, where he was assassinated soon after his arrival by Thimbron, one of his own officers. (2) A Greek astronomer, who introduced some improvements into the cycle of Cleostratus. Harpalus lived before Meton (q. v.).

Harpalўce (*Ἁρπαλύκη*). (1) Daughter of Harpalycus, king in Thrace, brought up by her father as a warrior, on the milk of cows and mares. After his death she became a robber in the forest, being able to outrun horses. She was at last snared and killed by shepherds (Hyg. *Fab.* 193). (2) The daughter of Clymenus and Epicasté. She was seduced by her own father, upon whom she afterwards revenged herself by killing her younger brother and serving him up as food on the father's table. By the gods she was changed into a bird.

Harpăsa (*Ἅρπασα*). A city of Caria on the river Harpasus.

Harpastum (*ἁρπαστόν*). A ball. See Pila.

Harpăsus (*Ἅρπασος*). (1) A river of Caria, flowing north into the Maeander. (2) A river of Armenia Maior, flowing south into the Araxes.

Harpīna (*Ἅρπινα*) or **Harpinna** (*Ἅρπιννα*). A town in Pisatis (Elis) near Olympia, named after a daughter of Asopus.

Harpocrătes (*Ἁρποκράτης*). See Horus.

Harpocration (*Ἁρποκρατίων*), Valerius. A Greek scholar of Alexandria, who lived probably in the second century A.D. He was the author of a lexicon to the ten great Attic orators (*Περὶ τῶν Λέξεων τῶν Δέκα Ῥητόρων*, or briefly *Λεξικὸν τῶν Δέκα Ῥητόρων*), which has survived, though in a very fragmentary form. It contains, in alphabetical order, notes on the matters and persons mentioned by the orators, with explanations of the technical expressions; thus forming a rich store of valuable information on matters of history, literature, and the constitution and judicial system of Athens. Suidas and the author of the *Etymologicum Magnum*, borrowed largely from Harpocration. Modern editions are those of Bekker (Berlin, 1833), and Dindorf (Oxford, 1853). See Boysen, *De Harpocrat. Fontibus* (Kiel, 1876).

Harpўiae (*Ἅρπυιαι*). The Harpies were originally the goddesses of the devastating storm, symbolizing the sudden and total disappearance of men. Homer only names one of them (*Il.* xvi. 150), Podargé, or "the swift-footed," who, in the shape of a mare, bore to Zephyrus the horses of Achilles. In Hesiod (*Theog.* 267) the Harpies appear as winged goddesses with beautiful hair, daughters of Thaumas and Electra, sisters of Iris, with the names of Aëllo and Ocypeté. In the later story their number increased, their names being Aëllo-

Harpy. (Painted Vase from Tel-Defenneh of B.C. 650.)

pus, Ocythoë, Nicothoë, and Celaeno. They are there represented as half-birds, half-maidens, and as spirits of mischief. In the story of the Argonauts, for instance, they torment Phineus by carrying off and polluting his food till they are driven off by Calaïs and Zetes, and either killed or banished to the island of the Strophades, where they are bound by an oath to remain. See Verg. *Aen.* iii. 211–244.

Harpy Monument. A remarkable work of Lycian art discovered in 1838 on the acropolis of Xanthus in Lycia by Sir C. Fellowes, and now deposited in the British Museum. It dates from about B.C. 500, and is a rectangular tower made of a single block of limestone with a flat roof directly

Harpy. (From the Harpy Monument.)

under which is a frieze of white marble, twenty-one feet from the ground, representing (probably) the Harpies carrying off the daughters of Pandareus (Hom. *Od.* xx. 78 foll.). For a fuller description and criticism, see Conze in the *Archäolog. Zeitung* for 1869, p. 80, and Perry, *Greek and Roman Sculpture* (1882), pp. 111–117.

Harrow. See CRATES; IRPEX.

Harūdes or **Charūdes.** A people in the army of Ariovistus (q. v.) at the time of his defeat by Caesar (B.C. 58). They are believed to have come from the Cimbric Chersonese (Jutland).

Harundo. See CALAMUS.

Harūspex. An Etruscan soothsayer, whose function it was to interpret the divine will from the entrails of sacrificial victims, to propitiate the anger of the gods as indicated by lightning or other marvels, and to interpret their significance according to Etruscan formulae. This art had long been practised in Etruria, and was referred to a divine origin. In the course of the republican era it found a home in the private and public life of the Romans, winning its way as the native priesthoods, intrusted with similar functions, lost in repute. From the time of the kings to the end of the Republic, haruspices were expressly summoned from Etruria by decrees of the Senate on the occurrence of prodigies which were not provided for in the Pontifical and Sibylline Books. Their business was to interpret the signs, to ascertain what deity demanded an expiation, and to indicate the nature of the necessary offering.

It then lay with the priests of the Roman people to carry out their instructions. Their knowledge of the signs given by lightning was only applied in republican Rome for the purpose of averting the omen portended by the flash. (See PUTEAL.) But under the Empire it was also used for consulting the lightning, either keeping it off or drawing it down. From about the time of the Punic Wars, haruspices began to settle in Rome, and were employed both by private individuals and state officials to ascertain the divine will by examination of the liver, gall, heart, lungs, and caul of sacrificial victims. They were especially consulted by generals when going to war. Their science was generally held in high esteem, but the class of haruspices who took pay for their services did not enjoy so good a reputation. Claudius seems to have been the first emperor who instituted a regular *collegium* of Roman haruspices, consisting of sixty members of equestrian rank, and presided over by a *haruspex maximus*, for the regular service of the State. This *collegium* continued to exist till the beginning of the fifth century A.D. See Fraudsen, *Haruspices* (Berlin, 1823); Bouché-Leclercq, *Histoire de la Divination dans l'Antiquité*, four vols. (Paris, 1879–82); and the articles AUGUR; DIVINATIO.

Hasdrŭbal (Ἀσδρούβας, meaning in Punic "(whose) help (is) Baal"). (1) A Carthaginian general, son of Mago, who succeeded to the titles and glory of his father. It was under his conduct that the Carthaginians carried the war into Sardinia. He received in that island a wound which caused his death, B.C. 420 (Just. xix. 1). (2) Son of the preceding, made war upon the Numidians, and freed Carthage from the tribute she had been compelled to pay for being permitted to establish herself on the coast of Africa (Just. xix. 2). (3) A son of Hanno, sent into Sicily at the head of a powerful army to oppose the Romans. He was defeated by Metellus, the Roman proconsul, B.C. 251. Hasdrubal fled to Lilybaeum, but was condemned to death by his countrymen at home. (4) Son-in-law of Hamilcar, distinguished himself under the orders of that general in the war with Numidia. On the death of his father-in-law he was appointed commander, and carried on military operations in Spain during eight years. He reduced the greater part of that country, and governed it with wisdom and prudence. He founded Carthago Nova (Carthagena). The Romans, wishing to put a stop to his successes, made a treaty with Carthage, by which the latter bound herself not to carry her arms beyond the Iberus. Hasdrubal faithfully observed the terms of this compact. He was slain, B.C. 220, by a slave whose master he had put to death (Livy, xxi. 2; Polyb. ii. 1, 13, iii. 12, x. 10). (5) Son of Hamilcar, brought from Spain large reinforcements for his brother Hannibal. He crossed the barrier of the Alps, and arrived in Italy, but the consuls Livius Salinator and Claudius Nero, having intercepted the letters which he had written to Hannibal, informing him of his arrival, attacked him near the river Metaurus, and gave him a complete defeat, B.C. 208. Hasdrubal fell in the battle, with 56,000 of his troops. The Romans lost about 8000 men, and made 5400 prisoners. The head of Hasdrubal

was severed from his body, and was thrown a few days afterwards into the camp of Hannibal. Before attempting to enter Italy by land, Hasdrubal attempted to cross the sea from Spain, but was defeated by the Roman governor of Sardinia (Livy, xxi. 23; Polyb. xi. 1). (6) A Carthaginian commander, son of Giscon, who commanded the forces of his country in Spain during the time of Hannibal. Being seconded by Syphax, he afterwards carried on the war against the Romans in Africa, but was defeated by Scipio. He died B.C. 206 (Livy, xxiv. 41, xxix. 35, xxx. 5). (7) A Carthaginian, surnamed "the Kid" (*haedus*), an opponent of the Barca faction. He advised his countrymen to make peace with the Romans, and censured the ironical laugh of Hannibal in the Carthaginian Senate, after the peace was concluded. (8) A Carthaginian general, who, during the siege of Carthage by the Romans, commanded an army of 20,000 men without the walls, with which he kept constantly harassing the besiegers. Being compelled at last to take refuge with his forces within the city, he took command of the place, and for a long time bravely withstood the attacks of the Romans. After the capture of the city, he retired with the Roman deserters, who had no quarter to expect, into the temple of Aesculapius in the citadel, resolved to bury himself under its ruins, taking with him, at the same time, his wife and two young sons. At length, however, having secretly left the temple, he threw himself at the feet of Scipio, and supplicated for life. Scipio granted his request, and showed him as a suppliant to the deserters in the temple. These desperate men, after venting against him a torrent of reproaches, set fire to the temple, and perished amid the flames. His wife, when the fire was kindling, displayed herself on the walls of the building in the richest attire she could procure, and, having upbraided her husband for his cowardice, slew her two sons, and threw herself, with them, into the burning pile (Appian, *Bell. Pun.* 131).

Hasta (*ἔγκος, παλτόν*). The lance. In the earlier history of the Roman army the first four classes under the Servian constitution, and in later times, the *triarii*, or hindmost rank, were armed with this weapon. (See LEGIO.) At length, however, the *pilum* was introduced for the whole infantry of the legion. (See PILUM.) To deprive a soldier of his *hasta* was equivalent to degrading him to the rank of the *velites*, who were armed with javelins. A blunt hasta with a button at the end (*hasta pura*) continued to be used in later times as a military decoration. The spear frequently had a leathern thong tied to the middle of the shaft, which was called *ἀγκύλη* by the Greeks, and *amentum* or *ammentum* by the Romans, and which was of assistance in throwing the spear. The javelin to which the *ἀγκύλη* was attached was called *μεσάγκυλον* (Poll. i. 136; Xen. *Anab.* iv. 2, § 28; Verg. *Aen.* ix. 665). The preceding figure, taken from Sir W. Hamilton's *Etruscan Vases* (iii. pl. 33), represents the *amentum* attached to the spear at the centre of gravity, a little above the middle. The *amentum* added to the effect of throwing the lance by giving it rotation, and hence a greater degree of steadiness and directness in its course.

Spear with Amentum. (From an Etruscan Vase.)

The hasta was employed in many symbolical ceremonies. The *fetialis* (q. v.), for instance, hurled a blood-stained hasta into the enemy's territory as a token of declaration of war, and if a general devoted his life for his army he stood on a hasta while repeating the necessary formula.

Greek Warrior with Spears. (Hope.)

The hasta was also set up as a symbol of legal ownership when the censor farmed out the taxes, when state property — booty, for instance — was sold; at private auctions (hence called *subhastationes*), where it was the ancient equivalent of our red flag, and at the sittings of the court of the *centumviri*, which had to decide questions of property.

Hastāti. See EXERCITUS.

Hat. See CAUSIA; PETASUS; PILLEUS.

Hatchet. See ASCIA; SECURIS.

Hatria ('Ατρία) and **Adria** ('Αδρία). (1) A city of Cisalpine Gaul between the mouths of the Padus and the Athesis, and still called Adria. It was of Greek or Etruscan origin. (2) A city in Picenum about five miles from the Adriatic Sea. It is now called Atri. It was one of the eighteen Latin colonies which remained faithful to Rome at the time of Hannibal's invasion (Polyb. iii. 88).

Haupt, MORITZ. A German classical scholar,

born at Zittau in Saxony in 1808, and educated at the University of Leipzig under G. Hermann. Later he lectured as a *privat-docent* at Leipzig, being made extraordinary professor in 1841 and ordinary professor in 1843. In 1848 he was dismissed from his chair as having shared in the revolutionary movements of that year, but in 1853 he was called to Berlin to succeed his friend Lachmann. He died in 1874.

Besides a number of works on Germanic literature and philology, Haupt published *Quaestiones Catullianae* (1837); a monograph on the *Epicedion Drusi* (1849); an edition of the *Halieuticon* and *Cynegetica* of Grattius and Nemesianus (1838); additions to Lachmann's observations on the *Iliad* (1847); a recension of Hermann's Bion and Moschus (1849), and of his Aeschylus (1852); an edition of Horace (1851); a school edition of the *Metamorphoses* of Ovid (1853); a monograph on Calpurnius and Nemesianus (1854); a small text of Catullus, Tibullus, and Propertius (1853); an edition of the *Germania* of Tacitus (1855); of Vergil (1858). His *Opuscula* were collected and edited by Wilamowitz-Möllendorff (1876). See an appreciative paper by Prof. Nettleship in his *Lectures and Essays* (Oxford, 1885).

Hauton Timorumĕnos. See TERENTIUS.

Hearse. See FUNUS; PLAUSTRUM.

Hearth. See FOCUS; VESTA.

Heating Arrangements. See DOMUS; FOCUS.

Hebé (Ἥβη). Daughter of Zeus and Heré, and goddess of eternal youth. She was represented as the handmaiden of the gods, for whom she pours out their nectar, and the consort of Heracles after his apotheosis. She was worshipped with Heracles in Sicyon and Phlius, especially under the name Ganymedé or Dia. She was represented as freeing men from chains and bonds, and her rites were celebrated with unrestrained merriment. The Romans identified Hebé with Iuventas, the personification of youthful manhood. As representing the eternal youth of the Roman State, Iuventas had a chapel on the Capitol in the front court of the Temple of Minerva, and in later times a temple of her own in the city (Livy, v. 54). It was to Iupiter and Iuventas that boys offered prayer on the Capitol when they put on the *toga virilis*, putting a piece of money into their treasury. Two fine poems in English are suggested by the myth of Hebé—one the *Fall of Hebé*, by Thomas Moore, and the other, *Hebé*, by James Russell Lowell.

Hebraei. See IUDAEI.

Hebron (Χεβρών and Ἑβρών). A city in the south of Iudaea, the first capital of the kingdom of David, who reigned there for seven and a half years as king of Judah only.

Hebrus (Ἕβρος). The modern Maritza; the principal river in Thrace, rising in the mountains of Scomius and Rhodopé, and falling into the Aegaean Sea near Aenos, after forming by another branch an estuary called Stentoris Lacus. The Hebrus was celebrated in Greek legends. On its banks Orpheus was torn to pieces by the Thracian women; and it is frequently mentioned in connection with the worship of Dionysus.

Hebūdae. See EBUDAE.

Hecaërgé (Ἑκαέργη). (1) A Hyperborean maiden, daughter of Boreas. She was one of those who introduced the worship of Artemis into Delos. (2) An epithet often applied to Artemis as being one who effects her works from a distance, which is the meaning of the word. The masculine form (ἑκάεργος) is in like manner applied to Apollo.

Hecălé (Ἑκάλη). A poor old woman who hospitably received Theseus when he had gone out to hunt the Marathonian bull, and offered to Zeus a sacrifice for the safe return of the hero. As she died before his return, Theseus decreed that the people of the Attic tetrapolis should offer a sacrifice to her and to Zeus Hecalesius. See THESEUS.

Hecalesia (Ἑκαλήσιον ἱερόν). A festival at Athens in honour of Zeus Hecalesius. It was instituted by Theseus, in commemoration of the kindness of Hecalé towards him when he was going on his adventure against the Marathonian bull.

Hecataeus (Ἑκαταῖος). (1) A Greek chronicler, born of a noble family at Miletus, about B.C. 550. In his youth he travelled widely in Europe and Asia, as well as in Egypt. At the time of the Ionian revolt he was in his native city, and gave his countrymen the wisest counsels, but in vain. After the suppression of the rising, he succeeded by his tact and management in obtaining some alleviation of the hard measures adopted by the Persians. He died about 476. The ancient critics assigned him a high place among the Greek historians who preceded Herodotus, though pronouncing him inferior to the latter. His two works, of which only fragments remain, were: (*a*) A description of the earth (Περίοδος Γῆς or Περιήγησις), which was much consulted by Herodotus, and was apparently used to correct the chart of Anaximander. It was in two parts, one relating to Europe and the other to Asia, Egypt, and Libya. (*b*) A treatise on Greek fables, entitled Γενεαλογίαι, or *Genealogies*, and also Ἱστορίαι, in four books, on the poetical traditions of the Greeks. The fragments of Hecataeus have been edited by Klausen (Berlin, 1831) and C. and Th. Müller (Paris, 1841). See Schäffer, *Hecataeus* (1885); and the article LOGOGRAPHI. (2) An Abderite, a contemporary of Alexander the Great. He was a philosopher, critic, and grammarian, and probably was the author of a history of the Jews cited often by Iosephus.

Hecătē (Ἑκάτη). A Greek goddess, though perhaps of non-Hellenic origin. She was unknown to Homer, but in Hesiod she was the only daughter of the Titan Perses and of Asteria, the sister of Leto. She stood high in the regard of Zeus, from whom she had received a share in the heaven, earth, and ocean. She was invoked at all sacrifices, for she could give or withhold her blessing in daily life, in war, in contests on the sea, in the hunting-field, in the education of children, and in the tending of cattle. Thus she appeared as a personification of the divine power, and was the instrument through which the gods effected their will, though themselves far away. In later times she was confused with Persephoné, the queen of the lower world, or associated with her. Sometimes she was regarded as the goddess of the moon (Selené) or as Artemis, sometimes she was identified with foreign deities of the same kind. Being conceived of as a goddess of night and of the lower world, she was, as time

went on, transformed into a deity of ghosts and magic. She was represented as haunting crossways and graves, accompanied by the dogs of the Styx, with the spirits of the dead and troops of spectral forms in her train. She lent powerful

Hecaté. (Causei, *Museum Romanum*, vol. i. tav. 21.)

aid to all magical incantations and witches' work. All enchanters and enchantresses were her disciples and *protégés;* Medea, in particular, was regarded as her votary. She was worshipped in private and in public in many places—for instance, in Samothrace, Thessaly, Lemnos, Athens, and Aegina—and had a celebrated temple near Stratonicea in Caria. Her images were set up in the front of houses and by the road-side, with altars in front of them and a roof above them. On the last day of the month, which was sacred to her, offerings were made to her in the crossways of eggs, fish, and onions. The victims sacrificed to her were young dogs, black ewes, and honey.

In works of art she is usually portrayed in three forms, represented by three statues standing back to back. Each form has its special attributes—torches, keys, daggers, snakes, and dogs. In the Gigantomachia of Pergamum she appears with a different weapon in her three right hands—a torch, a sword, and a lance.

Hecatombaea (Ἑκατόμβαια). (1) A festival celebrated in honour of Heré by the Argives and people of Aegina. It received its name from *ἑκατόν* and *βοῦς*, being a sacrifice of a hundred oxen, which were always offered to the goddess, and the flesh distributed among the poorest citizens. There were also public games, first instituted by Archinus, a king of Argos, in which the prize was a shield of brass with a crown of myrtle. (2) An anniversary sacrifice called by this name in Laconia, and offered for the preservation of the hundred towns which once flourished in that country.

Hecatombaeon (Ἑκατομβαιών). The first month in the Attic year, corresponding with the last half of July and the first of August. The Spartans called it Ἑκατομβεύς (Arist. *H. A.* v. 11, 2.) See CALENDARIUM.

Hecatombé (*ἑκατόμβη*). A word whose original meaning was a sacrifice of a hundred oxen; but in early times it was applied generally to any great sacrifice, without any idea either of oxen or definite number. Mr. A. Platt in the (Eng.) *Journal of Philology* for 1893, makes *ἑκατόμβη* to mean originally one ox in each hundred. See SACRIFICIUM.

Hecatomnos (Ἑκατόμνως). A king of Caria, the father of Mausolus and Artemisia. See ARTEMISIA; MAUSOLUS.

Hecatompĕdon. See PES; TEMPLUM.

Hecatomphonia (*τὰ ἑκατομφόνια*, from *ἑκατόν*, "a hundred," and *φονεύω*, "to kill"). A solemn sacrifice offered by the Messenians to Zeus, when any of them had killed a hundred enemies. Aristomenes is said to have offered up this sacrifice three times in the course of the Messenian wars against Sparta (Pausan. iv. 19).

Hecatompŏlis (Ἑκατόμπολις). An epithet given to Crete, from the hundred cities which it once contained (Hom. *Il.* ii. 649). The same epithet was also applied to Laconia. The greater part of these, however, were probably, like the demes of Attica, not larger than villages.

Hecatompўlos (*ἑκατόμπυλος*, "Hundred-gated"). (1) An epithet often applied to Thebes in Egypt. See THEBAE. (2) A city of Parthia near the centre of the country and once the capital.

Hecăton (Ἑκάτων). A Stoic philosopher of Rhodes who studied under Panaetius and wrote numerous works now lost.

Hecatoncheires (Ἑκατόγχειρες, "the hundred-handed ones"). In Hesiod these are three giants, each with fifty arms and a hundred hands, sons of Uranus and Gaea. Their names are Briareōs, Cottus, and Gyes. Owing to their hostile attitude to him, their father kept them imprisoned in the bowels of the earth; but on the advice of Gaea, the gods of Olympus summoned them from their prison to lend assistance against the Titans, and, after their victory, set them to watch the Titans, who had been thrown into Tartarus. Homer mentions Briareōs, called by men Aegaeon, as the son of Poseidon, and mightier than his father (*Il.* i.).

Hecatonnēsi (Ἑκατόννησοι). The Hundred Islands; the name of a group of small islands between Lesbos and the coast of Aeolis (Herod. i. 151).

Hector (Ἕκτωρ). The son of Priam and Hecuba and the most valiant of all the Trojan chiefs that fought against the Greeks. He married Andromaché, daughter of Eëtion, by whom he became the father of Astyanax. Hector was appointed commander of all the Trojan forces, and for a long period proved the bulwark of his native city. He was not only the bravest and most powerful, but also the most amiable, of his countrymen, and particularly distinguished himself in his conflicts with Aiax, Diomedes, and many other of the most formidable leaders. The fates had decreed that Troy should never be destroyed as long as Hector lived. The Greeks, therefore, after the death of Patroclus, who had fallen by Hector's hand, made a powerful effort under the command of Achilles; and, by the intervention of Athené, who assumed the form of Deïphobus, and urged Hector to encounter the Grecian chief, contrary to the remonstrances of Priam and Hecuba, their effort was crowned with success. Hector fell, and his death accomplished the overthrow of his father's kingdom. The dead body of the Trojan warrior was attached to the chariot of Achilles, and

insultingly dragged away to the Grecian fleet; and thrice every day, for the space of twelve days, was it also dragged by the victor around the tomb of Patroclus (*Il.* xxii. 399 foll.; xxiv. 14 foll.). During all this time the corpse of Hector was shielded from dogs and birds, and preserved from corruption, by the united care of Aphrodité and Apollo. The body was at last ransomed by Priam, who went in person for this purpose to the tent of Achilles. Splendid obsequies were rendered to the deceased, and with these the action of the *Iliad* terminates. Vergil makes Achilles to have dragged the corpse of Hector thrice round the walls of Troy (*Aen.* i. 483). Homer, however, is silent on this point. According to the latter, Hector fled thrice round the city-walls before engaging with Achilles; and, after he was slain, his body was immediately attached to the car of the victor, and dragged away as stated above. The incident, therefore, alluded to by Vergil must have been borrowed from one of the Cyclic poets, or perhaps some tragic writer.

Hecŭba (Ἑκάβη). The daughter of Dymas, a Phrygian prince (or, according to others, of Cisseus, a Thracian king, while others, again, made her the daughter of the river-god Sangarius and Metopé). She was the second wife of Priam, king of Troy (Apollod. iii. 12, 6), and bore him nineteen children (*Il.* xxiv. 496), of whom the chief were Hector, Paris, Deïphobus, Helenus, Troïlus, Polites, Polydorus, Cassandra, Creüsa, and Polyxena. When she was pregnant with Paris (q. v.), she dreamed that she brought into the world a burning torch, which reduced her husband's palace and all Troy to ashes. On her telling this dream to Priam, he sent for his son Aesacus, by a former wife Arisbé, the daughter of Merops, who had been reared and taught to interpret dreams by his grandfather. Aesacus declared that the child would be the ruin of his country, and recommended him to expose it. As soon as born, the babe was given to a servant to be left on Ida to perish; but the attempt proved a fruitless one, and the prediction of the soothsayer was fulfilled. After the ruin of Troy and the death of Priam, Hecuba fell to the lot of Odysseus, and embarked with the conquerors for Greece. The fleet, however, was detained off the coast of the Thracian Chersonese by the appearance of the spectre of Achilles on the summit of his tomb, demanding to be honoured with a new offering. Polyxena was, in consequence, torn from Hecuba and immolated by Neoptolemus on the grave of his father. The grief of the mother was increased by the sight of the dead body of her son Polydorus, washed upon the shore, who had been cruelly slain by Polymestor, king of Thrace, to whose care Priam had consigned him. Bent on revenge, Hecuba managed, by artifice, to get Polymestor and his two children in her power, and, by the aid of her fellow-captives, she effected the murder of his sons, and then put out the eyes of the father. This act drew upon her the vengeance of the Thracians: they assailed her with darts and showers of stones; and, in the act of biting a stone with impotent rage, she was suddenly metamorphosed into a dog (Ovid, *Met.* xiii. 429 foll.). Hyginus says that she threw herself into the sea (*Fab.* 111), while Servius states that she was changed into a dog when on the point of casting herself into the waters (*Ad Aen.* iii. 6). The story of Hecuba forms the subject of a play by Euripides (q. v.).

Hecўra (Ἑκυρά). "The Mother-in-Law." A comedy of Terence, based upon a Greek original of authorship now unknown. It has little or no plot, and seems to be an attempt at a new style of dramatic writing. Hence it was unpopular with Roman audiences, and did not get a successful hearing until B.C. 160, on its third production, five years after it was first put on the stage. Separate editions by Spengel (Berlin, 1879), Sloman (London, 1886), and Benoist and Psichari, 2d ed. (Paris, 1887). See TERENTIUS.

Hedna (ἕδνα). See MATRIMONIUM.

Hegēmon (Ἡγήμων). A native of Thasos and author of satyric dramas in the age of Alcibiades who was his friend, and managed to get him freed from an accusation that had been brought against him. A parody by this poet, entitled Γιγαντομαχία, was being presented when the news arrived of the defeat of Nicias in Sicily. This Hegemon was called Phacé (φακῆ, "lentil"), conferred on him as a nickname. He wrote also a comedy entitled Φίλιννα.

Hegemŏné (Ἡγεμόνη). See CHARITES.

Hegemonia (ἡγεμονία, "leadership"). A Greek name for the supremacy of States, and with it the direction, more or less absolute, of the business of the confederacy. In the language of Athenian law ἡγεμονία meant the presidency in the courts, which belonged in different cases to different officials. Their business was to receive the charge, make the arrangements for the trial, and preside while it was going on.

Hegesiănax (Ἡγησιάναξ). A Greek writer, a native of Alexandria-Troas, and contemporary with Antiochus the Great, by whom he was patronized. He was the author of an historical work and indulged also in poetic composition, having written a poem entitled τὰ Τρωϊκά, "Trojan Affairs." Some ascribed to him the Cyprian Epic. He was likewise a writer of tragedies; and, according to Athenaeus, from whom these particulars are obtained, was also a tragic actor, having improved and strengthened his voice, which was naturally weak, by abstaining for eighteen years from eating figs.

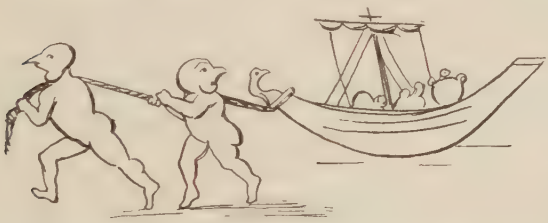
Hegesias (Ἡγησίας). (1) A Greek orator, born in Magnesia on Mount Sipylus in the first half of the third century B.C. He was the founder of what was termed the Asiatic style of oratory. See RHETORICA. (2) A famous Cyrenaic philosopher who flourished about B.C. 340, and known as Πεισιθάνατος from his arguments in favor of suicide. See CYRENAICI. (3) A statuary who is thought to have wrought the figures of the Dioscuri on the Capitol at Rome. He is probably the same as Hegias, supposed by some to be another person.

Hegesīnus (Ἡγησίνους) of Pergamum. The successor of Evander and the immediate predecessor of Carneades in the chair of the Academy, flourished about B.C. 185.

Hegesippus (Ἡγήσιππος). An Athenian orator and a contemporary of Demosthenes, to whose political party he belonged. The grammarians ascribe to him the oration on Halonesus, which has come down to us under the name of Demosthenes.

Hegetoria. See PLYNTERIA.

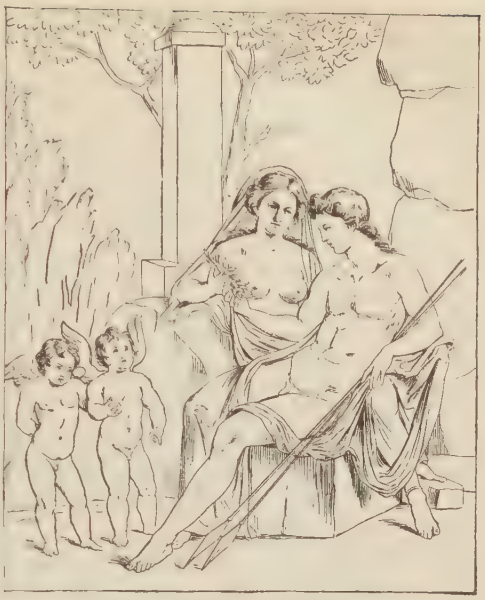
Hegias. See HEGESIAS.



Heinsius. (1) DANIEL (DANIEL HEINS), a distinguished scholar of the so-called "Dutch Renaissance." He was born at Ghent, June 9th, 1580. In 1594 he entered the University of Francken to perfect himself in Greek, having already won notice by his scholarship. Soon after he settled at Leyden, where he spent the remainder of his life, associated with such men as Joseph Scaliger, Douza, and Paulus Merula. In 1602 he was made Professor of Latin at the University, in 1605 Professor of Greek, and in 1607 University Librarian. He died at the Hague, February 25th, 1655.

His works include editions of Silius Italicus (1600), Hesiod (1603), Theocritus, Bion, and Moschus (1604), Horace (1610), Aristotle and Seneca (1611), Terence (1618), Livy (1620), Ovid (1629), and the *Epistolae* of Joseph Scaliger (1627). He also published three volumes of original Latin poems —*Iambi* (1602), *Elegiae* (1603), *Poemata* (1605)—and poems in Dutch and Latin (1604). See L. Müller, *Geschichte d. class. Philologie in den Niederlanden*, pp. 38 foll. (Leipzig, 1869).

(2) His son NIKOLAES was also a scholar of much distinction (born 1620, died 1681). He spent the greater part of his life in travel for the purpose of studying and collating classical MSS. He published editions of Ovid (1652; 3d ed. 1661), Paterculus (1678), and Valerius Flaccus (1680).



Heir. See HERES.

Helciarius. One who tows a vessel against the stream by a tow-line (*helcium*) (Mart. iv. 64, 22), as shown by the annexed illustration, which represents a vessel laden with corn and oil towed by two grotesque figures.

Helciarii. (From a Mosaic found at Lerida, Spain.)

Helĕna (Ἑλένη). (1) The beautiful daughter of Zeus and Leda, the wife of Tyndareos of Sparta. She was sister of the Dioscuri and of Clytaemnestra. The post-Homeric story represented her as carried off, while still a maiden, by Theseus, to the Attic fortress of Aphidnae, where she bore him a daughter, Iphigenia. She was afterwards set free by her brothers, who took her back to Sparta. She was wooed by a number of suitors, and at length gave her hand to Menelaüs, by whom she became the mother of one child, Hermioné. In the absence of her husband she was seduced and carried away to Troy by Paris, the son of Priam, taking with her great treasures. This was the origin of the Trojan War. The Trojans, in spite of the calamity she had brought upon them, loved her for her beauty, and refused to restore her to her husband. She, however, lamented the folly of her youth, and yearned for her home, her husband, and her daughter. After the death of Paris she was wedded to Deïphobus, assisted the Greeks at the taking of Troy, and betrayed Deïphobus into Menelaüs's hands. With Menelaüs she finally returned to

Helen and Paris. (Naples Museum.)

Sparta after eight years' wandering, and lived thenceforth with him in happiness and concord.

According to another story, mainly current after the time of Stesichorus, Paris carried off to Troy not the real Helen, but a phantom of her created by Heré. The real Helen was wafted through the air by Hermes, and brought to King Proteus in Egypt, whence, after the destruction of Troy, she was taken home by Menelaüs. (See Herod. ii. 112–120.) After the death of Menelaüs she was, according to one story, driven from Sparta by her step-sons, and fled thereupon to Rhodes to her friend Polyxo, who hanged her on a tree. Another tradition represented her as living after death in wedlock with Achilles on the island of Leucé. She was worshipped as the goddess of beauty in a special sanctuary at Therapné in Laconia, where a festival was held in her honour. She was also invoked, like her brothers the Dioscuri, as a tutelary deity of sailors. (See DIOSCURI.)

In the *Iliad*, Helen is apparently regarded as one who is not responsible for the ruin that she works, two passages seeming to imply that she was carried off by force (ii. 356 and 390). In the *Odyssey* she is also excused by the fact that she sins because a god has so willed it. (Cf. *Odyss.* xxiii. 222). Mr. Gladstone in his Homeric studies even regards her as not only a type of womanly loveliness, but of almost Christian penitence as well! The story of Helen has received a splendid setting in the genius of poets of every age. She is the most famous woman of all antiquity. In Goethe's *Faust* (pt. ii.) she is allegorically introduced as typifying the classical spirit of beauty. In English, see the *Hellenics* of Walter Savage Landor, Tennyson's *Dream of Fair Women*, and Andrew Lang's poem *Helen of Troy*, with the appended essay.

(2) FLAVIA IULIA, commonly known in ecclesiastical history by the name of St. Helena, the first wife of Constantius Chlorus. She was born of obscure

parents, in a village called Drepanum, in Bithynia, which was afterwards raised by her son Constantine to the rank of a city, under the name of Helenopolis. Her husband Constantius, on being made Caesar by Diocletian and Maximian (A.D. 292), repudiated Helena, and married Theodora, daughter of Maximian. Helena withdrew into retirement until her son Constantine, having become emperor, called his mother to court, and gave her the title of Augusta. He also supplied her with large sums of money, which she employed in building and endowing churches, and in relieving the poor. About A.D. 325 she set out on a pilgrimage to Palestine, and, having explored the site of Jerusalem, she thought that she had discovered the sepulchre of Jesus, and also the cross on which he died. With it she is said to have found the crosses of the two thieves, and to have learned which was the true one by the miracle it wrought in restoring to health a sick person to whose bedside it was carried. She built a church on the spot supposed to be that of the Holy Sepulchre, which has continued to be venerated by that name to the present day. She also built a church at Bethlehem, in honour of the nativity of the Saviour. From Palestine she rejoined her son at Nicomedia, in Bithynia, where she expired, in the year 327, at a very advanced age. She is numbered by the Roman Church among the saints, and her festival is August 18th.

Helĕna (Ἑλένη). A deserted and rugged island in the Aegean, opposite to Thoricus, and extending from that parallel to Sunium. It received its name from the circumstance of Paris having landed on it, as was said, in company with Helen, when they were fleeing from Sparta (Pliny, *H. N.* iv. 12; Mela, ii. 7). Strabo, who follows Artemidorus, conceived it to be the Cranaë of Homer (*Il.* iii. 444). Pliny calls it Macris. The modern name is Macronisi.

Helĕnus (Ἕλενος). A famous soothsayer, son of Priam and Hecuba, and the only one of their sons who survived the siege of Troy. He was so chagrined, according to some, at having failed to obtain Helen in marriage after the death of Paris that he retired to Mount Ida, and was there, by the advice of Calchas, surprised and carried away to the Grecian camp by Odysseus. Among other predictions, Helenus declared that Troy could not be taken unless Philoctetes (q. v.) could be prevailed to quit his retreat and repair to the siege. After the destruction of Troy, he, together with Andromaché, fell to the share of Pyrrhus, whose favour he conciliated by deterring him from sailing with the rest of the Greeks, who (as he foretold) would be exposed to a severe tempest on leaving the Trojan shore. Pyrrhus not only manifested his gratitude by giving him Andromaché in marriage, but nominated him as his successor in the kingdom of Epirus, to the exclusion of his own son Molossus, who did not ascend the throne until after the death of Helenus. A son named Cestrinus was the offspring of the union of Helenus with Andromaché (Verg. *Aen.* iii. 294 foll.).

Helepŏlis (ἑλέπολις). Literally, "destroyer of cities;" the name given to an engine invented by Demetrius Poliorcetes (q. v.) for besieging fortified places, consisting of a square tower placed upon wheels, and run up to the height of nine stories, each of which was furnished with machines for battering and discharging projectiles of enormous size and weight (Diod. Sic. xx. 48, 91; Vitruv. x. 22; Ammian. xxiii. 4, 10). See DEMETRIUS, p. 485.

Heliădes (Ἡλιάδες) and **Heliădae** (Ἡλιάδαι). (1) The daughters of Helios (the Sun) and Clymené. They were three in number—Lampetié, Phaëthusa, and Phoebé; or seven, according to Hyginus—Meropé, Helié, Aeglé, Lampetiê, Phoebé, Aethria, and Dioxippé. They were so afflicted at the death of their brother Phaëthon (see PHAËTHON) that they were changed by the gods into poplars, and their tears into amber, on the banks of the river Po (Ovid, *Met.* ii. 340; Hyg. *Fab.* 154). (2) Children of Helios and the nymph Rhodus. They were seven in number, and were fabled to have been the first inhabitants of the island of Rhodes. See RHODUS.

Heliaea. See DICASTERION; DICASTES.

Heliastae (Ἡλιασταί). See DICASTES.

Helĭcé (Ἑλίκη). (1) Another name for the Ursa Maior, or "Greater Bear." (See ARCTOS.) (2) One of the chief cities of Achaia, situated on the shore of the Sinus Corinthiacus, near Bura (Herod. i. 146). It was celebrated for the temple and worship of Poseidon, thence called Heliconius. Here, also, the general meeting of the Ionians was convened, while yet in the possession of Aegialus, and the festival which then took place is supposed to have resembled that of the Panionia, which they instituted afterwards in Asia Minor (Pausan. vii. 24). A tremendous influx of the sea, caused by a violent earthquake, overwhelmed and completely destroyed Helicé two years before the battle of Leuctra, B.C. 373. The details of this catastrophe will be found in Pausanias (vii. 24) and Aelian (*Hist. Anim.* xi. 19). Eratosthenes, as Strabo reports, beheld the site of this ancient city, and he was assured by sailors that the bronze statue of Poseidon was still visible beneath the waters, holding an hippocampus, or sea-horse, in his hand, and that it formed a dangerous shoal for their vessels. Two thousand workmen were afterwards sent by the Achaeans to recover the dead bodies, but without success.

Helĭcon (Ἑλικών). (1) A famous mountain in Boeotia, near the Gulf of Corinth. It was sacred to Apollo and the Muses, who were thence called Heliconiades. This mountain was famed for the purity of its air, the abundance of its water, its fertile valleys, the density of its shades, and the beauty of the venerable trees which clothed its sides. On the summit was the grove of the Muses, where these divinities had their statues, and where also were statues of Apollo and Hermes, of Bacchus by Lysippus, of Orpheus, and of famous poets and musicians (Pausan. ix. 30). A little below the grove was the fountain of Aganippé. The source Hippocrené (q. v.) was about twenty stadia above the grove. It is said to have burst forth when the horse Pegasus struck his hoof into the ground (Pausan. ix. 31), whence its name, ἵππου κρήνη. These two springs supplied two small rivers named Olmius and Permessus, which, after uniting their waters, flowed into the lake Copaïs, near Haliartus. The modern name of Helicon is Palaeovouni, and of Hippocrené, Kryopēgadi, or "cold spring." (2) A river of Macedonia, near Dium, the same, according to Pausanias (ix. 30), with the Baphyrus.

Heliconiădes. A name given to the Muses, from

their fabled residence on Mount Helicon, which was sacred to them (Lucret. iii. 1050).

Heliocamīnus. See DOMUS, p. 552.

Heliodōrus (Ἡλιόδωρος). (1) A Greek poet, from whom sixteen hexameters are cited by Stobaeus (*Serm.* 98), containing a description of that part of Campania situated between the Lucrine Lake and Puteoli, and where Cicero had a country residence. Some suppose him to have been the same with the rhetorician Heliodorus mentioned by Horace (*Sat.* i. 5. 2), as one of the companions of his journey to Brundisium. (2) An Athenian physician, of whom Galen makes mention, and who also wrote a didactic poem, under the title of Ἀπολυτικά, "Justification," of which Galen cites seven hexameters. (3) A native of Larissa, who left a treatise on optics, under the title of Κεφάλαια τῶν Ὀπτικῶν, which is scarcely anything more than an abridgment of the optical work ascribed to Euclid. He cites the optics of Ptolemy. The time when he flourished is uncertain; from the manner, however, in which he speaks of Tiberius, it is probable that he lived a long time after that emperor. Oribasius has preserved for us a fragment of another work of Heliodorus, which treats of the κοχλίας, a machine furnished with a screw for drawing water. (4) A Greek romance-writer, who was born at Emesa in Phœnicia, and flourished under the emperors Theodosius and Arcadius at the close of the fourth century. He was raised to the dignity of a bishop of Tricca in Thessaly. Heliodorus is best known as the author of a Greek romance, entitled Αἰθιοπικά, being the history of Theagenes and Chariclea, the latter a daughter of a king of Aethiopia. It is in ten books. This work was unknown in the West until a soldier of Anspach, under the Margrave Casimir of Brandenburg, assisting at the pillage of the library of Matthias Corvinus, at Buda, in 1526, being attracted by the rich binding of a manuscript, carried it off. He sold the prize afterwards to Vincent Obsopaeus, who published it at Basle in 1534. This was the celebrated romance of Heliodorus. Poetry, battles, piracies, and recognitions fill up the piece; there is no picture of the mind, no attempt at character-drawing carried on with the development of the action. The incidents point to no particular era of society, although one may perceive, from the tone of sentiment throughout, that the struggle had commenced between the spirit of Christianity and the grossness of pagan idolatry. Egypt is neither ancient Egypt, nor the Egypt of the Ptolemies, nor the Egypt of the Romans. Athens is neither Athens free nor Athens conquered—in short, there is no individuality either in the places or persons; and the vague pictures of the French romances of the seventeenth century give scarcely a caricatured idea of the model from which they were drawn. Various editions have been published of the romance of Heliodorus. The best are those of Bekker (1855) and Hirschig, in his *Erotici Scriptores* (1856). There is an English translation by Smith (London, 1856). See, also, Dunlop, *History of Fiction*, pp. 18–24 (3d ed. 1845), where an analysis of the novel is given; Chauvin, *Les Romanciers Grecs et Latins*, ch. viii. (1862); Rohde, *Der griechische Roman* (1876); and the article NOVELS AND ROMANCES.

Heliogabălus. See ELAGABALUS.

Heliopŏlis (Ἡλιούπολις). (1) A famous city of Egypt, situated a little to the east of the apex of the Delta, not far from modern Cairo. In Hebrew it is styled On or Aun. In the Septuagint it is called Heliopolis, or City of the Sun; in Jeremiah (xliii. 13), Beth Shemim—i. e. *domus solis*. Herodotus also mentions it by this name, and speaks of its inhabitants as being the wisest and most ingenious of all the Egyptians (ii. 3). According to Berosus, this was the city of Moses. It was also a place of resort for all the Greeks who visited Egypt for instruction. Hither came Herodotus, Plato, Eudoxus, and others, and secured much of the learning which they afterwards disseminated among their own countrymen. Plato, in particular, resided here three years. Manetho (q. v.), the historian, was also here as a priest. The city was built, according to Strabo, on a long, artificial mound of earth, so as to be out of reach of the inundations of the Nile. It had an oracle of Apollo and a famous Temple of the Sun. In this temple was fed and adored the sacred ox Mnevis, as Apis was at Memphis. This city was laid waste with fire and sword by Cambyses, and its chapter of priests all slaughtered. Strabo saw it in a deserted state and shorn of all its splendour. Heliopolis was famed also for its fountain of excellent water, which still remains, and gave rise to the subsequent Arabic name of the place, Ain Shems, or the Fountain of the Sun. The modern name is Matareieh, or cool water. A solitary obelisk of red granite is all that remains at the present day of this once celebrated place; and the two obelisks known as "Cleopatra's Needles" were originally brought from Heliopolis to Alexandria. (See ALEXANDRIA.) (2) A celebrated city of Syria, thirty-five miles northwest of Damascus, and southwest of Emesa, on the opposite side of the Orontes. Its Grecian name, Heliopolis (Ἡλιούπολις), "City of the Sun," is merely a translation of the native term Baalbek, which appellation the ruins at the present day retain. [See illustration on the following page.] Heliopolis was famed for its Temple of the Sun (Baal), erected by Antoninus Pius, though by the natives now ascribed to Solomon; and the ruins of this celebrated pile still attest its former magnificence. Of these the most notable are the Great Temple, a rectangular building 200 feet by 162, with a peristyle of 54 Corinthian columns; a smaller temple called the Temple of Iupiter; and a circular building of fine proportions long used as a Greek Church. Heliopolis was made a Roman colony by Iulius Caesar, and was garrisoned under Augustus. Later it was pillaged by the Arabs and by Timur (A.D. 1400), and since that time has gradually decayed. It is now only a wretched hamlet of a few hundred inhabitants. See Wood and Dawkins, *Ruins of Baalbec* (1757); Cassas, *Voyage Pittoresque de la Syrie* (1799); and Renan, *Mission de Phénicie* (1864).

Helios (Ἥλιος). In Greek mythology, the Sun-god, son of the Titan Hyperion (whose name he bears in Homer) and the Titaness Thea; brother of Selené (the Moon) and Eos (Dawn). The poets apply the name Titan to him in particular, as the offspring of Titans. He is represented as a strong and beautiful god, in the bloom of youth, with gleaming eyes and waving locks, and a crown of rays upon his head. In the morning he rises from a lovely bay of the Ocean in the farthest East, where the Æthiopians dwell. To give light to gods and men he climbs the vault of heaven in a chariot drawn by four snow-white horses, breath-

ing light and fire; their names are Eoös, Aethiops, Bronté, and Steropé. In the evening he sinks with his chariot into the Ocean, and while he sleeps is carried round along the northern border of the earth to the East again in a golden boat,

Temple at Heliopolis.

shaped like a bowl, the work of Hephaestus. He is called Phaëthon, from the brilliant light that he diffuses; he is the All-seer (Panoptes), because his rays penetrate everywhere. He is revealer of all that is done on earth; it is he who told Hephaestus of the intrigue of Ares and Aphrodité, and showed Demeter who had carried off her daughter. He was accordingly invoked as a witness to oaths and solemn protestations.

On the island of Trinacria (Sicily) he had seven flocks of sheep and seven herds of cattle, fifty in each. It was his pleasure, on his daily journey, to look down upon them. Their numbers were not to be increased or diminished; for if this was done, his wrath was terrible. (See Odysseus.) In the 700 sheep and oxen the ancients recognized the 700 days and nights of the lunar year. The flocks were tended by Phaëthusa (the goddess of light) and Lampetié (the goddess of shining), his daughter by Neaera. By the ocean Nymph Persé or Perseïs he was father of Aeëtes, Circé, and Pasiphaë, by Clymené the father of Phaëthon, and Augeas was also accounted his son. His children had the gleaming eyes of their father.

After the time of Euripides, or thereabouts, the all-seeing Sun-god was identified with Apollo, the god of prophecy. Helios was worshipped in many places, among which may be mentioned Corinth and Elis. The island of Rhodes was entirely consecrated to him. Here an annual festival (Ἅλια) was held during the summer in his honour, with chariot-racing and contests of music and gymnastics; and four consecrated horses were thrown into the sea as a sacrifice to him. In B.C. 278 a colossal bronze statue by Chares of Lindus was erected to him at the entrance of the harbour of Rhodes. (See Colossus.) Herds of red and white cattle were, in many places, kept in his honour. White animals, and especially white horses, were sacred to him: among the birds the cock, and among trees the white poplar. See, in English literature, the poem by Keats, *Hyperion*, and the first book of W. S. Landor's *Gebir*.

The Latin poets identified Helios with the Sabine deity Sol, who had an ancient place of worship on the Quirinal at Rome, and a public sacrifice on the 8th of August; but it was the introduction of the ritual of Mithras which first brought the worship of the sun into prominence in Rome. See Mithras.

Hell. See Hades.

Hellanīcus (Ἑλλανικός). One of the Greek logographi or chroniclers, born at Mitylené in Lesbos about B.C. 490. He is said to have lived till the age of eighty-five, and to have gone on writing until after B.C. 406. In the course of his long life he composed a series of works on genealogy, chorography, and chronology, of which the fragments are collected by C. and Th. Müller (Paris, 1841).

He was the first writer who attempted to introduce a systematic chronological arrangement into the traditional periods of Greek, and especially Athenian, history and mythology. His theories of the ancient Attic chronology were accepted down to the time of Eratosthenes (q. v.). See LOGOGRAPHI.

Hellanodĭcae (Ἑλλανοδίκαι). Judges in the Olympian and Nemean Games. See NEMEA; OLYMPIA.

Hellas (Ἑλλάς). A name originally given to a district and city of Thessaly in the division Phthiotis (Hom. *Il.* ii. 684), then further extended to the whole of Thessaly, and finally adopted as a general appellation for all Greece. Hellas is a peninsula, the easternmost of the three that project from the south of Europe into the Mediterranean Sea. Its western coast is rough and mountainous, while its eastern shores abound in gulfs, bays, and harbours. From this geographical cause Greece for a long time knew little or nothing of Italy and the West, but sustained very close relations, political and commercial, with the countries of Asia Minor —a fact of immense importance in her historical development. Because of her long line of coast, she first received, in great measure, the quickening which comes from immigration and the contact with new ideas that inevitably follows; so that Greece, largely by reason of her physical conformation and position, most readily responded to the influences of oriental culture, and thus became the cradle of European civilization.

Hellas is divided into two parts by the Gulf of Corinth, which would have completely severed them were it not for the narrow Isthmus of Corinth. This, until it was cut by the modern canal (August, 1893), united the southern division (Peloponnesus) with the northern (Hellas Proper). Hellas as a whole is marked off from the rest of Europe by a mountain chain, an extension of the Balkans, known in ancient times as the Haemus. From this range ran the chains from north-northwest to south-southeast, which form the skeleton of Greece. What may be called the backbone of the country is the range that first separates Illyria from Macedonia and Epirus from Thessaly, and then continues down through the whole peninsula. The most important single chain is Pindus (7111 feet), with its branch Othrys. Various single peaks are Olympus in Thessaly (9750 feet), Ossa, Pelion, Tymphrestus (7606 feet), Parnassus (8036 feet), and Helicon, all in Hellas Proper; with Cyllené, Aroania, and Erymanthus in the Peloponnesus, whose two important spurs are the Taÿgetus and Parnon. The Ionian Isles, Corcyra, Cephallenia, Leucas, and Zacynthus, off the western coast, follow the same direction as the mountain chains of the Peloponnesus and the mainland.

The rivers of Greece are small streams, little more than brooks, flowing usually south or west. In Hellas Proper there are four principal rivers, all having their source on Mount Lacmon of the Pindus range. The Aoüs flows into the Adriatic, the Peneus and Haliacmon into the Thermaic Gulf, and the Acheloüs into the Gulf of Patrae. In the Peloponnesus, the important streams rise near the north of Taÿgetus, the Eurotas flowing south and the Alpheus west.

The Hellenes were a branch of the family to which most of the European peoples belong, and which is variously described as Aryan, Indo-Germanic, and Indo-European, whose original home is uncertain, being by some placed in Asia and by others in Europe. (See INDO-EUROPEAN LANGUAGES.) It is generally held, however, that the original inhabitants of Greece entered it from the north at a very remote period, probably during the Stone Age; that they were in the nomadic stage of development; and that they came on in successive waves of immigration, each of which pushed farther south the people who had already preceded it. Even after the whole of Hellas had been covered by these early tribes, succeeding waves followed, overspreading the territory occupied by others. Such a wave of later immigration was that which is known to the legendary historians as "the return of the Heraclidae." (See HERACLIDAE.) This pressure from behind had the effect of driving out many who had settled in the mainland into the adjacent islands, and ultimately to far distant lands, such as the coasts of Asia Minor, Sicily, the shore of the Euxine, and the north of Africa. Hellas in its wider sense is, therefore, to be understood of the united settlements of Hellenes in all parts of the then known world, and it was in this sense that the Hellenes themselves understood it, since to them the word always had an ethnic rather than a territorial significance. The name Ἕλληνες in Homer refers only to the Thessalian people mentioned above; and in fact the Homeric poems have no general designation for the Greeks as a whole. They are called Danaï (Δαναοί), Argivi (Ἀργεῖοι), and Achaei (Ἀχαιοί), and it was not much before the time of Herodotus, Thucydides, and Scylax that the terms Ἑλλάς and Ἕλληνες received their full extension of meaning. The Orientals spoke of the Greeks as "Ionians"; the Italians called them Graeci, from one of the ancient tribes of Epirus, the Γραικοί—a word older than Ἕλληνες, but disused and then revived by Sophocles, according to Eustathius (*ad* Hom. *Il.* p. 890, 14; cf. Hesych. i. p. 854; Steph. Byz. s. h. v.; and Tzetzes, schol. to Lycophron's *Alexandra*).

On the Greek language, see DIALECTS; on the art, see ARCHITECTURA; CAELATURA; PICTURA; STATUARIA ARS; on the religion, see MYSTERIA; MYTHOLOGIA; RELIGIO. A brief description of each of the divisions of Greece will be found under their respective titles.

The time which elapsed from the appearance of the Hellenes in Thessaly to the siege of Troy is usually known by the name of the Heroic Age. Thucydides informs us (i. 4) that the commencement of Grecian civilization is to be dated from the reign of Minos of Crete, who acquired a naval power and cleared the Aegean Sea of pirates. Among the most celebrated heroes of this period were Bellerophon and Perseus, whose adventures were laid in the East; Theseus, the king of Athens; and Heracles. Tradition also preserved the account of expeditions undertaken by several chiefs united together, such as that of the Argonauts, of the Seven against Thebes, and of the siege of Troy. See TROJAN WAR.

It is learned from Thucydides (i. 12) that the population of Greece was in a very unsettled state for some time after the Trojan War. Of the various migrations which appear to have taken place, the most important in their consequences were those of the Boeotians from Thessaly into the country afterwards called Boeotia, and of the Dorians into Peloponnesus. At about the same period the west-

ern coast of Asia Minor was colonized by the Greeks. The ancient inhabitants of Boeotia, who had been driven out of their homes by the invasion of the Boeotians, together with some Aeolians (whence it has acquired the name of the Aeolian migration) left Boeotia and settled in Lesbos and the northwestern corner of Asia Minor. They were not long afterwards followed by the Ionians, who, having been driven from their abode on the Corinthian Gulf, had taken refuge in Attica, whence they emigrated to Asia Minor and settled on the Lydian coast. The southwestern part of the coast of Asia Minor was also colonized at about the same period by Dorians. The number of Greek colonies, considering the extent of the mother country, was very great; and the readiness with which the Greeks left their homes to settle in foreign lands forms a remarkable feature of their national character. In the seventh century before Christ the Greek colonies took another direction: Cyrené, in Africa, was founded by the inhabitants of Thera, and the coasts of Sicily and the southern part of Italy became studded with so many Greek cities that it acquired the name of the Great, or Greater, Greece (Magna Graecia). (On the settlement of the Greek cities in Southern Italy, see Lenormant, *La Grande Grèce*, 3 vols. [Paris, 1881].)

The two States of Greece which attained the greatest historical celebrity were Sparta and Athens. The power of Athens was of later growth; but Sparta had, from the time of the Dorian conquest, taken the lead among the Peloponnesian States, a position which she maintained by the conquest of the fertile country of Messenia, B.C. 688. Her superiority was probably owing to the nature of her political institutions, which are said to have been fixed on a firm basis by her celebrated lawgiver Lycurgus, B.C. 884. At the head of the nation were two hereditary kings, but their power was greatly limited by a jealous aristocracy. Her territories were also increased by the conquest of Tegea in Arcadia. Athens rose to importance only in the century preceding the Persian Wars; but even in this period her power was

Map of Ancient Greece.

not more than a match for the little States of Megaris and Aegina. The city was long harassed by internal commotions till the time of Solon, B.C. 594, who was chosen by his fellow-citizens to frame a new constitution and a new code of laws, to which much of the future greatness of Athens must be ascribed. We have already seen that the kingly form of government was prevalent in the Heroic Age. But, during the period that elapsed between the Trojan War and the Persian invasion, hereditary political power was abolished in almost all the Greek States, with the exception of Sparta, and a republican form of government established in its stead. In studying the history of the Greeks, one must bear in mind that almost every city formed an independent State, and that, with the exception of Athens and Sparta, which exacted obedience from the other towns of Attica and Laconia respectively, there was hardly any State which possessed more than a few miles of territory. Frequent wars between themselves were the almost unavoidable consequence of the existence of so many small States nearly equal in power. The evils which arose from this condition of things were partly remedied by the influence of the Amphictyonic Council and by the religious games and festivals which were held at fixed periods in different parts of Greece, and during the celebration of which no wars were carried on. In the sixth century before the Christian era, Greece rapidly advanced in knowledge and civilization. Literature and the fine arts were already cultivated in Athens under the auspices of Pisistratus and his sons; and the products of remote countries were introduced into Greece by the merchants of Corinth and Aegina. See COMMERCE.

This was the most splendid period of Grecian history. The Greeks, in their resistance to the Persians, and the part they took in the burning of Sardis, B.C. 499, drew upon them the vengeance of Darius. After the reduction of the Asiatic Greeks, a Persian army was sent into Attica, but was entirely defeated at Marathon, B.C. 490, by the Athenians under Miltiades. Ten years afterwards the whole power of the Persian Empire was directed against Greece; an immense army, led in person by Xerxes, advanced as far as Attica, and received the submission of almost all the Grecian States, with the exception of Athens and Sparta. But this expedition also failed; the Persian fleet was destroyed in the battles of Artemisium and Salamis; and the land forces were entirely defeated in the following year, B.C. 479, at Plataea in Boeotia. Sparta had, previous to the Persian invasion, been regarded by the other Greeks as the first power in Greece, and accordingly she obtained the supreme command of the army and fleet in the Persian War. But, during the course of this war, the Athenians had made greater sacrifices and had shown a greater degree of courage and patriotism, so that after the battle of Plataea a confederacy was formed by the Grecian States for carrying on the war against the Persians. Sparta was at first placed at the head of it; but the allies, disgusted with the tyranny of Pausanias (q. v.), the Spartan commander, gave the supremacy to Athens. The allies, who consisted of the inhabitants of the islands and coasts of the Aegean Sea, were to furnish contributions in money and ships, and the delicate task of assessing the amount which each State was to pay was assigned to Aristides. The yearly contribution was settled at 460 talents (about $542,800), and Delos was chosen as the common treasury. The Athenians, under the command of Cimon, carried on the war vigorously, defeated the Persian fleets, and plundered the maritime provinces of the Persian Empire.

During this period the power of Athens rapidly increased; she possessed a succession of distinguished statesmen—Themistocles, Aristides, Cimon, and Pericles — who all contributed to the advancement of her power, though differing in their political views. Her maritime greatness was founded by Themistocles, her revenues were increased by Pericles, and her general prosperity, in connection with other causes, tended to produce a greater degree of culture than existed in any other part of Greece. Literature was cultivated, and the arts of architecture and sculpture, which were employed to ornament the city, were carried to a degree of excellence that has never since been surpassed. See ATHENAE.

While Athens was advancing in power, Sparta had to maintain a war against the Messenians, who again revolted, and were joined by a great number of the Spartan slaves (B.C. 461–455). But, though Sparta made no efforts during this period to restrain the Athenian power, it was not because she wanted the will, but the means. These, however, were soon furnished by the Athenians themselves, who began to treat the allied States with great tyranny, and to regard them as subjects, and not as independent States in alliance. The tribute was raised from 460 to 600 talents, the treasury was removed from Delos to Athens, and the decision of all important suits was referred to the Athenian courts. When any State withdrew from the alliance, its citizens were considered by the Athenians as rebels, and immediately reduced to subjection. The dependent States, anxious to throw off the Athenian dominion, entreated the assistance of Sparta, and thus, in conjunction with other causes, arose the war between Sparta and Athens, which lasted for twenty-seven years (B.C. 431–404), and is usually known as the Peloponnesian War (q. v.). It terminated by again placing Sparta at the head of all Greece. Soon after the conclusion of this war, Sparta engaged in a contest with the Persian Empire, which lasted from B.C. 400 to 394. The splendid successes which Agesilaüs, the Spartan king, obtained over the Persian troops in Asia Minor, and the manifest weakness of the Persian Empire, which had been already shown by the successful retreat of only ten thousand Greeks from the very heart of the Persian Empire (see XENOPHON), appear to have induced Agesilaüs to entertain the design of overthrowing the Persian monarchy; but he was obliged to return to his native country to defend it against a powerful confederacy, which had been formed by the Corinthians, Thebans, Argives, Athenians, and Thessalians, for the purpose of throwing off the Spartan dominion. The confederates were not, however, successful in their attempt; and the Spartan supremacy was again secured for a brief period by a general peace, made B.C. 387, usually known by the name of the peace of Antalcidas. Ten years afterwards, the rupture between Thebes and Sparta began, which led to a general war in Greece, and for a short time gave Thebes the hegemony of Hellas. The greatness of Thebes was principally owing to the wisdom and valour of two of

her sons—Pelopidas and Epaminondas. After the death of Epaminondas at the battle of Mantinea, B.C. 362, Thebes again sank to its former obscurity. The Spartan supremacy was, however, wholly destroyed, and her power still further humbled by the restoration of Messenia to independence, B.C. 369. From the conclusion of this war to the reign of Philip of Macedon, Greece remained without any ruling power. It is only necessary here to mention the part which Philip took in the Sacred War (q.v.), which lasted ten years (B.C. 356–346), in which he appeared as the defender of the Amphictyonic Council, and which terminated by the conquest of the Phocians. The Athenians, urged on by Demosthenes, made an alliance with the Thebans for the purpose of resisting Philip; but their defeat at Chaeronea, B.C. 388, secured for the Macedonian king the supremacy of Greece. In the same year a congress of Grecian States was held at Corinth, in which Philip was chosen general-in-chief of the Greeks in a projected war against the Persian Empire; but his assassination in B.C. 336 caused this enterprise to devolve on his son Alexander. See ALEXANDER; MACEDONIA.

The conquests of Alexander extended the Grecian influence over the greater part of Asia west of the Indus. After his death the dominion of the East was contested by his generals, and two powerful empires were permanently established—that of the Ptolemies in Egypt and the Seleucidae in Syria. The dominions of the early Syrian kings embraced the greater part of Western Asia; but their Empire was soon divided into various independent kingdoms, such as that of Bactria and Pergamus, in all of which the Greek language was spoken, not merely at court, but to a considerable extent in the cities. From the death of Alexander to the Roman conquest, Macedon remained the ruling power in Greece. The Aetolian and Achaean leagues were formed, the former B.C. 284, the latter B.C. 281, for the purpose of resisting the Macedonian kings. Macedonia was conquered by the Romans B.C. 197, and the Greek States declared independent. This, however, was merely nominal; for they only exchanged the rule of the Macedonian kings for that of the Roman people; and in B.C. 146, Greece was reduced to the form of a Roman province, called Achaea, though certain cities, such as Athens, Delphi, and others, were allowed to have the rank of free towns. The history of Greece, from this period, forms part of that of the Roman Empire. See ROMA.

Greece was overrun by the Goths in A.D. 267, and again in A.D. 398, under Alaric; and, after being occupied by the Crusaders and Venetians, at last fell into the hands of the Turks, on the conquest of Constantinople; from whom it was again liberated in 1828. See the articles ATHENAE; BYZANTINUM IMPERIUM; SPARTA; MACEDONIA; and the following works of reference. — GEOGRAPHY: Wordsworth, *Greece Pictorial, Historical, and Descriptive* (1882); Tozer, *Lectures on the Geography of Greece* (1874); Bursian, *Geographie des Griechenland*, 3 vols. Hellé (Ἕλλη). See PHRIXUS.

Hellen (Ἕλλην). The mythical ancestor of the Hellenes. He was the son of Zeus and Dorippé, husband of Orseïs, and father of Aeolus, Dorus, and Xunthus. From his two sons, Aeolus and Dorus, the Aeolians and Dorians claimed descent; and from the two sons of Xanthus (Achaeus and Ion) tradition derives the Achaeans and Ionians. Hellen is described as reigning over Phthia in Thessaly. See HELLAS.

Hellēnes. See HELLAS.

Hellenĭca (Ἑλληνικά). An historical treatise by Xenophon (q. v.), dealing with the period of forty-eight years preceding the battle of Mantinea (B.C. 362). As it begins where the history of Thucydides (q. v.) ends, the first part is sometimes called the "Paralipomena of Thucydides." The *Hellenica* is in seven books, and is written in a dry, somewhat uninteresting style. Separate editions with notes are those of Hailstone (bks. i. and ii., 1867); Breitenbach (1863); Büchsenschütz (1876); and Dowdall (bk. i. 1890); of bks. i.–iv. by Manatt (Boston, 1886), and v.–vii. by Bennett (Boston, 1892). A fine English version is that of Dakyns in his translation of Xenophon (1893). See XENOPHON.

Hellenotamiae (Ἑλληνοταμίαι). The name of a board of ten members, elected annually by lot as controllers of the fund contributed by the members of the Athenian confederacy. The treasure was originally deposited at Delos, but after B.C. 461 was transferred to Athens. The yearly contributions of the cities owning the Athenian supremacy amounted at first to 460 talents (some $542,800); during the Peloponnesian War they were increased to nearly 1300 talents ($1,534,000). See DELOS, CONFEDERACY OF.

Hellespontus (Ἑλλήσποντος). (1) Now the Dardanelles, the long narrow strait which joins the Propontis (Sea of Marmora) with the Aegean Sea. Its length is some fifty miles, and its width varies from six at the upper end to one or less. The narrowest part is between the ancient cities of Sestus and Abydus, where Leander is said to have swum across to visit Hero. (See LEANDER.) Here, also, Xerxes (q. v.) crossed on his bridge of boats. The name Ἑλλήσποντος (Sea of Hellé) was derived from the myth of Hellé; on which see the article PHRIXUS. (2) Under the Roman Empire, the name Hellespontus was given to a province in the northern part of Mysia, with Cyzicus for its capital.

Helloměnum (Ἑλλόμενον). A seaport town of the Acarnanians on the island of Leucas.

Hellopia. See ELLOPIA.

Helm. See GUBERNACULUM.

Helmet. See ARMA; GALEA.

Helōrus (Ἕλωρος) and **Helōrum.** A town on the eastern coast of Sicily, south of Syracuse, at the mouth of the river Helorus.

Helos (τὸ Ἕλος). (1) A town in Laconia, on the coast, in a marshy situation, whence its name (ἕλος = marsh). It was commonly said that the Spartan slaves called Helotes (Εἵλωτες), were originally the Achaean inhabitants of this town who were reduced by the Dorian conquerors to slavery. (2) A town or district of Elis on the Alpheus.

Helōtae (Εἱλῶται), and **Helōtes** (Εἵλωτες). The Helots or bondsmen of the Spartans. The common account of the origin of this class is, that the inhabitants of the maritime town of Helos were reduced by Sparta to this state of degradation, after an insurrection against the Dorians already established in power. This explanation, however, rests merely on an etymology, and that by no means probable. The word Εἵλως is probably a derivative from ἑλεῖν in a passive sense, and consequently means "a prisoner"—a derivation known in ancient times. It seems likely that they were an aboriginal race, which was subdued at a very early period, and which immediately passed over as slaves to the Doric conquerors. In speaking of the condition of the Helots, their political rights and their personal treatment will be considered under different heads, though in fact the two subjects are very nearly connected.

The first were doubtless exactly defined by law and custom, though the expressions made use of by ancient authors are frequently vague and ambiguous. "They were," says Ephorus, "in a certain point of view public slaves. Their possessor could neither liberate them nor sell them beyond the borders." From this it is evident that they were considered as belonging properly to the State, which to a certain degree permitted them to be possessed by individuals, reserving to itself the power of enfranchising them. But to sell them out of the country was not in the power even of the State; and such an event seems never to have occurred. It is, upon the whole, most probable that individuals had no power to sell them at all, as they belonged chiefly to the landed property, and this was inalienable. On these lands they had certain fixed dwellings of their own, and particular services and payments were prescribed to them. They paid as rent a fixed measure of corn; not, however, like the Perioeci, to the State, but to their masters. As this quantity had been definitely settled at a very early period, the Helots were the persons who profited by a good, and lost by a bad, harvest, which must have been to them an en-

courageement to industry and good husbandry, as would not have been the case if the profit and loss had merely affected the landlords. In fact, by this means, as is proved by the accounts respecting the Spartan agriculture, a careful cultivation of the soil was kept up. By means of the rich produce of the lands, and in part by plunder obtained in war, they collected a considerable property, to the attainment of which almost every access was closed to the Spartans. The cultivation of the land, however, was not the only duty of the Helots; they also, at the public meals, attended upon their masters, who, according to the Lacedaemonian principle of a community of property, mutually lent them to one another (Xen. *Rep. Lac.* vi. 3; Aristot. *Pol.* ii. 2, 5). A large number of them was also employed by the State in public works. In the field the Helots never served as hoplites, except in extraordinary cases; and then it was the general practice afterwards to give them their liberty. This seems first to have occurred under Brasidas in B.C. 424. (Cf. Thuc. iv. 80, vii. 19.) On other occasions they attended the regular army as light-armed troops (ψιλοί); and that their numbers were very considerable may be seen from the battle of Plataea, in which 5000 Spartans were attended by 35,000 Helots. Although they did not share the honour of the heavy-armed soldiers, they were in turn exposed to a less degree of danger; for, while the former, in close rank, received the onset of the enemy with spear and shield, the Helots, armed only with their slings and javelins, were in a moment either before or behind the ranks, as Tyrtaeus accurately describes the relative duties of the light-armed soldier (γυμνής) and the hoplite. Sparta, in her better days, is never recorded to have unnecessarily sacrificed the lives of her Helots. A certain number of them were allotted to each Spartan (Herod. ix. 28; Thuc. iii. 8). At the battle of Plataea this number was seven. Those who were assigned to a single master were probably called ἀμπίτταρες. Of these, however, one in particular was the servant (θεράπων) of his master, as in the story of the blind Spartan, who was conducted by his Helot into the thickest of the battle of Thermopylae, and, while the latter fled, fell with the other heroes (Herod. vii. 229). It appears that the other Helots were in the field placed more immediately under the command of the king than the rest of the army (Herod. vi. 80, 81). In the fleet they composed the large mass of the sailors (Xen. *Hist. Gr.* vii. 1, 12), in which service at Athens the inferior citizens and slaves were employed. It is a matter of much greater difficulty to form a clear notion of the treatment of the Helots, and of their manner of life; for the rhetorical spirit with which later historians have embellished their views has been productive of much confusion and misconception. Myron of Priené, in his account of the Messenian War, drew a very dark picture of Sparta, and endeavoured at the end to rouse the feelings of his readers by a description of the fate which the conquered underwent. "The Helots," says he, "perform for the Spartans every ignominious service. They are compelled to wear a cap of dog's skin (κυνῆ), to have a covering of sheep's skin (διφθέρα), and are severely beaten every year without having committed any fault, in order that they may never forget they are slaves. In addition to this, those among them who, either by their stature or their beauty, raise themselves above the condition of a slave, are condemned to death, and the masters who do not destroy the most manly of them are liable to punishment." Myron's statements, however, are to be received with considerable caution.

Plutarch relates (*Lycurg.* 28) that the Helots were compelled to intoxicate themselves, and to perform indecent dances, as a warning to the Spartan youth. Yet Helot women discharged the office of nurse in the royal palaces, and doubtless obtained the affection with which the attendants of early youth were honoured in ancient times. It is, however, certain that the Doric laws did not bind servants to strict temperance; and hence examples of drunkenness among them might well have served as a means of recommending sobriety. It was also an established regulation that the national songs and dances of Sparta were forbidden to the Helots, who, on the other hand, had some extravagant and lascivious dances peculiar to themselves, which may have given rise to the above report.

It was the curse of this bondage, which Plato terms the hardest in Greece, that the slaves abandoned their masters when they stood in greatest need of their assistance; and hence the Spartans were even compelled to stipulate in treaties for aid against their own subjects (Thuc. i. 118, v. 14; cf. Aristot. *Pol.* ii. 6, 2). A more favourable side of the Spartan system of bondage is seen in the fact that a legal way to liberty and citizenship stood open to the Helots. The many intermediate steps seem to prove the existence of a regular mode of transition from the one rank to the other. The Helots who were esteemed worthy of an especial confidence were called ἀργεῖοι; the ἀφέται were probably released from all service. The δεσποσιοναῦται, who served in the fleets, resembled probably the freedmen of Attica, who were called "the out-dwellers" (οἱ χωρὶς οἰκοῦντες). When they received their liberty, they also obtained permission to dwell where they wished (Thuc. iv. 80, v. 34), and probably, at the same time, a portion of land was granted them without the lot of their former masters. After they had been in possession of liberty for some time, they appear to have been called νεοδαμώδεις (Thuc. vii. 58), the number of whom soon came near to that of the citizens (Plut. *Ages.* 6). The μόθωνες or μόθακες were Helots, who, being brought up together with the young Spartans, obtained freedom without the rights of citizenship.

The number of the Helots has been estimated by K. O. Müller and Schömann as having been some 225,000 at the time of the battle of Plataea, as against an estimated total population of 380,000 or 400,000 (Müller, *Dorians*, vol. ii. p. 30 foll., Eng. trans.). See Thirlwall, *Hist. of Greece*, i. 309–313; Gilbert, *Staatsalterth.* i. 31–36; and the article CRYPTEIA.

Helvecōnae. A people in Germany, between the Viadus and the Vistula, south of the Rugii and north of the Burgundiones, reckoned by Tacitus among the Ligii (*Germ.* 43).

Helvetia. See HELVETII.

Helvetii. (Ἑλουήττιοι). A nation of Gaul, conquered by Caesar. Their country is generally supposed to have answered to modern Switzerland; but ancient Helvetia was of less extent than modern Switzerland, being bounded on the north by the Rhenus and Lacus Brigantinus, or Lake of Constance; on

the south by the Rhodanus and the Lacus Lemannus, or Lake of Geneva; and on the west by Mons Iurassus (Jura) (Caes. *B. G.* i. etc.; Tac. *Hist.* i. 67, 69). The chief town of the Helvetii was Aventicum, now Avenches. They were divided into four *pagi* or cantons, of which the names of only two are known—the Pagus Tigurinus (the most important pagus) and the Pagus (Vicus) Verbigenus (Urbigenus). It must be noted that the name Helvetia is a purely modern one—the country being spoken of in ancient times simply as Ager Helvetiorum.

The Helvetii first appear in history during the war between the Romans and the Cimbri. In B.C. 107 the people of the Pagus Tigurinus defeated the Roman consul Cassius Longinus, while others of the race invaded Gaul and Italy, sharing in the defeat inflicted on the Cimbri by Marius and Catulus in B.C. 101. In the year 58, they attempted, on the advice of Orgetorix, an Helvetic chief, to migrate to Gaul, but were defeated and driven back by Caesar; after which the Romans planted colonies in these territories, with three fortresses at Aventicum, Vindonissa (Königsfelden), and Noviodunum (Nion). Under the later emperors, the country of the Helvetii, with that of the Sequani and Rauraci, formed the province known as Maxima Sequanorum. See Mommsen, *Die Schweiz in röm. Zeit* (Zürich, 1854).

Helvia. Mother of the philosopher Seneca (q. v.).

Helvidius Priscus. See PRISCUS.

Helvii. A people in Gaul, between the Rhone and Mount Cebenna, which separated them from the Arverni. They were for a long time subject to Massilia, but afterwards belonged to the province of Gallia Narbonensis. Their country produced good wine.

Helvius Cinna. See CINNA.

Helvius Pertĭnax. See PERTINAX.

Heměra (*ἡμέρα*). See DIES.

Hemerodrŏmi (*ἡμεροδρόμοι*). Trained runners employed as couriers in the Greek States, and used to carry the official tidings of important events. They were capable of performing remarkably long distances in a very short space of time; on which see Herod. vi. 105; Plut. *Arist.* 20. They are also called *ἡμεροσκόποι* (Herod. vii. 183).

Hemeroscŏpi. See HEMERODROMI.

Hemichrȳsus. See STATER.

Hemicongius. Half a *congius*. See CONGIUS.

Hemicyclium (*ἡμικύκλιον*). (1) A semicircular alcove, sufficiently large to admit of several persons sitting in it at the same time, for the enjoyment of mutual converse. The ancients constructed such places in their own pleasure-grounds (Cic. *De Am.* 1; Sidon. *Ep.* i. 1), and also as public seats in different parts of a town for the accommodation of the inhabitants (Suet. *Gramm.* 17). (2) A sundial of simple construction invented by Berosus. See HOROLOGIUM.

Hemīna (*ἡμίνα*). A measure of capacity, containing half a sextarius (Festus, s. v. Rhemn. Fann. *De Pond.* 67); whence, also, a vessel made to contain that exact quantity (Pers. i. 129).

Hemīna, CASSIUS. See CASSIUS.

Hemiobŏlus, Hemiobolion. See OBOLUS.

Hemiolia (*ἡμιολία*). A particular kind of ship (Gell. x. 25), used chiefly by the Greek pirates (Arrian, *Anab.* iii. 2, 5); constructed in such a manner that half of its side was left free from rowers, in order to form a deck for fighting purposes.

Hemiolia. (Rich.)

Hemipodion. See PES.

Hemistăter. See STATER.

Hemsterhuys, TIBERIUS, often spoken of under the Latinized form HEMSTERHUSIUS. A Dutch classical scholar born at Groningen, January 9th, 1685. He was educated at the Universities of Groningen and Leyden, entering the former at the age of fifteen, and being appointed Professor of Mathematics and Philosophy in Amsterdam at the age of nineteen. In 1706 he brought out an edition of the *Onomasticon* of Pollux which had been begun by Lederlin, but was so mortified by the criticism made upon it by Richard Bentley (q. v.) as to refuse to open a Greek book for months. In 1717 he was called to the chair of Greek at the University of Franeker, and from 1738 discharged the duties of a professor of history, being transferred to Leyden in 1740. He died April 7th, 1766.

His chief works are editions of the *Colloquia* and *Timon* of Lucian (1708); of the *Plutus* of Aristophanes (1744); annotations on Xenophon of Ephesus (last ed. 1784); ed. Pollux (1706); a Latin trans. of the *Birds* of Aristophanes in Kuster's edition; besides notes contributed to Ernesti's Callimachus and to Burmann's Propertius. See the *Eulogium* of Ruhnken (1789), the *Supplementa Annotationis ad Eulogium* (Leyden, 1874), and L. Müller, *Geschichte d. class. Philologie in den Niederlanden*, pp. 74–82 (Leipzig, 1869).

Hen. See GALLINA.

Henděka (*οἱ Ἕνδεκα*, "The Eleven"). A term applied at Athens to a band consisting of ten members, chosen by lot, and their secretary. Their duty was to superintend the prisons, receive arrested prisoners, and carry out the sentences of the law. The capital sentence was executed by their subordinates. They also had penal jurisdiction in the case of delinquents discovered in the act of committing offences punishable with death or imprisonment. If they pleaded guilty, the Eleven inflicted the punishment at once; if not, they instituted a judicial inquiry and presided at the decision of the case. They had the same power in the case of embezzlement of confiscated property, of which they had lists in their possession. Under Demetrius Phalereus they received the name of *νομοφύλακες*. See Hermann, *Staatsalterth.* § 138.

Henĕti (*Ἐνετοί*). An ancient people in Paphlagonia, dwelling on the river Parthenius, fought on the side of Priam against the Greeks, but had disappeared before the historical times. They were regarded by many ancient writers as the ancestors of the Veneti in Italy. See VENETI.

Heniŏchi (*Ἡνίοχοι*). A people in Colchis, north of the Phasis, notorious as pirates.

Henna. See ENNA.

Hephaestĭa (Ἡφαιστία). (1) One of the two principal towns in the island of Lemnos, the other being Myrina (Herod. vii. 140). (2) A deme of Attica belonging to the tribe Acamantis.

Hephaestīa (Ἡφαίστεια). A festival at Athens, celebrated annually, in honour of Hephaestus. See LAMPADEPHORIA.

Hephaestiădes Insŭlae. See AEOLIAE INSULAE.

Hephaestion (Ἡφαιστίων). (1) A Macedonian, celebrated as the friend of Alexander the Great, with whom he had been brought up. He died at Ecbatana, B.C. 325, to the great grief of Alexander, who ordered mourning for him throughout the whole Empire. (2) A Greek scholar, a native of Alexandria, who flourished about the middle of the second century A.D., and was tutor to the emperor Verus before his accession. He wrote a work on prosody, in forty-eight books, which he at first abridged into eleven books, then into three, and finally into one. The final abridgment, called a manual on metres (Ἐγχειρίδιον περὶ Μέτρων), has come down to us. It gives no more than a bare sketch of prosody, without any attempt at theoretical explanation of the facts; but it is, nevertheless, of immense value, since it is the only complete treatise on Greek prosody which has survived from antiquity, and quotes verses from the lost poets. Attached to it is a treatise on the different forms of poetry and composition, in two incomplete versions. The manual has a preface by Longinus, and two collections of scholia. It has been edited by Gaisford, with notes (last ed. 1856); and by Westphal (1866).

Hephaestium (Ἡφαίστιον). A name given to a region in the extremity of Lycia, near Phaselis, from which fire issued when a burning torch was applied to the surface. This was owing to the naphtha with which the soil was impregnated (Sen. *Epist.* 79).

Hephaestus (Ἥφαιστος). In Greek mythology, the god of fire, and of the arts which need fire in the execution. Roscher proposes various derivations of the name—from ἀφή (ἅπτω), "a lighting," or from the root of φαίνω, "to shine." He was said to be the son of Zeus and Heré, or, according to Hesiod, of the latter only. Being ugly, and lame in both feet, his mother was ashamed of him, and threw him from Olympus into the ocean, where he was taken up by Eurynomé and Thetis and concealed in a subterranean cavern. Here he remained for nine years, and fashioned a number of exquisite works of art, among them a golden throne with invisible chains, which he sent to his mother by way of revenge. She sat down in it, and was chained to the seat so fast that no one could release her. On this it was resolved to call Hephaestus back to Olympus. Ares wished to force him back, but was frightened off by his brother with firebrands. Dionysus at length succeeded in making him drunk and bringing him back in this condition to Olympus. But he was destined to meet with his former luck a second time. There came a quarrel between Zeus and Heré, and Hephaestus took his mother's part; whereupon Zeus seized him by the leg and hurled him down from Olympus. He fell upon the island of Lemnos, where the Sintians, who then inhabited the island, took care of him and finally revived him. From this time Lemnos was his favourite abode. His lameness was, in the later story, attributed to this fall (Hom. *Il.* i. 590 foll.).

The whole story—the sojourn of Hephaestus in the cavern under the sea and his fondness for Lemnos—is, in all probability, based upon volcanic phenomena—the submarine activity of volcanic fires and the natural features of the island of Lemnos. Here there was a volcano called Mosychlus, which was in activity down to the time of Alexander the Great. The friendship existing between Dionysus and Hephaestus may be explained by the fact that the best and finest wines are grown in the volcanic regions of the South.

Hephaestus. (Bronze Statue in British Museum.)

As a master in the production of beautiful and fascinating works of art, Hephaestus is in the *Iliad* the husband of a Charis, and in the *Odyssey* of Aphrodité, and in Hesiod of Aglaea. (See CHARITES.) The story of his marriage with Aphrodité was not, apparently, widely known in early antiquity. Through his artistic genius he appears, and most especially in the Athenian story, as the intimate friend of Athené. In Homer he lives and works on Olympus, where he makes palaces of brass for himself and the other deities; but he has a forge also on Mount Mosychlus in Lemnos; the later story gives him one under Aetna in Sicily, and on the sacred island, or island of Hephaestus, in the Lipari Islands, where he is heard at work with his companions the Cyclopes. All the masterpieces of metal

which appear in the stories of gods and heroes—the aegis of Zeus, the arms of Achilles, the sceptre of Agamemnon, the fatal necklace of Harmonia, the fire-breathing bulls of Aeëtes, the golden torchbearers in the palace of Alcinoüs, and others—were attributed to the art of Hephaestus. To help his lameness he made, according to Homer, two golden maidens, with the power of motion, to lean upon when he walked. He was much worshipped in Lemnos, where there was an annual festival in his honour. All fires were put out for nine days, during which rites of atonement and purification were performed. Then fresh fire was brought on a sacred ship from Delos, the fires were kindled again, and a new life, as the saying went, began. At Athens he was worshipped in the Academy, in connection with Athené and Prometheus (q. v.). In October the smiths and smelters celebrated the Χαλκεῖα, a feast of metal-workers, in his honour and that of Athené; at the Ἀπατούρια sacrifices were offered to him, among other gods, as the giver of fire, and torches were kindled and hymns were sung; at the Ἡφαίστεια, finally, there was a torch-race in his honour. The Greeks frequently set small dwarf-like images of Hephaestus near their fireplaces. In works of art he is represented as a vigorous man with a beard, equipped, like a smith, with hammer and tongs; his left leg is shortened, to show his lameness. The Romans identified him with their Vulcanus (q. v.).

Heptanŏmis (Ἑπτανομίς). Middle Egypt, one of the three divisions of the country.

Heptapylos (ἑπτάπυλος). "Seven-gated." A name of Thebes in Boeotia, distinguishing it from the Egyptian Thebes, which is called "hundred-gated" (ἑκατόμπυλοι).

Hera. See HERÉ.

Heraclēa (Ἡράκλεια). A name given to more than forty towns in Europe, Asia, Africa, and the islands of the Mediterranean. They are supposed to have derived this name from Heracles, and to have either been built in honour of him or placed under his protection. The most famous of these places were:

IN GREECE.—(1) A city of Elis, near the centre of the province, to the southeast of Pisa, near the confluence of the Cytherus and Alpheus. (2) A city of Acarnania, on the shore of the Ionian Sea, and opposite the island of Carnus. (3) A city of Epirus, on the confines of Athamania and Molossis, and near the sources of the Aras. (4) LYNCESTIS, a town of Macedonia, at the foot of the Candavian Mountains, on the confines of Illyria. Its ruins still retain the name of Erekli. Mention is made of this town in Caesar (*B. C.* iii. 79). (5) SINTĬCA, the principal town of the Sinti in Thrace. We are informed by Livy (xl. 24) that Demetrius, the son of Philip, was here imprisoned and murdered. Mannert thinks it the same with the Heraclea built by Amyntas, the brother of Philip. (6) TRACHINIA, a town of Thessaly, founded by the Lacedaemonians, and a colony from Trachis, about B.C. 426, in the sixth year of the Peloponnesian War (Thuc. iii. 92). It was distant about sixty stadia from Thermopylae and twenty from the sea. Iason, tyrant of Pherae, took possession of this city at one period, and caused the walls to be pulled down (Xen. *Hist. Gr.* vi. 4, 27). Heraclea, however, again arose from its ruins, and became a flourishing city under the Aetolians, who sometimes held their general council within its walls (Livy, xxv. 5). It was taken by the Roman consul, Acilius Glabrio, after a long and obstinate siege (Livy, xxxvii. 24; Polyb. x. 42).

IN ITALY, GAUL, etc.—(7) A city of Lucania in Italy, and situated between the Aciris and Siris. It was founded by the Tarentini after the destruction of the ancient city of Siris, which stood at the mouth of the latter river (B.C. 428). This city is rendered remarkable in history, as having been the seat of the general council of the Greek states. (8) A city of Campania, more commonly known by the name of Herculaneum. (9) CACCABARIA, a city on the confines of Italy and Gaul, in Narbonensis Secunda. It was situated on the coast, to the south of Forum Iulii. (10) MINŌA, a city of Sicily on the southern coast, northeast of Agrigentum, at the mouth of the river Camicus. It was founded by Minos when he pursued Daedalus hither, and was subsequently called Heraclea from Heracles, after his victory over Eryx—so, at least, said the fables of the day. Some authorities make the original name to have been Macara, and Minos to have been not the founder but the conqueror of the place (Mela, ii. 7; Livy, xxxiv. 35).

IN ASIA, AFRICA, etc.—(11) PONTĬCA (Ἡράκλεια Πόντου). A city on the coast of Bithynia, about twelve stadia from the river Lycus. It was founded by a colony of Megareans, strengthened by some Tanagreans from Boeotia; the numbers of the former, however, so predominated that the city was in general considered as Doric. This place was famed for its naval power and its consequence among the Asiatic States. Memnon composed a history of the tyrants who reigned at Heraclea during a space of eighty-four years; but we have only now the abridgment of Photius, which is confirmed by incidental notices contained in Aristotle (*Polit.* vi. 5). (12) A city of Aeolis, at the entrance of the Gulf of Adramyttium, opposite Mitylené. (13) A city in southern Aeolis, on the seacoast, near Cumae. (14) A city of Caria, on the seacoast, near the mouth of the river Latmus, between Miletus and Priené (Ptol. v. 10). It was called, for distinction's sake from other places of the same name, HERACLĒA LATMI. (15) A city of Syria, in the district of Cyrrhestica, northwest of Hierapolis and northeast of Beroea, near the confines of Comagené. (16) A city of Lower Egypt, situated in the Delta, to the northeast of the Canopic mouth of the Nile. (17) HERACLEOPŎLIS MAGNA, a city of Egypt, in the Heracleotic nome, of which it was the capital. The ichneumon was worshipped here. (18) HERACLEOPŎLIS PARVA, a city of Egypt, southwest of Pelusium, within the Delta.

Heracleopŏlis (Ἡρακλεούπολις). (1) PARVA (ἡ μικρά), called SETHRON, a city of Lower Egypt. (2) MAGNA (ἡ μεγάλη), the capital of the Nomos Heracleopolites in Middle Egypt identical with Heraclea. See above.

Herăcles (Ἡρακλῆς: Latin, HERCŬLES). Heracles is not only one of the oldest heroes in the Greek mythology, but the most famous of all. Indeed, the traditions of similar heroes in other Greek tribes, and in other nations, especially in the East, were transferred to Heracles; so that the scene of his achievements, which is, in the Homeric poems, confined on the whole to Greece, became almost coextensive with the known world;

and the story of Heracles was the richest and most comprehensive of all the heroic myths.

Heracles was born in Thebes, and was the son of Zeus by Alcmené, the wife of Amphitryon, whose form the god assumed while he was absent in the war against the Teleboi. On the day which he should have been born, Zeus announced to the gods that a descendant of Perseus was about to see the light, who would hold sway over all the Perseïdae. Heré cunningly induced her consort to confirm his words with an oath. She hated the unborn son as the son of her rival, and hence in her capacity as the goddess of childbirth caused the queen of Sthenelus of Mycenae, a descendant of Perseus, to give birth prematurely to Eurystheus, while she postponed the birth of Heracles for seven days. Hence it was that Heracles, with his gigantic strength, came into the service of the weaker Eurystheus. Heré pursued him with her hatred during the whole of his natural life. He and his twin brother Iphicles, the son of Amphitryon, were hardly born, when the goddess sent two serpents to their cradle to destroy them. Heracles seized them and strangled them. The child grew up to be a strong youth, and was taught by Amphitryon to drive a chariot, by Autolycus to wrestle, by Eurytus to shoot with the bow, and by Castor to use the weapons of war. Chiron instructed him in the sciences, Rhadamanthus in virtue and wisdom, Eumolpus (or according to another account, Linus) in music. When Linus attempted to chastise him, Heracles struck him dead with his lute. Amphitryon, accordingly, alarmed at his untamable temper, sent him to tend his flocks on Mount Cithaeron.

It was at this time, according to the Sophist Prodicus, that the event occurred which occasioned the fable of the "Choice of Heracles" (Xen. *Mem.* ii. 2). Heracles was meditating in solitude as to the path of life which he should choose, when two tall women appeared before him—the one called Pleasure, the other called Virtue. Pleasure promised him a life of enjoyment, Virtue a life of toil crowned by glory. He decided for Virtue. After destroying the savage lion of Cithaeron, he returned, in his eighteenth year, to Thebes, and freed the city from the tribute which it had been forced to pay to Erginus of Orchomenus, whose heralds he deprived of their ears and noses. Creon, king of Thebes, gave him, in gratitude, his daughter Megara as wife. But it was not long before the Delphic oracle commanded him to enter the service of Eurystheus, king of Mycenae and Tiryns, and perform twelve tasks which he should impose upon him. This was the humiliation which Heré had in store for him. The oracle promised him, at the same time, that he should win eternal glory, and indeed immortality, and change his present name Alcaeus (from his paternal grandfather) or Alcides (from ἀλκή, "strength") for Heracles ("renowned through Heré"). Nevertheless, he fell into a fit of madness, in which he shot down the three children whom Megara had borne him. When healed of his insanity, he entered into the service of Eurystheus.

The older story says nothing of the exact number (twelve) of the labours (ἆθλοι) of Heracles. The number was apparently invented by the poet Pisander of Rhodes, who may have had in his eye the contests of the Phœnician god Melkart with the twelve hostile beasts of the Zodiac. It was also Pisander who first armed the hero with the club, and the skin taken from the lion of Cithaeron or Nemea. Heracles was previously represented as carrying bow and arrows, and the weapons of a Homeric hero.

The twelve labours of Heracles were as follows: (1) The contest with the invulnerable lion of Nemea, the offspring of Typhon and Echidna. Heracles drove it into its cavern and strangled it in his arms. With the impenetrable hide, on which nothing could make any impression but the beast's own claws, he clothed himself, the jaws covering his head. (2) The hydra or water-snake of Lerna, also a child of Typhon and Echidna. This monster lived in the marsh of Lerna, near Argos, and was so poisonous that its very breath was fatal. It had nine heads, one of which was immortal. Heracles scared it out of its lair with burning arrows, and cut off its head; but for every head cut off two new ones arose. At length Iolaüs, the charioteer of Heracles and son of his brother Iphicles, seared the wounds with burning brands. Upon the immortal head he laid a heavy mass of rock. He anointed his arrows with the monster's gall, so that henceforth the wounds they inflicted were incurable. Eurystheus refused to accept this as a genuine victory, alleging the assistance offered by Iolaüs. (3) The boar of Erymanthus, which infested Arcadia. Heracles had been commanded to bring it alive to Mycenae, so he chased it into an expanse of snow, tired it out, and caught it in a noose. The mere sight of the beast threw Eurystheus into such a panic that he slunk away

Heracles and the Nemean Lion. (Pompeian painting. Overbeck.)

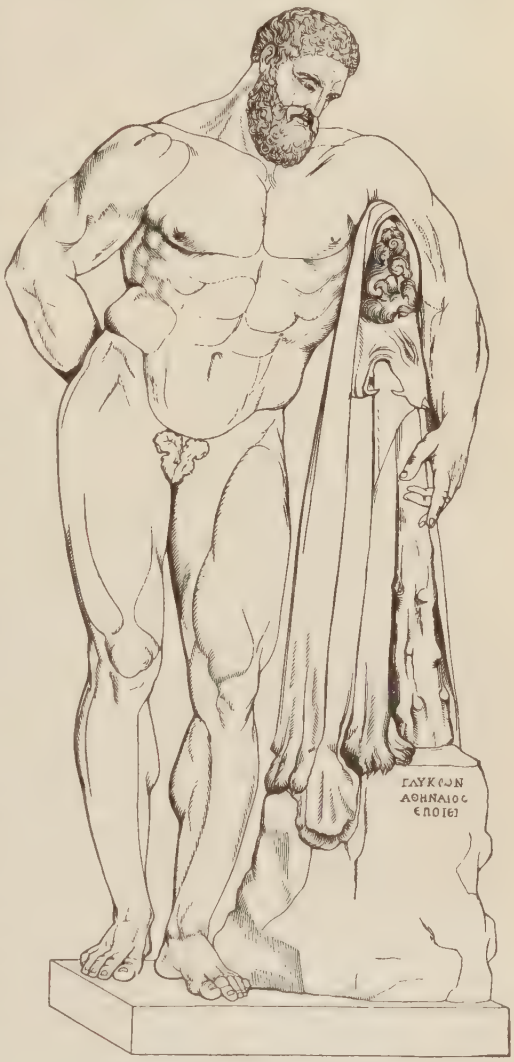
into a tub underground and bid the hero, in future, to show the proof of his achievements outside the city gates. (On the contest with the Centaurs which Heracles had to undergo on his way to the chase, see PHOLUS and CHIRON.) (4) The hind of Mount Cerynea, between Arcadia and Achaia. Another account localizes the event on Mount Maenalus, and speaks of the Maenalian hind. Its horns were of gold and its hoofs of brass, and it had been dedicated to Artemis by the Pleiad Taÿgeté. Heracles was to take the hind alive. He followed her for a whole year up to the source of the Ister in the country of the Hyperboreans. At length she returned to Arcadia, where he wounded her with an arrow on the banks of the Ladon, and so caught her. (5) The birds that infested the lake of Stymphalus, in Arcadia. These were man-eating monsters, with claws, wings, and beaks of brass, and feathers that they shot out like arrows. Heracles scared them with a brazen rattle, and succeeded in killing part, and driving away the rest, which settled on the island of Aretias in the Black Sea, to be frightened away, after a hard fight, by the Argonauts. (6) Heracles was commanded to bring home for Admeté, the daughter of Eurystheus, the girdle of Hippolyté, queen of the Amazons. After many adventures he landed at Themiscyra, and found the queen ready to give up the girdle of her own accord. But Heré spread a rumour among the Amazons that their queen was in danger, and a fierce battle took place, in which Heracles slew Hippolyté and many of her followers. On his return he slew, in the neighbourhood of Troy, a sea-monster, to whose fury King Laomedon had offered up his daughter Hesione. Laomedon refused to give Heracles the reward he had promised, whereupon the latter, who was hastening to return to Mycenae, threatened him with future vengeance. (See LAOMEDON.) (7) The farm-yard of Augeas, king of Elis, in which lay the dung of three thousand cattle, was to be cleared in a day. Heracles completed the task by turning the rivers Alpheus and Peneus into the yard. Augeas now contended that Heracles was only acting on the commission of Eurystheus, and on this pretext refused him his promised reward. Heracles slew him afterwards with all his sons, and thereupon founded the Olympian Games. (See AUGEAS). (8) A mad bull had been sent up from the sea by Poseidon to ravage the island of Creté, in revenge for the disobedience of Minos. (See MINOS.) Heracles was to bring him to Mycenae alive. He caught the bull, crossed the sea on his back, threw him over his neck and carried him to Mycenae, where he let him go. The animal wandered all through the Peloponnesus and ended by infesting the neighbourhood of Marathon, where he was at length slain by Theseus. (9) Diomedes, a son of Ares, and king of the Bistones in Thrace, had some mares which he used to feed on the flesh of the strangers landing in the country. After a severe struggle, Heracles overcame the king, threw his body to the mares, and took them off to Mycenae, where Eurystheus let them go. (10) The oxen of Geryones, the son of Chrysaor and the ocean nymph Callirrhoé. Geryones was a giant with three bodies and mighty wings, who dwelt on the island of Erythea, in the farthest West, on the borders of the Ocean stream. He had a herd of red cattle, which were watched by the shepherd Eurytion and his two-headed dog Orthrus, the offspring of Typhon and Echidna. In quest of these cattle, Heracles, with many adventures, passed through Europe and Libya. On the boundary of both continents he set up, in memory of his arrival, the two pillars which bear his name, and at length reached the Ocean stream. Oppressed by the rays of the neighbouring sun, he aimed his bow at the Sun-god, who marvelled at his courage, and gave him his golden bowl to cross the Ocean in. Arrived at Erythea, Heracles slew the shepherd and his dog, and drove off the cattle. Menoetius, who tended the herds of Hades in the neigbourhood, brought news to Geryones of what had happened. Geryones hurried in pursuit, but after a fierce contest fell before the arrows of Heracles. The hero returned with the cattle through Iberia, Gaul, Liguria, Italy, and Sicily, meeting everywhere with new adventures, and leaving behind him tokens of his presence. At the mouth of the Rhone he had a dreadful struggle with the Ligyes; his arrows were exhausted, and he had sunk in weariness upon his knee, when Zeus rained a shower of innumerable stones from heaven, with which he prevailed over his enemies. The place was ever after a stony desert plain, and was identified with the Campus Lapidosus near Massilia (Marseilles). (See, further, CACUS; ERYX.) Heracles had made the circuit of the Adriatic and was just nearing Greece, when Heré sent a gadfly and scattered the herd. With much toil he wandered through the mountains of Thrace as far as the Hellespont, but then only succeeded in getting together a part of the cattle. After a dangerous adventure with the giant Alcyoneus, he succeeded at length in returning to Mycenae, where Eurystheus offered up the cattle to Heré (Apollod. i. 6, 1). (11) The golden apples of the Hesperides. (See HESPERIDES.) Heracles was ignorant where the gardens of the Hesperides were to be found in which the apples grew. He accordingly repaired to the nymphs who dwelt by the Eridanus, on whose counsel he surprised Nereus, the omniscient god of the sea, and compelled him to give an answer. On this he journeyed through Libya, Egypt, and Ethiopia, where he slew Antaeus, Busiris, and Emathion. (See under these titles.) He then crossed to Asia, passed through the Caucasus, where he set Prometheus free, and on through the land of the Hyperboreans till he found Atlas. Following the counsel

Heracles and Bull. (From a bas-relief in the Vatican.)

of Prometheus, he sent Atlas to bring the apples, and in his absence bore the heavens for him on his shoulders. Atlas returned with them, but declined to take his burden upon his shoulders again, promising to carry the apples to Eurystheus himself. Heracles consented, and asked Atlas to take the burden only a moment, while he adjusted a cushion for his head; he then hurried off with his prize. Another account represents Heracles as slaying the serpent Ladon, who guarded the tree, and plucking the apples himself. Eurystheus presented him with the apples; he dedicated them to Athené, who restored them to their place. (12) Last he brought the dog Cerberus up from the lower world. This was the heaviest task of all. Conducted by Hermes and Athené, he descended into Hades at the promontory of Taenarum. In Hades he set Theseus free, and induced the prince of the infernal regions to let him take the dog to the realms of day, if only he could do so without using his weapons. Heracles bound the beast by the mere strength of arm, and carried him to Eurystheus, and took him back again into Hades. While in the upper world the dog, in his disgust, spat upon the ground, causing the poisonous herb aconite to spring up.

His tasks were now ended, and he returned to Thebes. His first wife, Megara, he wedded to his faithful friend Iolaüs, and then journeyed into Oechalia to King Eurytus, whose daughter Iolé he meant to woo. The king's son Iphitus favoured his suit, but Eurytus rejected it with contempt. Soon after this Autolycus stole some of Eurytus's cattle, and he accused Heracles of the robbery. Meanwhile, Heracles had rescued Alcestis, the wife of Admetus (q. v.), from death. Iphitus met Heracles, begged him to help him in looking for the stolen cattle, and accompanied him to Tiryns. Here, after hospitably entertaining him, Heracles threw him, in a fit of madness, from the battlements of his stronghold. A heavy sickness was sent on him for this murder, and Heracles prayed to the god of Delphi to heal him. Apollo rejected him, whereupon Heracles attempted to carry away the tripod. A conflict ensued, when Zeus parted the combatants with his lightning. The oracle bade Heracles to hire himself out for three years for three talents, and pay the money to Eurytus. Hermes put him into the service of Omphalé, queen of Lydia, daughter of Iardanus, and widow of Tmolus. Heracles was degraded to female drudgery, was clothed in soft raiment and set to spin wool, while the queen assumed the lion skin and the club. The time of service over, he undertook an expedition of vengeance against Laomedon of Troy. He landed on the coast of the Troad with eighteen ships, manned by the boldest of heroes, such as Telamon, Peleus, and Oïcles. Laomedon succeeded in surprising the guard by the ships and in slaying Oïcles. But the city was stormed, Telamon being the first to climb the wall, and Laomedon, with all his sons except Podarces, was slain by the arrows of Heracles. (See PRIAMUS.) On his return Heré sent a tempest upon him. On the island of Cos he had a hard conflict to undergo with Eurytion, the son of Poseidon, and his sons. Heracles was at first wounded and forced to fly, but prevailed at length with the help of Zeus.

After this Athené summoned the hero to the battle of the gods with the giants, who were not to be vanquished without his aid. (See GIGANTES.) Then Heracles returned to the Peloponnesus, and took vengeance on Augeas and on Neleus of Pylos, who had refused to purify him for the murder of Iphitus. (See AUGEAS; MOLIONIDAE; NELEUS; PERIDYMENUS.) In the battle with the Pylians he went so far as to wound Hades, who had come up to their assistance. Hippocoön of Sparta and his numerous sons he slew in revenge for their murder of Oeonus, a son of his maternal uncle Licymnius. In this contest his ally was King Cepheus of Tegea, by whose sister Augé he was father of Telephus. Cepheus with his twenty sons were left dead on the field.



Heracles now won as his wife Deïanira, the daughter of Oeneus of Calydon. (See ACHELOÜS.) He remained a long time with his father-in-law, and at length, with his wife and his son Hyllus, he passed on into Trachis to the hospitality of his friend Ceyx. At the ford of the river Evenus he encountered the Centaur Nessus, who had the right of carrying travellers across. Nessus remained behind and attempted to do violence to Deïanira, upon which Heracles shot him through with his poisoned arrows. The dying Centaur gave some of his infected blood to Deïanira, telling her that, should her husband be unfaithful, it would be a means of restoring him. Heracles had a stubborn contest with Theodamas, the king of the Dryopes, killed him, and took his son Hylas away. He then reached Trachis, and was received with the friendliest welcome by King Ceyx. Next he started to fight with Cycnus (q. v.), who had challenged him to single combat; and afterwards, at the request of Aegimius, prince of the Dorians, undertook a war against the Lapithae, and an expedition of revenge against Eurytus of Oechalia. He stormed the fortress, slew Eurytus with his sons, and carried off Iolé, who had formerly been denied him, as his prisoner. He was about to offer a sacrifice to his father Zeus on Mount Cenaeum, when Deïanira, jealous of Iolé, sent him a robe stained with the blood of Nessus. It had hardly grown warm upon his body when the dreadful poison began to devour his flesh. Wild with anguish, he hurled Lichas, who brought him the robe, into the sea, where he was changed into a tall cliff. In the attempt to tear off the robe, he only tore off pieces of his flesh. Apollo bade him be carried to the top of Oeta, where he had a great funeral pyre built up for him. This he ascended; then he gave Iolé to his son Hyllus to be his wife, and bade Poeas, the father of Philoctetes, to kindle the pyre. According to another story, it was Philoctetes himself, whom Heracles presented with his bow and poisoned arrows, who performed this office. The flames had hardly started up, when a cloud descended from the sky with thunder and lightning, and carried the son of Zeus up to heaven, where he was welcomed as one of the immortals. Heré was reconciled to him, and he was wedded to her daughter Hebé, the goddess of eternal youth. Their children were Alexiares ("Averter of the Curse") and Anicetus ("the Invincible"), the names merely personifying two of the main qualities for which the hero was worshipped.

About the end of Heracles nothing is said in the *Iliad* but that he, the best-loved of Zeus's sons, did not escape death, but was overcome by fate, and by the heavy wrath of Heré. In the *Odyssey* his ghost, in form like black night, walks in the lower world with his bow bent and his arrows ready,

while the hero himself dwells among the immortals, the husband of Hebé. For the lives of his children, and the end of Eurystheus, see HYLLUS.

Heracles was worshipped partly as a hero, to whom men brought the ordinary libations and offerings, and partly as an Olympian deity, an immortal among the immortals. Immediately after his apotheosis his friends offered sacrifice to him at the place of burning, and his worship spread from thence through all the tribes of Hellas. Diomus the son of Colyttus, an Athenian, is said to have been the first who paid him the honours of an immortal. It was he who founded the gymnasium called Cynosarges, near the city. This gymnasium, the sanctuary at Marathon, and the temple at Athens were the three most venerable shrines of Heracles in Attica. Diomus gave his name to the Diomeia, a merry festival held in Athens in honour of Heracles. Feasts to Heracles (Ἡράκλεια), with athletic contests, were celebrated in many places. He was the hero of labour and struggle, and the patron deity of the gymnasium and the palaestra. From early times he was regarded as having instituted the Olympic Games; as the founder of the Olympic sanctuaries and the Olympic truce, the planter of the shady groves, and the first competitor and victor in the contests. During his earthly life he had been a helper of gods and men, and had set the earth free from monsters and rascals. Accordingly he was invoked in all the perils of life as the saviour (σωτήρ) and the averter of evil (ἀλεξίκακος). Men prayed for his protection against locusts, flies, and noxious serpents. He was a wanderer, and had travelled over the whole world; therefore he was called on as the guide on marches and journeys (ἡγεμόνιος). In another character he was the glorious conqueror (καλλίνικος) who, after his toils are over, enjoys his rest with wine, feasting, and music. Indeed, the fable represents him as having, in his hours of repose, given as striking proofs of inexhaustible bodily power as in his struggles and contests. Men liked to think of him as an enormous eater, capable of devouring a whole ox; as a lusty boon companion, fond of delighting himself and others by playing the lyre. In Rome, as Hercules, he was coupled with the Muses, and, like Apollo elsewhere, was worshipped as Μουσαγέτης (Hercules Musarum), or master of the Muses. (On the connection between Heracles and the Muses, see Klügmann in the *Commentationes in Honorem Th. Mommseni*, p. 262 [1877], and Lobeck, *Phryn.* 430). Under Augustus, Marcius Philippus built a temple to him at Rome as Hercules Musarum (Suet. *Aug.* 29, with Peck's note). After his labours he was supposed to have been fond of hot baths (θέρμαι) which were accordingly deemed sacred to him. Among trees, the wild olive and white poplar were consecrated to him; the poplar he was believed to have brought from distant countries to Olympia.

Owing to the influence of the Greek colonies in Italy, the worship of Heracles was widely diffused among the Italian tribes. It attached itself to local legends and religion; the conqueror of Cacus, for instance, was originally not Heracles, but a powerful shepherd called Garanos. Again, Heracles came to be identified with the ancient Italian deity Sancus or Dius Fidius, and was regarded as the god of happiness in home and field, industry and war, as well as of truth and honour. His altar was the Ara Maxima in the cattle-market (Forum Boarium), which he was believed to have erected himself. (See CACUS.) Here they dedicated to him a tithe of their gains in war and peace, ratified solemn treaties, and invoked his name to witness their oaths. He had many shrines and sacrifices in Rome, corresponding to his various titles, *Victor* (Conqueror), *Invictus* (Unconquered), *Custos* (Guardian), *Defensor* (Defender), and others. His rites were always performed in Greek fashion, with the head covered. It was in his temple that soldiers and gladiators were accustomed to hang up their arms when their service was over. In the stone-quarries the labourers had their Hercules Saxarius

Farnese Hercules. (Naples Museum.)

(Hercules of the Stone). He was called the father of Latinus, the ancestor of the Latins, and to him the Roman gens of the Fabii traced their origin. The ancient family of the Potitii were said to have been commissioned by the god in person to provide, with the assistance of the Pinarii, for his sacrifices at the Ara Maxima (Livy, i. 7). In B.C. 310 the Potitii gave the service into the hands of the *servi publici*. Before a year had passed

the flourishing family had become completely extinct.

In works of art Heracles is represented as the ideal of manly strength, with full, well knit, and muscular limbs, serious expression, a curling beard, short neck, and a head small in proportion to the limbs. His equipment is generally the club and the lion's skin. The type appears to have been mainly fixed by Lysippus. The Farnese Hercules, by the Athenian Glycon, is probably a copy of one by Lysippus. Heracles is portrayed in repose, leaning on his club, which is covered with the lion's skin. (See FARNESE HERCULES.) The Heracles of the Athenian Apollonius (q. v.), now only a torso, is equally celebrated. See Vogel, *Hercules secundum Graecorum Poetas*, etc. (Halle, 1830); and Roscher, *Ausführliches Lexikon d. griech. und röm. Mythologie*, s. h. v.

Heraclianus (Ἡρακλιανός). An officer of the emperor Honorius who put Stilicho to death in A.D. 408, and got the government of Africa as his reward. After serving against Alaric and the usurper Attalus, whom Alaric had made emperor, Heraclianus revolted and invaded Italy. The attempt was unsuccessful, and on his return to Carthage he was there put to death by order of Honorius, in A.D. 413. See STILICHO.

Heraclidae (Ἡρακλεῖδαι). A name given in ancient legend to a powerful Achaean race or family, the fabled descendants of Heracles. According to the account of the ancient writers, the children of Heracles, after the death of that hero, being persecuted by Eurystheus, took refuge in Attica, and there defeated and slew the tyrant at the Scironian Rock, near the Saronic Gulf. When their enemy had fallen, they resumed possession of their birthright in the Peloponnesus; but they had not long enjoyed the fruits of their victory before a pestilence, in which they recognized the finger of heaven, drove them again into exile. Attica again afforded them a retreat. When their hopes had revived, an ambiguous oracle encouraged them to believe that, after they had reaped their third harvest, they should find a prosperous passage through the Isthmus into the land of their fathers. But, at the entrance of the Peloponnesus, they were met by the united forces of the Achaeans, Ionians, and Arcadians. Their leader Hyllus, the eldest son of Heracles, proposed to decide the quarrel by single combat; and Echemus, king of Tegea, was selected by the Peloponnesian confederates as their champion. Hyllus fell; and the Heraclidae were bound by the terms of the agreement to abandon their enterprise for a hundred, or, according to some accounts, for fifty, years. Yet both Cleodaeus, son of Hyllus, and his grandson Aristomachus, renewed the attempt with no better fortune. After Aristomachus had fallen in battle, the ambiguous oracle was explained to his sons Aristodemus, Temenus, and Cresphontes; and they were assured that the time, the third generation, had now come, when they should accomplish their return; not, however, as they had expected, over the guarded Isthmus, but across the mouth of the western gulf from Naupactus, where the opposite shores are parted by a channel only a few furlongs broad. Thus encouraged, with the aid of the Dorians, Aetolians, and Locrians, they crossed the strait, vanquished Tisamenus, son of Orestes, and divided the fairest portion of the Peloponnesus among them. (See DORIS.) For the historical significance of this legend, see HELLAS. For the play of Euripides on the subject of the Heraclidae, see EURIPIDES, p. 639.

Heraclides (Ἡρακλείδης). (1) Surnamed PONTICUS. A Greek philosopher, born at Heraclea in Pontus about B.C. 380. He came early to Athens, where he became a disciple of Plato and Aristotle, and had made a reputation by about B.C. 340. He was the author of some sixty works on a great variety of subjects—philosophy, mathematics, music, grammar, poetry, political and literary history, and geography. He was a learned and interesting writer, but somewhat deficient in critical power. There are a few fragments of his works remaining, besides an extract from a book on constitutions which bears his name, edited by Köler (Halle, 1804), Coraës (Paris, 1805), and Müller. See Deswert, *De Heraclide Pontico* (Louvain, 1830), and F. W. Schmidt, *De Heraclidae Pontici etc. Dialogis Deperditis* (Breslau, 1867). (2) A Syracusan, the son of Lysimachus, and one of the generals when Syracuse was attacked by the Athenians in B.C. 415. (3) A commander of the mercenary troops under the younger Dionysius at Syracuse. He subsequently joined Dion in expelling Dionysius, and was himself assassinated in B.C. 354. (4) A physician of Tarentum who flourished in the second century B.C. and wrote on Materia Medica.

Heraclitus (Ἡράκλειτος). (1) A Greek philosopher of Ephesus, who lived about B.C. 535–475, during the time of the first Persian domination over his native city. As one of the last of the family of Androclus, the descendant of Codrus, who had founded the colony of Ephesus, Heraclitus had certain honorary regal privileges, which he renounced in favour of his brother. He likewise declined an invitation of King Darius to visit his court. He was an adherent of the aristocracy, and when, after the defeat of the Persians, the democratic party came into power, he withdrew in ill-humour to a secluded estate in the country, and gave himself up entirely to his studies. In his later years he wrote a philosophical treatise, which he deposited in the temple of Artemis, making it a condition that it should not be published till after his death. He was buried in the marketplace of Ephesus, and for several centuries later the Ephesians continued to engrave his image on their coins.

Heraclitus was one of the subtlest of all the metaphysicians of Greece, and his importance as a philosopher lies in the fact that he was the founder of an independent metaphysical system which sought to obviate the difficulty of overcoming the contradictions between the one and the phenomenal many. His great work "On Nature" (Περὶ Φύσεως), in three books, was written in the Ionian dialect, and is the oldest monument of Greek prose. Considerable fragments of it have come down to us. The language is bold, harsh, and figurative; the style is so careless that the syntactical relations of the words are often hard to perceive; and the thoughts are profound. All this made Heraclitus so difficult a writer that he went in antiquity by the name "the Obscure" (ὁ σκοτεινός), and Lucretius attacks him on this ground (i. 638–644). From his gloomy view of life he is often called "the Weeping Philosopher," as Democritus is known as "the Laughing Philosopher." Cf. Juv. x. 28 foll.

Knowledge, according to Heraclitus, is based upon perception by the senses. Perfect knowledge is only given to the gods, but a progress in knowledge is possible to men. Wisdom consists in the recognition of the intelligence which, by means of the world-soul, guides the universe. Everything is in an eternal flux (*πάντα ῥεῖ*); nothing therefore, not even the world in its momentary form, nor the gods themselves, can escape final destruction. The ultimate principle into which all existence is resolvable is fire. As fire changes continually into water and then into earth, so earth changes back to water and water again to fire. The world, therefore, arose from fire, and in alternating periods is resolved again into fire, to form itself anew out of this element. The division of unity, or of the divine original fire, into the multiplicity of opposing phenomena, is "the way downwards," and the consequence of a war and a strife. Harmony and peace lead back to unity by "the way upwards." Nature is constantly dividing and uniting herself, so that the multiplicity of opposites does not destroy the unity of the whole. The existence of these opposites depends only on the difference of the motion on "the way upwards" from that on "the way downwards"; all things, therefore, are at once identical and not identical. The principle of the universe is "becoming," which implies that everything is and, at the same time, is not, so far as the same relation is concerned.

The letters ascribed to Heraclitus are spurious. See Bernays, *Heraclitea* (Bonn, 1848); id. *Die heraklitischen Briefe* (Berlin, 1859); Lassalle, *Die Philosophie Herakleitos' des Dunkeln*, 2 vols. (Berlin, 1858) — the most exhaustive monograph on the philosophy of Heraclitus; and Schuster, *Heraklit von Ephesus* (Leipzig, 1872). The fragments of Heraclitus were edited and published in England in 1877 by Bywater. See PHILOSOPHIA.

(2) An Academic philosopher of Tyre, whose treatise Περὶ Ἀπίστων still exists and has been edited by Westermann (Brunswick, 1843).

Heraea (Ἡραία). A town in Arcadia, on the right bank of the Alpheus, near the borders of Elis.

Heraea (*τὰ Ἡραῖα*). A festival held at Argos every five years in honour of Heré, the goddess of the country. The priestess of Heré drove in a car drawn by white oxen to the Heraeum, or temple of the goddess, situated between Argos and Mycenae. Meantime the people marched out in procession, the fighting men in their arms. There was a great sacrifice of oxen (*ἑκατόμβη*), followed by a general sacrificial banquet and games of all sorts. A special feature of these was a contest in throwing the javelin, while running at full speed, at a shield set up at the end of the course. The victor received a crown and a shield, which he carried in the final procession. Like feasts were held at Aegina, Samos, Elis, Cos, Athens, and other places (Hermann, *Gottesd. Alterth.* § 51, n. 28).

Heraei Montes (*τὰ Ἥραια ὄρη*). A range of mountains in Sicily, running from the centre of the island southeast, and ending in the promontory Pachynum.

Heraeum (Ἡραῖον). The name given to any temple of Heré, that at Argos being the most famous.

Heralds. See PRAECO.

Herald's Staff. See CADUCEUS.

Herbĭta (Ἕρβιτα). A town in Sicily, north of Agyrium, in the mountains, the residence of the tyrant Archonides.

Herculaneum (Ἡράκλειον). (1) A town in Samnium. (2) A city of Campania, on the coast, and not far from Neapolis (Naples). The form HERCULĀNUM is modern. Nothing is known respecting the origin of Herculaneum, except that fabulous accounts ascribed its foundation to Hercules on his return from Spain (Dion. Hal. i. 44). It may be inferred, however, from a passage in Strabo, that the town was of great antiquity. It may be reasonably conjectured, too, that Herculaneum was a Greek city, but that its name was altered to suit the Latin or Oscan pronunciation. At first it was only a fortress, which was successively occupied by the Osci, Tyrrheni, Pelasgi, Samnites, and lastly by the Romans. Being situated close to the sea, on elevated ground, it was exposed to the southwest wind, and from that circumstance was reckoned particularly healthful. We learn from Velleius Paterculus that Herculaneum suffered considerably during the civil wars (cf. Florus, i. 16). This place is mentioned also by Mela (ii. 4). Ovid likewise notices it under the name of Urbs Herculea (*Met.* xv. 711). Herculaneum, according to the common account, was overwhelmed by an eruption of Vesuvius in the first year of the reign of Titus, A.D. 79. Pompeii and Stabiae, which stood near, shared the same fate. It is possible, however, that the subversion of Herculaneum was not sudden, but progressive, since Seneca mentions a partial demolition which it sustained from an earthquake (*Nat. Quaest.* vi. 1). After being buried for more than sixteen hundred years, these cities were accidentally discovered—Herculaneum in 1719, by labourers in deepening a well; and Pompeii some years after. It appears that Herculaneum is in no part less than forty feet, and in some parts one hundred and twelve feet below the surface of the ground. Little was done to exhume the city until 1738, when some regular excavations were made. Above the city stand the two modern villages of Portici and Resina in the suburbs of Naples; and to the fear of undermining their buildings is due the fact that so much of the ancient city is still beneath the earth. The chief edifice of Herculaneum that has been disinterred is a fine theatre, built only a short time before the eruption and capable of accommodating 8000 persons. Part of the Forum, a colonnade, two small temples, and a villa have also been recovered, besides ruins of baths. Many other valuable remains of antiquity, such as busts, manuscripts, etc., have been found in the ruins of this ancient city, and are deposited in the Museo Nazionale at Naples. See Barré, *Herculaneum et Pompéi*, 8 vols., with 800 plates (Paris, 1837–40); Comparetti and De Petra, *La Villa Ercolanese dei Pisoni* (Turin, 1883); the works mentioned in Furchheim's *Bibliography of Pompeii, Herculaneum, and Stabiae* (Naples, 1891); and the articles PAPYRUS; POMPEII.

Hercŭles. (1) See HERACLES. (2) A son of Alexander the Great by Barsiné, the widow of the Rhodian Memnon, and murdered by Polysperchon, B.C. 310.

Hercŭles Musārum. See HERACLES, p. 793.

Herculeum. (1) PROMONTORIUM, a promontory in the Bruttiorum Ager, forming the most southern

angle of Italy to the east, now Capo Spartivento. (2) FRETUM, the strait which forms the communication between the Atlantic and Mediterranean. See ABILA; CALPÉ; COLUMNAE HERCULIS.

Hercŭlis Columnae. See COLUMNAE HERCULIS.

Hercŭlis Monoeci Portus. See MONOECUS.

Hercŭlis Portus. See COSA.

Hercynia Silva, Hercynius Saltus, Hercynium Iugum. An extensive range of mountains in Germany, covered with forests, described by Caesar (*B. G.* vi. 24, 25) as nine days' journey in breadth, and more than sixty days' journey in length, extending east from the territories of the Helvetii, Nemetes, and Rauraci, parallel to the Danube, to the frontiers of the Dacians. Under this general name Caesar appears to have included all the mountains and forests in the south and centre of Germany. The name is still preserved in the modern Harz and Erz. See GERMANIA.

Herdonia. A town in Apulia, destroyed by Hannibal.

Heré (Ionic, Ἥρη, and in Attic, Ἥρα: the name is often connected with the Latin *hĕra;* but on this, see Curtius, p. 119). In Greek mythology, the queen of heaven, eldest daughter of Cronus and Rhea, sister and lawful consort of Zeus. According to Homer, she was brought up in her youth by Oceanus and Tethys. But every place in which her worship was localized asserted that she was born there, and brought up by the Nymphs of the district. She is said to have long lived in secret intimacy with Zeus before he publicly acknowledged her as his lawful consort. Her worshippers celebrated her marriage (*ἱερὸς γάμος*) in the spring time. In the oldest version of the story it took place in the Islands of the Blessed, on the shore of the Ocean stream, where the golden apple-tree of the Hesperides sprang up to celebrate it. But this honour, too, was claimed by every place where Heré was worshipped. According to one local story, Zeus obtained the love of Heré by stealth, in the form of a cuckoo.

Heré seems originally to have symbolized the feminine aspects of the natural forces of which Zeus is the masculine representative. Hence she is at once his wife and his sister, shares his power and his honours, and, like him, has authority over the phenomena of the atmosphere. It is she who sends clouds and storms, and is mistress of the thunder and lightning. Her handmaids are the Horae or goddesses of the season, and Iris, the goddess of the rainbow. Like Zeus, men worship her on mountains, and pray to her for rain. The union of sun and rain, which wakes the earth to renewed fertility, is symbolized as the loving union of Zeus and Heré. In the same way a conflict of the winds is represented as the consequence of a matrimonial quarrel, usually attributed to the jealousy of Heré, who was regarded as the stern protectress of honourable marriage. Hence arose stories of Zeus ill-treating his wife. It was said that he scourged her, and hurled Hephaestus from heaven to earth when hurrying to his mother's assistance; that in anger for her persecution of his son Heracles, he hung her out in the air with golden chains to her arms and an anvil on each foot (*Il.* viii. 400). There were also old legends which spoke of Heré allying herself with Athené and Poseidon to bind Zeus in chains. Zeus was only rescued by the giant Aegaeon, whom Thetis called to his assistance. The birth of Athené was said to have enraged Heré to such a pitch that she became the mother of Typhon by the dark powers of the infernal regions. In fact, this constant resistance to the will of Zeus, and her jealousy and hatred of her consort's paramours and their children, especially Heracles, become in the poets a standing trait in her character.

In spite of all this, Homer represents her as the most majestic of all the goddesses. The other Olympians pay her royal honours, and Zeus treats her with all respect and confides all his designs to her, though not always yielding to her demands. She is the spotless and uncorruptible wife of the king of Heaven; the mother of Hephaestus, Ares, Hebé, and Ilithyia, and indeed may be called the only lawful wife in the Olympian court. She is, accordingly, before all other deities the goddess of marriage and the protectress of purity in married life. She is represented as of exalted but severe beauty, and appears before Paris as competing with Aphrodité and Athené for the prize of loveliness. In Homer she is described as of lofty stature, large eyes (*βοῶπις*), white arms (*λευκώλενος*), and beautiful hair. On women she confers bloom and strength; she helps them, too, in the dangerous hour of childbirth. Her daughters Hebé and Ilithyia personify both these attributes.

In earlier times Heré was not everywhere recognized as the consort of Zeus; at the primitive oracle of Dodona, for instance, Dioné occupies this position. The Peloponnesus may be regarded as

Head of Heré. (Naples. Supposed to be from a Statue by Polyclitus.)

the earliest seat of her worship, and in the Peloponnesus, during the Homeric period, Argos, Mycenae, and Sparta are her favourite seats. Of these, according to the poet, she is the passionate champion in the Trojan War. In later times the worship of Heré was strongly localized in Argos and Mycenae. At Argos she took the same commanding position as Athené at Athens, and the year was dated by the names of her priestesses. Between

these cities, at the foot of Mount Euboea, was situated the Heraeum (Ἡραῖον), a temple held in great honour. (See HERAEA.) At Corinth she was the goddess of the acropolis. At Elis a garment was offered her every five years by sixteen ladies chosen for the purpose, and maidens held a race in her honour on the race-course at Olympia. Boeotia had its feast of the *Daedala* (q. v.); Samos its large and splendid temple, built by Polycrates. The cuckoo was sacred to her as the messenger of spring, the season in which she was wedded to Zeus; so were the peacock and the crow, and among fruits the pomegranate, the symbol of wedded love and fruitfulness. Hecatombs were offered to her in sacrifice, as to Zeus.

In works of art she is represented as seated on a throne in a full robe, covering the whole figure. On her head is a sort of diadem, often with a veil; the expression of the face is severe and majestic, the eyes large and wide open, as in the Homeric description. The ideal type of Heré was found in the statue by Polyclitus in the temple at Argos. This was a colossal image, in gold and ivory, representing the goddess on her throne, her crown adorned with figures of the Graces and the Seasons, a pomegranate in one hand, and in the other a sceptre with the cuckoo on the top. The Farnese Heré at Naples, and the Ludovisi Iuno in Rome, are copies of this work. The Romans identified Heré with their own Iuno (q. v.).

Hereditas. See HERES.

Herennia Gens. A plebeian house at Rome originally Samnite. The Herennii were the patrons of the Marii (Livy, ix. 3).

Herennius. (1) SENECIO, a native of Spain, and a senator and quaestor at Rome under Domitian. His contempt for public honours, his upright character, and his admiration of Helvidius Priscus, whose life he wrote, made him hateful to the emperor, and caused him to be accused of high treason. He was condemned to death, and his work burned by the public executioner (Tac. *Agric.* 3; Pliny, *Ep.* iii. 33). (2) The father of Pontius the Samnite commander, who advised his son either to give freedom to the Romans ensnared at the Caudine Pass, or to exterminate them all (Livy, ix. 1 foll.). (3) GAIUS, a Roman, to whom a treatise on rhetoric in four books, ascribed by some to Cicero, is addressed. The treatise in question is generally regarded as not having been written by the Roman orator, but either by Antonius Gnipho or Q. Cornificius, usually cited simply as the "Auctor ad Herennium." See W. W. Fowler in the *Jour. of Philology*, x. 197; Krönhert, *De Rhet. ad Herennium* (Königsberg, 1873); the edition by F. Marx; and the article CORNIFICIUS. (4) See MODESTINUS.

Heres. An heir. (1) GREEK. At Athens, if a person died intestate, leaving sons, all of equal birthright, and none of them disinherited, the sons inherited the property in equal parts (*ἰσόμοιροι*), the eldest probably receiving the same share as the rest. If there were daughters, they were provided for by dowries given by the brothers, which, in case they were divorced or childless after marriage, went back to the remaining heirs. Girls so dowered were called *ἐπίπροικοι*. This was a matter of usage and not of formal law. If a man had no sons of his own, he usually adopted a son to continue the family and the religious worship connected with it. (See ADOPTIO.) If he had daughters, he would marry one of them to the adopted son; in this case the chief share of the inheritance would fall to this married daughter and her husband, the rest receiving dowries. If there were only daughters surviving, the succession passed to them. In such a case the next of kin had a legal right to one of the heiresses (*ἐπίκληρος*), and could demand to marry her, even if she had married some one else before receiving the inheritance; and poor heiresses (*θῆσσαι*), on the other hand, had a legal claim on their nearest of kin, either for marriage or for a provision suitable to their circumstances. (See EPICLERUS.) If a man had married an heiress, he was bound by custom and tradition, if he had sons, to name one as heir to the property which had come with his wife, and thus to restore the house of the maternal grandfather. Children born out of wedlock were illegitimate, and had no claim on the father's estate. If a man died intestate, leaving no heirs either of his body or adopted, his nearest relations in the male line inherited, and in default of these, those in the female line as far as the children of first cousins. Any one thinking he had a legal claim to the inheritance made an application to the archon to hand it over to him. The application was posted up in public, and read out in the following Ecclesia (Assembly). The question was then asked whether any one disputed the claim, or raised a counter-claim. If not, the archon assigned the inheritance to the claimant; otherwise the matter was decided by a lawsuit. Even after the assignment of an inheritance, it might be disputed in the lifetime of the holder, and for five years after his death. The claim of the nearest relation to an heiress was in the same way lodged with the archon and ratified before the Assembly.

(2) ROMAN. If a Roman died intestate, leaving a wife and children of his body or adopted, they were his heirs (*sui heredes*). But this did not apply to married daughters who had passed into the *manus* of their husbands, or the children who had been freed by emancipation from the *potestas* of their father. If the man left no wife or children, the *agnati*, or relations in the male line, inherited, according to the degree of their kinship. If there were no *agnati*, and the man was a patrician, the property went to his gens. The *cognati*, or relations in the female line, were originally not entitled to inherit by the civil law. But, as time went on, their claim was gradually recognized more and more to the exclusion of the *agnati*, until at last Justinian entirely abolished the privilege of the latter, and substituted the principle of blood-relationships for that of the civil law. Vestal Virgins were regarded as entirely cut off from the family union, and therefore could not inherit from an intestate, nor, in case of their dying intestate, did the property go to their family, but to the State. On the other hand, unlike other women, they had unlimited right of testamentary disposition. If a freedman died intestate and childless, the *patronus* and his wife had the first claim to inherit, then their children, then their *agnati*, and (if the *patronus* was a patrician) then his gens. In later times, even if a freedman, dying childless, left a will, the *patronus* and his sons had claim to half the property. Augustus made a number of provisions in the matter of freedmen's inheritance. The civil law made it compulsory on a man's *sui heredes* to accept an inheritance (*hereditatem adire*)

whether left by will or not. But as the debts were taken over with the property, the *edictum* of the praetor allowed the heirs to decline it. *A fortiori*, no other persons named in the will could be compelled to accept the legacy. See TESTAMENTUM.

Heres necessarius was a slave of the testator, who made him heir and *liber* at the same time. He was thus heir by necessity, becoming so without any action of his own, by the mere operation of the law. If a testator knew himself to be insolvent, he sometimes made a slave his heir to avoid the ignominy attached to a person whose property was sold to pay his debts (Gaius, ii. 154, etc.). The property of such an heir, acquired after his manumission, was not liable for the debts of the deceased. An insolvent inheritance was called *damnosa hereditas*.

Heres ex asse was the phrase used to describe one who was sole heir. So *heres ex dodrante*, an heir to three-quarters of an estate (Suet. *Iul.* 83); *heres ex parte sexta*, to the sixth; *ex parte dimidia*, to the half, etc.

See Hunger, *Das Erbrecht;* and Gans, *Das Erbrecht in weltgeschichtlicher Entwickelung*, 4 vols. (Berlin, 1823–35).

Herillus (Ἥριλλος). A native of Carthage, a Stoic philosopher, the disciple of Zeno of Citium, though differing from him in various points of doctrine. He held that the chief good is knowledge (*ἐπιστήμη*), a notion attacked by Cicero. (See Diog. Laërt. vii. 165 foll.; Cic. *Academ.* ii. 42; *De Fin.* ii. 11, 13 and often).

Hermae (Ἑρμαῖ), and dim. **Hermŭli** (*ἑρμίδια*). Pillars which terminated generally with a head of Hermes. In the earliest times Hermes (in whose worship the number 4 played a great part) was worshipped, especially in Arcadia (Pausan. viii. 4, § 4), under the form of a simple quadrangular pillar of marble or wood, with the significant mark of the male sex. As art advanced, the pillar was surmounted, first with a bearded head, and afterwards with a youthful head of the god. Hermes being the god

Hermes-pillar. (Pompeii.)

of traffic, roads, and boundaries, such pillars were erected to him in the streets and squares of towns; in Attica they were also erected along the country roads as mile-stones. Sometimes they were inscribed with apothegms and riddles; sometimes also with inscriptions in honour of those who had fought bravely for their country (Demosth. *Lept.* 112; Aeschin. *Or.* 3, § 183). In Athens there was an especially large number of them; in the marketplace to the northwest of the Acropolis, the Hermae, erected partly by private individuals and partly by corporations, formed a long colonnade extending between the Hall of Paintings (*στοὰ ποικίλη*) and the Royal Hall (*στοὰ βασίλειος*). Accordingly, the latter was sometimes called the Hall of the Hermae. When the heads of other divinities (such as Athenê, Heracles, Eros) were placed on such a pillar, it was then called Hermathena, Hermeracles, or Hermeros. At Rome the Hermae were used in the decoration of houses and villas, and also as posts for the ornamental railings of gardens. Great numbers have been preserved, and are now to be seen in the European museums.

Hermaea (Ἑρμαια). A festival celebrated at Cydonia, in the island of Crete, at which the slaves enjoyed complete freedom, and were waited upon by their masters, the usage suggesting the Roman Saturnalia (q. v.). Other feasts in honour of Hermes were held at Athens in the gymnasia, at Pheneos, Tanagra, Pellenê, etc.

Hermaeum or **Mercurii Promontorium** (Ἑρμαία ἄκρα). (1) On the southern shore of Crete. (2) A promontory of Sardinia, on the western shore, a little to the north of Bosa, now Capo della Cacca. (3) A promontory of Africa, in the district Zeugitana, now Cape Bon. It lay opposite Lilybaeum in Sicily (Polyb. i. 29).

Hermagŏras (Ἑρμαγόρας). (1) Of Temnos, a distinguished Greek rhetorician of the time of Cicero, belonging to the Rhodian school of oratory (Quint. iii. 1, § 16). (2) A Greek rhetorician, surnamed CARION, who taught rhetoric at Rome in the time of Augustus (Quint. iii. 1, § 18).

Hermann. See ARMINIUS; GERMANIA.

Hermann. (1) JOHANN GOTTFRIED JAKOB. A distinguished German classical philologist, born at Leipzig, November 28, 1772. He studied law and literature at Leipzig and Jena, and after acting as *privat-docent* at Leipzig for four years, he became Professor Extraordinarius of Philosophy in that university, occupying subsequently the chair of Eloquence (1803), and of Poetry (1809). From 1834 he conducted the philological seminary. He died December 31, 1848.

Hermann was a scholar of great originality in research, and his presentation of the results arrived at was remarkable for vigour and directness. He is especially noted for the new principles developed by him in the study of classical prosody and Greek grammar, with regard to the former of which he endeavoured to establish a philosophical theory based upon the categories of Kant. His metrical views will be found in his dissertations *De Metris Graecorum et Romanorum Poetarum* (Leipzig, 1796); *Handbuch der Metrik* (1798); *Elementa Doctrinae Metricae* (1816); *Epitome Doctrinae Metricae* (1818, 4th ed. 1869); and *De Metris Pindari* in Heyne's edition of Pindar (1817). His grammatical theories are set forth in his treatise *De Emendanda Ratione Graecae Grammaticae* (1801), and in his annotations on Vigier's *De Graecae Dictionis Idiotismis* (1802; 4th ed. 1834), and *Libri IV. de Particula ἄν* (1831). He also edited the *Hecuba*, *Hercules Furens*, *Bacchae*, *Supplices*, *Alcestis*, and *Ion* of Euripides; Aeschylus (1859); Sophocles (completing the edition begun by Erfurdt), the *Clouds* of Aristophanes, the *Trinummus* of Plautus, the *Poetica* of Aristotle, the Homeric Hymns, the Lexicon of Photius,

and Bion and Moschus. On the significance of mythology he wrote a treatise, *De Mythologia Graecorum Antiquissima* (1807) and the *Briefe über Homer und Hesiodus*, the latter in collaboration with Creuzer (Heidelberg, 1818). In his *Opuscula* (8 vols. 1827–1876) he treats of a wide range of topics, with breadth, force, and originality. See the memoirs by Jahn in the *Biogr. Aufsätze* (Leipzig, 1849), Köchly (1874), and Bursian, *Geschichte der class. Philologie*, etc., pp. 575 foll., 666–686 (Munich, 1883).

(2) KARL FRIEDRICH. A classical scholar born at Frankfort, August 4, 1804. He was educated at Heidelberg and Leipzig, and after spending some time in Italy (1825), was appointed Professor of Classical Philology at the University of Marburg in 1832. In 1840 he accepted a call to Göttingen, where he died, January 8, 1856. His principal works are his *Lehrbuch der griechischen Antiquitäten* (1841; 6th ed. 1892); *Geschichte und System der platonischen Philosophie* (1839); and *Culturgeschichte der Griechen und Römer* (1857).

Hermanūbis (Ἑρμανοῦβις). The son of Osiris and Nephthis, represented as a human being with a jackal-head. (Cf. ANUBIS). He symbolizes the Egyptian priesthood (Diod. i. 18, 87).

Hermaphroditus (Ἑρμαφρόδιτος). In Greek mythology, the son of Hermes and Aphroditê, born on Mount Ida, and endowed with the beauty of both deities. When a grown youth, he was bathing in the Carian fountain of Salmacis, and the nymph of the fountain, whose love he rejected, prayed the gods that she might be indissolubly united with him. The prayer was answered, and a being sprang into existence which united the qualities of male and female. The fable probably arose from the inclination, prevalent in the Eastern religions, towards confusing the attributes of both sexes. In Cyprus, for instance, a masculine Aphroditus, clad in female attire, was worshipped by the side of the goddess Aphroditê. Figures of hermaphrodites are common in art, one of the finest being the Sleeping Hermaphrodite in the Museo delle Terme at Rome. Less modest representations are given by Clarac (pl. 666 foll.). See Müller, *Archäol. der Kunst*, §§ 128 n. 2, 392 n. 2.

Hermarchus (Ἕρμαρχος). A rhetorician of Mitylenê who became a disciple of Epicurus, and finally succeeded him as head of the school about B.C. 270. A letter of Epicurus to him is preserved by Cicero (*De Fin.* ii. 30). His philosophical works are lost. See Diog. Laërt. x. 17, 24.

Hermas (Ἑρμᾶς). The author of a famous treatise entitled Ποιμήν, or "The Shepherd," once of great repute, so that it was read in the churches. The work is divided into three books—I. *Visiones;* II. *Mandata;* III. *Similitudines.* Its object is to rebuke the worldliness of professed Christians and to exhort sinners to repentance. By some, Hermas has been identified with the Hermas of St. Paul's *Epistle to the Romans*, xvi. 14; but the present belief places him in the second century. It was preserved only in a Latin translation entitled *Pastor* until 1847, when D'Abbadie discovered an Ethiopic version. Since then a great part of the Greek text has been recovered from various sources, and in 1890 a codex containing the whole. The earlier Greek text, compiled from the Codex Sinaiticus and an Athos MS., has been edited by Hilgenfeld (1888), who also edited the Latin version (1877). There is a good edition of the Greek and Latin texts together by Gebhardt and Harnack (1877). See Zahn, *Der Hirt des Hermas* (1868); Salmon, *Introduction to the New Testament* (4th ed. 1889); and the *Johns Hopkins University Circular*, iii. 75 and iv. 23.

Hermathēna. A sort of statue, raised on a square pedestal, in which the attributes of Hermes and Athenê were blended. See HERMAE.

Hermeneutics. The same as exegesis, a term technically used of the interpretation of a text from the study of critical materials such as manuscripts, editions, and quotations. The word is from the Greek ἑρμηνεύω, "to interpret." See TEXTUAL CRITICISM.

Hermes (Ἑρμῆς; Dor. Ἑρμᾶς). The son of Zeus and of the Naiad Maia, daughter of Atlas. Immediately after his birth upon the Arcadian mountain of Cyllenê, he gave proof of his chief characteristics—inventiveness and versatility, united with fascination, trickery, and cunning. Born in the morning, by mid-day he had invented the lyre; in the evening he stole fifty head of cattle from his brother Apollo, which he hid so skilfully in a cave that they could not be found. After these exploits he lay down quietly in his cradle. Apollo, by means of his prophetic power, discovered the thief and took the offender to Zeus, who ordered the cattle to be given up. Hermes, however, so delighted his brother by his playing on the lyre that, in exchange for it, he allowed him to keep the cattle, resigned to him the golden staff of fortune and of riches, with the gift of prophecy in its humbler forms, and from that time forth became his best friend. Zeus made his son herald to the gods and the guide of the dead in Hades. In this myth are contained allusions to several attributes of the god.

In many districts of Greece, and especially in Arcadia, the old seat of his worship, Hermes was regarded as a god who bestowed the blessing of fertility on the pastures and herds, and who was happiest when spending his time among shepherds and dallying with Nymphs, by whom he had numberless children, including Pan and Daphnis. In many places he was considered the god of crops, and also as the god of mining and of digging for buried treasure. His kindliness to man is also shown in his being the god of roads. At cross-roads in particular, there were raised in his honour, and called by his name, not only heaps of stones, to which every passer-by added a stone, but also the quadrangular pillars known as Hermae (q. v.). At Athens these last were set up in the streets and open spaces, and also before the doors. Every unexpected find on the road was called a gift of Hermes (ἕρμαιον). Together with Athenê, he escorted and protected heroes in perilous enterprises, and gave them prudent counsels. He took special delight in men's dealings with one another, in exchange and barter, in buying and selling; and in all that is won by craft or by theft. Thus he was the patron of tradespeople and thieves, and was himself the father of Autolycus (q. v.), the greatest of all thieves. He, too, it was who endowed Pandora, the first woman, with the faculty of lying, and with flattering discourse and a crafty spirit. On account of his nimbleness and activity he was the messenger of Zeus, and knew how to carry out his father's commands with adroitness and cun-

MARSHALL SCHOOL LIBRARY MINNEAPOLIS

ning, as in the slaying of Argos (the guard of Io), from which he derived his epithet of Argos-slayer (Ἀργειφόντης). Again, as Hermes was the sacrificial herald of the gods, it was an important part of the duty of heralds to assist at sacrifices. It was on this account that the priestly race of the Κήρυκες claimed him as the head of their family. (See ELEUSINIA.) Strength of voice and excellence of memory were supposed to be derived from him in his capacity of herald. Owing to his vigour, dexterity, and personal charm, he was deemed the god of gymnastic skill, which makes men strong and handsome, and the especial patron of boxing, running, and throwing the discus; in this capacity the palaestrae and gymnasia were sacred to him, and particular feasts called Hermaea were dedicated to him. He was the discoverer of music (for besides the lyre he invented the shepherd's pipe), and he was also the god of wise and clever discourse. A later age made him even the inventor of letters, figures, mathematics, and astronomy. He was, besides, the god of sleep and of dreams; with one touch of his staff he could close or open the eyes of mortals; hence the custom, before going to sleep, of offering him the last libation. As he was the guide of the living on their way, so he was also the conductor of the souls of the dead in the nether-world (ψυχοπομπός), and was as much loved by the gods of those regions as by those above. For this reason sacrifices were offered to him in the event of deaths, Hermae were placed on the graves, and, at oracles and incantations of the dead, he was honoured as belonging to the lower world; in general, he was accounted the intermediary between the upper and lower worlds. His worship early spread throughout the whole of Greece. As he was born in the fourth month, the number four was sacred to him. In Argos the fourth month was named after him, and in Athens he was honoured with sacrifices on the fourth of every month. His altars and images (mostly simple Hermae) were in all the streets, thoroughfares, and open spaces, and also at the entrance of the palaestra.

Statue of Hermes. (Capitoline Museum, Rome.)

In art he is represented in the widely varying characters which he assumed, as a shepherd with a single animal from his flock, as a mischievous little thief, as the god of gain with a purse in his hand (see illustration), with a strigil as patron of the gymnasia, at other times with a lyre, but oftenest of all as the messenger of the gods. He was portrayed by the greatest sculptors, such as Phidias, Polyclitus, Scopas, and Praxiteles, whose Hermes with the infant Dionysus was discovered in 1877, in the temple of Heré, at Olympia. It is mentioned by Pausanias (vi. 19, 1), and is described by Treu in his *Hermes mit dem Dionysosknaben* (Berlin, 1878). In the older works of art he appears as a bearded man (see illustration, p. 240); in the later ones, he is found in a graceful and charming attitude, as a slim youth with tranquil features, indicative of intellect and good-will. His usual attributes are wings on his golden sandals (πέδιλα), and a flat, broad-brimmed hat (see PETASUS), which in later times was ornamented with wings, as was also his staff. This last (ῥάβδος, κηρύκειον, *caduceus*) was originally an enchanter's wand, a symbol of power that produces wealth and prosperity, and also an emblem of influence over the living and the dead (see CADUCEUS), yet even in early times it was regarded as a herald's staff and an emblem of peaceful intercourse. It consisted of three shoots, one of which formed the handle, the other two being intertwined at the top in a knot. The place of the latter was afterwards taken by serpents; and thus arose our ordinary type of herald's staff. By the Romans, Hermes was identified with Mercurius (q. v.). For examples of the myths of Hermes in English literature, see Shelley's *Homeric Hymn to Mercury*, and Keats's *Ode to Maia*, with some fine passages in the *Prometheus Bound* of the former poet.

Hermes Trismegistus (Ἑρμῆς Τρισμέγιστος). The Greek name for the Egyptian god Thoth, regarded as the author of civilization, the inventor of writing, of art, science, and religion. The sacred canon of the Egyptians, in forty-two books divided into six sections, constituting an encyclopaedia of general learning, was ascribed to him under the name of the "Hermetic Books." They treat of religion, and of the arts and sciences, hieroglyphics, astronomy, medicine, mathematics, cosmography, etc. The date of the composition of this canon is not known, but it is evidently late, as the influence of Hellenic culture and the Neo-Platonic philosophy is clearly traceable. The Greek and Latin texts of these books exist only in fragments gathered from Stobaeus, Cyril, Lactantius, Suidas, and others. The Ebers Papy-

rus (1877) is regarded as one of the medical books of the series. See Ménard, *Hermès Trismégiste* (1866); and Pietschmann, *Hermes Trismegistos* (Leipzig, 1876).

Hermesiănax (Ἑρμησιάναξ). A Greek elegiac poet of Colophon in Ionia, who lived in the time of Alexander the Great, about B.C. 330, and was a scholar and friend of Philetas. He composed erotic elegies in the style of those by his compatriot, Antimachus. The three books containing his compositions he entitled *Leontium* (Λεόντιον), after his mistress. A fragment of ninety-eight lines of the third book has been preserved, in which love-stories of poets and wise men from Orpheus down to Philetas are treated in a rather disconnected manner, but not without spirit. There are editions by Hermann (*Opuscula Academica*, iv. p. 239), by Bach (Halle, 1829), and by Bailey (London, 1839). See Bergk, *De Hermesianactis Elegia* (Marburg, 1845).

Hermetic Books. See Hermes Trismegistus.

Hermĭas (Ἑρμίας or Ἑρμείας). (1) A Mysian eunuch, tyrant of Assos, and the friend and patron of Aristotle, who married his adopted daughter Pythias. In B.C. 344 Hermias was seized by Mentor, the Greek general of the king of Persia, and by him sent to the Persian court, where he was put to death. (See Diog. Laërt. v. 3; Diod. xvi. 52.) (2) A Christian writer towards the close of the second century, a native of Galatia, who has left a short discourse in ridicule of the pagan philosophers, entitled Διασυρμὸς τῶν ἔξω Φιλοσόφων. It appears to be an imitation of a discourse of Tatian's, but it is an imitation by a man of ability. He ridicules the want of harmony that prevails among the systems of the Greek philosophers, which is the cause of all their speculations being crowned with no positive result.

Herminia Gens. An ancient patrician family at Rome, one of whose members, T. Herminius, kept the bridge with Horatius Cocles against the army of Porsena. See Horatius.

Herminius Mons. The modern Sierra de la Estrella; the chief mountain in Lusitania, south of the Durius. It is some 7000 feet in height.

Hermiŏné (Ἑρμιόνη). A town on the eastern coast of Argolis on a bay deriving its name (Hermionicus Sinus) from the town. It was originally founded by the Dryopes, and was long a flourishing city, famous for its temple of Demeter Cthonia. It belonged to the Achaean League.

Hermiŏné (Ἑρμιόνη). The only child of Menelaüs and Helen, and married to Neoptolemus, the son of Achilles, immediately on her father's return from Troy, in fulfilment of a promise he had made there. According to a post-Homeric tradition, she had been previously promised to Orestes (q. v.), who claimed her on the ground of his prior right; and on his claim being refused by Neoptolemus, killed his rival with his own hands, or at any rate caused his death, at Delphi. Orestes took Hermioné to his home, and had by her a son, Tisamenus.

Hermiŏnes. A division of the people of Germania, which included the Suevi, Hermunduri, Chatti, and Cherusci. See Germania.

Hermionĭcus Sinus. A bay on the coast of Argolis, near Hermioné. It is now the Gulf of Castri.

Hermippus (Ἕρμιππος). (1) A Greek poet of the Old Comedy, an elder contemporary of Aristophanes and a bitter opponent of Pericles (Plut. *Pericl.* 32, 33), whose mistress, Aspasia, he prosecuted on a charge of atheism. Only a few fragments of his dramas, as also of his libellous iambic poems, after Archilochus's manner, have been preserved. They are remarkable for the cleverness of their style. They are collected by Meineke, *Frag. Com. Graec.* i. pp. 90–99; ii. 380–417. (2) Of Smyrna, a distinguished philosopher, the author of a great biographical work (Βίοι) frequently quoted by later writers. He flourished about the year B.C. 200.

Hermocrătes (Ἑρμοκράτης). One of the Syracusan generals, when the Athenians attacked Syracuse, B.C. 414. He was banished by the Syracusans (410), and having endeavoured to effect his restoration by force of arms and with the aid of the Persian satrap Pharnabazus, was slain in 407. See Peloponnesian War.

Hermodōrus (Ἑρμόδωρος). A philosopher of Ephesus, who is said to have assisted, as interpreter, the Roman decemvirs in the composition of the first ten tables of laws which had been collected in Greece (B.C. 451) (Cic. *Tusc.* v. 36). "An ancient tradition mentions," says Niebuhr, "as an auxiliary to the Decemviri, in this code, Hermodorus, an Ephesian, the friend of the sage Heraclitus, whom his fellow-citizens had banished because he filled them with shame, and they desired to be all on an equality in profligacy of conduct. It cannot, indeed, be well explained how this story could have been invented, for which nothing but a celebrated name could have given occasion, while that of Hermodorus appears to have been known to the Greeks themselves only by the saying of his friend. On this ground, the naming of the statue, which was inscribed as his at Rome, may pass for genuine." See Twelve Tables. (2) A native of Salamis, the architect of the Temple of Mars in the Flaminian Circus at Rome.

Hermogĕnes (Ἑρμογένης). (1) A Greek rhetorician of Tarsus in Cilicia, who flourished in the middle of the second century A.D. He came to Rome as a rhetorician as early as his fifteenth year, and excited universal admiration, especially on the part of the emperor Marcus Aurelius. In his twenty-fourth year he lost his memory, and never recovered it, though he lived to a great age. After his death his heart is said to have been found to be covered with hair. His work on rhetoric, which still exists, enjoyed a remarkable popularity, and was for a long time the principal text-book of rhetoric; it was also epitomized, and was the subject of numerous commentaries. The work itself consists of five sections: (i.) On points at issue in legal causes; (ii.) On the art of discovering arguments; (iii.) On the various forms of oratorical style; (iv.) On political orations in particular, and on the art of eloquent and effective speaking; (v.) The last section consists of rhetorical exercises (Προγυμνάσματα), which were cast into a fresh form by Aphthonius, and translated into Latin by Priscian, with the title *Praeexercitamenta*. It is printed in Halm's *Rhetores Latini*, p. 551. See Hoppichler, *De Hermogene Progymnasmatum Scriptore* (1884). (2) Hermogĕnes Tigellius. (See Tigellius.) (3) An architect of Alabanda, who is said

to have devised the so-called pseudo-dipterus form of temple. See TEMPLUM.

Hermogeniānus. The latest Roman jurist of whom the Digest contains any citation, and who flourished about A.D. 300.

Hermolāus (Ἑρμόλαος). A Macedonian youth, a page of Alexander the Great. He formed a conspiracy against the king's life in B.C. 327, but the plot was discovered, and Hermolaüs and his accomplices were stoned to death by the Macedonians. The reason for his plot was a desire to avenge himself on Alexander, who had ordered him to be whipped for slaying a wild boar in a hunting expedition without waiting to give the king the honour of the first blow (Q. Curt. viii. 6–8).

Hermonthis (Ἕρμωνθις). The chief town of the Nomos Hermonthitis on the western bank of the Nile in Upper Egypt, near Thebes.

Hermopŏlis (Ἑρμόπολις). "City of Hermes." (1) PARVA (ἡ μικρά), a city of Lower Egypt, stood upon the canal which connected the Canopic branch of the Nile with Lake Mareotis. (2) MAGNA (ἡ μεγάλη), an ancient city in Middle Egypt, standing on the west bank of the Nile, a little below the confines of Upper Egypt. This place was famous for its worship of Anubis (q. v.) or Hermanubis; and was the sacred burial-place of the ibis.

Hermotīmus (Ἑρμότιμος). A native of Clazomenae; a philosopher of the Ionian school, of whom many marvels were told. Tradition represented him as a person gifted with a power by which his soul could leave his body, and so bring him tidings of distant events with wonderful speed. At last, his enemies burned his body in the absence of his soul, thus putting an end to him and to his wanderings (Pliny, *H. N.* vii. 42).

Hermundūri. One of the most powerful nations of Germany, belonging to the Suevic race, and dwelling between the Main and the Danube. Though long the allies of the Romans, they at length joined the Marcomanni against them in the reign of Marcus Aurelius.

Hermus. (1) (Ἕρμος). A large river in Asia Minor, rising in Mount Dindymené, and after flowing through the plain of Sardis, falling into the Gulf of Smyrna, between Smyrna and Phocaea. It formed the boundary between Aeolia and Ionia. (2) (τὸ Ἕρμος). A deme of Attica, belonging to the tribe Acamantis, on the road from Athens to Eleusis.

Hernĭci. A people in Latium, belonging to the Sabine race, who inhabited the mountains of the Apennines between the lake Fucinus and the river Trerus, and were bounded on the north by the Marsi and Aequi, and on the south by the Volsci. Their chief town was Anagnia. They were a brave and warlike people, and long offered a formidable resistance to the Romans, who finally formed a league with them on equal terms in the third consulship of Sp. Cassius, B.C. 486. They were finally subdued by the Romans, B.C. 306.

Hero (Ἡρώ). See LEANDER.

Hero (Ἥρων). (1) A native of Alexandria and disciple of Ctesibius, who flourished about B.C. 125. He placed engineering and land-surveying on a scientific basis, and was celebrated as a mechanician, and invented the hydraulic clock, the machine called "the fountain of Hero," and a forcing-pump used as a fire-engine. (See CTESIBICA MACHINA.) He enjoyed a high reputation, and is mentioned by Gregory Nazianzen with Euclid and Ptolemy. He is now, however, principally known by some remains of his writings on mechanics. His extant writings are: (*a*) "On the Machine Called the Chiroballistra" (Χειροβαλλίστρας κατασκευὴ καὶ συμμετρία); (*b*) "Barulcus" (Βαρούλκος), a treatise on the raising of heavy weights, which is mentioned by Pappus, and was found by Golius in Arabic; (*c*) "Belopoeica" (Βελοποιϊκά), a treatise on the manufacture of darts; (*d*) "On Pneumatic Machines" (Πνευματικά). In this work is the first and only notice among the ancient writers of the application of steam as a moving power. There is an English translation by Greenwood (London, 1851). (*e*) "On the Construction of Automata" (Περὶ Αὐτοματοποιητικῶν), contained in the *Math. Veteres;* it describes a number of small machines and mechanical toys. (*f*) "On Dioptrics," from which Heliodorus, a mathematician who flourished after the commencement of the Christian era, has left an extract. (*g*) Μετρικά, consisting of geometrical and trigonometrical problems and solutions. Other works of Hero, now lost, are mentioned by Pappus, Eutocius, Heliodorus, etc. Hero describes the theodolite, the cyclometer, and the steam-engine; and discusses the centre of gravity. His works have been edited by F. Hultsch (Berlin, 1864). See the treatise on Hero by T. H. Martin (Paris, 1854); and the account in Ball's *Short History of Mathematics* (London, 1888). (2) Of Constantinople, commonly called the Younger, who is supposed to have flourished about A.D. 900. In a work attributed to him (on Geodesy), he states that the precession of the equinoxes had produced seven degrees of effect since the time of Ptolemy, so that he must have been about 500 years later than Ptolemy. The writings of Hero the Younger relate to warlike machines, tactics, and practical geometry. (3) A mathematician, who flourished about the middle of the fifth century.

Herōdas. See HERONDAS.

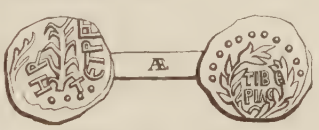
Herōdes (Ἡρώδης). (1) Surnamed THE GREAT and ASCALONĪTA, second son of Antipater the Idumaean, was born B.C. 71, at Ascalon, in Iudaea. At the age of twenty-five he was made by his father governor of Galilee, and distinguished himself by the suppression of a band of robbers and the execution of their leader. He was summoned before the Sanhedrim for having done this by his own authority, and having put these men to death without a trial; but, through the strength of his party and the zeal of his friends, he escaped censure. He at first embraced the party of Brutus and Cassius; but, after their death, reconciled himself to Antony, who appointed him and Phasael tetrarchs of Iudaea. In B.C. 40 the Parthians invaded Iudaea, and placed Antigonus on the throne, making Hyrcanus and Phasael prisoners. Herod escaped to Rome, where, by the influence of Antony, he was appointed king of the Jews. But the Roman generals in Syria assisted him very feebly, and it was not till the end of the year B.C. 38 that Jerusalem was taken by Sossius. The commencement of Herod's reign dates from the following year. In the year 38 he had married Mariamné, the granddaughter of Hyrcanus, hoping to strengthen his power by this match with the Asmonaean family, which was very popular in Iu-

daea. On ascending the throne Herod appointed Ananel of Babylon high-priest, to the exclusion of Aristobulus, the brother of Mariamné. But he soon found himself compelled, by the entreaties

Coin of Herod the Great.

of Mariamné and the artifices of her mother Alexandra, to depose Ananel and appoint Aristobulus in his place. Not long after, however, Aristobulus was secretly put to death by the command of Herod. Alexandra having informed Cleopatra of the murder, Herod was summoned to answer the accusation before Antony, whom he pacified by liberal bribes. When setting out to meet Antony, he had commanded his brother Joseph to put Mariamné to death in case he should be condemned, that she might not fall into Antony's power. Finding, on his return, that his brother had revealed this order to Mariamné, Herod put him to death. In the civil war between Octavius and Antony, Herod joined the latter, and undertook, at his command, a campaign against the Arabians, whom he defeated. After the battle of Actium, he went to meet Octavius at Rhodes, having first put to death Hyrcanus, who had been released by the Parthians, and had placed himself under Herod's protection some years before. He also imprisoned Mariamné and Alexandra, commanding their keepers to kill them upon receiving intelligence of his death. Octavius, however, received him kindly, and reinstated him in his kingdom. On his return, Mariamné reproached him with his intentions towards her, which she had again discovered. This led to an estrangement between Herod and his queen, which was artfully increased by his sister Salomé, till, on one occasion, enraged at a new affront he had received from Mariamné, Herod assembled some of his friends and accused her of adultery. She was condemned and executed. After her death Herod suffered the deepest remorse, and shut himself up in Samaria, where he was seized with an illness which nearly proved fatal. In the year B.C. 26 he put to death the sons of Babas, the last princes of the Asmonaean family.

He now openly disregarded the Jewish law, and introduced Roman customs. He particularly shocked the people by erecting a stately theatre and an amphitheatre in Jerusalem, in the latter of which he celebrated games in honour of Augustus. Ten men conspired against his life, but were detected and executed with the greatest cruelty. To secure himself against rebellion, he fortified Samaria, which he named Sebasté (equivalent to the Latin Augusta), and he built Caesarea and other cities and fortresses. In the year B.C. 17 he began to rebuild the temple at Jerusalem. The work was completed in eight years, but the decorations were not finished for many years after (John, ii. 20). Herod's power and territories continued to increase, but the latter part of his reign was disturbed by the most violent dissensions in his family, of which a minute account is given by Iosephus. He died in March, B.C. 4, in the thirty-fourth year of his reign and the seventieth of his age. Iosephus relates that, shortly before his death, he shut up many of the principal men of the Jewish nation in the Hippodrome, commanding his sister Salomé to put them to death as soon as he expired, that he might not want mourners. They were released, however, by Salomé upon Herod's death.



The birth of Christ took place in the last year of Herod's reign, four years earlier than the era from which the common system of chronology dates the years A.D. (Ioseph. *Ant. Iud.* xiv. 17 foll., xv. 1 foll., xvi. 1 foll.; *Bell. Iud.* i. 17, etc.). It was Herod of whom Augustus said, after he had heard of the former's having put to death his own sons, Alexander and Aristobulus, that he would rather be Herod's hog (*ὗν*) than his son (*υἱόν*), punning upon the similarity of the two terms, and alluding at the same time to the aversion with which the hog was regarded by the Jews (Macrob. *Sat.* ii. 4). It was this king who ordered the massacre of the children at Bethlehem.

(2) ARCHELAUS. A son of Herod the Great, who succeeded his father and was made ethnarch of Iudaea, Samaria, and Idumaea by Augustus Caesar (B.C. 3). In A.D. 7, however, for his misgovernment, he was removed from his office and banished to Nienna in Gaul, where he died.

Coin of Archelaus.

(3) ANTĬPAS, a son of Herod the Great, whom his father, in his first will, declared his successor in the kingdom, but to whom he afterwards gave merely the office of tetrarch over Galilee and Peraea, while he appointed his other son Archelaüs king of Iudaea. Antipas, after being confirmed in these territories by Augustus, married the daughter of Aretas, king of Arabia. He divorced her, however, A.D. 33, that he might marry his sister-in-law Herodias, the wife of his brother Philip, who was still living. John the Baptist, exclaiming against this union, was seized, and subsequently beheaded. Afterwards, A.D. 39, Herodias, being jealous of the prosperity of her brother Agrippa, who, from a private person, had become king of Iudaea, persuaded her husband Herod Antipas to visit Rome, and to desire the same dignity from Tiberius. Agrippa, being apprised of his design, wrote to the emperor, accusing Antipas of being implicated in the affair of Seianus, upon which he was banished to Lugdunum, in Gaul. This is the Antipas who, being at Jerusalem at the time of the Saviour's suffering, ridiculed Jesus, whom Pilate had sent to him, dressed him in mock attire, and sent him back to the Roman governor as a king whose ambition gave him no umbrage. The year of his death is unknown, though it is certain that he and Herodias ended their days in exile, according to Iosephus, in Spain. (4) AGRIPPA I., son of Aristobulus and Berenicé, and grandson of Herod

Coin of Herod Antipas.

the Great. He was educated at Rome with the future emperor Claudius, and Drusus the son of Tiberius. Having given offence to Tiberius, he was thrown into prison; but Caligula, on his accession (A.D. 37), set him at liberty, and gave him the tetrarchies of Abilené, Batanaea, Trachonitis, and Auranitis. On the death of Caligula in 41, Agrippa, who was at the time in Rome, assisted Claudius in gaining possession of the Empire. As a reward for his services, Judaea and Samaria were annexed to his dominions. His government was mild, and he was exceedingly popular among the Jews. It was probably to increase this popularity that he caused the apostle James to be beheaded and Peter to be cast into prison (A.D. 44). The manner of his death, which took place at Caesarea in the same year, is related in Acts, xii. By his wife Cypros he had a son Agrippa and three daughters—Berenicé,

Coin of Herod Agrippa.

Mariamné, and Drusilla. (5) Son of Agrippa I., was educated at the court of Claudius, and at the time of his father's death was seventeen years old. Claudius kept him at Rome, and sent Cuspius Fadus as procurator of the kingdom, which thus again became a Roman province. On the death of Herodes, king of Chalcis (48), his little principality was given to Agrippa, who subsequently received an accession of territory. Before the outbreak of the war with the Romans, Agrippa attempted in vain to dissuade the Jews from rebelling. He sided with the Romans in the war, and after the capture of Jerusalem he went with his sister Berenicé to Rome, and died in the seventieth year of his age, A.D. 100. It was before this Agrippa that the apostle Paul made his defence, A.D. 60 (Acts, xxv., xxvi.). (6) Attĭcus (in full, Tiberius Claudius Attĭcus Herōdes). See Atticus, Herodes.

Herodiānus (Ἡρωδιανός). (1) The author of an extant history, in the Greek language, of the Roman Empire, in eight books, from the death of Marcus Aurelius to the commencement of the reign of Gordianus III. (A.D. 180–238). He states that the events described by him occurred during the period of his own life, which serves to fix his date, but of the details of his career nothing is known. He seems to have made Thucydides his model, and his narrative is characterized by sobriety, impartiality, and in general by accuracy. His style is good in spite of numerous Latinisms. There are editions by Bekker (1855) and Mendelssohn (1883). See Kreuzer, *De Herodiani Vita*, etc. (1881); and on the language and style, the treatise of P. Schmidt, *Die Syntax des Historikers Herodian*, pt. i. (1891); pt. ii. (1893). (2) Aelius. A celebrated grammarian, son of Apollonius Dyscolus, and a native of Alexandria, from which place he went to Rome, where he secured the favour of the emperor Marcus Aurelius, to whom he dedicated his work on prosody (Καθολικὴ Προσῳδία), in twenty-one books. His reputation in antiquity was very great, so that Priscian styles him *maximus auctor artis grammaticae*. Of his numerous works, only fragmentary selections now exist, largely in citations in other grammarians. These are enumerated by Fabricius (*Bibl. Graec.* vi. pp. 278 foll.), and edited by Lentz, with indexes, in 2 vols. (Leipzig, 1870). See Lehrs, *Herodiani Scripta Tria* (Königsberg, 1848); Hiller, *Quaestiones Herodianae* (Bonn, 1866); Hilgard, *Excerpta ex Libris Herodiani* (Leipzig, 1887); and Stephan, *De Herodiani Technici Dialectologia* (Strassburg, 1889).

Herodĭcus (Ἡρόδικος). (1) A Babylonian grammarian, a follower of Crates of Mallos, and a violent opponent of the school of Aristarchus, against whose followers he wrote an epigram that is preserved in the Greek Anthology (Jacobs, *Anth. Graec.* ii. p. 64). He wrote a work on Comedy, entitled Κωμῳδούμενα, and various miscellanies. (2) A Thracian physician, who was one of the preceptors of Hippocrates. He seems to have been among the first to insist upon the great importance of systematic exercise in preserving the health. See Plato, *Protag.* § 20.

Herodŏtus (Ἡρόδοτος). (1) A celebrated Greek historian, born at Halicarnassus in Caria, B.C. 484 (Clinton, *Fasti Hellenici*, vol. i. p. 29, 2d ed.). He was of Dorian extraction, and of a distinguished family. His father was named Lyxes, his mother Rhoeo or Dryo. Panyasis, an eminent epic poet, whom some ranked next to Homer, was his uncle either by the mother's or father's side. The facts of his life are few and doubtful, except so far as we can gather them from his own works. Not liking the government of Lygdamis, the grandson of Queen Artemisia, who was tyrant of Halicarnassus, Herodotus retired for a season to the island of Samos, where he is said to have cultivated the Ionic dialect of the Greek, which was the language there prevalent. Before he was thirty years of age he joined a number of his fellow-exiles in an attempt, which proved successful, to expel Lygdamis. But the banishment of the tyrant did not give tranquillity to Halicarnassus, and Herodotus, who himself had become an object of dislike, again left his native country and visited Athens, where he made the acquaintance of many of the brilliant writers of the time. Of these, Sophocles became his intimate friend, and wrote a poem in his honour in B.C. 440, a fragment of which is preserved by Plutarch. (See Hanna, *Sophokles' Beziehungen zu Herodot* [1875]). Eusebius states that he received at Athens many public marks of distinction. As Athenian citizenship was not open to him, he joined, as it is said, a colony which the Athenians sent to Thurii in Southern Italy, about B.C. 443. He is said to have died in Thurii, and to have been buried in the market-place.

Herodotus is regarded by many as the father of profane history, and Cicero (*De Leg.* i. 1) calls him *historiae patrem;* by which, however, nothing more must be meant than that he is the first profane historian whose work is distinguished for its finished form, and has come down to us entire. Thus Cicero himself, on another occasion, speaks of him as the one *qui princeps genus hoc (scribendi) ornavit* (*De Orat.* ii. 13); while Dionysius of Halicarnassus has given us a list of many historical writers who preceded him.

Herodotus presents himself to our consideration in two points: as a traveller and observer, and as

an historian. The extent of his travels may be ascertained pretty clearly from his history; but the order in which he visited each place, and the time of his visit, cannot be determined. The story of his reading his work at the Olympic Games, on which occasion he is said to have received universal applause, and to have had the names of the nine Muses given to the nine books of his history, has been disproved. The story is founded upon a small piece by Lucian, entitled "Herodotus or Aëtion," which apparently was not intended by the writer himself as an historical truth; and, in addition to this, Herodotus was only about twenty-eight years old (Suid. s. v. Θουκυδίδης) when he is

Herodotus. (Visconti, *Iconog. Gr.* pl. 27, 2.)

said to have read to the assembled Greeks at Olympia a work which was the result of most extensive travelling and research, and which bears in every part of it evident marks of the hand of a man of mature age. The Olympic recitation is not even alluded to by Plutarch, in his treatise on the "malignity" of Herodotus. Furthermore, it is certain that the division of his work into books was not known to Herodotus himself, but was probably due to the Alexandrian grammarians. It is first mentioned by Diodorus Siculus. At a later period Herodotus read his history, as we are informed by Plutarch and Eusebius, at the Panathenaean festival at Athens, and the Athenians are said to have presented him with the sum of ten talents for the manner in which he had spoken of the deeds of their nation. The account of this second recitation may be true.

With a simplicity which characterizes his whole work, Herodotus makes no display of the great extent of his travels. He frequently avoids saying in express terms that he was at a place, but he uses words which are as conclusive as any positive statement. He describes a thing as standing behind the door (ii. 182), or on the right hand as you enter a temple (i. 51); or he was told something by a person in a particular place (ii. 28); or he uses other words equally significant. In Africa he visited Egypt (see Budinger, *Die ägyptische Forschung Herodot's* [Vienna, 1873]), from the coast of the Mediterranean to Elephantiné, the southern extremity of the country (ii. 29); and he travelled westward as far as Cyrené (ii. 32, 181), and probably farther. (See Neumann, *Nordafrika nach Herodot* [1893]). In Asia he visited Tyre, Babylon, Ecbatana (i. 98), Nineveh, and probably Susa (v. 52 foll., vi. 119). He also travelled to various parts of Asia Minor, and probably went as far as Colchis (ii. 104). In Europe he visited a large part of the country along the Black Sea, between the mouths of the Danube and the Crimea, and went some distance into the interior. He seems to have examined the line of the march of Xerxes from the Hellespont to Attica, and certainly had seen numerous places on this route. He was well acquainted with Athens (i. 98, v. 77), and also with Delphi, Dodona, Olympia, Delos, and many other places in Greece. That he had visited some parts of Southern Italy is clear from his work (iv. 99, v. 44). The mention of these places is sufficient to show that he must have seen many more. (See Hildebrandt, *De Itineribus Herodoti Europaeis et Africanis* [Leipzig, 1883].) So wide and varied a field of observation has rarely been presented to a traveller, and still more rarely to any historian of either ancient or modern times; and, if we cannot affirm that the author undertook his travels with a view to collecting materials for his great work, a supposition which is far from improbable, it is certain that, without such advantages, he could never have written it, and that his travels must have suggested much inquiry, and supplied many valuable facts, which afterwards found a place in his history.

The nine books of Herodotus contain a great variety of matter, the unity of which is not perceived till the whole work has been thoroughly examined; and for this reason, on a first perusal, the history is seldom well understood. But the subject of that history was conceived by the author both clearly and comprehensively. His aim was to combine a general history of the Greeks and the barbarians (i. e. those not Greeks) with the history of the wars between the Greeks and Persians. Accordingly, in the execution of his main task, he traces the course of events from the time when the Lydian kingdom of Croesus fell before the arms of Cyrus, the founder of the Persian monarchy (B.C. 546), to the capture of Sestus (B.C. 478), an event which completed the triumph of the Greeks over the Persians. The great subject of his work, which is comprised within the space of sixty-eight years, advances, with a regular progress and truly dramatic development, from the first weak and divided efforts of the Greeks to resist Asiatic numbers, to their union as a nation, and their final tri-

umph in the memorable battles of Thermopylae, Salamis, Plataea, and Mycalé. But with this subject, which has a complete unity, well maintained from its commencement to its close, the author has interwoven, conformably to his general purpose, and by way of occasional digression, sketches of the various people and countries which he had visited in his wide-extended travels. The more one contemplates the difficulty of thus combining a kind of universal history with a substantial and distinct narrative, the more one must admire, not so much the art of the historian, as his happy power of bringing together and arranging his materials, which was the result of the fulness of his information, the distinctness of his knowledge, and his clear conception of the subject. These numerous digressions are among the most valuable parts of his work; and, if they had been omitted or lost, barren indeed would have been modern investigation in the field of ancient history, over which the labour of this one great writer now throws a clear and steady light. The anecdotes, also, that sparkle through his pages are fascinating in their variety and in the illustrations they afford of the life and manners of the age that he describes.

The style of Herodotus is simple, pleasing, and highly picturesque; often, indeed, poetical both in expression and sentiment, and bearing evident marks of belonging to a period when prose composition had not yet become a finished art. That he was a close student of Homer is evident in every page of the history, since his phrases and expressions are everywhere coloured by the Homeric influence. Hence, Dionysius of Halicarnassus calls him Ὁμήρου ζηλωτής, and Longinus μόνος Ὁμηρικώτατος. So graceful and winning was his style that Athenaeus describes him as ὁ μελίγηρυς. His information is apparently the result of his own experience. In physical knowledge he was somewhat behind the science of even his own day. He had, no doubt, reflected on political questions; but he seems to have formed his opinions mainly from what he himself had observed. To pure philosophical speculations he had no inclination, and there is not a trace of such in his writings. He had a strong religious feeling bordering on superstition, though even here he clearly distinguished the gross and absurd from that which was reasonable. He seems to have viewed the manners and customs of all nations in a more truly philosophical way than many so-called philosophers, considering them all as various forms of social existence under which happiness might be found. He treats with respect the religious observances of every nation; a decisive proof of his great good sense. Until lately there was a strong tendency to exaggerate the credulity of Herodotus; but a fuller knowledge of the countries described by him has justified many of the statements once regarded as absurd. Moreover, a distinction must be drawn between the things he tells of his own knowledge and those which he merely relates as having been told him by other persons. The exquisite lines quoted by Prof. Merriam in his introduction are wonderfully descriptive of the whole tone and spirit of Herodotus:

> "He was a mild old man and cherished much
> The weight dark Egypt on his spirit laid;
> And with a sinuous eloquence would touch
> Forever at that haven of the dead.
> Single romantic words by him were thrown
> As types on men and places, with a power
> Like that of shifting sunlight after shower
> Kindling the cones of hills and journeying on.
> He feared the gods and heroes and spake low
> That Echo might not hear in her light room."

Plutarch accused Herodotus of partiality, and composed a treatise on what he termed the "spitefulness" of this writer (Περὶ τῆς Ἡροδότου Κακοηθείας), taxing him with injustice towards the Thebans, Corinthians, and Greeks in general; but the whole monograph is weak and frivolous.

Herodotus had planned to write a work on Assyrian history (i. 106, 184), but whether or not he ever carried out his intention is not known. A life of Homer has been commonly ascribed to Herodotus, and appears in some editions of his history; but it is now deemed spurious. See Schmidt, *De Herodotea quae fertur Vita Homeri*, 2 pts. (1874–75).

Manuscripts.—Of forty-six MSS. containing a whole or a portion of Herodotus, five, which are of superior age and excellence, form the basis of the accepted text. These represent two "families," to one of which belong the Codex Florentinus or Mediceus of the Laurentian Library at Florence, dating from the tenth century, a Codex Romanus of the eleventh century, and a second Codex Florentinus, also of the eleventh century. To the other family belong a Codex Parisinus, beautifully written, of the thirteenth century, and a third Codex Romanus of the fourteenth century, lacking, however, the Fifth Book. Of this, also, the text of the First Book has been considerably altered, possibly in order to adapt the work to the use of schools. An account of the MSS. is given by Stein in his edition mentioned below.

Bibliography.—The *editio princeps* of Herodotus is that of Aldus (1502). Standard critical editions are those of Schweighäuser, 5 vols. (Strassburg, 1816); Gaisford (Oxford, 1840); Stein (Berlin, 1869); and Dietsch (Leipzig, 1874). Good commentaries are those of Bähr in Latin (Leipzig, 1856); Blakesley (London, 1854); Stein in German (Berlin, 1877), and Rawlinson (London, 1858); also Abicht in German (1876). English translations have been made by Rawlinson, 4 vols. (2d ed. 1862), and G. C. Macaulay, 2 vols. (London, 1890). A valuable *Lexicon Herodoteum* is that of Schweighäuser (London, 2d ed. 1824). Very useful are the appendices to Prof. Sayce's edition of Bks. I.–III. (London, 1883). On the dialect, see Abicht, *Uebersicht über den herodoteischen Dialect* (3d ed. Leipzig, 1874); and Merzdorf, *Quaestiones Grammaticae de Dialecto Herodotea* (Leipzig, 1875). Stein's introduction on the dialect in his school edition is admirable; also Smyth in his *Sounds and Inflections of the Greek Dialects* (1894). On the sources of his history, see the monographs of Panofsky (1865) and K. W. Nitzsch (1871). On his travels, see the works already cited in the text.

(2) A physician of Tarsus, of the empiric school, and successor to Menodotus of Nicomedia. A work of his, entitled "The Physician," is mentioned by Galen.

Heron. See Hero.

Herondas (Ἡρώνδας) or **Herōdas** (Ἡρώδας). A Greek writer of iambics, who lived probably at Cos in the third century B.C., and of whose verses little was known before the recent discovery among the papyri in the British Museum of a MS. containing

seven poems. Previous to this discovery there existed only ten quotations from him (one in iambic dimeter and nine in choliambics), five of which are found in the British Museum MS., and served to identify the author, as his name is not there given. These seven complete poems contain from 85 to 129 lines apiece, and are entitled (1) Προκυκλίς ἢ Μαστροπός, "The Matchmaker or the Go-between;" (2) Πορνοβοσκός, "The Pimp;" (3) Διδάσκαλος, "The Schoolmaster;" (4) Ἀσκληπιῷ ἀνατιθεῖσαι καὶ θυσιάζουσαι, "A Visit to Asclepius;" (5) Ζηλότυπος, "The Jealous Woman;" (6) Φιλιάζουσαι ἢ Ἰδιάζουσαι, "Affectionate Friends, or the Confidantes;" (7) Σκυτεύς (?), "The Cobbler." The titles of two more poems are found in the MS.—Ἐνύπνιον, "The Dream;" and Ἀπονηστιζόμεναι, "Ladies at Breakfast." The poems are difficult to read, abounding in words found hitherto only in Hesychius, and containing some that are entirely unknown. Many of these strange vocables are probably the result of copyists' errors, having been written in Egypt whence the MS. came, while others are doubtless colloquialisms.

The previously extant fragments of Herondas can be found in Meineke's *Ceterorum Poetarum Choliambi*, appended to Lachmann's *Babrius* (Berlin, 1845). The recently discovered poems have been published unamended with autotype facsimiles of the MS. by the Trustees of the British Museum, and collated by F. G. Kenyon (London, 1891). An edition with a translation into Latin and a most admirable index has been published by Prof. Bücheler of Bonn (1892). An improved text with short notes by Rutherford appeared simultaneously with Mr. Kenyon's text. The latest edition is that of Crusius (Leipzig, 1894). Valuable edition by Meister in *Ber. der sächs. Geschichte der Wiss.* (Leipzig, 1893).

Herōon (*ἡρῷον*). The shrine of a hero. See HEROS.

Heroöpŏlis (Ἡρώων πόλις) or **Hero** (Ἡρώ). A city in Lower Egypt, standing on the border of the desert east of the Delta, upon the canal connecting the Nile with the western head of the Red Sea, which was called from it Sinus Heroöpoliticus (Κόλπος Ἡρώων). The country about it is considered to be the Goshen of the Bible.

Herophĭlé (Ἡροφίλη). The Erythraean Sibyl. See SIBYLLA.

Herophĭlus (Ἡρόφιλος). A celebrated physician, a native of Chalcedon, of the family of the Asclepiades, and a disciple of Praxagoras. Herophilus lived under Ptolemy Soter, and was contemporary with the philosopher Diodorus, and the celebrated physician Erasistratus, with whose name his own is commonly associated in the history of anatomical science. As a physician, Herophilus is mentioned with praise by both the ancient and the early modern writers. Galen says that he carried anatomy to the highest degree of perfection. With such zeal, indeed, did Herophilus pursue this science, that he is said to have dissected 700 subjects, and it was against him and Erasistratus that the charge was first made of having frequently opened living criminals that they might discover the secret springs of life (Celsus, *Praef.*). From the peculiar advantages which the school of Alexandria presented by this authorized dissection of the human body, it gained, and for many centuries preserved, the first reputation for medical education, so that Ammianus Marcellinus, who lived about 650 years after its establishment, says that it was sufficient to secure credit to any physician if he could say that he had studied at Alexandria (Amm. Marc. xxii. 16). Herophilus made great discoveries in anatomy, and Fallopius calls him "the evangelist of anatomists." He is to be regarded as the inventor of pathological anatomy, having been the first that thought of opening the bodies of men after death in order to ascertain the nature of the malady which had caused their dissolution. His principal discoveries have reference to the nervous system, which he acknowledged as the seat of the sensations. The description which Herophilus gave of the brain itself was far superior to those of previous authors. He also noticed the lacteals, though he was not aware of their use. He pointed out that the first division of the intestinal canal is never more than the breadth of twelve fingers in length, and from this fact proposed for it a name (δωδεκαδακτύλη ἔκφυσις), the Latin form of which (*duodenum*) is still applied to it. He described with great exactness the organ of sight, and gave to its various membranes the names which have still, in a great measure, remained to them. He operated on the cataract by extracting the crystalline humour. Herophilus was the first, also, that had correct notions respecting the pulse, of which his master, Praxagoras, had taught him some of the value as a means of discriminating diseases (Galen, *De Diff. Puls.* ii. p. 24; Pliny, *H. N.* xi. 37, xxix. 1). It was he who first showed that paralysis is an affection of the nervous system. His commentary on Hippocrates still exists. All his other works are lost. See Marx, *De Herophili Vita* (Göttingen, 1840); Berdoe, *Origin and Growth of the Healing Art* (London, 1893); and the articles CHIRURGIA; MEDICINA.

Heros (*ἥρως*, "a hero"). In Homer, a descriptive title given to princes and nobles, but also applied to men of mark sprung from the people. Hesiod reserves the name for mortals of divine origin, who are therefore known as demigods. Many of these he places on the Islands of the Blessed, where, under the sovereignty of Cronus, they lead a life of happiness. Hesiod makes no allusion to the influence of heroes upon the life of man, or to the worship due to them in consequence. But in later times this belief spread throughout the whole of Greece. The heroes are in most respects like men and suffer death; but death puts them in a more exalted rank, and they then have power to do men good as well as harm. The most distinguished warriors of prehistoric times were accounted heroes, being generally regarded as the offspring of gods by mortal women; to their souls another destiny was accordingly assigned than that allotted to the souls of mortals. But even among the heroes of old time there were some who, without being children of the gods, nevertheless so distinguished themselves by their virtue that they appeared to participate in the divine nature, and therefore to deserve a higher distinction after death. Even in later times such men were not unknown, when personages recently deceased were actually exalted to the ranks of heroes, as in the case of Leonidas at Sparta, and Harmodius and Aristogiton at Athens. The founders of colonies and cities (*ἀρχηγέται, κτίσται*) were especially considered worthy of worship as heroes;

when the true founder was unknown, then some appropriate hero was selected instead. Formerly there were many such fictitious heroes; to this class properly belong all the titular ancestors of the noble and priestly families of Attica and the founders of particular arts and trades, as Daedalus, Triptolemus, etc. Many heroes of historical times were originally gods, who, in course of time, were divested of their primitive dignity. There was no town or district of Greece in which a host of heroes was not worshipped by the side of the higher divinities; many as special tutelary spirits of the country, others as the heroes of the country, as the Dioscuri at Sparta, the Aeacidae at Aegina, and Theseus in Attica. There were festivals in their honour everywhere, many of them small and unimportant, and only celebrated in a restricted circle, others observed by the State as festivals of the people in general, and not at all inferior in wealth of equipment to the most important festivals in honour of the gods. This was especially the case with the heroes of the country. Many heroes (e. g. Adrastus, Theseus) had shrines, known as Heroa, which were generally erected over their graves (Herod. v. 67). The altars of heroes were lower than those of gods, and were commonly designated sacrificial hearths; they were generally on a level with the ground, and on the west side —the region of the nether world—were provided with a hollow, into which the libations were poured. Like offerings to the dead, these consisted of honey, wine, water, milk, oil, and blood which had been shed by sacrificial victims; the flesh of the animals sacrificed was burned. In the period of decadence it became customary to treat the living with heroic honours. Such honours were paid to the Spartan Lysander by the towns in Asia Minor, and were afterwards accorded to kings—e. g. to Antigonus and his son Demetrius at Athens.

The Greek ἥρως is used as an equivalent of the Latin *divus*, as applied to those who once were mortal, and hence opposed to *deus*, one who was from the first a god. It is therefore used of the deified Roman emperors. See APOTHEOSIS.

Herostrătus (Ἡρόστρατος). An Ephesian who set fire to the Temple of Artemis at Ephesus on the same night that Alexander the Great was born, B.C. 356, in order to immortalize himself. The Ephesians passed a decree condemning his name to oblivion, but as might naturally be expected, this only increased his notoriety, and made him more absolutely certain of the attainment of his object (Plut. *Alex.* 3; Val. Max. viii. 14, 5; Gell. ii. 6).

Hersé (Ἕρση). See AGRAULUS; CECROPS; ERECHTHEUS.

Hersilia. One of the Sabine women carried away by the Romans at the celebration of the Consualia. She was given to Romulus as a wife, and, after his death, became herself a divinity, under the name of Hora (Youth) (Livy, i. 11; Gell. xiii. 22; Plut. *Romul.* 14). Others make her the wife of Hostus Hostilius, grandfather of king Tullus Hostilius of Rome (Macrob. *Sat.* i. 6).

Hertha. A goddess worshipped by the ancient Germans, and, according to Tacitus (*Germ.* 40), the same with the earth. She was supposed to take part in human affairs, and even sometimes to come among mortals. She had a sacred grove in an island of the ocean, and a chariot, covered with a veil, standing in the grove and consecrated to her service. Whenever it was known that the goddess had descended into this her sanctuary, her car was got ready, cows were yoked to it, and the deity was carried around in the covered vehicle. Festivity reigned in every place which the goddess honoured with her presence; wars ceased, arms were laid aside, and peace and harmony prevailed, until the priest declared that the goddess was sated with human society, and once more enclosed her within the temple. The island mentioned by Tacitus is supposed by many to have been that of Rügen, in the Baltic, while others have placed it in the Northern Ocean. See Rabus, *De Dea Hertha* (Augsburg, 1842).

Herŭli or **Erŭli.** A powerful German race, which was said to have come originally from Scandinavia. It attacked the Roman Empire on its decline. Under the command of Odoacer, who is said to have been an Herulian, the Heruli destroyed the Western Empire, A.D. 476.

Hesiŏdus (Ἡσίοδος). A celebrated Greek poet, supposed to have been born at Ascra in Boeotia (*Op. et D.* 633 foll.). His father, it seems, had migrated to Ascra in consequence of his poverty, and resided at the latter place for some time, though without obtaining the rights of a citizen. Still, however, he left at his death a considerable property to his two sons, Hesiod, and a younger one named Perses. The brothers divided the inheritance; but Perses, by means of bribes to the judges, contrived to defraud his elder brother. Hesiod thereupon migrated to Orchomenus, as Göttling supposes, and the harsh epithets which he applies to his native village were, in all probability, prompted by resentment at the wrong which he had suffered from the Ascraean judges. From a passage in the proëm to his *Theogony*, it has been inferred that Hesiod was literally a shepherd, and tended his flocks on the side of Helicon. He was evidently born in an humble station, and was himself engaged in rural pursuits; and this perfectly accords with the subject of the poem which was unanimously ascribed to him—namely, the *Works and Days* (Ἔργα καὶ Ἡμέραι), which is a collection of reflections and precepts relating to husbandry and the regulation of a rural household, interwoven with fables, allegories, etc., forming, as has been said, "a Boeotian shepherd's-calendar." The only additional fact that can be gathered from Hesiod's writings is that he went over to the island of Euboea, on occasion of a poetical contest at Chalcis, which formed part of the funeral games instituted in honour of Amphidamas; that he obtained a tripod as the prize, and consecrated it to the Muses of Helicon. This latter passage is suspected by Wolf; but it seems to have formed a part of the poem from time immemorial; and it may not be unreasonable to infer its authenticity from the tradition respecting an imaginary contest between Homer and Hesiod.

The following legendary account is given as to the manner of Hesiod's death. He is said to have consulted the oracle of Delphi as to his future destinies, and the Pythia directed him, in reply, to shun the grove of Nemean Zeus, since there death awaited him. There were at Argos a temple and a brazen statue of Zeus; and Hesiod, believing this to be the fatal spot, directed his course to Oenoë, a town of the Locri; but the ambiguity of the oracle had deceived him, for

this place also, by obscure report, was sacred to the same god. He was here the guest of two brothers. It happened that their sister Clymené was violated in the night-time by the person who had accompanied Hesiod, and hanged herself in consequence of the outrage. This man they accordingly slew; and, suspecting the connivance of Hesiod, killed him also, and threw his body into the sea. The murder is said to have been detected by the sagacity of Hesiod's dog; though by some it is related that his corpse was brought to the shore by a company of dolphins, at the moment that the people were celebrating the festival of Poseidon. The body of Hesiod was recognized, the houses of the murderers were razed to the foundation, and the murderers themselves cast into the sea. Another account states them to have been consumed by lightning; a third, to have been overtaken by a tempest while escaping to Crete in a fishing-boat, and to have perished in the wreck.

The only works that remain under the name of Hesiod are: (i.) Ἔργα καὶ Ἡμέραι ("Works and Days"); (ii.) Θεογονία ("Theogony"); (iii.) Ἀσπὶς Ἡρακλέους ("The Shield of Heracles"). The *Works and Days* (which, according to Pausanias, the Boeotians regarded as the only genuine production of Hesiod) is entirely occupied with the events of common life. The poem consists of advice given by Hesiod to his brother Perses, on subjects relating for the most part to agriculture and the general conduct of life. The object of the first portion of the poem is to improve the character and habits of Perses, and to incite him to a life of labour, as the only source of permanent prosperity. Mythical narratives, fables, descriptions, and moral apophthegms, partly of a proverbial kind, are ingeniously chosen and combined, so as to illustrate and enforce the principal idea, and served as a model for Vergil in his *Georgics*. In the second part Hesiod shows Perses the succession in which his labours must follow, if he determines to lead a life of industry. The poet speaks of the time of life when a man should marry, and how he should look out for a wife. He recommends all to bear in mind that the immortal gods watch over the actions of men; in all intercourse with others to keep the tongue from idle and provoking words, and to preserve a certain purity and care in the commonest occurrences of every-day life. At the same time, he gives many curious precepts, which resemble sacerdotal rules, with respect to the decorum to be observed in acts of worship, and which, moreover, have much in common with the symbolic rules of the Pythagoreans, that ascribed a spiritual import to many acts of ordinary life. Of a very similar nature is the last part of the poem, which treats of the days on which it is expedient or inexpedient to do this or that business.

The *Theogony* (Θεογονία) consists of an account of the origin of the world, including the birth of the gods, and makes use of numerous personifications. Even as early as the time of Pausanias (viii. 18, ix. 31) it was doubted whether Hesiod was actually the author of this poem, though its genuineness is expressly asserted by Herodotus (ii. 53), and all the internal evidence is in favour of this view. According to Hermann, it is a species of *mélange*, formed by the union of several poems on the same subject, and which has been effected by the same copyists or grammarians. The *Theogony* is interesting as being the most ancient monument that we have of the Greek mythology. When we consider it as a poem, we find no composition of ancient times so stamped with a rude simplicity of character. It is without luminous order of arrangement, abounds with dry details, and only occasionally rises to any particular elevation of fancy. It exhibits that crude irregularity and that mixture of meanness and grandeur which characterize a strong but uncultivated genius. The censure of Quintilian that "Hesiod rarely soars, and a great part of him is occupied in mere names," is undoubtedly merited. The sentence just quoted, however, refers plainly to the *Theogony* alone, while the following seems exclusively applicable to the *Works and Days*: "Yet he is distinguished by useful sentences of morality, and an admirable sweetness of diction and expression, and he deserves the palm in the middle style of writing." The passage relating to the battle of the gods, however, can not surely be classed among the specimens of the middle style. This passage, together with the combat of Zeus and Typhoëus, astonishes the reader by sudden bursts of enthusiasm, for which the prolix and nerveless narrative of the general poem has little prepared him. Mahaffy speaks of it as having "a splendid crash and thunder about it," and even as "far superior in conception, though inferior in execution, to the battle of the gods in the *Iliad*." Milton has borrowed some suggestions from these descriptions; and the arming of the Messiah for battle in *Paradise Lost* is obviously imitated from the magnificent picture of Zeus summoning all the terrors of his omnipotence for the extirpation of the Titans.

We have also, under the name of Hesiod, a fragment of 480 lines from a poem entitled the Ἡρωογονία or the genealogy and history of the demigods. To this poem some unknown rhapsodist has attached a piece on the combat between Heracles and Cycnus, containing a description of the hero's shield. It is from this part that the fragment in question bears the title of the *Shield of Heracles* (Ἀσπὶς Ἡρακλέους). Modern critics think that to the *Heroögony* of Hesiod belonged two works which are cited by the ancients—the one under the title of *Catalogue of Women* (Κατάλογος Γυναικῶν), a sort of Greek Debrett, giving the history of those mortal women who had become the mothers of demigods, and the other under the title of the Μεγάλαι Ἠοῖαι, so named because the history of each woman or heroine mentioned therein commenced with the words ἢ οἵη ("or such as"). There are scholia on Hesiod by Proclus, John Tzetzes, Moschopulus, and John Protospatharius; but the commentary by Aristophanes of Byzantium is lost. Tzetzes has also left a life of the poet, which is printed in Flach's edition of Hesiod.

The *editio princeps* of Hesiod appeared at Milan in 1493. Other memorable editions are those of Gaisford (1814–20), Lehrs (1862), Schömann (1869), Koechly (1878), and Fick (1887); and with explanatory notes, those of Paley, in English (1861), and of Göttling (1843) and Flach, in Latin (1878). The fragments are collected by Markscheffel (Leipzig, 1840). There is an English prose translation of Hesiod with Callimachus and Theognis in the Bohn Library; and a spirited verse translation by Elton. See also Rzach's monograph on the language of Hesiod, *Der Dialect des Hesiodus* (1876);

and on the mythology, Gruppe, *Die griech. Kulte und Mythen*, i. 567–612.

Hesiŏné (Ἡσιόνη). The daughter of Laomedon, king of Troy, and of Leucippé. By her death she was to appease the wrath of Poseidon, who, on account of her father's breaking his word, was devastating the land with a marine monster. Heracles destroyed the monster and set the maiden free; but Laomedon wished to break his promise to the hero, and to deprive him of his stipulated payment. Heracles took Troy, slew Laomedon and his sons, and gave Hesioné to his companion Telamon, to whom she bore a son, Teucer.

Hesperia (Ἑσπερία). The Western Land (from ἕσπερος, *vesper*), the name given by the Greek poets to Italy, because it lay west of Greece. In imitation of them, the Roman poets gave the name of Hesperia to Spain, which they sometimes called Ultima Hesperia (Hor. *Carm.* i. 36, 4) to distinguish it from Italy, which they occasionally called Hesperia Magna. See ITALIA.

Hesperĭdes (Ἑσπερίδες). "The Western Maidens," three celebrated nymphs, whose genealogy is differently given by various writers. According to Hesiod (*Theog.* 215), they were the daughters of Night, without a father. Diodorus, on the other hand, makes them to have had for their parents Atlas and Hesperis, daughter of Hesperus (Diod. Sic. iv. 27), an account which is followed by Milton in his *Comus* (981). Others, however, to assimilate them to their neighbours the Graiae and Gorgons, call the Hesperides the offspring of Phorcys and Ceto. Apollonius gives their names as Aeglé, Hespera, and Erytheïs (iv. 1427); while Apollodorus, who increases the number to four, calls them Aeglé, Erythea, Hestia, and Arethusa (ii. 5, 11). Hesiod makes them to have dwelt "beyond the bright ocean," opposite to where Atlas stood supporting the heavens (*Theog.* 518); and when Atlas had been fixed as a mountain in the extremity of Libya, the dwelling of the Hesperides was usually placed in his vicinity, though some set it in the country of the Hyperboreans (Apollod. l. c.).

According to the legend, when the bridal of Zeus and Heré took place, the different deities came with nuptial presents for the latter, and among them the goddess of Earth, with branches having golden apples growing on them (Hyg. *Poet. Astron.* ii. 3). Heré, greatly admiring these, begged of Earth to plant them in her gardens, which extended as far as Mount Atlas. The Hesperides, or daughters of Atlas, were directed to watch these trees; but, as they were somewhat remiss in discharging this duty, and frequently plucked off the apples themselves, Heré sent thither a large serpent to guard the precious fruit. This monster was the offspring of Typhon and Echidna, and had a hundred heads, so that it never slept. According to Pisander, the name of the reptile was Ladon. One of the tasks imposed upon Heracles by Eurystheus was to bring him some of this golden fruit. For the legend, see HERACLES, p. 791.

Hesperĭdum Insŭlae. See HESPERIUM; HESPERIDES.

Hespĕris. See BERENICÉ.

Hesperium (Ἑσπέριον, Ἑσπέρου κέρας). The modern Cape Verde or Cape Roxo, a headland on the west coast of Africa, was one of the farthest points along that coast to which the knowledge of the ancients extended. At a day's journey from it was a group of islands called Hesperidum Insulae, wrongly identified by some with the Fortunatae Insulae. They are either the Cape de Verde islands, or, more probably, the Bissagos, at the mouth of the Rio Grande.

Hesperius Sinus. A bay on the western coast of Africa.

Hespĕrus (Ἕσπερος). The evening star, son of Astraeus and Eos (Aurora), of Cephalus and Eos, or of Atlas. He was also regarded as the same as the morning star. See LUCIFER.

Hestia (ἑστία). See FOCUS.

Hestia (Ἑστία; Ionic, Ἰστίη). The goddess of the hearth, which is the emblem of the settled home. She was deemed the founder and maintainer of the family and the State, of civic concord and of public reverence for the gods. She was the daughter of Cronus and of Rhea; sister of Zeus, Poseidon, Hades, Heré, and Demeter; one of the twelve Olympian deities, from the rest of whom she was distinguished by the fact that, as the abiding goddess of the household, she never left Olympus. In Homer, although the sanctity of the hearth is indeed recognized, as yet we find no mention of the goddess. It is a matter of discussion whether this was by accident, or because in that period the personification of the worship of the hearth had not attained its full perfection. Having been wooed by Apollo and Poseidon, she took an oath of perpetual virginity; so Zeus granted her the honour of being worshipped, as a tutelary goddess, at every hearth, in human habitations as well as in the temples of the gods, and of being called to mind amid libations at the beginning and end of every sacrifice and every festal entertainment. Hence it was that every sacrifice began and ended with a libation to Hestia, so that she had a share in all festivities; and in every prayer, as well as in all the public forms of solemn oaths, her name was recited before the name of any other god. Just as in the home her consecrated hearth formed the central point of family life, at which family festivals were celebrated and where both strangers and fugitives found a hospitable asylum, so also in the prytaneum, or town hall, where the sacred fire was ever burning, her hearth was the centre of the life of the city, indeed of the whole State, and of the colonies which had gone forth from it. Here, as representative of the State, the highest officials sacrificed to her, just as in every private house the father or mother of the family provided for her worship. Here also were held the public deliberations, and the public banquet given to deserving citizens and to foreign ambassadors. Hither repaired all who besought the protection of the State. Hence also the colonists, bound for distant shores, took the fire for the public hearth of their new community. In some respects, the centre of the religious life of Greece was the fire on the hearth of Hestia in the Delphic temple, where was the sacred ὀμφαλός

Vesta Giustiniani.

(navel), which the Greeks considered to be the central point of the inhabited earth. Hestia stands in close connection with Zeus as the guardian of the law of hospitality and of the oath. She was also much associated with Hermes and often invoked in conjunction with him; Hestia, as the goddess of quiet domesticity, and Hermes, as the restless god of trade on the public streets and roads, representing between them the two principal varieties of human life. According to a view that afterwards became current, under the influence of philosophers and mystics, she was regarded as personifying the earth, as the fixed centre of the world, and was identified with Demeter and Cybelé. The corresponding deity among the Romans was Vesta (q. v.). The statues placed in the prytanea represented her, in accordance with her nature, as a being with grave and yet gentle expression, sitting or standing in an attitude of rest, with a sceptre as her attribute. She is never represented as nude, whence perhaps so few statues of her have been found. The most celebrated of her existing statues is known as the Vesta Giustiniani, in the Torlonia collection at Rome, and ascribed conjecturally to Calamis—a form robed in simple drapery, with hair unadorned and wearing a veil; her right hand rests on her hip, and her left hand, which is pointing upwards, once held a long staff as her sceptre. It represents the earlier Greek conception of divinity, austere and rigid, yet stately and imposing, blending simplicity and severity with grace and tenderness. See Preuner, *Hestia-Vesta* (Tübingen, 1864).

Hestiaeōtis (Ἑστιαιῶτις). (1) According to Strabo, that portion of Thessaly which lies near Pindus, and between that mountain and Upper Macedonia. This district was originally the country of the Dorians, who are stated by Herodotus (i. 56) and others to have once occupied the regions of Pindus. See Thessalia. (2) Or Histiaea. A district of Euboea, whose inhabitants are said to have peopled the Thessalian Hestiaeotis.

Hestiāsis (*ἑστίασις*). A species of liturgy which consisted in giving a feast to one of the tribes at Athens by some person belonging to the tribe, who was known as *ἑστιάτωρ*. See Harpocration, s. v. *ἑστιάτωρ*.

Hesus. A deity among the Gauls, the same as Mars of the Romans (Lucan, i. 445). Lactantius (*Div. Inst.* i. 21) writes the name *Heusus*.

Hesychius (Ἡσύχιος). (1) A Greek grammarian of Alexandria, who lived probably towards the end of the fourth century A.D. He composed, with the assistance of the works of earlier lexicographers (especially the *Περιεργοπένητες* of Diogenianus), a lexicon (*Γλῶσσαι*), which has come down to us in a very confused form, but is nevertheless among the most important sources of our knowledge of the Greek language, and throws much light on the interpretation and criticism of Greek poets, orators, historians, and physicians. Editions by Alberti and Ruhnken (Leyden, 1746–66), with additions by Schon (Leipzig, 1792); and by M. Schmidt (5 vols. 1858–61). The Christian glosses, which are interpolations, have been separately edited by Ernesti (Leipzig, 1785). See Ranke, *De Lex. Hesych. Vera Origine* (Quedlinburg, 1831). (2) A Milesian, called Illustris, who lived about A.D. 540, and wrote an *Onomasticon* or biography of illustrious men (ed. by Orelli, 1820), and a *Chronicon* or synopsis of universal history, in six parts, beginning with Belus, the alleged founder of the Assyrian State, and ending with the death of the Byzantine emperor, Anastasius I. (A.D. 518). The latter work is lost. See Krumbacher, *Grundriss der byzantinischen Literatur* (in I. Müller's *Handbuch*, vol. ix.), pp. 110 foll.

Hetaerae (*ἑταῖραι*). See Meretrix.

Hetaeri (*ἑταῖροι*, "comrades"). The designation of all free Macedonians who were ready to join in the defence of their country; especially the noblemen who composed the heavy cavalry, as contrasted with the infantry (*πεζεταῖροι*) of the royal guard.

Hetaerīae (*ἑταιρεῖαι*). The common name in Greece for all associations having any particular object, but chiefly for political clubs, often of a secret character, for the advancement of certain interests in the State. In many cases their members only aimed at assisting one another as candidates for public office or in lawsuits; but occasionally they also worked for the victory of their party and for a change in the constitution. See Eranos.

Hetricŭlum. A town of the Bruttii.

Hetruria. See Etruria.

Hexaēměron. See Dracontius.

Hexaphŏrum. See Lectica.

Hexapŏlis. See Doris; Lesbos; Lindus.

Hexastȳlos. A temple or like building having six columns in front. See Templum.

Heyne, Christian Gottlob. A German classical scholar, born at Chemnitz in Saxony, September 25, 1729. His father was a poor weaver, and for a number of years the son struggled with poverty and disappointment, being sometimes reduced almost to actual starvation. In 1753, however, he secured the position of under-clerk in the Brühl Library at Dresden, and before long published an edition of Tibullus (1755), and one of the *Enchiridion* of Epictetus (1756), works which won for him the notice of the great Dutch scholar Ruhnken of Leyden. The Seven Years' War occurring at this time unfortunately threw Heyne out of employment, and reduced him to his former straits, his only source of income being the hack-work which he did for the booksellers. This period of want, however, was finally ended by his appointment, through the favour of Ruhnken, to the chair of Eloquence at the University of Göttingen, an office which he held until his death, and in which his profound scholarship and stimulating lectures raised the reputation of Göttingen to an unquestioned pre-eminence among the universities of Germany. It is said that he trained and sent forth more than 130 professors. He died on July 14, 1812. Heyne's principal works are his edition of Vergil (4 vols. 1767, new ed. 1830–44); of Pindar (1773), of Apollodorus (1782, 2d ed. 1802), and of the *Iliad* in eight vols. (1802). He also put forth a number of translations of the classics; six volumes of miscellanies in his *Opuscula Academica* (1785–1812); and between 7000 and 8000 book reviews in the *Göttinger Gelehrte Anzeiger*, of which he was the editor for more than thirty years. His life has been written by his son-in-law Heeren (Göttingen, 1813). See also Carlyle, *Miscellanies*, vol. ii. and Bursian, *Geschichte der class. Philologie*, pp. 476–500 (Munich, 1883).

Hibernia (also called **Ierné, Iverna,** and **Juverna**; Ἰέρνη, Ἰερνὶς νῆσος, Ἰουερνία; Keltic, *Eri*). The ancient name of Ireland, which is said to have been derived from the name of the early inhabitants of its southern coast, the Iuverni (Ἰουέρνοι). It is mentioned in the pseudo-Orphic poem on the Argonautic expedition (line 1164), and by Aristotle (*De Mundo*, 3), who describes it as lying in the ocean beyond the Pillars of Hercules. Strabo says that it is too cold to be more than barely habitable; whereas Mela speaks of its herbage as so rich as to cause the cattle to eat until they burst with it. Solinus mentions the fact that there are no snakes in the island, and pictures the inhabitants as so warlike that on the birth of a male child the mother places the first bit of food in its mouth on the point of a sword. Ptolemy gives the names of the rivers and promontories, and describes the outline of the coast with surprising accuracy. He also names the principal tribes of the island—the Vennicnii in Ulster, the Nagnatae in Connaught, the Uterni in Munster, and the Brigantes and others in Leinster. On the coast were two towns—Menapia and Eblana (Dublin). The Romans made no attempt to conquer the island, though they gained some knowledge of it from the British traders who visited its coast.

Hicesia (Ἱκεσία). One of the Aeoliae Insulae (q.v.).

Hicĕtas (Ἱκέτας or Ἱκέτης). (1) A Syracusan, contemporary with the younger Dionysius and Timoleon. He was at first a friend of Dion, after whose death (B.C. 353) his wife Areté and his sister Aristomaché placed themselves under the care of Hicetas; but he was persuaded, notwithstanding, to consent to their destruction. A few years later he became tyrant of Leontini. He carried on war against the younger Dionysius, whom he defeated, and had made himself master of the whole city, except the island citadel, when Timoleon landed in Sicily, B.C. 344. Hicetas then opposed Timoleon and called in the aid of the Carthaginians, but he was defeated and put to death by Timoleon, B.C. 339 or 338. (2) Tyrant of Syracuse, during the interval between the reign of Agathocles and that of Pyrrhus. He defeated Phintias, tyrant of Agrigentum, and was himself defeated by the Carthaginians. After a reign of nine years (B.C. 288–279), he was expelled from Syracuse.

Hiempsal. (1) Son of Micipsa, king of Numidia, and grandson of Masinissa, murdered by Iugurtha, soon after the death of Micipsa, B.C. 118. (2) King of Numidia, grandson or great-grandson of Masinissa, and father of Iuba. He appears to have received the sovereignty of part of Numidia after the Jugurthine War. He was expelled from his kingdom by Cn. Domitius Ahenobarbus, the leader of the Marian party in Africa, but was restored by Pompey in 81. Hiempsal wrote some works in the Punic language, which are cited by Sallust (*Iugurtha*, 17).

View of the Phrygian Hierapolis from the City Gates.

Hiĕra. (1) See Aeoliae Insulae. (2) See Aegates.

Hierapŏlis (Ἱεράπολις). (1) A city of Great Phrygia, near the Maeander, and an early seat of Christianity, mentioned in St. Paul's Epistle to the Colossians (iv. 13). Here Cybelé was worshipped. Epictetus was a native of Hierapolis. (2) Formerly Bambycé (Βαμβύκη), a city in the northeast of

Syria, one of the chief seats of the worship of Astarté.

Hieratic Writing. See HIEROGLYPHICS.

Hiero (Ἱέρων). (1) A Sicilian who succeeded his brother Gelon as tyrant of Syracuse, B.C. 478. He committed many acts of violence, encouraged spies, and kept a mercenary guard around his person. He was ambitious of extending his dominion, and his attempts proved successful. After the death of Theron of Agrigentum, Hiero defeated his son Thrasydaeus, who was soon afterwards expelled by his countrymen. He took Naxus and Catana, and, having driven away the inhabitants from both towns, replaced them by Syracusan and Peloponnesian colonists. He changed the name of Catana to Aetna, and he himself assumed the title of Aetnaeus (Αἰτναῖος). Having joined his fleet to that of the people of Cumae, he succeeded in clearing the Tyrrhenian Sea of the Etruscan and other pirates who infested it. His chariots repeatedly won the prize at the Olympic Games, and his success on those occasions formed the theme of several of the odes of Pindar, who was his guest and friend. Aeschylus, Simonides, Bacchylides, and Epicharmus were also well received at the court of Hiero, who was fond of the society of learned men. His intimacy with Simonides is the subject of Xenophon's dialogue entitled Ἱέρων. Hiero died at Catana, B.C. 467, and was succeeded by his brother Thrasybulus, who had all his faults without any of his good qualities, and was at last driven away by the Syracusans, who restored the government to the commonwealth (Diod. Sic. xi. 48 foll.). (2) The second of the name, son of Hierocles, a wealthy citizen of Syracuse, and a descendant of Gelon, distinguished himself in early life by his brilliant qualities, and served with distinction also under Pyrrhus in his Sicilian campaigns. After Pyrrhus had suddenly abandoned Sicily, the Syracusans found themselves threatened on one side by the Carthaginians and on the other by the Mamertines, a band of Campanian mercenaries, who had treacherously taken possession of Messana. The Syracusan troops, being in want of a trusty leader, chose Hiero by acclamation, and the Senate and citizens, after some demur, ratified the choice, B.C. 275. After various successful operations against the Mamertines, Hiero returned to Syracuse, where, through the influence of Leptines, his father-in-law, a leading man among the aristocratic party, he was proclaimed king, B.C. 270. Shortly afterwards the Mamertines at Messana quarrelled with the Carthaginians, who had managed to introduce a garrison into the citadel, and drove them out, upon which the Carthaginians invited Hiero to join his forces to theirs, in order to drive the Mamertines out of Sicily. Hiero having assented, encamped under the walls of Messana on one side, and the Carthaginians fixed their camp on the other, while their squadron guarded the strait. The Mamertines, meanwhile, had applied to the Romans for assistance, claiming a common origin with them, as being descended from Mars, called Mamers in the Oscan language; and Rome eagerly seized this opportunity of obtaining a footing in Sicily. The consul Appius Claudius marched to Rhegium, and, having contrived to pass the strait in the night unobserved by the Carthaginian cruisers, he surprised Hiero's camp, routed the soldiers, and obliged the monarch himself to seek safety in flight. The consul next attacked the Carthaginian camp with the same success, and this was the beginning of the First Punic War, B.C. 265. In the following year the Romans took Tauromenium and Catana and advanced to the walls of Syracuse, when Hiero sued for peace, which he obtained on condition of paying 100 talents of silver and supplying the Roman army with provisions. He punctually fulfilled his engagements, remaining faithful to Rome during the whole of the war, and by his supplies was of great service to the Roman armies, especially during the long sieges of Agrigentum and Lilybaeum. Hiero was included in the peace between Rome and Carthage, by which his territories were

Coin of Hiero II.

secured to him, and he remained in friendship with both States. He even assisted Carthage at a very critical moment by sending her supplies of provisions during the war which she had to sustain against her mercenaries. The period of peace which elapsed between the end of the First and the beginning of the Second Punic Wars, from B.C. 241 to 218, was most glorious for Hiero and most prosperous for Syracuse. Commerce and agriculture flourished, and wealth and population increased to an extraordinary degree. Hiero paid particular attention to the administration of the finances, and made wise regulations for the collection of the tithe or tax on land, which remained in force throughout Sicily long after his time, and are mentioned with praise by Cicero as the *lex Hieronica*. Hiero introduced the custom of farming out the tax every year by auction. He embellished and strengthened Syracuse, and built large ships. Archimedes lived under Hiero's reign. When the Second Punic War broke out, Hiero continued true to his Roman alliance, and, after the Trasimenian defeat, he sent a fleet to Ostia with provisions and other gifts, and a body of light troops to the assistance of Rome. He lived to see the battle of Cannae, after which his son Gelon embraced the part of the Carthaginians. Gelon, however, died, not without suspicion of violence, and Hiero himself, being past ninety years of age, ended his days soon afterwards (B.C. 216), leaving the crown to his grandson, Hieronymus.

Hiero (Ἱέρων ἢ Τυραννικός). A dialogue of Xenophon between King Hiero and the poet Simonides. Separate editions by Breitenbach (1847), and Holden (1888).

Hierŏcles (Ἱεροκλῆς). (1) A rhetorician of Alabanda, in Caria, who lived in the beginning of the first century before the Christian era. He excelled in what Cicero termed the Asiatic style of eloquence (Cic. *De Orat.* ii. 23.) (2) A lawyer, who wrote a work on veterinary medicine, addressed to Cassianus Bassus, of which three chap-

ters are preserved in the sixteenth book of the "Geoponica." (See GEOPONICI.) (3) Styled "the grammarian," for distinction's sake from the philosopher of the same name, a Greek writer supposed to have been contemporary with Justinian, but of whom one thing at least is certain—that he was anterior to the tenth century. He composed, under the title of Συνέκδημος ("Travelling Companion"), a description of the sixty-four provinces that formed the Byzantine Empire and of the cities situated in them. Ed. by Parthey (Berlin, 1866). (4) A New Platonist, who flourished at Alexandria about the middle of the fifth century A.D. He has left a commentary on the Golden Verses of Pythagoras and a treatise on Providence, Destiny, and Free-will. The aim of Hierocles is to show the agreement which exists in respect of these doctrines between Plato and Aristotle and to refute the systems of Epicurus and the Stoics. We have only extracts from this latter work made by Photius and an abridgment by an unknown hand. Stobaeus has preserved for us fragments of a work of Hierocles on the worship of the gods and of several other productions of his. There exists also, under the name of Hierocles, a collection of amusing anecdotes (Αστεῖα, *Facetiae*), giving an account of the ridiculous actions and sayings of book-learned men and pedants (σχολαστικοί). Among them are to be found the originals of several professedly modern jokes, and they furnish a model for the innumerable German witticisms at the expense of the typical Herr Professor. The best edition of the commentary on the Golden Verses and of the fragments, etc., is that of Warren (London, 1742). (5) A prefect of Bithynia, and afterwards of Alexandria, who is said by Lactantius to have been the principal adviser of the persecution of the Christians in the reign of Diocletian (Lactant. *Inst. Div.* v. 2; *De Morte Persec.* 17). He also wrote two works against Christianity, entitled Λόγοι Φιλαλήθεις πρὸς τοὺς Χριστιανούς ("Truth-loving words to the Christians"), in which, according to Lactantius, he endeavoured to show that the Scriptures overthrow themselves by the contradictions with which they abound. He also reviled Paul, Peter, and the other disciples, as propagators of falsehood. He endeavoured to destroy the effect of the Saviour's miracles, though he did not deny the truth of them. He also aimed to show that like things, or even greater, had been done by Apollonius of Tyana. See the chapter on Apollonius of Tyana in Dyer's *Gods in Greece*, pp. 257–266 (London, 1891), and Professor Gildersleeve's essay.

Hierodūli (ἱερόδουλοι, "temple servants"). The name for all who were closely connected with the service of a sanctuary, and especially such as were bound to perform certain services, obligations, and duties to the same, and in part lived as a kind of bondmen upon its land. We find them forming a considerable population in Asia; e. g. at Comana in Cappadocia, there were more than 6000 of them, who with their descendants belonged as slaves to the goddess called Enyo by the Greeks. They served as labourers on the estates of the temple, and performed the humblest offices as hewers of wood and drawers of water. See ADDITUUS.

The Delphic sanctuary of Apollo had similar ministrants from a very early date, as had also the temple of Aphrodité on Mount Eryx in Sicily. In the same manner Aphrodité of Corinth, in the flourishing times of that city, had over 1000 girls dedicated to her service. They added brilliancy and lustre to her worship, and living as prostitutes paid a portion of their earnings to the goddess as tribute. See MERETRIX.

Hieroglyphics (ἱερογλυφικὰ, sc. γράμματα) or **Hieroglyphs** (in Egyptian, called *Neter kharu* or "divine words"). Pictures of objects used to express either sounds, words, or ideas. Hieroglyphs have been used by several nations, among them the Mexican Aztecs, but the word is oftenest employed of the system of the ancient Egyptians. Their invention in Egypt was ascribed to the god Thoth. Pliny the Elder speaks of Menon as their inventor. There is no evidence that any of the early Greeks acquired an understanding of them, but Philo in his *Vita Moysis* says that Moses could read them. In Egypt they were universally employed by the educated classes, but were practically a mystery to the people at large, whence a belief in their divine origin prevailed. Democritus of Abdera (B.C. 460), in a work now lost, described both the hieroglyphs of Egypt and the Assyrian cuneiform; and under the Greek rulers of Egypt (after B.C. 300) considerable attention was paid to the language and literature of the country. Under the Romans, Chaeremon, librarian in the Serapeum, compiled a dictionary of hieroglyphs, and they are spoken of by Diodorus, Strabo, Tacitus, Ammianus Marcellinus, Iulius Valerius, and the novelist Heliodorus (about A.D. 400), who in his romance *Aethiopica*, describes a letter written in hieroglyphs by Queen Candacé. Clemens Alexandrinus (A.D. 211) is the first writer to speak of the twofold nature of the hieroglyphs, which he divides into phonetic and symbolic characters.

After the sixth century A.D. all knowledge of them was lost until about the beginning of the seventeenth century when the learned Jesuit, Athanasius Kircher, endeavoured to interpret them, but had little success owing to his theory that the signs were purely ideographic. That they were at least partly phonetic was asserted by Zoega in 1787, and a certain clue to their decipherment was found in 1799 by the discovery of the celebrated Rosetta Stone during the Napoleonic occupation of Egypt. This is a slab of black basalt inscribed with (1) hieroglyphics; (2) demotic (enchorial, cursive), and (3) Greek. It gives a decree of the priests of Memphis in honour of Ptolemy V. The labour of many scholars was devoted to the study of these inscriptions. Dr. Young in 1818 partly proved that the characters were alphabetic, a fact surely established in 1822 by the French scholar Champollion, who used for comparison an inscription found on an obelisk at Philae. His methods were subsequently used and his discoveries largely extended by Rosellini, Salvolini (1832), Lepsius (1837), and more recently by Bunsen, De Rougé, Birch, Chabas, Brugsch, and others.

Hieroglyphs are either ideographic (representing ideas) or phonetic (representing sounds). Phonetic signs are found dating back at least as early as B.C. 3800, and are partly alphabetic and partly syllabic. There are found in the earliest hieroglyphic writing 24 alphabetic signs. In all, there are about 1700 different hieroglyphic characters. Many of them are used as determinatives, that is as signs which aid in determining the meaning of the phonetic symbols which have preceded them. Thus after the phonetic signs for "dog," is placed a picture of a dog; after those for "tree," the picture

The Rosetta Stone. (British Museum.)

of a tree, etc. Abstract ideas are expressed by some figures which symbolize them or denote the objects which possess and illustrate them. Thus, "joy" is pictured in a man dancing; "craft" by a jackal, etc. Many of these determinatives get to be largely conventional, as where all actions of moving, standing, or stretching are signified by ⅄, originally representing two legs. There are about 150 of these determinative signs in all, and they have their fellows in the cuneiform system of the Assyrians. In the cuneiform, however, the determinatives precede the word and in Egyptian follow it. The Egyptian determinatives are also more numerous and oftener used than the Assyrian.

There are two cursive or running forms of the hieroglyphs. The first, which is known as the *hieratic*, which was very extensively used, being found in legal and governmental documents, accounts, in nearly all books and rituals, and in private accounts and memoranda. Its characters were fewer in number than the hieroglyphs proper, and the vocalic complements of the consonants are regularly employed to prevent ambiguity. For a specimen of hieratic writing, see the article AEGYPTUS, p. 28.

The second cursive form is known as the *demotic*, used as early as the sixth century B.C., and continuing down to the third century A.D. It was the last native form of writing to survive in Egypt, and was gradually supplanted by the characters of the Greek alphabet introduced by the Christians. It appears on the Rosetta Stone side by side with the hieroglyphs. A specimen of it will be found on p. 494.

The language of the hieroglyphs is best represented by the Coptic, which ceased to be spoken about a century ago, but in which the services of the Egyptian Christians are still conducted. The Coptic forms are largely those of the ancient Egyptian, modified by phonetic decay.

Hieroglyphs have been found inscribed upon granite, porphyry, basalt, and sandstone; and cut or carved on wood and plaster. They were also written upon papyrus and leather. (See PAPYRUS.) In writing upon papyrus, a reed pen (*qash*) was employed. The colours most used were black, red, and green, and the inks were held when in use in a sort of wooden or ivory palette, with holes hollowed out of it as receptacles. On the Ani papyrus in the British Museum, thirteen colours are employed. The characters are written either in horizontal lines or in perpendicular columns, and are read in the order in which the pictures face. See ALPHABET.

On the subject of the hieroglyphics, see Birch, *Introduction to the Study of the Hieroglyphics* (London, 1857); Brugsch, *Grammaire Démotique* (Berlin, 1855); Bunsen, *Egypt's Place* (vol. v. 1867). There are dictionaries of hieroglyphics by Birch and Pierret, and in German by Brugsch. See also Berger, *Histoire de l'Ecriture dans l'Antiquité* (Paris, 1891), and Taylor, *The Alphabet* (2 vols. London, 1883). A very full account of the Rosetta Stone is given in Budge's work *The Mummy* (London, 1893).

Hieromantēa (*ἱερομαντεία*). See DIVINATIO.

Hieromenia (*ἱερομηνία*). The Greek term for the holy time of the month—i. e. that portion of each month which was kept as a festival. It differed in the several months according to the number and duration of the festivals. During this time there was a suspension of all business and even of lawsuits, and executions and warrants were in abeyance; in short, everything that was likely to interrupt the universal peace and the celebration of the festival was set aside. For the greater feasts a "truce of God" was proclaimed. See EKECHEIRIA.

Hieromnēmon (*ἱερομνήμων*). The recorder or officer in charge of sacred business at the meetings of the Amphictyonic Council. See AMPHICTYONES.

Hiĕron. See HIERO.

Hieronўmus (Ἱερώνομος). (1) Of Cardia, accompanied Alexander the Great to Asia, and after the death of that monarch (B.C. 323) served under his countryman Eumenes. He afterwards fought under Antigonus, his son Demetrius, and grandson Antigonus Gonatas. He survived Pyrrhus, and died at the advanced age of 104. Hieronymus wrote a history of the events from the death of Alexander to that of Pyrrhus, if not later. (2) King of Syracuse, succeeded his grandfather, Hieron II., B.C. 216, at fifteen years of age, and was assassinated after a short reign of only thirteen months. (3) Of Rhodes, a Peripatetic philosopher, and a disciple of Aristotle. (4) Saint Jerome, one of the best known of the Christian Fathers, born at Stridon on the borders of Dalmatia about A.D. 340. His full name was EUSEBIUS HIERONŸMUS SOPHRONIUS. As a boy he studied Greek and Latin

rhetoric and philosophy under Aelius Donatus at Rome, where he was baptized. After residing in Gaul, he settled at Aquilea in A.D. 370, with his friend Rufinus. From 374 to 378 he lived in the desert of Chalcis undergoing penance and studying the Hebrew language. In 379 he was admitted to the priesthood at Antioch, where he was the friend of Gregory Nanzianzenus. In 382, in which year he visited Rome and became secretary to Pope Damasus, he began his great version of the Bible into Latin, known as the Vulgate, undertaken at the pope's request. From a linguistic point of view this version is of very great interest, as containing many lexical and grammatical forms not found in the classical language, but peculiar to the popular speech (*sermo plebeius*). In 386 he fixed his residence at Bethlehem, whither two noble Roman ladies, Paula and her daughter Eustochium, followed him and founded four convents, one of which Jerome himself governed. He died Sept. 30, 420. His writings comprise, besides the Vulgate, letters, treatises, and commentaries on the Scriptures. Important is his translation of the Chronicle of Eusebius (q. v.), which he revised and enlarged, bringing it down to the year A.D. 378. A complete edition of the works of St. Jerome is that of Vallarsi (Verona, 1734–42), reprinted by Migne in 8 vols. (Paris, 1845). See the special works by Zöckler (Gotha, 1865), Cutts (London, 1878), and Goelzer (Paris, 1886).

Hierophantes (*ἱεροφάντης*, "discloser of sacred things"). The chief priest in the Eleusinian Mysteries. See ELEUSINIA.

Hieropoei (*ἱεροποιοί*, "managers of the sacrifices"). The Greek term for certain officials, who, besides having the care of the sacrifices, had also the superintendence of the economic details of the sanctuary, and the charge of the money and treasures of the temple. In Athens, besides such officials attached to the several temples, there was a board of ten men, yearly appointed by lot, who had to attend to the celebration of the extraordinary and quinquennial sacrifices, the cost of which was defrayed by the public treasury. Another college of three or ten hieropoei, appointed by the Areopagus, superintended the sacrifices offered to the Eumenides by the State.

Hieroscopia (*ἱεροσκοπία*, "viewing the sacrifice"). A form of divination by means of the entrails of sacrificed beasts. See MANTIKÉ.

Hierosolŷma (*τὰ Ἱεροσόλυμα*). Jerusalem, a celebrated city of Palestine, the capital of Judaea. The history of Abraham mentions that Melchizedek, king of Salem, came forth to meet him when he returned from the slaughter of the kings (Gen. xiv. 18), and it has been generally supposed that this Salem was the original of the city which we are now considering. It is more certain, however, that when the Israelites entered Canaan they found the place in the occupation of the Jebusites, a tribe descended from Jebus, a son of Canaan, and the city then bore the name of Jebus or Jebusi (Josh. xv. 63, xviii. 28). The lower city was taken and burned by the children of Judah (Jud. i. 8) after the death of Joshua; but the Jebusites had so strongly fortified themselves in the upper city, on Mount Zion, that they maintained themselves in possession of it till the time of David. That monarch, after his seven years' rule over Judah in Hebron, became king of all Israel, on which he expelled the Jebusites from Mount Zion, and established here the metropolis of his kingdom. The city now took the name of Jerusalem (Yerushalaïm), a term which denotes "the abode of peace," or (according to another derivation) "the people of peace" (Gesenius, *Hebr. Lex.* s. v.). Yakût, the Mohammedan geographer, gives other forms of the name (Urîshallum, Urishalum, and Shallam). The Septuagint version gives *Ἱερουσαλήμ* as the form of the name, while by the Greek and Roman writers the place is called Hierosolyma. At present this city is known throughout Western Asia by the Arabic name of El-Kuds, which signifies "The Holy." See CADYTIS.

Jerusalem was built on several hills, the largest of which was Mount Sion, which formed the southern part of the city. A valley towards the north separated this from Acra, the second or lower city, on the east of which was Mount Moriah, the site of the Temple of Solomon. Northeast of Mount Moriah was the Mount of Olives, on the south was the valley of Hinnom, and at the north Mount Calvary, the scene of Christ's crucifixion.

Passing over the earlier history of this celebrated city, so fully detailed in the Scriptures, we come to the memorable period of its capture and destruction by Titus. The date of this event was the 8th of September, A.D. 70. During this siege and capture 1,100,000 persons are said to have perished, and 97,000 to have been made prisoners and afterwards either sold for slaves or exposed to the fury of wild beasts. In fact, the population, not only of Jerusalem, but that of the adjacent districts —many who had taken refuge in the city, more who had assembled for the feast of unleavened bread— had been shut up by the sudden formation of the siege. The ardent zeal of the Jewish nation for their holy city and temple soon caused both to be again rebuilt; but fresh commotions compelled the emperor Hadrian to interfere and ordain that no Jew should remain in, or even approach near Jerusalem, on pain of death. On the ruins of their temple the same emperor caused a temple in honour of Iupiter Capitolinus to be erected, and the image of a hog to be cut in stone over the gate leading to Bethlehem, as a standing insult to the religious feelings of this unfortunate people. The name of the city was also changed to Aelia Capitolina, the first part of the name alluding to the family of the Roman emperor. The more peaceful Christians were permitted, however, to establish themselves within the walls, and Aelia became the seat of a flourishing church and bishopric. This latter name became afterwards the ordinary name of the city, and Jerusalem became nearly obsolete. Upon the ascension to the throne, however, of the Christian emperors the earlier name revived. Jerusalem, thus restored, was much less in compass than the ancient city, Mount Sion and Bezetha being excluded.

The following description of Jerusalem, as it appeared just before the siege by Titus, is taken, with a few alterations, from Dean Milman (*History of the Jews*, vol. iii. pp. 17 foll.): "Jerusalem, at this period, was fortified by three walls, in all those parts where it was not surrounded by abrupt and impassable ravines; there it had but one. Not that these walls stood one within the other, each in a narrower circle running round the whole city; but each of the inner walls defended one of the several quarters into which

the city was divided, or, it might be almost said, one of the separate cities. Since the days in which David had built his capital on the rugged heights of Sion, great alterations had taken place at Jerusalem. That eminence was still occupied by the upper city; but, in addition, first the hill of Moriah was taken in, on which the temple stood, then Acra, which was originally, although a part of the same ridge, separated by a deep chasm from Moriah. This chasm was almost entirely filled up, and the top of Acra levelled by the Asmonean princes, so that Acra and Moriah were united, though on the side of Acra the temple presented a formidable front, connected by several bridges or causeways with the lower city. To the south the height of Sion, the upper city, was separated from

View of Jerusalem.

the lower by a ravine, which ran right through Jerusalem, called the Tyropoeon, or the valley of the cheesemongers; at the edge of this ravine, on both sides, the streets suddenly broke off, though the walls in some places must have crossed it, and it was bridged in more than one place. To the north extended a considerable suburb called Bezetha, or the new city. The first or outer wall encompassed Bezetha. Agrippa the First had intended to make this wall of extraordinary strength; but he had desisted from the work on the interference of the Romans, who seem to have foreseen that this refractory city would hereafter force them to take up arms against it. Had this wall been built according to the plan of Agrippa, the city, in the opinion of Iosephus, would have been impregnable. This wall began at the tower of Hippicus, which stood, it seems, on a point at the extreme corner of Mount Sion. It must have crossed the western mouth of the valley of Tyropoeon, and run directly north to the tower of Psephina. The wall then bore towards the monument of Helena, ran by the royal caverns of the Fuller's Monument, and was carried into the valley of Kedron or Jehoshaphat, where it joined the old or inner wall under the temple. The wall, however it fell short of Agrippa's design, was of considerable strength. The stones were 35 feet long, so solid as not easily to be shaken by battering engines, or undermined. The wall was 17½ feet broad. It had only been carried to the same height by Agrippa, but it had been hastily run up by the Jews to 35 feet; on its top stood battlements 3½ feet high, and pinnacles 5¾; so the whole was nearly 45 feet high. The second wall began at a gate in the old or inner one, called Gennath, the gate of the gardens; it intersected the lower city, and, having struck northward for some distance, turned to the east and joined the northwest corner of the tower of Antonia. The Antonia stood at the northwest corner of the temple, and was separated from Bezetha by a deep ditch, which probably protected the whole northern front of the temple as well as of the Antonia. The old or inner wall was that of Sion. Starting from the southwestern porticos of the temple to which it was united, it ran along the ridge of the Tyropoeon, passed first the Xystus, then the council-house, and abutted on the tower

Hippicus, whence the northern wall sprang. The old wall then ran southward through Bethso to the gate of the Essenes, all along the ridge of the valley of Hinnom, above the pool of Siloam, then eastward again to the pool of Solomon, so on through Opha, probably a deep glen. It then joined the eastern portico of the temple. Thus there were, it might seem, four distinct towns, each requiring a separate siege. The capture of the first wall only opened Bezetha; the fortifications of the northern part of the temple, the Antonia, and the second wall still defended the other quarters. The second wall forced, only a part of the lower city was won; the strong rock-built citadel of Antonia and the temple on one hand, and Sion on the other, were not the least weakened. The whole circuit of these walls was guarded with towers, built of the same solid masonry with the rest of the walls. They were 35 feet broad and 35 high; but above this height were lofty chambers, and above those again upper rooms and large tanks to receive the rain-water. Broad flights of steps led up to them. Ninety of these towers stood in the first wall, 14 in the second, and 60 in the third. The intervals between the towers were about 350 feet. The whole circuit of the city, according to Iosephus, was 33 stadia, rather more than 4 miles. The most magnificent of all these towers was that of Psephina, opposite to which Titus encamped. It was 122½ feet high, and commanded a noble view of the whole country of Iudea, to the border of Arabia, and to the sea. It was an octagon. Answering to

View of the Interior of Jerusalem

this was the tower Hippicus, and following the old wall stood those of Phasaëlus and Mariamné, built by Herod, and named after his wife and his brother and friend. These were stupendous, even as works of Herod. Hippicus was square, 43¾ feet each way. The whole height of the tower was 140 feet; the tower itself 52½, a deep tank or reservoir 35, two stories of chambers 43¾, battlements and pinnacles 8¾. Phasaëlus was a solid square of 70 feet. It was surrounded by a portico 17½ feet high, defended by breastworks and bulwarks, and above the portico was another tower, divided into lofty chambers and baths. It was more richly ornamented than the rest with battlements and pinnacles, so that its whole height was above 167 feet. It looked from a distance like the tall pharos of Alexandria. Mariamné, though not equal in elevation, was more luxuriously fitted up; it was built of solid wall 35 feet high, and of the same width; on the whole, with the upper chambers, it was about 76¾ feet high. These lofty towers appeared still higher from their situation. They were built on the old wall, which ran along the steep brow of Sion. Their masonry was perfect. They were built of white marble, cut in blocks 35 feet long, 17½ wide, 8¾ high, so fitted that the towers seemed hewn out of the solid quarry. High above the whole city rose the temple, uniting the commanding strength of a citadel with the splendour of a sacred edifice. According to Iosephus, the esplanade on which it stood had been considerably enlarged by the accumulation of fresh soil since the days of Solomon, particularly on the north side. It now covered a square of a furlong on each side. Solomon had faced the precipitous sides of the rock on the east, and perhaps the south, with huge blocks of stone; the other sides likewise had been built up with perpendicular walls to an equal height. These walls in no part were lower than 300 cubits (525 feet), but their whole height was not seen excepting on the eastern and perhaps the southern sides, as the earth was heaped up to the level of the streets of the city. Some of the stones employed in this work were 70 feet square. On this gigantic foundation ran, on each front, a strong and lofty wall without, within a spacious double portico or cloister 52½ feet broad, supported by 162 columns, which upheld a ceiling of cedar, of the most exquisite workmanship. The pillars were entire blocks hewn out of solid marble, of dazzling

whiteness, 43½ feet high. On the south side the portico or cloister was triple. This quadrangle had but one gate to the east, one to the north, two to the south, four to the west; one of these led to the palace, one to the city, one at the corner to the Antonia, one down towards the gardens. The open courts were paved with various inlaid marbles. Between this outer court of the Gentiles and the second court of the Israelites ran rails of stone, but of beautiful workmanship, rather more than 5 feet high. Along these, at regular intervals, stood pillars, with inscriptions in Hebrew, Greek, and Latin, warning all strangers, and Jews who were unclean, from entering into the Holy Court beyond. An ascent of fourteen steps led to a terrace 17½ feet wide, beyond which rose the wall of the inner court. This wall appeared on the outside 70 feet, on the inside 43½; for, besides the ascent of 14 steps to the terrace, there were 5 more up to the gates. The inner court had no gate or opening to the west, but four on the north, and four on the south, two to the east, one of which was for the women, for whom a portion of the inner court was set apart, and beyond which they might not advance; to this they had access likewise by one of the northern and one of the southern gates, which were set apart for their use. Around this court ran another splendid range of porticos or cloisters; the columns were quite equal in beauty and workmanship, though not in size, to those of the outer portico. Nine of these gates, or, rather, gateway towers, were richly adorned with gold and silver, on the doors, the door-posts, and the lintels. The doors of each of the nine gates were 52½ feet high, and half that breadth. Within, the gateways were 52½ feet wide and deep, with rooms on each side, so that the whole looked like lofty towers; the height from the base to the summit was 70 feet. Each gateway had two lofty pillars 21 feet in circumference. But what excited the greatest admiration was the tenth, usually called 'the Beautiful,' gate of the temple. It was of Corinthian brass of the finest workmanship. The height of the Beautiful Gate was 87½, its doors 70 feet. Within this quadrangle there was a further separation, a low wall which divided the priests from the Israelites; near this stood the great brazen altar. Beyond, the temple itself reared its glittering front. The porch or propylon, according to the design of the last, or Herod's temple, extended to a much greater width than the temple itself. In addition to the former width of 105 feet, it had two wings of 35 feet each, making in the whole 175 feet. The great gate of this last quadrangle, to which there was an ascent of twelve steps, was called that of Nicanor. The gateway tower was 132½ feet high, 43½ wide; it had no doors, but the front was covered with gold, and through its spacious arch was seen the Golden Gate of the temple, glittering with the same precious metal, with large plates of which it was sheeted all over. Above this gate hung the celebrated golden vine. This extraordinary piece of workmanship had bunches, according to Josephus, as large as a man. The Rabbins add that, 'like a true natural vine, it grew greater and greater; men would be offering—some, gold to make a leaf; some, a grape; some, a bunch; and these were hung up upon it; and so it was increasing continually.' The temple itself, excepting in the extension of the wings of the propylon, was probably the same in its dimensions and distribution with that of Solomon. Its roof had been set all over, on the outside, with sharp golden spikes, to prevent the birds from settling on and defiling the roof, and the gates were still sheeted with plates of the same splendid metal. At a

Golden Gate of Jerusalem.

distance the whole temple looked literally like a mountain of snow, fretted with golden pinnacles."

See Besant and Palmer, *Jerusalem* (2d ed. London, 1888); and Warren and Conder's *Jerusalem*, with a fine collection of plates (1884). The work of Le Strange, *Palestine under the Moslems*, gives a valuable résumé of the Arabic authorities regarding the city. On the temple, see De Vogüé, *Le Temple de Jérusalem*.

Hierosolymitānum Itinerarium. See ITINERARIA.

Hierosylias Graphé (*ἱεροσυλίας γραφή*). An action in the Athenian courts directed against one who robbed a temple (Dem. *c. Eubul.* p. 1318, § 64).

Highwayman. See LATRO.

Hilaria (*ἱλάρια*). (1) In Greece, any day a season of rejoicing. (2) At Rome, one of the *feriae stativae* held March 25th, in honour of Cybelé (Macrob. *Sat.* i. 21, § 7). See RHEA.

Hilarius. (1) A Christian writer born at Poitiers of pagan parents. He was elected bishop of his native place in A.D. 350. In 356, his strong polemics against the Arians led to his banishment by Constantine, who allowed him, however, to return from Phrygia, the place of his exile, and resume his office. He died in 368. His works consist of polemics against the Arians and addresses to the emperor. The best edition of his works is that of Coutant (2d ed. 1844–45). For his life see Cazenove's *St. Hilary of Poitiers* (1883). (2) Bishop of Arelaté (Arles) from A.D. 429 to 449. He wrote the life of Honoratus and a few other works.

Hilarotragoedia (*ἱλαροτραγῳδία*, "comic tragedy"). A species of comedy invented by Rhinthon of Tarentum, and consisting of a travesty of tragic themes. See RHINTHON; TRAGOEDIA.

Hildesheim, TREASURE OF. A number of drinking-vessels, plates, and cooking-utensils of silver, most of them embossed in high relief, found at Hildesheim in 1868. These important products of Roman art of the time of Augustus, are now deposited in the Berlin Museum. They probably belonged to the table service of some wealthy Roman, and had been hidden in the ground by Germans who had taken them as the spoils of victory. Artistically the most important pieces are a bowl shaped like a bell, and gracefully decorated externally with arabesques and figures of children, and four magnificent saucers decorated with a gilt Minerva seated on a rock, and half-length figures of the young Hercules slaying the serpents, of Cybelé, and of Attis; also two cups adorned with masks and all kinds of emblems of the worship of Bacchus. See Wieseler, *Der hildesheimer Silberfund* (Bonn, 1888), and the article CAELATURA.

Hilleviōnes. According to Pliny (*H. N.* iv. 27), a general term for the inhabitants of Scandinavia.

Himation (*ἱμάτιον*). Part of the outdoor dress of Greeks of free birth, worn over the *χιτών*, and reaching at least as far as the knees. It was an oblong piece of drapery, one end of which was first thrown over the left shoulder, then brought forward and held fast by the left arm; the garment was then drawn over the shoulder to the right side in such a manner that the right side was completely covered up to the shoulder, according to the more elegant fashion. Otherwise it went on under the right arm, and left the right shoulder exposed. Women wore the himation in the same manner, but some drew it over the head, so as to leave only the face visible. See CHLAMYS; PALLIUM; TRIBON.

Himation. (Stackelberg, *Gräber d. Hellenen*, taf. lxvii.)

Himĕra (*Ἱμέρα*). (1) Now Fiume Salso; one of the principal rivers in the south of Sicily, at one time the boundary between the territories of the Carthaginians and Syracusans, receives near Enna the water of a salt spring, and hence has salt water as far as its mouth. (2) A smaller river in the north of Sicily, flowing into the sea between the towns of Himera and Thermae. (3) A celebrated Greek city on the north coast of Sicily, west of the mouth of the river Himera (2), was founded by the Chalcidians of Zanclé, B.C. 648, and afterwards received Dorian settlers, so that the inhabitants spoke a mixed dialect, partly Ionic (Chalcidian), and partly Doric. In B.C. 409 it was taken by the Carthaginians, and was levelled to the ground. It was never rebuilt; but on the opposite bank of the river Himera the Carthaginians founded a new town, which, from a warm medicinal spring in its neighbourhood, was called THERMAE (Termini). The poet Stesichorus was born at the ancient Himera, and the tyrant Agathocles at Thermae.

Himerius (*Ἱμέριος*). A Greek sophist, born at Prusa in Bithynia, about A.D. 315, and educated at Athens, where, after extending his knowledge by travelling, he became a teacher of rhetoric. As such, he was so successful that he received the rights of citizenship and became a member of the Areopagus. Among his pupils were Basil the Great and Gregory of Nazianzus; for, although himself a pagan, nevertheless, like Libanius, he exhibited no animosity against Christians. He was summoned to Antioch by Julian, and appointed his private secretary. On the emperor's death (363), he returned to his earlier occupation at Athens, and there died, after becoming blind in his old age, about 386. Of his speeches and declamations twenty-four exist in a complete form, ten in fragments, and thirty-six in the summaries and excerpts preserved by Photius. His style is ornate, turgid, and overladen with erudition. He owes his special importance solely to the fact that his speeches contain material for the history of the events and of the manners of his time. The complete works of Himerius have been edited by Wernsdorf (Göttingen, 1790) and Dübner (1849).

Himĕros (*Ἵμερος*). The personification of longing and desire, and companion of Eros (q. v.).

Himilco (equivalent in Punic to *gratia Milcaris*, "the favour of Milcar"). The Greek form is *Ἱμίλκων*. The name of several Carthaginians. (1) A Carthaginian commander, who is said by Pliny (ii.

67) to have been contemporary with Hanno the navigator. He was sent by his government to explore the northwestern coast of Europe. A few fragments of this voyage are preserved by Avienus (*Ora Marit.* i. 90), in which the Hiberni and Albioni are mentioned, and also a promontory, Oestrymnis, and islands called Oestrymnides, which are usually considered to be Cornwall and the Scilly Islands. (2) A Carthaginian, who took Agrigentum in 406, and commanded in the wars with Dionysius I., tyrant of Syracuse, B.C. 405–368. Himilco was an able and successful general. He took Gela, Messana, and many other cities in Sicily, and at length besieged Syracuse by sea and land, but was finally defeated by Dionysius, who burned most of the Carthaginian vessels (Diod. Sic. bks. xiii. and xiv.). Hamilco, in his despair, ended his life by voluntary starvation. (3) A supporter of the Barcine party at Carthage (Livy, xiii. 12). He was sent by the Carthaginian government to oppose Marcellus in Sicily (Livy, xxiv. 35 foll., xxv. 23 foll.).

Hindustan. See INDIA.

Hinges. See CARDO.

Hippagrĕtae (*ἱππαγρέται*). The three officers chosen at Lacedaemon by the ephors to command the horsemen who formed the body-guard of the kings.

Hippăna (*τὰ Ἵππανα*). A town in the north of Sicily near Panormus.

Hipparchus (*ἵππαρχος*). The Greek name for a commander of cavalry. (See HIPPEIS.) In the Aetolian and Achaean Leagues, this name was borne by an officer charged with other functions besides, who was in rank second only to the *στρατηγός*.

Hipparchus (*Ἵππαρχος*). (1) A son of Pisistratus. (See PISISTRATIDAE.) (2) A Greek mathematician, the founder of scientific astronomy. He was born at Nicaea in Bithynia about B.C. 160, lived chiefly at Rhodes and Alexandria, and died about B.C. 120. He discovered the precession of the equinoxes, settled more accurately the length of the solar year, as also of the revolution of the moon, and the magnitude and distances of the heavenly bodies. He placed mathematical geography on a firmer basis, by teaching the application of the latitude and longitude of the stars to marking the position of places on the surface of the earth. He is also regarded as having invented trigonometry. In plane trigonometry he constructed a table of chords of arcs, which is practically the same as one of natural sines; and in spherical trigonometry he had some methods of solving triangles. Of his numerous writings we possess only his commentary on the *Phaenomena* of Eudoxus and Aratus and a catalogue of 1026 fixed stars. The famous *Almagest* of Ptolemy (*Μεγίστη Σύνταξις*) is founded on the writings of Hipparchus. See Ball, *Short Hist. of Mathematics*, pp. 79–81, 90 (London, 1888).

Hippăris (*Ἱππαρίς*). A river in the south of Sicily, now Camarina.

Hipparmostes (*ἱππαρμοστής*). A leader of the Spartan cavalry. See HIPPEIS.

Hippăsus (*Ἵππασος*). A native of Metapontum and follower of the Pythagorean doctrine. He is said to have excelled in the application of mathematical principles to music, statics, and mensuration. In common with others of the same school, he held that fire was the originating cause of all things. He taught also that the universe is finite, is always changing, and undergoes a periodical conflagration. In consequence of his having made known the sphere consisting of twelve pentagons, which was a secret of the Pythagoreans, he is said to have been drowned as an impious person (Diog. Laërt. viii.).

Hippeis (*ἱππεῖς*). The Greek term for horsemen and knights. (1) Among the Athenians, the citizens whose property qualified them for the second class. (2) Among the Spartans, the royal guard of honour, consisting of 300 picked young men under the age of thirty, who, although originally mounted, afterwards served as heavy-armed footsoldiers.

The cavalry of Athens, which was first formed after the Persian War, and then consisted of 300 men, from the time of Pericles onwards consisted of 1200 men—viz. 200 mounted bowmen (*ἱπποτόξοται*), who were slaves belonging to the State, and the 1000 citizens of the two highest classes. They were kept together in time of peace, and carefully drilled; at the great public festivals they took part in the processions. They were commanded by two *ἵππαρχοι*, each of whom had five *φυλαί* under him and superintended the levy. Subordinate to these were the ten *φύλαρχοι* in command of the ten phylae. Both sets of officers were drawn from the two highest classes. It was the duty of the council to see that the cavalry was in good condition, and also to examine new members in respect of their equipment and their eligibility.

The number of horsemen to be despatched to the field was determined by the decree of the popular assembly. Every citizen-soldier received equipment-money on joining, and during his time of service a subsidy towards keeping a groom and two horses; this grew to be an annual grant from the State, amounting to forty talents ($10,400 in intrinsic value), but regular pay was only given in the field.

At Sparta it was not until B.C. 404 that a regular body of horse was formed, the cavalry being much neglected as compared with the infantry. The rich had only to provide horses, equipment, and armour; for the actual cavalry service in time of war, only those unfitted for the heavy-armed infantry were drafted off and sent to the field without any preliminary drill. In later times every *μόρα* of heavy-armed infantry seems to have had allotted to it a *μόρα* of cavalry, of uncertain number. By enlisting mercenaries and introducing allies into their forces, the Spartans at length obtained better cavalry.

The utility of the Greek citizen-cavalry was small on account of their heavy armour, their metal helmet, and their coat of mail, their kilt fringed with metal flaps, their cuisses reaching to the knee, and their leather leggings. They did not take shields into action. As weapons of offence they had the straight two-edged sword and a spear, used either as a lance or a javelin. Shoeing of horses was unknown to the Greeks, as was also the use of stirrups. If anything at all was used as a saddle, it was either a saddle-cloth or a piece of felt, which was firmly fastened with girths under the horse's belly.

The Thessalians were considered the best riders. Cavalry became really important for the first time in the Macedonian army under Philip and his son

Alexander the Great. Although in earlier times the number of horsemen in the Greek forces was only very small, in the army which Alexander marched into Asia they formed nearly a sixth part of the infantry. The Macedonian cavalry was divided into heavy and light, both consisting of squadrons (ἴλαι) of an average strength of 200 men. Of the heavy cavalry the choicest troops were the Macedonian and Thessalian horsemen, armed in the Greek fashion, who were as formidable in onslaught as in single combat; in order and discipline they far surpassed the dense squadrons of the Asiatic cavalry, and even in attacking the infantry of the enemy they had generally a decisive effect. The light cavalry, which was constituted under the name of πρόδρομοι (skirmishers), consisted of Macedonian σαρισσοφόροι, so called from the *sarissa*, a lance from fourteen to sixteen feet long (Polyb. xviii. 12), and of Thracian horsemen. The heavy cavalrymen had each a mounted servant and probably a led horse for the transport of baggage and forage. In the time after Alexander there came into existence what were called the *Tarentini equites*, or light-armed spearmen, with two horses each (B.C. 192, Livy, xxxv. 28, 29). See EXERCITUS.

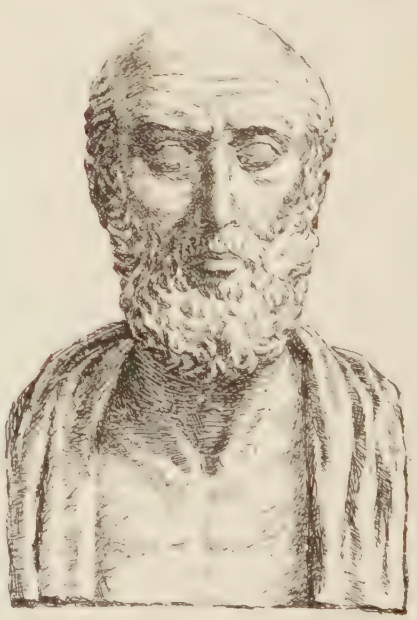
Hippias (Ἱππίας). (1) A Greek sophist of Elis and a contemporary of Socrates. He taught in the towns of Greece, especially at Athens. He had the advantage of a prodigious memory, and was deeply versed in all the learning of his day. He attempted literature in every form which was then extant. He was among the first to undertake the composition of dialogues. In the two Platonic dialogues named after him (*Hippias Maior* and *Hippias Minor*), he is represented as excessively vain and arrogant. See the study by Osann in the *Rhein. Museum* for 1843, p. 495 foll., and P. Leja, *Der Sophist Hippias* (1893). (2) A son of Pisistratus. See PISISTRATIDAE.

Hippĭcon (ἱππικόν, sc. στάδιον). A Greek measure of distance, equal to four stadia, or about 2426 English feet. According to Plutarch, it was mentioned in the laws of Solon (Plut. *Sol.* 23). See HIPPODROMUS; STADIUM.

Hippo (Ἱππών). (1) HIPPO REGIUS, a city on the coast of Numidia, once a royal residence, and afterwards celebrated as the bishopric of St. Augustine. (2) HIPPO DIARRHYTUS or ZARITUS (now Biserta), a city on the north coast of the Carthaginian territory west of Utica. (3) A town of the Carpetani in Hispania Tarraconensis, south of Toletum (Toledo).

Hippobŏtae (ἱπποβόται). "The feeders of horses." The name of the nobility of Chalcis in Euboea, corresponding to the ἱππεῖς in other Greek States. On the conquest of the Chalcidians by the Athenians in B.C. 506, these Hippobotae were deprived of their lands, and 4000 Athenian cleruchi sent to take possession of them (Herod. v. 77, vi. 100; Plut. *Pericl.* 23; Aelian, *V. H.* vi. 1; Grote, ch. 31, iii. 145).

Hippocampus (ἱππόκαμπος). A fabulous animal, having the fore-quarters and body of a horse, but ending in the tail of a fish, like the following illustration, from a Pompeian painting, which the poets and artists of antiquity commonly attach to the marine car of Neptune and the Tritons. See Naev. and Lucil. *ap.* Non. s. v. p. 120.



Hippocampus. (Pompeian painting.)

Hippocentaurus (ἱπποκένταυρος). A horse-centaur, half-horse and half-man (Cic. *N. D.* ii. 2), as opposed to the fish-centaur, half-man and half-fish (ἰχθυοκένταυρος), under which form the giants who waged war against the gods, were represented (Apollod. i. 6, 1). See CENTAURUS.

Hippocoön (Ἱπποκόων). The son of Oebalus of Sparta and of the nymph Batea. He drove his brothers Tyndareus and Icarius from home. Afterwards, in consequence of his slaying the young Oeonus, a kinsman of Heracles, he himself, with his twenty sons, was slain by Heracles in alliance with King Cepheus of Tegea. Tyndareus was thereby restored to the inheritance of his father's kingdom.

Hippocrătes (Ἱπποκράτης). (1) The father of Pisistratus, the Athenian tyrant. (2) A famous Greek physician, was born in the island of Cos (an ancient seat of the worship of Asclepius), about B.C. 460. He was the son of Heraclides and of Phaenareté, and sprang from the race of the Asclepiadae, a priestly family, who in the course of time had gathered and preserved medical traditions,

Hippocrates. (Louvre.)

which were secretly handed down from father to son. Like many of the Asclepiadae, he practised his art while travelling in different parts of Greece. He is said to have been at Athens at the time of the Peloponnesian War, and to have taken advantage of the instructions of the sophists Gorgias and Prodicus; Democritus of Abdera is also

named as one of his teachers. The value he himself set upon philosophic education is proved by his remark that "a philosophic physician resembles a god." Towards the end of his life he lived chiefly in Thessaly and on the island of Thasos. He died about B.C. 377 (or later) in the Thessalian Larissa, where his tomb was to be seen as late as the second century A.D. All through his long life his activity was unceasing in its efforts to increase the amount of his knowledge on all subjects, by both practical and theoretical investigations, and his practical knowledge was as great as his theoretical. Some of his fragments and epigrammatic dicta have passed into the literature of all time, as, for instance, the famous saying, "Life is short, and Art is long." He was the founder of the school of a scientific art of healing, and, as in the case of Homer, numerous writings of unknown authorship, proceeding from the school which followed his system, were attributed to him. Seventy-two works, great and small, in the Ionic and old Attic dialects, bear his name, and, apparently, formed a single collection, even before they came under the consideration of the critics of Alexandria. But it is clear that, as the ancients themselves were aware, only a small portion, which can no longer be precisely defined, really belongs to him. It is highly probable that his nearest relations, who were also distinguished physicians, contributed their share to the collection, and that it contains works by his sons Thessalus and Dracon, his son-in-law Polybus, and his two grandsons, the sons of Thessalus and Dracon, who bore his own name. The best known of these works are the aphorisms (Ἀφορισμοί), which, in antiquity and in mediæval times, were held in high esteem, and have been freely commented on by Greeks, Romans, and Arabs; they consist of short sentences upon the nature of illnesses, their symptoms and crises, and their final issue. One of his treatises (Περὶ Ἀέρων, Ὑδάτων, Τόπων), which is of general interest, and is in all respects among the best, is that on the influence of the climate, the water, and the configuration of a country upon the physical and intellectual life of its inhabitants. In the second portion of this work are found the first beginnings of a comparative ethnography, which at once surprise us by the acuteness and intelligence of its observation, and attracts us by the simplicity and clearness of its style. Many ancient physicians wrote commentaries on the works of Hippocrates, the most celebrated being those of Galen.

The first edition of the Greek text of Hippocrates is the Aldine (Venice, 1526). The best modern editions are those of Littré, with a French translation, 10 vols. (Paris, 1839–61), and that of Ermerius, with a Latin version (Utrecht, 1859–65). A good English translation is that by Adams, 2 vols. (1849). See Berdoe, *Origin and Growth of the Healing Art* (London, 1893), and the article MEDICINA.

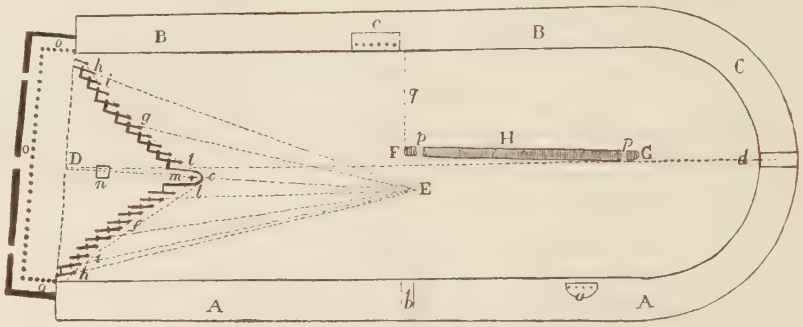
Hippocrēnē (Ἱπποκρήνη or Ἱππουκρήνη, "the fountain of the steed"). The fount of the Muses, which was struck out of Mount Helicon, in Boeotia, by the hoof of the winged steed Pegasus. See MUSAE; PEGASUS.

Hippodameia (*ἱπποδάμεια*, sc. *ἔργα*). An adjective derived from the name of the architect Hippodamus of Miletus, who is said to have been the first of the Greeks who built whole cities on a regular architectural plan; and hence the word is applied to such cities, and to the public places and buildings in them. The Piraeus, for example, was designed by Hippodamus, and its market-place was called Ἱπποδάμειος ἀγορά, Ἱπποδαμεία ἀγ., or simply ἡ Ἱπποδαμεία. Hippodamus flourished during the second half of the fifth century B.C.

Hippodamīa (Ἱπποδάμεια). (1) A daughter of Oenomaüs, king of Pisa, in Elis, who married Pelops, son of Tantalus. (See PELOPS, where the full legend is given.) (2) A daughter of Adrastus, king of Argos, who married Pirithoüs, king of the Lapithae. The festivity which prevailed on the day of her marriage was interrupted by the violent conduct of the Centaurs, which led to their conflict with the Lapithae. (See CENTAURI; LAPITHAE.) (3) See BRISEÏS.

Hippodămus (Ἱππόδαμος). A Greek architect, born at Miletus in the second half of the fifth century B.C. He was the first inventor of a system of laying out towns on geometrical principles, carried out, under his direction, in the laying out of the Piraeus (q. v.), the harbour-town of Athens, and also at the building of Thurii (B.C. 443) and of Rhodes (408); it was also used in subsequent times in the foundation of new towns.

Hippodrŏmus (*ἱππόδρομος*). The name by which the Greeks designated the place appropriated to the horse-races, both of chariots and of single horses, which formed a part of their games. The word was also applied to the races themselves.



The mode of fighting from chariots, as described by Homer, involves the necessity of much previous practice; and the funeral games in honour of Patroclus present us with an example of the chariot-race, occupying the first and most important place in those games (*Il.* xxiii. 262–650). In this vivid description the nature of the contest and the arrangements for it are very clearly indicated. There is no artificially constructed hippodrome; but an existing landmark or monument (*σῆμα*) is chosen as the goal (*τέρμα*), round which the chariots had to pass, leaving it on the left hand, and so returning to the Greek ships on the sea-shore, from which they had started. The course thus marked out was so long that the goal, which was the stump of a tree, could only be clearly seen by its having two white stones leaning against it, and that, as the chariots return, the spectators are uncertain which is first (450 foll.: the passage furnishes a precedent for betting at a horse-race, 485). The ground is a level plain, but with its natural inequalities, which are sufficient to make the light chariots leap from the ground, and to threaten an overthrow where the earth was broken by a winter torrent, or a collision in the narrow hollow way thus formed. The chariots were five in number, each with two horses and a single driver, who stood upright in his chariot. See CURRUS.

In a race of this nature, success would obviously depend quite as much on the courage and skill of the driver as on the speed of the horses. At starting, it was necessary so to direct the horses as, on the one hand, to avoid the loss of time by driving wide of the straightest course, and on the other not to incur the risk of a collision in the crowd of chariots, nor to make so straight for the goal as to leave insufficient room to turn it. Here was the critical point of the race, to turn the goal as sharply as possible, with the nave of the near wheel almost grazing it, and to do this safely;

very often the driver was here thrown out, and the chariot broken in pieces. There was another danger at this point, which deserves particular notice as connected with the arrangements of the hippodrome of later times. As the horse is easily scared, it can readily be understood that the noise and crush of many chariots turning the goal together, with the additional confusion created by the overthrow of some of them, would so frighten some of the horses as to make them unmanageable; and this is expressly referred to by Homer. Among the other disasters to which the competitors were liable were: the loss of the whip; the reins escaping from the hands; the breaking of the pole; the light chariot being overturned, or the driver thrown out of it, through the roughness of the ground, or by neglecting to balance the body properly in turning the goal, and the being compelled to give way to a bolder driver, for fear of a collision; but it was considered foul play to take such an advantage. The prizes, as in the other Homeric games, were of substantial value, and one for each competitor. The charioteer accused of foul play was required to lay his hand upon his horses, and to swear by Poseidon, the patron deity of the race, that he was guiltless. This description is shown by the following illustration from an antique Greek vase, in which is seen the goal as a mere stone post, with a fillet wound round it; the form of the chariots and the attitude of the drivers is well shown; each has four horses, as in the earliest Olympic chariot-race; and the vividness of the representation is increased by the introduction of the incident of a horse having got loose from the first chariot, the driver of which strives to retain his place with the others (Panofka, *Bilder antiken Lebens*, pl. iii. No. 10).

In no other writer is there a description, at once so vivid and so minute, of the Greek chariot-race as this of Homer's; and it may be safely assumed that, with a few points of difference, it will give an equally good idea of a chariot-race at Olympia or any other of the great games of later times. The chief points of difference were the greater compactness of the course, in order that a large body of spectators might view the race with convenience, and the greater number of chariots. The first of these conditions involved the necessity of making the race consist of several double lengths of the course, instead of only one; the second required some arrangement by which the chariots might start without confusion and on equal terms. It is now to be seen how these conditions were satisfied in the hippodrome at Olympia, of which the only description we possess is in two passages of Pausanias (v. 15, § 4; vi. 20, § 7 foll.).

The following is the ground-plan which Hirt (pl. xx. fig. 8) has drawn out from the description

Ground-plan of Hippodrome at Olympia. (Hirt.)

of Pausanias: A, B, the sides; C, the rounded end of the hippodrome, with raised seats for the spectators (the dotted line D *d* is the axis of the figure); *a*, place of honour for the magistrates and musicians; *b*, side door, perhaps for the exit of disabled chariots and horses; *c*, seats for the Hellanodicae, the judges of the games; *d*, principal entrance, corresponding to the *porta triumphalis* in a Roman circus; D, the starting-place; *e*, its apex; *f*, *g*, its curved sides; *h*, *i*, etc., up to *l*, stations of the chariots, their directions converging towards the point E; F, G, the goals, or turning-posts; H, the spina; *p*, *p*, small intervals between the spina and the goals; *q*, the winning line; *m*, dolphin used as a signal; *n*, altar, with eagle for signal; *o*, *o*, *o*, portico of Agnaptus.

The general form of the hippodrome was an oblong, with a semicircular end, C, and with the right side, A, somewhat longer than the left, B, for a reason to be stated presently. The right side, A, was formed by an artificial mound; the left, B, by the natural slope of a hill. The base of the fourth side, D, was formed by the portico of Agnaptus, so called from its builder. At this end of the hippodrome was the starting-place (ἄφεσις), in the form of the prow of a ship, with its apex, *e*, towards the area, and each of its sides more than 400 feet long. Along both of these sides were stalls (οἰκήματα) for the chariots about to start, like the *carceres* in the Roman circus; and it was in the arrangement of these stalls that the peculiarity of the Greek starting-place consisted. According to the view which we follow, the stalls were so arranged as that the pole of each chariot, while standing in its stall, was directed to a normal point E, at which, as nearly as possible, each chariot ought to fall into its proper course. As this point, E, was necessarily on the right side of

Chariot-race. (From a Vase-painting.)

the area (in order to turn the goal on the left hand), and as the corresponding stalls on each side were required to be equidistant from the apex, *e* (as will presently be seen), and of course also from the point E, it follows that the base of the *aphesis* must have been perpendicular to the line E *e*, and therefore oblique to the axis D *d*; and this is the reason why the side A was longer than the side B. The curvature of the sides of the aphesis, *f*, *g*, is a conjectural arrangement, assumed as that which was probably adopted to give more space to each chariot at starting. The front of each stall had a cord drawn across it, and the necessary arrangements were made for letting these cords fall at the right moments. On the signal being given for the race to begin, the cords in front of the two extreme stalls, *h*, *h*, were let fall simultaneously, and the two chariots started; then those of the next pair; and so on, each pair of chariots being liberated at the precise moment when those which had already started came abreast of their position; and when all the chariots formed an even line abreast of the apex of the *aphesis*, *e*, it was a fair start. This arrangement of the *aphesis* was the invention of the statuary Cleoetas, and was improved by Aristeides, perhaps the famous painter.

Precisely the same arrangements were made for the start in the race of single horses (κέλητες);

Race-horse. (Mosaic found near Constantine.) Inscription: *Vincas non vincas te amamus, Polidoxe.*

and in both cases, as in the race described by Homer, the stalls were assigned to the competitors by lot. How many chariots usually started cannot be determined, but that the number was large is proved by the well-known story that Alcibiades alone sent to one race seven chariots. Sophocles (*Elect.* 701–708) mentions ten chariots as running at once in the Pythian games; and the number at Olympia was no doubt greater than at any of the other games. This is probably the reason why the arrangements of a starting-place were so much more complicated in the Greek hippodrome than they were in the Roman circus. (See CIRCUS.) About the centre of the triangular area of the *aphesis* there was an altar, *n*, of rough brick, which was plastered afresh before each festival, surmounted by a bronze eagle with outstretched wings; and above the apex of the *aphesis* was a bronze dolphin, *m*. As the signal for the race to begin, the eagle was made to soar aloft, so as to be seen by all the spectators, and the dolphin sank to the ground.

The chariots, thus started, had to pass several times round two goals (νύσσαι), the distinction between which is one of the difficult points in the description of Pausanias. On the whole, it seems most probable that the one which he describes as having a bronze statue of Hippodameia holding out the victor's fillet as if about to crown Pelops with it, was the one nearer to the *aphesis*, and abreast of the winning line, F; and that the other, G, round which the chariots made their first turn, was that which Pausanias calls "Taraxippus, the terror of the horses." This was a round altar, dedicated to Taraxippus, who was supposed to strike a supernatural terror into the horses as they passed the spot, and whom, therefore, the charioteers sought to propitiate, before the race began, by offering sacrifices and making vows at this altar. Pausanias gives various accounts as to who this Taraxippus was; some modern scholars take the word for an appellation of Poseidon Hippius. He was similarly honoured in the Isthmian hippodrome. At Nemea there was no such hero, but above the turning-point of the course there was a bright-red rock, which was supposed to frighten the horses. There are several vase-paintings on which chariots or single horses are exhibited turning the goal, which is represented as a Doric or Ionic column. (See Panofka, *Bilder antiken Lebens*, pl. iii.) One of these is shown in the following illustration, which exhibits a vivid picture of a race of single horses. The last rider has been unlucky in turning the goal.

There is no authority in the account of Pausanias for the connecting wall, H, between the goals, nor does he state that the winning line, *q*, was marked out as a white line; but these details are inserted from the analogy of the Roman circus. So also is the oblique position of the line of the goals, as compared with the axis of the figure: of course the greatest space was required at E, where the chariots were all nearly abreast of each other.

Respecting the dimensions of the Olympic Hippodrome there is no precise information; but from the length of the measure called ἱππικον and on other grounds, it seems probable that the distance from the starting-place to the goal, or perhaps, rather, from one goal to the other, was two stadia, so that one double course was four stadia. How many such double courses made up the whole race is not known. The width must have been at least as great as the length of each side of the *aphesis*—namely, more than 400 feet.

The chief points of difference between the Greek hippodrome and the Roman circus are the smaller width of the latter, as only four chariots ran at

Race of Single Horses. (Panofka.)

once, and the different arrangement of the *carceres*. The periods at which the Olympic horse-races were instituted are mentioned under OLYMPIA.

Among the Romans the term was also applied to an enclosed space for riding and driving in, attached to a garden or villa, and planted with trees (Pliny, *Epist.* v. 6, §§ 19, 32; Mart. xii. 50, 5, with Paley's note). See CIRCUS; CURRUS.

Hippolytē (Ἱππολύτη). (1) Queen of the Amazons, daughter of Ares and of Otrera; slain in battle by Heracles, when he went at the bidding of Eurystheus to fetch the girdle given her by Ares. (See HERACLES.) In some accounts she is said to have been married to Theseus, and to have been the mother of Hippolytus (q. v.). (2) Or ASTYDAMIA, wife of Acastus, who fell in love with Peleus. He rejected her proposals, and was in consequence accused by her to Acastus. She was subsequently slain by Peleus. See ACASTUS: PELEUS.

Hippolytus (Ἱππόλυτος). The Joseph of classical literature, a son of Theseus and Hippolyté, or, according to others, of Theseus and Antiopé. Theseus, after the death of his first wife, married Phaedra, the daughter of Minos and sister of Ariadné. This princess was seized with a criminal affection for the son of the Amazon, an affection produced by the wrath of Aphrodité against Hippolytus for neglecting her divinity and for devoting himself solely to the service of Artemis; or else against Phaedra as the daughter of Pasiphaë (q. v.). During the absence of Theseus, the queen made advances to her step-son, which were indignantly rejected. Filled with fear and hate, on the return of her husband she accused Hippolytus of an attempt on her honour. Without giving the youth an opportunity of clearing himself, the monarch, calling to mind that Poseidon had promised him the accomplishment of any three wishes that he might form, cursed and implored destruction on his son from the god. As Hippolytus, leaving Troezen, was driving his chariot along the seashore, a monster, sent by Poseidon from the deep, terrified his horses; they burst away in fury, heedless of their driver, dashed the chariot to pieces, and dragged along Hippolytus, entangled in the reins, until he died. Phaedra ended her days by her own hand; and Theseus, when too late, learned the innocence of his son. Euripides has founded his tragedy, *Hippolytus*, on this subject, but the legend assumes a somewhat different shape with him. According to the plot of his play, Phaedra hangs herself in despair when she finds that she is slighted by her step-son, and Theseus, on his return from his travels, finds, when taking down her corpse, a writing attached to it, in which Phaedra accused Hippolytus of having attempted her honour. According to another legend, Aesculapius restored Hippolytus to life, and Artemis transported him, under the name of Virbius, to Italy, where he was worshipped in the grove of Aricia. (See VIRBIUS; Apollod. iii. 10, 3.) The story of Hippolytus forms the subject of a play by Euripides with that title, of a Latin tragedy by Seneca, and the *Phèdre* of Racine.

Hippomĕdon (Ἱππομέδων). A son of Aristomachus and Mythidicé, was one of the seven chiefs that went against Thebes. He was killed by Ismarus, son of Acastus, or by Ismaeus (Apollod. iii. 6; Aesch. *Sept.* 490; Pausan. ii. 36).

Hippomĕnes (Ἱππομένης). (1) Son of Megareus and great-grandson of Poseidon. He conquered Atalanta in a foot-race. (See ATALANTA.) (2) A descendant of Codrus, the fourth and last of the decennial archons. Incensed at the barbarous punishment which he inflicted on his daughter and her paramour, the Attic nobles deposed him.

Hippomolgi, or, more correctly, **Hippemolgi** (Ἱππημολγοί). A people of Scythia, who, as the name imports, lived on the milk of mares (Dionys. *Perieg.* 309).

Hippōna. A goddess who presided over horses. Her statues were placed in horses' stables (Juv. viii. 157).

Hippōnax (Ἱππώναξ). A Greek iambic poet of Ephesus, who about B.C. 540 was banished to Clazomenae by Athenagoras and Comas, tyrants of his native city. At Clazomenae, two sculptors, Bupalus (Hor. *Epod.* vi. 14) and Athenis, made the little, thin, ugly poet ridiculous in caricature; but he avenged himself in such bitter iambic verses that, like Lycambes and his daughter, who were persecuted by Archilochus (q. v.), they hanged themselves.

The burlesque character of the poems which he composed in the Ionic dialect found an appropriate form in his favourite metre, which was probably invented by himself. This metre is known as the *choliambus* ("the halting iambus"), or the *scazon* ("limping"), from its having a spondee or trochee in the last place, instead of the usual iambic foot. He is also reckoned among the very first to produce parodies of epic poetry, and in his satire he spared neither his own parents nor the gods. Of his poems we have only a few fragments, which are collected by Bergk in his *Poetae Lyrici Graeci* (4th ed. 1878).

Hipponīcus. See CALLIAS.

Hipponium. See VIBO.

Hipponoüs. The original name of Bellerophon, who changed it on slaying the Corinthian Bellerus. See BELLEROPHON.

Hippopērae (*ἱπποπῆραι*). Saddle-bags. This appendage to the saddle (*ephippium*) was made of leather or untanned hide (Fest. s. v. *Bulgae*), and seems not to have changed its form and appearance in ancient or modern times. Its proper Latin name was *bisaccium* (Petron. *Sat.* 31, 9), which gave origin to *bisaccia* in Italian and *besace*, *bissac* in French. By the Gauls, saddle-bags were called *bulgae*. See BULGA.

Hippotădes (Ἱπποτάδης). A son of Hippotes, and hence = Aeolus. From him the Aeoliae Insulae are called Hippotadae Regnum (Ovid, *Met.* xiv. 86).

Hippŏtes (Ἱππότης). (1) The father of Aeolus (q. v.). (2) Son of Phylas by a daughter of Iolaüs, and hence a great-grandson of Heracles. He was banished for ten years because of his having killed the prophet Carnus during the invasion of the Peloponnesus by the Heraclidae. As an expiation for this murder, the Spartans are said to have established the festival of the Carnea (q. v.).

Hippothoön (Ἱπποθόων). An Attic hero, son of Poseidon and Alopé, daughter of Cercyon. After him one of the Attic tribes was called Hippothoöntis. He had a shrine at Athens.

Hippothoüs (Ἱπποθόος). Son of Cercyon, and father of Aepytus, king of Arcadia.

Hippotoxŏta (*ἱπποτοξότης*). A mounted archer (Hirt. *B. Afr.* 19); in most cases characteristic of foreign nations, as the Syrians (Caes. *B. C.* iii. 4),

Persians (Herod. ix. 49), etc.; but men thus equipped appear to have been used among the light horse of the Greeks (Aristoph. *Av.* 1179), and of the Romans; at least under the Empire.

Hippys (of Rhegium). One of the Greek Logographi (q. v.).

Hira or **Alexandrīa**. A town of Asia in Babylonia, situated on a lake, a short distance from the western bank of the Euphrates. It was the residence of a dynasty of rulers (the Alamundari), who aided the Persians and Parthians against the Romans.

Hirpīni. A Samnite people, dwelling in the south of Samnium, between Apulia, Lucania, and Campania. Their chief town was Aeculanum. The name, Hirpini, is said to have been derived from the Sabine *hirpus*, "a wolf."

Hirtius, Aulus. A friend of Caesar, and one of his companions in arms as in politics. In B.C. 58 he was Caesar's legate in Gaul, was praetor in 46, and consul in 43, when, acting for Octavian, he defeated Antony at Mutina. He completed Caesar's *Commentarii de Bello Gallico* by adding an eighth book (Suet. *Iul.* 56). According to the dedication to Cornelius Balbus prefixed to that book, he contemplated the continuation of Caesar's account of the Civil War to Caesar's death. This intention he never carried out, as he fell in battle at Mutina, April 27, B.C. 43, when he was consul. Of the three works, the *Bellum Alexandrinum*, *Bellum Africanum*, and *Bellum Hispaniense*, which have come down to us with Caesar's commentaries, the first may have been written by him. Of the other two, it has been conjectured that they were composed at his request, in preparation for his intended work on military commanders, and that having been found at his death among his papers, they were added, with his own writings, to the works of Caesar himself. A short letter of Hirtius to Cicero is found in Cic. *Ad Att.* xv. 6. He is known to have written, at Caesar's instigation, an answer to Cicero's panegyric on Cato (Cic. *Ad Att.* xii. 40. 1, 41. 4, 44. 1, 45. 3, 47. 3). See Caesar.

Hirtulēius. An able general under Sertorius in Spain. He fell at Italica in Baetica (B.C. 78), routed by the troops of Metellus. See Sertorius.

Hispălis, more rarely **Hispal**. The modern Seville, a town of the Turdetani in Hispania Baetica, founded by the Phœnicians, and situated on the left bank of the Baetis, and in reality a seaport, for, although 500 stadia from the sea, the river is navigable for the largest vessels up to the town. Under the Romans it was an important place, with the name Iulia Romŭla or Romulensis, and was surpassed in size by Corduba (Cordova) and Gades alone. Under the Goths and Vandals it was the chief town in the south of Spain; and under the Arabs the capital of a separate kingdom.

Hispania (Ἱσπανία). An extensive country, forming a kind of peninsula, in the southwest of Europe; the modern Spain and Portugal. It was bounded on the north by the Pyrenees and Sinus Cantabricus or Bay of Biscay, on the west by the Atlantic, on the south by the Atlantic, Fretum Herculeum or Strait of Gibraltar, and the Mediterranean, which last bounds it also on the east. By the Romans, Spain was represented by the figure of a woman with a rabbit at her side. The Romans borrowed the name Hispania, appending their own termination to it, from the Phœnicians, through whom they first became acquainted with the country. The Greeks called it Ἰβηρία (Lat. Iberia), but attached at different periods different ideas to the name. Up to the time of the Achaean League and their more intimate acquaintance with the Romans, they understood by this name all the sea-coast from the Pillars of Hercules to the mouth even of the Rhodanus (Rhone) in Gaul (Polyb. iii. 37). The coast of Spain on the Atlantic they called Tartessis (Herod. i. 163). The interior of the country they termed Celticé (Κελτική), a name which they applied, in fact, to the whole northwestern part of Europe. The Greeks in after-ages understood by Iberia the whole of Spain. The name Iberia is derived from the Iberi (Ἴβηρες) of whom the Greeks had heard as one of the most powerful nations of the country. The Roman poets called the country Hesperia Ultima. For a map of Hispania, see the article Provincia.

The origin of the ancient population of Spain is altogether uncertain. The Iberi, according to the ancient writers, were divided into six tribes; the Cynetes, Gletes, Tartessii, Elbysinii, Mastieni, and Calpiani. Diodorus Siculus (v. 31 foll.) mentions the invasion of Spain by the Kelts. The Iberi made war against them for a long time, but, after an obstinate resistance on the part of the natives, the two people entered into an agreement, according to which they were to possess the country in common, bear the same name, and remain forever united; such, says the same historian, was the origin of the Celtiberi in Spain. These warlike people, continues Diodorus, were equally formidable as cavalry and infantry; for, when the horse had broken the enemy's ranks, the men dismounted and fought on foot. Their dress consisted of a *sagum*, or coarse woollen mantle; they wore greaves made of hair, an iron helmet adorned with a red feather, a round buckler, and a broad two-edged sword, of so fine a temper as to pierce through the enemy's armour. Although they boasted of cleanliness in both their food and dress, it was not unusual for them to wash their teeth and bodies with urine, a custom which they considered favourable to health. Wine was brought into the country by foreign merchants. The land was equally distributed, and the harvests were divided among all the citizens; the law punished with death the person who appropriated more than his just share. They sacrificed human victims to their divinities, and the priests pretended to read future events by inspecting the entrails. At every full moon they celebrated the festival of a god without a name; from this circumstance, their religion has been considered a sort of deism.

The Phœnicians were the first people who established colonies on the coast of Spain. Tartessus was perhaps the most ancient; at a later period they founded Gades (Cadiz). They carried on there a very lucrative trade, inasmuch as the country was unknown to other nations; but, in time, the Rhodians, the Samians, the Phocaeans, and other Greeks established settlements on different parts of the coast. Carthage had been founded by the Phœnicians; but the inhabitants, regardless of their connection with that people, took possession of the Phœnician stations, and conquered the whole of maritime Spain. The government of these people was still less supportable. The Carthaginians were unable to form any friendly intercourse with the

Spaniards in the interior. The ruin of Carthage paved the way for new invaders, and Spain was considered a Roman province two centuries before the Christian era. Those who had been the allies became masters of the Spaniards, and the manners, customs, and even language of the conquerors were introduced into the peninsula. But Rome paid dearly for her conquest; the north—or the present Old Castile, Aragon, and Catalonia—was constantly in a state of revolt. The mountaineers shook off the yoke, and it was not before the reign of Augustus that the country was wholly subdued.

The peninsula was then divided into HISPANIA CITERIOR and HISPANIA ULTERIOR. Hispania Citerior was also called TARRACONENSIS, from Tarraco, its capital, and extended from the foot of the Pyrenees to the mouth of the Durius (Douro), on the Atlantic shore; comprehending all the north of Spain, together with the south as far as a line drawn below Carthago Nova (Carthagena), and continued in an oblique direction to Salamantica (Salamanca), on the Durius. Hispania Ulterior was divided into two provinces; Baetica, on the south of Spain, between the Anas (Guadiana) and Citerior, and above it Lusitania, corresponding in a great degree, though not entirely, to Portugal. In the age of Diocletian and Constantine, Tarraconensis was subdivided into a province towards the limits of Baetica, and adjacent to the Mediterranean, called Carthaginiensis, from its chief city Carthago Nova, and another, north of Lusitania, called Gallaecia from the Callaici. The province of Lusitania was partly peopled by the Cynetes or Cynesii. The Celtici possessed the land between the Anas and the Tagus. The Lusitani, a nation of freebooters, were settled in the middle of Estremadura. The part of Baetica near the Mediterranean was peopled by the Bastuli Poeni. The Turduli inhabited the shores of the ocean, near the mouth of the Baetis. The Baeturi dwelt on the Montes Mariani, and the Turdetani inhabited the southern slope of the Sierra de Aracena. The last people, more enlightened than any other in Baetica, were skilled in different kinds of industry long before their neighbours. When the Phœnicians arrived on their coasts, silver was so common among them that their ordinary utensils were made of it. The people in Gallaecia, a subdivision of Tarraconensis, were the Artabri, who derived their name from the promontory of Artabrum, now Cape Finisterre; the Bracari, whose chief town was Bracara, the present Braga; and lastly the Lucenses, the capital of whose country was Lucus Augusti, now Lugo. These tribes and some others formed the nation of the Callaici or Callaeci. The Astures, now the Asturians, inhabited the banks of the Asturis, or the country on the east of the Gallaecian mountains. Their capital was Asturica Augusta, now Astorga. The Vaccaei, the least barbarous of the Celtiberians, cultivated the country on the east of the Astures. The fierce Cantabri occupied Biscay and part of Asturias. The Vascones, the ancestors of the present Gascons, were settled on the north of the Iberus or Ebro. The Iacetani were scattered over the Pyrenaean declivities of Aragon. The Ilergetes resided in the country round Lerida. As to the country on the east of these tribes, the whole of Catalonia was peopled by the Ceretani, Indigetes, Ausetani, Cosetani, and others. The lands on the south of the Ebro were inhabited by the Arevaci and Pelendones; the former were so called from the river Areva; they were settled in the neighbourhood of Arevola, and in the province of Segovia: the latter possessed the high plains of Soria and Moncayo. The space between the mountains of Albaracino and the river was peopled by the Edetani, one of the most powerful tribes of Spain. The Ilercaones, who were not less formidable, inhabited an extensive district between the upper Jucar and the lower Ebro. The country of the Carpetani, or the space from the Guadiana to the Somo-Sierra, forms at present the archiepiscopal see of Toledo. The people on the south of the last were the Oretani, between the Guadiana and the Montes Mariani; and the Olcades, a small tribe near the confluence of the Gabriel and Jucar. Hispania Carthaginiensis, a subdivision of Tarraconensis, was inhabited by two tribes: the Bastitani, in the centre of Murcia, and the Contestani, who possessed the two banks of the Segura, near the shores of the Mediterranean.

Under the Romans all the arts of Latin civilization flourished. Latin was spoken by the educated, and many of the great writers of the Silver Age were Spaniards—Martial, Seneca, Quintilian, Lucan, Silius Italicus, Columella, Pomponius Mela, as also Prudentius and Isidorus in later times. The emperor Trajan was of Spanish birth.

The different tribes were confounded while the Romans governed the country; but, in the beginning of the fifth century, the Suevi, Vandals, and Visigoths invaded the Peninsula, and, mixing with the Kelts and Iberians, produced the different races which the ethnologist still observes in Spain. The first-mentioned people, or Suevi, descended the Durius under the leadership of Ermeric, and chose Braga for the capital of their kingdom. Genseric led his Vandals to the centre of the peninsula, and fixed his residence at Toletum (Toledo); but fifteen years had not elapsed after the settlement of the barbarous horde when Theodoric, conquered by Clovis, abandoned Tolosa (Toulouse), penetrated into Spain, and compelled the Vandals to fly into Africa. During the short period that the Vandals remained in the country, the ancient province of Baetica was called Vandalusia, and all the country, from the Ebro to the Strait of Gibraltar, submitted to them. The ancient Celtiberians, who had so long resisted the Romans, made then no struggle for liberty or independence; they yielded without resistance to their new masters. Powers and privileges were the portion of the Gothic race, and the title of *hijo del Goda*, or "son of the Goth," which the Spaniards changed into *hidalgo*, became the title of a noble or a free and powerful man among a people of slaves. A number of petty and almost independent States were formed by the chiefs of the conquering tribes; but the barons or freemen acknowledged a liege lord. Spain and Portugal were thus divided, and the feudal system established.

Historia (*ἱστορία*, "investigation"). I. GREEK. —The composition of history, and indeed of all forms of prose composition among the Greeks, originated with the Ionians of Asia Minor, who also created the epos, the elegy, and iambic poetry. It was among them, in the sixth century B.C., that the Logographi (q. v.) made their appearance. These writers treated the materials supplied by family traditions and local legends in a style which gradually approached more and more to prose, but without any attempt at critical investigation or scientific arrangement. The most important writers in this style and also its latest representatives were Hecataeus of Miletus and Hellanicus of Lesbos. The latter was a contemporary of Herodotus of Halicarnassus (about B.C. 485–424), called by Cicero the Father of History. His work, also written in the Ionic dialect, was founded upon a vast collection of historical and geographical material gathered in his extensive travels, and through the researches of many years. This mass of information he, with great art, moulded into a homogeneous work, the leading theme of which is the struggle of the Greeks against the barbarians. The narrative is simple, but always attractive. See HERODOTUS.

The line of historians who wrote in the Attic dialect is headed by the Athenian Thucydides, whose history of the Peloponnesian War is a masterpiece of the first order, noble alike in style and in matter. A continuation of Thucydides was written by his countryman Xenophon (about B.C. 431–355) in his *Hellenica*. In his *Anabasis*, Xenophon described the famous retreat of the Ten Thousand in a style which won for him the name of "the Attic Bee." In the *Cyropaedia* he gives a picture, much idealized, but not without a foundation of fact, of the history of the Persian Cyrus. His contemporary Ctesias of Cnidus, writing in Ionic Greek, introduced his countrymen to the formal history of the Persian Empire. At the same time Philistus of Syracuse, an imitator of Thucydides, compiled the history of Sicily from the earliest times down to his own. In the second half of the fourth century B.C. appeared two celebrated historians, Theopompus of Chios and Ephorus of Cymé, both disciples of the rhetorician Isocrates. The chief work of Theopompus was a history of Philip of Macedon, from his accession to his death. Ephorus, in a great work embracing the whole course of events from the invasion of the Peloponnesus by the Heraclidae, to B.C. 345, was the first writer who attempted a universal history. To this period belong the numerous chronicles of Attic history, called *Atthides*. (See ATTHIS.) In these, comparatively little regard was paid to style—less, certainly, than was paid by the historians just mentioned as succeeding Xenophon.

The period of Alexander the Great and his successors was very fertile in historical writing. One may mention Callisthenes, Aristobulus, Chares, Onesicritus, Clitarchus, and Hieronymus, who narrated contemporary events in a style sometimes plain and simple, and sometimes rhetorically exaggerated. This was the age of the Sicilian Timaeus, whose great work on the history of his native island, in some forty books, won him little recognition, but who simplified chronology by introducing the method of reckoning by Olympiads, and thus established a lasting claim on the gratitude of historians. Among the better histories should be named also the great work of Phylarchus (about B.C. 210), which began with the invasion of the Peloponnesus by Pyrrhus, and ended with the death of Cleomenes.

The Alexandrian scholar Eratosthenes conferred a great boon on scientific historical investigation by his attempt to place chronology on the firm foundation of mathematics and astronomy. His labours were continued by Apollodorus, whose *Chronica* was the most important work on chronology produced in antiquity. This was a brief enumeration of the most important events, from the taking of Troy (by him assigned to the year B.C. 1183) down to his own time (B.C. 144). Only isolated fragments of the histories written after Xenophon have, in the greater number of instances, come down to us; but we have a considerable part of the work of Polybius of Megalopolis, who died about 122. This was a general history of the known world from the beginning of the Second Punic War to the destruction of Carthage. Its style has no just claim to artistic merit, but its contents make it one of the most remarkable of ancient Greek histories. About the year B.C. 40, the Sicilian writer Diodorus compiled a valuable general history from the works of Greek and Roman writers now lost. Of this a considerable part still remains. Nicolaüs of Damascus, who lived a little later, was the author of a great general history, in 144 books, of which we have considerable fragments. Dionysius of Halicarnassus composed, a few years before Christ, his *Roman Archaeology* (*Ῥωμαϊκὴ Ἀρχαιολογία*), about half of which has survived. This was the history of Rome from the earliest period down to the First Punic War. It was written with taste and care. In the second half of the first century A.D. the Hebrew Iosephus wrote a work on Jewish archaeology and a history of the Jewish War. At the beginning of the second century, Plutarch of Chaeronea produced his fascinating biographies of famous Greeks and Romans. In the course of the same century appeared the *Anabasis* of Alexander the Great, written after the best authorities by Arrian of Nicomedia, the *Strategemata* of the Macedonian Polyaenus, a number of examples of military stratagems collected from older writers; and a part of the Roman history of the Alexandrian Appian, ethnographically arranged. At the beginning of the third century Dio Cassius of Nicaea conceived and executed his great work on Roman history, which has unfortunately come down to us in a very mutilated form. His younger contemporary, Herodianus, composed in eight books an interesting history of the Caesars, which still survives, from the death of Marcus Aurelius to Gordian (A.D. 180–238). Ancient chronology is much indebted to the *Chronicle* (*Χρονικά*) of Eusebius, bishop of Caesarea. This was written in the fourth century A.D., and only survives in quotations and an Armenian translation. Among later writers we may mention Zosimus (in the second half of the sixth century), the author of a history of the Roman emperors, from Augustus to A.D. 410. For a bibliography of the great writers, see the separate articles in this dictionary. The fragments of their lost works will be found in the *Historicorum Graec. Fragmenta*, ed. by C. and Th. Müller for the Didot series, 5 vols. (Paris, 1868–74). The text of the minor historians is edited by L. Dindorf, 2 vols. (Leipzig, 1870–71).

II. Roman.—The beginnings of Roman history date from about B.C. 200. The form of composition was, until the first half of the first century B.C., almost exclusively that of annals (*annales*), and the historians previous to that period are, in consequence, usually mentioned under the term "annalists." They confined themselves exclusively to the history of their country in its widest extent, from the earliest times to their own. In later times, but not till then, Roman historians undertook to write on the events of special periods, generally on those of their own time. At first they wrote in Greek only. Among the greatest of these annalists are Fabius Pictor, L. Cincius Alimentus, C. Acilius, and Postumius Albinus. The first annalist to write in Latin was Cato the Censor (B.C. 184) in his *Origines*, now unfortunately lost. His example was followed by Cassius Hemina, L. Calpurnius Piso, Sempronius Tuditanus, and many others. The early annalistic writers of Latin had no style. It is not until the knowledge of Greek literature and the development of style had reached a higher stage in the second half of the second century B.C. that one finds any attempt at good writing. In the age of Cicero, good prose was at last attained, and many men of distinction, such as Varro, Atticus, Hortensius, and Cicero himself, wrote historical works and memoirs. Some even sought to include foreign history, as was the case with C. Cornelius Nepos in his well-known collection of biographies entitled *De Viris Illustribus*. The biographies which remain are mostly those of non-Roman generals. Iulius Caesar and Sallust surpass all the other historical writers of this period both in form and matter. Sallust is an imitator of Thucydides, and the first Roman historian who can lay any claim to finished execution. The other historians of the time whose works have come down to us are Aulus Hirtius, who continued Caesar's commentaries, and the unknown authors of the Alexandrian, African, and Spanish Wars.

The Augustan Age produced the Roman history of Livy, a work as remarkable for its comprehensiveness as for its delightful literary finish. The greater part of it is unhappily lost. The first general history written in Latin, by Trogus Pompeius, belongs to the same period, but is preserved only in an epitome by Iustinus.

The first century A.D. was fruitful in historical literature, but only a certain number of works have survived, including a short sketch of Roman history by Velleius Paterculus, which is unduly animated by the adulating spirit of the courtier; a collection of historical anecdotes by Valerius Maximus; a very rhetorical history of Alexander the Great, by Q. Curtius Rufus; and a number of instances of military stratagems by Iulius Frontinus. The great history of the Empire comprised in the *Annales* and *Historiae* of Tacitus, one of the most important monuments of Roman literature, was written partly in the first and partly in the second century A.D. Dating from the beginning of the second century A.D. we have the lives of the twelve Caesars, by C. Suetonius Tranquillus, and the panegyrical account of Roman history by Florus.

After this period, Suetonius becomes the model of historians, and their favourite subject is the doings of the emperors and of the imperial court. These lost writings were the main sources of the *Historia Augusta*, a collection of biographies of the emperors from Hadrian to Numerian (A.D. 117–284), abounding in personal details often scandalous and disgusting. (See Augustae Historiae.) For the history of the fourth century, the excellent work of Ammianus Marcellinus survives. At this time, writers began to content themselves with merely epitomizing and revising the books of their greater predecessors. Among the authors of historical summaries of this sort are Vopiscus, Eutropius, Orosius, St. Jerome, and Cassiodorus. There are valuable special histories by Iordanis (relating to the Goths), and by Gregory of Tours (relating to the Franks).

See Peter, *Zur Kritik der Quellen d. ält. röm. Geschichte* (Halle, 1879); Vossius, *De Historicis Latinis* (Leyden, 1627; 2d ed. 1651); Schäfer, *Quellenkunde d. griech. und röm. Geschichte*, ed. by Nissen (Leipzig, 1885); and the chapters on Roman literature in Mommsen's *History of Rome*. The fragments of lost historical works are collated by H. Peter in his *Historicorum Romanorum Reliquiae* (Leipzig, 1870), and *Historicorum Rom. Fragmenta* (Leipzig, 1883). For bibliographies of the great writers, see the special articles in this Dictionary.

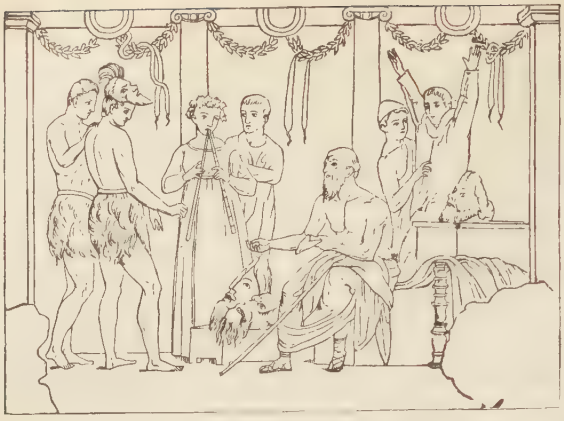
Histrio (*ὑποκριτής*). An actor. (1) Greek. The steps by which *ὑποκρίνομαι*, *ὑποκριτής* acquired their dramatic meaning have been variously traced. The primitive sense of "answering" (i. e. of the quick repartee of dialogue between the actor and the chorus—*ὑποκρίνεσθαι* implying a more ready and instantaneous reply than *ἀποκρίνεσθαι*) seems quite sufficient for the purpose (Poll. iv. 123).



It is shown in the articles Chorus and Dionysia that the Greek drama originated in the chorus which at the festivals of Dionysus danced around his altar, and that at first one person detached himself from the chorus and, with mimetic gestures, related his story either to the chorus or in conversation with it. If the story thus acted required more than one person, they were all represented in succession by the same choreutes. Thespis, who was regarded in antiquity as the inventor of tragedy, was the first to employ an actor distinct from the chorus; the latter still took the most important part in the performance, but lost something of its original character by becoming an interlocutor in the dialogue. Aeschylus therefore added a second actor, so that the action and the dialogue became independent of the chorus, and the dramatist at the same time had an opportunity of showing two persons in contrast with each other on the stage (Aristot. *Poet.* 4, § 16). Sophocles took the final step by adding a third actor (Aristot. l. c.); and towards the close of his career, Aeschylus found it necessary to follow the example of his younger rival, and to introduce a third actor, as is seen in the *Agamemnon*, *Choëphori*, and *Eumenides* (Poll. iv. 110). This number of three actors was also adopted by Euripides, and remained the limit scarcely ever exceeded in any Greek drama, at least in tragedy. In comedy a somewhat greater license was taken; and though Cratinus kept to the regular three performers, Aristophanes sometimes, and notably in the *Thesmophoriazusae*, employed a larger number.

Some real or apparent exceptions to this rule in tragedy have been keenly discussed, and demand a short notice. For instance, the *Prometheus* is a piece for two actors, yet in the opening scene there are four persons upon the stage—Prometheus, Hephaestus, and the allegorical Κράτος and Βία. But Βία does not speak, and mute actors were unquestionably not reckoned; while Prometheus himself, there can be no doubt, was represented by a gigantic lay figure, "so contrived that an actor standing behind the pictorial mountain could speak through the mask. No protagonist could have been expected to submit to the restraint of such an attitude throughout the whole of the play, to say nothing of the catastrophe at the end, when the rocks fall asunder, and Prometheus is dashed down into Tartarus" (Donaldson, *Theatre of the Greeks*, 7th ed. p. 286). In the *Choëphori* Aeschylus had three actors, but in 900 foll. a fourth seems required, where Pylades, who has been present most of the time as a mute actor, begins to speak. The notion of the Scholiast that the οἰκέτης, who has only just quitted the stage, reappears as Pylades, is rejected by A. Müller on the ground that the actor has not had time to change his dress. It may be remarked, however, that the Greek tragic actor, in order to assume another character, had only to change an upper garment, a mask, and perhaps a wig. There were none of the minute toilet accessories of the modern "make-up," and the operation may have been got through with much greater rapidity. Once more, in the *Oedipus at Colonus*, a fourth actor must be assumed unless the part of Theseus is divided among all three performers. The former alternative is supported by C. O. Müller (*Diss. on Eumen.* p. 127) and A. Müller (p. 175, n. 4); the latter by K. F. Hermann (*De Distributione Personarum inter Histriones in Tragoediis Graecis*, Marburg, 1840, p. 42) and Donaldson, who observes that "the mask and the uniformity of tragic declamation would make it as easy for two actors to represent one part as for one actor to sustain several characters" (p. 268 n.). The terms παρασκήνιον and παραχορήγημα here come in for explanation. The usual meaning of παραχορήγημα is of course a subordinate chorus or ἕτερος χορός; but the statement that the word was also applied to the part taken by a fourth actor rests only on the authority of Pollux (iv. 109, 110), where there is almost certainly some confusion in the text. It is more likely that a supernumerary who spoke a few words only, such as the children in the *Medea*, or the above cases of a fourth actor being required, was called παρασκήνιον.

The three regular actors were distinguished by the technical names of πρωταγωνιστής, δευτεραγωνιστής, and τριταγωνιστής, indicating the more or less prominent part each had to play in the drama. Certain conventional means were also devised, by which the spectators, as soon as an actor appeared on the stage, were enabled to judge which part he was going to perform; thus the protagonist regularly came from a door in the centre, the deuteragonist from one on the right, and the tritagonist from a door on the left-hand side (Poll. iv. 124). The protagonist naturally undertook the character in which the interest of the piece was intended to centre; not always the title-rôle, unless it were that of the real hero or heroine. It is true that, in six out of the seven extant plays of Sophocles, the title-rôle is also the leading part; but in the *Cresphontes* and *Oenomaüs* of Euripides the title-rôle was only a third-class part, and as such was taken by Aeschines (Dem. *De Cor.* p. 288, § 180). The conjecture is also unfounded that the protagonist was always the principal messenger (ἄγγελος), or again that the narrative of a death (e. g. of Hippolytus or Pentheus) was necessarily assigned to the actor of the dead man's part (K. F. Hermann, *op. cit.* p. 33). It is an ingenious but rather fanciful notion of K. O. Müller's (*Griech. Lit.* ii. 57) that the deuteragonist regularly took sympathetic parts as a friend of the hero or heroine, whereas the tritagonist was generally "an instigator who was the cause of the sufferings of the protagonist, while he himself was the least capable of depth of feeling or sympathy;" in popular language, that he was the "villain of the piece." This is supported by the recorded fact that Creon in the *Antigone* was a tritagonist's part, and by an arrangement of the characters in the Orestean trilogy of Aeschylus which gives the part of Clytaemnestra throughout to the tritagonist. It is a fact not without significance that the thirty-two extant tragedies contain no "hero" who is also a "villain," like *Macbeth* or *Richard the Third;* but the titles of lost plays show an *Ixion* of Aeschylus, an *Acrisius* and an *Atreus* of Sophocles; and it would seem that the villain-hero, though rare, was not altogether unknown. It is safer to say with Donaldson that the second and third performers "seem to have divided the other characters between them, less according to any fixed rule than in obedience to the directions of the poet, who was guided by the exigencies of his play." As on the modern stage, parts were written for particular actors; a proof that the author, notwithstanding the many conventional restrictions imposed by the sacred character of the Attic drama, had some influence over the choice of his actors.

The number of supernumeraries was unlimited. They were usually silent, but sometimes spoke a few words, especially when a fourth interlocutor was required as above; in which case the speaker was occasionally placed behind the scenes, or sheltered from view by the chorus, that the limit of three actors might not be obtrusively violated. Persons of rank and dignity always came upon the stage suitably attended, just as no Athenian lady or gentleman in real life went out without at least one slave: the body-guards of royal personages were a conspicuous feature, so that δορυφόρος or δορυφόρημα became an equivalent to κωφὸν πρόσωπον, and in one or two instances (the opening scene of the *Oedipus Tyrannus* and probably that of the *Acharnians*) we have a regular "stage-mob" of citizens like those in *Julius Caesar* and *Wilhelm Tell*.

The acting of female characters by men was greatly assisted by the use of masks; there was no need to assign such parts to beardless youths, as in England in the Shakespearian times. In early days the dramatic poets themselves acted in their own plays, and doubtless as protagonists. Of Aeschylus it is further recorded that he was his own ballet-master, and trained his choruses to dance without the aid of a professional ὀρχηστοδιδάσκαλος (Ath. i. 21 e). Sophocles appeared only twice on the stage; as Thamyris in the play of that name, accompanying a song on the *cithara*, and as Nausicaa playing at ball, in the Πλύντριαι: he then gave up acting on account of the weak-

Green-room of an Ancient Theatre.

ness of his voice. After his time it became exceptional for the poet to be also an actor. Aeschylus, who seems to have been usually protagonist in his own plays, employed Cleander as his deuteragonist, and subsequently (after the introduction of a third actor) Mynniscus as tritagonist (*Vit. Aesch.* p. 3, l. 75 Dind.). Cleidemides and Tlepolemus were similarly associated with Sophocles, and Cephisophon with Euripides. Actors sometimes received enormous salaries, occasionally as much as a talent ($1180) for two or even one day's performance (Gell. xi. 9, § 2).

No social stigma attached to the actor's calling (Corn. Nep. *Praef.* 5). Distinguished Athenian citizens appeared on the stage as amateurs, and the rôle of a *τριταγωνιστής*, notwithstanding the scurrilous and exaggerated invectives of Demosthenes, did not detract from Aeschines' position as a soldier and orator. Bad actors, however, to whatever station in life they belonged, were not, on that account, spared; displeasure was shown by whistling or hissing (*συρίττειν*, Demosth. *De Cor.* p. 315, § 265); another word is *θορυβεῖν*, probably denoting uproar against the author rather than the actor. For the throwing of fruit or nuts in theatres, and sometimes even of stones, cf. [Andoc.] *c. Alcib.* § 20; Demosth. *De Cor.* p. 314, § 262. On the other hand, the practice of encoring (*αὖθις*) is inferred from Xen. *Symp.* 9, § 4.

At a later time, when Greece had lost her independence, we find regular troops of actors, who were either stationary in particular towns of Greece, or wandered from place to place, and engaged themselves wherever they found it most profitable. They formed regular companies or guilds (*σύνοδοι*) with their own internal organization, with their common officers, property, and sacra. There are a number of inscriptions belonging to such companies. They can be traced at Athens, Thebes, Argos, Teos, Cyprus, and Rhegium. But these actors are generally spoken of in very contemptuous terms; they were perhaps in some cases slaves or freedmen, and their pay was sometimes as low as seven drachmas ($1.25) for a performance (Lucian, *Icaromen.* 29). The language of Lucian must, however, be received with caution. He has evidently confused the old Greek estimate of the profession with the much lower Roman one of his own time; and in one passage (*Apol.* 5) writes as though Polus and Aristodemus, free Greeks of the highest consideration, had been liable to the *ius virgarum in histriones.*

On Greek actors in general, cf. Müller, *Gr. Lit.* chap. 22; Donaldson, *Theatre of the Greeks*, 7th ed., book iii. chaps. 1, 2; Becker-Göll, *Charikles*, iii. 195–200; and especially Alb. Müller, *Bühnenalterth.* in Hermann-Blümner, § 14, pp. 170–188: on the "guilds of the artists of Dionysus," § 26, pp. 392–414.

(2) Roman. The word *histriones*, by which the Roman actors were called, is said to have been formed from the Etruscan *hister*, which signified a *ludio* or dancer (Livy, vii. 2). The origin of scenic representations at Rome has been related under Comoedia. The name *histrio* thenceforward lost the signification of a dancer, and was now applied to the actors in the drama. Only the Atellanae (q. v.) and *exodia* were played by freeborn Romans, while the regular drama was left to the histriones, who formed a distinct class of persons.

In the times of Plautus and Terence we find the actors gathered into a company (*grex, caterva*), under the control of a manager (*dominus gregis*, also called *actor* in a technical sense, though *actor* is of course also a synonym of *histrio*). It was through the manager that a magistrate who was giving games, of which stage-plays formed a part, engaged the services of a company. Brutus, who was praetor in the year of Caesar's death, tried to regain the popularity he had lost through the murder by giving the Ludi Apollinares with unusual splendour; and he went all the way to Naples to negotiate with actors, who seem to have been Greeks, besides getting his friends to use their interest in his behalf (Plut. *Brut.* 21). So in imperial times a public singer is said *vocem vendere praetoribus* (Juv. vi. 379). The pay (*merces*) was on as varied a scale as in modern times. In the first century of the Empire an ordinary actor seems to have received five denarii and his food (Sen. *Ep.* 80, § 7); while at an earlier period "stars" like Roscius and Aesopus, the contemporaries and friends of Cicero, made ample fortunes. Cicero tells us that Roscius could have honourably made 6,000,000 sesterces ($240,000) in ten years had he chosen to do so (*Pro Rosc. Com.* 8, § 23); and Pliny gives half a million ($20,000) as his annual earnings. The tradition preserved by Macrobius (*Sat.* iii. 14, §§ 11–13) is that Roscius alone received 1000 denarii ($175) for every day's performance; while Aesopus left a fortune of 20,000,000 sesterces ($800,000), acquired solely by his profession. This was afterwards squandered by his son (Hor. *Sat.* ii. 3, 239).

It is clear from the words of Livy (vii. 2) that the histriones were not citizens; that they were not contained in the tribes, nor allowed to be enlisted as soldiers in the Roman legions; and that, if any citizen entered the profession of histrio, he, on this account, was excluded from his tribe. The histriones were therefore usually either freedmen, foreigners, or slaves; the latter specially educated for the stage to their master's profit. Even if *ingenui*, they were legally *infames* (Edict. Praet. *ap. Dig.* 3, 2, 1; cf. Cic. *De Rep.* iv. *fr.* 10 *ap.* Aug. *De Civ. Dei*, ii. 13), and socially in low estimation (Cic. *Pro Arch.* 5, § 10; Corn. Nep. *Praef.* 4; Suet. *Tib.* 35). Aesopus seems to have been a freedman of the Claudian gens; but Roscius, the *amor et deliciae* of Cicero, was certainly *ingenuus*, and probably of good birth. Sulla gave him the gold ring of eques-

trian rank. Towards the close of the Republican period, a few men of position and Greek culture raised themselves above the prejudices of their countrymen, and valued the person no less than the genius of great artists. When Caesar forced Laberius (q. v.), a knight advanced in years, to appear on the stage in his own mimes, he was thought to have exceeded the powers even of a dictator, and his victim took a dignified revenge (Macrob. *Sat.* ii. 7, § 3 foll.). Under the emperors men of equestrian rank often appeared, with or without compulsion (Suet. *Aug.* 43; Dio Cass. liii. 31; Suet. *Tib.* 35); and this circumstance, together with the increasing influence of Greek manners, tended to improve the social position of the actors. At the very beginning of the reign of Tiberius it had become necessary to check the extravagant compliments paid them (Tac. *Ann.* i. 77). Their legal status remained the same as regards *infamia* and exclusion from office; even provincial honours are denied them in the Lex Iulia Municipalis of B.C. 45, where they are coupled with gladiators (*C. I. L.* p. 123); though inscriptions show that the rule was not always enforced (Orelli, 2625). But the old law was now somewhat modified, by which the Roman magistrates were empowered to coerce the histriones at any time and in any place, and the praetor had the right to scourge them (*ius virgarum in histriones*). Augustus entirely did away with the *ius virgarum*, and limited the interference of the magistrates to the time when, and the place where (*ludi et scaena*), the actors performed (Suet. *Aug.* 45). But he nevertheless inflicted, of his own authority, very severe punishments upon those actors who, either in their private life or in their conduct on the stage, committed any impropriety. After these regulations the only legal punishments that could be inflicted upon actors for improper conduct seem to have been imprisonment and exile (Tac. *Ann.* iv. 14, xiii. 28).

Comic Actor. (From an Engraved Ring.)

The competition of the actors for public favour was carried to extraordinary lengths, and stirred up factions like those of the Circus. If not as early as the time of Plautus himself, yet at the time when the existing Plautine prologues were composed (probably about B.C. 150–100), we find partisanship (*ambitio*) in full operation (Plaut. *Poen.* prol. 37 foll.). At first palms and inexpensive crowns of gold or silver tinsel were the reward of popularity (Pliny, *H. N.* xxi. § 6); afterwards, under the Empire, presents of money and rich garments (Juv. vii. 243 with Schol.). There was a regularly organized and paid *claque* (the *theatrales operae* of Tac. *Ann.* i. 16; cf. Mart. iv. 5, 8); and over and above that the backers (*fautores*) resorted to actual violence and even bloodshed. Hence Tiberius on one occasion found himself obliged to expel all histriones from Italy (Tac. *Ann.* iv. 14); but they were recalled and patronized by his successor. The emperors as a rule tolerated, sometimes encouraged, and occasionally checked the excesses of the stage. We read of the emperor's private companies who performed during dinner-time (Suet. *Aug.* 74), and were sometimes allowed also to play in the theatres before the people. The practice of giving immoderate sums to actors was restricted by Tiberius (Tac. *Ann.* i. 77; Suet. *Tib.* 34); again by M. Aurelius, and by Alexander Severus. Aurelius ordained a maximum payment of five aurei ($25.50) to each actor, and that no *editor* should exceed the sum of ten aurei ($51); this must mean that there were to be *editores* in number equal to half the actors, for it cannot be thought that he reduced the actors to two for each performance. The restrictions of the Greek stage as to the number of actors never prevailed upon the Roman.

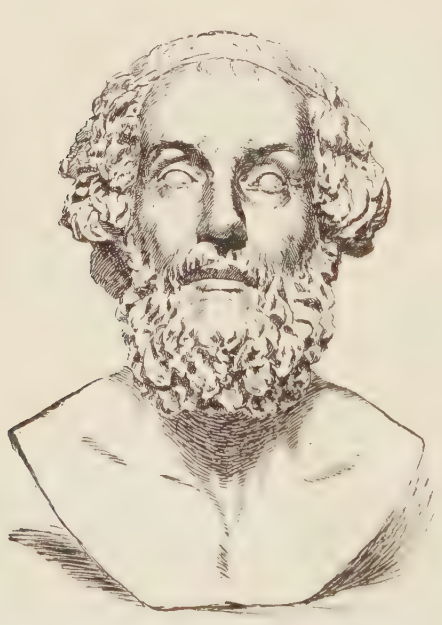
Homeric Question. See HOMERUS.



Homerĭdae. See HOMERUS.

Homērus (Ὅμηρος). The ancient Greeks never doubted the historical existence of Homer. He was to them "the poet" (ὁ ποιητής) in a special sense, but they knew nothing of him as a person. Eight Greek biographies of him are still extant—one under the name of Plutarch, another falsely ascribed to Herodotus—but none of them have any historic value; most of them belong to the Christian era. The early Greeks had no more interest in literary biography than the English contemporaries of Chaucer, and later generations supplied the lack of knowledge from vague tradition and from uncertain indications in the works attributed to the poet. They did not require scientific accuracy of statement, and enjoyed a good story too well to question its truth. A large variety of manifestly fictitious genealogical trees is presented for Homer, in many of which he is brought into some connection with Hesiod. Some made him a descendant of Orpheus. He was called by some Melesigenes, as the son of the river-god Meles, near Smyrna. Others called him Maeonides, either as the son of Maeon or the son of Maeonia (Lydia). A well-known epigram emphasizes the uncertainty with regard to his birthplace. More than seven cities claimed him as their own. Some thought he was born at Smyrna, and near that city a grotto was shown in which they said he composed his poems. Simonides (*Frag.* 85) called him a Chian, doubtless partly on the strength of the verse in the Hymn to Delian Apollo, 172, τυφλὸς ἀνήρ, οἰκεῖ δὲ Χίῳ ἔνι παιπαλοέσσῃ, which is quoted by Thucydides (iii. 104)—a verse which at least supported the popular belief in the poet's blindness. The great critic Aristarchus thought him an Athenian, basing his arguments upon characteristics of the Homeric dialect. Aristodemus of Nyssa believed him to be a Roman, because of the similarity of certain Roman customs with those described by the poet. Others would make an Ithacan of him. Others thought him an Aegyptian. Lucian called him a Babylonian, but doubtless in merry jest. It was reserved for an English scholar, however, to suggest that if Homer's name were read backwards, in Hebrew style, ΟΜΗΡΟΣ would become ΣΟΡΗΜΟ, which was only another form for Solomon; thus the Homeric poems were ascribed to the Hebrew king. He was generally assumed to have lived about a century or a cen-

tury and a half after the Trojan War (B.C. 1183). Others made him flourish about B.C. 976. He was set by Herodotus (ii. 53) not more than four hundred years before his time, or B.C. 850. The church fathers, Clemens Alexandrinus and Tatian, inclined to set the date of his birth as late as possible, in order to sustain their claim that the wisdom of the Greeks was derived from the Hebrews.

Scholars no longer ask where Homer was born or when he lived, but in what regions and tribes of Greece epic poetry was perfected, and in what centuries the *Iliad* and *Odyssey* received their present form. Not that all would deny that any poet Homer ever lived to whom we owe the *Iliad* or *Odyssey*, or both, but all authentic information regarding him has perished beyond recovery. Even in his poems his personality is kept entirely in the background.

The meaning of the name Homer is uncertain. Many stories were invented to account for it as meaning "a hostage." Half a century ago it was explained as "the uniter" (*ὁμοῦ ἀραρίσκω*), and thus it was made to sustain the view that the poems are only a conglomeration of distinct and independent lays. Georg Curtius showed that, according to analogy, the name should mean "the united," not "the uniter." The plural Ὅμηροι would then be used of the members of a guild of poet-singers. The next generation would be Ὁμηρίδαι, and from this patronymic an assumption was made of an original Ὅμηρος. This process has been playfully but fairly illustrated by the succession in English: "fellows" (*ὅμηροι*), "the fellows' guild" (*ὁμηρίδαι*), "the Fellows guild" (Ὁμηρίδαι), which last assumes a Mr. Fellows (Ὅμηρος) as its founder. But very possibly the name had nothing to do with the profession of song.

Ideal Head of Homer. (Sans Souci Palace, Potsdam.)

Homer was to the early Greeks the personification of epic poetry. All the old epic poems were attributed to him, as all great achievements were assigned to Heracles—not only what are extant, but also what are known as the cyclic poems: the *Cypria* (*τὰ Κύπρια*, in eleven books, of the judgment of Paris, the rape of Helen, and other events which immediately preceded the Trojan War—ascribed by others to Stasinus of Cyprus), the *Aethiopis* and *Iliupersis* (*Αἰθιοπίς*, in five books, of the arrival of the Amazons and the Aethiopian Memnon, the defence of Troy, and the death of Achilles; and Ἰλίου Πέρσις, in two books, of the device of the wooden horse and the capture of the city—generally ascribed to Arctinus of Miletus), the *Little Iliad* (Ἰλιὰς Μικρά, in four books, in which Philoctetes and Achilles' son Neoptolemus were brought to the help of the Greeks—by Lesches of Mitylené), the *Nosti* (Νόστοι, in five books, of the adventures of the Greeks on their return from Troy—by Agias of Troezen), and the *Telegonia* (Τηλεγονία, in two books, a sort of conclusion of the story of the *Odyssey*—by Eugammon of Cyrené).

When Aeschylus said that his tragedies were but crumbs from the rich feast of Homer (Athen. viii. 347 E, *τὰς αὑτοῦ τραγῳδίας τεμάχη εἶναι ἔλεγε τῶν Ὁμήρου μεγάλων δείπνων*), he probably had in mind not only the *Iliad* and *Odyssey*, but also the other poems of the Trojan cycle, from which he borrowed suggestions, as is seen from the titles of his plays. Herodotus was the first, so far as is known, to deny the Homeric authorship of the *Cypria*. This he did (ii. 117) on the ground of the inconsistency that the poet of the *Cypria* made Paris reach Troy on the third day from Sparta, while the poet of the *Iliad* represented him as driven on a devious course to Sidon; and the historian remarks that nowhere else does Homer contradict himself (*οὐδαμῇ ἄλλῃ ἀνεπόδισε ἑωυτόν*). Thucydides (iii. 104) seems to have acknowledged or assumed the Homeric authorship of the so-called Homeric Hymns. Plato and Xenophon mean our *Iliad* and *Odyssey* when they speak of Homer; but Aristotle (*Nicom. Eth.* 1141 a) quotes from the *Margites* (*ὥσπερ Ὅμηρός φησιν ἐν τῷ Μαργίτῃ*). The earliest Alexandrian editor of Homer, Zenodotus, seems to have assigned to him only the *Iliad* and *Odyssey*.

Among the minor poems of Homer are generally placed the *Hymns*, *Battle of the Frogs and Mice* (*Βατραχομυομαχία*), *Jests* (*παίγνια*), and *Margites*. The *Hymns* are not hymns in the modern sense of the term; they are rather epic than lyric. They number thirty-four in all, but ten are brief, having only three to six lines each. The first two, to Apollo, were counted as one until the critic Rhunken in 1749 convinced scholars that the first was in praise of Delian (178 verses) and the second of Pythian Apollo (368 verses). The latest editor endeavours again to show that the two are simply parts of one. The third Hymn (580 verses) tells of the birth of Hermes and the exploits and tricks of the new-born babe: how he found a tortoise and invented the seven-stringed lyre (*φόρμιγξ*), how he stole the cattle of Apollo and then returned to his cradle, finally appeasing Apollo's wrath by the gift of the lyre. This and the one immediately following are distinctly secular, not religious, in their character. The fourth Hymn (293 verses) tells of Aphrodité and her love for Anchises. The fifth Hymn (495 verses), to Demeter, has a more serious tone than the preceding. It seems to have been intended to state the mythical foundation for the Eleusinian Mysteries. It tells how Persephoné, Demeter's daughter, was carried off by

Hades as she was plucking flowers ("herself a fairer flower"), and of the disconsolate wanderings of the mother in search of her daughter until she found a temporary home at Eleusis; on her departure thence a temple was built in her honour, and at last the mother and daughter were united. No one of the other Hymns has more than sixty verses. They are "introductions," proems (*προοίμια*), intended to be sung before the rhapsodist's recital of some other lay (perhaps at some rhapsodic contest), as a sort of "grace before meat"—in the same spirit which made every Greek festivity sacred to some divinity. No external evidence exists for the date of these Hymns. They contain many Homeric formulas and tags of verses which give an antique flavour even to what is comparatively modern. Parts of the poems may go back to a remote antiquity; the Hymn to Demeter may have been composed about B.C. 650; more date from the fifth and sixth centuries. After the fifth century, the interest in epic recitations was so slight that these proems would not be composed.

The *Batrachomyomachia* is a comic epic poem of 303 verses, giving a burlesque account of the battle between the frogs and mice, when Puff-cheek (*Φυσίγναθος*), king of the frogs, caused the death of Crumb-snatcher (*Ψιχάρπαξ*), a promising young mouse, inviting him and bearing him on his back to visit his home, but deserting him in the midst of the waters on the approach of a water-snake. The story is composed with humour and some ingenuity, but is a light production. It was ascribed to Pigres, son of Lygdamis and nephew of the Artemisia who distinguished herself in the battle of Salamis; but if it were composed by him, it was interpolated and worked over later. Very possibly it was composed in the Alexandrian period, in mockery of the revival of epic poetry after the ancient spirit was lost. The epigrams and jests are entirely insignificant, both in quantity and quality. The only one of any note is the answer of Arcadian fishers to the question as to their luck: "All that they took, they left; what they did not take, they brought with them" (*ὅσσ' ἕλομεν, λιπόμεσθ' · ὅσα δ' οὐχ ἕλομεν φερόμεσθα*). The *Margites* was a comic poem of considerable fame in antiquity, part in dactylic hexameter and part in iambic trimeter verse, with the story of a stupid (*μάργος*), bashful fellow, who had all manner of ridiculous adventures and attempted many things which were beyond his powers. As long as critics are not agreed as to what works are rightly attributed to Chaucer, and even as to the authorship of some of the plays which have been ascribed to Shakespeare, no one can wonder that little is known of the history of the incunabula of Greek poetry, composed in the imaginative age, long before the classical period.

The *Iliad* and the *Odyssey* contain the story of parts of the Trojan cycle of myths.

The *Iliad* opens with a scene in the last of the ten years of the Siege of Troy, and the action of the poem continues for only seven weeks. With great ingenuity (as it would seem) just enough incidental indications are given of the early history of the war to supply the needed basis for an intelligent appreciation of the story. As Horace says, Homer *semper ad eventum festinat et in medias res, non secus ac notas auditorem rapit.* The judgment of Paris and the assignment of the prize of beauty to the Goddess of Love are referred to in the Homeric poems but once, and that in a doubtful passage, xxiv. 29, 30. Paris (his Greek name Alexander is more frequent in the poems), the voluptuous son of Priam, king of Ilios (the later Ilium), in the Trojan land, on the southwestern shore of the Hellespont, had sailed to Lacedaemon and carried away Helen, the beautiful wife of Menelaüs, the king, and many of her possessions. In order to avenge this insult and to recover the woman and her treasures, Menelaüs and his brother Agamemnon, king of Mycenae, gathered an army at Aulis, and with 1186 ships (and perhaps 100,000 men) set sail for the plain of Troy. For ten years they besiege the city. They bring with them no supplies, and spend much of their time in making forays on the neighbouring districts and more formal expeditions against the adjoining towns. The captured men are slain or sold to distant islands; the women are kept as slaves. The Trojans are not closely barred within their walls, but they are unable to cultivate their fields and are obliged to send their treasures to their neighbours, in order to buy provisions and to hire mercenaries. The loss of men does not seem to have been very great on either side in the early years of the war. At the opening of the *Iliad*, an old priest of Apollo, Chryses, comes to the Greek camp to ransom his daughter, who had been captured by the Greeks and given as a prize of honour to Agamemnon. The king refuses the request, and Apollo avenges the slight to his priest by sending a pestilence upon the Greek camp. After nine days an assembly of the army is called, and the seer Calchas declares the cause of the god's anger. The rude language used by Achilles, the mightiest of the Greek warriors, arouses the wrath of Agamemnon, and a quarrel follows. Achilles "sulks in his tent," while his mother, the goddess Thetis, persuades Zeus to grant victory to the Trojan arms. The action of the *Iliad* includes only four days of battle. In the first, ii.–vii. 380, neither side gains any great advantage; in the second, viii., the tide of battle often turns and the gods interfere again and again, but at last the Trojans drive the foe to their camp, and bivouac on the plain, near the Greek watchfires. In the third day of battle, xi.–xviii., the Trojans break into the Greek camp and begin to set fire to the fleet; but as soon as Achilles sees the flickering flame he sends his comrade Patroclus with his Myrmidons, enjoining upon him to drive the Trojans from the camp, but not to attempt to capture the city. Patroclus forgets the warning of his chief, and filled with the spirit of the combat presses on too far; Apollo strikes him (the only instance in the poems of such direct interference of a divinity), and Hector slays him. Achilles now becomes more angry at Hector than he had been at Agamemnon, and takes an active part in the fourth day of battle, xix.–xxii., in which he drives the Trojans in confusion into their city, and slays Hector. The twenty-third book is devoted to the funeral games in honour of Patroclus, in accordance with the curious ancient custom of honouring the dead with horse-races and foot-races and contests in wrestling, boxing, putting the shot, and shooting the bow. In the twenty-fourth book old Priam comes to the Greek camp and ransoms the body of Hector from Achilles, who here appears in a gentler mood. The poem closes very simply: "Thus these were busy with the burial of Hector."

After the action of the *Iliad*, the Aethiopian Mem-

non comes with his men to the help of Troy, while Philoctetes with the bow of Heracles and Neoptolemus, the son of Achilles, after his father's death, come to aid the Greeks. The alliance of the Amazons with the Trojans is not mentioned in the poems. Odysseus plans the Wooden Horse, by which the city is captured. Athené's wrath is kindled against the Greeks by their conduct after the capture of the city, and she sends upon them a storm, which scatters their fleets. Menelaüs is driven to Crete and Egypt, and with Helen reaches his home in Sparta only in the eighth year of their wandering. Odysseus is driven first to the land of the lotus-eaters, then to the island of the Cyclopes, where Polyphemus slays and devours six of his comrades (and is blinded by him), thence to the land of the Laestrygonians (where all but one of his ships are destroyed), and to Circe's island, where he passes a year. He then visits Hades, in order to consult the soul of the blind Theban seer, Teiresias. In Hades he sees the shade of his mother and those of many of the Greek heroes. On his return the dangers of Scylla and Charybdis are met. His comrades slay one of the cattle of the Sun, and their boat is wrecked. Odysseus himself is borne to the island of the sea-nymph Calypso, who cares for him tenderly, and would make him immortal and her husband. The scene of the *Odyssey* opens in the tenth year after the close of the Trojan War and the twentieth after the departure of Odysseus from his home on Ithaca. He has been absent so long that no expectation is entertained of his return. His home is filled by more than a hundred young princes, each eager to win the hand of the faithful and prudent wife, Penelopé; and thus to become the king of the realm. The goddess Athené pities Odysseus, who is weary of his sojourn in the grotto of Calypso and longing for his home, and secures the decree of Zeus for his return. Meanwhile she sends his son Telemachus to Nestor and Menelaüs, asking for tidings of his father. Odysseus sets out from Calypso's island, eighteen days' sail to the west, but as he approaches Greece he is wrecked by the sea-god Poseidon, whose son Polyphemus he had blinded, and is cast on the shore of the Phaeacians (identified by the ancients with Corcyra, the modern Corfu), who convey him to his home. Finding his palace in the possession of haughty suitors, he returns in the guise of a beggar, but with the help of his son and two faithful servants (and Athené) he slays the suitors and regains his kingdom and faithful wife.

The action of the *Odyssey* covers only six weeks —less even than that of the *Iliad*—yet the events of the ten years of wandering are comprised in the stories which are put into the mouth of Nestor, Menelaüs, and Odysseus himself. This device of introducing a full account of events which are not included in the time of the proper action of the poem was followed by Vergil in his account of the capture of Troy (as told by Aeneas), and by Milton in his account of the war in heaven (told by Raphael). Many matters which are merely touched upon in the poem were discussed more fully in the lesser epic poems, and the question has been raised whether these brief mentions in the *Iliad* and *Odyssey* were allusions to the fuller accounts, already familiar to the hearer, or rather were the fruitful germs which were later developed into the *Cypria*, the *Nosti*, etc. In some cases the latter alternative seems certain—e. g. on the death of Hector, his wife Andromaché despairs of safety for herself and her son Astyanax; "he will either accompany her into slavery, or some Greek will seize him by the arm and hurl him from the wall." This seems to have suggested to a later poet the detailed description of such a death for the boy.

The influence of the Homeric poems upon the Greeks was very great. Pindar says that Odysseus had more fame than he deserved because of the sweet-voiced Homer (*Nem.* vii. 20, *ἐγὼ δὲ πλέον' ἔλπομαι λόγον 'Οδυσσέος ἢ πάθαν διὰ τὸν ἀδυεπῆ γενέσθ' Ὅμηρον*). Herodotus (ii. 53) even asserts that Homer and Hesiod fixed the theogony of the Greeks, distributing to the gods their epithets, arts, and honours. Appeal was made to the Homeric poems to settle questions of precedence and of title to territory. These poems were in large measure the basis of the Greek youth's education. A fragment of a play of Aristophanes (*Frag.* 222) shows us a father examining his son, to prove his diligence in school, on the meaning of certain obsolete Homeric words: *τί καλοῦσι κόρυμβα; τί καλοῦσ' ἀμενηνὰ κάρηνα;* In the *Symposium* of Xenophon (iii. 5), Niceratus says that his father, the noted Athenian general Nicias, in his desire to make a good man of him, compelled him to learn all the poems of Homer, and that he could repeat the entire *Iliad* and *Odyssey* from memory. At the Panathenaic festival from the time of Solon early in the sixth century, for at least two hundred years the recitation of portions of the Homeric poems had a prominent place (Lycurg. *Leocrates*, 102). The Platonic dialogue *Ion* reports a conversation between Socrates and the Ephesian rhapsode Ion, who visits Athens after taking the prize in the Homeric recitation at Epidaurus, and expects the same honour from the Panathenaic festival. This Ion was a Homeric specialist; he claimed no unusual familiarity with Hesiod and Archilochus, but asserted that no one equalled him as an interpreter of Homer. Such men naturally magnified their office and represented the poet as the teacher of much occult wisdom—finding in his works the best maxims for war and for peace, for the statesman, the philosopher, and the general. Even Aristophanes represents Aeschylus as saying, "From what has divine Homer received his fame except from his most excellent instructions with regard to tactics, brave deeds, and the arming of men?" (*Frogs*, 1034, *ὁ δὲ θεῖος Ὅμηρος | ἀπὸ τοῦ τιμὴν καὶ κλέος ἔσχεν πλὴν τοῦδ' ὅτι χρήστ' ἐδίδαξεν | τάξεις ἀρετὰς ὁπλίσεις ἀνδρῶν*). The words of Horace are familiar: at Praeneste he read again Homer, who taught what was base and what was honourable more fully and better than the Stoic Chrysippus or the Academic philosopher Crantor (*Epist.* i. 2. 1, *Troiani belli scriptorem . . . relegi; | qui quid sit pulchrum, quid turpe, quid utile, quid non, | plenius ac melius Chrysippo et Crantore dicit*). Plato (*Rep.* x. 599 c) refutes the view that Homer had special wisdom in regard to "wars, generalships, administration of cities, and the education of men," thus showing the prevalence of that belief.

According to an uncertain story, Pythagoras was said to have seen Homer in Hades, suffering torments in return for his statements about the gods. But the first definite criticism of Homer, so far as is known, was that of Xenophanes (*Frag.* 7), at the close of the sixth century B.C., that Ho-

mer and Hesiod attributed to the gods all actions which are regarded as shameful by men. Heraclitus, Xenophanes' contemporary, would have Homer driven from the musical contests. Plato, in his *Republic* (ii. 377 d–iii. 391 c), enters into a detailed examination of the moral effect exerted by the Homeric poems, and declares that the youths who are in process of training to be the guardians of his ideal State must not be rendered impious by hearing what would degrade the gods in their eyes; lest they should fear death more than defeat and flight, they must not hear Zeus lamenting the death of Sarpedon (*Il.* xvi. 433 foll.), and Achilles declaring that he would rather serve a poor man on earth than rule over all the dead in the home of Hades (*Od.* xi. 488 foll.); they must not be taught insubordination and insolence to commanding officers by hearing Achilles call Agamemnon a coward (*Il.* i. 225); and they must not learn to give free rein to their passions from the wantonness of Zeus (*Il.* xiv. 314 foll.) and from Odysseus' enjoyment of food and drink (*Od.* ix. 5 foll.). Thus, although with much regret because of his old regard and affection for the poet, the works of Homer are not allowed in Plato's ideal State. The reader is at a loss to know how seriously he is to understand these words of the philosopher, who is fond of clinching an argument or giving a higher literary flavour to a sentence by a quotation from the "inspired poet." Allegory was already employed in the interpretation of the most offensive passages, but Plato says that the young person cannot distinguish between what is allegorical and what is not (*Rep.* ii. 378 d). In the *Phaedrus* (243 a) he playfully suggests that the poet may have lost his sight because of his false statements with regard to the gods. Plutarch, in his treatise on "How a young man should study poetry," makes a formal reply to Plato without naming him, urging that the young should be taught to discriminate between what is admirable in itself and what is an admirable imitation of the offensive or even base. The rhetorician Zoïlus received the nickname of Homer's Scourge (Ὁμηρομάστιξ) because of his severe criticisms on the poet; but these were meant very likely merely as a paradox, just as other rhetoricians showed their ingenuity in maintaining the guilt of Socrates, the innocence of Busiris, and the advantages of fever and vermin.

The old Greek commentaries (*scholia*, σχόλια) on Homer mention editions by Antimachus of Colophon (himself an epic poet, a contemporary of Plato), and by Aristotle, who was said to have prepared an edition expressly for the use of his distinguished pupil, Alexander the Great (Plut. *Alex.* 8). Athenian school-masters prepared also lists of obsolete Homeric words. The critical study of Homer, however, began at Alexandria, in connection with the great library and "Museum" which were established by the Ptolemies. These kings of Egypt had abundant means with which to encourage the arts and sciences, and desired by the help of Greek civilization to break down the barriers which existed between the different races of their subjects and to exalt their kingdom. They gathered men of literary talent from all lands and set apart a portion of the palace for a great library. Strenuous efforts were made to secure copies of all works of Greek literature, and, in fact, of all literature, including, according to the story, the Greek translation of the Hebrew Scriptures. In the time of Ptolemy Philadelphus (who reigned B.C. 285–247), the library was said to contain 400,000 volumes (rolls)—perhaps equal to about 40,000 modern octavo volumes—such a collection as had never existed before. It possessed copies of Homer from Marseilles, Chios (the seat of the Homeridae), Sinope on the Black Sea, Argos, Cyprus, Crete. The Homeric poems formed the centre of the literary studies of the Alexandrian scholars. The first careful editor and reviser of the Homeric text was Zenodotus, the earliest of the librarians. He had before him copies of the poems with variations which extended over whole verses and clauses, as well as to words and forms. A critical procedure was necessary. Even the same manuscript must have shown marked inconsistencies of grammatical forms. The first critical edition, in the nature of the case, must have been an experiment. The editor can have had no fixed principles with regard to the formation of words and the characteristics of the Homeric dialect. Zenodotus is thought to have been the first to divide the *Iliad* and the *Odyssey* each into twenty-four books. In earlier times this division was unknown. So, for example, Herodotus (ii. 116) speaks of *Iliad* vi. 289–292 as ἐν Διομήδεος ἀριστείῃ. Aelian (*Varia Hist.* xiii. 14) writes in detail of this ancient custom of reference by the subject of each particular portion of the poems. The ancient titles are preserved, though with some possible inaccuracies and no definite authority, as the headings of the books in ordinary editions of the poems. The division into books became necessary at this particular time, because then parchment was replaced by papyrus as the ordinary writing material. The comparatively frail papyrus was not suited for long rolls. Hence the works of Plato, Xenophon, Thucydides, and Herodotus were divided, also. Zenodotus seems to have composed no commentary to accompany his edition of the poems, but tradition preserved his views of certain passages. He was not led to reject or change for grammatical reasons, but seems to have been guided in many changes rather by a sense of propriety. Thus he rejected *Il.* iii. 424, where Aphrodité took a chair and set it for Helen, for the goddess to do menial service was ἀπρεπές in his eyes; verses *Il.* i. 28–30 were unworthy of a king; in *Il.* i. 260, where Nestor says, "I have been associated with better men than you" (ἀρείοσιν ἠέ περ ὑμῖν), Zenodotus read "than we" (ἡμῖν), in order to make the expression more courteous. But the work of this critic is coming to honour, and it is at present fashionable in some quarters to praise him at the expense of Aristarchus.

The edition of Zenodotus formed the basis of that of his successor, Aristophanes of Byzantium, a little after B.C. 200, who is noteworthy as the first to introduce to general use the marks of accentuation and the signs of quantity, which are still in use. His chief work was in lexicography.

Unquestionably the greatest of the literary critics of Alexandria was Aristarchus, who was born in the island of Samothrace, but came to Alexandria and studied under Aristophanes, whom he succeeded in the care of the library. He prepared two revised editions of the Homeric text, with critical marks in the margin, and wrote eight hundred tracts on many subjects, largely connected with our poet. He founded a school of critics which continued active until the time of the early

Roman emperors. Many of his notes have been preserved to us in the Greek scholia, and prove his learning and his caution. The watchword and battle-cry of his school was *analogy*, opposed to the rival school of the Stoic Crates at Pergamum, who was more free in the admission of *anomalies* in the construction of sentences and in the formation and meaning of words. Crates indulged in allegorical interpretation, paying little attention to grammatical studies, and making Homer a philosopher and an orator, while Aristarchus was more conservative and sober in his views.

The basis of our scholia to the *Iliad* is an epitome made about A.D. 200, of four works. Of these the most important was a work by Didymus (called Χαλκέντερος and Βιβλιολάθας from his unwearied industry and literary productivity), of the time of Augustus, in which Didymus aimed at giving a full report of the readings of the editions of Aristarchus, in so far as they varied from others. Next in importance was a work by an earlier contemporary, Aristonicus, who endeavoured to explain the use of the critical signs of Aristarchus, and the reasons for their employment in each case. Less full and important were the extracts from a treatise by Herodian on Accentuation (ἡ Ἰλιακὴ Προσῳδία) and one by Nicanor on Punctuation (Περὶ Στιγμῆς). The epitome of these four works has suffered serious losses in its transmission to the present time, and considerable additional matter of little value and authority has been added. The component parts of these scholia have been carefully analyzed and separated, and scholars no longer speak of the statement of the scholiast, but of that of Didymus, of Nicanor, etc. The extant scholia to the *Odyssey* are far less extensive and important than those to the *Iliad*.

The Homeric text of the MSS. does not seem to be so distinctly under the control of the text of Aristarchus as was to be expected. In many particulars it differs from his editions—so widely that it seems that the vulgate text was only indirectly and slightly influenced by his work. Many scholars now regard the restoration of the Aristarchean text as the ultimate, or at least the immediate, aim of Homeric text-criticism. But Bekker's edition of 1858 attempted to present the text as it was sung—not as it stood in the old MSS.—inserting the lost *vau* where the editor believed it had once been pronounced. Bekker had been preceded by a wholly unscientific attempt of the same kind in 1820, by R. Payne Knight, who inserted *vaus* with more zeal than discretion, printing as the title of the *Iliad* ϜΙΛϜΙΑΣ, and Tydeus as ΤΥϜΔΕϜΣ, but who with many absurdities had many ideas which have been confirmed by modern investigations. Bekker has been followed by others, notably Nauck, who has made a scientific edition of Homer such as he believes the poems to have been before the forms were subjected to later Attic influence.

That the Homeric text of Plato and Aristotle was not exactly like that of the present day is extremely probable, but these seem to have quoted so freely that exact inferences are difficult. The view that they quoted from memory is strengthened by the fact that each of the two makes a careless reference to the Homeric story: Plato (*Rep.* iii. 405 e) speaks of Eurypylus where he means Machaon, confusing two similar incidents in the same book of the *Iliad* (xi. 638–641, 822–848); and Aristotle (*Nicom. Eth.* ii. 1109, a 31) puts into the mouth of Calypso a command of Odysseus which was given in accordance with advice of Circé (*Od.* xii. 219). In the summer of 1891 the British Museum published a collation of several very ancient papyrus texts of the *Iliad*, containing fragments of several hundred lines. With the exception of two or three details, the most important teaching of these MSS., one of which is from the very beginning of our era, is that the ordinary texts of to-day are rather more accurate and intelligible than those of two thousand years ago, but certain verses may not have been recognized as Homeric then which are in modern texts.

For the last century the vexed and ever-burning Homeric Question has been with regard to the composition and original form of the Homeric poems—whether they were the creations of one poetic genius or the remnants of the songs of many bards; whether their composition was organic or atomic; whether they can be compared with Vergil's *Aeneid* and Milton's *Paradise Lost*, or whether they were at first only short, scattered songs, grouped around central personages and events, and gradually developed into longer poems with unity. The heat and length of the discussion have made clear the fact that the question is difficult, and no hypothesis has been presented free from grave objections. Scholars are more nearly agreed than half a century ago, however. Probably no one who has a right to an opinion on the subject now holds to the strict unity of the poems in the old sense—that all of the *Iliad* and *Odyssey* was composed by one man—yet comparatively few would deny a certain unity in the poems, however it was secured. The ancient Alexandrians had their Separatists (χωρίζοντες), Xeno and Hellanicus, who denied that the *Odyssey* was composed by the author of the *Iliad*, and Perizonius in 1684 called attention to the late use of writing for literary purposes. The great Bentley in 1713 said that "Homer wrote a sequel of songs and rhapsodies to be sung by himself for small earnings and good cheer, at festivals and other days of merriment; the *Iliad* he made for the men, and the *Odysseïs* for the other sex. These loose songs were not collected together in the form of an epic poem till about five hundred years after." Vico of Naples in 1725 expressed his view that Homer never existed—that he was the personification of the early songs of the Greeks. Robert Wood, in *An Essay on the Original Genius of Homer* (1769), declared his belief that the art of writing was not known to Homer. But the modern discussion of the Homeric Question dates from the *Prolegomena ad Homerum* of Friedrich August Wolf, published in 1795. The *Prolegomena* excited much attention, and probably has had greater influence than any other work on the methods of historical and philological study, although its ideas were not wholly novel. The poet Herder and the philologist Heyne each claimed that his thunder had been stolen. The book owed its great success largely to its clear and attractive presentation of the subject, and it is more valuable now for its method than for its particular arguments. Wolf planned to give a critical history of the Homeric poems through six periods, the first of which extended from the composition of the poems (about B.C. 950, according to him) to the age of Pisistratus, tyrant of Athens in the sixth century B.C., who, according to an uncertain tradition, first collected and arranged them in

their present form ; the second period extended from Pisistratus to Zenodotus, the earliest of the Alexandrian critics. Wolf never completed his work beyond these first two periods. He attempted to show (*a*) that the Homeric poems were not committed to writing by the poet, but were intrusted to the memory of the rhapsodes, who were gathered in schools, like the Hebrew prophets; thus before the poems were written they were exposed to many and unintentional changes—from lapse of memory, and from a singer's desire to improve a passage or suit it more perfectly to a special occasion. Writing was unknown in Greece in Homer's time, and no class of readers existed for whom a poem should be written. (*b*) After the poems had been committed to writing, many more additional changes were made in them, in order to remove inconsistencies and to give them the polish of an age advanced in culture and poetic art. (*c*) The *Iliad* and *Odyssey* in their present form are due not to the poetic genius of Homer, but to the intelligence of a later age—to the united efforts of Pisistratus and the poets of his court. (*d*) The songs themselves, of which the *Iliad* and *Odyssey* are composed, are not by the same poet. These last two theses were never publicly discussed by Wolf in detail. He only urged that if the poems were not to be committed to writing at the time when they were composed, the songs were not originally parts of one long work; no one would have thought of making a poem which could not be read and which was too long to be sung or recited at a single sitting. A bond of union would be valueless between lays which were to be sung in no regular order on different occasions. The Homeric poems unquestionably possess a certain unity beyond what is found in Hesiod or in the late poet Quintus Smyrnaeus, but this unity must be due to the editors of the Pisistratean age. Discrepancies are found which could not occur in a single poem, but might very well be overlooked in the combination of independent lays. Entire rhapsodies (e. g. *Iliad* x.) seem to be due to some other than the poet of the greater part of the *Iliad*.

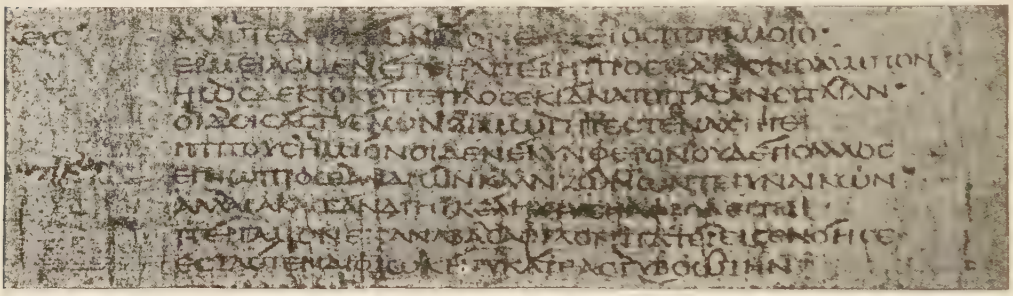
The views of Wolf were received with intense interest, but with varied approval. The poet Schiller said that the man was a barbarian who would tear asunder the Homeric poems and believe that they were put together long after their composition. Goethe, while at first an enthusiastic admirer of the *Prolegomena*, soon declared that he believed in the unity of the *Iliad* more heartily than ever. On the whole, however, the work of Wolf was convincing, at least in large part, to most scholars of Germany. Theologians received it with special interest, on account of the applications of Wolf's principles to the study of the Old Testament. But a reaction took place. Opponents urged that the use of writing in Greece was much earlier than Wolf claimed; but they made the fatal concession that such long poems would be impossible without the aid of writing. Both sides claimed too much. Writing was certainly known in Greece earlier than Wolf allowed, but was not used for extensive literary purposes until long after the time alleged by his opponents. The power of the human memory to retain accurately long poems had been underrated. The external arguments against the original unity of the Homeric poems have yielded rather than advanced since Wolf's time. The evidence in support of the story of the work of Pisistratus in collecting and arranging the scattered Homeric poems is considered weak, as well as that for the existence of schools of rhapsodists corresponding to the schools of the prophets.

Only a beginning had been made of the attempt to disprove the unity of the Homeric poems from internal evidence when Lachmann, of Berlin, in 1837, applied to the *Iliad* the analysis which had been applied not much earlier to the *Nibelungenlied*. He set to work to discover contradictions and inconsistencies which would indicate the different authorship of different parts. The discussion of the unity of the poems was conducted mainly on his principles for half a century, and no one now lays stress on the external evidence, one way or the other. In the first book of the *Iliad* he determined an original lay (1–347), complete in itself, and two independent and inconsistent continuations (430–492; and 348–429, 493–611). The beginning of the second book (he says) cannot have been part of the same lay as the close of the first book; at the close of book i., Zeus sleeps, with Hera by his side, while at the beginning of book ii., Zeus cannot sleep and has an interview with the Dream God, in which he tells much that he would not have Hera know. In the third day of battle, which begins book xi. 1 and continues through book xviii. 240, the sun comes twice to the zenith (at xi. 86 and xvi. 777, nearly 4000 verses later). The twenty-third book of the *Iliad* cannot have been intended to follow immediately upon the twenty-second—the one ending, "Thus she spake weeping, and the women groaned in response," while the next begins, "Thus these were groaning throughout the city." Following such indications, Lachmann marked out the boundaries of eighteen distinct lays in the *Iliad*. Köchly, following in Lachmann's footsteps, published in 1851 an edition of the *Iliad*, in sixteen lays (omitting books x., xix.–xxiii., and parts of some others)—not agreeing with Lachmann in the divisions so well as in the number of the songs. The advocates of the theory that the Homeric poems are but a conglomeration of independent lays have not succeeded in coming to essential agreement with regard to the original songs. Their lines of cleavage do not agree. Contradictions certainly exist: Odysseus' hair is blonde (*Od.* xiii. 431), but black (*Od.* xvi. 176). Diomed and Odysseus are seriously wounded and retire from the conflict (*Il.* xi. 369 foll., 428 foll.), but two days later take part in the games in honour of Patroclus—Odysseus wrestling with Telamonian Ajax (*Il.* xxiii. 709), and winning the prize in the foot-race (*Il.* xxiii. 778). Most noted of all is the case of Pylaemenes; he is slain at *Il.* v. 576, but follows the corpse of his son from the battle (*Il.* xiii. 658). Some inconsistencies may be considered as trifles about which the poet did not concern himself; he was composing for hearers rather than for critical readers who can turn backward and forward, and compare statements. Other inconsistencies may have been caused by interpolations; the incident of Pylaemenes in *Il.* xiii. 658 may have been added by a later poet in order to give increased pathos to the scene. Possibly the Homeric Greeks were not so much disturbed as some moderns at such inconsistencies. Similar discrepancies are found in the works of Vergil and other poets.

In 1846, the historian Grote, declaring that "the

idea that a poem as we read it grew out of atoms not originally designed for the places which they now occupy, involves us in new and inextricable difficulties when we seek to elucidate either the mode of coalescence or the degree of existing unity," proposed the theory that the present *Iliad* was made up by the combination of an original *Iliad* (books ii.–vii., ix., x., xxiii.–xxiv.) with an *Achilleïd* (books i., viii., xi.–xxii.). This latter poem on the Wrath of Achilles gives all that is "really necessary to complete the programme in the opening proem of the poem."

In 1878, Professor Geddes of Aberdeen, following in Grote's footsteps, declared that "the Homeric corpus of *Iliad* and *Odyssey* falls asunder into two great sections, on the one hand the *Achilleïd*, and on the other the non-Achilleïd, *plus* the Odyssey." "A poet, who is also the author of the *Odyssey*, has engrafted on a more ancient poem, the *Achilleïd*, splendid and vigorous saplings of his own, transforming and enlarging it into an *Iliad*." This view was maintained by many indications: Achilles is more gentle in the Odyssean books; Helen is not mentioned in the *Achilleïd;* the dog is more honoured in the Odyssean books, the horse in the *Achilleïd*, etc.



Organic development from a brief epic poem was claimed for the *Odyssey* by Kirchhoff of Berlin, in 1859. He considers the original part to be the old *Return* (Νόστος) *of Odysseus*, of just 1200 verses; to this simple story was added a longer story of 3560 verses, narrating the adventures of Odysseus after his return to Ithaca; still later were added (7185 verses) the *Telemachia*, or account of the journey of Telemachus to Pylus and Sparta, the experiences of Odysseus in Phaeacia, and his adventures in the cave of Polyphemus, in the island of Circé, in the realm of Hades, etc.

Christ of Munich published in 1884 an edition of the *Iliad* in which he divided the poem into forty lays, and indicated by the use of four different styles of Greek type his view of the relative order of composition of the different parts of the poem. Immediately after the first book he places the eleventh, the Bravery of Agamemnon, believing that the intermediate books were composed after the poet saw what a rich vein he had struck, and to what a magnificent growth his germ might be developed. He holds that most of the poem proves a poet revolving a great plan in his mind, and arranging the parts to form a whole.

Von Wilamowitz-Moellendorff published in 1884 an important work on this subject, *Homerische Untersuchungen*, dedicated to the well-known Biblical scholar Wellhausen. Just as Wolf's *Prolegomena* stimulated the investigation of the historical sources and of the age of the Old Testament Scriptures, so the method of the recent analysis of the Pentateuch has been applied to the Homeric poems. Wilamowitz rejects Lachmann's lays as being fragments, unintelligible when separated. He bases his work upon that of Kirchhoff, yet rejects many of the latter's views. He follows him in putting the *Odyssey* in the front of the discussion. Until Kirchhoff, no scholar had seriously attempted the critical dissection of this poem, of which the artistic plan was not doubted. Two of Wilamowitz's conclusions are that the *Telemachia* (*Od.* ii. 1–iv. 619) was composed in Asia Minor, and that the *Odyssey* was brought into its present form in Greece proper —probably near Corinth or in Euboea.

The Homeric Question is clearly full of difficulties. No theory has been proposed which meets with general acceptance. The poems doubtless contain a great mass of very ancient material. Professor Percy Gardner writes, in his *New Chapters in Greek History* (1892), "There is a broad line dividing mythical from political Hellas, a line which seems to coincide with the great break made in the continuity of Hellas by the Dorian invasion. . . . The Homeric poetry may have been reduced to form after the splendour of the Ionian and Achaean chiefs had passed away. . . . In using the name of Homer, we do not, of course, assert that the Homeric poems had a single author. But we do assert the antiquity of those poems. Homer reflects the pre-historic age of Greece as truly as does Herodotus the Greece of the Persian Wars, or Pausanias the Greece of the age of the Antonines." The poet does not profess to have seen Priam's Troy; he is clearly conscious that he belongs to a degenerate age, and that he is dependent on the muse for his information. No one supposes that the poems are an accurate record of a particular war. The recent excavations, however, establish the fact that at Mycenae, the home of the Homeric Agamemnon, and on the shore of the Hellespont, the home of the Homeric Priam, stood at the same period, flourishing from about B.C. 1400 to about B.C. 1000, cities of wealth and power, of similar culture. A war between these cities, which may have suggested the Homeric story, is by no means an impossibility. The details, however, and perhaps every name of a person, are due to the poet's imagination. The view that the poems were essentially in their present condition before the historical period in Greece began, early in the eighth century B.C., is moderate.

The Homeric dialect is artificial—that is, such as was never spoken by any Greek tribe. It con-

Bankes Papyrus of the Second Century B.C. (*Il.* xxiv. 692–700.)

tains many ancient elements, but is far from being the ancestor of all the later historical dialects. It is not even the source of the Attic or Ionic dialects. The Aeolic element in it is so strong as to suggest to Fick the view that the older parts of the poems were composed in the Aeolic dialect and were afterwards translated into that of the Ionic. The formulaic character of many of the Aeolic words and phrases, the large number of Homeric proper names found in historical times in Northern Greece, the traditions with regard to the seats of the Pierian Muses, and the prominence given to the Thessalian hero, Achilles, make probable the view that epic poetry was first cultivated by the Aeolians in Northern Greece, but was afterwards brought to perfection by the Ionians in Asia Minor. The dialect certainly indicates a long course of development. Obsolete words and forms were retained by the poets in certain connections after they had been dropped from the ordinary speech of the people. Certain late forms appear in the ordinary texts in sufficient number to suggest to Paley the theory that the poems were brought into their present form in the age of Pericles at Athens; but most of these forms can be explained easily as the work of a careless copyist, who substituted a form which he heard every day for one which was found only in old poems—just as a half-educated man would do to-day in copying the works of Chaucer, unless he were specially warned and trained to be accurate in this matter. If the Homeric poems were thoroughly worked over, revamped, in the time of Solon or of Pericles, some clear trace would have been left of the culture and political relations of that time. A strong indication of the falsity of the story that Pisistratus gathered the poems and caused interpolations to be made to the glory of Athens, is the simple fact that Athens is so insignificant in the *Iliad* and *Odyssey*. If the unity of the poems were really due to Pisistratus, and he ordered the poets of his court to insert passages which would honour Athens, we should find greater distinction given to Athenian heroes and more myths of the Attic cycle. The two or three verses assigned by the ancient critics to Athenian interpolators are absolutely trifling.

Fortunately the Homeric poems *exist*, even though scholars have not settled the question when and how they came into being. Destructive criticism has not been able to disturb the fact that they remain the greatest epic poems the world has seen—admired by many ages and peoples of different civilizations. They stand unrivalled. In comparison with them the vast epics of India are as shapeless as the Hindoo idols, and are in their luxuriance like to a tropical jungle; while the work of Vergil and of Milton, who take Homer as their master, is artificial and unnatural in comparison with his—the "clearest-souled of men."

BIBLIOGRAPHY.—The best MS. of the *Iliad* is Venetus A, now in the library of San Marco at Venice, written in the eleventh century on 327 large leaves of parchment. The best MS. of the *Odyssey* is Codex Harleianus, now in the British Museum, written in the thirteenth century on 150 folio leaves of parchment.

The best introduction to Homer, with a delightful literary flavour, is Professor Jebb's *Homer* (1887). This treats of the general literary characteristics of the poems, the Homeric world, Homer in antiquity, and the Homeric question.

For the Homeric question, see Wolf, *Prolegomena ad Homerum* (1795); Lachmann, *Betrachtungen über Homers Ilias* (1837, 1865); Kirchhoff, *Die homerische Odyssee und ihre Entstehung* (1859, 1879); Grote, *History of Greece*, vol. ii.; Geddes, *Problem of the Homeric Poems* (1878); Bonitz, *Origin of the Homeric Poems* (1880); Wilamowitz-Moellendorff, *Homerische Untersuchungen* (1884).

The best critical edition of the poems, with brief notes, is that of Nauck, 2 vols. (1874–79); the most complete critical apparatus for the *Iliad* is in the edition of La Roche (1873), and for the *Odyssey* in the edition of Ludwich (1889); the best exegetical commentary is that of Ameis-Hentze (with German notes, in twelve parts, of different dates — three parts as yet published with English notes); the best complete edition of the *Iliad* with English notes is that of Leaf, 2 vols. (1886–88); the best edition of the *Odyssey* with English notes is that of Hayman, 3 vols. (1866–82). Convenient text editions are those of Dindorf-Hentze and Cauer, both published at Leipzig. The most complete lexicon for Homer is the *Lexicon Homericum* of Ebeling, 1700 pages (1871–85); admirable is the *Index Homericus* of Gehring (1891); Keep's Autenrieth's *Homeric Dictionary* (1891) is capitally convenient; more elaborate than the last mentioned is Capelle's *Wörterbuch über die Gedichte des Homeros und die Homeriden* (1889). The best work in its department is Monro's *Homeric Grammar* (1882, 1891).

For Homeric antiquities, see Buchholz, *Homerische Realien*, 3 vols. (1871–85); Helbig, *Das homerische Epos aus den Denkmälern erklärt* (1884, 1887); Inghirami, *Galleria Omerica*, 3 vols. (1829); Anderson's Engelmann's *Pictorial Atlas to Homer* (1892). For Schliemann's work in connection with Homer, see Schuchhardt, *Schliemann's Excavations* (1891) and Gardner's *New Chapters in Greek History* (1892). The old Greek commentaries (Scholia) are published best by Dindorf and Maass, 8 vols. (1855–1887); for their illustration, see Lehrs' *De Aristarchi Studiis Homericis* (3d ed. 1882), and Ludwich's *Aristarchs Homerische Textkritik* (1884–85).

Very many translations have been made, and different tastes will like different translations. See Matthew Arnold's essay *On Translating Homer*. The translations of Chapman and Pope are classics in their way. Within the last few years two good prose translations of the *Odyssey* have appeared—one by Palmer, the other by Butcher and Lang. That of the *Iliad* by Lang, Leaf, and Myers, is not so good. Worsley's verse is enjoyed by some, and Bryant's by others. Leaf has published a *Companion to the Iliad* (1892), and Andrew Lang a work entitled *Homer and the Epic* (1892), in connection with their versions.

Homoioi (ὅμοιοι, "peers"). A name given to the Spartiatae (q. v.) in allusion to their having equal political rights with one another (Xen. *Hell.* iii. 3. 5) as opposed to the ὑπομείονες, whose position was in some respects subordinate. See SPARTA.

Homŏlé (Ὁμόλη). (1) A lofty mountain in Thessaly, near Tempé, with a sanctuary of Pan. (2) Or HOMOLIUM (Ὁμόλιον). A town in Magnesia in Thessaly, at the foot of Mount Ossa, near the Peneus.

Honor or **Honos**. The personification of honour at Rome, to whom temples were built both by Marcellus (B.C. 212) and by Marius (B.C. 101), close

to the temples of Virtus. Marcellus also built one to Virtus; and the two deities are frequently mentioned together. Honor and Virtus are represented on coins as youthful figures—Honor wearing a bay-leaf chaplet, and Virtus a helmet. See VIRTUS.

Honorarii Ludi. See LUDI.

Honorarium Ius. See EDICTUM.

Honōres. (1) A term used of any compliment or honour conferred by the Roman Senate or any public body (Cic. *Pro Planc.* 26, 64; *Ad Fam.* i. 9, 14). (2) A commission or rank in the army (Caes. *B. C.* i. 77). (3) Technically the name denotes actual magistrates whether of the Populus Romanus, the Plebs, or of a municipality, excluding, however, the office of *iudex*, senator, and priest (Mommsen, *Staatsrecht*, i. p. 8), and possibly the *principatus* (q. v.). The *ius honorum* was a part of the rights of one who was a free citizen and might be withheld when all the other rights were granted (Tac. *Ann.* xi. 23). (See MUNUS.) (4) *Cursus honorum* is an expression of Roman official life which may be defined as the career of public service through which a citizen must pass before attaining to the position of the highest rank. In the early Roman Republic there existed in an informal way a principle of official promotion by which those who had held inferior magistracies were understood to be eligible for higher positions after the lapse of a certain interval of time (Callist. *Dig.* 50, 4, 14, 5). The order, *certus ordo magistratuum*, in which the various magistracies should be held, was, however, formally defined in B.C. 180 by the Lex Villia Annalis. The *cursus honorum* thus legally determined consisted of the quaestorship, curule aedileship, praetorship, consulship. A preliminary military service of ten years was required before the career of magistracies could be begun. Since enrollment by the censors took place at the census next following the attainment of the age of seventeen years, allowing for the ten years of military service, we may place the earliest age at which the quaestorship could be held as twenty-eight years. An interval of at least two years was required between the holding one office and the following, so that the aedileship could be held at thirty-one years, the praetorship at thirty-four, and the consulship at thirty-seven. Since the holding of the curule aedileship was optional, the praetorship might directly follow the quaestorship, and the consulship might thus be reached at thirty-four years.

The principle of an *ordo honorum* found, however, its most important application in the development of the imperial government under Augustus and his successors.

In the imperial period there were three careers of official service. The republican magistracies formed the *cursus honorum* for those of senatorial rank—i. e. senators, sons of senators, or those raised to senatorial rank by the emperor, all possessing the requisite property of one million sesterces.

To a select body of the knights invested by the emperor with membership in the equestrian troop through the conferring of the knight's horse, were assigned the offices of administration, the various procuratorships and *praefecturae* which formed the equestrian *cursus honorum*.

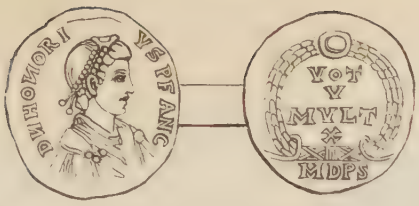
To the commonalty were assigned the subordinate offices, civil and military.

SENATORIAL CURSUS HONORUM.

I. Preliminary service.
   (*a*) Annual tenure of one of a group of minor offices, known as *vigintiviri: triumvir capitalis, triumvir monetalis, quattuorvir viarum curandarum, decemvir stlitibus iudicandis.*
   (*b*) A year's service as *tribunus militum laticlavius.*
II. Quaestorship—at twenty-five years.
   Interval of at least one year.
III. Aedileship or tribunate of the plebs.
   Interval of at least one year.
IV. Praetorship—at thirty years.
   Interval of at least two years.
V. Consulship.
   A patrician being ineligible for the tribunate of the plebs or the plebeian aedileship could pass directly from the quaestorship to the praetorship.

EQUESTRIAN CURSUS HONORUM.

I. Preliminary service.
   (*a*) Military service. No special military service appears to have been regularly required, although Claudius determined upon three positions—(1) *praefectura cohortis;* (2) *praefectura alae;* (3) *tribunatus legionis;* and these *tres militiae equestres* became the usual preliminary service in the second century. In the inscriptions the *tribunatus* regularly holds the second place.
   (*b*) Civil service. Through the reforms of Hadrian, training in state affairs was recognized as equivalent to service in the army—e. g. those who had served as *advocati fisci* or *ab commentariis praefecti praetorio* were eligible for the procuratorships and praefectures.
II. Procuratorships of various kinds and grades.
III. Praefecturae.
   The highest offices open to those of the equestrian order given in ascending order were: *praefectura classis, praefectura vigilum, praefectura annonae, praefectura Aegypti, praefectura praetorio.*



OFFICIALS OF THE THIRD CLASS.

These were of great number and variety, being made up mainly of subordinate officers of administration in Rome and the provinces, attendants of public officials, officers of the army and the fleets, magistrates of the coloniae and municipia, and the officers of the collegia. The inscriptions show that these subordinate offices were arranged in a *cursus honorum* on the same principle prevailing in the senatorial and equestrian *cursus*.

See T. Mommsen, *Römisches Staatsrecht*, vol. i. 523–577; and O. Hirschfeld, *Untersuchungen auf dem Gebiete der römischen Verwaltungsgeschichte*, vol. i. 240.

Honoria. See ATTILA.

Honorius Flavius. A Roman emperor of the West, A.D. 395–423, the second son of Theodosius the Great. During his minority the able Stilicho was regent, but in 408 was charged with treason and put to death. In the reign of Honorius, Alaric (q. v.) took and plundered Rome (410), while the emperor led a life of ease at Ravenna.

Coin of the Emperor Honorius.

Honos. See HONOR.

Hood. See CUCULLUS; MITRA.

Hoop. See TROCHUS.

Hoplītae (ὁπλῖται). Heavy-armed soldiers. See EXERCITUS, p. 649.

Hoplomăchi (ὁπλομάχοι). See GLADIATORES.

Hora. See DIES.

Horae (Ὧραι). The goddesses of order in nature, who cause the seasons to change in their regular course, and all things to come into being, blossom, and ripen at the appointed time. In Homer, who gives them neither genealogy nor names, they are mentioned as handmaidens of Zeus, intrusted with the guarding of the gates of heaven and Olympus — in other words, with watching the clouds. Hesiod calls them the daughters of Zeus and Themis, who watch over the field operations of mankind; their names are Eunomia (Good Order), Diké (Justice), and Irené (Peace), names which show that the divinities of the three ordinary seasons of the world of nature—Spring, Summer, and Winter—are also, as daughters of Themis, appointed to superintend the moral world of human life. This is especially the case with Diké, who is the goddess who presided over legal order, and, like Themis, was enthroned by the side of Zeus. According to Hesiod, she immediately acquaints him with all unjust judicial decisions, so that he may punish them. In the tragic poets she is mentioned with the Erinyes, and as a divinity who is relentless and stern in exacting punishment. (See ASTRAEA.) At Athens, two Horae were honoured —Thallo, the goddess of the flowers of spring; and Carpo, the goddess of the fruits of summer. Nevertheless the Horae were also recognized as four in number, distinguished by the attributes of the seasons. They were represented as delicate, joyous, lightly moving creatures, adorned with flowers and fruits, and, like the Graces, often associated with other divinities, such as Aphrodité, Apollo, and Helios. As the Hora specially representing spring, we have Chloris, the wife of Zephyrus, and goddess of flowers, identified by the Romans with Flora (q. v.).

The Horae bringing Wedding Gifts to Peleus. (Relief in the Louvre.)

Horatia. The sister of the Horatii, killed by her surviving brother for deploring the death of her betrothed, one of the Curiatii, and for reproaching him with the deed by which she had lost her lover. See HORATIUS.

Horatia Gens. One of the most ancient of the patrician gentry at Rome. See HORATIUS.

Horatii. See HORATIUS.

Horatius. (1) The name of three brave Roman brothers, who fought, according to the old Roman legends, against the Curiatii, three Alban brothers, about 667 years before the commencement of our era. Mutual acts of violence committed by the citizens of Rome and Alba had given rise to a war. The armies were drawn up against each other at the Fossa Cluilia, where it was agreed to avert a battle by a combat of three brothers on either side —namely, the Horatii and Curiatii. It is evident that we have here types of the two nations regarded as sisters and of the three tribes in each. In the first onset, two of the Horatii were slain by their opponents; but the third brother, by joining address to valour, obtained a victory over all his antagonists. Pretending to fly from the field of battle, he separated the three Curiatii, and then, attacking them one by one, slew them successively. As he returned triumphant to the city, his sister Horatia, who had been betrothed to one of the Curiatii, met and reproached her brother bitterly for having slain her intended husband. Horatius, incensed at this, stabbed his sister to the heart, exclaiming, "So perish every Roman woman who bewails a foe." For this murder he was adjudged by the duumvirs to be scourged with covered head and hanged on the accursed tree. Horatius appealed to his peers, the burghers or *populus;* and his father pronounced him guiltless, or he would have punished him by the paternal power. The populus acquitted Horatius, but prescribed a symbolical punishment. With veiled head, led by his father, Horatius passed under a yoke or gibbet—*tigillum sororium*, "sisters' gibbet." (See Livy, i. 26.) (2) COCLES. See COCLES.

(3) QUINTUS HORATIUS FLACCUS, a celebrated Roman poet, born at Venusia, December 8th, B.C. 65, during the consulship of L. Aurelius Cotta and L. Manlius Torquatus (*Carm.* iii. 21, 1; *Epod.* 13, 6). His father, who was a freedman of the Horatian family, had gained considerable property as a *coactor*, a name applied to the servant of the money-brokers, who attended at sales at auction, and collected the money from the purchasers (*Sat.* i. 6, 86). With these gains he purchased a farm in the neighbourhood of Venusia, on the banks of the Aufidus. In this place Horace appears to have lived until his eleventh or twelfth year, when his father, dissatisfied with the country school of Flavius, removed with his son to Rome, where he was placed under the care

Monument of the Horatii and Curiatii. (Von Falke.)

of a celebrated teacher, Orbilius Pupillus, of Beneventum, whose life has been written by Suetonius. After studying the ancient Latin poets, Horace acquired the Greek language. He also enjoyed, during the course of his education, the advice and assistance of his father, who appears to have been a sensible man, and who is mentioned by his son with the greatest esteem and respect. It is probable that, soon after he had assumed the *toga virilis* at the age of seventeen, he went to Athens to pursue his studies, where he appears to have remained till the breaking out of the Civil War during the second triumvirate. In this contest he joined the army of Brutus, was promoted to the rank of military tribune, and was present at the battle of Philippi, his flight from which he compares to a similar act on the part of the Greek poet Alcaeus.

Though the life of Horace was spared by the imperial party, his paternal property at Venusia was confiscated, and he repaired to Rome, with the hope of obtaining a living by his literary exertions. Some of his poems attracted the notice of Vergil and Varius, who introduced him to Maecenas, and the liberality of that statesman quickly relieved the poet from all pecuniary difficulties. From this eventful epoch the current of his life flowed on in a smooth and gentle course. Satisfied with the competency which his patron had bestowed, Horace declined the offers made him by Augustus, to take him into his service as private secretary, and steadily resisted the temptation thus held out of rising to wealth and political consideration; advantages which would have been dearly purchased by the sacrifice of his independence. That he was really independent in the noblest sense of the word, in freedom of thought and action, is evidenced by that beautiful epistle (i. 7) to Maecenas, in which he states that if the favour of his patron is to be secured by a slavish renunciation of his own habits and feelings, he will at once say farewell to fortune and welcome poverty.

Not long after his introduction to Maecenas the journey to Brundisium took place (*Sat.* i. 5), and the gift of his Sabine farm soon followed. Rendered independent by the bounty of Maecenas, high in the favour of Augustus, courted by the proudest patricians of Rome, and blessed in the friendship of his brother poets, Vergil, Tibullus, and Varius, it is difficult to conceive a state of more perfect temporal felicity than Horace must have enjoyed. This happiness was first seriously interrupted by the death of Vergil, which was shortly succeeded by that of Tibullus. These losses must have sunk deeply into his mind. The solemn thoughts and serious studies which, in the first epistle of his first book, he declares shall henceforward occupy his time, were, if we may judge from the second epistle of the second book, confirmed by those sad warnings of the frail tenure of existence. The severest blow, however, which Horace had to encounter, was inflicted by the death of his early friend and best patron Maecenas. He had declared that he could never survive the loss of one who was "part of his soul" (*Carm.* ii. 17, 5), and his prediction was verified. The death of the poet occurred only a few weeks after that of his friend, on the 27th of November, B.C. 8, when he had nearly completed his fifty-eighth year. His remains were deposited next to those of Maecenas, on the Esquiline Hill.

Horace. (From a Gem in the British Museum.)

When at Rome, Horace lived in a small and plainly-furnished mansion on the Esquiline. When he left the city, he either betook himself to his Sabine farm or his villa at Tibur, the modern Tivoli. When in the country, as the whim seized him, he

would either study hard or be luxuriously idle. The country was his favourite abode, and here he displayed all the genial simplicity of his nature.

If we may believe Horace himself, his own preference was for a country life; and some of the truest poetry that he ever wrote deals with themes drawn from his love of rural scenes—the peaceful meadows of Apulia, the Bandusian fountain, the cattle resting in the flickering shade through the long summer afternoon, the siesta by the brook-side, the cool vistas of the forest glades with the young deer browsing among the trees. His own homely tastes are delightfully set forth in the passages where he tells of his sitting about the fire at evening with his rustic neighbours, exchanging stories and cracking jokes over the mellow wine.

Horace is described as short and stout, so that Augustus rallied him on his corpulency; of a rather quick temper, yet easily placated; and given to ease and the enjoyment of the good things of life. This disposition is perfectly reflected in his writings, which embody a genial, if not very deep, philosophy of life, and a good sense which robbed Epicureanism of its selfishness and Stoicism of its sourness and severity.

Augustus and his Friends. (From a wall-painting from the Palace of the Caesars, discovered in 1737.)

The productions of Horace are divided into Odes, Epodes, Satires, and Epistles. The Epodes (*Epodi*) are the earliest of his works, and are written in various forms of iambic and dactylic verse. They were not published as a collection until B.C. 29, after the publication of his first book of Satires (*Sermones*), which had appeared about the year B.C. 35, dedicated to Maecenas. At about the time of the publication of the Epodes appeared the second book of Satires. The Odes (*Carmina*) were written in part as early as B.C. 29, but their formal appearance in three books is to be assigned to the year B.C. 20 or thereabouts. These three books were also dedicated to Maecenas. Following them came a continuation of the Satires in a new form, that of letters addressed each to a single person, and called Epistles (*Epistulae*). These are in two books, the first having been published soon after the first publication of the Odes, and the second not long before the poet's death in B.C. 8. In B.C. 17, the *Carmen Saeculare* or Secular Hymn was composed at the request of Augustus for the celebration of the Ludi Saeculares (q. v.). Horace likewise, being in a way the Poet Laureate of Augustus, celebrated the victories of the emperor's stepsons, Tiberius and Drusus, in several new Odes, which he published with a number of others, as a fourth book of Odes in B.C. 13. The famous bit of literary criticism, the *Epistula ad Pisones*, usually known as the *Ars Poetica*, and perhaps unfinished, is of uncertain date, but is to be assigned with much probability to the year B.C. 20.

Horace, as a poet, does not show the inspiration and *Geist* that would rank him with the great masters of lyric verse—Pindar, Alcaeus, Sappho—whom he imitates; and he is himself thoroughly aware of his own poetic limitations. When he attempts the flight of the Theban eagle and when he writes in his *rôle* of Poet Laureate, he is never at his best; but, like Tennyson in his official verse, invariably suggests a person ill at ease over a perfunctory task. His temperament and tastes marked out for him a far different sphere, in which he is inimitable. When he gets away from battles and triumphs, and gods and heroes, and the whole machinery of Olympus, and turns to the familiar world in which he lives, he plays with a master hand upon the chords that vibrate in the breast of all men. Tenderness, humour, a lively and picturesque fancy, a sympathetic love of external nature in her familiar aspects, a keen insight into human nature in its varying moods—all these are his in a high degree, and joined with them is an undercurrent of occasional melancholy that not infrequently touches the source of tears. In those Odes where he depicts the lighter side of love, the genial intercourse of friends, and natural scenery, or in which he sets forth his amiable philosophy of life, he is quite inimitable. Words cannot do justice to the exquisite polish of his verse, the crispness and terse vigour of his phrases, and the perfect choice of words, which Petronius, in the following century, characterized as *Horatii curiosa felicitas*. He has filled the pages of modern literature with a host of sparkling epigrams, phrases, and proverbial lines—"jewels five words long"—more numerous, in fact, than those that have been taken from all the rest of Latin literature put together. No other writer in any language so abounds in pregnant phrases. His *carpe diem* is an epitome in two words of the whole practical teaching of Epicureanism. His *nil desperandum*, twisted out of its context, has almost become an English phrase. So, too, the expressions *consule Planco—damnosa quid non—nunc vino pellite curas—post equitem sedet atra cura—non omnis moriar—semper avarus eget—sapere aude—nil admirari—sub iudice lis est—disiecti membra poetae*—and a hundred others.

It is in his Satires and Epistles that the true Horace is most clearly seen, freed from the uncomfortable trappings of the grand style, and, as it were, chatting at ease among his friends. Here he most winningly sets forth his shrewd and kindly views of men and things, laughing good-humouredly at the foibles of his friends and at his

own as well, like Thackeray, except that in the laugh of Horace there is no subacid tone of even a pretended cynicism. The whole tenour of his teaching is moderation—the *mediocritas aurea*, the *modus in rebus*—which he preaches incessantly alike to the ambitious, the pleasure-loving, and the philosopher. Not even virtue itself is to be pursued beyond what is reasonable. This is essentially the philosophy of "good form," of the man of the world, enlivened by a sense of humour that is fatal alike to the fanaticism of the "crank" and the priggish solemnity of the Philistine. It is the philosophy of the average man, and it explains the constant popularity of Horace in all ages and all nations, and the fact that he is today, at the end of the nineteenth century, the most modern writer that literature can show us. He, more than any other, makes antiquity live for us again; and, stripping off the superficial differences of time and place and language, flashes upon the mind a conviction of the essential unity of the present and the past. He is thus the most human of all the classic writers, and the one whose wit and wisdom linger in the mind of the most idle student long after the lines of Aeschylus and Vergil and even Homer have been forgotten. Hence we find him admired, translated, and imitated by men of such different types as Pope, Byron, Gladstone, and Eugene Field. His nearest representative in English literature is Pope; but, as Mr. Mackail well says, to suggest a true parallel we must unite in thought the excellence of Pope and Gray with the easy wit and cultured grace of Addison.

From an early date Horace's poems were used in Roman schools as a text-book, and were expounded by Roman scholars, especially by Acron and Porphyrion. His use as a school-text has perpetuated the order in which his works are now always printed, that being the order in which the Roman school-boys read them. As Horace has been continuously popular, there exist a very large number of MSS. (about 250) of the text—none, however, older than the ninth century A.D. The oldest is the Codex Bernensis (denoted as B), written in Ireland. This is incomplete. A separate source of Horace is represented by the Codex Blandinius (*Vetustissimus* or V), in part collated by Cruquius (Jacques de Crusques) at Blankenberg, but destroyed about 1566. (See CRUQUIUS.) The best representative of this "family" is probably the Codex Gothanus (G), dating from the year 1456. The Horatian MSS. are enumerated in Keller and Holder's preface.

Q. Horatius Flaccus. (From a Gem.)

BIBLIOGRAPHY.—The *editio princeps* of Horace is said to have appeared at Milan in 1470. Great editions are those of Lambinus (Leyden, 1561, reprinted at Paris in 1567, 1579, 1587, and at Coblentz in 1829); Cruquius (first printed as a whole at Antwerp, 1578); Heinsius (Leyden, 1612); the great epoch-making work of Bentley (Cambridge, 1711, reprinted at Amsterdam, 1713, and lately at Berlin, 1869); Wakefield (London, 1794); Orelli and Baiter (1850–52; last ed. Berlin, 1885 foll.); Dillenburger (1881); Nauck and Krüger (Leipzig, 1885); Schütz (Berlin, 1880–83); Kiessling (Berlin, 1884–1888); the text alone by Meineke (Berlin, 1854); Keller and Holder (Leipzig, 1864–70); Haupt and Vahlen (4th ed. Leipzig, 1881); L. Müller (last ed. Chicago, 1882); with illustrations from gems, by King, text by H. A. J. Munro (London, 1869); French commentary by Waltz (Paris, 1887); English commentaries by Macleane (London, 1869); Wickham (vol. i. Odes and Epodes, 1874; vol. ii. Satires and Epistles, 1891). Separate editions are those of the Odes by Page, with an off-hand commentary of much literary merit (4th ed. London, 1890), and Wickham (2d ed. London, 1887); of the Satires by Palmer (London, 1883) and L. Müller (Vienna, 1891); of the Epistles by Wilkins (3d ed. London, 1889), Shuckburgh (Cambridge, 1888), L. Müller (Vienna, 1893); of the Satires and Epistles together by Kirkland, after Kiessling (Boston and N. Y. 1893). The *Ars Poetica* is edited separately by Hofmann-Peerlkamp (Leyden, 1845) and Albert (Paris, 1886), and discussed by Weissenfels (Görlitz, 1880), and Bonino (Turin, 1888).

No translation of Horace does any kind of justice to the original, though some of the imitations in English by Pope are very clever. There are translations by Sir Philip Francis, by Professor Conington (in verse), by Sir Theodore Martin (Odes and Satires), by Clark (Odes), by Sargent (Odes), and Sir Stephen De Vere (selected Odes and Epodes)—the last two in 1893. There is a fair prose translation by Lonsdale and Lee.

The life of Horace has been written in English by Milman (1853) and Hovenden (1877); in German by L. Müller (1880); in French by Walckenaer, 2 vols. (1858), and Des Vergers (1855); in Italian by Onesolto (Padua, 1888). A valuable life of the poet by Suetonius has come down to us with some discreditable interpolations, in the MSS. of the poet. Valuable criticism of Horace will be found in Teuffel's *Charakteristik des Horaz* (Leipzig, 1842); Gerlach, *Leben und Dichtung des Horaz* (Basle, 1867); Weissenfels, *Horaz* (Berlin, 1885); Vogel, *Die Lebensweisheit des Horaz* (Meissen, 1868); Beck, *Horaz als Kunstrichter und Philosoph* (Mainz, 1875); Weise, *De Horatio Philosopho* (Colberg, 1881); Maier, *D. philosoph. Standpunkt des Horaz* (Kremsier, 1888); and Sellar, *Roman Poets of the Augustan Age: Horace* (1892).

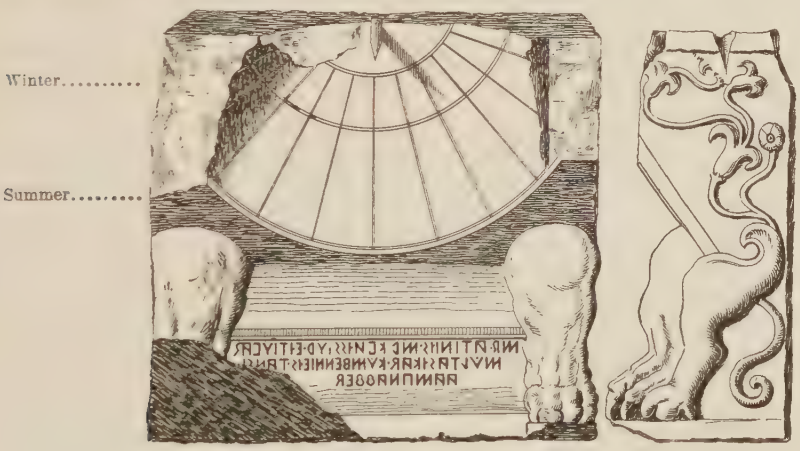
The scholia to Horace have been edited by Fabricius (Basle, 1555), with additions by Pauly (Prague, 1858 and 1877), and by Hauthal (Berlin, 1864–66). See the account of the scholia by Use-

ner (Berne, 1863). There is a lexicon to Horace by Koch (2d ed. Hanover, 1879). On the language, etc., of Horace, see Ernesti's *Clavis Horatiana* (2d ed. Leipzig, 1823); Barta, *Sprachliche Studien*, etc. (Linz, 1879 and 1881); Habenicht, *Alliteration bei Horaz* (Eger, 1885); Waltz, *Des Variations de la Langue et de la Métrique d'Horace*, etc. (Paris, 1881); and the introduction to Kirkland's edition of the Satires and Epistles (1893). On Horace as a satirist, see R. Y. Tyrrell in *Hermathena*, iv. 355; id. *Latin Poetry* (1895); and the article SATIRA.

Hordicidia. See FORDICIDIA; TELLUS.

Horesti. A people of Scotland, mentioned by Tacitus. In Agricola's time they seem to have been the inhabitants of what is now Angus (Tac. *Agric.* 38).

Horistae (*ὁρισταί*). Officials at Athens and some other places, e. g. Chios, whose duty it was to settle boundaries, especially of sacred precincts.



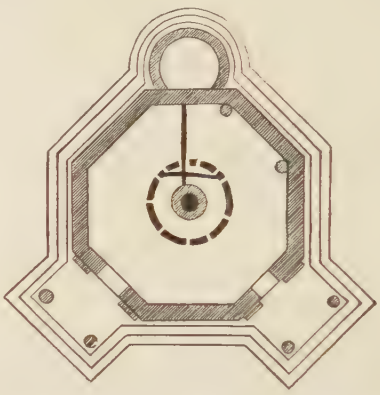
Hormisdas. See SASSANIDAE.

Horn. See CORNU.

Horologium (*ὡρολόγιον*). A name given to various instruments by means of which the ancients measured the time of the day and night. The earliest and simplest horologia of which mention is made were called *πόλος* and *γνώμων*. Herodotus (ii. 109), who ascribes their invention to the Babylonians, mentions the *πόλος* and *γνώμων* as two distinct instruments. Both, however, divided the day into twelve parts, and were a kind of sundial. The *γνώμων*, which was also called *στοιχεῖον*, was the more simple of the two, and probably the more ancient. It consisted of a staff or pillar standing perpendicular, in a place exposed to the sun (*σκιάθηρον*), so that the length of its shadow might be easily ascertained. The shadow of the gnomon was measured by feet, which were probably marked on the place where the shadow fell (Poll. i. 72). The gnomon is almost without exception mentioned in connection with the *δεῖπνον* or the bath; and the time for the former was towards sunset, or at the time when the shadow of the gnomon measured ten or twelve feet (Aristoph. *Eccles.* 652, with the Schol.; Poll. l. c.). The longest shadow of the gnomon, at sunrise and sunset, was twelve feet. The time for bathing was when the gnomon threw a shadow of six feet (Lucian, *Cronos*, c. 17; *Somn. s. Gall.* c. 9). In later times the name gnomon was applied to any kind of sundial, and especially to its finger, which threw the shadow, and thus pointed to the hour. Even the clepsydra is sometimes called gnomon (Athen. ii. p. 42).

The gnomon was evidently a very imperfect instrument, and it was impossible to divide the day into twelve equal spaces by it. The *πόλος* or *ἡλιοτρόπιον*, on the other hand, seems to have been a more perfect kind of sundial; but it appears, nevertheless, not to have been much used, as it is but seldom mentioned (Aristoph. *ap.* Poll. ix. 46). It consisted of a basin (*λεκανίς*), in the middle of which the perpendicular staff or finger (*γνώμων*) was erected, and in it the twelve parts of the day were marked by lines (Lucian, *Lexiph.* 4).

Another kind of horologium was the *clepsydra* (*κλεψύδρα*). It derived its name from *κλέπτειν* and *ὕδωρ*, as in its original and simple form it consisted of a vessel with several little openings (*τρυπήματα*) at the bottom, through which the water contained in it escaped, as it were, by stealth. This instrument seems at first to have been used only for the purpose of measuring the time during which persons were allowed to speak in the courts of justice at Athens. The time of its invention or introduction is not known; but in the age of Aristophanes (see *Acharn.* 692) it appears to have been in common use. Its form and construction may be seen very clearly from a passage of Aristotle (*Problem.* xvi. 8). The clepsydra was a hollow globe, probably somewhat flat at the top part,



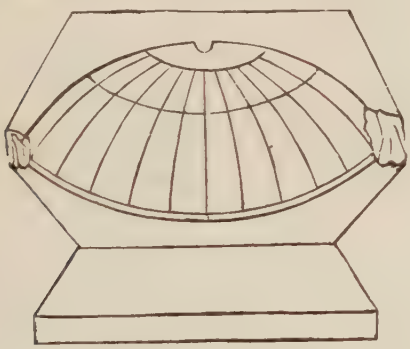
Horologium. (Pompeii.)

where it had a short neck (*αὐλός*), like that of a bottle, through which the water was poured into it. This opening might be closed by a lid or stopper (*πῶμα*), to prevent the water running out at the bottom. The clepsydra which Aristotle had in view was probably not of glass or of any transparent material, but of bronze or brass, so that it could not be seen in the clepsydra itself what quantity of water had escaped. As the time for speaking in the Athenian courts was thus measured by water, the orators frequently use the term *ὕδωρ* instead of the time allowed to them (*ἐν τῷ ἐμῷ ὕδατι*, Demosth. *De Coron.* p. 274, § 139). Aeschines (*c. Ctesiph.* § 197), when describing the order in which the several parties were allowed to speak, says that the first water was given to the accuser, the second to the accused, and the third to the

judges. An especial officer (ὁ ἐφ' ὕδωρ) was appointed in the courts for the purpose of watching the clepsydra, and stopping it when any documents were read, whereby the speaker was interrupted. The time, and consequently the quantity of water allowed to a speaker depended upon the importance of the case; and we are informed that in a γραφὴ παραπρεσβείας the water allowed to each party amounted to eleven amphorae (Aeschin. *De Fals. Leg.* § 126), whereas in trials concerning the right of inheritance only one amphora was allowed (Demosth. *c. Macart.* p. 1052, § 8). Those actions in which the time was thus measured to the speakers are called by Pollux (viii. 113) δίκαι πρὸς ὕδωρ: others are termed δίκαι ἄνευ ὕδατος, and in these the speakers were not tied down to a certain space of time.

The clepsydra used in the courts of justice, however, was, properly speaking, not a horologium; but smaller ones, made of glass, and of the same simple structure, were undoubtedly used very early in families for the purposes of ordinary life, and for dividing the day into twelve equal parts. In these glass clepsydrae the division into twelve parts must have been visible, either on the glass globe itself, or in the basin into which the water flowed. These instruments, however, did not show the time quite correctly all the year round: first, because the water ran out of the clepsydra sometimes quicker and sometimes slower, according to the different temperature of the water (Plut. *Quaest. Nat.* 7); and secondly, because the length of the hours varied in the different seasons of the year. To remove the second of these defects the inside of the clepsydra was covered with a coat of wax during the shorter days, and when they became longer the wax was gradually taken away again (Aen. Tact. c. 22, § 10). Plato is said to have used a νυκτερινὸν ὡρολόγιον in the shape of a large clepsydra, which indicated the hours of the night, and seems to have been of a complicated structure. This instance shows that at an early period improvements were made on the old and simple clepsydra. But all these improvements were excelled by the ingenious invention of Ctesibius (q. v.), a celebrated mathematician of Alexandria (about B.C. 135). It is called ὡρολόγιον ὑδραυλικόν, and is described by Vitruvius (ix. 9). Water was made to drop upon wheels which were thereby turned. The regular movement of these wheels was communicated to a small statue, which, gradually rising, pointed with a little stick to the hours marked on a pillar which was attached to the mechanism. It indicated the hours regularly throughout the year, but still required to be often attended to and regulated. This complicated clepsydra seems never to have come into general use, and was probably found only in the houses of very wealthy persons. The sundial or gnomon, and a simpler kind of clepsydra, on the other hand, were much used down to a very late period. The twelve parts of the day were not designated by the name ὥρα until the time of the Alexandrian astronomers, and even then the old and vague divisions, described in the article DIES, were preferred in the affairs of common life. At the time of the geographer Hipparchus, however (about B.C. 150), it seems to have been very common to reckon by hours.

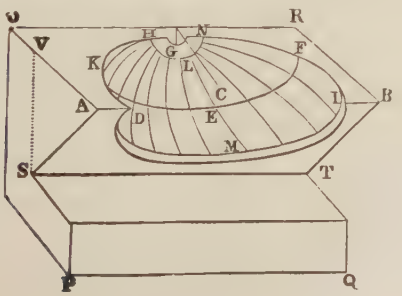
There is still existing, though in ruins, a horological building, which is one of the most interesting monuments at Athens. It is the structure formerly called the Tower of the Winds, but now known as the Horological Monument of Andronicus Cyrrhestes. It is expressly called *horologium* by Varro (*R. R.* iii. 5, § 17). This building is fully described by Vitruvius (i. 6, § 4), and the following illustration shows its ground-plan. For the elevation see the article ANDRONICUS.



Ground-plan of the Horological Monument of Andronicus Cyrrhestes at Athens.

The structure is octagonal, with its faces to the points of the compass. On the northeast and northwest sides are distyle Corinthian porticos, giving access to the interior; and to the south wall is affixed a sort of turret, forming three-quarters of a circle, to contain the cistern which supplied water to the clepsydra in the interior. On the summit of the building was a bronze figure of a Triton, holding a wand in his hand; and this figure turned on a pivot, so that the wand always pointed above that side of the building which faced the wind then blowing. The directions of the several faces were indicated by figures of the eight winds on the frieze of the entablature. On the plain wall below the entablature of each face, lines are still visible which, with the gnomons that stood out above them, formed a series of sundials. In the centre of the interior of the building was a clepsydra, the remains of which are still visible, and are shown on the plan, where the dark lines represent the channels for the water, which was supplied from the turret on the south, and escaped by the hole in the centre. Three other Athenian horologia are extant, one in the monument of Thrasyllus, another that of Phaedrus in the British Museum (*C. I. G.* 522), a third in the theatre of Dionysus, besides others from different parts of Greece.

The first horologium with which the Romans became acquainted was the sundial (*solarium*, or *horologium sciothericum*), and was, according to some writers, brought to Rome by Papirius Cursor twelve years before the war with Pyrrhus, and placed before the temple of Quirinus (Pliny, *H. N.* vii. § 213). Varro stated that it was brought to Rome from Catina in Sicily, at the time of the First Punic War, by the consul M. Valerius Messala, and erected on a column behind the Rostra. But this solarium, being made for a different latitude, did not show the time at Rome correctly. Ninety-nine years afterwards, the censor Q. Marcius Philippus erected by the side of the old solarium a new one, which was more carefully regulated according to the latitude of Rome. But as sundials, how-



ever perfect they might be, were useless when the sky was cloudy, P. Scipio Nasica, in his censorship, B.C. 159, established a public clepsydra, which indicated the hours both of day and night. This clepsydra was in after-times generally called *solarium* (Cic. *De N. D.* ii. 34, 87). The word *hora* for hour was introduced at Rome at the time when the Romans became acquainted with the Greek horologia, and was in this signification well known at the time of Plautus (*Pseud.* 1307). After the time of Scipio Nasica, several horologia, chiefly solaria, seem to have been erected in various public places at Rome. A magnificent horologium was erected by Augustus in the Campus Martius. It was a gnomon in the shape of an obelisk; but Pliny (*H. N.* xxxvi. § 73) complains that in the course of time it had become incorrect. Horologia of various descriptions seem also to have been commonly kept by private individuals (Cic. *Ad Fam.* xvi. 18, 3); and at the time of the emperors, the wealthy Romans used to keep slaves whose special duty it was to announce the hours of the day to their masters (Juv. x. 216, with Mayor's note; Mart. viii. 67; Petron. 26).

From the number of solaria which have been discovered in modern times in Italy (thirteen having been discovered in the neighbourhood of Rome alone), we must infer that they were very generally used among the ancients. The following illustrations represent one of the simplest horologia which have been discovered; it seems to bear great similarity to that the invention of which Vitruvius ascribes to Berosus. It was discovered in 1741, on the hill of Tusculum, and is described by Zuzzeri (Venice, 1746), and by G. H. Martini, in his *Abhandlung von den Sonnenuhren der Alten*, p. 49 (Leipzig, 1777).

Horologium. (From Tusculum.)

The following illustration shows the same solarium as restored by Zuzzeri:

The same restored.

The breadth as well as the height (A O and P A) are somewhat more than eight inches, and the length (A B) a little more than sixteen inches. The surface (A O R B) is horizontal. S P Q T is the basis of the solarium, which, originally, was probably erected upon a pillar. Its side (A S T B) inclines somewhat towards the basis. This inclination was called ἔγκλιμα, or *inclinatio solarii* and *enclima succisum* (Vitruv. l. c.), and shows the latitude or polar altitude of the place for which the solarium was made. The angle of the enclima is about 40° 43′, which coincides with the latitude of Tusculum. In the body of the solarium is the almost spherical excavation (H K D M I F N), which forms a double hemicyclium. Within this excavation the eleven hour-lines are marked which pass through three semicircles (H L N, K E F, and D M I). The middle one (K E F) represents the equator, the two others the tropic lines of winter and summer. The curve representing the summer tropic is somewhat more than a semicircle, the other two curves somewhat smaller. The ten middle parts or hours in each of the three curves are all equal to one another; but the two extreme ones, though equal to each other, are by one-fourth smaller than the rest. In the middle (G) of the curve (D K H N I I), there is a little square hole, in which the gnomon or pointer must have been fixed, and a trace of it is still visible in the lead by means of which it was fixed. It must have stood in a perpendicular position upon the surface (A B R O), and at a certain distance from the surface it must have turned in a right angle above the spheric excavation, so that its end (C) extended as far as the middle of the equator, as it is restored in the last illustration.

Clepsydrae were used by the Romans in their camps, chiefly for the purpose of measuring accurately the four watches into which the night was divided (Caes. *B. G.* v. 13).

The custom of using clepsydrae as a check upon the speakers in the courts of justice at Rome is said to have been introduced by a law of Cn. Pompeius, in his third consulship (Tac. *De Clar. Orat.* 38), who adds, before that time the speakers had been under no restrictions, but spoke as long as they deemed proper. But there is some inaccuracy here, as Cicero in B.C. 70 (*In Verr.* i. 9, 25) speaks of his *legitimae horae;* in B.C. 63 (*Pro Rab. Perd.* 2, 6) his defence is limited to half an hour; and in B.C. 59 (*Pro Flacc.* 33, 82) six hours are allotted. At Rome, as at Athens, the time allowed to the speakers depended upon the importance of the case. Pliny (*Epist.* ii. 11) states that on one important occasion he spoke for nearly five hours, ten large clepsydrae having been granted to him by the judices, but the case was so important that four others were added. (Cf. Pliny, *Epist.* vi. 2.) The law of Pompeius only limited the time during which the accuser was allowed to speak to two hours, while the accused was allowed three hours in the case of prosecutions *de vi.* It is clear from the case of Pliny (*Epist.* iv. 9) and others that this restriction was not observed on all occasions. An especial officer was at Rome as well as at Athens appointed to stop the clepsydra during the time when documents were read (Apul. *Apolog.* i. and ii.). See Ernesti, *De Solariis*, in his *Opuscul. Philolog. et Crit.* pp. 21–31; Wöpcke, *Disquisitionee Arch. Math. Circa Solaria Veterum* (Berlin, 1842); Becker-Göll, *Gallus*, ii. pp. 407 foll.; and especially Marquardt, *Privatl.* pp. 370 foll.

Horoscŏpus. A horoscope. See ASTRONOMIA, p. 146.

Horreum (*ὡρεῖον, σιτοφυλακεῖον, ἀποθήκη*). (1) A granary, especially at Rome a public granary, in which grain was stored at the expense of the State for distribution to the people. (See FRUMENTARIAE LEGES.) (2) A warehouse or storehouse where anything might be deposited for safe-keeping. These were common at Rome under the Empire, and were used for the storage of securities, money, goods, etc. (*Cod.* iv. 24, 9; *Dig.* i. 15, 3). Keepers of *horrea* in either sense of the word were called *horrearii* or *vilici ex horreis.*

Horse-races. See CIRCUS; HIPPODROMUS.

Horta or **Hortānum.** Now Orte; a town in Etruria, at the junction of the Nar and the Tiber, so called from the Etruscan goddess Horta, whose temple at Rome always remained open. (Cf. Müller, *Die Etrusker*, ii. p. 62.)

Hortălus. See HORTENSIUS (2).

Hortātor (*κελευστής*). On board ship, the officer who gave out the chant (*κέλευσμα*), which was sung or played to make the rowers keep the stroke, and, as it were, encourage them at their work (Ovid, *Met.* iii. 619; cf. Verg. *Aen.* v. 177; Serv. *ad loc.*), whence the name (*solet hortator remiges hortarier*, Plaut. *Merc.* iv. 2, 5). He sat on the stern of the vessel, with a truncheon in his hand, which he used to beat the time, as represented in the above illustration.

Hortator. (From the Vatican Vergil.)

Hortensia. The daughter of the orator Hortensius (q. v.), who inherited her father's eloquence. When the members of the Second Triumvirate had imposed a heavy tax upon the Roman matrons and no one of the other sex dared to espouse their cause, Hortensia appeared as their advocate, and made so able a speech that a large portion of the burden was removed (Val. Max. viii. 3, 3). This harangue was extant in Quintilian's time, who speaks of it with praise (Quint. i. 1, 6).

Hortensius, QUINTUS. (1) A celebrated orator, who began to distinguish himself by his eloquence in the Roman Forum at the age of nineteen. He was born of a plebeian family, B.C. 114, eight years before Cicero. He served at first as a common soldier, and afterwards as military tribune, in the Social War. In the contest between Marius and Sulla he remained neutral, and was one of the twenty quaestors established by Sulla. He afterwards obtained in succession the offices of aedile, praetor, and consul. As an orator he for a long time shared the reputation of Cicero; but, as his orations are lost, we can only judge of him by the account which his rival gives of his abilities. "Nature had given him," says Cicero, in his *Brutus* (88), "so splendid a memory that he never had any need of committing to writing any discourse which he had thought over; while, after his opponent had finished speaking, he could recall, word by word, not only what the other had said, but also the authorities which had been cited against himself. His industry was indefatigable. He never let a day pass without speaking in the Forum, or preparing himself to appear on the morrow; oftentimes he did both. He excelled particularly in the art of dividing his subject, and in then reuniting it in a luminous manner, adapting, at the same time, even some of the arguments which had been urged against him. His diction was noble, elegant, and rich; his voice strong and pleasing; his gestures carefully studied." The eloquence of Hortensius would seem, in fact, to have been of the showy species called Asiatic, which flourished in the Greek colonies of Asia Minor, and was infinitely more florid and ornamental than the oratory of Athens, or even of Rhodes, being full of brilliant thoughts and sparkling expressions. This glowing style of rhetoric, though deficient in

Hortensius. (Villa Albani, Rome.)

solidity and weight, was not unsuitable in a young man; and, being further recommended by a beautiful cadence of periods, met with great applause. But Hortensius, as he advanced in life, did not correct this exuberance; and his somewhat tawdry taste in phraseology, which, even in his earliest years, had occasionally excited ridicule among the senators, being now totally inconsistent with his advanced age and dignity, his reputation in consequence waned. Possibly, too, from his declining health and strength, which greatly failed in his latter years, he may not have been able to give its full effect to that showy rhetoric in which he had indulged. A constant toothache and swelling in the jaws greatly impaired his powers of elocution and utterance, and became at length so severe as to accelerate his end. A few months, however, before his death, which happened in B.C. 50, he pleaded for his nephew Messala, who was accused of illegal canvassing, and acquitted more in consequence of the exertions of his uncle than the justice of his cause. So discreditable, indeed, was the case esteemed

that, though the speech of Hortensius had been much admired, he was received, on entering the theatre on the following day, with loud hisses (Cic. *Ad Fam.* viii. 2). The speech, however, revived all the admiration of the public for his oratorical talents, and convinced them that, had he possessed the same perseverance as Cicero, he would not have been inferior to that orator.

It appears from Macrobius that Hortensius was much ridiculed by his contemporaries on account of his affected gestures. In pleading, his hands were constantly in motion, whence he was often attacked by his adversaries in the Forum for resembling an actor; and on one occasion he received from his opponent the appellation of Dionysia, the name of a celebrated dancing-girl (Aul. Gell. i. 5). The actors Aesopus and Roscius frequently attended his pleadings to catch his gestures and imitate them on the stage (Val. Max. viii. 10). Such, indeed, was his exertion in action that it was commonly said that it could not be determined whether people went to hear or to see him. Like Demosthenes, he selected and put on his dress with the most studied care and neatness. He is said not only to have prearranged his gestures, but also to have adjusted the folds of his toga before a mirror when about to go to the Forum. He so arranged his gown that the folds did not fall by chance, but were formed with great care by help of a knot carefully tied and concealed by his robe, which apparently flowed carelessly around him (Macrob. *Sat.* iii. 13). Macrobius also records a story of his instituting an action of damages against a person who had jostled him while walking in this elaborate dress, and had ruffled his toga when he was about to appear in public with his drapery adjusted according to his favourite arrangement.

Hortensius stood, for thirteen years, at the head of the Roman bar; and being, in consequence, engaged during that long period on one side or other in every case of importance, he soon amassed an enormous fortune. He lived, too, with a magnificence corresponding to his wealth. His house at Rome formed the nucleus of the imperial palace, which was enlarged from the time of Augustus to that of Nero, till it nearly covered the whole Palatine Mount and branched over other hills. (See PALATIUM.) Besides his mansion in Rome, he possessed villas at Tusculum, Bauli, and Laurentum, where he was accustomed to give the most elegant and elaborate entertainments. His olive plantations he is said to have regularly moistened with wine; and, on one occasion, during the hearing of an important case in which he was engaged with Cicero, he begged the latter to change with him the previously arranged order of pleading, as he was obliged to go to the country to pour wine on a favourite plane-tree, which grew near his Tusculan villa (Macrob. *Sat.* iii. 13). Notwithstanding this profusion, his heir found no less than 10,000 casks of wine in his cellar after his death (Pliny, *H. N.* xiv. 14). Besides his taste for wine and fondness for plantations, he indulged in a passion for pictures and fish-ponds. At his Tusculan villa he built a hall for the reception of a painting of the expedition of the Argonauts, by the painter Cydias, which cost the sum of 144,000 sesterces. At his country-seat near Bauli, on the sea-shore, he vied with Lucullus and Philippus in the extent of his fish-ponds, which were constructed at an immense cost, and so formed that the tide flowed into them (Varr. *R. R.* iii. 3); yet such was his reluctance to diminish the supply that when he gave entertainments at Bauli he generally sent to the neighbouring town of Puteoli to buy the fish; and Varro declares that a friend could more easily get his chariot-mules out of his stable than a mullet from his ponds. He was more anxious about the welfare of his fish than the health of his slaves, and less solicitous that a sick servant might not take what was unfit for him than that his fish might not drink water which was unwholesome. It is even said (Pliny, *H. N.* ix. 55) that he was so passionately fond of a particular lamprey as to shed tears for its untimely death. At his Laurentan villa, Hortensius had a wooded park of fifty acres encompassed with a wall. This enclosure he called a nursery of wild beasts, all of which came for their food at a certain hour on the blowing of a horn. See Forsyth, *Hortensius* (London, 1879).

(2) Son of the preceding, called also HORTĂLUS, a dissipated person who fought on Caesar's side in the Civil War. In B.C. 44, after Caesar's death, he joined Brutus and put to death C. Antonius, brother of the triumvir. After the battle of Philippi, Hortalus was himself taken and slain.

Hortus (*κῆπος*). A garden. Gardens among the ancients were usually of a strictly utilitarian character. Even the mythical garden of Alcinoüs, described in the *Odyssey* (vii. 112–130), is divided into a fruit-garden, a vineyard, and a kitchen-garden, with no mention of flowers; and when, in later times, flower-gardens are spoken of (e. g. *κήπους εὐώδεις*, Aristoph. *Aves*, 1066), they are probably gardens in which flowers were cultivated for profit. The ancients, in fact, had much less love of landscape beauties than the moderns, and some of their garden arrangements seem shocking to modern taste. Longus (*Pastoralia*, ii. 3) describes a garden in which flowers were mingled with fruits; and Plutarch says that the beauty of roses and violets is enhanced by planting them side by side with onions and leeks! The suburbs of Athens abounded in market-gardens, which supplied the city with both flowers and vegetables (Pliny, *H. N.* xxxvi. 18). Plato speaks of books on gardening (*Min.* p. 316 E).

Roman gardens are described in two letters of the Younger Pliny (ii. 17; v. 6), from which it appears that they were rather prim and formal in their plan, with regular walks (*ambulationes*) lined by closely-clipped hedges of box, yew, and cypress; and diversified with statues, pyramids, and summer-houses (*diaetae*). As in modern Italy and in France under Louis XV., so at Rome the trees and shrubs were often cut into figures of animals, ships, letters, and grotesque forms (*ars topiaria*), so that the regular name for an ornamental gardener is *topiarius*. (Cf. Pliny, *H. N.* xvi. 140; xxi. 68; xxii. 76.) The principal flowers known to the ancients were the rose, violet, crocus, narcissus, lily, iris, poppy, amaranth, and gladiolus.

Conservatories with windows closed by *specularia* (windows of talc) are mentioned by the writers of the first century A.D. (Mart. viii. 14 and 68; Sen. *Epist.* 90; Pliny, *Epist.* ii. 17). Columella speaks of forcing-houses for grapes and melons. For flowers in private houses see DOMUS.

Ornamental gardens were called *viridaria*. The regular name for a gardener is *cultor hortorum*, *vilicus*, *viridarius*, and *topiarius*.

HORTUS PENSĬLIS is a term meaning (1) a hang-

ing (i. e. terraced) garden (see BABYLON); and (2) a frame like our frames for melons and cucumbers, and used for forcing vegetables and fruits. See Pliny, *H. N.* xix. 64.

Horus (Ὧρος, Egyptian *Har*). An Egyptian god, the son of Osiris and Isis. At the death of his father he was still a child, but when he had grown to be a stalwart youth (Harver — i. e. "stronger Horus"), he overcame and captured Typhon, the murderer of his father, after a combat lasting over many days, and handed him over to Isis, who, however, let him go free. By the Egyptians he was deemed the victorious god of light, who overcame darkness, winter, and drought, and was identified with Apollo by the Greeks. He is often represented with the head of a sparrow-hawk, which was sacred to him. He must be distinguished from a younger Horus, the Harpocrates of the Greeks (in Egyptian Harpechruti — i. e. "Har, the Child"), who was received by Isis from Osiris in the under-world, and is the representative of the winter-sun, and also the image of early vegetation, and therefore identified with Priapus (q. v.). Statues represent him as a naked boy with his finger on his mouth. Misunderstanding this symbol of childhood, the Greeks made him the god of Silence and Secrecy. Afterwards, in the time when mysteries were in vogue, his worship was widely extended among the Greeks, and also among the Romans. See Beauregard, *Les Divinités Égyptiennes* (Paris, 1866); and ISIS.

Hostia. A victim. See SACRIFICIUM.

Hostilia. Now Ostiglia; a small town in Gallia Cisalpina, on the Po, and on the road from Mutina Verona; the birthplace of Cornelius Nepos.

Hostilius, TULLUS. See TULLUS HOSTILIUS.

Hostis. See HOSPITIUM in Appendix.

Hostius. A Roman poet, perhaps a contemporary of Lucilius the satirist. He wrote a poem on the Istrian War, which took place in B.C. 178. Some fragments of this have reached our time. Hostius wrote also metrical annals, after the manner of Ennius. See Bergk, *Kl. Schr.* i. 252.

Hotels. See CAUPONA.

Hounds. See CANIS.

Hour-glass. See HOROLOGIUM.

House. See DOMUS.

House-breakers. See EFFRACTOR.

Household Gods. See LARES; PENATES.

House-rent. See DOMUS, p. 541.

Hunnĕric. King of the Vandals in Africa (A.D. 477–484), succeeding his father Genseric. His reign is memorable for his persecution of the Christians.

Hunni (Οὖννοι, Χοῦνοι). An Asiatic people who dwelt for some centuries in the plains of Tartary, and were formidable to the Chinese Empire long before they were known to the Romans. It was against them, in fact, that the famous Chinese wall was built. A portion of the nation crossed into Europe, and were allowed by Valens to settle in Thrace, A.D. 376. Under their king, Attila (A.D. 434–453), they devastated the fairest portions of the Empire; but a few years after Attila's death their power was completely destroyed by the Turks.

The Huns were probably remotely descended from the Hiung-nu, a race of Turkish ("Turanian") stock, though fable declared them to be the offspring of the Scythian witches and the unclean and infernal spirits with whom these witches consorted in the desert. They are described as being dark, stunted, and uncouth, with shrill voices. Like the Mongolians, they were a race of horseman, fighting with bone-tipped javelins and with slings and lassoes. They ate meat nearly raw, and herbs; and wore the hides of wild beasts. See De Guignes, *Histoire Générale des Huns* (1756); Neumann, *Die Völker des südlichen Russland* (2d ed. 1855); Thierry, *Histoire d'Attila* (4th ed. 1874); and Howorth, in the *Journal of the Anthropological Institute* (English) for 1872–74.

Hunting. See VENATIONES.

Hyacinthia (τὰ Ὑακίνθια). A festival, celebrated for three days in the summer of each year, at Amyclae, in honour of Apollo and his unhappy favourite Hyacynthus (q. v.). Müller gives strong reasons for supposing that the Hyacinthia was originally a festival of Demeter. Like other festivals in honour of nature, the festival of the Hyacinthia, celebrated by the Spartans at Amyclae for three days in July, down to the time of the Roman emperors, was connected with the expression of grief at the death of vegetation, of joy over the harvest, and of cheerful trust in the re-awakening of nature. On the first day, which was dedicated to silent mourning, sacrifice to the dead was offered at the grave of Hyacinthus, which was under the statue of Apollo in the temple at Amyclae. The following day was spent in public rejoicing in honour of Apollo, in which all the populace, including the slaves, took part. They went in festal procession with choruses of singing boys and girls, accompanied by harps and flutes, to the temple of Apollo, where games and competitions, sacrifices and entertainments to one another took place, and a robe, woven by the Spartan women, was offered to the god.

Hyacinthus (Ὑάκινθος). (1) Son of King Amyclas, of Amyclae in Laconia, and of Diomedes. He was beloved for his beauty by Apollo and Zephyrus. As Apollo was one day teaching the boy how to play at quoits, on the banks of the river Eurotas, the wind-god in his jealousy drove the quoit with such violence against the head of Hyacinthus that the blow killed him. From his blood Apollo caused a flower of the same name to spring up, with the exclamation of woe, AI, AI, marked upon its petals. (See AIAX.) Hyacinthus, like Adonis, is a personification of vegetation, which flourishes in the spring-time, but is scorched and killed by the glowing heat of the summer sun, which is symbolized by the quoit or discus. (2) The flower sprung from the blood of Hyacinthus, described in the older poets as dark but later as rather light; so that several flowers have been included under the name. (3) The jacinth, or perhaps the sapphire.

Hyădes (Ὑάδες). According to some, the daughters of Atlas and sisters of the Pleiades. The best accounts, however, make them to have been the nymphs of Dodona, to whom Zeus confided the nurture of Bacchus. Pherecydes gives their names as Ambrosia, Coronis, Eudora, Dioné, Aesula, and Polyxo. Hesiod, on the other hand, calls them Phaesula, Coronis, Cleea, Phaeo, and Eudora. The names generally given to the seven stars are Ambrosia, Eudora, Pedilé, Coronis, Polyxo, Phyto, and Dioné or Thyené. The Hyades went about with

their divine charge, communicating his discovery to mankind, until, being chased with him into the sea by Lycurgus, Zeus, in compassion, raised them to the skies and transformed them into stars. According to the more common legend, however, the Hyades, having lost their brother Hyas, who was killed by a bear or lion, or, as Timaeus says, by an asp, were so disconsolate at his death that they pined away and died; and after death they were changed into stars (Hyg. *Fab.* 192). The stars called Hyades (Ὑάδες) derived their name from ὕειν, "to make wet," "to rain," because their setting, at both the evening and morning twilight, was for the Greeks and Romans a sure presage of wet and stormy weather, these two periods falling respectively in the latter half of April and November. Horace, with a double allusion to both fable and physical phenomena, calls the stars in question *tristes Hyadas* (*Carm.* i. 3, 14). The Roman writers sometimes call these stars by the name of Suculae, "little pigs," for which epithet Pliny assigns a singular derivation. According to this writer, the Roman farmers mistook the etymology of the Greek name Hyades, and deduced it, not from ὕειν, "to rain," but from ὗς, "a sow" (Pliny, *H. N.* xviii. 26). It is more probable, however, that Suculae was the oldest Roman name, given before the Greek appellation was known, and to be compared with our popular astronomical terms such as "the Dipper," "Charles's Wain," etc. Isidorus derives the term Suculae from *succus*, in the sense of "moisture" or "wet" (*a succo et pluviis*, Isidor. *Orig.* iii. 70), an etymology which has found its way into many later works. Some grammarians, again, sought to derive the name Hyades from the Greek Υ (upsilon), in consequence of the resemblance which the cluster of stars bears to that letter.

The Hyades, in the celestial sphere, are at the head of the Bull (ἐπὶ τοῦ βουκράνου).

Hyălos (ὕαλος). Glass. See VITRUM.

Hyampēa (Ὑάμπεια). One of the two lofty rocks which rose perpendicularly from behind Delphi, and obtained for Parnassus the epithet of δικόρυφος, or the two-headed (Eurip. *Phoen.* 234; Herod. viii. 39). The other was called Nauplea. It was from these elevated crags that culprits and sacrilegious criminals were hurled. See PARNASSUS.

Hyampŏlis (Ὑάμπολις). A town in Phocis, east of the Cephissus, near Cleonae, founded by the Hyantes. It was first destroyed by Xerxes, and afterwards rebuilt to be destroyed again in part by Philip and the Amphictyons.

Hyantes (Ὕαντες). The ancient inhabitants of Boeotia, from which country they were expelled by the Cadmeans. Part of the Hyantes emigrated to Phocis, where they founded Hyampolis and part to Aetolia. The poets use the adjective Hyantius as equivalent to Boeoticus.

Hyas (Ὕας). The son of Atlas, and father or brother of the Hyades (q. v.), and said to be the ancestor of the Hyantes (q. v.).

Hybla (Ὕβλη). Three towns in Sicily. (1) MAIOR (ἡ μεγάλη), on the southern slope of Mount Aetna and on the river Symaethus, was originally a town of the Siculi. (2) MINOR (ἡ μικρά), afterwards called Megara. (3) HERAEA, in the south of the island, on the road from Syracuse to Agrigentum. It is doubtful from which of these three places the Hyblaean honey came, so frequently mentioned by the poets.

Hybreas (Ὑβρέας). (1) A Carian, a native of Mylasa, who was well known as an orator in the time of M. Antonius, the triumvir. (2) A Cretan lyric poet, the author of a drinking-song preserved in Athenaeus and edited by Gräfenhan (Mulhausen, 1834).

Hybreōs Graphé (ὕβρεως γραφή). In Attic law, a criminal prosecution for assault or personal violence of any kind. In it any penalty might be demanded, and in extreme cases, death. The case was tried before a Heliastic court.

Hyccăra (τὰ Ὕκκαρα). A town of the Sicani on the north coast of Sicily, west of Panormus, taken by the Athenians, and its inhabitants sold as slaves, B.C. 415. Among the captives was the beautiful Timandra, the mistress of Alcibiades and the mother of Laïs. The place was said to get its name from the fish ὕκαι.

Hydarnes (Ὑδάρνης). One of the seven Persians who conspired against the Magi, B.C. 521. See PERSIA.

Hydaspes (Ὑδάσπης). The modern Jhelum; the northernmost of the five great tributaries of the Indus, which, with the Indus itself, water the great plain of northern India, which is bounded on the north by the Himalaya range, and which is now called the Punjab—i. e. five rivers. The Hydaspes falls into the Acesines (Chenâb), which itself falls into the Indus. The epithet *fabulosus*, which Horace applies to the Hydaspes, refers to the marvellous stories current among the Romans, who knew next to nothing about India. See INDIA.

Hydra. See HERACLES, p. 790.

Hydraōtes (Ὑδραώτης). A tributary to the Indus, now the Raví. Strabo and Quintus Curtius call it the Hyarotes or Hyarotis.

Hydraulus (ὕδραυλος). A water-organ. According to Athenaeus, it was the invention of Ctesibius of Alexandria (q. v.), who evidently took the idea of his organ from the syrinx or Pandean pipes, a musical instrument of the highest antiquity among the Greeks. His object being to employ a row of pipes of great size, and capable of emitting the most powerful as well as the softest sounds, he contrived the means of adapting keys with levers (ἀγκωνίσκοι), and with perforated sliders (πώματα) to open and shut the mouths of the pipes (γλωσσόκομα), a supply of wind being obtained, without intermission, by bellows, in which the pressure of water performed the same part which is fulfilled in the modern organ by a weight (Hero, *Spirit.* 228). On this account the instrument invented by Ctesibius was called the water-organ (ὕδραυλις, ὑδραυλικὸν ὄργανον, Heron, *Spirit.*; *hydraulica machina*, Vitruv. x. 13; *hydraulus*, Pliny, *H. N.* ix. § 24; Cic. *Tusc.* iii. 18, § 43). It is described in an epigram by the emperor Julian (Brunck, *Anal.* ii. 403 = *Anth. Pal.* ix. 365), who mentions the swift fingers of the performer, but not the water-bellows; and more clearly in the lines of Claudian (*De Manl. Theod. Cons.* 316–319). We have here the keys, the innumerable pipes of metal, the lever as large as a beam which sets the water in motion. Its pipes were partly of bronze (χαλκειὴ ἄρουρα, Julian; *seges aëna*, Claudian), and partly of reed (δόνακες, Julian). The number of its stops, and consequently of its

rows of pipes, varied from one to eight, so that Tertullian (*De Anima*, 14) describes it with reason as an exceedingly complicated instrument. We are still in the dark as to the exact part played by the water, which, besides, must have rendered the instrument much less portable. As invented by Ctesibius, the organ was doubtless hydraulic: but the epigram of Julian omits all mention of the water, and probably, in later times, the mechanism was simplified and the bellows blown directly by the pedal, as in the modern harmonium.

The organ was well adapted to gratify the Roman people in the splendid entertainments provided for them by the emperors and other opulent persons. Nero was very curious about organs, both in regard to their musical effect and their mechanism (Suet. *Ner.* 41, 54). A contorniate coin of this emperor in the British Museum (see illustration) shows a small organ with a sprig of laurel on one side and a man standing on the other. The general form of the organ is also clearly exhibited in a poem by Publilius Porphyrius Optatianus, describing the instrument, and composed of verses so constructed as to show both the lower part which contained the bellows, the wind-chest which lay upon it, and over this the row of twenty-six pipes. These are represented by twenty-six lines, which increase in length each by one letter, until the last line is twice as long as the first (Wernsdorf, *Poetae Lat. Min.* vol. ii. pp. 394–413).

Organ, from a coin of Nero. (British Museum.)

There can be little doubt that ὑδραύλης, *hydraula* or *hydraules*, denotes the organist (Suet. *Ner.* 54; Petron. *Sat.* 36). See MUSICA.

Hydrĕa (Ὑδρέα). The modern Hydra; a small island in the Gulf of Hermioné, off Argolis (Herod. iii. 59; and E. Curtius, *Peloponnesos*, ii. p. 456).

Hydria (ὑδρία). (1) A vessel for holding water. (2) A balloting-urn in the Attic law-courts. (See SITELLA.) (3) A cinerary urn.

Hydriaphoria (ὑδριαφορία). "The carrying of a water-pot," a service performed by the wives of resident aliens at the Panathenaea (q. v.). See SCIADEPHORIA.

Hydroměli (ὑδρόμελι). See VINUM.

Hydruntum or **Hydrus** (Ὕδρους). The modern Otranto. One of the most ancient towns of Calabria, situated on the southeast coast, near a mountain of the same name. It had a good harbour, from which persons frequently crossed over to Epirus.

Hygiēa (Ὑγίεια). In Greek mythology, the goddess of Health, daughter of Asclepius (Aesculapius), with whom she is often worshipped. In works of art she is represented by his side, as a maiden of kindly aspect, with a serpent to whom she is giving drink from a saucer. As the giver of mental health, she is sometimes confused with Athenê Hygiea (Aesch. *Eumen.* 522). By the Romans she was identified with Salus (q. v.).

Hygīnus. (1) GAIUS IULIUS. A celebrated grammarian. He is mentioned by Suetonius as a native of Spain, though some have supposed him an Alexandrian, and to have been brought to Rome after the capture of that city by Caesar. Hyginus was a freedman of Augustus Caesar, and was put by that emperor in charge of the library on the Palatine Hill. (See BIBLIOTHECA.) He also gave instruction to numerous pupils. Hyginus was intimately acquainted with Ovid and other writers of the day, and was said to be the imitator of Cornelius Alexander, a Greek grammarian. Some suppose him to have been the faithless friend of whom Ovid complains in his *Ibis*. His works, which were numerous, are frequently quoted by the ancients with great respect. The principal ones appear to have been: (*a*) *De Situ Urbium Italicarum;* (*b*) *De Troianis Familiis;* (*c*) *De Claris Viris;* (*d*) *De Proprietatibus Deorum;* (*e*) *De Diis Penatibus;* (*f*) A commentary on Vergil; (*g*) A treatise on Agriculture. These are all lost. Those which are extant, and are ascribed to Hyginus, were possibly written by another individual of the same name. These are: (*a*) *Fabularum Liber*, a collection of 277 fables, taken for the most part from Grecian sources, and embracing all the most important legends of antiquity. It is written in a very inferior style, but is still of great importance for the mythologist. Text by Schmidt (Jena, 1872), and see the paper by Wölfflin, *Zur Kritik von Hyg. Fabeln*, in the *Philologus*, x. 303. (*b*) *De Astrologia*, also called *Poetica Astronomia*. This, like the previous work, is in prose, and consists of four books, being partly astronomical and mathematical, partly mythological and philosophical in its character, since it gives the origin of the Catasterisms according to the legends of the poets. The proëm of the work is addressed to a certain Quintus Fabius. This work is written in a careless manner, but is very important for obtaining a knowledge of ancient astronomy, and for a correct understanding of the poets. Text by Bunte (Dresden, 1875), and see Robert's edition of the *Catasterismi* of Eratosthenes (Berlin, 1878). (2) A gromatic writer of whom nothing is known, but to whom are often ascribed two works —one on legal boundaries (*De Limitibus Constituendis*), and one on castrametation (*De Munitionibus Castrorum*), though they are really by two different writers, as the language shows. They are to be assigned to the third century A.D. The text is to be found in the Lachmann-Rudorff editions of the *Agrimensores* (Berlin, 1848).

Hyksos Kings. See AEGYPTUS, p. 28.

Hylaeus (Ὑλαῖος, i. e. "the Woodman"). The name of an Arcadian centaur who was slain by Atalanta when he pursued her. According to some legends, Hylaeus fell in the fight against the Lapithae, and according to others he was one of the centaurs slain by Heracles.

Hylas (Ὕλας). Son of Theodamas, king of the Dryopes, and the nymph Menodicé. He was a favourite of Heracles, whom he accompanied on the Argonautic expedition. When Heracles disembarked upon the coast of Mysia to cut himself a fresh oar, Hylas followed him to draw water from a fountain, whose nymphs drew the youth down into the water. The Argonauts having gone on their way, Heracles, with his sister's son Polyphe-

mus, remained behind to search for him. On failing to find him, he did not leave until he had taken hostages from the Mysians, and made them promise that they would produce the boy either dead or alive. After that, the inhabitants of Cios (founded by Polyphemus and afterwards called Prusias) continually sought for Hylas, and sacrificed to him every year at the fountain, thrice calling him by name. The story of Hylas suggested a song of Thomas Moore's, and is the subject of a poem, *Hylas*, by Bayard Taylor. See Calverly's translation of the thirteenth idyl of Theocritus.

Hylé (Ὕλη) and **Hylae** (Ὕλαι). A small town in Boeotia, situated on Lake Hylicé, which was called after this town.

Hylias. A river in Bruttium, separating the territories of Sybaris and Croton.

Hylĭcé (ἡ Ὑλικὴ λίμνη). See Hylé.

Hylĭcus (Ὕλικος). A small river in Argolis near Troezen.

Hyllus (Ὕλλος). The son of Heracles and Deïanira, and husband of Iolé. When he and the rest of the children of Heracles, at their father's death, were pursued everywhere by the enmity of Eurystheus, they at last found succour from Theseus, or his son Demophon. When Eurystheus drew near with his army to compel the Athenians to give them up, Macaria, daughter of Heracles, freely offered herself up as a sacrifice for her brethren, who, aided by the Athenians, defeated the enemy, Eurystheus being slain as a fugitive by Hyllus himself. Having withdrawn from Attica to Thessaly, Hyllus was adopted by the Dorian prince Aegimius, whom Heracles had once assisted in the war between the Lapithae and the Dryopes, under promise of his abdication of the royal power, together with a third part of the kingdom. Thus the rule over the Dorians passed to him and his descendants. When commanded by the Delphic oracle to attempt to conquer the kingdom of Eurystheus immediately after "the third fruit," he endeavoured after the lapse of three years to invade the Peloponnesus by way of the Isthmus. He was, however, repulsed by Atreus, the successor of Eurystheus, and fell in single combat with Echemus, king of Tegea. It was in the "third generation" after him that the sons of his grandson Aristomachus — viz. Temenus, Cresphontes, and Aristodemus—at last conquered the Peloponnesus, which was then under the rule of Tisamenus, son of Orestes. See Heraclidae.

Hyllus (Ὕλλος). A river of Lydia, falling into the Hermus on its north side.

Hymenaeus (Ὑμέναιος) or **Hymen** (Ὑμήν). The Greek god of marriage and of the marriage-song named after him. He is sometimes described as the son of Apollo and a Muse (either Terpsichoré, Urania, or Calliopé), who had vanished on his own wedding-day, and was consequently always sought for at every wedding. He is also described as a son of the Thessalian Magnes and of the Muse Calliopé, and as beloved by Apollo and Thamyris; or as the son of Dionysus and Aphroditė, who lost his voice and life while singing the nuptial song at the marriage of Dionysus and Ariadné. According to Attic tradition, he was an Argive youth who, in the disguise of a girl, followed to the feast of Demeter at Eleusis a young Athenian maiden whom he loved without winning the consent of her parents. Hymenaeus and some of the maidens who were celebrating the festival, were carried off by pirates, whom he afterwards killed in their sleep, and henceforth became the champion of all women and damsels. In art he is represented like Eros, as a beautiful, winged youth, only with a more serious expression, and carrying in his hand the marriage torch and nuptial veil. The marriage-song called *Hymenaeus*, which is mentioned as early as Homer (*Il.* xviii. 493), was sung by young men and maidens, to the sound of flutes, during the festal procession of the bride from the house of her parents to that of the bridegroom. In character it was partly serious and partly humorous. The several parts always ended with an invocation of Hymenaeus. (See Catullus, 61 and 62, with the rendering by Sir Theodore Martin; and the article Epithalamium.) On the Roman god of weddings, see Talassio.

Hymettus (Ὑμηττός). A mountain in Attica, about three miles south of Athens, celebrated for its marble and its honey (Herod. vi. 137). See Athenae.

Hymnus (ὕμνος). In general, an invocation of the gods, especially in the form of an ode sung by a choir, to the accompaniment of the cithara, while they stood round the altar. For the so-called Homeric Hymns (to Aphroditė, Hermes, Demeter, etc.), see the article Homerus. For wedding hymns, see Epithalamium. For the Orphic Hymns, see Orpheus. Many of the Pindaric odes, written in lyric measures, are to be classed as ὕμνοι. (Cf. Aristoph. *Eq.* 530.) Famous among Greek hymns is the noble hymn to Zeus by the Stoic Cleanthes (q. v.). See Musica.

In Latin, examples of hymns in the older sense are the songs of the Salii (*carmina Saliaria*), sung by the priests of Mars (see Salii); the hymn of the Arval Brethren (see Fratres Arvales); the hymns composed by Horace (*carmen saeculare*) for the Ludi Saeculares in B.C. 17, and sung in honour of Diana and Apollo (see Ludi Saeculares); and some of later date, like the poem called *Laus Herculis*, in 137 hexameters, by an anonymous author (see Bährens in the *Neue Jahrbücher für Philologie*, etc., 105, 52. 503); the *Hymnus Claudii ad Lunam* (*Poet. Lat. Min.*, ed. Bährens, iii. 163); and the parodic hymn to Pan (id. iii. 170).

The early Christian hymns in Greek and Latin are interesting. Of those in Greek, only a comparatively few are written in the classic metres—e. g. those by Clemens Alexandrinus (about A.D. 220), Englished by Dr. Dexter in his "Shepherd of Early Youth;" Gregory of Nanzianzus (A.D. 360), Synesius (A.D. 400), and Sophronius (A.D. 629). Others, and especially those used by the Eastern Church, are strongly Oriental in style, due to the constant study of the Jewish Psalter. No authors of Latin hymns are mentioned earlier than A.D. 325, the date of the Council of Nice. Soon after, however, two great hymnologists—St. Hilary and St. Ambrose—appear, both in the fourth century, followed by Prudentius (A.D. 350–410), whose poems in 1860 reached a sixty-third edition; Sedulius of the same period; Venantius Fortunatus (A.D. 530–609), and Gregory the Great (A.D. 540–604). Some of the most magnificent of the Latin hymns are of unknown authorship. Such are the famous *Veni, Creator Spiritus*, popularly ascribed to Charlemagne, but really of earlier date; the hymn be-

ginning *Verbum Dei, Deo Natum;* and, above all, the sublime *Dies Irae*, the despair of translators, which is often attributed to Thomas of Celano, but on no sure authority (Mohnike, *Hymnologische Forschungen*, i. pp. 1–24).

The Latin hymns are interesting from a linguistic and metrical standpoint, as usually reverting to the older and more natural accentual system of prosody instead of preserving the artificial and unpopular distinctions of syllabic quantity. Among the common people, in their folk-songs (e. g. the songs of the soldiers in their barracks and during the triumphs, the chants, spells, and nursery songs), the accentual system still survived, and, as in the *Instructiones* of Commodianus, written in the third century A.D., the popular system sometimes made its way even into written literature. It was natural that the Christian hymns, being composed not for the learned and fastidious, but for the common people—for provincials and non-Romans—should avail themselves of the far freer range allowed by the loose laws of accent. Thus St. Augustine, even in the title of one of his psalms (*Psalmus contra Partem Donati*), shows his desire to escape from the rigid restrictions of the Augustan prosody—in other words, to write a *canticum* and not a *carmen*. In the later hymns, many metrical ingenuities are introduced, such as the so-called leonine and other rhymes (see LEONINI VERSUS), of which a good account will be found in the introduction and notes to Archbishop Trench's *Sacred Latin Poetry* (London, 1874).

For the Greek Christian hymns, see Christ and Paranika's *Anthologia Graeca Carminum Christianorum* (1871); Chatfield's *Hymns of the Eastern Greek Christian Poets* (1876)—the former giving the original text and the latter the English reading; and Petra, *Hymnographie de l'Église-Grecque* (1867); *Analecta Sacra Inedita* (Paris, 1876). On the Latin hymns, see the work of Trench already cited; Cardinal Newman's *Carmina Ecclesiae* (1876); Du Méril, *Poésies Populaires Latines* (1843); Mone, *Hymni Latini*, 3 vols. (1853–55); and Duffield (1888).

There is a dictionary of Hymnology by Julian (1888). On the versification of the Christian hymns (usually trochaic and iambic metres with a special preference for the iambic dimeter, with rhyme and frequent alliteration), see Schuch, *De Poësis Latinae Rhythmis et Rimis* (1851); Hümer, *Der iamb. Dimeter bei den christl.-lat. Hymnendichtern der vorkaroling. Zeit* (Vienna, 1876); id. *Die ältesten lat.-christl. Rhythmen* (Vienna, 1879); and the article RHYME.

Hypacyris, Hypacăris, or **Pacăris.** A river in European Sarmatia, flowing through the country of the nomad Scythians and falling into the Sinus Carcinites in the Euxine Sea.

Hypaea. See STOECHADES INSULAE.

Hypaepa (Ὕπαιπα). A city of Lydia, on the southern slope of Mount Tmolus, near the north bank of the Cayster.

Hypaethral Temple. A temple not covered by a roof, and in form usually decastyle. See Dörpfeld in the *Mittheilungen d. deutschen archäol. Inst. zu Athen* for 1891, pp. 334–344; and the article TEMPLUM.

Hypăna (τὰ Ὕπανα) and **Hypănē** (Ὑπάνη). A town in Elis belonging to the so-called Pentapolis.

Hypănis (Ὕπανις). The modern Bog; a river in European Sarmatia, falling into the Euxine Sea west of the Borysthenes (Herod. iv. 17, etc.).

Hypaspistae (ὑπασπισταί). The shield-bearers in the Greek army, who followed the heavy-armed warriors and carried a portion of their burdensome equipment, principally the shield, the necessary baggage, and the usual provision for three days. Among the Macedonians the light infantry were so called to distinguish them from the heavy φαλάγγιται (see HOPLITES) and the archers. They wore a round felt hat (see CAUSIA), a linen jerkin, and had a long dagger and a short hand-pike. They were a standing body of 6000 men, and in war formed the king's body-guard. See EXERCITUS.

Hypăta (τὰ Ὕπατα). A town of the Aenianes in Thessaly, south of the Spercheus, whose inhabitants were notorious for witchcraft. It is now Neopatra (Turk. Batrajik).

Hypatia (Ὑπατία). A mathematician of Alexandria, daughter of Theon, and still more celebrated than her father. She was born about the end of the fourth century. In her studies she applied herself in particular to the philosophy of Plato. Following the example of her master, she resolved to add to her information by travelling; and, having reached Athens, attended there the lectures of the ablest instructors. On her return to her native city, she was invited by the magistrates to give lectures in philosophy, and Alexandria beheld a woman succeed to that long line of illustrious teachers which had rendered its school one of the most celebrated in the world. She was an Eclectic; but the exact sciences formed the basis of all her instruction, and she applied their demonstrations to the principles of the speculative sciences. She numbered among her disciples many celebrated men, among others Synesius, afterwards bishop of Ptolemaïs, who preserved during his whole life the most friendly feelings towards her, although she constantly refused to become a convert to Christianity. Hypatia united to a masculine intellect many of the attractions and all the virtues of her sex. Her dress was remarkable for its simplicity; her conduct was always above suspicion; and she knew well how to compel the respect of those of her auditors who felt the influence of her charms. All idea of marriage was constantly rejected by her as threatening to interfere with her devotion to her favourite studies. Orestes, governor of Alexandria, admired the talents of Hypatia, and frequently had recourse to her for advice. He was desirous of repressing the too ardent zeal of St. Cyril, who saw in Hypatia one of the principal supports of paganism. The partisans of the bishop, on their side, beheld in the measures of the governor the result of the counsels of Hypatia; the most fanatical of their number, in March, A.D. 415, seized upon Hypatia as she was proceeding to her school, forced her to descend from her chariot, and dragged her into a neighbouring church, where, stripped of her vestments, she was put to death by her brutal foes. Her body was hacked to pieces with oyster-shells, and the bloody remains were dragged through the streets and finally burned.

The works of Hypatia were lost in the burning of the Alexandrian Library. In the number of these were a commentary on Diophantus, an Astronomi-

cal Canon, and a commentary on the Conics of Apollonius of Perga. The very names of her other productions are lost. The Greek Anthology contains an epigram in praise of Hypatia, attributed to Paulus Silentiarius. Canon Kingsley's historical romance (London, 1853) has done much to make her name familiar to English readers. See the exhaustive monograph on Hypatia by Hoche in the *Philologus*, xv. 435 foll. (1860).

Hypatodōrus (Ὑπατόδωρος). A Theban sculptor, who flourished about B.C. 372.

Hyperbŏlus (Ὑπέρβολος). An Athenian demagogue in the Peloponnesian War, of servile origin. In order to get rid of either Nicias or Alcibiades, Hyperbolus called for the exercise of the ostracism. But the parties endangered combined to defeat him, and the vote of exile fell on Hyperbolus himself—an application of that dignified punishment by which it was thought to have been so debased that the use of it was never recurred to. Some years afterwards he was murdered by the oligarchs at Samos, B.C. 411 (Thuc. viii. 74).

Hyperborei (Ὑπερβόρεοι, lit. "dwellers beyond the north wind"). A people of Greek legend, whose existence was denied by some of the ancients, while others endeavoured to define their position more precisely. They were said to dwell far in the North, where the sun rose and set only once a year—a fancy due, perhaps, to some dim report of the long arctic summer day. The fruits of the earth ripened quickly with them; they lived in unbroken happiness, knowing no violence or strife, and reached the age of a thousand years; any who were weary of life casting themselves from a sacred rock into the sea. The myth is connected with the worship of the god of light, Apollo, who during the dark winter was supposed to visit them, as his priestly people, in a chariot drawn by swans; returning to Delphi for the summer. There was a tradition in Delos that in earlier times they used to send to that island the first-fruits of their harvests by way of Dodona, Thessaly, and Euboea.

Hyperborei Montes. Originally the mythical name of an imaginary range of mountains in the north of the earth. It was afterwards applied by the geographers to various chains; as, for example, the Caucasus, the Rhipaei Montes, and others.

Hyperesia (Ὑπερεσίη). The more ancient name of Aegira in Achaia. Pausanias (vii. 26) relates the story which accounts for the subsequent change of name.

Hyperīa (Ὑπέρεια). A fountain of Thessaly, placed by some in the vicinity of Argos Pelasgicum, while others think that it was near Pherae.

Hyperīdes (Ὑπερείδης and Ὑπερίδης). One of the Ten Attic Orators, born about B.C. 390, son of the Athenian Glaucippus. He was a pupil of Plato and Isocrates, and won for himself an important position as a forensic and political orator, although his private life was not unblemished. As a statesman, he decidedly shared the views of Demosthenes, and was his steadfast ally in the struggle against the Macedonian party. It is true that he afterwards (B.C. 324) took part in the prosecution of Demosthenes, when accused of having taken bribes from Alexander's treasurer, Harpalus, and that he contributed to his condemnation on that charge. After the destruction of Thebes by Alexander (335) it was only with difficulty that he and Demosthenes escaped being given up to the Macedonians. After the death of Alexander (323) he was the chief instigator of the Lamian War, at the unfortunate conclusion of which he and Demosthenes (who had been reconciled to one another in the meantime) and other patriots were condemned to death by the Macedonian party. He fled for sanctuary to a temple in Aegina, but was dragged away from it by force, and by order of Antipater put to death at Corinth in 322.

Of the seventy-seven speeches which were known to antiquity as the work of Hyperides, only a few fragments were known until recent times; but in 1847, in a tomb at Thebes, in Egypt, extensive fragments were found of his speech against Demosthenes, together with a speech for Lycophron, and the whole of his oration for Euxenippus. In 1856 there was a further discovery in Egypt of an important part of the funeral oration delivered in 322 over those who had fallen in the siege of Lamia. In 1889 M. Eugène Revillout announced the purchase by the Louvre of a papyrus containing portions of the first oration of Hyperides against Athenogenes (*Revue des Études Grecques*, Jan.–March, 1889).

Though the speeches of Hyperides never attain to the force and depth of those of Demosthenes, nevertheless they were valued highly on account of the skill of their construction and the grace and charm of their expression. They are the productions of a practical pleader who is thoroughly in command of all his powers, and who is, above all, an accomplished man of the world—slightly indolent, witty, refined, with a delicious fund of irony, of perfect taste, entertaining and urbane. He is, oratorically speaking, to Demosthenes what Lord Salisbury is to Mr. Gladstone.

The text of Hyperides is edited by Blass in the Teubner series; and there is a good edition of the orations for Lycophron and Euxenippus by Babington, with fac-similes of the MSS. (Cambridge, 1853). The best account of his oratory is that of Blass in his *Attische Beredsamkeit*, iii. 2. 1–72 (1877). See, also, Hager's *Quaestiones Hyperideae* (Leipzig, 1870); Caffiaux, *Hypéride* (Valenciennes, 1860); Jebb, *The Attic Orators*, ii. pp. 381–92 (London, 1876); and Böhnecke, *Demosthenes, Lykurgos, Hyperides und ihr Zeitalter* (Berlin, 1874).

Hyperīon (Ὑπερίων). One of the Titans, father of the Sun-god Helios, who himself is also called Hyperion in Homer. See TITANES.

Hypermnestra (Ὑπερμνήστρα). (1) The only one of the daughters of Danaüs who spared her husband, Lynceus. (See DANAÜS.) (2) Daughter of Thestius and Eurythemis, wife of Oïcles, and mother of Amphiaraüs.

Hyperōön (ὑπερῷον). The upper story of a Greek house. See DOMUS.

Hyphăsis (Ὕφασις), **Hypăsis** (Ὕπασις) or **Hypănis** (Ὕπανις). A river of India, now the Gharra, falling into the Acesines. See HYDASPES.

Hypius (Ὕπιος). A river and mountain in Bithynia.

Hypnos (Ὕπνος). The god of sleep.

Hypocaustum. See BALNEAE.

Hypocrĭtes (ὑποκριτής). An actor. See HISTRIO.

Hypodēma (ὑπόδημα). See CALCEUS.

Hypogaeum. A tomb or vault underground.

Hyponŏmus. See EMISSARIUM.

Hyporchēma (*ὑπόρχημα*). A species of lyric, choral song in lively rhythms; its subject was generally gay, and contained imitative dance movements. Like the paeans, these choral odes were mostly sung in honour of Apollo.

Hyposcenium. See THEATRUM.

Hypothēca. See PIGNUS.

Hypozōma (*ὑπόζωμα*). See NAVIS.

Hypsas (*Ὕψας*). A river of Sicily falling into the Crinisus.

Hypseus (*Ὑψεύς*). A son of Peneüs and Creüsa. He was king of the Lapithae (q. v.) and father of Cyrené.

Hypsĭcles (*Ὑψικλῆς*). An astronomer of Alexandria, who flourished under Ptolemy Physcon, about B.C. 146. He is considered by some to have been the author of the fourteenth book appended to Euclid's *Elements*, in which he discussed the regular solids. No one, however, disputes his claim to a small work entitled *Περὶ τῆς τῶν Ζῳδίων Ἀναφορᾶς*, in which he gives a method, far from exact, of calculating the risings of each sign or portion of the ecliptic.

Hypsipўlé (*Ὑψιπύλη*). Daughter of Thoas of Lemnos. The Lemnian women had, from jealousy of their Thracian maids, killed all the men of the island; Hypsipylé alone spared her father Thoas, having been the means of aiding his flight. When the Argonauts landed at Lemnos and united with the women, Hypsipylé bore twin sons to Iason—Euneus, who in Homer figures as king of Lemnos and carries on trade with the Greeks before Troy; and Thoas (also called Deïphilus and Nebrophonus), who is sometimes described as a son of Dionysus. When the news of her father's escape was rumoured among the Lemnian women, Hypsipylé was forced to flee for her life, and was captured by pirates, who sold her to Lycurgus of Nemea. There, as the nurse of Opheltes, the infant son of the king, she accidentally caused his death by a snake (see SEVEN AGAINST THEBES), and was exposed to the greatest danger, from which she was only rescued by the intervention of her sons, who were sent to her aid by Dionysus.

Hypsus (*Ὕψους*). A town in Arcadia on a mountain of the same name.

Hyrcania (*Ὑρκανία*). A province of the ancient Persian Empire, on the south and southeast shores of the Caspian or Hyrcanian Sea, and separated by mountains on the west, south, and east from Media, Parthia, and Margiana. It flourished most under the Parthians, whose kings often resided in it during the summer.

Hyrcānum or **Hyrcanium Maré.** See CASPIUM MARÉ.

Hyrcānus (*Ὑρκανός*). (1) IOANNES, prince and high-priest of the Jews, was the son and successor of Simon Maccabaeus, the restorer of the independence of Iudaea. He succeeded to his father's power B.C. 135, and died in 106. Although he did not assume the title of king, he may be regarded as the founder of the monarchy of Iudaea, which continued in his family till the accession of Herod. (2) High-priest and king of the Jews, was the eldest son of Alexander Iannaeus and his wife Alexandra, and was frequently engaged in war with his brother Aristobulus, who was, however, taken to Rome as a prisoner by Pompey in B.C. 63. Hyrcanus was put to death by his successor, Herod, in B.C. 30.

Hyria (*Ὑρία*). (1) A town in Boeotia near Tanagra. (2) A town in Apulia. (3) A city in Calabria.

Hyrieus (*Ὑριεύς*). (1) An Arcadian monarch, for whom Agamedes and Trophonius constructed a treasury. The story about this treasury resembles the one told by Herodotus (ii. 121) of the treasury of the Egyptian king Rhampsinitus. In the construction of the treasury of Hyrieus, Agamedes and Trophonius contrived to place one stone in such a manner that it could be taken away outside, and thus formed an entrance to the treasury, without any one perceiving it. Agamedes and Trophonius now constantly robbed the treasury; and the king, seeing that locks and seals were uninjured while his treasures were constantly decreasing, set traps to catch the thief. Agamedes was thus ensnared, and Trophonius cut off his head to avert the discovery. After this Trophonius was immediately swallowed up by the earth. On this spot there was afterwards, in the grove of Lebadea, the cave of Agamedes with a column by the side of it. Here, also, was the oracle of Trophonius. A tradition mentioned by Cicero (*Tusc.* i. 47) states that Agamedes and Trophonius, after building the temple of Apollo at Delphi, prayed to the god to grant them in reward for their labour what was best for men. The god promised to do so on a certain day, and when the day came, the two brothers died. (2) A peasant of Hyria in Boeotia, whose name is connected with the legend of the birth of Orion. See ORION.

Hyrmĭné (*Ὑρμίνη*). The daughter of Neleus (or Nycteus), wife of Phorbas, and mother of Actor.

Hyrtăcus (*Ὕρτακος*). A Trojan, to whom Priam gave his own first wife Arisba on marrying Hecuba. Homer makes him the father of Asius, called Hyrtacides. In Vergil, Nisus and Hippocoön are also represented as sons of Hyrtacus.

Hysiae (*Ὑσιαί*). (1) A town in Argolis, south of Argos, destroyed by the Spartans in the Peloponnesian War. (2) A town in Boeotia, east of Plataeae, called by Herodotus (v. 74) a demus of Attica, but probably belonging to Plataeae.

Hystaspes (*Ὑστάσπης*). (1) Father of the Persian king, Darius I. He had been satrap of Persis under Cambyses. (2) The son of Darius I. and Atossa. He commanded a force of Bactrians and Sacae in the army of his brother Xerxes.

I

I, as a symbol.

In Greek.—Only as a numeral either = 9 (in the earlier system) or = 10, τὸ I = τὸ δέκατον (*C. I. G.* 2020); I = 10,000.

In Latin.—I = Ianuarius, itur, Iulius, iunior.

I·A = in agro.

I·D = invictus deus, iure dicundo.

I·E = iudex esto.

I·A·P = in agro pedes.

I·F·P = in fronte pedes.

I·L·H = ius liberorum habens.

I·O·C = Iupiter optimus Capitolinus.

I·Q·P = idemque probavit.

I·S·E = (h)ic situs est.

I·D·Q·C·P = iure dicundo quinquennalis censoriae potestatis.

I·E·V·Q·I·S·S = in ea verba quae infra scripta sunt.

I·O·M·C·O·D·I = Iupiter optimus maximus ceterique omnes dii immortales.

I·O·M·F·F = Iupiter optimus maximus fulminator fulgurator.

I·O·M·I·R·M·T·M = Iupiter optimus maximus Iuno regina Minerva Terra mater.

I·O·S·P·D = Iupiter optimus Sol praestantissimus dignus.

I·S·M·R = Iuno sospes magna regina.

I·T·M·F·C = idem testamento monumentum faciendum curavit.

I·V·E·E·R·P·F·S·V·E = ita utei eis e re publica fideve sua videbitur esse.

Iaccetāni. A people in Hispania Tarraconensis between the Pyrenees and the Iberus.

Iacchus (Ἴακχος). The solemn name of Bacchus in the Lesser Eleusinian Mysteries, whose name was derived from the boisterous song called Iacchus. In these mysteries Iacchus was regarded as the son of Zeus and Demeter, and was distinguished from the Theban Bacchus (Dionysus), the son of Zeus and Semelé. In some traditions Iacchus is even called a son of Bacchus, but in others the two are identified. See the chapter on "Dionysus at Athens" in Dyer's *Gods in Greece* (Lond. and N. Y. 1891); and the articles Dionysus; Eleusinia.

Iaculatōres. See Exercitus, p. 651.

Iacŭlum. A dart or javelin lighter than the *hasta* (q. v.).

Iadĕra (Ἰάδερα) or **Iader.** A town on the coast of Illyricum with a good harbour.

Ialĕmus (Ἴαλεμος). The personification of a sort of dirge, as was Linus (q. v.), and as Hymenaeus personified the marriage song. He is called a son of Apollo and Calliopé, and was the inventor of a melancholy song which bore the name of *ialemos*.

Ialmĕnus (Ἴαλμενος). The son of Ares and Astyoché and brother of Ascalaphus. He was one of the Argonauts and a suitor of Helen. After the destruction of Troy he wandered about with his followers, the Orchomenians, and founded colonies in Colchis.

Ialȳsus (Ἴαλυσος). One of the three ancient Dorian cities in the island of Rhodes, on the northwestern coast of the island, about sixty stadia southwest of Rhodes. It was one of the six members of the so-called Dorian Hexapolis, and was said to have derived its name from that of the hero Ialysus, grandson of Helios. See Doris.

Iambé (Ἰάμβη). A Thracian servant-maid of Metanira, wife of Celeus, king of Eleusis, who succeeded by her tricks and jests in making Demeter (q. v.) smile when the goddess was full of distress at the loss of her daughter (Apollod. i. 5, 1). She was the daughter of Pan and Echo. From Iambé, the metrical foot known as the *iambus* (⏑–) gets its name, as being light and adapted to playful themes. Such, at any rate, was the tradition, but the story of Iambé is of probably later date than the nomenclature of the verse.

Iamblĭchus (Ἰάμβλιχος). (1) A Syrian who lived in the time of the emperor Trajan. He wrote in Greek a romance called Βαβυλωνικά on the loves of Rhodané and Sinonis, which is now lost, though an epitome of it is given by Photius. (See Novels and Romances.) (2) A Neo-Platonic philosopher, a native of Chalcis in Coele-Syria. He died about A.D. 330. He was a pupil of Porphyry and a follower of Plotinus; but pushing their teachings to the point of absurdity, became a mere charlatan and impostor, seeking the reputation of a magician and wonder-worker. His writings include (i.) a life of Pythagoras (Περὶ τοῦ Πυθαγορικοῦ Βίου) in ten books, of which four parts are extant, edited by Nauck (1884); (ii.) a work on mathematics (Περὶ Κοινῆς Μαθηματικῆς Ἐπιστήμης), edited by Friès (1790); (iii.) two treatises on mystical arithmetic (Περὶ Νικομάχου Ἀριθμητικῆς Εἰσαγωγῆς and Τὰ Θεολογούμενα τῆς Ἀριθμητικῆς), the latter edited by Ast (1817); (iv.) a treatise on the Egyptian mysteries (Περὶ Μυστηρίων), and intending to prove their divine origin, edited by Parthey (1857); and (v.) a sort of introduction to the study of Plato (Προτρεπτικοὶ Λόγοι εἰς Φιλοσοφίαν), edited by Kiessling (1813). The treatise on the mysteries and those on arithmetic are possibly not the work of Iamblichus. On the *De Mysteriis*, see Harles, *Das Buch von d. ägypt. Myst.* (Munich, 1858). It has been rendered into English by Thomas Taylor with the life of Pythagoras (2d ed. Chiswick, 1821). The best account of Iamblichus will be found in Zeller, *Philosophie der Griechen*, iii. 2, pp. 613 foll. in the second edition; and in Vacherot, *Histoire Critique de l'École d'Alexandrie*, ii. pp. 57 foll. (Paris, 1851).

Iambus. See Iambé.

Iamĭdae. Certain prophets among the Greeks, descended from Iamus, a son of Apollo and Evadné, who received the gift of prophecy from his father (Pausan. vi. 2).

Iamnīa (Ἰάμνεια, Ἰαμνία). In the Old Testament Jabneel, Jabneh; a considerable city of Palestine, between Diospolis and Azotus, near the coast, with a good harbour. After the destruction of Jerusalem it became the seat of the Sanhedrim and of a celebrated school of Jewish learning.

Iămus (Ἴαμος). The son of Apollo and Evadné. He received the art of prophecy from his father,

and was regarded as the ancestor of the famous family of seers, the Iamidae at Olympia.

Iana. See IANUS.

Ianiculum. A hill of Rome, across the Tiber, and connected with the city by means of the Sublician bridge. From its sparkling sands it obtained the name of Mons Aureus, now by corruption Montorio. There was an ancient tradition that Ianus, king of the Aborigines, contemporary with Saturn, who then inhabited the Capitoline Hill, founded a city opposite to the residence of Saturn, and, dying, left his name to the hill on which he had built (Verg. *Aen.* viii. 355 foll.; Serv. *ad loc.*). Ancus Marcius joined it to the Aventine by a bridge and a wall, lest an enemy should make it a citadel for attack.

The summit of the Ianiculum was seen from the Comitia, and also from the place of popular assemblies in the Campus Martius. At the earliest period of the Republic, when the Romans were surrounded by foes, and feared lest, while they held these assemblies, the enemy might come upon them unawares, they placed some of their citizens upon the Ianiculum to guard the spot, and to watch for the safety of the state; a standard was erected upon the top of the hill, and the removal of it was a signal for the assembly immediately to dissolve, because the enemy was near (Dio Cassius, xxxvii. 28). This act afterwards became a mere formal ceremony; it was, however, made subservient to the designs of factions in later times; and the taking down of the standard on the Ianiculum more than once put a stop to public proceedings at the Comitia.

Ianthé (Ἰάνθη). (1) The daughter of Oceanus and Tethys, and one of the companions of Pemphoné. (2) See IPHIS.

Ianua (*θύρα*). A door; denoting more especially the first entrance to the house through which one entered from the street. This door was also called by the Romans *anticum*, and by the Greeks *θύρα αὐλεία, αὐλία*, etc. The back-door was termed *posticum, postica*, and *posticula;* in Greek, *παράθυρος*, dim. *παραθύριον*, and *κηπαία* (*θύρα*). The doors of the inner apartments were called *ostia*, and in Greek *μέσαυλοι* or *μέταυλοι*, etc. A secret door was styled *pseudothyrum* (*ψευδόθυρον*).

The complete doorway consisted of the four indispensable parts—threshold (*limen, βηλός, ὀυδὸς ὁδός*), lintel (*iugumentum, limen superum*), and jambs (*postes, σταθμοί*). Vitruvius speaks of the jambs as *antepagmenta*. For the hinges, see CARDO. The door itself was called *foris, valva*, and in Greek *σανίς, κλισίας, θύρετρον*. It was regularly bivalve or double, and hence spoken of in the plural.

The threshold was an object of reverence, and it was thought unlucky to tread on it with the left foot. On this account the steps leading into a temple were of an uneven number, because the worshipper, after placing his right foot on the bottom step, would then place the same foot on the threshold also (Vitruv. iii. 4). The doors of Greek houses regularly opened inward, and of Roman houses always so, with the single exception of the house of M. Valerius Publicola (Pliny, *H. N.* xxxvi. § 112), who was exempted from the usual rule as a special honour.

As early as Homer we find mention of a contrivance for bolting or unbolting a door from the outside, which consisted in a leathern thong (*ἱμάς*) inserted through a hole in the door, and by means of a loop, ring, or hook (*κλείς, κληῖς*), which was the origin of keys, capable of laying hold of the bolt so as to move it in the manner required (*Odyss.* i. 442; iv. 802). The bolt by the progress of improvement was transformed into a lock, and the keys found at Herculaneum and Pompeii and those attached to rings prove that among the Greeks and Romans the art of the locksmith (*κλειδοποιός*) approached very nearly to its present state. See CLAVIS.

Temple Door. (Roman bas-relief.)

By night the front door of the house was further secured by means of a wooden and sometimes an iron bar (*sera, repagula, μοχλός*) placed across it, and inserted into sockets, on each side of the doorway. Hence it was necessary to remove the bar in order to open the door (*reserare*). Even chamber doors were secured in the same manner (Heliodor. vi. 9); and here also, in case of need, the bar was employed as a further security in addition to the two bolts (Eurip. *Orest.* 1551, 1571; *Iph. Aul.* 345; *Androm.* 951). Where, as in the case of tyrants, midnight assassination was especially dreaded, we read of a bedchamber secured with a portcullis (Plut. *Arat.* 26). To fasten the door with the bolt was *ianuae pessulum obdere*, with the bar, *ianuam obserare*. At Athens a jealous husband sometimes even sealed the door of the women's apartment (Aristoph. *Thesm.* 427; Menand. *Incert.* 1, 11). The door of a bedchamber was occasionally covered with a curtain (*velum*). See DOMUS.

Ianual. The sacrifice offered to Ianus (q. v.) and consisting of barley, incense, and wine (Paul. *ex* Fest. p. 104, Müller).

Ianus and **Iana.** Two ancient Latin divinities, who were worshipped as the sun and moon. The names Ianus and Iana were thought to be other forms of Dianus and Diana (Varro, *R. R.* i. 37, 3; Macrob. i. 9), which words contain the same root as *dies*, day. The ancients, however, also connected the words with *ianua*, a door, which itself contains the root of *ire*, "to go." Ianus occupied an important place in the Roman religion. He presided over the beginning of everything, and was

therefore always invoked first in every undertaking, even before Iupiter. He opened the year and the seasons, and hence the first month of the year was called after him (*mensis Iani*, Ovid, *Fasti*, ii. 51). He was the porter of heaven, and therefore bore the surnames Patulcus or Patulcius (*pateo*), "the opener," and Clusius or Clusivius (*cludo*), "the shutter" (Ovid, *Fasti*, 130). On earth, also, he was the guardian deity of gates, and hence is commonly represented with two heads, because every door looks two ways (*Ianus bifrons*). He is sometimes represented with four heads (*Ianus quadrifrons*), because he presided over the four seasons. At Rome, Numa is said to have dedicated to Ianus the covered passage bearing his name, which is commonly, but erroneously, called a temple. It stood close by the Forum. A temple to Ianus was built by Duilius, to take the place of this passage; and was restored by Augustus. It appears to have been left open in war to indicate symbolically that the god had gone out to assist the Roman warriors, and to have been shut in time of peace that the god, the safeguard of the city, might not escape. The gates of Ianus were closed only three times from Numa to Augustus, and twice by Augustus. On New-year's day, which was the principal festival of the god, people gave presents to one another, consisting of sweetmeats and copper coins, showing on one side the double head of Ianus (see illustration under BIFRONS) and on the other a ship. The general name for these presents was *strenae*, the modern French *étrennes*.

Temple of Ianus. (Coin of Nero.)

The connection of Ianus with the year was indicated by representing him with three fingers of his right hand bent so as to suggest the numeral CCC (300), while the fingers of the left hand were spread for the numerals L+V (55), and in later times L+V+V+V (65), for the 355 days of the old Roman year and 365 of the Julian year (Pliny, *H. N.* xxxiv. 7).

Ianus. An arch, as distinct from *ianua*, a door or gate.

Iapetĭdae. See IAPETUS.

Iapĕtus (Ἰαπετός). A son of Uranus and Gaea, and one of the Titans. According to the *Theogony* (v. 507 foll.), he married Clymené, a daughter of Oceanus, by whom he became the father of four sons, Atlas, Menoetius, Prometheus, and Epimetheus. Some authorities made him to have married Aethra, others Asia, others again Libya: the last two refer to the abodes of Prometheus and Atlas. He was thrown into Tartarus for rebelling against Zeus. (See Hom. *Il.* viii. 479, and the article TITANES.) The Greeks regarded him as the ancestor of the human race. (See PROMETHEUS.) His descendants are often designated as Iapetidae and Iapetionidae.

Iāpis. The son of Iasus. He was loved by Apollo, who taught him the healing art and prophecy. Iapis cured Aeneas of a wound received by him in his war with Latinus (Verg. *Aen.* xii. 391).

Iapўdes (Ἰάπυδες and Ἰάποδες). A warlike and barbarous people in the north of Illyricum, between the rivers Arsia and Tedanius. They were a mixed race, partly Illyrian and partly Celtic, who tattooed their bodies. They were subdued by Augustus. Their country was called IAPYDIA.

Iapygia (Ἰαπυγία). A division of Italy, forming what is called the heel. It was called also Messapia, and contained two nations, the Calabri on the northeast, and the Salentini on the southwest side. The name of Iapygia was not known to the Romans, except as an appellation borrowed from the Greeks, to whom it was familiar. Among the many traditions current with the latter people may be reckoned their derivation of this name from Iapyx, the son of Daedalus (Pliny, *H. N.* iii. 11). This story, however, belongs rather to fable than to history. There is no positive evidence regarding the origin of the Iapyges, but their existence on these shores prior to the arrival of any Grecian colony is recognized by the earliest writers of that nation, such as Herodotus (vii. 170) and Hellanicus of Lesbos (*ap.* Dion. Hal. i. 22). Thucydides evidently considered them as barbarians (vii. 33), as did also Scylax, in his *Periplus*, and Pausanias (x. 1). It may be noticed that the name of the Iapyges appears on one of the Eugubine Tables under the form *Iapuscom*, which might lead one to suppose that some connection once existed between this people and the Umbri. See TABULAE IGUVINAE; and for further observations, the articles ITALIA; MESSAPIA.

Iapygium, or Salentīnum, Promontorium. A famous promontory of Italy, at the southern extremity of Iapygia, now Capo di Leuca. When the art of navigation was yet in its infancy, this great headland presented a conspicuous landmark to mariners bound from the ports of Greece to Sicily, of which they always availed themselves (Thuc. vi. 44). It formed, with the opposite Cape of Lacinium, the entrance to the Tarentine Gulf.

Iapўgum Tria Promontoria. Three capes on the coast of Magna Graecia, to the south of the Lacinian promontory. They are now called Capo delle Castello, Capo Rizzuto, and Capo della Nave.

Iāpyx (Ἰάπυξ). (1) Son of Lycaon and brother of Daunius and Peucetius, who went as leaders of a colony to Italy. According to others, he was a Cretan and a son of Daedalus. (2) The west-northwest wind blowing off the coast of Iapygia (Apulia), in the south of Italy, and consequently favourable to persons crossing over to Greece. It was called by the Greeks ἀργέστης.

Iarbas, also Hiarbas. A son of Iupiter and the Libyan nymph Garamantis. He was king of Gaetulia, and a suitor of Dido, queen of Carthage. See DIDO.

Iardănes (Ἰαρδάνης). King of Lydia, and father of Omphalé, who is hence called Iardanis (Apollod. ii. 6, § 3).

Iardănes (Ἰαρδάνης) or **Iardănus** Ἰάρδανος). (1) A river in Elis. (2) A river in the north of Crete, which flowed near the town Cydonia.

Iasĭdes. A patronymic given to Palinurus, as descended from a person of the name of Iasius (Verg. *Aen.* v. 843).

Iasion or **Iasius** (Ἰασίων or Ἰάσιος). (1) Son of Zeus and Electra, beloved by Demeter, who, in a thrice-ploughed field (τρίπολος), became by him

the mother of Pluto or Plutus in Crete. He was slain by Zeus with a thunderbolt. From Iasion came the patronymic Iasides, a name given to Palinurus, as a descendant of Atlas.

Iăsis. A name given to Atalanta (q. v.), daughter of Iasus.

Iāso (*Ἰασώ*, from *ἰάομαι*, "to heal"). A personification of recovery from illness, and called the daughter of Aesculapius and sister of Hygiea.

Iason (*Ἰάσων*). (1) Son of Aeson and Polymedé or Alcimedé. He was the celebrated leader of the Argonauts. His father, Aeson, who reigned at Iolcus in Thessaly, was deprived of the kingdom by his half-brother Pelias, who attempted to take the life of the infant Iason. He was saved by his friends, and intrusted to the care of the centaur Chiron. When he had grown up he came to Iolcus, and demanded the kingdom, which Pelias promised to surrender to him, provided he brought the golden fleece, which was in the possession of King Aeëtes in Colchis, and was guarded by an ever-watchful dragon. Iason willingly undertook the enterprise, and set sail in the ship Argo, accompanied by the chief heroes of Greece. He obtained the fleece with the assistance of Medea, whom he made his wife, and along with whom he returned to Iolcus. The history of his exploits on this enterprise is related elsewhere. (See ARGONAUTAE.) In order to avenge the death of his father, who had been slain by Pelias during his absence, Medea, at the instigation of Iason, persuaded the daughters of Pelias to cut their father to pieces and boil him, in order to restore him to youth and vigour, as she had before changed a ram into a lamb, by boiling the ram in a caldron. Pelias thus perished miserably; and his son Acastus expelled Iason and Medea from Iolcus. They then went to Corinth, where they lived happily for several years, until Iason deserted Medea, in order to marry Glaucé (or Creüsa), daughter of Creon, the king of the country. Medea fearfully revenged this insult. She sent Glaucé a poisoned garment, which burned her to death when she put it on. Creon likewise perished in the flames. Medea also killed her children by Iason, and then fled to Athens in a chariot drawn by winged dragons. (See MEDEA.) The death of Iason is related variously. According to some, he made away with himself from grief; according to others, he was crushed by the poop of the ship Argo, which fell upon him as he was lying under it. (2) Tyrant of Pherae, elected Tagus or military chief of Thessaly, B.C. 374. He possessed great power, and aspired to the sovereignty of Greece, but was assassinated in 370. He was a man of much ability and culture, and was the friend of Isocrates and admirer of Gorgias.

Iasonium Promontorium. A promontory of Pontus, northeast of Polemonium. It was so called from the ship Argo having anchored in its vicinity (Xen. *Anab.* vi. 2. 1).

Iassĭcus Sinus (*Ἰασικὸς κόλπος*). A gulf of Caria, deriving its name from the city of Iassus, situated at its head (Thuc. viii. 26).

Iassus (*Ἴασσος* and *Ἴασος*). A city of Asia Minor, situated on a small island near the coast of Caria, and giving to the adjacent bay the name of Sinus Iassicus. It was a rich and flourishing city, and the inhabitants were chiefly occupied with fisheries along the adjacent coasts (Livy, xxxii. 33; xxxvii. 17).

Iăsus (*Ἴασος*). The father of Atalanta (q. v.).

Iatralipta and **Iatraliptes** (*ἰατραλείπτης*). A physician who used a system which combined the use of unguents and friction (massage) with dieting and gymnastic exercise (Celsus, i. 1). See MEDICINA; MEDICUS.

Iatraliptĭcé (*ἰατραλειπτική*). Iatraliptic practice. See IATRALIPTA.

Iātros (*ἰατρός*). A physician. See MEDICUS.

Iatrosophista (*ἰατροσοφιστής*). A professor of medicine. See MEDICINA.

Iavolēnus Priscus. A Roman jurist born about A.D. 79. He was one of the council of Antoninus Pius and a man of much ability. As a jurist he belonged to the Sabinian school. His opinions are cited more than two hundred times in the *Digest*. The younger Pliny gives some personal anecdotes of him (*Epist.* vi. 15).

Iaxartes (*Ἰαξάρτης*). The modern Syr Daria, or Sihûn; a great river of Central Asia, flowing northwest into the Sea of Aral; the ancients supposed it to fall into the north side of the Caspian, not distinguishing between the two seas. It divided Sogdiana from Scythia. On its banks dwelt a Scythian tribe called Iaxartae.

Iazўges (*Ἰαζύγες*). A powerful Sarmatian people, who originally dwelt on the coast of the Pontus Euxinus and the Palus Maeotis, but in the reign of Claudius settled near the Quadi in Dacia, in the country bounded by the Danube, the Theiss, and the Sarmatian mountains. In the fifth century A.D., they were conquered by the Goths.

Ibēri. A powerful nation of Spain, dwelling along the Iberus, and who, mingling with Keltic tribes, took the name of Celtiberi. See HISPANIA.

Iberia (*Ἰβηρία*). (1) A country of Asia, bounded on the west by Colchis, on the north by Mount Caucasus, on the east by Albania, and on the south by Armenia. It answers now to Georgia, the country of the Gurians, etc. The Cyrus (Kûr) flowed through Iberia. Ptolemy enumerates several towns of this country, such as Agiuna, Vasaeda, Varica, etc. The Iberians were allies of Mithridates, and were therefore attacked by Pompey, who defeated them in a great battle, and took many prisoners. Plutarch makes the number of slain to have been not less than 9000, and that of the prisoners 10,000. (2) One of the ancient names of Spain, derived from the river Iberus. See HISPANIA.

Ibērus (*Ἴβηρος* and *Ἴβηρ*). The modern Ebro; the principal river in the northeastern part of Spain, rising among the mountains of the Cantabri, and falling into the Mediterranean near Dertosa (Tortosa), after forming a delta. See HISPANIA.

Ibis. (1) A bird worshipped by the Egyptians, and called by them *Hab* or *Hib*. It was supposed from the colour of its feathers to symbolize the light and shade of the moon; and to be the avatar of the god Thoth (Hermes). It appeared at the time of the rise and departed at the inundation of the Nile, and was supposed to deliver Egypt from the serpents which came from Arabia. Its purity was celebrated, and its flesh was regarded as incorruptible. Ibises were kept in temples, and after death were mummied after the fashion of human mummies, wrapped in linen bandages. See

Herodotus, ii. 65, 67, 75, 76; Wilkinson, *Manners and Customs of the Ancient Egyptians* (1847); and Renouf, *Hibbert Lectures* (1880). (2) A poem by Ovid, written in exile, and denouncing some unnamed person at Rome who had sought to injure the poet's interests. It is in elegiac verse, and is an imitation of a similar poem of Callimachus. There is a separate edition by Robinson Ellis (Oxford, 1881). See OVIDIUS.

Ibȳcus (Ἴβυκος). A Greek lyric and erotic poet of Rhegium in Lower Italy, who flourished about B.C. 530. Like Anacreon, he led a roving life, and spent much of his time at the court of Polycrates of Samos. According to his epitaph, he died in his native town; but according to the legend made familiar by Schiller's poem, he was slain on a journey to Corinth, and his murderers were discovered by means of a flock of cranes, which, as he died, he had invoked as his avengers. The story goes that, after his murder, when the Corinthians were gathered in the theatre, the cranes appeared; whereupon one of the assassins who was present cried out, "See the avengers of Ibycus!" thus giving a clue to their detection. Hence arose the expression used of the cranes, Ἰβύκου γέρανοι. His poems, which were collected into seven books, survive in scanty fragments only. They dealt partly with mythological themes in the metres of Stesichorus and partly with love-songs in the spirit of Aeolic lyric poetry, full of glowing passion and sensibility. It was mainly to the latter that he owed his fame. The fragments are given in Schneidewin's *Delectus Poesis Graecorum Elegiacae* (1833), and Bergk's *Poetae Lyrici Graeci* (vol. ii.). See Holsten, *De Stesichori et Ibyci Dialecto et Copia Verborum* (1884).

Icaria (Ἰκαρία). (1) An island of the Aegean, near Samos, west from Ampelos, the western promontory of the latter. Mythology derived the name of this island from Icarus (q. v.), son of Daedalus, whose body was washed upon its shores after the unfortunate termination of his flight. The modern name is Nicaria. (2) Also ICARIUS (Ἰκάριος). A deme of Attica belonging to the tribe Aegeïs. Here Dionysus is said to have taught Icarius the cultivation of the vine.

Icăris and **Icariōtis**. Names given to Penelopé, as daughter of Icarius.

Icarium Maré. A part of the Aegean Sea, near the islands of Myconus and Gyarus. The ancient mythologists derive the name from Icarus (q. v.), who fell into it and was drowned. See, however, the article ICARIA.

Icarius (Ἰκάριος). (1) An Athenian, father of Erigoné. Having been taught by Dionysus the culture of the vine, he gave some of the juice of the grape to certain shepherds, who, thinking themselves poisoned, killed him. When they came to their senses they buried him; and his daughter Erigoné, being shown the spot by his faithful dog Maera, hanged herself through grief (Apollod. iii. 14, 7; Hyg. *Fab.* 130). Icarius was fabled to have been changed after death into the constellation Boötes, Erigoné into Virgo, while Maera became the star Procyon. (See AEORA; ERIGONÉ.) (2) A son of Oebalus of Lacedaemon. He gave his daughter Penelopé in marriage to Odysseus, king of Ithaca, but he was so tenderly attached to her that he wished her husband to settle at Lacedaemon. Odysseus refused; and when he saw the earnest petitions of Icarius, he told Penelopé, as they were going to embark, that she might choose freely either to follow him to Ithaca or to remain with her father. Penelopé blushed in silence, and covered her head with her veil. Icarius, upon this, permitted his daughter to go to Ithaca, and immediately erected a temple to the goddess of modesty, on the spot where Penelopé had covered her blushes with her veil.

Icărus (Ἴκαρος). (1) A son of Daedalus (q. v.). (2) See ICARIA.

Icĕlus. A dream-god (Ovid, *Met.* xi. 640).

Icēni. A powerful people in Britain, dwelling north of the Trinobantes, in the modern countries of Suffolk and Norfolk. Their revolt from the Romans, under their heroic queen, Boadicea, is celebrated in history. (See BOADICEA.) Their chief town was Venta Icenorum (Caister), about three miles from Norwich. Ptolemy calls them SIMĔNI (Σιμενοί).

Ichnae (Ἴχναι) and **Ischnae** (Ἴσχναι). A town of Macedonia, placed by Herodotus in Bottiaea, and situated probably at the mouth of the Ludias (Herod. vii. 123). From other authors, cited by Stephanus, it appears that the name was sometimes written Achne. (2) A city of Thessaly, near Phyllus, and in the district of Phthiotis. The goddess Themis was especially revered here.

Ichnographia (ἰχνογραφία). A ground-plan or map used by architects, surveyors, etc. (Vitruv. i. 2, 2). A good example of Roman chartography is the plan of Rome engraved on marble and originally part of the temple of Romulus and Remus. Fragments of it are still preserved in the Capitol.

Ichnūsa (Ἰχνοῦσα). An ancient name of Sardinia, which it is said to have received from its likeness to a human foot (ἴχνος = *vestigium*) (Pausan. x. 17). It was also called Sandaliotis, from its resemblance to a sandal (σανδάλιον). See SARDINIA.

Ichthyocentauri (ἰχθυοκένταυροι). See TRITON.

Ichthyophăgi (Ἰχθυοφάγοι, "fish-eaters"). A vaguely descriptive name given by the ancients to various peoples on the coasts of Asia and Africa, of whom they knew but little. Thus we find Ichthyophagi (1) in the extreme southeast of Asia, in the country of the Sinae; (2) on the coast of Gedrosia; (3) on the northeastern coast of Arabia Felix; (4) in Africa, on the coast of the Red Sea, above Egypt; (5) on the western coast of Africa.

Ichthyophagōrum Sinus. A bay on the northeastern coast of Arabia Felix.

Icilius. The name of a celebrated Roman family, the most distinguished members of which were (1) SPURIUS ICILIUS, one of the three plebeian envoys who treated with the Senate at the time of the secession to the Sacred Mount (B.C. 494); and (2) LUCIUS ICILIUS, tribune of the plebs, B.C. 456 and 455. He was one of the chief leaders in the revolt against the Decemviri, B.C. 449, Virginia having been betrothed to him. See VIRGINIA.

Iconium (Ἰκόνιον). The modern Koniyeh; the capital of Lycaonia, in Asia Minor, and when visited by St. Paul a flourishing city. During the Middle Ages it was of great importance in the history of the Crusades.

Ictīnus (Ἰκτῖνος). One of the most famous architects of Greece; he flourished in the second

half of the fifth century B.C., and was a contemporary of Pericles and Phidias. His most famous works were the Parthenon on the Acropolis at Athens, and the temple of Apollo at Bassae, near Phigalia in Arcadia. Of both these edifices important remains are in existence. Most of the columns of the temple at Bassae are still standing. In the judgment of the ancients, it was the most beautiful temple in the Peloponnesus, after the temple of Athené at Tegea, which was the work of Scopas (Pausan. viii. 41, § 8). See PARTHENON.

Ida (Ἴδη, Dor. Ἴδα). (1) Now Ida or Kas-Dagh; a mountain range of Mysia, in Asia Minor, which formed the southern boundary of the Troad; extending from Lectum Promontorium in the southwestern corner of the Troad, eastwards along the northern side of the Gulf of Adramyttium, and further east into the centre of Mysia. Its highest summits were Cotylus on the north and Gargara on the south; the latter is about 5700 feet high, and is often capped with snow. Lower down, the slopes of the mountain are well wooded; and lower still, they form fertile fields and valleys. The sources of the Scamander, the Simoïs, and the Granicus, besides other rivers and numerous brooks, are on Ida. The mountain is celebrated in mythology, as the scene of the rape of Ganymedes, whom Ovid (*Fasti*, ii. 145) calls *Idaeus puer*, and of the judgment of Paris, who is called *Idaeus iudex* by Ovid (*Fasti*, vi. 44), and *Idaeus pastor* by Cicero (*Ad Att.* i. 18). In Homer, too, its summit is the place from which the gods watch the battles in the plain of Troy. Ida was also an ancient seat of the worship of Cybelé, who obtained from it the name of *Idaea Mater*. (2) Now Psilorati; a mountain in the centre of Crete, belonging to the mountain range which runs through the whole length of the island. Mount Ida is 8055 feet above the level of the sea. It was closely connected with the worship of Zeus, who is fabled to have been reared in a cave in this mountain. See CURETES; ZEUS.

Idaea Mater. See IDA; RHEA.

Idaei Dactyli (Ἰδαῖοι Δάκτυλοι). See DACTYLI.

Idalium (Ἰδάλιον). A town in Cyprus, sacred to Aphrodité, who hence bore the surname Idalia.

Idas (Ἴδας) and **Lynceus** (Λυγκεύς). The sons of Aphareus of Messenia and of Arené; two brothers as heroic and inseparable as their cousins Castor and Pollux (Polydeuces). The nymph Marpessa, daughter of the Acarnanian river-god Euenus, was wooed by Apollo, when Idas carried her off in a winged chariot given him by Poseidon. When Apollo overtook the fugitives in Messenia, Idas, who was then the strongest of living men (Hom. *Il.* ix. 556), stretched his bow against Apollo. Zeus interposed and gave the girl her choice of suitors; she decided in favour of the mortal, as she feared that Apollo would desert her. After that the god detested her; and both she and her beautiful daughter Cleopatra or Alcyoné, wife of Meléager, and also their daughter, all died young, and brought misfortune on those that loved them. Idas and Lynceus, who could see even into the heart of the earth, joined in the Calydonian hunt and the Argonautic expedition. They met their deaths fighting Castor and Pollux, with whom they had been brought up. As they were all returning from a raid into Arcadia, Idas was appointed to divide the cattle they had captured; he divided an ox into four portions and decided that whosoever devoured his portion first was to have the first half of the spoil, and he who finished his next, the second half. He finished his own and his brother's share first, and then drove the cattle away. The Dioscuri were enraged and hid themselves from the brothers in a hollow oak-tree; but the keen sight of Lynceus detected their lurking-place, and Idas stabbed Castor in the tree. Thereupon Pollux pierced Lynceus through, while Idas was slain by the lightning of Zeus. For another account of the origin of the quarrel, see DIOSCURI.

Idistavīsus Campus. A plain in Germany near the Weser, probably in the neighbourhood of the modern Minden, memorable for the victory of Germanicus over the Cherusci, A.D. 16.

Idmon (Ἴδμων). The son of Apollo and of Asterié, daughter of Coronus; a seer who took part in the Argonautic expedition, although he foresaw that it would lead to his own death. He was killed by a wild boar in the land of the Mariandyni, in Bithynia, and was worshipped as a hero by the inhabitants of the town of Heraclea in Pontus, which was built around his grave by command of Apollo (Apollon. Rhod. i. 139).

Idoměneus (Ἰδομενεύς). (1) The son of Deucalion of Crete, and grandson of Minos. Being one of Helen's suitors, he and Meriones, the son of his half-brother, went with eighty ships to Troy, where he appears in Homer as among the bravest of heroes. He is described by Homer (*Od.* iii. 191) as one of those who safely returned to his native land. According to a later story, he was caught in a storm on his way home, and vowed to Poseidon that, if he returned in safety, he would sacrifice to the god whatever he should first meet on his landing. His son came out to meet him, and was accordingly sacrificed; a plague thereupon broke out, he was banished by the Cretans, and betook himself to Calabria. He afterwards withdrew to Colophon in Asia, where he is said to have been buried. His tomb, however, was shown by the Cretans at Cnosus, where he and Meriones were worshipped as heroes. (2) An Epicurean philosopher of Lampsacus, who flourished about B.C. 260. He wrote several historical and philosophical works that are now lost.

Idothea (Εἰδόθεα). A daughter of Proetus, king of Argos. She was cured of insanity, together with her sisters, by Melampus (q. v.).

Idrieus (Ἰδριεύς) and **Hidrieus** (Ἱδριεύς). A king of Caria, brother of Mausolus (q. v.), who ascended the throne on the death of his brother's widow Artemisia. His own widow, Ada, was allowed by Alexander the Great to retain the government of Caria.

Idubĕda. A range of mountains in Spain, commencing among the Cantabri, and extending nearly in a southeastern direction through Spain until it terminates on the Mediterranean coast, near Saguntum.

Idumaea (Ἰδουμαία). The Greek form of the Scriptural name EDOM. In the Old Testament, Edom is the district of Mount Seir, that is, the mountainous region extending from the Dead Sea to the eastern head of the Red Sea. The decline of the kingdom of Iudaea enabled the Edomites to extend their power over the southern part of Iu-

daea as far as Hebron, while their original territory was taken possession of by the Nabathaean Arabs. Thus the Idumaea of the later Jewish and of the Roman history is the southern part of Iudaea, and a small portion of the north of Arabia Petraea, extending from the Mediterranean to the west side of Mount Seir. Antipater, the father of Herod the Great, was an Idumaean. The Roman writers of the Augustan and of later ages use Idumaea and Iudaea as equivalent terms. Both the old Edomites and the later Idumaeans were a commercial people, and carried on a great part of the traffic between the East and the shores of the Mediterranean.

Idus. A word said to be derived from the Etruscan. The thirteenth (in March, May, July, and October the fifteenth) day of the Roman month. It was sacred to Iupiter. See CALENDARIUM.

Idȳia (Ἰδυῖα). Wife of the Colchian king Aeëtes, and mother of Medea (q. v.). See Hes. *Theog.* 352.

Idyllium (εἰδύλλιον, diminutive of εἶδος, "form," "a small picture"). A poetic sketch of character, especially, though not necessarily, in connection with pastoral life. For the chief ancient writers of idylls, see AUSONIUS; BION; CALPURNIUS; CLAUDIANUS; EPICHARMUS; MOSCHUS; THEOCRITUS; VERGILIUS; and the article BUCOLICA.

Ientacŭlum (*ἀκράτισμα*). Breakfast. See CENA.

Ierĭcho (Ἱεριχώ) or **Hierĭchus** (Ἱεριχοῦς). A city of the Canaanites, in a plain on the west side of the Jordan, near its mouth, destroyed by Joshua, but afterwards rebuilt.

Ierné (Ἱέρνη). See HIBERNIA.

Ĭētae (Ἰεταί). A town in the interior of Sicily, on a mountain of the same name, southwest of Macella.

Igilgĭlis (Ἰγιλγιλί). A town of Mauretania Caesariensis, west of the mouth of the river Ampsagas, and north of Cirta (Amm. Marcell. xxix. 5).

Igilium. The modern Giglio; a small island off the Etruscan coast, opposite Cosa.

Ignatius (Ἰγνάτιος). A martyr who suffered at Rome during the third persecution of the Christians. He was a Syrian by birth, and an immediate disciple of St. John the Evangelist, who, in A.D. 67, committed the church at Antioch to his pastoral superintendence, as successor to Euodius. Over this bishopric he presided for upwards of forty years, when the emperor Trajan, after his triumph over the Dacians, entering the city, exercised many severities towards those who professed the Christian faith, and summoned the prelate himself before him, on which occasion Ignatius conducted himself with such boldness in the imperial presence that he was sent to Rome, and ordered to be exposed in the amphitheatre to the fury of wild beasts. This dreadful death he underwent (October 17) with great fortitude, having availed himself of the interval between his sentence and its execution to strengthen, by his exhortations, the faith of the Roman converts. After his decease, which took place A.D. 107, or, according to some accounts, A.D. 116, his remains were carried to Antioch for interment.

It is reported that Ignatius was one of the little children whom Jesus took up in his arms and blessed, whence he was called Theophorus or "God-borne"; and it is certain that he conversed familiarly with the Apostles, and was perfectly acquainted with their doctrine. Of his works there remain seven genuine epistles, on the various forms of which see Zahn, *Ignatios von Antiochien* (1873), and Bishop Lightfoot, *The Apostolic Fathers*, pt. ii. 2d ed. (1889).

Igniaria (*πυρεῖα*). Fire-sticks. One of the earliest methods of producing fire was by the friction of two specially prepared sticks—a method which Lucretius (v. 199) supposes the primitive peoples to have learned from the ignition of forest trees by friction. (Cf. Thuc. ii. 77; Pliny, *H. N.* xvi. 208). It was the means prescribed by Roman usage for relighting the vestal fire when by any oversight it became extinguished. In Greece, the sacred flame was rekindled from the sun's rays by the use of burning-glasses (Plut. *Numa*, 9). Seneca (*Nat. Quaest.* ii. 22) speaks of producing fire from flints, and also from *igniaria*. These last were (1) a block of soft wood with a hollow in it, and called *ἐσχάρα*, and (2) a bit of hard wood (*τρύπανον*). The *τρύπανον* was whirled around in the hollow of the former. The sparks produced by this friction were caught in a sort of tinder made of dried grass and shavings. Instead of this primitive tinder the ancients also used bits of wood smeared with sulphur (*ramenta sulpurata*), such as were common in modern times until the invention of lucifer matches in the present century. With these, the sparks produced from the *igniaria* or from the flints were caught; and these more quickly and surely ignited than the ordinary tinder, saving both time and breath. See Seneca, *Nat. Quaest.* i. 1, 8; Mart. x. 3; Juv. xiii. 145; Stat. *Silv.* i. 6, 73; Pliny, *H. N.* xxxvi. 138; Blümner, *Technologie*, ii. 353, and iv. 407; Tylor, *Early Hist. of Mankind*, p. 237 (1865); and Dr. M. H. Morgan in the *Harvard Studies in Classical Philology*, vol. i. (1890).

Ignobĭles. See NOBILES.

Ignominia. See INFAMIA.

Iguvīnae Tabŭlae. See TABULAE IGUVINAE.

Iguvium. Now Gubbio or Eugubio, a town in Umbria on the southern slope of the Apennines. Here were found the famous Eugubine Tables (*Tabulae Iguvinae*), which form so important a factor in our knowledge of the Umbrian dialects, and of which an account is given in the article TABULAE IGUVINAE. See also UMBRIA.

Ilaïra (Ἰλάειρα). The daughter of Leucippus and Philodicé and sister of Phoebé. She and her sister, who are called by the poets Leucippidae, were carried off by the Dioscuri. Ilaïra became the wife of Castor.

Ilarches (*ἰλάρχης*). See ILÉ.

Ilba or **Ilva.** The modern Elba. An island of the Tyrrhenian Sea, off the coast of Etruria, and about ten miles from the promontory of Populonium. It was early celebrated for its rich iron mines; but by whom they were first discovered and worked is uncertain, as they are said to exhibit the marks of labour carried on for an incalculable time (Pliny, *H. N.* xxxiv. 14).

Ilé (*ἴλη* or *εἴλη*, "a troop"). (1) The Spartan term for a company of boys of the same age, who were brought up together. (See EDUCATION.) (2) In the organization of the Macedonian army, a squadron of cavalry, generally 200 strong, under the command of an *ilarches*. See HIPPEIS.

Ilerda. A town of the Ilergetes in Hispania

Tarraconensis, situated on a height above the river Sicoris (Segre), which was here crossed by a stone bridge. It was here that Afranius and Petreius, the legates of Pompey, were defeated by Caesar (B.C. 49). Its modern name is Lerida.

Ilerac̆ones (Ἰλερκάονες). A people of Hispania Tarraconensis on the western coast. Their chief town was Dertosa.

Ilergētes (Ἰλέργητες). A people in Hispania Tarraconensis, between the Iberus and the Pyrenees.

Ilia. Daughter of Numitor. According to the legend, Romulus and Remus were her sons by Mars. See RHEA SILVIA; ROMULUS.

Iliad (Ἰλιάς). See HOMERUS; TROJAN WAR.

Iliad, THE LATIN. See SILIUS ITALICUS.

Ilienses. An ancient people of Sardinia.

Ilĭŏna (Ἰλιόνη). Daughter of Priam and Hecuba, wife of Polymnestor or Polymestor, king of the Thracian Chersonesus, to whom she bore a son, Deīpylus. As to her connection with Polydorus, see POLYDORUS.

Ilĭŏneus (Ἰλιονεύς). A son of Niobé, whom Apollo would have liked to save, because he was praying; but the arrow was no longer under the control of the god (Ovid, *Met.* vi. 261). See NIOBÉ.

Ilios (Ἴλιος). The scene of the *Iliad* is laid before the walls of Ilios or Troy, described by the poet as a populous and warlike city, mistress of the Troad, or northwest promontory of Asia Minor, and ruled by King Priam. In the Greek myths Ilios was founded by Ilus, son of Tros and great-grandson of Dardanus. In the reign of Laomedon, son of Ilus, the city was fortified with huge walls by Poseidon and Apollo; but as Laomedon refused to pay the price agreed upon for this service, he incurred the hostility of his mighty assistants. Laomedon was succeeded by his son Podarces, or Priam, who became a great monarch, with fifty sons, including Hector and Paris, and twelve daughters. Paris, by the help of Aphroditē, carried off Helen, wife of Menelaüs, king of Sparta; and to avenge this insult an army of Achaeans besieged the city for ten years, and finally captured and destroyed it. For a fuller account of the mythical history of Troy, see DARDANUS; ILUS; LAOMEDON; PARIS; TROJAN WAR.

It is impossible to determine how much, if any, of historical truth is contained in these legends, and particularly in the Homeric account of the Trojan War. But recent excavations have done much to show that the siege of Troy was not all a myth. Where the ancient city stood, or where the poet conceived that it stood, has been the subject of endless discussion. A brief history of this controversy will be the best introduction to an account of the present state of the question.

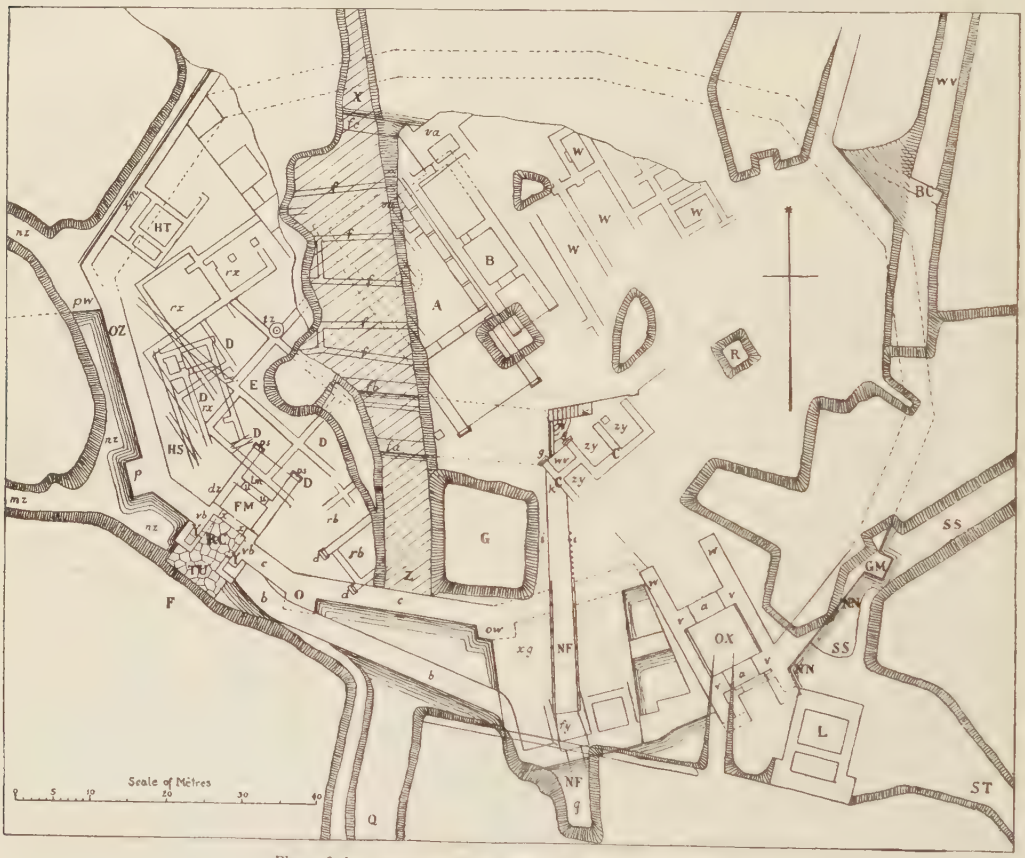
Long after the assumed date of the fall of Troy, but before the Persian wars, the Greek town of (Novum) Ilium was founded at the low mound of Hissarlik (pl. i.), nearly four miles from the Hellespont at Sigēum and about three miles from the nearest point on the coast. Its inhabitants asserted that the city of Priam had never been completely destroyed and that their own town was the immediate successor of Homeric Ilios. This claim seems to have been generally allowed. Hellanīcus expressly approved it, and Herodotus describes, without dissent, the visit of Xerxes to the spot, to which he was drawn by its legendary fame. The Spartan admiral Mindarus, during the Peloponnesian War, and Alexander the Great, almost a century later, each offered sacrifice to the Ilian Athenē, in recognition of the ancient glory of the town. But in the second century B.C. Demetrius of Scepsis advanced the theory that Homeric Troy could not have stood on the site of (Novum) Ilium. His chief reasons were: (1) that the plain between Ilium and the sea was an alluvial deposit, and must have been far too small, in the days of Homer, for the mighty combats described in the *Iliad;* (2) the flight of Hector from Achilles three times around the walls of the city could not have taken place at the site of Ilium, for the mound on which the latter stands (the modern Hissarlik) was not an isolated hill, but a spur from Mount Ida, so that at one point the runners would have had to ascend a considerable incline. Demetrius would look for ancient Ilios apparently at a site now called Hanaï-tepeh, opposite Bunárbashi (pl. i.). In these opinions he was followed by Strabo, our chief authority for the geography of the Troad; and most modern scholars, until recent years, including such men as Welcker, Kiepert, Von Moltke, E. Curtius, and Jebb, have agreed with them. It has been the accepted belief that it was impossible to separate truth from fiction in the *Iliad*, and that we must not therefore hope to find anywhere a site exactly corresponding to the poet's description. According to this modern view, the ancient capital of the Troad was situated on a high hill called Bali Dagh, much farther inland than Hissarlik, and this mountain fortress was transformed, by the poet's imaginaton, into a great city—the capital of a mighty empire. George Grote almost alone, with his usual perspicacity, maintained that there was "every reason for presuming that the Ilium visited by Xerxes and Alexander was the holy Ilium present to the mind of Homer;" and the excavations of the last two decades have rendered it quite certain that he was right in his adherence to the general opinion of antiquity.

But before giving an account of these excavations, it may be well to glance at some of the circumstances which seem to favor the Hissarlik site. Its distance from the coast is such as to agree with the Homeric conception of the rapid ebb and flow of the tide of battle between the ships and the city walls, and the frequent and speedy journeys of messengers, and king Priam himself. The situation on the level plain, but with the low mound of from fifty to sixty-five feet in height for the citadel, is more favourable for a great and wealthy city than the almost inaccessible steep of Bali Dagh; while the latter is too far from the coast (over ten miles) to meet the conditions mentioned above. Professor Virchow has shown that the river Scamander (Menderé), which now discharges near Cape Sigēum, must formerly have followed the course of the present Kalifatli-Asmak, farther north, thus bringing it between the city and the ships, and providing for its union with the Simois (Dumbrek-su); and so removing all objection to the Hissarlik site on this score. The view of Demetrius, that the plain is an alluvial deposit (see above), is clearly founded on Herodotus ii. 11, where it is stated that the plain was originally a bay. But Herodotus manifestly did not think that the plain lay under water in the Trojan period, for he could not, in that case, have believed in the identity of Troy and Ilium, as his recital of the visit of Xerxes would seem to indi-

cate that he did. The statement, if true, must refer to some remote period of antiquity, for Scylax (*Peripl.* 94) makes the distance of Ilium from the sea almost precisely the same as the distance from Hissarlik to-day, showing that the alluvial deposit has not materially extended the plain in the last 2000 years, at least. The objection to the Hissarlik site, based upon the flight of Hector around the walls, amounts to nothing, since this whole story is manifestly a poetic exaggeration, like the battle of Achilles with the Scamander; and we need not expect to find the exact spot where such fictitious and impossible occurrences took place. But if importance is attached to this point, it may be added that recent excavations prove that this ridge was originally about forty feet lower than at present, as it was gradually raised by the clearing away of debris from the citadel mound. At its former insignificant height it might easily have been surmounted by the two stout warriors. It may be added that the ruins on the Bali Dagh consist of nothing more than the remains of a small circuit wall, indicating that we have to do with an unimportant mountain fortress, which may have commanded the Scamander gorge—a fortress which could never have been described as a great and populous city "on the plain" (*Iliad*, xx. 217).

It would thus appear that on topographical grounds alone the question, though a difficult one, might fairly be decided in favour of the Hissarlik site. It remains to show how recent discoveries have converted this probability into a practical certainty. In 1870 Dr. Heinrich Schliemann (q. v.), a retired German merchant and enthusiastic archæologist, began his excavations at Hissarlik. These excavations were continued, with various interruptions, until his death in 1890. During their progress, the scholarly world, incredulous at first, gradually came more and more to the belief that the Homeric Ilios had actually been found. After 1882 Schliemann had the coöperation of Dr. W. Dörpfeld, afterwards secretary of the German Archæological Institute at Athens, whose adhesion added much to the weight of authority in favour of Schliemann's views. The remains which have been unearthed were found in no less than seven different layers, of which the uppermost contained what could be positively identified as ruins of the Hellenistic and Roman city of Ilium. The four layers below this contained nothing but traces of small and mean buildings of a village character. It was in the two lowest layers that the most interesting discoveries were made. The lowest settlement of all was built upon the solid rock, and the remains consisted of fortification walls eight feet thick, built of rough limestone (pl. ii. fa, fb, fc), with house walls (f f f), two to three feet in thickness, of small stones cemented with clay. Utensils were found, very rarely of metal, but usually of stone, with vases of black baked clay. The potter's wheel was apparently known to the inhabitants of this settlement, but was not so often employed as later. The debris of this first city, which Schliemann decided to be pre-Homeric, is about eight feet in depth. Above this was a layer of earth nearly two feet in thickness, showing a long period of desertion, and over this the great layer of debris, in which were found the remains of the second city, now generally believed to be Homeric Ilios.

Here the great citadel walls (c, b) were discov-



Map of the Troad.

ered. These consisted of a stone substructure 13 feet wide at the top, which is level, the depth varying according to the irregularities of the surface below. On this was built a wall of brick, from 11 to 13 feet in thickness, and rising originally, as well as can be estimated, to a height of 13 feet. These bricks are sun-dried, and measure $18\times9\times3\frac{1}{2}$ inches. In the walls were found long, hollow channels, one foot square, which Dr. Dörpfeld first considered to have been made for the purpose of conducting heat to bake the bricks after the wall had been built. But this theory has now been abandoned, and it is generally believed that the marks of heat about these channels were caused, at the time of the destruction of the city, by the burning of beams which had been imbedded in the walls to give them

Such a roofed gate we may suppose the poet to have had in mind in *Iliad*, iii. 145, when he describes the elders as sitting "on the Scaean gates." The other two gates (FM, OX) cannot be described for lack of space.

In the centre of the citadel lies the building, which is generally considered to be the palace. The ruins consist of a gateway (C), opening upon the courtyard, beyond which stand the chief apartments of the palace, the megaron or men's apartment on the left (A) and the women's apartments on the right (B). The megaron is 66 feet in depth, with an entrance hall 37 feet square in front of it, and in its centre are slight remains of a large round hearth, which thus occupied the central point of the whole palace, as described in the *Iliad* and *Odyssey* (*Od.* xiv. 158).

Plan of the Acropolis of the Second Ilios. (Schuchhardt.)

stronger cohesion. These circuit walls seem to have formed an equilateral of about 165 feet on each side, with projecting bastions at the corners. The walls are pierced by several gates, of which the central one on the south side is the oldest (NF). This consists of a tower 130 feet long by 59 feet broad, and projecting 59 feet beyond the wall. Through this tower the road to the citadel passed, and by means of the projecting wing was protected all the way from the foot of the acropolis hill. The side walls of this passage were buttressed with thick wooden braces, which were probably connected at the top, thus forming a continuous flat roof over the whole gateway.

The women's apartment is considerably smaller, consisting of a series of three rooms 15 feet wide and 20, 24, and 29 feet long respectively.

But besides these remains of walls and buildings, numerous articles of gold and silver were found by Dr. Schliemann, showing conclusively that the ruins were those of a prosperous and wealthy city. In May, 1873, the so-called "great treasure" was found buried within the fortification wall, near the southwestern gate (F). This consisted of a great variety of articles, packed into one another in the form of a rectangular mass, apparently placed originally in a wooden chest, and stored for safe keeping in a hollow in the wall.

The most valuable were two large diadems of gold, formed of a number of small pendant chains of beautiful workmanship. Gold earrings were found in large numbers, as well as cups, vases, bracelets, and other ornaments of gold or silver, with spear-heads, battle-axes, and knife blades, and numerous other articles of various kinds.

Space will not allow a description of the remains found in the five upper layers, which are not materially different from those of the same period elsewhere. But in general it may be said that these excavations show that the hill of Hissarlik was inhabited, without serious interruption, from the late Graeco-Roman period back to a time before the dawn of history. At a date so early that we cannot estimate it even approximately the hill was covered with fortifications and palaces. Captain E. Bötticher, to be sure, has attempted to prove that the so-called citadel is nothing but a huge fire-necropolis, and even went so far as to accuse Schliemann of ill faith in describing what he found. But a conference of scholars, which met at Hissarlik in March, 1890, at Schliemann's invitation, decided: (1) that the site was well suited for a fortress; (2) that traces of fortifications of different epochs can be seen there; (3) that the "corridors" of Bötticher did not exist; (4) that the hill did not consist of a series of artificial terraces, each smaller than the one below. On the contrary each layer occupies more space than the one below it (showing the gradual extension by the accumulation of debris); (5) that the ruins in the second layer resemble those at Tiryns and Mycenae; (6) that the numerous upright jars which were found contained grain and not human bones; (7) that no traces were found of the burning of corpses. This decision overthrew the theory of Bötticher (who was indeed compelled to withdraw his accusation of bad faith), and went far to satisfy scholars that Schliemann's discoveries have actually revealed the site of Homeric Ilios.

Ilĭpa. A town in Hispania Baetica, on the right bank of the Baetis, which was navigable to this place with small vessels.

Ilissus (Ἰλισσός and Εἰλισσός). A small river in Attica, rising on the north slope of Mount Hymettus, flowing through the east side of Athens, and losing itself in the marshes, in the Athenian plain. See ATHENAE.

Ilithyia (Εἰλείθυια). The goddess of the Greeks who aided women in childbirth when she was propitious to them, but protracted the labour-pains if she was displeased. In the *Iliad* the Ilithyiae (in the plural) are called the daughters of Heré; but in the *Odyssey* and in later poets there is only one goddess of this name. In an ancient hymn she is called the mother of Eros. See IUNO.

Ilium. See ILIOS.

Illiběris (Ἰλλιβερίς). (1) The modern Tech, called TICHIS or TECHUM by the Romans, a river in Gallia Narbonensis in the territory of the Sardones, rising in the Pyrenees and falling, after a short course, into the Mare Gallicum. (2) A town of the Santones, on the above-mentioned river, at the foot of the Pyrenees. Constantine changed its name into HELĒNA, whence the modern Elne.

Illīcis. A city of the Contestani in Spain, northeast of Carthago Nova (Mela, ii. 6).

Illicitānus Sinus. A bay on the southeast coast of Spain, extending from Carthago Nova to the Dianium Promontorium. It is now the Bay of Alicante (Mela, ii. 6).

Illiturgis, Iliturgis, or **Iliturgi.** A city of Spain, not far from Castulo and Mentesa, and five days' march from Carthago Nova. It was situated near the Baetis, on a steep and rugged rock, and was called in Roman times Forum Iulium. The place was destroyed by Scipio B.C. 210 (Livy, xxviii. 19), but was soon afterwards repeopled. It is now Andujar.

Illustres. A name given by Diocletian and Constantine to magistrates and officials belonging to the first of the three classes into which they were divided, the other two being *Spectabiles* and *Clarissimi.* Among the Illustres were the consuls, *patricii, praefectus praetorio, praefectus urbi, praepositus sacri cubiculi,* the *magister officiorum,* and some of the *comites.* See Walter, *Geschichte des röm. Rechts,* § 380, 2d ed.

Illyrĭcum or **Illȳris,** more rarely **Illyria** (τὸ Ἰλλυρικόν, Ἰλλυρίς, Ἰλλυρία), included, in its widest signification, all the land west of Macedonia and east of Italy and Rhaetia, extending south as far as Epirus, and north as far as the valleys of the Savus and Dravus, and the junction of these rivers with the Danube. This wide extent of country was inhabited by numerous Illyrian tribes, all of whom were more or less barbarous. They were probably of the same origin as the Thracians. (See INDO-EUROPEAN LANGUAGES.) The country was divided into two parts. (1) ILLYRIS BARBĂRA or ROMĀNA, the Roman province of ILLYRĬCUM, extended along the Adriatic sea from Italy (Istria), from which it was separated by the Arsia, to the river Drilo, and was bounded on the east by Macedonia and Moesia Superior, from which it was separated by the Drinus, and on the north by Pannonia, from which it was separated by the Dravus. It thus comprehended a part of the modern Croatia, the whole of Dalmatia, almost the whole of Bosnia, and a part of Albania. It was divided in ancient times into three districts, according to the tribes by which it was inhabited—Iapydia, the interior of the country on the north, from the Arsia to the Tedanius; Liburnia, along the coast from the Arsia to the Titius; and Dalmatia, south of Liburnia, along the coast from the Titius to the Drilo. The Liburnians submitted at an early time to the Romans; but it was not till after the conquest of the Dalmatians, in the reign of Augustus, that the entire country was organized as a Roman province. From this time the Illyrians, and especially the Dalmatians, formed an important part of the Roman legion. (2) ILLȳRIS GRAECA, or ILLYRIA PROPRIA, also called EPĪRUS NOVA, extended from the Drilo, along the Adriatic, to the Ceraunian Mountains, which separated it from Epirus proper; it was bounded on the east by Macedonia. It thus embraced the greater part of the modern Albania.

It was a mountainous country, but possessed some fertile land on the coast. Its principal rivers were the Aoüs, Apsus, Genusus, and Panyasus. In the interior was an important lake, the Lychnitis. On the coast there were the Greek colonies of Epidamnus, afterwards Dyrrhachium, and Apollonia. It was at these places that the celebrated Via Egnatia commenced, which ran through Macedonia to Byzantium. The country was inhabited by various tribes—Atintanes, Taulantii, Parthini, Dassaretae, etc. In early times they were troublesome and dangerous neighbours to the Macedonian kings. They were subdued by Philip, the father of Alexander the Great, who defeated and slew in battle their king, Bardylis, in B.C. 359. After the death of Alexander the Great, most of the Illyrian tribes recovered their independence. At a later time the injury which the Roman trade suffered from their piracies brought against them the arms of the Republic. The forces of their queen, Teuta, were easily defeated by the Romans, and she was obliged to purchase peace by the surrender of part of her dominions and the payment of an annual tribute (B.C. 229). The second Illyrian war was finished by the Romans with the same ease. It was commenced by Demetrius of Pharos, who was guardian of Pineus, the son of Agron, but he was conquered by the consul Aemilius Paulus in 219. Pineus was succeeded by Pleuratus, who cultivated friendly relations with the Romans. His son Gentius formed an alliance with Perseus, king of Macedonia, against Rome; but he was conquered by the praetor L. Anicius, in the same year as Perseus (168); whereupon Illyria, as well as Macedonia, became subject to Rome. See Bahr, *Illyrien* (Leipzig, 1876).

In the new division of the Empire under Constantine, Illyricum formed one of the great provinces. It was divided into ILLYRICUM OCCIDENTALE, which included Illyricum Propria, Pannonia, and Noricum, and ILLYRICUM ORIENTALE, which comprehended Dacia, Moesia, Macedonia, and Thrace.

Ilus (Ἶλος). The son of Tros, and great-grandson of Dardanus, brother of Assaracus and Ganymede, and father of Laomedon. He once went from his native town of Dardania upon Mount Ida to Phrygia, where he was victorious in an athletic contest held by the king of the country. Besides fifty youths and fifty maidens, the prize of the contest, the king gave him, at the command of an oracle, a spotted cow, and directed him to found a city on the spot where she lay. He accordingly founded on the hill of the Phrygian Até, the town which after him was called Ilios, and also Troy (Troia) after his father. When he demanded a sign of Zeus, on the following morning he found the statue known as the Palladium (q. v.) before his tent.

Ilva. See ILBA.

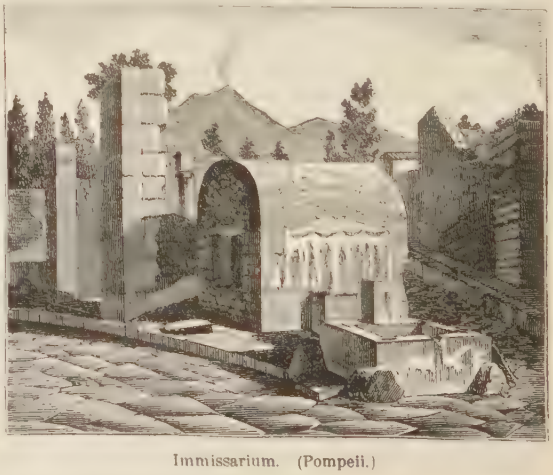
Ilvātes. A people in Liguria, south of the Po, in the modern Montferrat.

Imachăra (Ἰμιχάρα). A town in Sicily, in the Heraean mountains.

Imagĭnes. The Roman portrait-masks of deceased members of a family; they were made of wax and painted, and probably fastened to the busts. They were kept in small wooden shrines let into the inner walls of the *atrium*. Inscriptions under the shrines recorded the names, merits, and exploits of the persons they referred to. The images were arranged and connected with one another by means of coloured lines, in such a way as to exhibit the pedigree (*stemma*) of the family. On festal days the shrines were opened, and the busts crowned with bay-leaves. These portrait-masks must have been originally used for covering the faces of the dead, like the light metal masks of Phœnicia, Carthage, and Mycenae. (See PERSONA.) At family funerals, there were persons specially appointed to walk in procession before the body, wearing the masks of the deceased members of the family, and clothed in the *insignia* of the rank which they had held when alive. The right (*ius imaginum*) of having these ancestral images carried in procession was one of the privileges of the nobility, and distinguished the *nobilis* from the *novus homo*. If a person died not being in the possession of full civic rights, his image could not be exhibited, as in the case of Brutus and Cassius (Polyb. vi. 53; Pliny, *H. N.* xxxv. 2, §§ 6, 7; Tac. *Ann.* iii. 76; Mommsen, *Hist. of Rome*, book iii. chap. xiii.).

Imagĭnes. See VARRO, M. TERENTIUS.

Imagĭnum Ius. See IMAGINES.



Imăus (τὸ Ἴμαον ὄρος). The name of a great mountain range of Asia; one of those terms which the ancient geographers appear to have used indefinitely for want of exact knowledge. In its most definite application, it appears to mean the western part of the Himalaya, between the Paropamisus and the Emodi Montes; but when it is applied to some great chain, extending much farther to the north and dividing Scythia into two parts—Scythia intra Imaum and Scythia extra Imaum—it must either be understood to mean the Altai Mountains, or else some imaginary range, which cannot be identified with any actually existing mountains.

Imbrăsus (Ἴμβρασος). A river in the island of Samos.

Imbrĭces. See TEGULA.

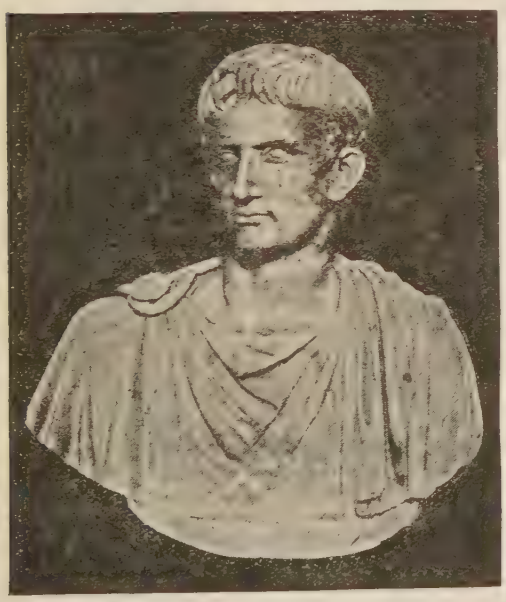
Imbros (Ἴμβρος). An island in the north of the Aegaean Sea, near the Thracian Chersonesus, about twenty-five miles in circumference. Like the neighbouring island of Samothrace, it was one of the chief seats of the worship of the Cabeiri. See CABEIRIA.

Immissarium. A basin, trough, or other contrivance built upon the ground, of stone or brick, and intended as a cistern to contain a body of wa-

Immissarium. (Pompeii.)

ter flowing from the reservoir (*castellum*) of an aqueduct, for the accommodation of the adjacent neighbourhood (Vitruv. viii. 6, 1). It differs from *cisterna*, which was underground, and is shown by the preceding illustration. The high vaulted building is the reservoir, from which the water flowed through the small dark aperture at its bottom into the square stone trough (*immissarium*) on the level of the pavement. See AQUAEDUCTUS.

"Immortals" (*οἱ ἀθάνατοι*). A body of 10,000 picked troops in the Persian army. They were equipped with great magnificence, and all vacancies in their ranks were filled by successors previously appointed (Herod. vii. 83).



Impeachment. See EISANGELIA.

Impedimenta (*τὰ σκεύη*). The baggage of an army (Caes. *B. G.* i. 26). The word often includes also the pack-animals and the wagons (Caes. *B. G.* vii. 45). See EXERCITUS.

Impediti. Troops who marched with all their arms, provisions, and personal baggage (*sarcina*), as Roman soldiers usually did (Caes. *B. G.* i. 12). See EXERCITUS; EXPEDITI.

Imperatīvae Feriae. See FERIAE.

Imperātor. A Roman title, originally the designation of each separate possessor of an independent command (*imperium*). In the course of time

Augustus. (Glyptothek, Munich.)

it became customary to assume the title after a man had gained his first great victory, usually after having been greeted as imperator either by the soldiers on the battlefield, or by the decree of the Senate. Under the Empire the title, which was seldom conferred by Augustus, was granted for the last time by Tiberius, A.D. 22. It was usually followed by a triumph, and ceased when the triumph was over. As a permanent title, it was first assumed by Caesar, whose adopted son and heir, Octavian (Augustus), bore it as an inherited cognomen, and from the year B.C. 40 onwards, according to a custom that arose at that time, substituted it for his previous praenomen Gaius, instead of Caesar Imperator (Mommsen, *Staatsr.* ii.[3] pp. 767–770). His immediate successors, Tiberius, Caligula, and Claudius abstained from using this praenomen; Nero used it frequently, but it first became permanent with Vespasian. The emperors also took the title Imperator, in its earlier signification, after a victory won by themselves or on their behalf. See IMPERIUM.

Imperium. The full kingly power among the Romans, the royal authority over all members of the State. It was conferred on the newly-elected king by the Comitia Curiata, a formal assembly of the patricians comprising the *curiae*, and it consisted of the rights of levying the citizens for military service, of leading the army, of celebrating a triumph, of exercising civil and criminal jurisdiction, and of inflicting punishment on the citizens, whether corporal or capital, or such as affected either their property or their liberty. A symbol of this authority was the axe and the bundle of rods borne by the lictors. See FASCES.

At the establishment of the Republic the imperium was transferred to the two consuls, as the successors of the kings; but the full power of the imperium was then limited by the fact that both possessed the same power, and that, in the penalties they inflicted in times of peace, they were subject to the right of appeal (see PROVOCATIO), and to the intervention of the tribunes of the people, after the institution of that office. When the consulship was deprived of its civil jurisdiction and the praetorship instituted for this purpose, the praetors also received the imperium; nevertheless it was more limited (*minus*) than that of the consuls, who, in contrast with the praetors and all other magistrates except the tribunes, had the right of ordering and forbidding. The imperium in its undivided and unlimited form was conferred on those who in exceptional cases were appointed dictators. It was also possessed by the *interrex*, but for five days only. For consuls and praetors the imperium could be prorogued, i. e. prolonged beyond their time of office; but the imperium thus prolonged was *finitum*, i. e. bounded within the limits of their province. In the Republic it could also be conferred by means of the Comitia Curiata, but this act fell into a mere formality. Under the Empire the term imperium included the highest military authority, which resided in the emperor and was the foundation of all his power. It was taken up either at the instance of the Senate or the troops. Its full validity depended on its recognition by both. See PRINCEPS.

Impluvium. A depression in the floor of the Roman *atrium* made for the purpose of receiving the rain which came in through the open roof. See DOMUS, p. 544.

Imprisonment. See CARCER.

Impūbes. In Roman law, persons were classed as follows with reference to their age in its legal aspect: (1) *Infantes*, from birth to the end of the seventh year; (2) *Infantiā maiores*, from the end of seven years to the age of puberty, which was fixed at twelve for a girl and fourteen for a boy; (3) *Adulescentes, adulti, puberes*, or *minores* (sc. *xxv annis*); (4) *maiores*, above the age of twenty-five. The first two classes were generally styled *impuberes*.

An *infans* could not perform any legal act whatever, nor incur any liability; but one who was *infantiā maior* and not in the power of a father (see PATRIA POTESTAS) could do any legal act with the sanction (*auctoritas*) of his guardian (*tutor*). Without that assent he could do only such acts as were legally beneficial, and not those that were to his disadvantage—e. g. he could not release another from a debt due him, though he could enter into a contract looking to his own release from debt. He could enter into a betrothal (*sponsalia*) alone, because the *auctoritas* of the *tutor* had reference only to property; and *sponsalia* did not give rise to any liability to be sued. An impubes could not without the sanction of his *tutor* be plaintiff or defendant in a suit. He could acquire the ownership of property alone, but he could not alienate it or manumit a slave unless with the concurrence of his *tutor*. See CURATORES; TUTOR.

Inachĭdae. A name given to the first eight successors of Inachus (q. v.) on the throne of Argos.

Inachĭdes. A patronymic of Epaphus, as grandson of Inachus (Ovid, *Met.* i. 704).

Inăchis (Ἰναχίς). A patronymic of Io (q. v.) as daughter of Inachus (Ovid, *Fasti*, i. 454). The goddess Isis (q. v.) is also called Inachis, as being identified with Io.

Inăchus (Ἴναχος). A son of Oceanus and Tethys, and father of Io. He was said to have founded the kingdom of Argos, and was succeeded by his son Phoroneus, B.C. 1807. Inachus is said, in the old legend, to have given his name to the principal river of Argolis. Hence, probably, he was described as the son of Oceanus, the common parent of all rivers. They who make Inachus to have come into Greece from beyond the sea regard his name as a Greek form for the Oriental term *Enak*, denoting "great" or "powerful," and this last as the base of the Greek ἄναξ, "a king." The foreign origin of Inachus, however, or, rather, his actual existence, is very problematical. According to the mythological writers, Inachus became the father of Io by his sister, the ocean-nymph Melia (Apollod. ii. 1, 1), and he is also described as the father of Aegialeus, Argus, and Rhegeus.

Inăchus (Ἴναχος). (1) A river of Argolis, flowing at the foot of the Acropolis of Argos, and emptying into the Bay of Nauplia. Its real source was in Mount Lyrceus, on the confines of Arcadia; but the poets, who delighted in fiction, imagined it to be a branch of the Inachus of Amphilochia, which, after mingling with the Acheloüs, passed under ground, and reappeared in Argolis. (2) A river of the Amphilochian district in Acarnania.

Inarĭmé. See AENARIA.

Inăros (Ἰνάρως, Ἴναρος). Son of Psammetichus, a Libyan, and the leader of a revolt of the Egyptians against the Persians in B.C. 461. He was at first successful, and formed an alliance with the Athenians, but was eventually defeated by the Persians, taken prisoner, and crucified in 455. See AEGYPTUS.

Inauguratio. A Roman ceremony by which the augurs obtained, or endeavoured to obtain, the sanction of the gods to something which had been decreed by man—e. g. to the election of the magistrates, who continued to be inaugurated under the Republic (Dionys. ii. 6), and for this purpose were summoned by the augurs (*condictio, denuntiatio*) to appear on the Capitol on the third day after their election (Serv. *ad* Verg. *Aen.* iii. 117). The inauguratio conferred no priestly dignity upon the magistrates, but was merely a method of obtaining the sanction of the gods to their election, and gave them the right to take the *auspicia;* and in important emergencies it was their duty to make use of this privilege. At the time of Cicero, however, this duty was scarcely ever observed (Cic. *De Div.* ii. 36, 76).

A building was "inaugurated" only when it was to be used for meetings of the Senate, or when the rites to be performed there required it should be a *templum*. The *inauguratio* hallowed the site, and the *consecratio* the building. Thus the Aedes Vestae was consecrated, but not inaugurated, and meetings of the Senate were never held there. See AUGUR; TEMPLUM.

Inauris (ἐλλόβιον, ἐνώτιον, ἔρμα). An ear-ring fastened, as in modern times, to the ear through the hole (*fenestra*) bored in the lobe. They were

Ear-ring of B.C. 350, found at Tarentum. (Castellani Collection.)

Etruscan Ear-ring. (Blacas Collection.)

worn in Greece and Italy by women, and among ultra-fashionable men it appears to have been the practice to wear a single ear-ring, much as the "smart" set in London at one time favoured the wearing of a single bracelet by men. Ear-rings were of every conceivable pattern and value, and were often set with precious stones, and sometimes with drops (*stalagmia*).

Incaustum. A name given to black ink. See PALAEOGRAPHY.

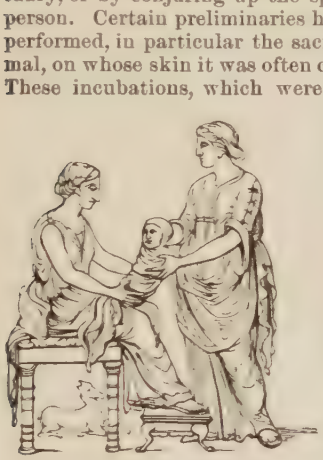
Incendium. The crime of causing a fire by which the property of another was endangered. It was thus more comprehensive than our "arson." As to the methods of extinguishing fires, and regulations relating to fires, see SIPHO; VIGILES.

Incense. See TUS.

Incensus. One who voluntarily absented himself from the census at Rome—an offence severely punished by law. See CENSUS.

Incestum. The crime of incest. See VESTALES.

Incitēga (ἐγγυθήκη, ἀγγοθήκη). A stand for holding bottles, cruets, decanters, and other like vessels



(Fest. s. h. v.). They were made of wood or earthenware.

Incitegae. (British Museum.)

Inclinatio. See CLIMA.

Incubāre (*ἐγκοιμᾶσθαι*). A verb especially used of sleeping in a sanctuary where oracular responses were sought through dreams or necromancy. (See ORACULUM.) It was with a view to obtaining in a dream a revelation either from the god of the sanctuary, or by conjuring up the spirit of some dead person. Certain preliminaries had generally to be performed, in particular the sacrifice of some animal, on whose skin it was often customary to sleep. These incubations, which were in vogue among the Greeks from the earliest times, but were not extensively practised among the Romans until under the Empire, generally took place in the temple of Aesculapius, the god of healing.

Child in Swaddling Clothes. (Roman bas-relief.)

Incunabŭla. (1) A cradle and layette. (2) A cradle alone (Livy, iv. 36). See CUNAE. (3) A name applied to all specimens of printed books issued prior to the year 1500. See EDITIO PRINCEPS.

Incus (*ἄκμων*). An anvil (Verg. *Aen.* vii. 629), exactly similar in appearance to those in use at the present day.

Anvil. (From a gem in the Louvre.)

Indāgo. A Roman sporting term, expressive of the surrounding of a wood or cover with nets to prevent the escape of the game at a *battue* (Verg. *Aen.* iv. 121).

Index (*σίλλυβος*). (1) The title of a book (Cic. *Ad Att.* iv. 4). See LIBER. (2) An inscription upon the base of a statue or slab, or upon any object indicative of the purpose for which the object was erected (Livy, xli. 28).

28*

India (*Ἰνδία*). India is the middle one of the three great land-masses that jut southward from the mainland of Asia. In shape it is somewhat like a lozenge or diamond, with land-boundaries to the north and water-boundaries to the south. The northern half is wedged in between the Himalayan and the Sulaiman ranges, which thus form respectively its northeastern and northwestern frontiers; while the southern half, tapering to a point at Cape Comorin, projects into the Indian Ocean, and is washed by the Arabian Sea on the southwest and by the Bay of Bengal on the southeast. Its area is nigh 1,500,000 square miles—that is, nearly one-half (about $\frac{6}{12}$) that of the United States, or almost equal to that of all Europe less Russia.

In respect of physical configuration, India may be divided into three very distinct parts: the Himalayan region; the river plains of the Indus and Ganges, or the Indo-Gangetic plain; and Peninsular India. The last is a triangular plateau which forms the southern half of the "lozenge." The Himalaya shuts off India from Central Asia by an almost impassable barrier on the north. The Indus, flowing northwest, drains the back of the western half of the range; then, turning a right angle to the left, it breaks through the mountains, and receiving the affluents which with it drain the Punjab (Persian, *Panj-āb*, "Five-river" land) flows in a general southwesterly direction to the Arabian Sea. The Ganges, with its feeders, drains the southern slopes of the range and flows in a general southeasterly direction into the Bay of Bengal. The watershed between the drainage basins of the Indus and the Ganges is scarce a thousand feet above sea-level, and the slope on each side is imperceptible. The "basins," therefore, form one practically continuous "plain." This Indo-Gangetic plain is a vast alluvial formation, made by deposits of rich silt brought down by the rivers, and has accordingly been the principal scene of Indic civilization.

The home of the earliest and most primitive Indic civilization, as indicated by the geographical allusions of the Vedas, was the Punjab, the region of the middle Indus and its tributaries. Later, the scene shifts to the southeast, to the valley of the Ganges and its most important affluent, the Jumna. This is the "Middle Country" (Sanskrit, *Madhya-deça*), the fertile region in which occur the chief events of the great Epic period and of the rise and bloom of Buddhism.

For the country above defined as India, there is no comprehensive name in the oldest native literature. Later books call it *Jambu-dvīpa*, "Land of the Rose-apple;" and the great Gangetic region is named "The Bhāratan" (Sanskrit, *Bhārata*), or also *Arya-āvarta*, "Home of the Aryans." The French take their name for Germany—Allemagne—from that of the region of the tribe—the Alemanni—nearest themselves, and then extend it to the whole country. Similarly the Greeks. Their names for India—*ἡ Ἰνδία*, *ἡ Ἰνδική*—apply properly only to the westernmost part of India, the region of the Indus. In Sanskrit, *Sindhu-s* (the *Hindu-sh* of the ancient Persians) means "stream," and then "*The* Stream," that is, "The Indus, *ὁ Ἰνδός*" (*incolis Sindus appellatus*, says Pliny), and finally also "The region on the Indus."

Subjoined are the names of the tributaries of the Indus in order from west to east—first the San-

skrit form, then the Greek, and then the modern name:

Vitastā	Ὑδάσπης	Jehlam
Asiknī ("Black")	Ἀκεσίνης	Chenāb
Irāvatī ("Refreshing")	Ὑδραώτης	Rāvi
Vipāç ("Unfettered")	Ὕφασις	Beas
Çatadru ("Hundred-runs")	Ζαδάδρης	Sutlej

The Asiknī was known later as the Chandrabhāgā, a name to the Macedonian ears so ominously like Σανδαρο-φάγος ("Xander-devourer"), that Alexander changed it to Ἀκεσίνης ("The Healing"), with a bright play on its older name Asiknī. Σανδαροφάγος ὑπὸ Ἀλεξάνδρου ποταμὸς μετωνομάσθη καὶ ἐκλήθη Ἀκεσίνης, says Hesychius.

The names of the Ganges and its greatest tributary, the Jumna, are easily recognized in their ancient forms — Γάγγης and Διάμουνα; Sanskrit, *Gangā* and *Yamunā*. The mountain names Ἡμωδό-ς (Strabo, 689) and *Haemodes* (Mela, i. 81) correspond closely to the vernacular form of the Sanskrit *Haimavata-s*, synonymous with *Hima-vant*, "The Snow-y" range, and with *Hima-ālaya*, "Abode of Snow." The Hindu, in telling the points of the compass, faces the east. The Sanskrit name for Peninsular India, south of the Vindhya Mountains (τὸ Οὐίνδιον ὄρος) is, accordingly, *Dakshinā-patha*, "Region to the right (δεξιά) or the south," Δαχιναβάδης of the Periplus (§ 50), our Dekkan.

The recent science of Comparative Grammar has proved that the ancestors of Hindus and Iranians and Greeks and of the Slavic, Germanic, Italic, and Keltic races are of one stock, called Aryan or Indo-European, which once had a common language and home. The Indic branch of this stock were not the aboriginal inhabitants of India; these were the dark-skinned tribes or *Dasyus*, whom the more gifted Aryan invaders, entering India from the extreme northwest, forced constantly to retire to the east and southeast. These non-Aryan tribes are now represented in part by the Dravidian races of the Dekkan. Of the Aryans, numerous tribes are mentioned in the Vedic literature, among them the *Pūrus*, the *Bharatas*, the *Kuru-Panchālas;* but the physical form of the Indo-Gangetic plain, free as it is from mountain barriers, is not favourable to the maintenance of tribal identity, and the floods of foreign invasion have had a similarly unfavourable tendency.

The language of the Indic Aryans shows three principal stages of development: (1) Old Indic or Sanskrit; (2) Middle Indic or Prākrit; and (3) New Indic or Bhāshā. The first is represented by the Vedic, the Epic, and the Classical Sanskrit; the second, chiefly by the Pāli and by the Prākrit proper, or languages respectively of the sacred books of the Southern Buddhists and of the Jains; the third, chiefly by the nine principal Aryan tongues of modern India, Mahratti, Bengali, etc.

Of all these, as indeed of all recorded Aryan tongues, the language of the Vedas is the most ancient; and it has, on the whole, conserved the greatest number of antique features. Note, for example, the retention in Sanskrit of the primitive sibilant in *sū-s* as compared with the cognate *ὗ-ς* and English *sow;* in *jánas-as* = *γένε(σ)-ος, gener-is;* in *ás-mi*, "I am" = Lesbian *ἔμ-μι*; in *á-srava-t*, "it flowed" = *ἔρρεε*, for **ἐ-σρεϝε-τ*, root *sru* = *ῥυ*.

The structure of the Sanskrit forms of derivation and inflection is so transparent as to shed much light on the corresponding forms of the allied languages. Thus it has two equivalent endings for the passive participle, *-na-s* and *-ta-s;* and likewise a root *mah*, "Be great," with an older form, *magh* — facts which, considered together, furnish an easy bond of connection for *μέγ-α, māg-nu-s*, and *māc-tu-s*, "Magnified." In *ichāmi dā-tu-m*, "I wish to give," the infinitive is simply the accusative of a verbal noun-stem *dā-tu*, of which various other case-forms occur. Such facts make clear the nature of the Latin supines: *īre datum*, "Be going to give;" *lepida memorātuī*, "Nice for telling, nice to tell;" *redīre opsōnātu*, "Come back from marketing." Take *quo-d* and *πό-θεν* by themselves, and the stem is obscure; but in the light of the Sanskrit *ka-d*, Gothic *hva*, English *wha-t*, Ionic *κό-θεν*, it is plain that the pronominal stem began originally with the *k*-sound, not with the *p*.

An extensive Sanskrit literature has come down to us from the Hindus. Oldest and most important are the four Vedas, chiefly metrical. The Rigveda is a collection of over a thousand hymns, the most ancient of which may antedate our era by twenty centuries, and are therefore the oldest recorded documents of Aryan antiquity. Next come the Brahmanas, in prose, and containing, besides mystical discussions of the sacrifice and ritual, those theosophic speculations which culminated in the doctrines of the Upanishads, and thus became the basis of the later philosophical systems, notably of the pantheistic system of the Vedanta. In another stream from the Vedas flow the books of ceremonial, of custom, and of law. The legends of the Heroic Age are embodied in the vast epic called the Great Bharata Story (*Mahā-bhārata-ākhyāna*, or, more briefly, the Mahā-bhārata); and also in the lesser epic called Rāmāyana. Notable, besides, are especially the drama (Kālidāsa's Çakuntalā) and the beast-fable (Pancha-tantra).

The Pāli literature embraces the legends of the life and teachings of Buddha, the books of the doctrine and order which grew therefrom, and the great collection of charming folk-stories called the Jātaka, or tales of the anterior births of Gotama Buddha.

The early Indic Aryans of the Punjab were a sturdy, life-loving race. Their religion was a primitive polytheism, whose deities were personifications of the phenomena of nature, such as the wind and the sun. Thus *agnis* was the element (Latin *ignis*), while *Agnis* was the fire-god, who bore aloft the sacrifice to the other gods. To Hindu, as to Greek and Roman, the sky (*dyaus, Ζεύς, Diēs-piter*) was father and the earth was mother. As the Aryans advanced southeastward down the Ganges valley, the hot and humid climate wrought a profound change in their character. Their religion degenerated into a most elaborate and soul-deadening ritualism. The growth of individuality and so of great and public-spirited personalities was estopped by the rigid system of caste. The belief in the transmigration of souls became general. And the institutions of monkish life and asceticism developed to a degree which astonished the Greeks beyond measure, and is perhaps without a parallel elsewhere. Religious nostrums were doubtless many in the "Middle Country" in the sixth century B.C.; and so were the religious teachers or saviours, each with his following greater or less. Of all the latter, only two have left any great mark in the world's history—namely, Nātaputta the Nigantha and the great monk Gotama.

Nātaputta was contemporary with Gotama, but somewhat older; and he was the reformer of Jainism, or the religion of the "Conqueror" (*Jina*), which, since it still flourishes in India, may not unfairly be deemed the oldest Aryan sect in the world. Gotama, whose death at the age of eighty may be set at about B.C. 480, seems to be the greatest personality that India has ever produced. He taught not only a pure and gentle and noble morality, but also that all things are transitory, are misery, are unreal; and that the supreme goal is escape from the bonds of existence and rebirth. His religion, vastly modified by influences of time and locality, has spread to the Extreme Orient; and has meanwhile become displaced in India by Hinduism and the worship of the gods Vishnu and Çiva.

The customs of the ancient Hindus may be learned with much fulness from the treatises of household usages called *Grihya-sūtras;* and, when studied in the light of the corresponding classical or Germanic customs, will form a most important and interesting chapter of Aryan comparative philology. Since birth, reproduction, and death are the three great facts of human existence, the marriage and funeral customs naturally take a prominent place in these pictures of ancient life. The joining of right hands was the most significant feature of the nuptial ceremonies; and this was not lacking with the Romans (*dextrarum iunctio*). The walking about the altar with the right side towards it (*ἐπιδέξια*), or the sunwise circumambulation, finds its analogies among other Aryan races: compare the Roman *dextratio* and the Gaelic "walking the deasil." The *confarreatio* and the *pellis lanata* may be traced to India. At a funeral the circumambulation was reversed, in Italy (Statius, *Theb.* vi. 215) as well as on the Ganges. The above may serve as examples of coincidences of usage. It is likely that a considerable body of these customs go back to Aryan antiquity.

Ancient India has no history, in the ordinary acceptation of the word. If all things are transitory, are misery—why fix the thoughts on them? The events of its past do not show the working of noble and mighty personalities. Its loftiest souls are absorbed in religious and philosophical speculation. The history of India is a history of thought, of religion. The Vedas and the Epics yield us abundant and invaluable evidence concerning the life and civilization of the times to which they belong; but for any records of events in orderly sequence and with fixed chronology we look in vain.

Yet two great events — the appearance of Buddha and the invasion of Alexander — are exceptions. The one was of profoundest importance to India; the other, of great importance for our knowledge of India. Indeed, it is to foreign invaders and pilgrims that we owe some of our most valuable knowledge about India. Darius (521–485), on an inscription at Persepolis, mentions the Indus region among his conquered provinces. Nearly two centuries later, B.C. 326, Alexander the Great crossed the Indus (Arrian, *Anab.* v. 4) and the Hydaspes (v. 12); and, after defeating the Indian king Porus (v. 17), advanced to the Hyphasis. On the bank of this Indian stream the world-conqueror was forced to turn back; and, without even entering the Gangetic plain, he set out for Persis.

After his death (June, 323), one of his great generals, Seleucus Nicator, invaded India again (about 305), and made a treaty with the famous Sandrokottos (or Σανδρόκυπτος, Sanskrit *Chandra-gupta*), the founder of the Mauryan dynasty of Magadha. The Magadhan empire extended from Lower Bengal to the Indus, and its capital was Παλίβοθρα (Sanskrit *Pātaliputra*), on the Ganges at the old confluence of the Sone. The Pāli books call him Chandagutta the Moriya (Μωριεύς); and there is no other ancient Hindu about whom there is so much concurrent evidence from Indian and classical sources. (See Justin, xv. 4.) It was to his court that Seleucus sent his friend Megasthenes as ambassador. Megasthenes was a careful observer, and had a most unusual opportunity for observing; so that the book which he wrote was probably the most valuable work of antiquity on India. As if to show how deplorable is its loss, considerable excerpts from it have been preserved by Strabo, Arrian, and others.

Chandragupta's grandson Açoka (B.C. 259–222) was the greatest monarch of ancient India. Many rock-inscriptions containing his edicts are still extant, and are of priceless worth, as being the oldest of their kind. Some of them are especially interesting because they mention the Greeks, for example, "Antiyoka, king of the Yonas," and "Antikina." The former is Antiochus II., and the latter Antigonus Gonatas. The Yonas or Yavanas are of course the Ἴωνες or Ἰάονες, that is, the Greeks. The rock-cut edicts are found in Orissa, Gujarat, and the extreme north of the Punjab—places so wide apart as to show that Açoka's empire embraced the whole Indo-Gangetic region. Perhaps the most notable event of his reign was his conversion to Buddhism. He was mild and tolerant, but zealous withal for the promotion of the faith. See Senart's "Un roi de l'Inde," in the *Revue des Deux Mondes*, March 1, 1889.

The century from B.C. 326 to 222, accordingly—including, as it does, Alexander's invasion and death, the reigns of Chandragupta and Açoka, and the culmination of the Magadhan empire—is the most notable one of Indian antiquity. It includes also the rise of the Graeco-Bactrian kingdom, from which Hellenic kings made repeated conquests of parts of Western India. There followed the Graeco-Indian sovereigns, chief of whom was Menander (Pāli *Milinda*), about B.C. 100. Some fifteen years later the dynasty was overthrown by the Çakas or Scythians, and the power of the Greeks put to an end. The greatest of the Çaka kings was Kanishka; and it is probably his consecration in A.D. 78 that forms the starting-point of the Çaka era, which is still in use.

The Imperial Gupta dynasty, beginning A.D. 320 and lasting till about 480, deserves mention as bearing a national Indian character. It gave to India a respite from the inroads of the northern barbarians and an excellent administration of government. Among regents of the sixth century, Harsha of Ujjain, with the title Vikramāditya, is famous because of the traditional connection of his name with that of the greatest of all Hindu poets, Kālidāsa. In the seventh century, Çīlāditya of Kanauj became very powerful; and it was during his long reign that the illustrious Chinese Buddhist pilgrim, Hiuen Tsiang, made his travels in India (A.D. 629–645). The history of modern India begins with the invasion made by Mahmud of

Ghazni, A.D. 1000, and embraces the period of the Mohammedan conquerors and that of British rule.

BIBLIOGRAPHY. — Geography: H. F. Blanford, *Elementary Geography of India, Burma, and Ceylon* (New York, 1890). The best map of ancient India is Colonel Yule's, in William Smith's *Atlas of Ancient Geography*. See, also, in the *Journal of the Royal Asiatic Society* for 1889 the map facing p. 527. An admirable modern atlas is *Constable's Hand Atlas of India* (London, 1893). Language: W. D. Whitney, *Sanskrit Grammar* (2d ed. Boston, 1889); C. R. Lanman, *Sanskrit Reader, with Vocabulary and Notes* (Boston, 1888); Victor Henry, *Short Comparative Grammar of Greek and Latin* (Eng. trans. New York, 1890). Literature and Civilization: A. Kaegi, *The Rigveda* (Boston, 1886); L. von Schroeder, *Indiens Literatur und Cultur in historischer Entwickelung* (Leipzig, 1887). Religion: A. Barth, *The Religions of India* (2d ed. London, 1890); H. Oldenberg, *Buddha: his Life, his Doctrine, his Order*, trans. by W. Hoey (also 2d German ed., Berlin, 1893). Greek Knowledge of India: see, especially, J. W. M'Crindle's *Ancient India as described by the Classical Authors, being a series of copiously annotated translations of all the Greek and Roman texts which relate to India*. Five volumes have appeared. Vol. I. Megasthenes, and Arrian's *Indica*, i.–xvii. Vol. II. Commerce and navigation of the Erythraean Sea, being a translation of the *Periplus* and of Arrian's account of the voyage of Nearchus (*Indica*, xviii.–xliii.). Vol. III. The *Indica* of Ctesias, the Cnidian (the abridgment by Photius, and the fragments). Vol. IV. The *Geography* of Claudius Ptolemaeus (the chapters on India, etc.). Vol. V. The invasion of India by Alexander the Great, as described by Arrian, Q. Curtius, Diodorus, Plutarch, and Justin (London, 1893). Texts: Megasthenes's *Indica*, fragments ed. by E. A. Schwanbeck (Bonn, 1846). Also, in C. Müller's *Fragmenta Historicorum Graecorum*, ii. pp. 397–439 (Paris, 1848); Strabo's *Geography*, xv. pp. 685–720; Arrian's *Anabasis*, iv. 22 to vi. 28; and Porphyrius, *De Abstinentia*, iv. 17–18.

Indibĭlis. See MANDONIUS.

Indĭca. See CTESIAS; MEGASTHENES.

Indicētae or **Indigētes.** A people in the northeast corner of Hispania Tarraconensis, close upon the Pyrenees. Their chief town was Emporium (q. v.).

Indicopleustes. See COSMAS.

Indĭcus Oceănus. See ERYTHRAEUM MARÉ.

Indigĕtes. The name of those indigenous gods and heroes at Rome who once lived on earth as mortals, and were worshipped after their death as gods. Thus Aeneas, after his disappearance on the banks of the Numicus, became a *deus indiges, pater indiges*, or Iupiter Indiges; and in like manner Romulus became Quirinus, and Latinus, Iupiter Latiaris.

Indigitamenta. The Latin term for an official collection of forms of prayer belonging to the *libri pontificii*. (See PONTIFEX). In them were set forth the various powers of each god who was to be summoned to aid in particular cases; and none of these divinities could be passed over, if the prayer was to receive a favourable answer. Only those portions of the collection were made public which bore direct reference to private life; prayers at marriages, at births, for a blessing on the children at different times of life, and for the beginning of all kinds of work, especially agriculture. The names of the gods of earliest childhood were as follows: Potina and Educa, who taught the child when weaned to eat and drink; Cuba, who protected the child when taken out of the cradle and put to bed; Ossipaga, who strengthened the bones; Carna, who strengthened the flesh; Levana, who helped it to rise from the ground; Statanus, Statilinus, or Dea Statina, who taught it to stand; Abeona and Adeona, who supported its first walking; Fabulinus, Farinus, who assisted it to talk. All collective occupations, all parts of the house, all different spots had their particular gods, who were invoked in these forms of prayer. Often the various names only indicate the different characteristics of a single divinity—e. g. Maia was invoked under the names of Bona, Fauna, Ops, and Fatua. In course of time the different attributes came to be regarded as separate divinities. The names of these divinities are quoted from Varro's *Antiquitates Rerum Divinarum* by Tertullian *Ad Nat.* ii. 11, 15; *De Anima*, 37, 39; and by Augustine, *De Civitate Dei*, iv. 11, 21; iv. 8, 10; vi. 9; vii. 23.

Indo-European Languages or **Aryan Languages.** Names used to designate those languages and dialects of Europe and Asia which can be grouped together as showing by their vocabularies and general grammatical structure a strong linguistic relationship to one another. The term INDO-GERMANIC is also frequently applied to the same family. The languages in question are conveniently arranged in eight groups.

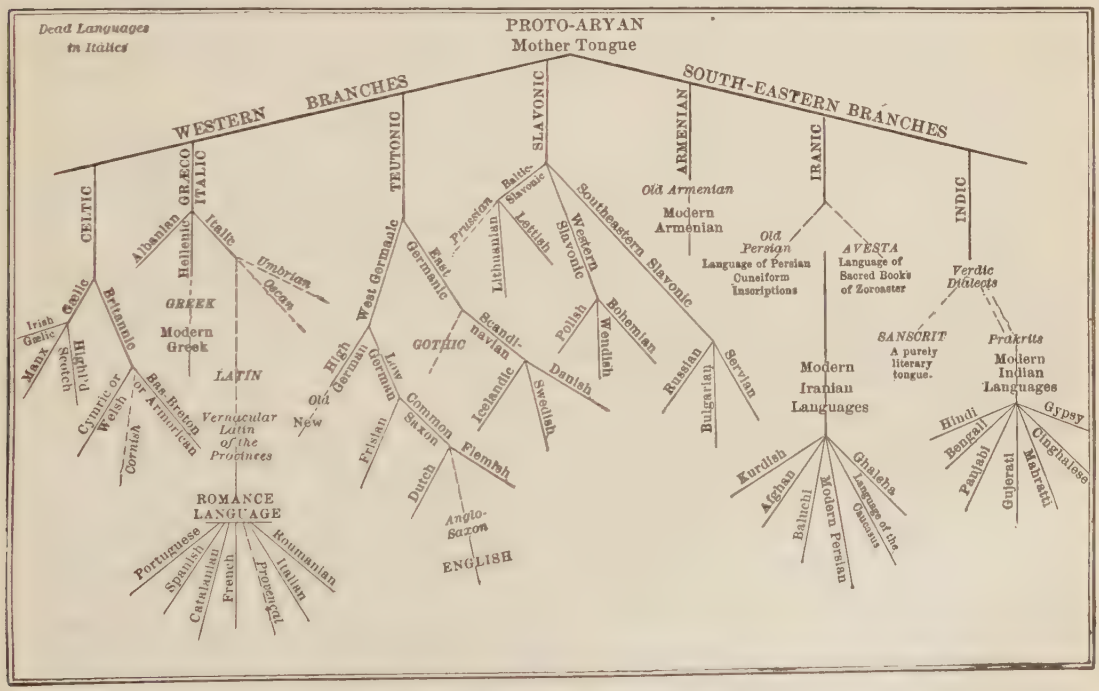
I. THE INDIAN AND IRANIAN GROUP.—(1) *Indian.* Of these, Sanskrit, the ancient literary language of the priestly caste of the Brahmins, is the chief. In its oldest form it is found in the Vedas, or sacred hymns, from about B.C. 1500. Later it was modified by the native grammarians. (2) *Iranian* or *Persian.* This is found in the cuneiform inscriptions of Persia (Old Persian) and in the Avesta, or sacred books of Zoroaster (Avestan, Zend, Old Bactrian). See CUNEIFORM; PERSIA; ZOROASTER.

II. ARMENIAN GROUP. — This group includes the dialects of Armenia, and its main point of difference as compared with the Indian and Iranian tongues lies in its possession of the vowel *e*.

III. HELLENIC GROUP.—This comprises the dialects of ancient Greece and the modern dialects descended from them. Roughly, the ancient Hellenic dialects are divided into Ionic and non-Ionic, but oftener into Doric, Aeolic, and Ionic. The dialects of modern Greece are known as Romaic. For a fuller account, see DIALECTS.

IV. ALBANIAN OR SKIPETAR.—A tongue of which little is definitely known, though it is classed as distinct from the Greek, and regarded as representative of the ancient Illyrian.

V. ITALIC GROUP.—These are the Indo-European dialects developed out of those spoken in Italy. They are to be roughly divided: (1) *Umbro-Oscan*, (2) *Latin*, and (3) the modern *Romance Languages* sprung from the vulgar Latin (Italian, French, Provençal, Spanish, Portuguese, Catalan [in North Spain], Rhaeto-Romanic [in the Tyrol, etc.], and Roumanian or Wallachian). See ITALIA; OSCI; UMBRIA.



VI. KELTIC GROUP. — The Keltic dialects are subdivided into two: (1) *Northern Keltic* (Irish, Gaelic [Scotland], Manx [in the Isle of Man]); and (2) *Southern Group* (Cymric [Wales], Cornish [Cornwall], and Armorican [Brittany]). See CELTAE.

VII. Teutonic Group.—This is subdivided into (1) *Eastern Teutonic* (Ancient Gothic and Scandinavian), and (2) *Western Teutonic* (English, Frisian, Saxon, High German, Low German).

VIII. Baltic and Sclavonic Group.—(1) *Baltic* (Old Prussian, Lithuanian, and Lettish); (2) *Russian* (Bulgarian, Servian, Croatian, Czechish, and Polish).

Comparative philologists have long speculated over the probable separation and development of these different languages. Two main theories have been put forward. The older is that known as the Genealogical Theory, best stated by Schleicher, but now generally abandoned. According to this view there was a parent-language (*Ursprache*) spoken by a single people dwelling together in the original home of the race. From these "there hived off swarms which, on geographical disjunction, began to develop differences in language that separated them from the other members of their stock—swarms, however, which still comprised two or three more peoples that for a long period were linguistically one." Hence were assumed an Italo-Graeco-Keltic period, a Graeco-Latin period, and a Lithu-Slavo-Teutonic period, to account for special points of agreement observed between certain members of the family—e.g. Latin and Greek, Latin and Keltic, etc. The relation between the divisions of the Indo-European language according to the genealogical theory is shown in the following table based upon Schleicher.

At the present time, the Wave Theory or Transition Theory of Johannes Schmidt, which has the support of Brugmann, Paul, and Schrader, has supplanted the genealogical theory, as it presents fewer difficulties and contradictions when tested by known facts. According to Schmidt, the primitive Indo-European peoples were strictly homogeneous, not packed closely together into a limited territory, but settled at considerable distances though with facility of intercourse. Thus differences of dialect would be evolved and accentuated in many parts of the whole territory, and, having been so evolved, spread in waves or undulations over the immediate neighbourhood. Adjacent peoples partook of one another's linguistic peculiarities, and neighbouring dialects borrowed from one another, while those widely separated had no close mutual connection, but became more and more unlike. The relation of different languages is thus explained partly by geographical as well as by genealogical conditions. This can be illustrated in the special group of Greek dialects in later times. In Attic, Boeotian, and Euboean Greek alone an original $\tau\iota$ became $\tau\tau$, because Attica, Boeotia, and Euboea are geographically contiguous; and so, in later Laconian, σ is changed to ρ (Rhotacism) by the influence of the usage of Elis, the neighbour of Laconia. There are, in fact, three kinds of resemblances to be noted in the Indo-European tongues—resemblances inherited from the original tongue, resemblances due to long-continued geographical proximity, and resemblances that come from accidental contact with different neighbours at different points, perhaps during a gradual migration from place to place. This last is important, for it will account for the fact that languages which have no especial closeness of relation often exhibit curious special coincidences. Thus, as noted above, Armenian agrees with its European

Plan illustrating Schleicher's Genealogical Theory.

rather than with its Asiatic congeners in possessing *e*; Sanskrit and Letto-Slavonic assibilate the palatal guttural; Latin and Keltic alone have *r* as a passive sign.

It is not possible to say that any one of the existing Aryan languages has a predominance of archaic traits; and attempts to reconstruct the

primitive tongue from comparative evidence are always unsatisfactory and frequently fanciful. As to the early home of the race before its separation and dispersion, several theories have been held. The old view placed it in Asia among the mountains of the Hindu-Kush (Max Müller). Other suppositions have been vigorously urged. Latham argues that the whole people must have dwelt where the majority of its parts are now found—i. e. in Europe. Benfey supported the same conclusion, arguing from the absence of common names for beasts of prey, and fixed upon the country north of the Black Sea. Geiger and Cuno urge the claims of Germany; Pösche holds to Western Russia; Penka, appealing to craniology, declares Scandinavia to have been the original home; Schrader defends a site partly European and partly Asiatic. The first is the territory bounded on the south by the Danube and the Black Sea, on the west by the Carpathian Mountains, on the east by the Dnieper, and on the north by the forests and swamps of Volhynia. This he regards as the seat of the common European culture, and for the common Indo-Iranian development he selects ancient Sogdiana and Bactriana.

See Brugmann, *Comparative Grammar of the Indo-Germanic Languages* (1888–95); Curti, *Die Sprachschöpfung* (1890); Schrader, *Prehistoric Antiquities of the Aryan Peoples* (Eng. trans. 1890); Taylor, *The Origin of the Aryans* (1889); Wilser, *Die Herkunft der Deutschen* (1886); an article by Hirt, "Die Urheimat der Indo-Germanen," the introduction to Clark's *Manual of Linguistics* (1893); various papers in Brugmann's *Indogermanische Forschungen;* and also the article PHILOLOGIA in this Dictionary.

Inducŭ**la.** A woman's undergarment, probably the same as a chemise (Plaut. *Epid.* ii. 2, 41).

Indumentum. A word derived from *induo;* hence anything put on—e. g. a mask (Gell. v. 7); a garment (Gell. xvi. 19. 3; a tunic (Aurel. Vict. *Caes.* 12), etc.

Indus (Ἰνδός; Skt. *Sindhu*). (1) A river of India frequently mentioned in the classics. It rises in Thibet, and after taking a northwesterly course, turns to the south and finally empties into the Indian Ocean. Its total length is something more than 1800 miles, and the area of its drainage-basin 372,000 square miles. At a distance of 812 miles from its source it receives the waters of the five streams of the Punjab—Hydaspes, Acesines, Hydrastes, Hyphasis, and Xeradrus. These all unite and flow into the Indus through the single channel of the Panjnad, a fact maintained by Ptolemy but long disbelieved. The delta of the Indus covers an area of some 3000 square miles. (2) A river of Asia Minor rising in the southwestern part of Phrygia and emptying into the Mediterranean opposite Rhodes.

Indusium. A woman's frock worn over the chemise (*subucula*). It had short sleeves and a loose belt over it (Varro, *L. L.* v. 131).

Indutiomārus or **Induciomārus.** One of the leading chiefs of the Treviri in Gaul who opposed the Romans, but was defeated and slain by Labienus, B.C. 54. See CINGETORIX.

Indūtus (ἔνδυμα). Any kind of close-fitting garment as distinguished from *amictus* (q. v.), which is generally expressive of loose clothing. It is oftenest applied to the underclothing of both men and women (Alciphr. *Epist.* iii. 42; Tac. *Ann.* xvi. 4). See AMICTUS; TUNICA.

Inessa. See AETNA (2).

Infamia (ἀτιμία). The Latin term for the loss of certain political rights; resembling, but not identical with, *deminutio capitis* (q. v.). It was the direct consequence of dishonourable conduct, or of some shameless act (such as a widow not observing the usual year of mourning, bigamy, bankruptcy, going on the stage, or becoming a gladiator, pandering, or becoming a prostitute, etc.). It also resulted from a condemnation for felony, robbery, fraud, embezzlement of a deposit, whether belonging to a society or a ward, or, in fact, for any criminal offence. The *infamis* was expelled from his tribe, lost his vote and his capacity for filling public offices (*ius suffragii* and *ius honorum*), and could not appear in a court of law either on his own account or on behalf of another. See Mommsen, *Römisches Staatsrecht*, ii. 1, pp. 375 foll.; and cf. the article ATIMIA.

Infāmis. See INFAMIA.

Infans. See CURATORES; IMPUBES.

Infantry. See EXERCITUS.

Inferi (οἱ κάτω, οἱ χθόνιοι, οἱ ὑπὸ γαῖαν, οἱ ἔνερθε). The gods of the nether world, in contradistinction from the Superi, or the gods of heaven. But the word Inferi is also frequently used to designate the dead, and therefore comprises all the inhabitants of the lower world, both the gods—viz., Hades or Pluto, his wife Persephoné (Proserpina), the Erinyes or Furies, and also the souls of departed men. See HADES.

Inferiae. See FUNUS.

Infĕrum Mare. See TYRRHENUM MARE.

Infŭla. A flock of wool dyed red and white and knotted at intervals with a ribbon (*vitta*). It was worn by Roman priestesses and vestals, and by the victim at a sacrifice (Lucret. i. 87). The plural INFŬLAE is sometimes used.

Infundibŭlum (χώνη). (1) A funnel for transferring liquids from one vessel to another (Cato, *R. R.* 13. 3). (2) A hopper through which the corn to be ground was poured into a mill (Vitruv. x. 5, 2).

Ingaevōnes. See GERMANIA.

Ingauni. A people in Liguria on the coast, whose chief town was Albium Ingaunum.

Ingenui, Ingenŭitas. In Roman law, ingenui are those persons sprung from free parents. The word is therefore opposed in meaning to *libertini*, which denoted those who were only themselves free. At one time those only whose parents were free-born were styled ingenui, but by the time of Justinian any child born of a free mother was ingenuus. See Mommsen, *Röm. Staatsr.* iii. pp. 72 foll., 518, 519; ii. 2, p. 518; and the article LIBERTINUS.

Ingenuus. One of the Thirty Tyrants, slain in Pannonia by Gallienus, A.D. 258. See THIRTY TYRANTS.

Ingrātus. See PATRONUS.

Inheritance. See HERES.

Iniuria. In general, iniuria is whatever is not *ius;* hence a violation of law. In a special sense, it denotes a wrong against one's person as distin-

guished from a wrong against one's property. It involves an insult (*ὕβρις, contumelia*) and must include an intent to act unlawfully (*dolus*). Instances of iniuria are assault, noisy abuse (*convicium*), libellous writings, insulting gestures, spitting at a man (Cic. *Ad Q. Fratr.* ii. 3, 2), dunning him for a debt in such a way as to injure his credit, etc. Iniuria to a wife was also iniuria to her husband. No iniuria could be done to a slave, though iniuria to his master might be done upon the person of a slave. See SERVUS.

The penalty of twenty-five *asses*, which was provided by the Twelve Tables for iniuria, was subsequently found insufficient in many cases, and so an action was established by the praetor (*actio iniuriarum aestimatoria*), in which the injured party was allowed to claim such damages as he thought he was entitled to, and the *iudex* might give the full amount or less. This became the ordinary remedy on account of iniuria, but a Lex Cornelia gave a special action in cases of *pulsatio, verberatio*, and forcible entry into a man's house. The person who committed the iniuria was styled *iniurius* and later *iniustus*.

Iniuriārum Actio. See INIURIA.

Ink. See ATRAMENTUM; WRITING AND WRITING-MATERIALS.

Inns. See CAUPONA.

Ino (Ἰνώ). The daughter of Cadmus, and wife of Athamas (q. v.). Being followed by the latter after he had been seized with madness, she fled to the cliff Moluris, between Megara and Corinth, and there threw herself into the sea with her infant son Melicertes. At the isthmus, however, mother and child were carried ashore by a dolphin, and, from that time forward, were honoured as marine divinities along the shores of the Mediterranean, especially on the coast of Megara and at the Isthmus of Corinth. Ino was worshipped at Leucothea, and Melicertes as Palaemon. They were regarded as divinities who aided men in peril on the sea. As early as Homer, we have Ino mentioned as rescuing Odysseus from danger by throwing him her veil (*Od.* v. 333–353). Among the Romans Ino was identified with Matuta (q. v.).

Inōa (Ἰνῶα). Festivals celebrated at Megara, at Epidaurus Limera (in Laconia), and on the Corinthian Isthmus in honour of Ino (q. v.) (Pausan. i. 42, § 8; iii. 23, § 5).

Inofficiōsum Testamentum. See TESTAMENTUM.

Inōpus (Ἰνωπός). A river of Delos, watering the plain in which the town of Delos stood. It was said to rise and fall at the same time as the Nile, and hence was supposed to be in some way connected with that river (Val. Fl. v. 105).

Inōus. A name of both Melicertes and of Palaemon, as being sons of Ino (q. v.) (Verg. *Aen.* v. 823).

Insania, Insānus. See CURATORES.

Inscriptions. See EPIGRAPHY.

Inscriptus, sc. *servus*. A branded slave. See SERVUS.

Insigné. (1) In general, any kind of badge or decoration—e. g. the crest of a helmet, the *bulla* of a child, the sceptre of a king, the device on a shield. (2) (*παράσημον*) The figure-head of a ship. See NAVIS.

Instĭta (*περιπόδιον*). (1) A flounce or hem attached to the *stola* (q. v.) of the Roman matron at the bottom of the skirt (Hor. *Sat.* i. 2, 29; Ovid, *A. A.* i. 32). (2) A train. (3) A fillet or ribbon tied to the Bacchic *thyrsus* (Stat. *Theb.* vii. 654). (4) (*τόνοι, ἐπίτονοι*). The bands of a bedstead used to support the mattress (Petron. 97). (5) Any band or bandage (Petron. 20).

Instĭtor (*παλιγκάπηλος*). One who sells for another on commission (Livy, xxii. 25; Ovid, *A. A.* i. 421).

Institoria Actio. An action brought against one for business debts contracted by whatever person (son, slave, or freeman) he had made his *institor* or business agent. See ACTIO; MANDATUM.

Institutio Oratoria. See QUINTILIANUS.

Institutiōnes. A student beginning the study of Roman law was instituted in the subject (*institui*); that is, he went through an elementary course of legal instruction under the direction of a competent lawyer. Such introductory study led to the publication of law books of an educational kind, which were called *Institutiones*. There were various institutional works written by the Roman jurists. Thus Callistratus, who lived under Septimius Severus and Antoninus Caracalla, wrote three books of *Institutiones;* Aelius Marcianus wrote sixteen books of *Institutiones*, under Caracalla, or shortly afterwards; Florentinus, who probably lived in the time of the Antonines, wrote twelve books of *Institutiones*, from which there are forty-two excerpts in the *Digest;* Paulus also wrote two books of *Institutiones*. There still remain fragments of the *Institutiones* of Ulpian. But the most important treatise of this kind that we know of was the *Institutiones* of Gaius, in four books or commentaries, of which the first relates to persons, the second and third to property, and the fourth to actions. (See GAIUS.) On the *Institutiones* of Justinian, see CORPUS IURIS CIVILIS; IUSTINIANUS.

Instragŭlum. See STRAGULUM.

Insŭbres. A Gallic people, who crossed the Alps and settled in Gallia Transpadana in the north of Italy. Their chief town was Mediolanum (Milan). They were conquered by the Romans, shortly before the commencement of the Second Punic War. See CELTAE.

Insubŭlum (*ἀντίον*). The cloth-beam of a weaver's loom, still called by the Italians *il subbio*.

Insŭla. See DOMUS, p. 541.

Insŭla. A part of Syracuse separated from the rest of the city by a narrow arm of the sea (Livy, xxiv. 21).

Insŭla Batavōrum. See BATAVI.

Insula Gallinaria. See GALLINARIA.

Insŭla Sacra. An island formed at the mouth of the Tiber, by the separation of the two branches of that river.

Insŭla Tiberīna. An island in the river Tiber within the city of Rome. It was united to the left bank of the river by the Pons Fabricius and to the right bank by the Pons Cestius. See PONS.

Insŭlae Fortunātae. See FORTUNATAE INSULAE.

Insularii. (1) Persons who lived in a hired lodging (*insula*). See DOMUS, p. 541. (2) Slaves

who acted as house-agents or *concierges* for the owners of *insulae*. See DOMUS, p. 541.

Intabulamentum. Entablature (from *tabula*). In the Greek styles, the whole of the structure above the columns, with the exception of the gable. The entablature has three members—(1) the epistyle or architrave which joins the columns; (2) the frieze; and (3) the terminal cornice.

Entablature of the Parthenon at Athens.

Intemelii. A people in Liguria on the coast, whose chief town was Albium Intemelium (Ventimiglia).

Intemelium or **Albium Intemelium.** The capital of the Intemelii.

Intentio. See ACTIO in the Appendix.

Interamna. The name of several towns in Italy, so called from their lying between two streams. (1) (Terni), in Umbria, situated on the Nar, and surrounded by a canal flowing into this river, whence its inhabitants were called Interamnates Nartes. It was the birthplace of the historian Tacitus. (2) In Latium, at the junction of the Casinus with the Liris, whence its inhabitants were called Interamnates Lirinates.

Intercalation. See CALENDARIUM.

Intercatia. A town of the Vaccaei in Hispania Tarraconensis, on the road from Asturica to Caesaraugusta.

Intercessio. (1) The Latin term for the interference of a higher officer with some public act on the part of one lower in rank—e. g. calling a meeting of the commons. The tribune of the people could thus interfere with the praetor, quaestor, and aedile, so that it was even open to the tribunes of the people to refuse a triumph to a consul or a praetor. (2) The quashing of an official act. As in (1), this might be issued by a higher official against a lower one; and also by one colleague against another—e. g. by tribune against tribune. It was necessary that the intercessio should be made in person, and in general immediately after the act in question. It was employed against judicial decisions, administrative ordinances (solely on the appeal of the person concerned); also against decrees of the Senate and motions in the popular assembly. The later species of intercessio early became a special right of the *tribuni* (q. v.). (3) In general legal procedure, intercessio means the assumption by one person of another's debt. To become an *intercessor*, he must incur liability by entering into a contract or other similar transaction with the other person's creditors. See Gaius, iii. 110–127, ed. Poste.

Intercidōna. The name given by the Italian tribes to one of the three divinities who, during child-bed, protected mother and child from being tormented by the wood-god Silvanus (Varr. *ap.* Aug. *De Civ. Dei*, vi. 9). See PICUMNUS.

Intercīsa or **Petra Pertūsa.** A town in Umbria, named from its road cut through the rocks by order of Vespasian.

Intercīsi Dies. See DIES.

Intercolumnium (*μεσοστύλιον*). The space left between one column and another in a colonnade (Cic. *Verr.* ii. 1. 19). See PORTICUS.

Interdictio Aquae et Ignis. The Roman term for exclusion from the common use of fire and water, which were the symbols of the community. See EXSILIUM.

Interdictum. The intervention by the praetor or proconsul in certain legal controversies to command the abstention from some act—e. g. to forbid the disturbance of some possessions or the desecration of consecrated ground. An order requiring the performance of some act is called *decretum*. Orders of restitution are styled *restitutoria;* of production, *exhibitoria;* of abstention, *prohibitoria*. (Cf. Gaius, iv. 139, 140, with Poste's note.) The interdict probably arose in cases where there was no statutory action, but where the intervention of the supreme authority was necessary to maintain law and order. In later times, the praetor ceased to intervene absolutely, but made his action conditional, referring the case to a *iudex* and directing the interested parties to stake a wager (*sponsio*) on the question at issue. See Machelard, *Théorie des Interdits;* and Muirhead, *Historical Introduction to the Private Law of Rome*, § 73.

Interest of Money. See FENUS.

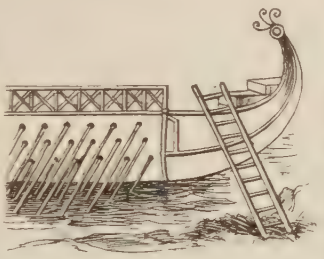
Intermetium. The barrier between the *metae* or goals of a race-course; the same as the *spina*. See CIRCUS, pp. 352, 353.

Intermontium. See article in the Appendix.

Internum Maré. The Mediterranean Sea, extending on the west from the Strait of Hercules, which separated it from the Atlantic, to the coasts of Syria and Asia Minor on the east. It was called by the Romans, Maré Internum or Intestinum; by the Greeks, *ἡ ἔσω θάλαττα*, or *ἡ ἐντὸς θάλαττα*, or, more fully, *ἡ ἐντὸς Ἡρακλείων στηλῶν θάλαττα*, and by Herodotus, *ἥδε ἡ θάλαττα;* and from its washing the coasts both of Greece and Italy, it was also called, by both Greeks and Romans, Our Sea (*ἡ ἡμετέρα θάλαττα, ἡ καθ' ἡμᾶς θάλαττα*, Maré Nostrum). The term Maré Mediterraneum is not used by the best classical writers, and occurs first in Solinus. The ebb and flow of the tide are percept-

ible in only a few parts of the Mediterranean, such as in the Syrtes on the coast of Africa, in the Adriatic, etc. The different parts of the Mediterranean are called by different names, which are spoken of in separate articles. See AEGEUM MARÉ; HADRIATICUM MARÉ; SICULUM MARÉ; TYRRHENUM MARÉ.

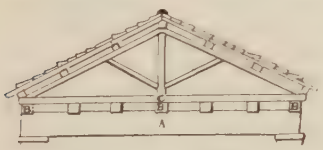
Internundĭnum. The Roman week. See CALENDARIUM; NUNDINAE.



Interpres. An interpreter; used by the foreign embassies at Rome; by Roman merchants in foreign cities; and by the Roman officials in the provinces. See Pliny, *H. N.* vi. 15; Val. Max. ii. 2, § 2.

Interrēges (*μεσοβασιλεῖς*). The name given by the Romans to the senators who, between the death of one king and the election of another, held regal authority, during the *interregnum*, for successive periods of five days each. One of these interreges had to conduct the election itself. Even under the Republic an interrex was nominated by the Senate to hold the Comitia for the election of consuls, whenever the consuls had died, or resigned, or if the election had not been completed by the end of the year. If five days did not suffice, the retiring interrex named another to succeed him. See Mommsen, *Röm. Staatsrecht*, vol. i. 647–660.

Interregnum. See INTERREGES.



Interrex. See INTERREGES.

Interscalmium. The space between thowl and thowl on the side of a vessel (Vitruv. i. 2, 4); consequently represented on the outside by the space between one oar, or oar-port, and another.

Interscalmia. (From Rich after a Roman fresco.)

Intertignium. The space between the ends of the tie beams (*tigna*, B B B in the illustration) which rest upon the architrave (*trabs*, A) in the timber work of a roof (Vitruv. iv. 2, 2, and 4). Six of these are here shown; and in the earliest buildings these intervals were left open; but, subsequently, they were covered over with slabs of marble, so as to form part of a continuous frieze (*zophorus*), or to form a metope (*metopa*) in the Doric order.

Intertignium. (Rich.)

Interŭla. See TUNICA.

Intestātus. One who has made no will. See HERES; TESTAMENTUM.

Intonsus. "The unshorn." An epithet applied to Apollo and Bacchus with reference to their eternal youth.

Inui Castrum. See CASTRUM (1).

Inuus. See FAUNUS.

Inventarium. A list or inventory.

Inventio Crucis. See HELENA.

Investis. A Roman who has not yet assumed the *toga virilis*. See IMPUBES.

Io (Ἰώ). The beautiful daughter of Inachus, and the first priestess of Heré at Argos. As Zeus loved her, she was changed by the jealousy of Heré into a white heifer, and Argus of the hundred eyes was appointed to watch her. When Hermes, at the command of Zeus, had killed Argus, Heré maddened the heifer by sending a gad-fly which perpetually pursued her. Io thus wandered through the continents of Europe and Asia, by land and by sea. Each of the different straits she swam across was named after her Bosporus, or Ox-ford. At last in Egypt she recovered her original shape, and bore Epaphus to Zeus. Libya, the daughter of Epaphus, became by Poseidon the mother of Belus, who in turn was father of Aegyptus, Danaus, Cepheus, and Phineus. The Greek legend of Io's going to Egypt is probably to be explained by her having been identified with the Egyptian goddess Isis, who is always represented with cow's horns. Io ("the wanderer") is generally explained as a moon-goddess wandering in the starry heavens, symbolized by Argus of the hundred eyes; her transformation into a horned heifer representing the crescent moon.

Ioannes. The name of several Byzantine emperors. See BYZANTINUM IMPERIUM.

Ioannes Chrysostŏmus. See CHRYSOSTOMUS.

Ioannes Chrysolōras. See CHRYSOLORAS.

Ioannes Laurentius. See LYDUS.

Ioannes Secundus (JAN EVERARD). A Dutch artist and scholar, justly celebrated for his Latin verse. He was born at the Hague, November 11, 1511, and died at Utrecht, September 24, 1536. He won some success for his painting and sculpture, and was one of the suite of Charles V. in his expedition to Tunis. His Latin verses are written with classical purity and show an exquisite felicity of expression, which has led to their translation and imitation in many languages. The finest is the *Basia* ("Kisses"), published at Utrecht in 1539. It consists of separate poems, each descriptive of a kiss. The grace and melody of the lines and their voluptuous warmth of feeling have led them to be compared with the love-lyrics of Catullus, and the comparison is fully justified. There is a translation in prose and verse, with notes, in the Bohn series (London, 1858). The collected works of Everard, comprising elegies, odes, and epigrams, were published under the title *Opera Poetica* by his brothers at Paris in 1541, and have since been reprinted (Göttingen, 1748; Leyden, 1821).

Iobătes (Ἰοβάτης). A king of Lycia, father of Anteia, and son-in-law of Proetus, king of Tiryns, by whom he was commissioned to kill Bellerophon (q. v.).

Iocasté or **Iocasta** (Ἰοκάστη, called Ἐπικάστη in Homer). The wife of Laïus, and mother of Oedipus. See OEDIPUS.

Iocus. A joke. See JESTS.

Iol. See CAESAREA (2).

Iolāus (Ἰόλαος). Son of Iphicles, the half-brother of Heracles, and the faithful companion and charioteer of that hero. For his help in destroying the Lernaean hydra and in the fight with Cycnus, Heracles transferred to him his first wife Megara. The friendship he had devoted to the

father he continued to the children of Heracles in defending them against Eurystheus. As the comrade of Heracles he was worshipped beside him in Thebes, where the gymnasium was named after him, and where the inhabitants used to swear by his name.

Iolcus (Ἰωλκός). An ancient town in Magnesia in Thessaly, at the top of the Pagasean Gulf, about a mile from the sea. It was celebrated in mythology as the residence of Pelias and Iason, and as the place from which the Argonauts sailed in quest of the golden fleece.

Ion (Ἴων). (1) According to the Attic story, the son of Apollo and Creüsa, daughter of the Athenian king Erechtheus. He was exposed at his birth by his mother in a grotto on the cliff of the Acropolis, whence he was taken by Hermes to Delphi and brought up by the Pythian priestess to be an attendant in his father's temple. Creüsa afterwards married Xuthus, who had migrated from Thessaly, and was son of Hellen and brother of Aeolus and Dorus. As this marriage was childless, the pair went to Delphi to consult the god as to the cause. Xuthus received the command to consider as his son the first person he should meet in front of the temple. This happened to be Ion, who had meanwhile grown up, and was at once accepted by Xuthus as his son. But Creüsa, fancying he was her husband's son by a former union, resolved to poison him. Ion detected her design in time and would have killed Creüsa, who, however, took refuge at the altar of the god. Then the Pythian priestess produced the cradle in which he had been exposed as an infant, and thus brought about recognition and reconciliation between mother and son. Ion married Helicé, the daughter of Selinus, king of the Aegialeans on the north coast of the Peloponnesus. At the death of this king he became monarch of the land, and the inhabitants assumed the name of Ionians after him. Afterwards being called upon by the Athenians to help them against Eumolpus and the Eleusinians, he conquered the enemy and was made king of Athens. From the four sons who are attributed to him, Geleon, Aegicores, Argades, and Hoples, were descended the four Ionic tribes. (2) Of Chios. A Greek author of rare versatility for his time. He composed historical writings, among them a kind of memoirs of men of mark he had met, such as Sophocles; also lyric poems of the most varied types, and thirty or forty tragedies which were more remarkable for elegance and erudition than for elevation of style. When in B.C. 452 he won a dramatic victory at Athens, he is said to have presented every Athenian with a flask of Chian wine. He died at Athens in B.C. 422. There remain only scanty fragments of his works.

Iōnes (Ἴωνες). Ionians; one of the two great original divisions of the Hellenic race, the other being the Doric. Their ancestors at an early period spread over the coasts of Asia Minor, and there established a people of great commercial and intellectual activity, while the ancestors of the Dorians settled in the highlands of Northern Greece. In Asia the Ionians came into close contact with the Semitic peoples, especially at Miletus, and from them received an impulse towards civilization which they in turn imparted to their kinsmen on the other side of the Aegaean. Their name (under the form Ἰάονες) occurs only once in the *Iliad* (xiii. 685), but not long after this we find them in Attica and in a part of the Peloponnesus. Their name was by them derived from that of the mythical Ion, adopted son of Xuthus (cf. Herod. viii. 44). The Oriental peoples called the Greeks indiscriminately by the name "Ionians" (Schol. on Aristoph. *Acharn.* 104). See HELLAS; HERACLIDAE; IONIA; PELASGI.

Ionia (Ἰωνία) and **Iōnis** (in Latin poetry). A district on the west coast of Asia Minor, so called from the Ionian Greeks who colonized it earlier than any distinct historical records. The mythical account of "the great Ionic migration" relates that in consequence of the disputes between the sons of Codrus, king of Athens, about the succession to his government, his younger sons, Neleus and Androclus, resolved to seek a new home beyond the Aegean Sea. Attica was at the time overpeopled by numerous exiles, whom the great revolution, known as "the return of the Heraclidae," had driven out of their own States, and the chief of whom were the Ionians who had been expelled from Peloponnesus by the Dorian invaders. A large portion of this superfluous population went forth as Athenian colonists, under the leadership of Androclus and Neleus, and of other chieftains of other races, and settled on that part of the western shores of Asia Minor which formed the coast of Lydia and part of Caria, and also in the adjacent islands of Chios and Samos, and in the Cyclades. The mythical chronology places this great movement 140 years after the Trojan War, or 60 years after the return of the Heraclidae—that is, in B.C. 1060 or 1044, according to the two chief dates imagined for the Trojan War.

Passing from mythology to history, the earliest authentic records show us the existence of twelve great cities on the above-named coast, claiming to be (though some of them only partially) of Ionic origin, and all united into one confederacy, similar to that of the twelve ancient Ionian cities on the north coast of the Peloponnesus. The district they possessed formed a narrow strip of coast, extending between, and somewhat beyond, the mouths of the rivers Maeander on the south, and Hermus on the north. The names of the twelve cities, going from south to north, were Miletus, Myus, Priené, Samos (city and island), Ephesus, Colophon, Lebedus, Teos, Erythrae, Chios (city and island), Clazomenae, and Phocaea; the first three on the coast of Caria, the rest on that of Lydia. The city of Smyrna, which lay within this district, but was of Aeolic origin, was afterwards (about B.C. 700) added to the Ionian confederacy. The common sanctuary of the league was the Panionium (*πανιώνιον*), a sanctuary of Poseidon Heliconius, on the north side of the promontory of Mycalé, opposite to Samos; and here was held the great national assembly (*πανήγυρις*) of the confederacy, called Panionia (*πανιώνια*). It is important to observe that the inhabitants of these cities were far from being exclusively and purely of Ionic descent. The traditions of the original colonization and the accounts of the historians agree in representing them as peopled by a mixture, not only of Hellenic races, but also of these with the earlier inhabitants, such as Carians, Leleges, Lydians, Cretans, and Pelasgians; their dialects, Herodotus expressly tells us, were very different, and nearly all the cities were founded on the sites of pre-existing native settlements. The religious rites, also, which

the Greeks of Ionia observed, in addition to their national worship of Poseidon, were borrowed in part from the native peoples; such were the worship of Apollo Didymaeus at Branchidae near Miletus, of Artemis at Ephesus, and of Apollo Clarius at Colophon. All these facts point to the conclusion that the Greek colonization of this coast was effected, not by one, but by successive emigrations from different States, but chiefly of the Ionic race.

The central position of this district, its excellent harbours, and the fertility of its plains, watered by the Maeander, the Cayster, and the Hermus, combined with the energetic character of the Ionian race to confer a high degree of prosperity upon these cities; and it was not long before they began to send forth colonies to many places on the shores of the Mediterranean and the Euxine, and even to Greece itself. During the rise of the Lydian Empire, the cities of Ionia preserved their independence until the reign of Croesus, who subdued those on the mainland, but relinquished his design of attacking the islands. When Cyrus had overthrown Croesus, he sent his general, Harpagus, to complete the conquest of the Ionian Greeks, B.C. 557. Under the Persian rule, they retained their political organization, subject to the government of the Persian satraps, and of tyrants who were set up in single cities, but they were required to render tribute and military service to the king. In B.C. 500 they revolted from Darius Hystaspis, under the leadership of Histiaeus, the former tyrant of Miletus, and his brother-in-law Aristagoras, and supported by aid from the Athenians. The Ionian army advanced as far as Sardis, which they took and burned; but they were driven back to the coast, and defeated near Ephesus, B.C. 499. The reconquest of Ionia by the Persians was completed by the taking of Miletus, in 496, and the Ionians were compelled to furnish ships and to serve as soldiers, in the two expeditions against Greece. After the defeat of Xerxes, the Greeks carried the war to the coasts of Asia, and effected the liberation of Ionia by the victories of Mycalé (479), and of the Eurymedon (469). In 387 the peace of Antalcidas restored Ionia to Persia; and after the Macedonian conquest, it formed part, successively, of the kingdom of Pergamus and of the Roman province of Asia. For the history of the several cities, see the respective articles.

In no country inhabited by the Hellenic race, except at Athens, were the refinements of civilization, the arts, and literature more highly cultivated than in Ionia. The restless energy and free spirit of the Ionians, the riches gained by commerce, and the neighbourhood of the great seats of Asiatic civilization, combined to advance with rapidity the intellectual progress and the social development of its people; but these same influences, unchecked by the rigid discipline of the Doric race, or the simple earnestness of the Aeolic, imbued their social life with luxury and license, and invested their works of genius with enchanting beauty at the expense of severe good taste and earnest purpose. Out of the long list of the authors and artists of Ionia, we may mention Mimnermus of Colophon, the first poet of the amatory elegy; Anacreon of Teos, who sang of love and wine to the music of the lyre; Thales of Miletus, Anaxagoras of Clazomenae, and several other early philosophers; the early annalists, Cadmus, Dionysius, and Hecataeus, all of Miletus. In the fine arts, besides being the home of that exquisitely beautiful order of architecture, the Ionic, and possessing many of the most magnificent temples in the world, Ionia was the native country of that refined school of painting, which boasted the names of Zeuxis, Apelles, and Parrhasius. The most flourishing period in the history of Ionia is that during which it was subject to Persia; but its prosperity lasted till the decline of the Roman Empire, under which its cities were among the chief resorts of the celebrated teachers of rhetoric and philosophy. The important place which some of the chief cities of Ionia occupy in the early history of Christianity is attested by the Acts of the Apostles, and the epistles of St. Paul to the Ephesians, and of St. John to the seven churches of Asia.

Ionian School of Philosophy. The earliest school of Greek philosophy, devoted to physical research, the problem before them being the discovery of the ἀρχή or first principle of all things. The great names of this school are those of Thales of Miletus (B.C. 640–550), Anaximander of Miletus (B.C. 611–547), Anaximenes of Miletus (about B.C. 520), and Heraclitus of Ephesus (about B.C. 510). To this list some add Pythagoras of Samos (about B.C. 500), though he properly belongs to another division. See PHILOSOPHIA.

Ionic Dialect. See DIALECTS.

Ionic Order of Architecture. See ARCHITECTURA; CAPITULUM; COLUMNA.

Ionic Tribes. The four original divisions (φυλαί) of the inhabitants of Attica, said by the ancients to have descended from the mythical Ion, adopted son of Xuthus, after whose four sons they were said to have got their names — Γελέοντες, Αἰγικορεῖς, Ἀργαδεῖς, and Ὅπλητες. It is fairly certain, however, that the names are in reality descriptive of the respective functions of those composing each: γελέοντες, "the shining"—i. e. the noble; αἰγικορεῖς, "the goat-herds;" ἀργαδεῖς, "the artisans;" and ὅπλητες, "the warriors." See PHRATRIA.

Ionium Maré (Ἰόνιος πόντος). The sea between Italy and Greece south of the Adriatic, beginning on the west at Hydruntum in Calabria, and on the east at Oricus in Epirus, or at the Ceraunian Mountains. In more ancient times the Adriatic was called the Ionian Gulf; while at a later time the Ionium Maré itself was included in the Adriatic. In its widest signification the Ionium Maré included the Maré Siculum, Creticum, and Icarium. Its name was usually derived by the ancients from the wanderings of Io, but it was more probably so called from the Ionian colonies which settled in Cephallenia and the other islands off the western coasts of Greece.

Iŏphon (Ἰοφῶν). Son of Sophocles by Nicostraté. He was a distinguished tragic poet. For the celebrated story of his undutiful charge against his father, see SOPHOCLES.

Ioppé, IOPPA; O. T. Japho; Japha. An ancient maritime city of Palestine, lying south of the boundary between Iudaea and Samaria.

Iordānes (Ἰορδάνης). The modern Jordan. A river of Palestine, rising at the southern foot of Mount Hermon (the southernmost part of Anti-Libanus), flowing south into the Sea of Galilee (Lake of Tiberias), and thence into Lake Asphaltites (Dead Sea), where it is finally lost.

Iordānis (less correctly JORNANDES). An Alanian by birth. He wrote about the year A.D. 551 two historical works: (1) a compendium of universal history (*De Summa Temporum Gentis Romanorum*) down to A.D. 551; and (2) an abstract of Cassiodorus' history of the Goths (*De Rebus Geticis* or *De Origine Actibusque Getarum*), which, though done in a cursory and unskilful manner, is nevertheless of great value, owing to the loss of the original work. The principal edition of both works is that of Mommsen (Berlin, 1882). There is a translation of the *Getica* and of part of the *De Summa Temporum*, into German, by Martens (Leipzig, 1884). See also Jordan, *Iordanes' Leben und Schriften* (Ansbach, 1843).

Ios (Ἴος). An island in the Aegean Sea, to the north of Thera. Here, according to some accounts, Homer was interred (Pliny *H. N.* iv. 12). It was also said that the poet's mother was a native of this island. The modern name is Nio.

Iosēphus, FLAVIUS (Φλάβιος Ἰώσηπος). A celebrated Jewish historian, born at Jerusalem in A.D. 37, inheriting on his father's side the priestly office and being descended through his mother from the Asmonaean princes. After receiving an excellent education, he was sent to Rome at the age of twenty-six to plead before Nero the cause of several Jewish priests whom the procurator Felix had sent there as prisoners. After securing their release, he returned to Jerusalem, which he found on the eve of a revolt against the Romans. He endeavoured to dissuade his countrymen from the attempt, but failing in this, he entered into their plans and took the field as one of their generals. On the approach of Vespasian with a Roman army, Iosephus retired with his forces into Iotapata, where, for forty-seven days, he sustained a siege, surrendering, however, in the end. His life was spared by Vespasian through the intercession of Titus. Iosephus thereupon assumed the character of a prophet, and predicted to Vespasian that the Empire should one day be his and his son's. Vespasian treated him with respect, but did not release him from captivity until he was proclaimed emperor nearly three years afterwards (A.D. 70). Iosephus was present with Titus at the siege of Jerusalem, and afterwards accompanied him to Rome. He received the freedom of the city from Vespasian, who assigned him, as a residence, a house formerly occupied by himself, and treated him with great regard to the end of his reign. The same favour was extended to him by Titus and Domitian as well. He assumed the name of Flavius, as a dependant of the Flavian family. His time at Rome appears to have been employed mainly in the composition of his works. He died about A.D. 100.

The works of Iosephus are written in Greek of such pleasing style as to win for him the title of "the Greek Livy." They are: (1) A History of the Jewish War (Περὶ τοῦ Ἰουδαϊκοῦ πολέμου ἢ Ἰουδαϊκῆς Ἱστορίας περὶ Ἁλώσεως), in seven books, published about A.D. 75. Iosephus first wrote it in Hebrew, and then translated it into Greek. It commences with the capture of Jerusalem by Antiochus Epiphanes in B.C. 170, runs rapidly over the events before Iosephus's own time, and gives a detailed account of the fatal war with Rome. (2) On Jewish Antiquities (Ἰουδαϊκὴ Ἀρχαιολογία), in twenty books, completed about A.D. 93, and addressed to Epaphroditus. The title as well as the number of books may have been suggested by the Ῥωμαϊκὴ Ἀρχαιολογία of Dionysius of Halicarnassus. It gives an account of Jewish History from the creation of the world to A.D. 66, in which the Jews were goaded to rebellion by Gessius Florus. In this work Iosephus seeks to reconcile the Jewish religion with heathen tastes and prejudices. Thus he speaks of Moses and his law in a tone which might be adopted by any disbeliever in his divine mission. He says that Abraham went into Egypt (Gen. xii.), intending to adopt the Egyptian views of religion, should he find them better than his own. He speaks doubtfully of the preservation of Jonah by the fish. He intimates a doubt of there having been any miracle in the passage of the Red Sea, and compares it with the passage of Alexander the Great along the shore of the sea of Pamphylia. He interprets Exod. xxii. 28 as if it conveyed a command to respect the idols of the heathen. Many similar instances might be quoted from his work. (3) His own life, in one book. This is a supplement to the *Archaeologia*, and is addressed to the same Epaphroditus. It was not written earlier than A.D. 97, since Agrippa II. is mentioned in it as no longer living. (4) A treatise on the Antiquity of the Jews, or against Apion, in two books, also addressed to Epaphroditus. It is in answer to such as impugned the antiquity of the Jewish nation, on the ground of the silence of Greek writers respecting it. (See APION.) The treatise exhibits extensive acquaintance with Greek literature and philosophy. (5) Εἰς Μακκαβαίους ἢ περὶ Αὐτοκράτορος Λογισμοῦ, in one book. Its genuineness is doubtful. It is a declamatory account of the martyrdom of Eleazar (an aged priest), and of seven youths and their mother, in the persecution under Antiochus Epiphanes. The best editions of Iosephus are by Hudson (Oxford, 1720), Havercamp (Amsterdam, 1726), Dindorf (Paris, 1845–47), Bekker, 6 vols. (Leipzig, 1855–1856), and Niese (Berlin, 1886 foll.). Excellent translations into English are those of Maynard (1800), Traill and Taylor (1851), and Shilleto's revision of Whiston, 5 vols. (1889–90).

Iovīanus, FLAVIUS CLAUDIUS. A Roman emperor, born A.D. 331, the son of Veronianus, of an illustrious family of Moesia, who had filled important offices under Constantine. Iovianus served in the army of Julian, in his unlucky expedition against the Persians; and when that emperor was killed, A.D. 363, the soldiers proclaimed him successor. His first task was to save the army, which was surrounded by the Persians, and in great distress for provisions. After repelling repeated attacks of the enemy, he willingly listened to proposals for peace, and accepted conditions offensive to Roman pride. Iovianus gave up the city of Nisibis to the Persians, the inhabitants withdrawing to Amida. On his arrival at Antioch, Iovianus, who was of the Christian faith, revoked the edicts of Julian against the Christians. He also supported the orthodox or Nicene creed against the Arians, and showed his favour to the bishops who had previously suffered from the Arians, and especially to Athanasius, who visited him at Antioch. Having been acknowledged over the whole Empire, Iovianus set off during the winter to Constantinople. At Ancyra he assumed the consular dignity; but, a few days after, being at a place called Dadastana, in Galatia, he was found dead in his bed, having

been suffocated, as some say, by the vapour of charcoal burning in his room; according to others, by the steam of the plaster with which it had been newly laid; while others, again, suspected him of having been poisoned or killed by some of his guards. He died February 16, A.D. 364, after a reign of only seven months. The army proclaimed Valentinianus as his successor (Amm. Marcell. xxv. 5 foll.).

Iovīnus. A person born of a noble family of Gaul who assumed the imperial title under the weak reign of Honorius, and, placing himself at the head of a mixed army of Burgundians, Alemanni, Alani, etc., took possession of part of Gaul, A.D. 411. Ataulphus (Athawulf), king of the Visigoths, offered to join Iovinus, and share Gaul between them; but the latter having declined his alliance, Ataulphus made peace with Honorius, attacked and defeated Iovinus, and, having taken him prisoner, delivered him to Dardanus, prefect of Gaul, who had him put to death at Narbo (Narbonne), A.D. 412.

Iphianassa (Ἰφιάνασσα). See IPHIGENIA.

Iphias (Ἰφιάς). Evadné, a daughter of Iphis, and wife of Capaneus.

Iphĭcles (Ἰφικλῆς) and **Iphĭclus** (Ἴφικλος). (1) A son of Amphitryon and Alcmené, born at the same birth with Heracles. The children were but eight months old when Heré sent two huge serpents into the chamber to devour them. Iphicles alarmed the house by his cries, but Heracles raised himself up on his feet, caught the two monsters by the throat, and strangled them (Theocr. *Idyll.* 24; Apollod. ii. 4). Iphicles, on attaining to manhood, was slain in battle during the expedition against the sons of Hippocoön, who had beaten to death Oeonus, the son of Licymnius (Pausan. iii. 15. 4). (2) A king of Phylacé in Phthiotis, whose name is connected with one of the legends relative to Melampus (q. v.). (3) One of the Argonauts, distinguished for his speed in running.

Iphicrătes (Ἰφικράτης). A famous Athenian general, son of a shoemaker. He introduced into the Athenian army the peltastae or targeteers, a body of troops possessing, to a certain extent, the advantages of heavy and light armed forces. This he effected by substituting a small target for the heavy shield, adopting a longer sword and spear, and replacing the old coat of mail by a linen corselet. At the head of his targeteers he defeated and nearly destroyed a Spartan mora, in B.C. 392, an exploit which became very celebrated throughout Greece. He also defeated Anaxibius at the Hellespont (388), aided the Persians in subduing Egypt (377), reduced Cephallonia (373), and commanded in the Social War. He married the daughter of Cotys, king of Thrace, and died shortly before 348.

Iphigenīa (Ἰφιγένεια, in Homer Ἰφιάνασσα). Daughter of Agamemnon and of Clytaemnestra, or (according to another account) of Theseus and Helen (q. v.), and brought up by Clytaemnestra as her own child to hide her sister's shame. When the Greek ships were detained at Aulis by the calm caused by the wrath of Artemis against Agamemnon for killing a hind sacred to that goddess, and boasting that he was superior to her in the chase, the seer Calchas announced that the goddess could be appeased only by the sacrifice of Iphigenia. According to another story, Agamemnon had vowed, before the birth of Iphigenia, that he would sacrifice to the goddess whatever the year brought forth that was loveliest, but had neglected to keep his vow. After a long struggle Agamemnon finally gave way to the pressure put upon him by Menelaüs, and sent for his daughter to come to Aulis under the pretext of betrothing her to Achilles. During the sacrifice Artemis substituted a hind for her, and carried her off in a cloud to the land of the Tauri (the modern Crimea), where, as priestess of the goddess, it fell to her lot to offer up as victims all strangers who were shipwrecked on the coast. Orestes, who,

Sacrifice of Iphigenia. (Pompeian Painting.)

commanded by the oracle, had gone there to bring to Attica the image of the goddess, was on the point of being sacrificed by her, when she recognized him as her brother and allowed herself to be carried off by him together with the image. At Delphi her sister Electra wanted to put her eyes out, on hearing that the Tauric priestess had slain Orestes; but was prevented from doing so by her brother's arrival. She is said to have brought the image of the Tauric Artemis to the Attic deme of Brauron, and to have died and been buried there as its priestess. She was even introduced into Attic legend as daughter of Theseus and Helen. In other places also, such as Sparta, the image was shown, and she was regarded as a priestess who had brought it to Greece from among the Scythians. In all probability Iphigenia was originally a designation of Artemis herself, and out of this epithet of the goddess the personality of the priestess was in time evolved. Her grave was also shown at Megara. According to another legend, she is said to have been made immortal by Artemis, and to have lived on in the island of Leucé as the wife of Achilles under the name of Orsilochia. Two plays of Euripides (*Iphigenia at Aulis* and *Iphigenia among the Tauri*) deal with her story.

Iphimedīa (Ἰφιμέδεια) or **Iphimĕdé** (Ἰφιμέδη). The wife of Aloeus. She became by Poseidon the mother of the Aloadae, Otus and Ephialtes. See ALOADAE.

Iphis (Ἶφις). (1) A youth in love with Anaxaretē (q. v.). (2) A Cretan girl, brought up as a boy, and, on being betrothed to Ianthē, metamorphosed by Isis into a youth (Ovid, *Met.* ix. 665, etc.).

Iphĭtus (Ἴφιτος). (1) A son of Eurytus, king of Oechalia. (See HERACLES.) (2) A king of Elis, son of Praxonides, in the age of Lycurgus. He re-established the Olympic Games 470 years after their first institution, or B.C. 884. It was not, however, until 108 years after this (B.C. 776) that the custom was introduced of inscribing in the gymnasium at Olympia the names of those who had borne off the prize in the stadium. (Pausan. v. 4, 5).

Ipsus (Ἴψος). A small town in Great Phrygia, celebrated for the great battle in which Antigonus was defeated and slain by Seleucus and Lysimachus, B.C. 301. See ANTIGONUS.

Ira (Εἶρα, Ἰρά). A mountain stronghold in Messenia, in which Aristomenes defended himself for eleven years against the Spartans in the Second Messenian War. See ARISTOMENES; MESSENIA.

Iranian Languages. See INDO-EUROPEAN LANGUAGES.

Ireland. See HIBERNIA.

Iren (εἶρην and ἰρήν). See EDUCATION, p. 570.

Irenaeus (Εἰρηναῖος). A native of Greece, disciple of Polycarp, and bishop of Lyons, in France. The time of his birth and the precise place of his nativity cannot be satisfactorily ascertained. On the martyrdom of Photinus, his predecessor in the see of Lyons, Irenaeus, who had been a distinguished member of the church in that quarter, was appointed his successor in the diocese, A.D. 177, and presided in that capacity at two councils held at Lyons, in one of which the Gnostic heresy was condemned and in another the Quartodecimani. He also went to Rome, and disputed there publicly with Valentinus, Florinus, and Blastus, against whose opinions he afterwards wrote with much zeal and ability. He wrote on different subjects; but there remains only a barbarous Latin version of a work, *Adversus Haereses*, in five books, written to confute the Gnostics and Ebionites. Fragments of his works in Greek are, however, preserved, which prove that his style was simple, though clear and often animated. His opinions concerning the soul are curious. He is said to have suffered martyrdom about A.D. 202. His day is the 28th of June.

The *editio princeps* of the *Adversus Haereses* is that of Erasmus (Basle, 1526). The best editions are those of Stieren (Leipzig, 1851–53) and Harvey (Cambridge, 1857). There is an English translation in Clark's *Ante-Nicene Library*. On the views of Irenaeus, see Werner, *Der Paulinismus des Irenaeus* (1890).

Irēnē (Εἰρήνη), called Pax by the Romans. The goddess of peace was, according to Hesiod, a daughter of Zeus and Themis and one of the Horae. (See HORAE.) She was worshipped at Athens and Rome; and in the latter city a magnificent temple was built to her by the emperor Vespasian. Pax is represented on coins as a youthful female, holding in her left arm a cornucopia and in her right hand an olive branch or the staff of Mercury. See HORAE.

Irēnē (Εἰρήνη). See BYZANTINUM IMPERIUM.

Iris (Ἶρις). Daughter of Thaumas (whence she is called Thaumantias) and of Electra, and sister of the Harpies. In the *Iliad* she appears as the messenger of the gods; but in the *Odyssey*, Hermes (Mercury) is the messenger of the gods, and Iris is never mentioned. Iris was originally the personification of the rainbow, which was regarded

Iris. (Parthenon frieze.)

as the swift messenger of the gods. In the earlier poets Iris appears as a virgin goddess; but in the later she is the wife of Zephyrus and the mother of Eros (Amor). Iris is represented in works of art, dressed in a long and wide tunic, over which hangs a light upper garment, with wings attached to her shoulders, carrying the herald's staff in her left hand, and sometimes also holding a vase. See Bergstedt, *Studia Archaeologica* (Upsala, 1881).

Iris (Ἶρις). The modern Yeshil-Irmak; a considerable river of Asia Minor, rising on the north side of the Anti-Taurus and flowing through Pontus into the Sinus Amisenus in the Euxine.

Iron. See METALLUM.

Irpex. A heavy rake or harrow set with teeth and drawn over the ground by cattle to tear up the weeds (Varr. *L. L.* v. 136).

Irus (Ἶρος). (1) A beggar of Ithaca, remarkable for his large stature and unusual gluttony. His original name was Arnaeus, but he received that of Irus, as being the messenger of the suitors of Penelopē. Irus attempted to obstruct the entrance of Odysseus into the palace, under the mean disguise assumed by the latter on his return home, and in presence of the whole court challenged him to fight. Odysseus immediately brought him to the ground with a single blow (*Odyss.* xviii. 1 foll.). (2) The son of Actor and father of Eurydamus and Eurytion. He purified Peleus (q. v.) after the latter had killed Phocus. During the Calydonian boar-hunt, Peleus accidentally slew Eurytion.

Is (Ἶς). The modern Hit; a city in the south of Mesopotamia, eight days' journey from Babylon, on the west bank of the Euphrates, and upon a little river of the same name. In its neighbourhood were the springs of asphalt from which was obtained the bitumen that was used, instead of mortar, in the walls of Babylon. (Herod. i. 179).

Isădas (Ἴσαδας). A young Spartan, who, when Epaminondas and the Thebans had attacked Lacedaemon and the city was in danger of falling into their hands, rushed forth from his dwelling stark naked and newly anointed with oil, having nothing but a spear in one hand and a sword in the

other, and in this condition contended valiantly against the foe. The Ephori honoured him with a chaplet for his gallant achievement, but at the same time fined him 1000 drachmas for having dared to appear without his armour (Plut. *Ages.*).

Isaeus (Ἰσαῖος). One of the ten Attic orators. He was born at Chalcis, and came to Athens at an early age. He wrote judicial orations for others and established a rhetorical school at Athens, in which Demosthenes is said to have been his pupil. He lived between B.C. 420 and 348. Eleven of his orations are extant, all relating to questions of inheritance. They afford considerable information respecting this branch of the Attic law, of which he was a master, and are marked by intellectual acumen, clearness of statement, and vigour of style. Edited with the other orations by Reiske (1773), Bekker (1823–28), Dobson (1828), Baiter and Sauppe (1839–43); and separately by Schömann (1831); with notes by Burmann (1883), and by Scheibe in the Teubner series. See Blass, *Attische Beredsamkeit*, vol. ii.; May, *Les Plaidoyers d' Isée* (Paris, 1876); and on the style, Lincke, *De Elocutione Isaei* (1884).

Isagŏras (Ἰσαγόρας). The leader of the oligarchical party at Athens, opposing Clisthenes, B.C. 510. He was finally expelled from Athens by the party of the people. See CLISTHENES.

Isăra. The modern Isère; a river in Gallia Narbonensis, descending from the Graian Alps, and flowing into the Rhone north of Valentia.

Isauria (Ἰσαυρία). A district of Asia Minor, on the northern side of the Taurus, between Pisidia and Cilicia, whose inhabitants, the Isauri, were daring robbers. They were defeated by the Roman consul, L. Servilius, in B.C. 75, who received in consequence the surname of Isauricus. Two Byzantine emperors (Zeno I. and Leo III.) were Isaurians. See BYZANTINUM IMPERIUM.

Isca. (1) A town of the Damnonii or Dumnonii in Britain, now Axminster or Exeter. (2) A town of the British Silures, now Caerleon.

Ischys. See AESCULAPIUS.

Iselastĭci Ludi. The four great games of Greece—i. e. the Olympian, Isthmian, Nemean, and Pythian. They were so called because the victors, after the contests were over, entered their native towns crowned and in a triumphal chariot (*εἰσήλασαν*) drawn by four horses (Pliny, *Epist.* x. 118; cf. Suet. *Nero*, 25). In later times the reward given by the Roman emperors to the victors at the Iselastic Games was called *iselasticum* (Trai. *ad* Pliny, *Epist.* x. 119).

Isidōrus (Ἰσίδωρος). A Spaniard who, from the beginning of the seventh century, was bishop of Seville (in Latin *Hispalis*, whence he is called Hispalensis). He died about A.D. 636. He possessed a width of reading which was remarkable for his time, and an extraordinary faculty for collecting information. Next to Boëtius and Cassiodorus, he exercised the most important influence upon the general culture and literature of the Middle Ages. Besides works on grammar, theology, and history (including a chronicle of the world to his own day, and histories of the Goths, Vandals, and Suevi), he composed in the last years of his life his greatest and most important work—an immense but imperfect encyclopaedic survey of all knowledge, in twenty books, entitled the *Etymologiae* or *Origines*, from its often very capricious and marvellous explanations of the various subjects of which it treats. Though it is only a vast congeries of collected excerpts, devoid of a single original idea, it is nevertheless important owing to the variety of its contents and its citations from writings now lost, such as those of Suetonius. Another work, which is similarly a compilation, but was greatly used in the Middle Ages, is his *De Natura Rerum*, a handbook of natural history.

The complete text of Isidorus is given in the Abbé Migne's *Patrologia Latina*, 4 vols., reprinted from Arevalo (1850). The *De Natura Rerum* is edited separately by G. Becker (Berlin, 1857), and the *Origines* in Lindemann's *Corpus Grammaticorum Veterum* (Leipzig, 1833), by Otto.

Isionda (Ἰσιόνδα). A city of Pisidia in Asia Minor, near Termessus.

Isis (Ἶσις). The divinity most extensively worshipped, with her brother and husband Osiris, by the Egyptians, among whom she represented the feminine, receptive, and producing principle in nature. As the goddess of procreation and birth her symbol was the cow. On monuments she is mostly represented as of youthful appearance with a cow's horns on her head, between the horns the orb of the moon, and with a sceptre of flowers and the emblem of life in her hands. Her greatest temple stood at Busiris (i. e. Pe-Osiri, or Abode of Osiris) in the midst of the Delta of the Nile, where, amidst the fruitful fields, the inhabitants worshipped the mightiest god and goddess with ceremonies which typified the search and discovery of Osiris by his mourning wife after his murder by Typhon. Like Osiris she was a divinity who ruled over the world below. In the course of the fusion of religions which took place under the Ptolemies, Isis and Osiris were confounded with all manner of Asiatic and Greek gods. In process of time she became in her power the most universal of all goddesses, ruling in heaven, on earth, and on the sea, and in the world below, decreeing life and death, deciding the fate of men, and dispensing rewards and punishments. Her worship spread over Greece, and after the Second Punic War obtained a firm footing in Rome in spite of repeated interference by the State. In the days of the Empire it obtained recognition by the State and established itself in all parts of the Roman dominions. The attractiveness of the service of Isis lay in the religious satisfaction which it was calculated to insure. Through

Egyptian Isis and Horus (Harpocrates). (Berlin Museum.)

abstinence from food and from sensual pleasures, and through expiations and purifications, it promised to lead its votaries to sanctification of life and to a true perception of the life divine. The ritual consisted in part of a morning and evening service to the god, partly in annual festivals celebrated in spring at the return of the season for navigation, and also in the late autumn before the advent of winter. At the former festival, held on the fifth of March, and called the ship of Isis (*Isidis navigium*), in recognition of her being the patroness of navigation, and inventress of the sail, the people in general, with the devotees and priests of Isis, went in solemn procession down to the seashore, where a sailing-vessel painted in the Egyptian manner and laden with spices, was committed to the sea (Apul. *Met.* xi. 8–17, esp. 11; Firm. Matern. *De Err. Prof. Relig.* 2).

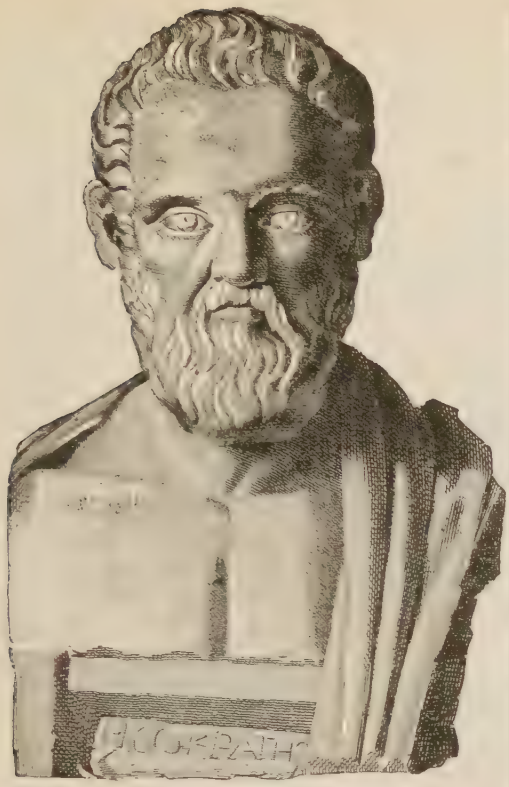
Isis. (Cairo Museum.)

The other feast was emblematic of the grief of Isis at her loss and her joy at finding again her husband Osiris and her son Horus. Besides these popular feasts there were also certain special mysteries of Isis, which in all their essentials were borrowed from the Eleusinian mysteries of Demeter. (See MYSTERIA.) In these, all who were called thereto by the goddess in a dream were admitted to the select circle of the worshippers of Isis. These devotees, like the priests, were recognized by their linen robes and their shaven heads, and had to devote themselves to an ascetic life. Oracular responses received in dreams were as much associated with the temples of Isis as with those of Serapis (q. v.). In Greek art the goddess is represented as similar to Heré. Her attributes are a serpent, a cornucopia, ears of corn, lotus, moon and horns, as well as the *sistrum* (q. v.), a metal rattle, specially employed in her service.

See Chantepie de la Saussaye, *Lehrbuch der Religionsgeschichte*, vol. i. (1887); R. Lepsius, *Ueber den ersten ägyptischen Götterkreis* (1851); Brugsch Pasha, *Religion und Mythologie der alten Aegypter*, vol. i. (1884); Lefébure, *Étude de la Religion Égyptienne* (1886).

Ismărus (Ἴσμαρος) or **Ismăra**. A town in Thrace, near Maronea, situated on a mountain of the same name, which produced excellent wine. It is mentioned in the *Odyssey* as a town of the Cicones. The poets frequently use the adjective Ismarius as equivalent to Thracus. Near Ismarus was Lake Ismaris.

Ismēné (Ἰσμήνη). The daughter of Oedipus and Iocasta and sister of Antigoné (q. v.).



Ismenias (Ἰσμηνίας). (1) A celebrated musician of Thebes. When he was taken prisoner by the Scythians, Atheas, the king of the country, observed that he liked the neighing of his horse better than all the music of Ismenias. (2) A Theban general, sent to Persia on an embassy by his countrymen. As none were admitted into the king's presence without prostrating themselves at his feet, Ismenias, when he was introduced, dropped his ring, and the motion he made to recover it from the ground being mistaken for the required homage, Ismenias had a satisfactory audience with the monarch (Aelian, *V. H.* i. 21).

Ismēnus (Ἰσμηνός). A small river in Boeotia, rising in Mount Cithaeron, flowing through Thebes, and falling into the lake Hylica. The brook from the fountain Dircé, so celebrated in Theban story, flowed into the Ismenus. From this river Apollo was called Ismenius.

Ismēnus (Ἰσμηνός). The son of Amphion and Niobé. Being struck by one of Apollo's arrows, he fell into the Theban river Ladon, which after this was called from him Ismenus. See NIOBÉ.

Isocrătes (Ἰσοκράτης). The fourth among the ten Attic orators (q. v.). He was born at Athens in B.C. 436, the son of Theodorus, the wealthy proprietor of a flute manufactory, who provided for his son a thorough education. Accordingly, he had the advantage of being instructed by Prodicus, Protagoras, Theramenes, and above all by Gorgias; his character was also moulded by the influence of Socrates, although he never belonged to the more restricted circle of that philosopher's pupils.

Bashfulness and a weak voice prevented him from taking part in public life. After the fall of the Thirty, as his father had lost his means in the calamitous years that closed the Peloponnesian War, he turned his attention to composing forensic speeches for others. After having taught rhetoric at Chios (probably about B.C. 404), he returned to Athens in 403, and there opened a regular school of rhetoric about 392. It was largely attended by both Athenians and non-Athenians, and gained for him considerable wealth. The total number of his pupils has been given at one hundred, including Timotheus, son of Conon, the orators Isaeus, Hyperides, and Lycurgus, and the historians Ephorus and Theopompus. Each pupil paid him 1000 drachmae. Isocrates also had friendly relations with foreign princes, especially with Evagoras of Cyprus and his son Nicocles, who loaded him with

Isocrates. (Villa Albani.)

favours. He kept himself completely aloof from any personal share in the public life of his day; yet attempted to influence the political world, not only within the narrow bounds of his native land, but also throughout the whole of Greece, by a series of rhetorical declamations, not intended to be delivered, but only to be read. This he did in the first place in his *Panegyricus* (Παηγυρικός), which he published in B.C. 380, after spending ten or, according to another account, as many as fifteen years over its preparation. It is a kind of festal oration, eulogizing the services of Athens to Greece, exhorting the Spartans peacefully to share the supremacy with Athens, and calling on the Greeks to lay aside all internal dissensions and to attack the barbarians with their united strength. In the ninetieth year of his age, in a discourse addressed to Philip in B.C. 346, he endeavoured to induce that monarch to carry out his policy by reconciling all the Greeks to one another and leading their united forces against the Persians. Other discourses relate to the internal politics of Athens. Thus, in the *Areopagiticus* (B.C. 354), he recommends his fellow-citizens to get rid of the existing weaknesses in their political constitution by returning to the democracy as founded by Solon and reconstituted by Clisthenes, and by reinstating the Areopagus as the supreme tribunal of censorship over public decorum and morality. He retained his mental and bodily powers unimpaired to an advanced age, and in his ninety-eighth year completed the *Panathenaicus*, a discourse in praise of Athens. He lived to see the total wreck of all his hopes for a regeneration of Greece, and died B.C. 338, a few days after the battle of Chaeronea. He is said to have died of voluntary starvation, owing to his despair at the downfall of Greek liberty; but this account of his death, made familiar to the English world by Milton in his fifth English sonnet, must be considered as doubtful.

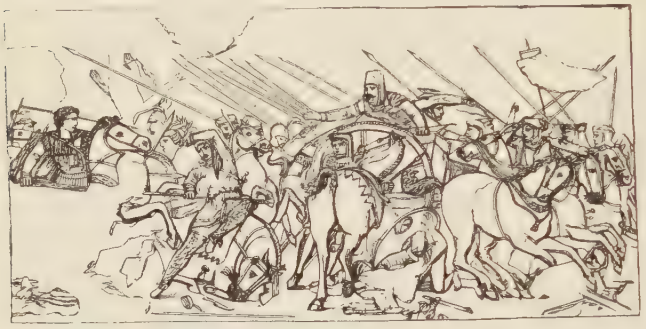
There were sixty compositions bearing his name known to antiquity, but less than half that number were considered genuine. Of the twenty-one which have come down to us, the first, the letter to Dominicus, is often regarded as spurious, but there is no reason to doubt the genuineness of nine of the ten other letters. It is only the letter prefixed to the nine in the older editions that is not genuine, having been really written by Theophylact Simocatta early in the seventh century A.D. Of the speeches, six are forensic orations, written to be delivered by others; the rest are declamations, chiefly on political subjects. By his mastery of style, Isocrates had a far-reaching influence on all subsequent Greek prose, which is not confined to oratorical composition alone. His chief strength lies in a careful choice of expression, not only in his vocabulary, but also in the rhythmical formation of his flowing periods, in a skilful use of the figures of speech, and in all that lends euphony to language. Even in Latin the oratorical prose of Cicero is, on its formal side, based chiefly on that of Isocrates; and as modern literary prose has, in its turn, been largely modelled on that of Cicero, the influence of Isocrates has endured to the present day.

The first separate edition of Isocrates is that of Demetrius Chalcocondylas (Milan, 1493). The best modern editions are those of Lange (Halle, 1803); G. S. Dobson, with a Latin rendering, notes, and scholia, 2 vols. (London, 1828); Baiter and Sauppe, 2 vols. (Zürich, 1850); and separately by Benseler-Blass (Leipzig, 1882). There are good editions, with English notes, of the *Demonicus* and *Panegyricus* by Sandys (London, 1872); of the *Areopagiticus*, with German notes by Rauchenstein (5th ed. Berlin, 1882); of the *Philippus* by Schneider (1875). There is an *Index Graecitatis* by Mitchell (Oxford, 1827). See Henn, *De Isocrate Rhetore* (1861); Gehlert, *De Elocutione Isocratea* (1874); Spengel, *Isokrates und Platon* (1855); Susemihl, *De Vita Isocratis* (1884); Blass, *Attische Beredsamkeit;* and Jebb, *Attic Orators*, vol. ii. pp. 1–34.

Isodŏmos (*ἰσόδομος*). A style of masonry adopted by Greek builders, in which every stone was cut and squared to the same height. Hence, when laid, the courses were all equal (Pliny, *H. N.* xxxvi. 51).

Isopoliteia. See Politeia.

Isoteleia (*ἰσοτέλεια*, "equality in tax and tribute"). At Athens, the position of partial equality with the citizens which was granted to the more deserving of the *metoeci* (q. v.).



Issa (*Ἴσσα*). The modern Lissa; a small island in the Adriatic Sea, with a town of the same name, off the coast of Dalmatia, said to have derived its name from Issa, daughter of Macareus of Lesbos, who was beloved by Apollo. (Ovid, *Met.* vi. 124). The island was inhabited by a hardy race of sailors, whose barks (*lembi Issaei*) were much prized.

Issedŏnes (*Ἰσσηδόνες*). A Scythian tribe in Great Tartary, near the Massagetae, whom they resembled in their manners. They are represented as extending to the borders of Serica. (Herod. iv. 26).

Issĭcus Sinus. See ISSUS.

Issoria (Ἰσσωρία). A name given to Artemis from her shrine at Mount Issorion in Laconia.

Issus (Ἰσσός). A city in the southeastern extremity of Cilicia, near the head of the Issicus Sinus (Gulf of Iskenderûn), and at the northern foot of the pass of Mount Amanus, called the Syrian Gates; memorable for the great battle in which Alexander defeated Darius Codomannus (B.C. 333), which was fought in a narrow valley near the town. See ALEXANDER; DARIUS.

Battle of Issus. (Pompeian Mosaic in the Naples Museum.)

Istaevŏnes. See GERMANIA.

Ister (Ἴστρος) and **Danubius** (Δανούβιος), also **Danuvius.** The greatest river in southeastern Europe; now the Danube, Germ. *Donau.* Its sources are at Donaueschingen near the Mons Abnoba, and after a long course through Vindelicia, Noricum, Pannonia, and Dacia, it separates into a delta of three branches and empties into the Pontus Euxinus (Black Sea). Among its 400 tributaries are the Dravus (Drave), Savus (Save), Pathiseus or Tibiseus (Theiss?), and Margus (Morava). The early writers, such as Pindar, had only the vaguest notions about the sources of this stream, and even in later times it was supposed to empty into the Adriatic. Ister was said to be its Keltic name and Danubis its Thracian. The syllable Dan is that found in Rho-dan-us, Tan-aïs, Eri-dan-us, etc., and is said to mean "river." The most ancient name of the stream was said to be Matoas. Some writers use Ister of the lower Danube, and Danubius of the upper from its source as far as Vindobona (Vienna). The total length of the river is 1740 miles.

Ister. A Greek historian, at one time the slave of Callimachus (q. v.). He wrote, in the third century B.C., a number of works, of which an *Atthis*, or history of Attica, was especially important. The fragments are given in Müller's *Frag. Hist. Graec.* i. pp. 418–427.

Isthmia (τὰ Ἴσθμια). One of the four great national festivals of the Greeks, held on the Isthmus of Corinth, in a grove of pine-trees sacred to Poseidon, near the shrines of the Isthmian Poseidon and of Melicertes. From B.C. 589, they were held in the first month of spring, in the second and fourth years of each Olympiad. According to legend, the Isthmian Games were originally funeral games in memory of Melicertes (q. v.); another tradition relates that they were established by Theseus either in honour of Poseidon, or in commemoration of his victory over Sciron and Sinis. In any case, the Athenians were specially interested in the festival from the earliest times. It was alleged that, from the days of Theseus downwards, they had what was called the *προεδρία*, the right of occupying the most prominent seats at the games, and, in accordance with a law attributed to Solon, they presented to those of their citizens who were victors in the contests a reward amounting to 100 drachmae. The only occasion when Socrates was absent from Athens, except with the army, was to attend this festival. The inhabitants of Elis were completely excluded from the games, being debarred from either sending competitors or festal envoys. The Corinthians had the presidency, which was transferred to the Sicyonians after the destruction of Corinth (B.C. 146), but at the rebuilding of Corinth (B.C. 46) it was restored to that city. The contests included gymnastic exercises, horse-races, and competitions in music. The former two differed in no essential way from the Olympian Games; in the third, besides musicians, poets of either sex contended for the prize. Besides the customary palm, the prize in Pindar's time consisted of a wreath of dry *σέλινον* (often translated "parsley," but more probably identical with the "wild celery," *apium graveolens*). The *σέλινον* was a symbol of funeral games. After the destruction of Corinth, a crown of pine needles was substituted for it. The games long continued to be held, even under the Roman Empire. (Cf. Plut. *Timoleon*, 26; *Sympos.* v. 3, 1–3).

Isthmus (*ἰσθμός*). A small neck of land which joins a country to another and prevents the sea from making them separate, such as that of Corinth joining the Peloponnesus to Greece prior to 1893, when it was cut by a canal. This is often called "the Isthmus" by way of eminence. See CORINTHIACUS ISTHMUS.

Istria or **Histria.** A peninsula at the northern extremity of the Adriatic, separated from Venetia by the river Timavus, and from Illyricum by the river Arsia. Its inhabitants, the Istri or Histri, were a warlike Illyrian race, who carried on several wars with the Romans, till their final subjugation by the consul C. Clodius Pulcher, B.C. 177. Their chief towns were Tergesté and Pola.

Istropŏlis (Ἰστρόπολις), **Istros** (Ἴστρος), or **Istria** (Ἰστρίη). A town in Lower Moesia, not far from the mouth of the Danube; a colony from Miletus. Its modern name is Istere.

Ităla. The name given to a Latin version of the Scriptures, used by Tertullian in his Biblical quotations. (Cf. St. August. *Doctr. Christ.* ii. 15.) It followed the Septuagint in the Old Testament, and mingled Graecisms, Hebraisms, and plebeian Latin. Its form largely influenced the existing Vulgate. See H. Rönsch, *Itala und Vulgata* (2d ed. Marburg, 1875); Linke, *Studien z. Itala* (Breslau, 1889); and the articles HIERONYMUS; SERMO PLEBEIUS.

Italia. See PROVINCIA.

Italia (Ἰταλία). A country of Europe, bounded on the north by the Alps, on the south by the Ionian Sea, on the northeast by the Adriatic or Maré Superum, and on the southwest by the Maré

Tyrrhenum or Inferum. It was called HESPERIA (Ἑσπερία, "Land of the West") by the Greeks, from its western situation in relation to Greece (Verg. *Aen.* i. 530), and received also from the Latin poets the appellation of AUSONIA (Verg. *Aen.* vii. 54), SATURNIA (Verg. *Georg.* ii. 173), and OENOTRIA

(Οἰνωτρία, "Land of Wine"). The name ITALIA some writers derive from Italus, a chief of the Oenotri or Siculi (Thuc. vi. 2). Others find the origin of the term in the Greek word *ἰταλός*, or the Latin *vitulus* (Oscan *vitlu*), which corresponds to it (Varr. *R. R.* ii. 5; Dion. Hal. i. 35; and Mommsen, *Hist. of Rome*, i. p. 185). Some make the name to have belonged originally to a small section of Calabria, and to have been gradually applied to the whole country.

When the Greeks first became acquainted with this country, they observed it to be peopled with several distinct nations, as they thought; and hence we find it divided by them about the time of Aristotle into six regions—Ausonia or Opica, Tyrrhenia, Iapygia, Ombria, Liguria, and Henetia. Thucydides, in speaking of Cumae, says that it is situated in Opica; and Aristotle, cited by Diony-

sius of Halicarnassus, made Latium a part of this same Opica. As regards the original use of the name Italia, the truth appears to be that the appellation was first given by the early Greeks to Calabria Ulterior, or that southern extremity of the boot which is confined between the Sinus Terinaeus and the Sinus Scyllacius. Such, at least, is the account of Aristotle (*Polit.* vii. 10). This was not done because the name was in strictness confined to that section of the country, but because the Greeks knew at that early period very little, comparatively speaking, of the interior. The nations in the south of Italy, with whom the Greeks first became acquainted, were found by them to be descended from the Itali, or, rather, they found this name in general use among them: hence they called their section of the country by the name of Italia. As their knowledge of the interior became more enlarged, other branches of the same race were successively discovered, and the name Italia thus gradually progressed in its application until it reached the southern limits of Cisalpine Gaul. To this latter country the name of Gallia Cisalpina was originally given, because it was peopled principally by Gauls. (See GALLIA.) Towards the end of the third century B.C., Italia designated all the countries south of the Tiber and Aesis. At length, in Polybius, we find the name given to all Italy up to the foot of the Alps. The inclusion of Cisalpine Gaul under this appellation was an act of policy on the part of the Second Triumvirate, who were afraid lest, if it remained a province, some future proconsul might imitate Caesar, and overthrow with his legions the authority of the Republic. At a still later period, Augustus divided Italy into eleven regions (see below). It is somewhat remarkable that the name Italia, after having gradually extended to the Alps, should at a subsequent epoch be limited in its application to the northern parts alone. When the emperor Maximian, towards the close of the third century A.D., transferred his residence to Milan, the usage prevailed in the West of giving the name of Italy exclusively to the five provinces of Æmilia, Liguria, Flaminia, Venetia, and Istria. It was in this sense that the kings of the Lombards were styled kings of Italy.

Italy was never inhabited by a single race. It contained a number of different peoples, who had migrated into the country at a very early period. They may be classified under the following five divisions:

(1) THE ILLYRIANS. — These were the people usually spoken of as the Veneti, dwelling at the head of the Adriatic (cf. Herod. i. 196), and regarded by ethnologists as Indo-European and probably allied to the Albanians in their racial type as in their language. Of the speech of these people there exist, in addition to geographical and personal names, several hundred inscriptions, largely dedications on bronzes and pottery, and all of them very brief. Other offshoots of the same branch are probably to be found in the Iapygians of southeastern Italy, of whom the Messapii are the most noted group. Of the last there exist some 165 stone inscriptions. See Pauli, *Die Veneter* (Leipzig, 1891); and the article MESSAPIA.

(2) THE ETRUSCANS.—This curious people extended from the mouth of the Tiber between its right bank on the sea to the Alps in the north. For a full account of the theories regarding them, see the article ETRURIA.

(3) THE GREEKS.—Southern Italy was colonized by Greeks at an early period, and there existed in that part of the peninsula (called MAGNA GRAECIA or GRAECIA MAIOR) rich and flourishing cities long before Rome had risen to power. Among them were Tarentum, Sybaris, Croton, Siris (Heraclea), Metapontum, Locri, and Rhegium, and their inhabitants exerted considerable influence upon both the purely Italic peoples of Italy and upon the Latin language, contributing to it a number of non-Ionic word-forms. See Lenormant, *La Grande-Grèce*, 3 vols. (Paris, 1881).

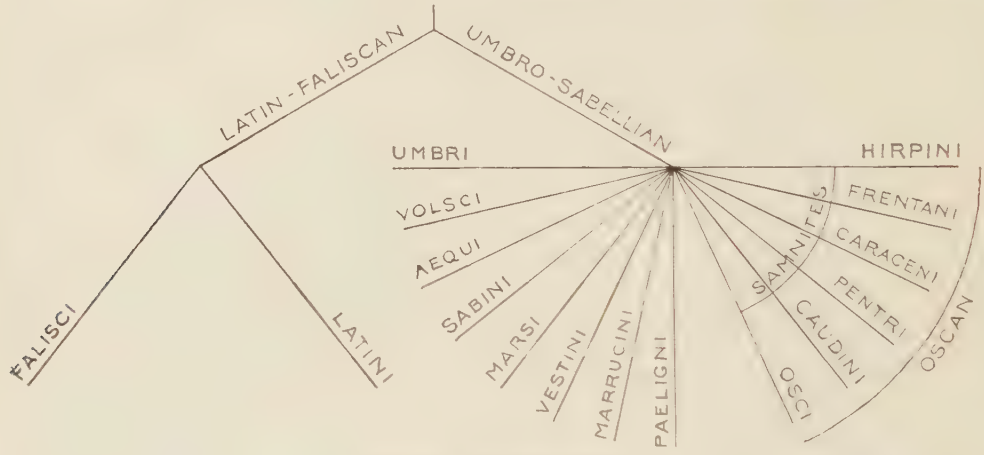


Diagram of the Italic Peoples.

(4) THE KELTS.—These first appeared in Italy only in historic times, in the early years of the fourth century B.C. Keltic inscriptions have been found in Italy as far south as Todi in Umbria. See CELTAE; GALLIA CISALPINA; INDO-EUROPEAN LANGUAGES.

(5) THE ITALIANS PROPER.—These are the branch of the Indo-European race that became specifically identified with Italy, and of which the Latin subdivision finally dominated the whole peninsula and in fact the known world. Grouped linguistically, there are two principal divisions: (*a*) *Latin-Faliscan* and (*b*) *Oscan-Umbrian* or *Umbro-Sabellian*. The Oscan-Umbrian is subdivided into many minor dialects, their general relations being sufficiently well indicated in the foregoing diagram; see, also, the separate articles OSCI; UMBRIA.

At the time of Augustus the following were the chief divisions of Italy, an account of which is also given in separate articles: (1) UPPER ITALY, which extended from the Alps to the rivers Macra on the west and Rubico on the east. It comprehended (*a*) Liguria; (*b*) Gallia Cisalpina; (*c*) Venetia, including Carnia; (*d*) Istria. (2) CENTRAL ITALY, sometimes called ITALIA PROPRIA (a term not used by the ancients), to distinguish it from Gallia Cisalpina or Upper Italy, and Magna Graecia or Lower Italy, extended from the rivers Macra on the west and Rubico on the east, to the rivers Silarus on the west and Frento on the east. It comprehended (*a*) Etruria; (*b*) Umbria; (*c*) Picenum; (*d*) Samnium, including the country of the Sabini, Vestini, Marrucini, Marsi, Paeligni, etc.; (*e*) Latium; (*f*) Campania. (3) LOWER ITALY, or MAGNA GRAECIA, included the remaining part of the peninsula, south of the rivers Silarus and Frento. It comprehended, (*a*) Apulia, including Calabria; (*b*) Lucania; (*c*) Bruttium.

Augustus divided Italy into the following eleven Regiones: I. Latium and Campania. II. The land of the Hirpini, Apulia, and Calabria. III. Lucania and Bruttium. IV. The land of the Frentani, Marrucini, Paeligni, Marsi, Vestini, and Sabini, together with Samnium. V. Picenum. VI. Umbria and the district of Ariminum, in what was formerly called Gallia Cisalpina. VII. Etruria. VIII. Gallia Cispadana. IX. Liguria. X. The eastern part of Gallia Transpadana, Venetia, Carnia, and Istria. XI. The western part of Gallia Transpadana. See Desjardins, *Les Onze Régions d'Auguste* (1875).

See Curtius, *De Antiquis Italiae Incolis* (Greifswald, 1829); Diefenbach, *Origines Europaeae* (Frankfurt-on-the-Main, 1861); Bugge, *Altitalische Studien* (Christiania, 1878); Deecke, *Die Falisker* (Strassburg, 1885); Czörnig, *Die alten Völker Oberitaliens* (Vienna, 1885); Nissen, *Italische Landeskunde* (Berlin, 1883); Deecke, *Die italischen Sprachen* in Gröber's *Grundriss der romanischen Philologie;* Mommsen, *Die unteritalischen Dialekte* (Leipzig, 1850); Conway, *The Italic Dialects* (announced in 1895); and the articles CELTAE; DIALECTS; ETRURIA; GALLIA; INDO-EUROPEAN LANGUAGES; OSCI; ROMA; UMBRIA.

Italĭca. Now Sevilla la Vieja in Spain. A municipium in Hispania Baetica on the west bank of the Baetis, founded by Scipio Africanus in the Second Punic War. It was the birthplace of both Trajan and Hadrian.

Italĭcus, SILIUS. See SILIUS.

Itălus (Ἰταλός). A fabled monarch of early Italy, said to have been the son of Telegonus by Penelopé. See Thuc. vi. 2, and ITALIA.

Itănus (Ἴτανος). A town on the eastern coast of Crete, of Phœnician origin.

Iter. See SERVITUTES; VIAE.

Iterdūca or **Interdūca.** An epithet of Iuno. See Mart. Capell. ii. § 149 (Grot.).

Ithăca (Ἰθάκη). Now Thiaki; an island in the Ionian Sea, off the coast of Epirus, celebrated as the birthplace of Odysseus. It is about twelve miles long, and four in its greatest breadth, and is divided into two parts, which are connected by a narrow isthmus not more than half a mile across. In each of these parts there is a mountain ridge of considerable height—the one in the north called Neritum, and the one in the south Neium. The city of Ithaca, the residence of Odysseus, was situated on a precipitous, conical hill, now called Aëto, or "eagle's cliff," occupying the whole breadth of the isthmus mentioned above. Its summit is still surrounded by Cyclopean walls and shows traces of fortifications. The chief town of the island is now called Vathý. See Warsberg, *Odysseische Landschaften* (Vienna, 1879); Partsch, *Kephallenia und Ithaka* (Gotha, 1890); and La Roche, *Ithaka* (1892).

Ithacesiae. (1) Three islands opposite Vibo, on the coast of Bruttium. They are thought to answer to the modern Braces, Praca, and Torricella. (2) Baiae is called by Silius Italicus *sedes Ithacesia Baii*, because founded by Baius, the pilot of Odysseus, according to the poetic legends of antiquity (Sil. Ital. viii. 539).

Ithăcus (Ἴθακος). The son of Pterolaüs. He was the hero after whom Ithaca was said to have been named (*Odyss.* xvii. 207).

Ithōmé (Ἰθώμη). (1) A town of Thessaly, in the vicinity of Metropolis. (2) A fortress of Messenia, on a mountain of the same name. It was celebrated for the long and obstinate defence (ten years) which the Messenians there made in their last revolt against the Spartans. The mountain was said to have derived its name from Ithomé, one of the nymphs that nourished Zeus. On the summit was the altar of Zeus Ithometes, to whom the mountain was especially dedicated. Strabo compares the Messenian Acropolis to the Acrocorinthus, being situated, like that citadel, on a lofty and steep mountain, enclosed by fortified lines which connected it with the town. Hence these were justly deemed the two strongest places in the Peloponnesus. When Philip, the son of Demetrius, was planning the conquest of the peninsula with Demetrius of Pharos, the latter advised him to seize first the horns of the heifer, which would secure to him possession of the animal. By these enigmatical expressions he designated the Peloponnesus and the two strongholds above mentioned (Polyb. vii. 11). Remains of the ancient fortress still exist, the towers being magnificent specimens of military architecture and engineering.

Itineraria. The Roman name for (1) compendious lists of the names and distances of the different stations on the public roads, after the manner of our road-books (*itineraria adnotata* or *scripta*); and (2) chartographic representations similar to our travelling maps (*itineraria picta*, Veget. iii. 6). Of the former kind we have: (i.) the two ANTONINE ITINERARIES, the basis of which belongs to the time of the emperor Antoninus Caracalla; but the edition which has come down to us dates from the beginning of the fourth century. They contain lists of routes by land and sea in the Roman Empire; (ii.) the ITINERARIUM BURDIGALENSE or HIEROSOLYMITANUM, A.D. 333, the route of a pilgrimage from Burdigala (Bordeaux) to Jerusalem; (iii.) the ITINERARIUM ALEXANDRI, an abstract of the Persian expedition of Alexander the Great, drawn up mainly from Arrian for the expedition of the emperor Constantius against the Persians (A.D. 340–345).

At Vicarello in Etruria have been found four silver travelling-cups shaped like mile-stones, and having marked upon them a list of stations and distances from Gades (Cadiz) to Rome.

Of the other kind of itineraries, in the form of maps, there exists a specimen in the Peutinger map (*tabula Peutingeriana*), now in Vienna. It

received its name from a former possessor, Konrad Peutinger, a councillor of Augsburg. It was painted at Kolmar in 1265 on the model of an original map which dates back to the middle of the third century A.D., and consists of twelve broad strips of parchment, on which are delineated all those parts of the world which were known to the Romans; only the pieces which should contain Spain and Britain are lost, with the exception of part of Kent. It is probably derived from Agrippa's map. (See GEOGRAPHIA.) It is disproportionately elongated in the direction of east to west, the ratio of its height to its breadth being 1:21. The distances from town to town are marked on lines running from east to west, and the relative sizes of the towns are indicated by distinctive marks. An excellent fac-simile has been published by O. Maier of Ravensburg (1888), and the table is represented on a small scale in the very convenient little *Atlas Antiquus* of Justus Perthes (Gotha, 1893). See D'Urban, *Recueil des Itinéraires Anciens*, with ten maps (Paris, 1845); Renier, *Itin. Romains de la Gaule* (Paris, 1850); and NOTITIA REGIONUM.

Itius Portus. A harbour of the Morini, on the north coast of Gaul, from which Caesar set sail for Britain; probably Vissant, or Witsand, near Calais.

Iton. See ITONIA.

Itonia (Ἰτωνία), **Itonias** (Ἰτωνιάς), or **Itonis** (Ἰτωνίς). A surname of Athenê, derived from the town of Iton, in the south of Phthiotis in Thessaly. Here the goddess had a celebrated sanctuary, and hence is called by the Roman poets *incola Itoni*.

Itūna, or **Itūnae**, AESTUARIUM. Now Solway Firth, in Scotland.

Ituraea (Ἰτουραία) or **Ityraea.** A country of Palestine, so called from Itur or Ietur, one of the sons of Ishmael, who settled in it; but whose posterity were either driven out or subdued by the Amorites, when it is supposed to have formed part of the kingdom of Bashan. It lay on the north-eastern side of the land of Israel, between it and the territory of Damascus or Syria. The Itureans being subdued by Aristobulus, the high-priest and governor of the Jews, B.C. 106, were forced by him to embrace the Jewish religion, and were at the same time incorporated into the State. They again became independent, but were again subdued by Pompey. Many of them entered the Roman armies and won renown by their skill in horsemanship and archery. Philip, one of the sons of Herod the Great, was tetrarch or governor of this country when John the Baptist commenced his ministry (Ioseph. *Ant. Jud.* xiii. 19; Epiphan. *Haeres.* 19; Luke, iii. 1). See PALAESTINA.

Itȳlus (Ἴτυλος). See AËDON.

Itys (Ἴτυς). (1) See TEREUS. (2) A companion of Aeneas, slain by Turnus in Italy (Verg. *Aen.* ix. 574).

Iuba (Ἰόβας). (1) King of Numidia and son of Hiempsal. He joined Pompey's party, and gained a victory over Curio, Caesar's legate, B.C. 49. He afterwards fought with Scipio against Caesar; and after the battle of Thapsus (B.C. 46) put an end to his own life. (2) Son of the preceding. He was a child at the time of his father's death, and was carried by Caesar to Rome, where he received an excellent education. He became one of the most learned men of his day, and wrote numerous works on historical and other subjects. In B.C. 30, Augustus reinstated him in his paternal kingdom of Numidia, and gave him in marriage Cleopatra, otherwise called Selenê, the daughter of Antony and Cleopatra. Five years afterwards (25) Augustus gave him Mauretania in exchange for Numidia, which was reduced to a Roman province. He died in Mauretania, about A.D. 19. Plutarch calls him *ὁ πάντων ἱστορικώτατος βασιλέων* (*Sert.* 9), and he appears to have attempted (in Greek) many kinds of literary and scientific work; but the titles alone have descended to us. Among these are an African history (Λιβυκά), a Roman history (Ῥωμαϊκὴ Ἱστορία), and a history of painting (Περὶ Γραφικῆς). There is an epigram by Iuba preserved in Athenaeus (viii. p. 343). See the account of Iuba by the Abbé Sevin in the *Mémoires de l'Académie des Inscriptions*, iv. p. 457 foll.; and for the fragments, Müller's *Frag. Hist. Graec.* iii. pp. 465–484.

Iudaea. See PALAESTINA.

Iudaei (Hebr. *Yehudim*). The Jews came into historical contact with the Greeks during the Asiatic campaigns of Alexander the Great, who in 332, on his march through Palestine, spared Jerusalem and its temple at the intercession of Jaddua the high-priest. During the following century, when Iudaea became subject to Alexander's successors, the Ptolemies and Seleucidae in Egypt and Syria, Greek philosophy and Greek culture were widely diffused among the Jews. The Sadducees appear to have been largely influenced by the Epicurean doctrines, and the stricter Pharisees by the Stoic. Even the worship of the Grecian gods made considerable progress in Iudaea, and the Greek language came into common use. Many Jews were drawn to Alexandria soon after the founding of that city, and enjoyed these unusual privileges under both Ptolemy I. and Ptolemy II. (B.C. 323–247). Under the latter the celebrated translation of the Old Testament, known as the Septuagint, was made by a body of Jewish scholars, seventy in number, and this Greek version was even used in the synagogues. In B.C. 198 the Jews aided Antiochus the Great in expelling the Egyptians from Palestine; but found to their sorrow that, under the new régime of the Seleucidae, their lot was much less favourable, for an attempt was soon made to Hellenize the Empire at the expense of some of the most cherished Jewish traditions. The treasury of the temple at Jerusalem was several times robbed of its treasures; and in 169, owing to a revolt against the king of Syria, a general massacre of the inhabitants of that city occurred. At the same time its walls were destroyed, the image of Antiochus was placed in the temple, swine were sacrificed on its altar, the Jewish Scriptures were publicly burned, shrines to Zeus were erected, and great cruelty was shown to the surviving inhabitants. This savage rule was checked by the great revolt headed by the Maccabees, the priest Mattathias, and his five sons, under whom the Jews freed the land for a time (167–63) and defeated the Syrian armies, forming alliances with the Romans.

In B.C. 63 a civil war between the Jewish claimants for political power led to the intervention of Pompey, who had been invoked as arbiter. He laid siege to Jerusalem, violated the temple, even entering the Holy of Holies, and finally reduced

Iudaea to the form of a Roman province. In 39 Herod the Great, having won the favour of the Second Triumvirate, was installed as king of Iudaea, and kept himself in power by his servile flattery of M. Antonius. (See HERODES.) At the death of Herod, Augustus Caesar divided his territories among his sons—Archelaüs, Philip, and Herodes Antipas; but a state of anarchy ensued, and the country was re-annexed to the Roman dominions. Under the emperors, the Jews suffered greatly from the oppression of their governors. Their religion was insulted, and their property wrung from them by the exactions of the procurators. Under Nero, a great revolt took place, owing to the severities of the governor Gessius Florus; and Jerusalem fell into the hands of the insurgents. The Roman governor of Syria, Cestius Gallus, was routed by the Jewish army. The revolt, however, was crushed by Vespasian, who took Jerusalem after a memorable siege (A.D. 68), in which the sufferings of the besieged and the ferocity of their defence are immortalized in the narrative of Iosephus (q. v.). The city was razed to the ground; and a new city, reared under Hadrian, received the name Aelia Capitolina. Into this no Jew was allowed to enter.

The Romans seem to have felt considerable interest in the Jews, being attracted by their monotheistic religion, though failing to understand it rightly, and accepting many strange stories regarding it. Thus, it was asserted that the Jews worshipped clouds and thunder (Juv. xiv. 97, with Mayor's note); that they adored an ass's head (Apion in Ios. ii. 7); that they ate human flesh (Apion, *Fr.* 19, Didot); that they made it a practice annually to cook and eat a Greek, swearing hostility to the Greek race (Apion in Ios. ii. 7). Nevertheless, the spiritual beauty of the Jewish faith impressed many serious minds among both the Greeks and Romans. Tacitus, in his *Historiae*, pays a high tribute to the Jews; and there are many instances recorded of acts of reverence paid by the Romans to the Mosaic religion. Thus, Cumanus ordered the execution of a soldier who had torn and burned the book of the law; Agrippa, the son-in-law of Augustus, visited the temple daily during his stay in Jerusalem, and offered sacrifices there; Iulius Caesar, before this, had removed restrictions set upon the practice of the Jewish faith, so that at his funeral rites the Jews took a conspicuous part in the public mourning (Suet. *Iul.* 84, with Peck's note). They were regarded as especially given to making proselytes (cf. Hor. *Sat.* i. 4, 43; Ioseph. *Ant. Jud.* vii. 3, 3), and were successful in spreading their religion (Dio Cass. lxvii. 14, § 2), especially among women (Juv. vi. 542 foll.; Ovid, *A. A.* i. 76). When the Romans began to import Oriental rites, the Sabbath was superstitiously observed by many (Plut. *De Superst.* iii. p. 166 *a*; cf. Hor. *Sat.* i. 9, 69). From the similarity of many of their usages, the Jews and Christians were often regarded as identical.

The heathen accounts of the Jews are carefully collected by Meyer, *Judaica* (Jena, 1832); Gill, *Notices of the Jews*, etc. (2d ed. London, 1872); and reference may be made to the following works: Göser, in the *Tüb. Quartalschr.* (1868); Friedländer, *Sittengeschichte Roms*, vol. iii. (Leipzig, 1890); Langen, *Das Judenthum in Palästina zur Zeit Christi* (1866); Huidekoper, *Judaism at Rome* (New York, 1876); Derenbourg, *Essai sur l'Histoire, etc., de la Palestine*, ch. xiv. (Paris, 1867); Lecky, *Hist. of European Morals*, ch. iii.; Döllinger, *Heidenthum und Judenthum* (Regensburg, 1857); and Mayor's elaborate notes to Juvenal, xiv. 96–106. See PALAESTINA.

Iudex. In the Roman constitution a general designation of all judges, whether officials exercising judicial functions or individuals in a private position intrusted on oath with the duty of deciding in either civil or criminal trials. For standing and for extraordinary criminal courts (see QUAESTIO) the iudices were at first chosen from the number of the senators by agreement of the parties concerned. Gaius Gracchus first introduced a list of iudices (*album*) for the permanent tribunals (*quaestiones perpetuae*). At first this list was permanent, but afterwards it was published annually by the *praetor urbanus*, who had to swear that he would be impartial in his selection of names. Under the Empire, as long as the *quaestiones perpetuae* existed, it was published by the emperor, who nominated the iudices to hold office for life, and from time to time revised and completed the list. By the lex Sempronia of Gaius Gracchus (B.C. 123), the office of judge was taken away from the senators, who had held it previously, and transferred to the possessors of the knight's census (the *equites*). In B.C. 80 a lex Cornelia of L. Cornelius Sulla restored it to the Senate. In B.C. 70 the office was equally divided between the senators, the knights, and the *tribuni aerarii*. These last were once more excluded by Caesar. Augustus formed four *decuriae*, or divisions, of iudices. Of these the first three were obliged to possess the knight's census, and the last the half of it. Caligula added a fifth decuria.

Under the Empire the judicial functions, hitherto confined to certain definite classes, had become so general in their obligations that it was considered a privilege to be freed from them. This exemption was granted to a man with many children, and, afterwards, to those following the professions of grammarians and teachers. The requisite qualifications, apart from that of property, were that a person should be by birth a citizen, and not less than thirty years of age (after Augustus, not less than twenty-five). The other requirements were bodily and mental capacity, an unblemished reputation, and a long residence in Italy. Under the Republic the number of those who were sworn in varied at different times; under the Empire it was fixed at 4000, and later at 5000. For every court of justice the judges were taken from the general list by lot, and out of this special list the presiding magistrate appointed a definite number for each trial. Out of these a certain number might be challenged and rejected by either side; perhaps the president filled up the vacancies by again drawing lots. The swearing in took place before the trial. When the number of the praetors appointed for the *quaestiones* was not sufficiently large, a *iudex quaestionis* was appointed, generally one who had served as aedile.

In civil cases it was customary from early times for the judicial magistrates—i. e. the praetors—to depute the investigation and decision to a person instructed by them and appointed by consent of both sides, who was styled *iudex pedaneus* (χαμαὶ δικαστής), and corresponded with the referee of New York state law. The terms *arbiter*, *iudex delegatus*, and *iudex specialis* are also used of such

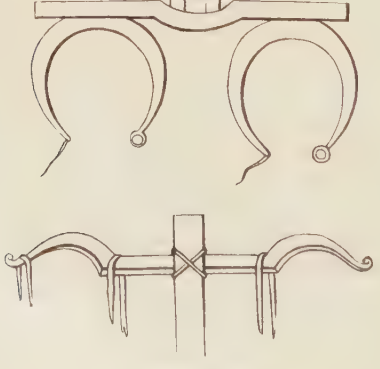
a person. From the time of Augustus a single judge (*iudex unus*) was appointed in each case from the general *album* of sworn iudices, but for certain cases several judges were introduced. (See RECUPERATORES; JUDICIAL PROCEDURE, II.) The *iudices centumviri* formed the single great judicial body for trying civil cases. (See CENTUMVIRI.) Concerning the *iudices litibus iudicandis*, who were also appointed in civil cases, see VIGINTI-SEX VIRI.

Iudex Pedaneus. See IUDEX.

Iudex Quaestiōnis. See IUDEX.

Iudicāti Actio. A defendant who had been condemned in an action was under an obligation to satisfy the judgment—i. e. to pay to the plaintiff the sum of money which the iudex had awarded; and the actio iudicati was the mode which the successful party had to adopt in order to compel the defendant to fulfil his obligation. The ground of the actio iudicati being the judgment debt, the defendant was not allowed to go behind the judgment and dispute the original claim, but might set up the plea that the judgment was invalid. If defeated in the action he was mulcted in double the original amount.

Iudĭces. See IUDEX.



Iudicium. See IUDEX; JUDICIAL PROCEDURE.

Iudicium Publĭcum. In Roman law, a sort of application of civil procedure, in some of its points, to criminal cases. The presiding officers were usually a civil magistrate (the praetor), and the case was heard before a bench of *iudices*. It differed from ordinary civil process in that the magistrate sat with the *iudices*, directed their decision, and pronounced the verdict. The earliest notice of the iudicium publicum is found in the Lex Bantina of about B.C. 130. (See TABULA BANTINA.) Reference may be made to Mommsen, *Röm. Staatsrecht*, i. pp. 168 and 182 foll.; ii. pp. 223 and 569 foll.

Iugatio. A word which implies the training of vines to a rail or trellis, which was practised in two ways: either in single lines, like an espalier, then termed *iugatio directa*, or over a frame formed with uprights and tie-bars at the top (Varro, *R. R.* i. 8, 2).

Iugĕrum and **Iugus.** A Roman measure of surface = 240×120 feet, or 28,800 square feet, and hence = $\frac{5}{8}$ of an English acre. It was the common measure of land, two iugera forming an *heredium*, one hundred *heredia* forming a *centuria*, and four *centuriae* a *saltus*.

Iugum (*ζυγόν* and *ζυγός*). (1) In architecture, a cross-beam (Vitruv. x. 8, 19). (2) The beam which united the upright posts of a loom. (3) The cross-rail of a trellis. (4) The cross-bar of a lyre. (5) A scale-beam, and hence, by metonymy, a pair of scales = *libra*. (6) The thwart or cross-bench of a boat. (7) A yoke, often fastened to the horns of a beast (Columell. *R. R.* ii. 2). The yoke was tied to the pole (*ῥυμός, temo*) by a rope or strap (*ζυγόδεσμον*). Cf. Hom. *Il.* xxiv. 268–274, with Leaf's discussion in the *Journal of the Hellen. Soc.* v. 185 foll. See CURRUS.

Ancient Yokes.

Iugumentum (*ζύγωμα*). The lintel of a doorway (Cato, *R. R.* xiv. 1, 4). See IANUA.

Iugurtha (*Ἰουγούρθας*). An illegitimate son of Mastanabal, and grandson of Masinissa. He lost his father at an early age, but was brought up by Micipsa with his own sons, Hiempsal and Adherbal. Iugurtha was a brave, able, and ambitious prince, and distinguished himself greatly while serving under Scipio against Numantia, in B.C. 134. Micipsa, on his death in 118, bequeathed his kingdom to Iugurtha and his two sons, Hiempsal and Adherbal, in common. Iugurtha aspired to the sole sovereignty. He assassinated Hiempsal soon after his father's death, and a division of the kingdom between Iugurtha and Adherbal was then made by the Roman Senate; but shortly afterwards Iugurtha attacked Adherbal, took him prisoner, and put him to death (112). The Romans had previously commanded Iugurtha to abstain from hostilities against Adherbal; and as he had paid no attention to their commands, they now declared war against him. The consul L. Calpurnius Bestia was sent into Africa (111); but by large sums of money Iugurtha purchased from him a favourable peace—a disgraceful proceeding which excited the greatest indignation at Rome. The peace was disowned, and the war renewed under the command of the consul Sp. Postumius Albinus; but during the absence of the consul, his brother Aulus was defeated by Iugurtha (110). Next year (109) the consul Q. Caecilius Metellus, an able general and incorruptible man, was sent into Africa at the head of a new army. In the course of two years Metellus frequently defeated Iugurtha, and at length drove him to take refuge among the Gaetulians. In 107 Metellus was succeeded in the command by Marius. The cause of Iugurtha was now supported by his father-in-law, Bocchus, king of Mauretania; but Marius defeated their united forces, and Bocchus purchased the forgiveness of the Romans by surrendering his son-in-law to Sulla, the quaestor of Marius (106). Iugurtha was carried a prisoner to Rome, and after adorning the triumph of Marius (January 1, 104), was thrown into a dungeon, and there starved to death. The history of the Jugurthine War was written by Sallust, and is a masterpiece of historical composition. See SALLUSTIUS.

Iulia. (1) A daughter of Iulius Caesar by Cornelia, celebrated for her beauty and excellent character. She had been affianced to Servilius Caepio, and was on the point of being given to him in marriage, when her father bestowed her upon Pompey (Plut. *Pomp.* 47; Appian. *B. C.* i. 14). Iulia possessed great influence over both her father and her husband, and as long as she lived prevented any outbreak between them. Her sudden death, however, in childbed, severed the tie that had in some degree bound Pompey to his father-in-law, and no private considerations any longer existed to allay

the jealousies which political disputes might arouse between them. The amiable character of Iulia, and her constant affection for her husband, gained for her the general regard of the people; and this they showed by insisting on celebrating her funeral in the Campus Martius, a compliment scarcely ever paid to a woman before (Suet. *Iul.* 21, 26, 84). (2) The sister of Iulius Caesar. She married M. Atius Balbus, and became by him the mother of Octavia Minor and Augustus (Suet. *Iul.* 74; *Aug.* 4, 8). (3) The aunt of Iulius Caesar. At her decease, her nephew pronounced a eulogy from the Rostra over her remains (Suet. *Iul.* 6). (4) The daughter of Augustus by his first wife Scribonia. As he had no children by Livia, whom he had subsequently espoused, Iulia remained his sole heiress, and the choice of her husband became a matter of great importance. She was first married to her cousin M. Marcellus (B.C. 25), the nephew of Augustus by his sister Octavia, and the person celebrated by Vergil in the famous lines of the sixth *Aeneid*. But Marcellus dying young and without children, Augustus selected for the second husband of his daughter his oldest friend and most useful adherent, M. Vipsanius Agrippa. This marriage seemed to answer all the wishes of Augustus, for Iulia became the mother of five children — Gaius, Lucius, Iulia, Agrippina, and Agrippa Postumus. Agrippa died B.C. 12, and Iulia was married, for the third time, to Tiberius Claudius Nero, the son of Livia, and afterwards emperor. Tiberius subsequently thought proper to withdraw from Rome to the island of Rhodes, where he lived in the greatest retirement. During his absence, his wife Iulia was guilty of such gross infidelities towards him that Augustus himself divorced her in the name of his son-in-law, and banished her to the island of Pandataria, off the Campanian coast, where she was closely confined for some time, and treated with the greatest rigour; nor would Augustus ever forgive her, or receive her again into his presence, although he afterwards removed her from Pandataria to Rhegium, and somewhat softened the severity of her treatment. When her husband Tiberius ascended the throne (A.D. 14) she was again severely dealt with, and soon died of ill-treatment and starvation. (5) The granddaughter of Augustus, and daughter of Agrippa and Iulia (4). She was married to L. Paulus, but, imitating the licentious conduct of her mother, was banished by Augustus for her adulterous practices to the island of Tremerus, off the coast of Apulia, where she continued to live for the space of twenty years, and where at last she died (Tac. *Ann.* iv. 71). (6) A daughter of Germanicus and Agrippina, married in A.D. 33 to M. Vinicius. She was cut off by the intrigues of Messalina, who accused her of adultery with the philosopher Seneca (Dio Cass. lix. 3, 8). (7) Daughter of Caligula and Milonia Caesaria. Her father carried her to the temples of all the goddesses, and dedicated her to Minerva, as the patroness of her education. She showed in her infancy strong indications of the cruelty that branded both her parents. She suffered death with her mother after the assassination of Caligula (Suet. *Calig.* 25, 59). (8) See DOMNA. (9) Daughter of Titus the son of Vespasian, and married to Flavius Sabinus, Vespasian's nephew. She lived in criminal intercourse with the emperor Domitian, and died of an abortion caused by him. (10) See DRUSILLA. (11) See MAESA.

Iulia, daughter of Augustus.

Iulia, daughter of Titus. (Gem in the King Collection.)

Iulia Gens, one of the most ancient patrician houses at Rome. It was of Alban origin, and was removed to Rome by Tullus Hostilius upon the destruction of Alba Longa. It claimed descent from the mythical Iulus, the son of Venus and Anchises. The most distinguished family in the gens is that of Caesar.

Iuliae Leges. See LEX.

Iuliānus, DIDIUS. See DIDIUS.

Iuliānus, FLAVIUS CLAUDIUS. A Roman emperor, popularly known as "Julian the Apostate" (*ὁ ἀποστάτης*). He was born at Constantinople in A.D. 331, the youngest son of Iulius Constantius, half-brother to Constantine the Great. On the death of Constantine there was a general massacre of the male members of the younger line of the Flavian family, and among those so put to death was Julian's father, Julian being spared only on account of his extreme youth. He was reared under close and vexatious surveillance at Macellum in Cappadocia and at Nicomedia, and the treatment which he and his family had received from nominal Christians both embittered him and led him to reject Christianity, he being also won back to paganism by the teaching of his Neoplatonic master Maximus. In 355 he studied at Athens, among his fellow-students being the future bishops Basil and Gregory Nan-

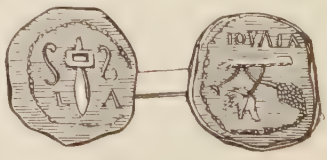
Iulianus.

zianzenus. In November of the same year Julian was summoned to Milan to assume the rank of Caesar. He married the emperor's sister Helena.

During the next five years he joined the army in Germania and defeated the Alemanni near Argentoratum (Strassburg), and also subdued the Franks along the Rhine, winning at the same time the affections of the people by his courage, mildness, and simplicity. In April, 360, the emperor, becoming alarmed at Julian's popularity, ordered away some of his best troops, upon which his soldiers revolted, and proclaimed him as Augustus. Soon after, he sent forward the greater part of his army by way of Rhaetia and Noricum, and himself with a picked body of 3000 men plunged into the Black Forest, sailing down the Danube to Sirmium in Pannonia Inferior, which he had made the rendezvous of his forces. Here he heard of the death of the emperor (November 3, 361), and here he openly proclaimed himself a pagan, sacrificing to the old gods of Rome. Though he tolerated the Jewish and the Christian religions, he did all that lay in his power to cripple the spread of the latter. He confiscated the revenues of the churches, and ordered that those who had assisted in pulling down the heathen temples should rebuild them. This was the signal for a fearful reaction and persecution against the Christians in the provinces, where many were imprisoned, tormented, and even put to death. Julian restrained or punished some of these disorders, but with no very zealous hand. There was evidently a determined struggle throughout the Empire between the old and the new religion, and Julian wished for the triumph of the former. He forbade the Christians to read, or teach to others, the works of the ancient classic writers, saying that, as they rejected the gods, they ought not to avail themselves of the learning and genius of those who believed in them. He also forbade their filling any office, civil or military, and subjected them to other disabilities and humiliations.

In July, 362, he resolved upon war with the Persians, and spent some months at Antioch. Gibbon has given a powerful, though no doubt too highly coloured, picture of the emperor — awkward, shy, and unkempt, with ink-stained fingers, long nails, and vermin-infested beard—at whom the citizens of this luxurious capital sneered and aimed lampoons. Against them in reply he directed his satire *Misopogon* (Μισοπώγων, "beard-hater"), and gave them a rapacious governor.

It was during his residence at Antioch that Julian undertook to aim what he thought would prove a deadly blow to Christianity. An order was issued for rebuilding the great temple of Jerusalem. The Jews were invited from all the provinces of the Empire to assemble on the holy mountain of their fathers, and a bold attempt was thus made to falsify the language of prophecy and annul the decree which the Christians believed to have been pronounced by the Almighty against his once chosen, but now rejected, people. The accomplishment of this design was intrusted to Alypius, who had been governor of Britain, and every effort was made to insure its success as well on the part of the "imperial sophist" as on that of the Jews themselves. But the attempt was an unavailing one, and is said to have been signally and miraculously interrupted. Few historical facts, indeed, rest on more abundant testimony. The narratives of Gregory Nanzianzenus and of Rufinus are confirmed in the fullest manner by Ammianus Marcellinus, himself a heathen writer. "When Alypius," observes Ammianus, "was plying the work vigorously, and the governor of the province was lending his aid, fearful globes of fire, bursting forth repeatedly from the earth close to the foundations, scorched the workmen, and rendered the place, after frequent trials on their part, quite inaccessible." The Jewish rabbis, in their annals, attest the same fact; and even Gibbon, though in his solemnly sneering way he styles it a "splendid and specious miracle," is obliged to treat the evidence with respect. See Newman, *Essay on the Miracles in Early Ecclesiastical History* (1842).



In March, 363, Julian set out on his expedition against the Persian king Sapor, and advanced upon Ctesiphon. Proceeding still farther, with a treacherous guide and under a burning sun, he was continually assailed by the Persian cavalry; and in one of their onslaughts the emperor was wounded by a spear-thrust in the side and fell from his horse, the blood spurting from the wound. Theodoretus relates that as he saw the ghastly injury the dying man exclaimed, "Thou hast conquered, Galilaean; yet still do I renounce thee!" He passed away at midnight of June 26, 363.

Julian's life is one of much pathetic interest, and is a sad instance of noble views distorted and of powers misapplied, with failure as the inevitable result; for, as Beugnot says, it was an accident, after which events reverted to their natural channel. Christianity was scarcely checked for a single moment in its spread, and the ill-success of its imperial opponent only added to his prestige. Julian's extant writings are as follows: seventeen *Epistles;* nine *Orations;* a satirical sketch called *Caesares* (Καίσαρες ἢ Συμπόσιον), in which the deified Romulus gives a banquet to the gods and, at a separate table, to the Caesars, who are made to pass in review before Silenus, who comments upon them; and finally, the Μισοπώγων already mentioned. His work against the Christians is now lost. It was answered by Apollinarius of Laodicea and others. To the reply of Apollinarius, Julian put forth this *jeu de mots*, Ἀνέγνων, ἔγνων, κατέγνων ("I have read it, understood it, and condemned it"). On this, St. Basil remarked, Ἀνέγνως ἀλλ' οὐκ ἔγνως· εἰ γὰρ ἔγνως οὐκ ἂν κατέγνως ("Thou hast read it, but hast not understood it; for hadst thou done so, thou wouldst not have condemned it").

Of Julian's works, a good edition is that of Hertlein (Leipzig, 1875). See also Neander, *Kaiser Julian und sein Zeitalter* (1813; Eng. trans. 1850); De Broglie, *L'Église et l'Empire Romain*, vols. iii. and iv. (1856–69); Mücke, *Flavius Claudius Iulianus nach den Quellen* (1867–69); and Rendall, *The Emperor Julian*, with an excellent bibliography (1879).

Iuliānus, Salvius. A Roman jurist under Hadrian and the Antonines, who was *praefectus urbi* and twice consul. He drew up at Hadrian's request the *edictum perpetuum*, on which see the articles Edictum; Iurisprudentia.

Iulias (Ἰουλίας). The Bethsaida of the Bible; a city of Palestine on the eastern bank of the Jordan. It

Coin of Iulias.

was named in honour of Iulia, the daughter of Augustus.

Iulii. See IULIA GENS.

Iuliomăgus. A city of Gaul, the capital of the Andecavi, situated on a tributary of the Liger (Loire), near its junction with that river, and to the northeast of Namnetes (Nantes). It was afterwards called Andecavi, from the name of the people, and is now Angers.

Iuliopŏlis (Ἰουλιόπολις). (1) A city of Galatia. See GORDIUM. (2) See TARSUS.

Iulis (Ἰουλίς). The chief town in Ceos; the birthplace of Simonides. See CEOS.

Iulius Caesar. See CAESAR.

Iulus. (1) Son of Aeneas, usually called Ascanius. See ASCANIUS. (2) The eldest son of Ascanius, who claimed the government of Latium, but was obliged to give it up to his brother Silvius.

Iunia Gens. An ancient patrician house at Rome, to which belonged the celebrated M. Iunius Brutus, who took such an active part in expelling the Tarquins. But afterwards the gens appears as only a plebeian one. The chief families were those of Brutus, Bubulcus, Gracchanus, Norbanus, Pullus, and Silanus.

Iunia Lex. See LEX.

Iuno. A name which contains the same root DIV, "to shine," as the name Iupiter (q. v.). As Iupiter was the king of heaven and of the gods, so Iuno was, in the Roman mythology, the queen of heaven, or the female Iupiter. She was worshipped as the queen of heaven, from early times, with the surname of REGĪNA. At a later period her worship was solemnly transferred from Veii to Rome, where a sanctuary was dedicated to her on the Aventine. As Iupiter was the protector of the male sex, so Iuno watched over women, accompanying every woman through life, from the moment of birth to that of death. Hence she bore the special surnames of VIRGINĀLIS and MATRŌNA, as well as the general ones of OPIGĔNA and SOSPĪTA, and under the last-mentioned name she was worshipped at Lanuvium. On their birthday women offered sacrifices to Iuno surnamed NATĀLIS, just as men sacrificed to their *genius natalis*. The great festival, celebrated by all the women, in honour of Iuno, was called Matronalia, and took place on the 1st of March. Her protection of women, and especially her power of making them fruitful, is further alluded to in the festival Populifugia (q. v.), as well as in the surname of FEBRŪLIS, FEBRUĀTA, FEBRŪTA, or FEBRUĀLIS. Iuno was further, like Saturn, the guardian of the finances, and under the name of MONĒTA she had a temple on the Capitoline Hill, which contained the mint. The most important period in a woman's life is that of her marriage, and Iuno was therefore believed especially to preside over marriage. Hence she was called IUGA or IUGĀLIS, and had a variety of other names, such as PRONŬBA, CINXIA, LUCĪNA, etc. The month of June, which is said to have been originally called Iunonius, was considered to be the most favourable period for marrying. Women in childbed invoked Iuno Lucina to help them, and newly-born children were likewise under her protection; hence she was sometimes confounded with the Greek Artemis or Ilithyia. In Etruria she was worshipped under the name of CUPRA. She was also worshipped at Falerii, Lanuvium, Aricia, Tibur, Praenesté, and other places. In the representations of the Roman Iuno that have come down to us, the type of the Greek Heré is commonly adopted. See HERÉ.

Iunōnes. A sort of feminine equivalent to the *genius* (q. v.) of men. The Iunones were to the Romans guardian spirits who watched over women. They are represented in art as young girls, winged, and wholly draped (Pliny, *H. N.* ii. 5; Sen. *Epist.* 110).

Iunonia. One of the Canary Islands, or Insulae Fortunatae. It is now Palma (Pliny, *H. N.* vi. 32).

Iunōnis Promontorium. A promontory of Spain, on the Atlantic side of the Strait of Gibraltar. It is now Cape Trafalgar (Mela, ii. 6).

Iupĭter (IUPPĬTER). The chief of the gods in the Roman mythology. He was originally an elemental divinity, and his name signifies the father or lord of heaven, being a contraction of *Diovis pater*, or *Diespiter* (Skt. *Dyāus pitar*; cf. the Teutonic *Tiu* or *Zio*). Being the lord of heaven, he was worshipped as the god of light, rain, storms, thunder, and lightning, whence he had the epithets of LUCETIUS, IMBRICĪTOR, SERENĀTOR, PLUVIUS, FULGURĀTOR, TONITRUĀLIS, TONANS, and FULMINĀTOR. As the pebble or flint stone was regarded as the symbol of lightning, Iupiter was frequently represented with such a stone in his hand instead of a thunderbolt. In concluding a treaty, the Romans took the sacred symbols of Iupiter—i. e. the sceptre and flint stone—together with some grass from his temple, and the oath taken on such an occasion was expressed by *per Iovem Lapidem jurare*. In consequence of his possessing such powers over the elements, and especially of his always having the thunderbolt at his command, he was regarded as the highest and most powerful among the gods. Hence he is called the Best and Greatest (*Optimus Maximus*). His temple at Rome stood on the lofty hill of the Capitol, whence he derived the surnames CAPITOLINUS and TARPĒIUS. The Ides of each month were sacred to him. He was regarded as the special protector of Rome. As such he was worshipped by the consuls on entering upon their office; and the triumph of a victorious general was a solemn procession to his temple. He therefore bore the surnames of IMPERĀTOR, VICTOR, INVICTUS, STATOR, OPITŬLUS, FERETRIUS, PRAEDĀTOR, TRIUMPHĀTOR, and the like. Under all these surnames he had temples or statues at Rome; and two temples, viz. those of Iupiter Stator and of Iupiter Feretrius, were believed to have been built in the time of Romulus. Under the name of Iupiter Capitolinus, he presided over the great Roman games; and under the name of Iupiter Latialis or Latiaris, over the Feriae Latinae.

Iupiter, according to the belief of the Romans, determined the course of all human affairs. He foresaw the future, and the events happening in it were the results of his will. He revealed the future to men through signs in the heavens and the flight of birds, which are hence called his messengers, while the god himself is designated as PRODIGIĀLIS—that is, "sender of prodigies." For the same reason the god was invoked at the beginning of every undertaking, whether sacred or profane, together with Ianus, who blessed the beginning itself. Iupiter was further regarded as the guardian of law and as the protector of justice and virtue. He maintained the sanctity of

MARSHALL HIGH SCHOOL
LIBRARY
MINNEAPOLIS

an oath, and presided over all transactions which were based upon faithfulness and justice. Hence Fides was his companion on the Capitol along with Victoria; and hence a traitor to his country; and persons guilty of perjury were thrown down from the Tarpeian Rock.

As Iupiter was the lord of heaven, and consequently the prince of light, the white colour was sacred to him, white animals were sacrificed to him, his chariot was believed to be drawn by four white horses, his priests wore white caps (*albogaleri*), and the consuls were attired in white when they offered sacrifices in the Capitol the day they entered on their office. The worship of Iupiter at Rome was under the special care of the Flamen Dialis, who was the highest in rank of all the flamens. (See FLAMEN.) The Romans, in their representations of the god, adopted the type of the Greek Zeus (see ZEUS); but the Roman conception of Iupiter differs from the Greek conception of Zeus in being more purely animistic as distinct from anthropomorphic. Hence we do not find Iupiter as the subject of plastic art until the later (Graeco-Roman) period. Cf. Mommsen, *Hist. of Rome*, i. pp. 41, 52, 53 (Amer. ed. 1888).

Iura or Iurassus Mons. Now Iura; a range of mountains running north of the Lake Lemanus as far as Augusta Rauracorum (August, near Bâle), on the Rhine, forming the boundary between the Sequani and Helvetii (Caes. *B. G.* i. 2).

Iure, Cessio in. A method used under the forms of Roman law, by which the transfer of rights was accomplished by means of a fictitious suit. See Gaius, ii. 24 foll.

Iuridĭci Conventus. See PROVINCIA.

Iuris Consulti and Iure Consulti. See IURISPRUDENTIA.

Iuris Periti. See IURISPRUDENTIA.

Iurisdictio. The term used in Roman law of the power belonging to the king or magistrate of administering justice in suits between private persons (*inter privatos*), which was a part of the *imperium* or supreme executive power. The plebeian and inferior magistrates did not possess iurisdictio, except that the curule aediles exercised it in matters relating to the markets.

Very strictly used, the term iurisdictio means the same as *iudicis datio*, or the right of a magistrate to appoint a *iudex*. See ACTIO; IMPERIUM; IUDEX; JUDICIAL PROCEDURE; MAGISTRATUS.

Iurisprudentia. A post-classical term defined by the *Digest* (i. 1, 10) as the knowledge of what is legally right and wrong (*iusti atque iniusti scientia*). The science of law is the one branch of Roman literature which had a purely national development. From an early date there were definite legal ordinances in Rome, and shortly after the expulsion of the kings a collection of *leges regiae* was made by a certain Gaius Papirius. These consisted of archaic customary laws of a strongly sacerdotal character, and arbitrarily attributed to individual kings (known as the *Ius Papirianum*). However, the foundation of the collective legal life of the Romans was primarily the well-known law of the Twelve Tables, B.C. 451–450. (See TWELVE TABLES.) This put an end to the want of a generally known law; for the knowledge of previous legal decisions, like the whole of the judicial procedure, had been hitherto kept in the exclusive possession of the patricians. The administration of the law remained as formerly in the hands of the patricians alone, for they kept from the plebeians all knowledge of the *dies fasti* and *nefasti*—i. e. the days on which legal proceedings might or might not be taken, as also the forms of pleading which were regularly employed (*legis actiones*). The latter were so highly important that the least infraction of them would involve the loss of the cause. This condition of things existed for a long time, until Appius Claudius Caecus drew up a calendar of the days on which causes could be pleaded, and a list of the forms of pleading. These were made public about B.C. 304 by his secretary, Gnaeus Flavius, after whom they were then called *Ius Flavianum*. By these means a knowledge of the law became generally attainable. It soon had eminent representatives among the plebeians in the persons of Publius Sempronius Sophus and Tiberius Coruncanius. In ancient days, however, the work of the jurists was purely practical. It was considered an honourable thing for men learned in the law (*iuris periti*) to allow people to consult them (*consulere*, hence *iuris*, or *iure consulti*) either in the Forum or at appointed hours in their own houses, and to give them legal advice (*responsa*). It was mainly by a kind of oral tradition that the knowledge of law was handed down, as the most eminent jurists allowed younger men to be present at these consultations as listeners (*auditores* or *discipuli*).

The beginning of literary activity in this department, as in others, dates from the Second Punic War. It begins with the earliest exposition of existing law. Sextus Aelius Catus published in B.C. 204 a work named *Tripertita* (from its being divided into three parts) or *Ius Aelianum*, which consisted of the text of the laws of the Twelve Tables together with interpretations, and the legal *formulae* for carrying on suits. From the middle of the second century it became common to make collections of the *responsa* of eminent jurists, and to use them as a source of legal information. Among others, Marcus Porcius Cato, the son of Cato the Elder, made a collection of this kind. In some families knowledge of the law was in a measure hereditary, as in those of the Aelii, Porcii, Sulpicii, and Mucii. A member of the last family, the pontifex Quintus Mucius Scaevola (died B.C. 82), was the first who, with the aid of the formal precision of the Stoic philosophy, gave a scientific and systematic account of all existing law, in his work, *De Iure Civili*. Servius Sulpicius Rufus, the contemporary and friend of Cicero, further advanced this new and more methodical treatment of law by his numerous writings and by training up pupils, such as Aulus Ofilius and Publius Alfenus Varus. The former rendered great assistance to Caesar in his scheme for forming the whole of the *Ius Civile* into a single code. Besides these there were several eminent jurists at the close of the Republic: Gaius Trebatius Testa, Quintus Aelius Tubero, Gaius Aelius Gallus, and Aulus Cascellius.

While under the Republic the learned jurist had held an inferior position to the orator in influence and importance, there is no doubt that under the Empire public eloquence became subordinate, and the position of the jurists was the most coveted and influential in the State, especially when Augustus decreed that the opinions of jurists author-

ized by the head of the State were to have the validity of law. It was from the jurists as advisers of the emperor that all legislation now proceeded. They had access to all the highest offices of the court and of the State. Accordingly men of the highest gifts and character betook themselves naturally to this profession, and even introduced into the laws an increased unity, consistency, and systematic order. Under Augustus two jurists were pre-eminent, Quintus Antistius Labeo and Gaius Ateius Capito, the founders of the two later schools, named, after their pupils Sempronius Proculus and Masurius Sabinus, the "Proculiani" and "Sabini" respectively. Labeo sought to extend his professional knowledge, while Capito held fast to the traditions of former jurists. A third school was that of the Cassiani, who took their name from the jurist Cassius Longinus (Pliny, *Epist.* vii. 24, 8), and represented a mean between the conservatism of Capito and the innovating spirit of Labeo.

The first scientific collection of laws was made under Hadrian by the Sabinian lawyer Salvius Iulianus, with his *Edictum Perpetuum*, a classified collection of the praetorian edicts from the times of the Republic. (See EDICTUM.) Sextus Pomponius, his somewhat younger contemporary, composed among other things a history of the law till the time of Hadrian.

Under the Antonines jurisprudence was able to claim a remarkable representative in the Asiatic Gaius, but it received its completion and conclusion in the first half of the third century A.D. through Aemilius Papinianus, Domitius Ulpianus, and Iulius Paulus. After their time there were no jurists of great and original capacity. In the fourth century literary activity revived again, but confined itself to the collection of legal authorities, especially that of imperial ordinances. Thus the *Codex Theodosianus*, finished in A.D. 438, contains an official record of all the enactments decreed by the emperors from the time of Constantine. Under Justinian I. (A.D. 527–565) the last and most complete Roman collection of laws was made, under the name of the *Corpus Iuris Civilis* (q. v.).

See Bach, *Historia Iurisprudentiae Romanae* (rev. by Stockmann, Leipzig, 1796); Bremer, *Die Rechtslehrer und Rechtsschulen im röm. Kaiserreich* (Berlin, 1868); Krüger, *Quellen und Lit. des röm. Rechts;* and on the law language, Kalb, *Das Juristlatein* (Nürnberg, 1886).

Ius. (1) In the widest sense, right or justice (so *ius reddere*); and, derivatively, the place where justice is dispensed, the tribunal of the praetor (cf. ACTIO); but usually law, the system of social order enforced by the community. More strictly, human law as contrasted with *fas*, the divine law. (Nevertheless, the body of ancient rules which regulated the intercourse of the city-states of Italy, and which seems to have been a part of *fas*, was termed *ius fetiale*.) *Ius*, in the sense of human law, may be either customary in its origin (*ius moribus constitutum*) or statutory (cf. LEX). The two make up the *ius civile* or municipal law of each State. *Ius civile*, unqualified, usually means the civil law of Rome, more precisely designated as the law of the Quirites (*ius Quiritium*). Such principles of law as were common to all the Mediterranean States, and were applied by the Romans in cases where others than Roman citizens were concerned, were termed *ius gentium*. This *ius gentium* was often identified with natural law, but in the early Imperial period *ius naturale* commonly designated the postulates of natural reason and the sense of right. Closely analogous, therefore, is the conception of *ius aequum* as opposed to *ius strictum*. It was the acceptance and development of *ius gentium* and *ius naturale* that gave to the Roman law of the Imperial period its character of universality. The chief agencies in this development were (*a*) the edicts of the praetors (cf. EDICTUM) during the last two centuries of the Republic, and (*b*) the writings of the great jurists (*iurisperiti, iurisprudentes*), especially of those to whose opinions the emperors gave legal authority by granting them the *ius respondendi*. The edict law was sometimes distinguished from the *ius* (sc. *civile*), as English lawyers contrast "equity" and "law"; but the distinction, as in English law, was essentially historical. The real authority of the edict and the source of its authority—viz. the *imperium* of the praetor — were well expressed in terming it *ius honorarium* (Dig. i. 1, 7, § 1, *honor* = office). The juristic literature of the second and third centuries was cited in the later Empire as the sole authority for all the older law (*ius vetus*), and was commonly described as the *ius*, in antithesis to the *leges* promulgated by the emperors.

Ius publicum embraces all those rules of law which primarily subserve public interests; *ius privatum* those which primarily subserve individual interests (Dig. i. 1, 1, § 2). *Ius privatum* covers the law of the family and of property. *Ius singulare*, as opposed to *ius commune*, denotes a special rule contrary to the general spirit and tenor of the law (Dig. i. 3, 16).

(2) A right, in the sense of a privilege granted to a special community or class. So the *ius Latii*, by which allies (*socii*) of Rome gained *commercium* and, in some cases, full Roman citizenship (cf. LATINITAS); the *ius Italicum*, by which, in the Imperial period, provincial cities obtained the same rights as those commonly possessed by Italian cities—viz. municipal self-government and exemption from poll and land taxes; the *ius liberorum*, by which the mother of at least three children was emancipated from guardianship and obtained a special capacity of inheritance.

(3) A right in the ordinary legal sense, which may be political, like the *ius suffragii* or *ius honorum*, or private, like family and property rights. In the family relations, *ius* is frequently equivalent to *potestas;* wife and children are *alieno iuri subjecti*, an independent person is *sui iuris*. Property rights the Roman jurists divided into real and personal according as they were enforcible by *actio in rem* or only by *actio in personam* (cf. ACTIO). *Ius nudum* was a right without a remedy. The praetor could not make any person *heres* or *dominus* who was not *heres* or *dominus* by the old civil law; but he could give such a person *bonorum possessio* and the actions necessary to protect his possession; and by refusing to give actions to the civil-law owner, he made the latter's right *ius nudum*.

Iusiurandum (*ὅρκος*). An oath, either formally and solemnly pronounced as a part of a religious or legal act, or loosely used in common life. Among the Greeks oaths were taken on important occasions, such as treaties, alliances, and other compacts, in making vows, in ratifying promises; and on many other occasions, such as the registry of a youth as an Athenian citizen (see Ephebi), the assumption of public office by kings and ephors in Sparta, and by archons, generals, judges, and other officials at Athens, by judges of the games, by both accuser and defendant in the *ἀνάκρισις* (see Anacrisis), and by witnesses (see Martyria).

Oaths were sworn in the name of all the gods together, or by the special deity appropriate to the special occasion, as when virgins swore by Artemis, married women by Heré, etc. Women had also their own peculiar oaths, *μὰ τὼ θεώ* ("by the two goddesses," i. e. Demeter and Persephoné), *νὴ τὴν Ἀφροδίτην*, etc. The Spartans swore by Castor and Pollux as their national demigods, and the Athenians by their deities (Zeus, Poseidon, and Athené), much as in the age of chivalry the nations of Europe swore by their national saints. The Greeks also swore by whatever was especially dear to them—e. g. Achilles by his sceptre, warriors by their weapons, friends by their friendship. The most solemn oaths, however, were those that were sworn by Zeus (hence styled *ὅρκιος*), who punished perjury both in this life and after death (*Il.* xix. 260; Pind. *Ol.* ii. 71). The gods themselves swore by the Styx as the most terrible of oaths (*Il.* xv. 36 foll.). In taking an oath men usually stood, lifting up the hands and eyes to heaven, the oath being a sort of prayer; and sacrifices and libations were the accompaniments of the most solemn adjurations. To give them especial sanctity, oaths were often taken in temples, shrines, or sacred groves.

Among the Romans, oaths were taken by the magistrates and other persons who entered the service of the State, by soldiers, by the *fetiales* in ratifying treaties with foreign powers, by the parties to a legal action before the praetor, by witnesses, and loosely by persons in the ordinary speech of common life. Under the Empire, oaths of allegiance were commonly taken by all subjects of the emperor, and on the recurrence of the day on which such an oath had been taken, it was customary to renew it, and also on the first day of each year. The form of this oath of allegiance was probably the same as that of the *sacramentum* (see below). Vestal virgins and the Flamen Dialis were not allowed to swear on any occasion. Men swore by the gods, much as did the Greeks, by their genii, or by the genius of the emperor, and also by individuals or objects most dear to them. Favorite oaths were *Hercle* or *Mehercle* (i. e. *ita me Hercules iuvet*); *Pol, Perpol, Aedepol* (i. e. *per Pollucem, ah di Pollux*); *per Iovem* and *per Iovem Lapidem; per superos; per deos immortales; medius fidius* (i. e. *ita me deus Fidius iuvet*); *ita me dii ament.* Women never swore by Hercules nor men by Castor (Gell. xi. 6). The form called *exsecratio* was common. Thus, *di me perdant ni . . .; dispeream; di me interficiant; ne vivam; ne salvus sim,* etc.

The oath taken in legal actions was called *iusiurandum in iure* and also *iusiurandum necessarium* as being required, and hence opposed to the *iusiurandum voluntarium* out of court. The oath taken by the Roman soldier was called *sacramentum.* It was taken on enlisting for a campaign, and first gave the soldier the right of using arms against the enemy. It thus distinguished legitimate warfare (*militia*) from mere rapine (*latrocinium*). It contained an *exsecratio*, and he who broke it was accursed (*sacer*). The formula of a *sacramentum* is given by Gellius (xvi. 4).

The ancients, especially the Greeks, tried to check the indiscriminate use of oaths in daily life. To allow men to relieve their feelings without profanity, Rhadamanthus is said to have ordained swearing by the names of animals, much as in modern times resort is had to such expressions as "By Jingo!" "Thunder!" "Great Scott!" etc. Thus Socrates swore by the dog, Lampon by the goose, and such elliptical expressions as *μὰ τὸν* (with the name of the deity suppressed) were common, just as in English men say "I swear!" (Aristoph. *Ran.* 1374). See Lasaulx, *Ueber den Eid bei den Griechen;* Brissonius, *De Formulis,* etc.; and the article Sponsio.

Iusta Funĕra. See Funus.

Iustinianēus Codex. See Codex Iustinianeus.

Iustiniāna. (1) Prima, a town in Illyria, near Tauresium, was the birthplace of Justinian, and was built by that emperor. It became the residence of the archbishop of Illyria, and, in the Middle Ages, of the Servian kings. (2) Secunda, also a town in Illyria, previously called Ulpiana, was enlarged and embellished by Justinian.

Iustiniānus. (1) Flavius Anicius. A Roman emperor of the East, born in Illyria A.D. 482 or 483, of servile parentage. He was nephew on his mother's side to Iustinus, afterwards emperor. His original name was Uprauda. The elevation of his uncle to the throne, A.D. 518, decided the fortune of Justinian, who, having been educated at Constantinople, had given proofs of considerable capacity and application. Iustinus was ignorant and old, and the advice and exertions of his nephew were of great service to him during the nine years of his reign. He adopted Justinian as his colleague, and at length a few months before his death, feeling that his end was approaching, crowned him in presence of the patriarch and senators, and made over the imperial authority to him, in April, 527. Justinian was then in his forty-fifth year, and he ruled more than thirty-

eight years, till November, 565, when he died. His long reign forms a remarkable epoch in the history of the world. Although himself unwarlike, by means of his able generals, Belisarius and the eunuch Narses, he completely defeated the Vandals and the Goths, and restored Italy and Africa to the Empire. Justinian was the last emperor of Constantinople who, by his dominion over the whole of Italy, reunited in some measure the two principal portions of the ancient Empire of the Caesars. In the East, his arms repelled the inroads of Chosroës and conquered Colchis; and the Negus, or king of Abyssinia, entered into an alliance with him. On the Danubian frontier, the Gepidae, Langobardi, Bulgarians, and other hordes were either kept in check or wholly routed. The wars of his reign are related by Procopius and Agathias.

Iustinianus. (From a medal.)

Justinian must be viewed also as the administrator and legislator of a vast empire. In the first capacity he did much good and considerable harm. He was both profuse and penurious. Personally inclined to justice, he often overlooked, through weakness, the injustice of subordinates. He established monopolies of certain branches of industry and commerce, and increased the taxes; but he introduced the culture of silkworms into Europe, and the numerous edifices which he raised, and the towns which he repaired or fortified, attest his love for the arts, and his anxiety for the security and welfare of his dominions. Procopius gives a notice of the towns, churches (St. Sophia among the rest), convents, bridges, roads, walls, and fortifications constructed or repaired during his reign. The same Procopius, however, wrote a secret history (Ἀνέκδοτα) of the court and reign of Justinian and his wife Theodora, both of whom he paints in the darkest colours. Theodora, previous to her marriage, indeed, had been a dissolute woman, but one of some ability, and she exercised till her death in 548, a great influence over the mind of Justinian. Many acts of oppression and cruelty were committed by her orders. At the same time the *Anecdota* of Procopius cannot be implicitly trusted, as many of his charges are evidently misrepresentations or malignant exaggerations.

Justinian was easy of access, patient of bearing, courteous and affable in discourse, and perfect master of his temper. In the conspiracies against his authority and person he often showed both justice and clemency. He was chaste and temperate, frequently fasting, and allowing himself little time for sleep. His restless application to business and to study, as well as the extent of his learning, have been attested even by his enemies (Procop. viii. 13). He adorned Constantinople with many magnificent structures, among them the great church (now mosque) of St. Sophia. He was, or professed to be, a poet and philosopher, a lawyer and theologian, a musician and architect; but the greatest act of his reign is the codification of the Roman law, which has immortalized his name, and an account of which will be found under the articles Corpus Iuris and Tribonianus. He was, however, much more than a codifier, for the following fundamental changes were introduced by him: (*a*) a great amelioration of the condition of slaves (see Servus); (*b*) a change in the law of intestate succession by which *cognati* or relations on the mother's side inherited equally with *agnati* or relations on the father's side; (*c*) the introduction of a system of small-debt courts. Unfortunately, his love of theological controversy led him to interfere with the consciences of his subjects; and his penal enactments against Jews and heretics displayed a spirit of intolerance. He was succeeded by his nephew, Iustinus IV. See the biographies by Isambert (1856) and Body (6th ed. 1889); also Roby's *Introduction to the Digest* (1884).

(2) The second of the name, the son of Constantine III., and lineal descendant of the emperor Heraclius. He succeeded his father on the throne of Constantinople, A.D. 685, but his reign, which lasted ten years, was marked chiefly by wars with the Saracens, and by the exactions and oppressions of his ministers. At last, his general Leontius drove him from the throne, and, having caused his nose to be cut off, banished him to the Crimea, A.D. 695. Leontius, however, was soon after himself deposed and banished by Tiberius Apsimerus, who reigned for seven years. Meantime Justinian had escaped from the Crimea and married the daughter of chief of the Gazari, a tribe of Turks; and he afterwards, with the assistance of the Bulgarians, entered Constantinople, and put to death both Leontius and Tiberius, along with many others. He ordered also many of the principal people of Ravenna to be killed. Justinian was finally dethroned and slain by Philippus Bardanes, A.D. 711.

Iustinus, M. Iunianus. A Latin historian, generally supposed to have flourished in the age of the Antonines. Nothing is known of the particulars of Justin's life. He made an epitome or selection of extracts from the *Historiae Philippicae* of Trogus Pompeius, written under Augustus. This epitome is entitled, *Historiarum Philippicarum et Totius Mundi Originum, et Terrae Situs ex Trogo Pompeio Excerptarum Libri XLIV. a Nino ad Caesarem Augustum*, and it is best described as a history of the world down to the Roman conquest of the East. In making his extracts, Justin gave the preference to those facts and those passages which he considered peculiarly interesting. Other events are only mentioned briefly, and by way of transition. Chronology is entirely neglected in the work of Justin, as in the greater part of the ancient writers. His style is correct, simple, and elegant, but unequal; though preferable to that of Florus.

The value of Justin's history chiefly depends on the circumstance of Trogus's work having been

compiled from some of the best of the ancient historical writers, such as Theopompus, Herodotus, Ctesias, Hieronymus of Cardia, Timaeus, Phylarchus, Polybius, Posidonius, etc.

In the Middle Ages the work of Justin was much read and copied, though not used in schools. The *editio princeps* appeared at Venice and Rome in 1470. Good editions are those of Fittbogen, with notes (Halle, 1835), Johanneau and Dübner, revised by Jeep (Leipzig, 1860), with critical commentary, and Rühl (Leipzig, 1886). There is an index in the Delphin edition (by Cantel) and in the Lemaire edition, from Wetzel.

Iustitium. The term by which the Romans designated a legal vacation, or cessation from business in the courts of justice, in the sittings of the Senate, and even in private life, when all the shops were closed. This took place on extraordinary occasions, such as famine, or during the perils of war, and, under the Empire, on the death of a member of the imperial family. It was decreed by the highest magistrate present in Rome, subject to the approval of the Senate. When the occasion had passed by, it was removed by a special edict on the part of the magistrate (Mommsen, *Römisches Staatsrecht*, i. pp. 263–266).

Iustus (Ἰοῦστος). A Jewish historian of Tiberius in Galilee. He was a contemporary of Iosephus, who was unfriendly towards him. Iustus wrote a history of the Jewish kings from Moses down to the death of Herod in the third year of the reign of Trajan, but it has not survived.

Iuthungi. A German tribe dwelling north of the Danube between Vindobona (Vienna) and the site of the modern Pesth (Ammian. Marc. xvii. 6).

Iuturna. The nymph of a fountain in Latium, famous for its healing qualities, whose water was used in many of the sacrifices. A pond in the Forum, between the temples of Castor and Vesta, was called Lacus Iuturnae. The nymph is said to have been beloved by Iupiter, who rewarded her with immortality and dominion over the waters. Vergil calls her the sister of Turnus. See Serv. *ad Aen.* xii. 139; Varr. *L. L.* v. 71; Ovid, *Fast.* i. 463; Arnob. iii. 29.

Iuvāvum or **Iuvavia**. Now Salzburg; a town in Noricum, on the river Iuvavus (Isonta, Salzach). It was founded by Hadrian, and made the residence of the Roman provincial governor. It was destroyed by the Heruli in the fifth century, but afterwards rebuilt.

Iuvenalia and **Iuvenāles Ludi**. Scenic games instituted by Nero in A.D. 59 in honour of the first shaving of his beard. They were celebrated in a private theatre, and consisted of a great variety of plays acted by distinguished amateurs (Pliny, *H. N.* xxxvii. 19; Dio Cass. lxvii. 14).

Iuvenālis, Decĭmus Iunius. The fourth in order of time and of literary development of the great writers of Roman satire, his predecessors being Lucilius, Horace, and Persius. Of his life there are known but few particulars. His ancient biographers relate that he was either the son or foster-son of a rich freedman, and was born at Aquinum (cf. Juv. iii. 319) at a date that can not be determined, but which may be approximately given as between A.D. 57 and 67. He is said to have studied rhetoric, and began writing satire not earlier than A.D. 100, for in his first satire (i. 49) he mentions the exile of Marius Priscus, which took place in that year. He lived a simple life at his country estate near Tibur (xi. 65). He tells us himself that he visited Egypt at some period of his life; and according to an inscription dedicated by him to Ceres Helvina, found at Aquinum, he held at various times the offices of tribune of a cohort, duumvir of Aquinum, and *flamen*. (*C. I. L.* x. 5382). Tradition explains his military office and his visit to Egypt as having been in reality a form of exile for having attacked the imperial favourite, Paris, in his satires (cf. Sidon. Apoll. viii. 270). Another tradition makes Britain to have been his place of exile. Of the date and place of his death, nothing is known; but he must have died later than A.D. 127, as he mentions Aemilius Iunius (xv. 27). He was a friend of Martial, who speaks of him in friendly terms (vii. 24 and 91; xii. 18).

There remain to us sixteen satires of Juvenal, the last of which is probably a fragment, and is by some regarded as spurious. All are written in dactylic hexameters. They represent the final development of satire among the Romans, and answer the modern definition of satiric composition, being passionate, scornful, and filled with the language of indignant denunciation and bitter invective. His subject is not, as with Horace, the foibles and venial follies of the age, but those darker vices whose prevalence taints the history of the times in which he wrote. His tone is, therefore, not that of the indulgent man of the world, but of the stern censor who hates the hideous sins that he looks upon, and scourges them with a whip of scorpions. Yet there is much of the rhetorician's exaggeration in his invective, and it may be questioned whether the passion is not partly simulated. Moreover, the painful minuteness with which he draws the details of abnormal vice, and the excessive crudity of his language in at least two of the satires (the Second and Sixth) seem inconsistent with the professed morality of the writer, and excite a strong suspicion of pruriency. He is at his best in the Third and Tenth, in which he touches the less loathsome faults of contemporary Rome, and where one finds here and there a noble bit of poetry. It is these two satires that Dr. Samuel Johnson paraphrased in English in his two poems, *London* and *The Vanity of Human Riches*, with a fire and force and epigrammatic terseness of language that are in no respect inferior to the original. Juvenal is very modern in his mental attitude as well as in his phrasing. An English scholar has recently declared that we are to see in him the first instances in literature of American humour—the humour that derives its effect from bringing together unexpectedly two ludicrously inappropriate ideas, or in applying to the most solemn subjects the familiar language of every-day life. In this, Juvenal has been hailed as the prototype of Hosea Biglow and Mark Twain; and his "waxing over the knees of the gods" and his offering "the sacred sausages of a little white pig" have perhaps to many obscured the other passages of great nobility and beauty that are not far to seek. Of pregnant phrases and epigrammatic sentences, he has made some striking contributions to literature. *Probitas laudatur et alget—facit indignatio versum—res angusta domi—scribendi cacoëthes—stemmata quid faciunt?—Cantabit vacuus coram latrone viator—Orandum est*

ut sit mens sana in corpore sano—Maxima debetur puero reverentia—are perhaps the most famous of his many famous epigrams.

The best MS. of Juvenal is the Codex Pithoeanus of the ninth century, preserved at Montpellier in France. The other MSS. are enumerated by Jahn in his edition. The *editio princeps* of Juvenal appeared at Rome in 1470, but undated. Standard editions with notes are those of Ruperti (2d ed. Leipzig, 1819); Lemaire (Paris, 1823); Weber (Weimar, 1825); Heinrich, with scholia (Bonn, 1839); Jahn (Berlin, 1851) revised by Bücheler (Berlin, 1886); Friedländer, 2 vols. (1895); of thirteen satires with English notes, Macleane and Long (2d ed. London, 1867); Simcox (2d ed. London, 1873); Hardy (London, 1883); Pearson and Strong, with good introduction (Oxford, 1887); but especially by J. E. B. Mayor (4th ed. of vol. i. London, 1886; 3d ed. of vol. ii. 1881); of satires i. and ii. by Nash (Boston, 1893). There is a spirited verse translation by Gifford (London, 1817; reprinted in the Bohn Library); and a prose by J. D. Lewis, with text and notes (2d ed. London, 1882); by Strong and Lesper (London, 1882). On Juvenal, see Widal, *Juvénal et ses Satires* (Paris, 1869); and an article by Boissier in the *Revue des Deux Mondes* for June, 1870. On the coincidences between Juvenal and Martial, see a monograph in the introduction to Pearson and Strong's edition. See also the article SATIRA.

Iuvencus, GAIUS VETTIUS AQUILINUS. A Spanish presbyter, who, under Constantine, composed a version of New Testament history in heroic metre, modelling his diction on the Roman epic poets, especially Vergil. He shows considerable taste and technical skill. In the best MSS. the work is styled *Evangeliorum*, Liber i.–iv. In the story, Iuvencus follows chiefly St. Matthew. Edition by Reusch (Frankfort, 1710). On the language, etc., see the monograph by Hatfield (Bonn, 1890).

Iuventas. The Roman goddess of youth. See HEBÉ.

Iuvernia (Ἰουερνία). A name for Ireland, found among the Greek writers (Agathem. ii. 4; Ptol. ii. 2). See HIBERNIA; IERNÉ.

Ivory. See ELEPHAS.

Ixĭon (Ἰξίων). The son of Antion or Peision, or, according to some, of Phlegyas. Others, again, gave him the god Ares for a father. He obtained the hand of Dia, the daughter of Deïoneus, having promised his father-in-law large gifts; but he did not keep his agreement and Deïoneus seizing his horses detained them as a pledge. Ixion then sent messengers to say that the gifts were ready if he would come to bring them. Deïoneus accordingly came, but his treacherous son-in-law had prepared in his house a pit filled with fire and carefully covered over, into which the unsuspecting man fell and perished. After this deed Ixion was stricken with madness, and the atrocity of his crime was such that neither gods nor men would absolve him, till at length Zeus took pity on him and purified him, and admitted him to Olympus. Here again, incapable of good, Ixion cast a lustful eye on Heré, the wife of his divine benefactor. She, however, in concert with Zeus, formed a cloud in the likeness of herself, which Ixion embraced. Having boasted of his good-fortune, Zeus precipitated him into Erebus, where Hermes fastened him with brazen bands to an ever-revolving fiery wheel, lying upon which he is forever scourged and forced to cry out "Benefactors should be honoured!" The offspring of Ixion and the cloud was a son, Centaurus, who afterwards, having intercourse with the mares of Magnesia, begot the race of centaurs. See CENTAURI.

The myth of Ixion is probably of great antiquity, as the customs on which it is founded only prevailed in the Heroic Age. Its chief object seems to have been to inspire a horror of the violation of hospitality on the part of those who, having committed homicide, were admitted to the house and table of the one who had consented to perform the rites by which the guilt of the offender was supposed to be removed. On Ixion, see the poem by Robert Browning in his *Jocoseria*.

Ixionĭdes. A patronymic applied to Pirithoüs, the son of Ixion (q. v.). The Centaurs are also called Ixionidae (Lucan, vi. 386).

Ixios (Ἴξιος). A name applied to Apollo, and derived from a district in Rhodes called Ixiae or Ixia.

Iynx (Ἴυγξ). Daughter of Peitho and Pan (or Echo). She was changed into a bird by Heré, as a punishment for endeavoring to fascinate Zeus. She is the symbol of restless, passionate love.

J

J. For Latin words beginning with J (consonantal I), see under I. For the character, see ALPHABET, p. 62.

Jacobs, CHRISTIAN FRIEDRICH WILHELM, a distinguished classicist, was born at Gotha, October 6, 1764. He studied philology, theology, and philosophy at the universities of Jena and Göttingen, and in 1785 became an instructor in the Gymnasium at Gotha, with a position after 1802 in the Public Library of that city. In 1807 he accepted the office of classical teacher in the Munich Lyceum, returning, however, to Gotha in 1810 to assume full charge of the Library and of the collection of numismatics and antiques. From 1831 to 1842 he was director of the art collections of Gotha. He died March 30, 1847. Besides many special editions of the classics, including the *Carmina Iliaca* of Tzetzes, Aelian, Achilles Tatius, and the *Imagines* of the Philostrati, Jacobs was a prolific contributor to general literature and a frequent translator. His essays on topics relating to classical philology were published at various times with the title *Vermischte Schriften*, and make eight volumes in all (1823–44). His most important classical work is an edition of the *Anthologia Graeca*, 13 vols. (1794–1814). He also made numerous translations from the Anthology, which he published under the title of *Tempe*, in 2 vols. (1803). His elementary book on Greek (*Elementarbuch der griechischen Sprache*), published in 1805, was long popular. Of his other writings may be mentioned the *Geschichte des weiblichen*

Geschlechts. See Bursian, *Geschichte der class. Philol. in Deutschland,* pp. 635–640.

Jahn, Otto, distinguished as an archaeologist and classical scholar, was born at Kiel, June 16, 1813. He pursued his university studies at Kiel, Leipzig, and Berlin, and after travelling extensively in Italy, took up his residence for a time at Rome, whence he was called to lecture at Kiel and later at Greifswald. In 1847 he became Professor of Archaeology at the University of Leipzig, where he founded the Archaeological Society and acted himself as Director of the Archaeological Museum. Having taken part with Mommsen and other distinguished men in the political agitation of 1848–1849, he was deprived of his university offices in 1851. Four years later he received a call to Bonn as Professor of "Alterthumswissenschaft" and Director of the Art Museum, resigning in 1867 to succeed Gerhard at Berlin, but died before actually commencing to lecture there, September 9, 1869.

Jahn was a most prolific writer, and possessed a versatile mind coupled with acuteness and power. His contributions to literature comprise many works that are of the first importance. Such are his editions of Persius (1843), Censorinus (1845), Florus (1852), *Pausaniae Descriptio Arcis Atheniensis* (1860), the *Brutus* of Cicero (1849), Juvenal (1851), the *Periochae* of Livy (1853), the *Psyche et Cupido* of Apuleius (1856), the *Electra* of Sophocles (1861), the *Symposium* of Plato (1864), and Longinus (1867). Purely archaeological are the following works: *Die hellenische Kunst* (1846); *Peitho* (1846); a description of the antique vases in the Royal Bavarian Collection (1854); *Die Wandgemälde des Columbariums in der Villa Pamfili* (1859); a work on the evil eye (1855); and *Darstellungen griechischer Dichter auf Vasenbildern* (1861). Other works are the elaborate and able biography of Mozart (1856–60); the *Gesammelte Aufsätze über Musik* (1866); his *Biographische Aufsätze* (1866); and *Ludwig Uhland* (1853). See the sketch of Jahn by Vahlen (Vienna, 1870).

Jests (*ἀστεῖα, σκώμματα, ioci, iocularia, facete dicta*). In their fun-making, the Greeks and Romans seem to have differed somewhat as do the French and the English of to-day—the Greeks inclining more to wit and the Romans to humour. The Greeks admired what was neat in form, terse, pointed, sparkling; the Romans what was provocative of laughter. This is, in fact, the essential difference between the *sal Atticum* and the *acetum Italicum.* (See Epigramma.) The witty sayings of the most famous Greeks, preserved for us in the pages of Diogenes Laërtius and Plutarch, have a higher quality about them than mere fun. Such is that of Diogenes the Cynic, who, when journeying from Sparta to Athens, was asked where he was going, and replied, "From the men's apartments to the women's." The same person, observing the son of a courtesan throwing stones among a crowd, said to him, "Take care lest you hit your father!" A stock joke of modern times is told of him, for seeing an unskilful archer practising, he went and sat by the target, saying, "Now I shall be out of harm's way." Clever, also, is the saying of Aristotle on being told that a person had been abusing him in his absence: "He may even beat me, if he likes, in my absence." Two of his sayings anticipate two famous passages of the New Testament. Being asked how we should treat our friends, he replied, "As we should wish our friends to treat us." And to one who inquired how students should get on, he said, "Pressing on upon those who are before and not waiting for those who are behind."

Parody and burlesque flourished among the Greeks from very early times, witness the mock-heroics of the *Batrachomyomachia* (q. v.) and the other ludicrous imitations of the Homeric poems, and so in Latin in the pseudo-Vergilian comic epic *Culex.* As early as Epicharmus (in the fifth century B.C.) tragic themes were burlesqued, as in later times by Rhinthon (q. v.), who gave his name to this species of composition (*fabula Rhinthonica*); while Aristophanes (q. v.) has filled his comedies with the richest kind of drollery based upon the presentation of serious subjects in a comic light. Lucian's dialogues are remarkable examples of clever burlesque and keen irony, which spares neither men nor gods. See Lucianus; Parodia.

In later times special collections of *facetiae* were made, one of the best known being the Ἀστεῖα ascribed to Hierocles. This is the source of many jokes that are professedly modern, and deals principally with the absurd doings of pedants (*σχολαστικοί*), which bear a strong family likeness to many of the jokes that appear in the *Fliegende Blätter.* The following will serve as specimens of these ancient jests:

"A bookworm, wishing to teach his horse to be a small eater, gave him no food at all. Finally the horse starved to death, whereupon the bookworm exclaimed, 'What a loss I have suffered! Just as he had learned to live without eating, he has gone and died!'"—a story which reappears in modern fiction in Sir Walter Scott's *Waverley,* where it is put into the mouth of Evan Dhu Maccombich.

"A bookworm, meeting another of his own kind, said, 'Why, I heard you were dead!' 'And yet,' replied the other, 'you see that I am alive.' 'Well,' said the first, with a puzzled air, 'I really don't know what to believe, for the party who told me is a much more reliable person than you are.'"

Quintilian devotes a part of his treatise (vi. 3) to the discussion of humour, giving copious examples from Roman sources. In it he deprecates the use of puns as being only a cheap form of wit; yet punning was much practised by the Romans. Cicero was an inveterate punster, much to the disgust of Pompey when they were associated together in the Civil War. Many of these cheap jokes of his are preserved by Macrobius (ii. 2), by Plutarch in his life of the orator, and Quintilian mentions a collection of them as having been made and published (vi. 3, 5) by Cicero's freedman Tiro. Another collection of them was made by C. Trebonius (Cic. *Ad Fam.* xv. 21, 1–3). Like books were made of Caesar's *ἀποφθέγματα.* (Cf. C. F. W. Müller's ed. of Cicero, iv. 3, 341; and for examples, the article describing Puns in this Dictionary.) Cato the Censor is said to have published a joke-book, but not, how-

ever, of his own sayings (Plut. *Cat. Mai.* 2). For satirical wit, see SATIRA.

Judicial Procedure. I. AT ATHENS.—A clear distinction was drawn at Athens between public (*γραφαί*) and private actions (*δίκαι*). But it must be remarked that the public actions included more offences than those which directly affected the State. Injuries to individuals might form matter for a public prosecution, if (as, e. g., in a case of theft or damage to property) the wrong to a citizen in his honour or property admitted of being viewed as an attack upon the honour of the citizens or the security of property in general. The difference, both in public and private actions, was essential, whether we consider (*a*) the right of prosecution, or (*b*) the consequences of condemnation.

(*a*) Any one might institute a public prosecution, even if he had himself suffered no wrong. The only condition was that he must be of full age and in possession of all civic rights. It was only in cases of murder that the right of prosecution was limited to the relations of the murdered person. Private prosecutions, on the other hand, could only be undertaken by the injured person or his legal representative, in the case of a ward by his guardian, in that of a married woman by her husband, in that of strangers by their *πρόξενος*, in that of resident aliens by their patrons.

(*b*) In the case of public prosecutions, if a fine was inflicted the amount went into the public treasury; in the case of a private prosecution, to the prosecutor. At public trials other penalties than fines could be inflicted: death, imprisonment, deprivation of civic rights, banishment with confiscation of property. This was not the case in private causes, though in them the State had the right of increasing the penalty. For instance, a prosecution for false witness was not public, but private; yet if a person was convicted three times, the State could inflict deprivation of civil rights. In public causes the prosecutor ran the risk of being himself fined 1000 *drachmae* ($166) if he failed to carry at least one third of the votes of the jurymen, besides which he lost his right of instituting a similar action again. In private causes the prosecutor, if he failed to establish his case, was fined in an amount generally equal to one sixth of the sum in dispute. A distinction was drawn between assessed and non-assessed causes. The non-assessed were those in which the amount of the fine was already fixed by law, and any further estimate was therefore unnecessary; the assessed causes were all those in which the amount of fine had to be settled according to the character of the offence, or the magnitude of the damage; in other words, those which required that the punishment should be fixed for the occasion. Besides those prosecutions, the object of which was to get a person punished for an actual breach of law, there were others which merely aimed at settling a disputed right. These were naturally, for the most part, private causes; but there were public prosecutions of this kind as well. For instance, any one who proposed and carried a new law was liable for a whole year after it had passed to prosecution and punishment for making an illegal proposal. But after the year had elapsed, his personal responsibility came to an end, and only the new law could be attacked. Private causes could be settled by arrangement, but the law forbade the accuser in a public cause to drop the case. If he did, he was liable to the same punishment as if he had failed to carry one third of the votes. This was the principle, but it was not always carried out in practice. In certain public causes in which a reward was offered by the State, the prosecutor, if successful, received a share of the fine. The costs of private causes (*πρυτανεῖα*) were paid by both parties in advance, and returned to the successful suitor by his adversary. These fees amounted, if the sum in dispute were less than 1000 drachmae, to three drachmae (about $0.50); if greater, to thirty drachmae (about $5.00). The costs of public prosecutions were not paid by the accused. They were paid by the accuser in one case only—namely, if, in the event of the accused being condemned, the accuser received part of the fine imposed. In testamentary suits, supposing a person to claim an inheritance already assigned to another, or to lay exclusive claim to one which was claimed by several others, the tenth part of the amount was deposited before the trial. If the suit was instituted against the State, supposing the question affected confiscated property, a fifth part of the amount was deposited. The successful litigant in either case received the amount deposited.

As above mentioned, the Athenian law allowed the prosecutor, in many cases, to institute the same suit in various forms. A case of personal injury might be treated either as a private action for assault or as a public action for outrage. In the latter case the prosecutor could make no claim for personal compensation. If the injury was accompanied by aggravating circumstances, supposing, for instance, that the person injured were performing a public function, either form of action was open.

Private actions were often decided by Diaetetae, or arbitrators (see DIAETETAE)—an important body. For the convenience of persons living outside Athens, thirty (in later times forty) local magistrates were appointed by lot, whose business it was to go from place to place and decide petty cases of debt, or damage, or assault. In cases of murder the jurisdiction belonged to the Ephetae, in certain other cases to the Senate, the Ecclesia, the Strategi, the Archons, and the Eleven. (See HENDEKA.) The greater number of cases came before the court of the Heliaea. See DICASTES; DIKÉ.

The most general name for a public charge was *γραφή*, or a statement in writing. The *γραφή* was resorted to only in cases of offences already recognized by law, and was always brought before a court of law, never before a political body, such as the Senate or Public Assembly. On the special forms of public prosecution, see APAGOGÉ; EISANGELIA; ENDEIXIS; PHASIS; PROBOLÉ. *Δίκη* (suit) was the term for a civil process. Under both

forms of action the proceedings were very much the same. Except in certain cases affecting the religious mysteries, they were public, and involved a great many formalities. By way of introducing his case, the prosecutor applied to the president of the court, who fixed the date for the preliminary investigation. The summons was made by the prosecutor in a public place and in the presence of witnesses. Aliens were obliged to give security for their appearance; citizens were not, except in case of *ἀπαγωγή*, *ἔνδειξις*, or *εἰσαγγελία*; and in these cases a special summons was sometimes dispensed with, and the accused might be immediately arrested. The charge having been handed in, the presiding judge decided, when the day mentioned in the summons came round, whether he should admit it or not. Various reasons might lead him to dismiss it: the non-appearance of the accused, there being no sufficient evidence to show that he had been summoned; or if the accuser appeared, on the whole, not justified in bringing the charge; or if the forms were not duly observed. If the charge were admitted, it was publicly posted up on a tablet in the neighbourhood of the court, with a notification of the day when the trial would come on. If the accuser failed to appear on the appointed day, the charge fell through *ipso facto*; if the accused failed without putting in a valid plea for postponement, he was proceeded against *in contumaciam*. If the parties came into court, they were both put on their oath, the accuser with respect to his charge, the accused with regard to his answer. They then paid the court fees.

The accused generally tried, if possible, to prevent the trial coming on. There were many ways of doing this. He might, or another might for him, dispute the admissibility of the charge on various grounds—e. g. the legal inability of the prosecutor to prosecute, limitation, want of jurisdiction on the part of the authorities, absence of any law to serve as a basis for the charge, and so on. A witness was usually put forward in cases of disputed inheritance to prove that the prosecutor had no claim. In either case the trial was postponed until a decision had been come to upon the objection raised by the accused or upon the charge of false testimony brought by him against the witness. If the decision went against the accuser he was obliged to retire from the case. After a decision was given on the objection raised by the accused, the party to whom it was unfavourable had to pay his adversary a fine amounting to a sixth part of the value of the object in dispute.

All the material necessary for the trial, the passages to be quoted from laws, documents, and testimony, had to be prepared by the parties. The evidence consisted of written statements which were given in among the records. The witnesses who were responsible for these might either have made them in person before the magistrates, or in their absence before other witnesses. The witnesses were either willing or unwilling. If a person had at first offered to give evidence and afterwards refused to do so, he might be prosecuted by the person affected by his conduct. If any person, even without having bound himself to appear, refused to give evidence after being formally summoned by the herald, he had to pay into the public treasury a fine of 1000 drachmae.

The statements of slaves were only accepted as evidence when given under torture in the presence of witnesses, who had to take them down. The owners of slaves offered to submit them to the torture, either of their own will or on the demand of the opposite party, with which, however, they were not bound to comply. The oath was regarded as the ultimate test of truth. (See IUSIURANDUM.) It might either be taken by both parties on their own proposal, or be exacted by one party from the other. The taking of the oath or the refusal to take it was put into writing as evidence and enrolled among the archives. These documents were kept by the magistrate in a sealed box, and brought by him into court on the day of trial. In certain cases, such as those relating to commerce, mining, and dowries, the duration of the proceedings was legally limited to thirty days; but in other causes trials would sometimes drag themselves out through a whole year. If one of the parties failed to appear in court on the day appointed, his reason had to be stated on oath by a representative. The other party was free to declare on oath that the reasons alleged were insufficient: if the judge took this view, the proceedings went on *in contumaciam*, and the absent party lost in the suit. In the opposite case the accuser had to propose another date for the trial. In private cases an arrangement might be made, even in court. The charge and the answer having been read by the clerk, both parties delivered their speeches. These had often been composed for them, for, according to strict law, the parties could not be represented by advocates. In practice, however, they often contented themselves with a short introductory address of their own, and then asked for permission to employ an advocate.

The first speech and reply were often followed by a second, but the whole number of speeches on each side was not allowed to exceed a certain time measured by the water-clock. The pieces of written evidence were read out by the clerk, during the speaking, in their proper places, but the time which they took was not counted against the speaker. The judge alone had the right of interrupting the speaker. It was usual to introduce the evidence of parents, wives, children, and influential persons. The voting was secret. Every judge received a black and a white pebble (the black for condemnation and the white for acquittal), and put the pebble (*ψῆφος*) which indicated his vote into a metal urn (*ὑδρία*), the other into a wooden one. Stones bored through or left entire, mussel shells, beans, or metal balls were also used for voting.

The verdict was decided by the majority of votes: if they were equal, the accused was acquitted. If the cause was assessed (*ἀγὼν τιμητός*), a second voting followed, to decide between the punishment proposed by the accuser and the counter-proposal of the accused. There was no appeal, at least against the decision of the public court of the Heliastae. The utmost that was possible was to get the verdict set aside by proving that the proceedings *in contumaciam* had been illegal, or that the winner had gained the case by suborning false witnesses. The magistrates were, in the case of public actions, responsible for carrying out the punishment. Capital sentences were usually carried out (by poison or strangulation) in prison by the executioner commissioned by the Eleven. (See HENDEKA.) The corpses of great criminals were

thrown down a precipice or removed over the border. If the sentence were banishment, the condemned person had to leave the country within a certain time at the peril of his life; his property was confiscated. If *ἀτιμία* were inflicted, and the condemned person attempted to usurp the rights of which he had been deprived, he was liable to severe, even to capital, punishment. In case of a fine being inflicted, a man was *ἄτιμος* till it was paid: if he failed to pay by the time appointed, he was liable to a double punishment, and ultimately to the confiscation of his property. If the amount of his property exceeded the fine, the surplus was returned to him; if it fell short of it, he and his descendants were debtors to the State and *ἄτιμοι*. Imprisonment seems to have served only as an increase of sentence or as a means of enforcing sentence. Loss of freedom and sale were only inflicted on non-citizens for usurping civic rights. In private actions the ultimate means of compelling the condemned person to the fulfilment of his obligation was an executory mandate, by which he was declared a debtor to the State in the same sum that he owed the prosecutor, and made *ἄτιμος* till it was paid.

II. At Rome. Criminal jurisdiction, until the establishment of the Republic, belonged to the kings, and on their commission to the *quaestores parricidii* and the *duo viri perduellionis*. (See Parricidium; Perduellio.) After the expulsion of the kings it passed over immediately to the consuls, until the public courts (*iudicia populi*) were gradually developed. In capital cases, even in the time of the kings, an appeal was allowed, as an act of grace, from their verdict to the representative assembly, at first to the Comitia Curiata, and after Servius Tullius to the Comitia Centuriata. (See Provocatio.) After the establishment of the Republic, it was, in B.C. 509, legally provided that an appeal might be made, in capital cases, from the sentence of the magistrate to the decision of the Comitia Centuriata as a court of appeal. Condemned persons, as a rule, naturally made use of this right, and the magistrates consequently brought their verdict before the Comitia Centuriata, in the form of a charge with reasons to support it. Thus these comitia acquired a jurisdiction, dependent, it is true, on a previous judgment of the magistrates, and limited to capital cases which admitted of appeal. The jurisdiction of the Comitia Tributa was developed in the same way. At first these comitia had merely served as a court of appeal against the fines imposed by the tribunes for violation of their authority. (See Multa.) But they soon acquired jurisdiction in all cases involving fines, and quite overshadowed the Comitia Centuriata in importance. The judicial power of the latter was gradually more and more restricted by the increasing habit of referring cases of common offences to the exceptional commissions. At last actions brought under the name of *perduellio* were the only ones in which they retained their judicial competence. But the greatest possible number of cases were brought before the Comitia Tributa, notably those of a political character in which illegal or mischievous administration was in question. Only the name of *perduellio* was avoided. The distinction between the judicial competence of the two assemblies was founded, not so much on differences in the offences, as in those of the penalties. Whether the Comitia Centuriata or Comitia Tributa were to take cognizance of an offence depended on the light in which the magistrates regarded it. If they thought less seriously of it, it would go before the Comitia Tributa, which had only the power of inflicting fines to the amount of half the property; if more seriously, before the Comitia Centuriata, which could only pass capital sentences; in early times death, in later times the *interdictio aquae et ignis*, and the confiscation of property which accompanied them. See Exsilium.

The proceedings in the assembly were opened by the accusing magistrate. In the Comitia Centuriata this would be a consul or praetor, in the Comitia Tributa a tribune, aedile, or quaestor. The trial began with the *diei dictio*, or fixing of a day for the proceedings. The accused was then either put into prison, or left free on giving bail for his appearance. To give the people some means of arriving at a conclusion on the guilt or innocence of the accused, a preliminary investigation was held in three *contiones* at intervals of some days. Before these the accused was allowed to defend himself against the charge of the magistrate. At the last *contio* the magistrate pronounced a provisional verdict, which, if adverse, was taken as a definite charge. At the same time he fixed the day for the meeting of the Comitia, always allowing an interval of thirty days. At the meeting of the Comitia, supposing nothing had occurred to stop the proceedings—i. e. supposing the accused had gone into voluntary exile, or a tribune had interposed his veto, or the accuser had withdrawn the charge—the accuser made his proposal (*rogatio*) to punish the accused. Thereupon the accused (or his advocate) spoke in his defence, the evidence of the witnesses who had been previously called was shortly gone through, and the proofs laid before the assembly. Finally the votes were taken in the usual manner, and the result at once made known. An action which remained unfinished at the expiration of the appointed time was not continued, but the accused was regarded as acquitted. The condemnation of the accused was followed by the immediate infliction of the penalty. The sentence could only be reversed by a subsequent resolution of the people. (See Restitutio.) The popular tribunals fell gradually into disuse; the standing judicial courts or *quaestiones* arose, the first of which was instituted in B.C. 149. In Cicero's time there were eight of those commissions, each presided over by a praetor or his representative. These courts were respectively appointed to try the following offences: (1) *Repetundae*, or official extortion; (2) *Maiestas*, or offences against the majesty of the State; (3) *Peculatus*, or embezzlement; (4) *Ambitus*, or attempt to gain office by unlawful means; (5) *Vis*, or violence; (6) *De Sicariis*, or murder; (7) *Adulterium*, or adultery; (8) *Falsum*, or forgery. (See Ambitus; Maiestas; Peculatus; Repetundae; Vis.) Any citizen, not an official, might bring the charge. On the proceedings, see Quaestio.

The Comitia Tributa were, after this, only set in motion in cases for which there was no *quaestio perpetua*, or for which it was thought improper to institute a *quaestio extraordinaria*. The popular tribunals of the Comitia came to an end with the Republic, but the *quaestiones* continued until the second century A.D. to act as the regular criminal courts. Under the Empire the Senate and the emperor had an extraordinary jurisdiction in crim-

inal cases. The senatorial court, which met under the presidency of the consuls, followed the procedure of the *quaestiones*, but its proceedings were not public. The cases which it tried were usually those which affected persons of high standing charged with political or official offences. The decision of the court took the form of a *senatus consultum*, but had all the force of a legal sentence. The emperor, in virtue of his tribunician authority, had the power of neutralizing it by his veto. An interval of ten days occurred between sentence and execution, in pursuance of an order of Tiberius made in A.D. 22. But up to that time the sentence was carried out immediately after being passed, even in capital cases. Capital punishment had in the republican times been practically abolished, but was at once reinstated under the imperial régime. The emperor himself usually exercised his jurisdiction only over his own procurators and the higher officers of the army, notably in the case of strictly military offences. He acted as sole judge even when he invited the assistance of a jury (*consilium*). No formal act of accusation was required. Actions which he was unwilling to settle himself he would generally hand over to the *quaestiones* or the senatorial tribunals. The power of inflicting sentence of death on Roman citizens was confined originally to the emperor and Senate; but in later times the emperor, by a special mandate, transferred it for purposes of provincial administration to the governors of the provinces, whose jurisdiction extended to all citizens, with the exception of the high military officers, senators, and the *decuriones* of a *municipium*. (See DECURIO.) The criminal jurisdiction in Rome and its neighbourhood for a radius of 100 miles was given to the *praefectus urbi*, whose court ended by becoming the chief criminal court in the capital. The rest of Italy was placed under the jurisdiction of the praefect of the Praetorian Guard. From the decision of these representatives of the imperial authority an appeal was allowed to the emperor. But, after the third century A.D., the appeal mostly came before the praefect of the body-guard, whose judgment was generally final. The senatorial court came finally to acting only on the motion of the emperor.

The Roman civil jurisdiction, like the criminal, belonged originally to the king, from whom it passed to the consuls. With them it remained until a special magistracy, the praetorship, was instituted for it. (See PRAETOR.) According to ancient usage, the highest judicial authorities did not superintend the case from beginning to end. Their action was usually confined to the preparation of the case and such measures as its course made absolutely necessary, as (supposing their interference was required) in ordering execution of sentence. The investigation proper, and the passing of judgment, they as a rule handed over (with the consent of the parties) either to a single judge (see IUDEX) or *recuperatores* (see RECUPERATORES) appointed for the occasion, or to the judicial *collegia* of the *iudices decemviri* and *centumviri*, appointed, independently of special cases, for the whole year. As an introduction of the case, the suitor (*petitor*) was required to bring the defendant (*reus*) before the tribunal of the magistrate (*in ius*). In the case of the praetor, this would be his tribunal in the Forum. If the accused failed either to obey the personal summons of the prosecutor (*in ius vocatio*) or to appear by his representative (*vindex*), the prosecutor could, after calling a witness to attest that his summons was in order, take him before the praetor by force. In later time, to meet the cases in which the accused was unable to answer the summons immediately, the *vadimonium* was introduced. This was a promise, given by the accused on the security of sureties, that he would appear in court on a certain day, or if he failed would pay a sum of money, the amount of which depended on the nature of the question in dispute. The proceedings *in iure*, or before the magistrate, took place according to certain definite formal rules, the so-called *legis actiones*, the commonest of which was the *actio sacramenti*. This was accompanied by the utterance of a solemn formula partly by the magistrate, partly by the parties, and by certain symbolical acts. The smallest departure from the traditional formula involved the loss of the suit. The trial thus commenced, the next step was the *iudicis datio*, or appointment of a judge to try it. The case came on before the appointed *iudex* (*in iudicio*) on a day appointed. It was first shortly stated; the parties or their advocates made their speeches, the evidence was tested and judgment pronounced. See ACTIO; IUDEX.

The cumbrous machinery of the *legis actiones* gave way afterwards, in all cases but a few, to the procedure of *formula*. The *formula* was a document written out by the praetor, in which he, after hearing the parties, summed up the points of the accusation and the replies of the accused, appointed the judge, and gave him the materials for investigation and judgment. The proceedings *in iudicio* were then opened with the production of the formula. The question of the debt being settled, the judge proceeded to make a valuation of the object in dispute, in case a definite amount had not been mentioned in the formula. On the procedure in case of default, see CONTUMACIA. The judgment was irreversible. It was only in certain exceptional cases, notably if it appeared that any deception or force had been employed, that the magistrate who had appointed the judge, or his successor in office, could set it aside by *restitutio in integrum*. If the condemned party refused to make the payment, the magistrate who had prepared the case could order personal arrest or seizure of goods. See MANUS INIECTIO and BONORUM EMPTIO.

The only weapon against abuse of judicial authority in the republican age was the right of appeal to a magistrate with the power of veto. See APPELLATIO; PROVOCATIO.

The system of civil jurisdiction continued to exist in the imperial period, though with many modifications in detail, until the third century A.D. After that, the exceptional procedure (*extra ordinem*), in which the magistrate superintended the case till its conclusion and pronounced judgment at the end of it, became the usual one. The emperor, as supreme judge, had the power of deciding every case, criminal or otherwise, if his decision was appealed to. Further, he could interfere by his decree during the course of the trial, and either quash the verdict himself, or lay the appeal for decision before an authority constituted by himself for the purpose. In later times this authority was the *praefectus urbi*. A further appeal from this authority back to the emperor was allowed.

L

L (Λ), as a symbol.

IN GREEK.—Λ = Λούκιος or Λεύκιος. The Lacedaemonians bore Λ upon their shields, as the Sicyonians Σ and the Messenians M. (See CLIPEUS, and cf. Eupolis, *Frag. Incert.* 37; Theopomp. [com.] *Frag. Incert.* 16.) As a numeral it stands for 11 (old system), or 30. $\overline{\Lambda}$ = 30,000.

IN LATIN.—L = latum, legio, lex, libertus, librarius, locus, Lucius.

L·A·D·D = libens animo donum dat.
L·B = libertus bonus.
L·C = laticlavius, locus concessus.
L·D = libens dat, libero damno, locum dedit (loco dato, locus datus)—very frequent.
L·F = Latinae fuerunt, laudabilis femina, liberti fecerunt.
L·L = legatus legionis, libens laetus, liberto libertae, librarius legati (legionis), Lucii (duo).
L·M = libens merito, libertus mens, ludus magnus.
L·P = Liber pater, libertus patrono, libens posuit.
L·R·P = legas rogo praeteriens.
L·V = luna quinta.
L·V·S = libens votum solvit.
L·D·D·C·F·C = locus datus decreto collegii fabrum centurionum.
L·D·D·D·D·D = loco dato decreto decurionum dono dederunt.
L·F·D·D = ludos fecerunt decurionum decreto.
L·L·P·E = libertis libertabus posterisque eorum.
L·P·P·P = loco publico pecunia publica.

Labărum (λάβαρον and λάβουρον). The sacred banner or standard borne before the Roman emperors in war from the time of Constantine. It is described as a long pike intersected by a transverse beam. A silken veil, of a purple colour, hung down from the beam, and was adorned with precious stones, and curiously inwrought with the images of the reigning monarch and his children. The summit of the pike supported a crown of gold, which enclosed the monogram at once expressive of the figure of the cross, and the two initial letters (X and P) of the name of Christ. The safety of the Labarum was intrusted to fifty guards of approved valour and fidelity. In the Second Civil War, Licinius felt the power of this consecrated banner, the sight of which, in the stress of battle, animated the soldiers of Constantine with an invincible enthusiasm, and scattered terror and dismay through the adverse legions. Eusebius (*Vit. Const.* i. 2, 7 foll.) introduces the Labarum before the Italian expedition of Constantine; but his narrative seems to indicate that it was never shown at the head of an army till Constantine, about ten years afterwards, declared himself the enemy of Licinius and the deliverer of the Church. The Christian emperors, who respected the example of Constantine, displayed in all their military expeditions the standard of the cross; but when the successors of Theodosius had ceased to appear in person at the head of their armies, the Labarum was deposited as a venerable but useless relic in the palace of Constantinople. Its form is still preserved on the medals of the Flavian family; and there is extant a medal of the emperor Constantius, where the standard of the Labarum is accompanied with these memorable words: "By this sign thou shalt conquer."

Labarum.

The history of this standard is a curious one. A contemporary writer (Caecilius) affirms that in the night which preceded the last battle against Maxentius (A.D. 312), Constantine was admonished in a dream to inscribe the shields of his soldiers with the "celestial sign of God," the sacred monogram of the name of Christ; that he executed the command, and that his obedience was rewarded by a decisive victory at the Milvian bridge. The dream of Constantine may be naturally explained either by the enthusiasm or the policy of the emperor. While his anxiety for the approaching day, which must decide the fate of the Empire, was suspended

by a short and interrupted slumber, the revered form of the Saviour and the well-known symbol of his religion might forcibly offer themselves to the active fancy of a prince who reverenced the name, and had, perhaps, secretly implored the power of the God of the Christians. As readily, on the other hand, might a consummate statesman indulge himself in the use of one of those military stratagems, one of those pious frauds, which Philip and Sertorius had employed with such art and effect.

The account given by Eusebius, however, is different from this. According to his statement, Constantine is reported to have seen with his own eyes the luminous trophy of the cross placed above the meridian sun, and inscribed with the following words in Greek: Ἐν τούτῳ νίκα. This appearance in the sky astonished the whole army, as well as the emperor himself, who was yet undetermined in the choice of a religion; but his astonishment was converted into faith by the vision of the ensuing night. The Saviour appeared before his eyes, and displayed the same celestial sign of the cross, directing Constantine to frame a similar standard, and to march, with an assurance of victory, against Maxentius and all his enemies.

The form of the Labarum and monogram may be seen, as we have already said, on the medals of the Flavian family. The etymology of the term itself has given rise to many conflicting opinions. Some derive the name from *labor;* others from εὐλάβεια, "reverence"; others from λαμβάνειν, "to take"; and others, again, from λάφυρα, "spoils." One writer makes Labarum to be like S.P.Q.R., only a *notatio*, or combination of initials to represent an equal number of terms; and thus, L.A.B.A.R.V.M. will stand for *Legionum aquila Byzantium antiqua Roma urbe mutavit.*

Labdacĭdae (Λαβδακίδαι). See LABDACUS.

Labdacĭdes (Λαβδακίδης). A name given to Oedipus as descended from Labdacus. See OEDIPUS.

Labdăcus (Λάβδακος). A son of Polydorus by Nycteïs, the daughter of Nycteus, king of Thebes. His father and mother died during his childhood, and he was left to the care of Nycteus, who, at his death, left his kingdom in the hands of Lycus, with orders to restore it to Labdacus as soon as of age. On succeeding to the throne, Labdacus, like Pentheus (q. v.), opposed the cult of Bacchus, and underwent a similar fate. He was father to Laïus, and his descendants were called Labdacidae. See LAÏUS.

Labdălum (Λάβδαλον). See SYRACUSAE.

Labeātes. A warlike people in Dalmatia, whose chief town was Scodra, and in whose territory was the Labeatis Palus (Lake of Scutari), through which the river Barbana (Bogana) runs.

Label. See SCHEDA; TITULUS.

Labeo, ANTISTIUS. (1) A Roman jurist, one of the murderers of Iulius Caesar. He put an end to his life after the battle of Philippi, B.C. 42. (2) A son of the preceding, and a still more eminent jurist. He adopted the republican opinions of his father, and was in consequence disliked by Augustus. It is probable that the *Labeone insanior* of Horace was a stroke levelled against the jurist in order to please the emperor. Labeo wrote a large number of works, which are cited in the *Digest.* He was the founder of one of the two great legal schools spoken of under IURISPRUDENTIA. He died A.D. 17.

Laberius, DECĬMUS. A Roman knight of good family, born about B.C. 107. He was famed for his talent in writing mimes, in the composition of which productions he occasionally amused himself. He was at length requested by Iulius Caesar, in B.C. 45, to appear on the stage and act the mimes which he had written (Macrob. *Sat.* ii. 7). Laberius was sixty years of age when this occurrence took place. Aware that the entreaties of a dictator were equivalent to commands, he complied; but, in the prologue to the first piece which he acted, he complained bitterly to the audience of the degradation to which he had been subjected. The whole prologue, consisting of twenty-nine lines, which have been preserved by Macrobius, is written in a lofty vein and with all the high spirit of a Roman citizen. He is said to have represented the feigned character with inimitable grace and spirit; yet in the course of the performance he could not refrain from expressing strong sentiments of freedom and detestation of tyranny. In one of the scenes he personated a Syrian slave; and, while escaping from the lash of his master, he exclaimed,

"Porro, Quirites, libertatem perdidimus."

and shortly after he added,

"Necesse est multos timeat quem multi timent."

on which the whole audience turned their eyes towards Caesar, who was present in the theatre (Macrob. l. c.). It was not merely to entertain the people, who would have been as well amused with the representation of any other actor; nor to wound the private feeling of Laberius that Caesar forced him on the stage. His sole object was to degrade the Roman knighthood, to subdue their spirit of independence, and to strike the people with a sense of his unlimited sway. This policy formed part of the same system which afterwards led him to persuade a senator to fight in the ranks of the gladiators. Though Laberius complied with the wishes of Caesar in exhibiting himself on the stage, and acquitted himself with ability as a mimetic actor, it would appear that the dictator had been hurt and offended by the freedoms which he used in the course of the representation, and, either on this or some subsequent occasion, bestowed the dramatic crown on Publilius Syrus in preference to the Roman knight. Laberius submitted with good grace to this fresh humiliation; he pretended to regard it merely as the ordinary chance of theatric competition. He did not long survive, however, this double mortification, but retired from Rome, and died at Puteoli about ten months after the assassination of Caesar. The titles and fragments of forty-three of the mimes of Laberius are still extant; but, excepting the prologue already cited, none is important. They will be found collected in Ribbeck's *Comicorum Romanorum Fragmenta*, pp. 279–302 (Leipzig, 1873).

Labials. See GRIMM'S LAW.

Labīci, Lavīci, or **Labīcum.** The modern Colonna; an ancient town in Latium, on a hill of the Alban mountain, fifteen miles southeast of Rome, west of Praenesté, and northeast of Tusculum. It was taken by the Romans B.C. 418, and by them colonized (Livy, iii. 25; iv. 45).

Labiēnus. (1) Titus, one of Caesar's lieutenants in the Gallic war. In the beginning of the civil war he left Caesar for Pompey (*B. C.* iii. 13), escaped from the battle of Pharsalia, and was killed in that at Munda (*B. H.* 31). Labienus appears to have parted with almost all his former success on abandoning the side of his old commander. (2) Quintus, a son of the preceding, who inherited all his father's hatred of the party of Caesar. After the defeat of Brutus and Cassius, he refused to submit to the triumvirs, and retired to Parthia, where he was invested with a military command, and proved very serviceable to his new allies in their contests with the Romans. He was made prisoner in Cilicia, and probably put to death. Labienus caused medals to be struck, having on the obverse his head, with this legend, Q. Labienus Parthicus Imper., and on the reverse a horse caparisoned after the Parthian manner. (3) Titus, an orator and author of the time of Augustus, who distinguished himself by his bitter opposition to the imperial régime. The Senate decreed that his writings should be publicly burned; whereupon he shut himself up in his ancestral tomb and died there, about A.D. 12 (Suet. *Cal.* 16).

Laborīnus Campus. See Phlegraei Campi.

Labours of Heracles. See Heracles.

Labrădeus (Λαβραδεύς). A surname of Zeus at Labranda near Mylassa in Caria. The name was derived, according to Plutarch, from λάβρυς, the Lydian term for a hatchet, which the statue of Zeus held in its hand, and which had been offered up by Arselis of Mylassa from the spoils of Candaules, king of Lydia (Plut. *Quaest. Gr.*).

Labranda (τὰ Λάβρανδα). A town in Caria to the north of Mylae, celebrated for its temple of Zeus Stratios or Labrandenus.

Labrōnis Portus or **Portus Hercŭlis Liburni.** A harbour of Etruria, below the mouth of the Arnus. It is now Livorno (Leghorn). Cicero calls it Portus Labronis (*Ad Q. frat.* ii. 6).

Labrum. See Balneae, p. 191.

Labynētus (Λαβύνητος). A name common to several of the Babylonian monarchs, seems to have been a title rather than a proper name. The Labynetus mentioned by Herodotus (i. 74) as arranging a peace between Cyaxares and Alyattes is the same with Nebuchadnezzar. The Labynetus mentioned by Herodotus (i. 77) as a contemporary of Cyrus and Croesus is the same with the Belshazzar of the prophet Daniel. By other writers he is called Nabonadius or Nabonidus. He was the last king of Babylon.

Labyrinthus (Λαβύρινθος). A name given to a species of structure full of intricate passages and windings, so that when once entered, it is next to impossible for an individual to extricate himself without the assistance of a guide. The origin of the term will be considered at the close of the article. There were four very famous labyrinths among the ancients—one in Egypt near the Lake Moeris, another in Crete, a third at Lemnos, and a fourth near Clusium in Italy. (1) The Egyptian. This was situated in Lower Egypt, near Lake Moeris, and in the vicinity of Arsinoë or Crocodilopolis. The accounts which the ancient writers give of it are very different from each other. Herodotus, who saw the structure itself, assigns to it twelve courts (Herod. ii. 148). Pliny, whose description is much more highly coloured and marvellous than the former's, makes the number sixteen (*H. N.* xxxvi. 19); while Strabo, who, like Herodotus, beheld the very structure, gives the number of courts as twenty-seven. The following imperfect sketch, drawn from these different sources, may give some idea of the magnitude and nature of this singular structure: A large edifice, divided, most probably, into twelve separate palaces, stretched along with a succession of splendid apartments, spacious halls, etc., the whole adorned with columns, gigantic statues, richly carved hieroglyphics, and every other appendage of Egyptian art. With the northern side of the structure were connected six courts, and the same number with the southern. These were open places surrounded by lofty walls, and paved with large slabs of stone. Around these courts ran a vast number of the most intricate passages, lower than the corresponding parts of the main building; and around all these again was thrown a large wall, affording only one entrance into the Labyrinth; while at the other end, where the Labyrinth terminated, was a pyramid forty fathoms high, with large figures carved on it, and a subterraneous way leading within. According to Herodotus, the whole structure contained 3000 chambers, 1500 above ground, and as many below. The historian informs us that he went through all the rooms above the surface of the earth, but that he was not allowed by the Egyptians who kept the place to examine the subterraneous apartments, because in these were the bodies of the sacred crocodiles and of the kings who had built the Labyrinth. "The upper part, however," remarks the historian, "which I carefully viewed, seems to surpass the art of men; for the passages through the buildings and the variety of windings afforded me a thousand occasions of wonder, as I passed from a hall to a chamber, and from the chamber to other buildings, and from chambers into halls. All the roofs and walls within are of stone, but the walls are further adorned with figures of sculpture. The halls are surrounded with pillars of white stone, very closely fitted."

According to Herodotus, the Labyrinth was built by twelve kings, who at one time reigned over Egypt, and it was intended as a public monument of their common reign (Herod. ii. 148). Others make it to have been constructed by Psammetichus alone, who was one of the twelve; others again, by Ismandes or Petosuchis. Mannert assigns it to Memnon. Opinions are also divided as to the object of this singular structure. Some regard it as a burial-place for the kings and sacred crocodiles, an opinion very prevalent among the ancients. Others view it as a kind of Egyptian Pantheon. Others, again, make it to have been a place of assembly for the deputies sent by each of the twelve nomes of Egypt; while another class think that the Egyptian Mysteries were celebrated here. According to Galterer, however, the Labyrinth was an architectural symbolical representation of the zodiac and the course of the sun through the same. The twelve palaces are the twelve zodiacal signs; the one half of the building above ground and the other below is a symbol of the course of the sun above and below the horizon.

As regards the name Labyrinth itself, much diversity of opinion exists. By a sort of antiphrasis it was formerly derived ἀπὸ τοῦ μὴ λαβεῖν θύραν, from its difficulty of egress; but very prob-

ably from λαύρα (λάϜρα), "a passage-way;" the termination being found in such words as *μήρινθος*, *ὑάκινθος*. Others, finding in Manetho that an Egyptian king, named Lachares or Labaris, had erected the structure in question, make the term equivalent to "the abode of Labaris." Brugsch regards it as the corruption of an Egyptian word meaning "the building at the entrance to a reservoir" (*Egypt under the Pharaohs*).

The position of the Egyptian Labyrinth is clearly indicated by the words of Herodotus, "a little above the Lake Moeris." It is now certain that the remains of the Labyrinth must be sought for near Sakkara in the district called Fayûm. Vast piles of rubbish are here to be seen, and the destruction is supposed to be owing to the Arabs, who may have thought that treasures were concealed under ground here. The ruins were first carefully explored, and an imperfect idea of their original plan made out by the Prussian expedition of 1843, of which Prof. Lepsius was the head. More recent expeditions are those of Mr. Petrie, to whose work the reader is referred (*Hawâra, Biahma, and Arsinoë* [1889]).

(2) For an account of the CRETAN and ETRURIAN labyrinths, consult the articles PORSENA and THESEUS respectively.

Lacedaemon (Λακεδαίμων). (1) A son of Zeus and Taÿgeté, the daughter of Atlas, who married Sparta, the daughter of Eurotas, by whom he had Amyclas, Asiné, and Eurydicé, the wife of Acrisius. He was the first who introduced the worship of the Charites into Laconia, and who built them a temple. From Lacedaemon and his wife the capital of Laconia was called Lacedaemon and Sparta (Apollod. iii. 10; Hyg. *Fab.* 155). (2) A city of the Peloponnesus, the capital of Laconia, called also Sparta. See SPARTA.

Lacedaemonii (Λακεδαιμόνιοι) and **Lacedaemŏnes** (Λακεδαίμονες). The inhabitants of Lacedaemon. See SPARTA.

Lacēdas (Λακήδας) or **Leocēdes**. A king of Argos, father of Melas (Herod. vi. 127).

Lacerna (practically identical with the Greek χλαμύς). The Latin term for a coarse, dark-coloured cloak, fastened on the shoulder by a brooch, which was in use as a protection against rain. It was provided with a hood. In later times the name was given to a light and elegant mantle, either white or dyed in Tyrian purple, which was worn over the toga to complete the costume at games or other outdoor occasions. In the time of Augustus, who forbade its use in the Forum or Circus, it formed part of the military uniform. It was afterwards commonly worn even in Rome itself.

Lacerna. (From the Column of Trajan.)

Lacetāni. A people in Hispania Tarraconensis, at the foot of the Pyrenees.

Lachăres (Λαχάρης). An Athenian popular leader who in B.C. 296 made himself supreme in Athens at the time when that city was besieged by Demetrius. When the city was about to capitulate, Lachares escaped to Thebes with a great treasure, and was there murdered for his wealth (Pausan. i. 25, 7).

Laches (Λάχης). An Athenian general who fell at the battle of Mantinea, B.C. 418. A dialogue of Plato bears his name. See PLATO.

Lachĕsis (Λάχεσις). One of the Fates. See MOERAE.

Lachmann, KARL KONRAD FRIEDRICH WILHELM. One of the greatest of modern philologists and text-critics, born at Brunswick, March 4, 1793. He began his studies at the Katharineum in Brunswick, and at once showed an extraordinary aptitude for classical literature and linguistics. In 1809 he entered the University of Leipzig, where he studied philology and theology, soon, however, transferring himself to the University of Göttingen, where the stimulating influence of Heyne and Dissen powerfully affected his intellectual development. Besides working hard at classical philology, he pursued with much ardour the scientific study of Italian, English, and Old German. In 1815, carried away by the patriotic enthusiasm which swept over Germany, he enlisted as a volunteer in the army which in that year marched upon Paris; but he had no part in active fighting.

In 1816 he took the position of assistant master in the Friedrich Werder Gymnasium at Berlin, and, soon after, habilitated at the University of that place, publishing a dissertation on the *Nibelungennoth*, and almost simultaneously an edition of Propertius. Receiving an appointment as master in the Fridericianum of Königsberg, he assisted his colleague Köpke in editing Rudolf von Monfort's text of *Barlaam and Josaphat* (1818), and also in preparing notes for an edition of Walther von der Vogelweide. In January, 1818, he was appointed Professor Extraordinarius of Classical Philology in the University of Königsberg, where he had Lobeck for a colleague, and where he also lectured on Middle High German literature and Old German grammar. In 1824, having received leave of absence for this purpose, he devoted some time to a thorough search through the libraries of Germany, especially of Southern Germany, for unpublished material relating to these subjects. In February, 1825, he was called to the University of Berlin as Professor Extraordinarius of Classical and German Philology, and in 1827 was promoted to Professor Ordinarius. He died March 13, 1851.

Lachmann was one of the most truly scientific scholars that Germany has ever produced, and possessed a mind of singular originality, sagacity, and subtle power. In both classical and Germanic philology, and in New Testament criticism as well, his independent work has justly been styled "epoch-making." "His influence," says Nettleship, "on the general course of philological study has probably been greater than that of any single man during the present century. Many scholars who never saw him, and to whom he is only known by his books, have been inspired by the extraordinary impulse which he gave to critical methods. Greek, Latin, and German philology have alike felt the touch of the magician."

His chief classical works are the following: Editions of Propertius (1816), Catullus (1829), Tibullus (1829), Genesis (1834), Terentianus Maurus (1836), Babrius (1845), Avianus (1845), Gaius (1841–1842), the *Agrimensores Romani* (1848–52), Lucilius, and, above all, Lucretius (1850). Of this last great work, Professor Munro has justly said that it is "a work which will be a landmark for scholars as long as the Latin language continues to be studied." In his *Betrachtungen über die Ilias* (1837, 1841), he attempted to show that the *Iliad* consists of sixteen independent "lays" that were subsequently enlarged and altered. (See HOMERUS.) In New Testament criticism he first carried out the plan first put forth by Richard Bentley (q. v.) of restoring the ancient readings current in the Eastern MSS., using the Latin authorities (and West Greek) as evidence in case of a divergence of readings in the oldest Eastern MSS. His smaller edition of the New Testament appeared in 1831 (3d ed. 1846); the larger one, in two volumes (*Novum Testamentum Graece et Latine*), in the preparation of which he was aided by Philip Buttmann, in 1842–50. Of his work in Germanic philology and literature it is not necessary to speak here. Lachmann's life has been written by M. Hertz, *Karl Lachmann, eine Biographie* (Berlin, 1851); and see Bursian, *Geschichte der class. Philol.*, etc., pp. 789–800 (Munich, 1883).

Lacia (Λακία) or **Laciădae** (Λακιάδαι). A deme of Attica belonging to the tribe Oeneïs.

Lacinia. A surname of Iuno, from her temple at Lacinium in Italy.

Lacinia. The angular extremity of the toga, one end of which was thrown over the left shoulder. See TOGA.

Lacinium (Λακίνιον ἄκρον). A promontory on the eastern coast of Bruttium, a few miles south of Croton, and forming the western boundary of the Tarentine Gulf. It possessed a celebrated temple of Iuno, who was worshipped here under the surname of Lacinia. The ruins of this temple have given the modern name to the promontory, Capo delle Colonne.

Lacmon (Λάκμων) or **Lacmus** (Λάκμος). The northern part of Mount Pindus, in which the river Aoüs takes its origin (Herod. ix. 92).

Lacobrĭga. (1) A town of Spain, near the Sacrum Promontorium, now Lagoa (Mela, iii. 1). (2) A town of Spain, among the Vaccaei, now Lobera (Pliny, *H. N.* iii. § 4).

Laconĭca (Λακωνική, sc. γῆ), called by the Roman writers **Laconia.** A country of the Peloponnesus, situated at its southern extremity, having Messenia on the west, and Arcadia and Argolis on the north. The extent of Laconia from east to west, where it reached farthest, was 1° 45′, but it became narrower towards the north, and its extent from north to south was about fifty miles. As the southern parts were encompassed by the sea, and the east and northeast parts by the Sinus Argolicus, it had a great number of promontories, the chief of which were those of Malea and Taenarum, now Capes Malio and Matapan. The sea-coast of Laconia was furnished with a considerable number of seaports, towns, and commodious harbours, the chief of which were Trinnassus, Acria, Gytheum, and Epidaurus. The Laconian coasts were famous for yielding a shellfish (*murex*) whence was obtained a beautiful purple dye, inferior only to that which was brought from the Red Sea and Phœnicia. The mountains of Laconia were numerous, the most famous being Taÿgetus. The principal river was the Eurotas, on which stood the capital, Sparta or Lacedaemon. The soil was very rich, especially in the low grounds, and, being well watered, was excellent for pasture; but the number of its mountains and hills prevented its being tilled so well as it might otherwise have been. See SPARTA.

Laconĭcum (λακωνικόν). A species of dry sweating-bath, introduced from Greece by the Romans towards the end of the Republic. See BALNEAE, p. 191.

Laconĭcus Sinus (Κόλπος Λακωνικός). A gulf in the south of the Peloponnesus, into which the Eurotas falls.

Lactantius. (1) FIRMIANUS (in some MSS. called LUCIUS CAECILIUS or CAELIUS). An eminent Christian writer of the early part of the fourth century, whose birthplace is uncertain. He taught rhetoric at Nicomedia in Bithynia, and it was probably there that he became converted to Christianity. About the year 313 he was invited by Constantine the Great to act as tutor to his son Crispus. He died about 325. His chief work is a defence of Christianity, in seven books, entitled *Institutiones Divinae*, written in reply to an attack upon the faith made by two pagan writers. He also wrote treatises *De Ira Dei* and *De Opificio Dei*, the latter being an account of anthropology from the Christian standpoint. A fourth book, by some not credited to him, is entitled *De Mortibus Persecutorum*, in which he tries to show that all the persecutors of the Christians have met with violent deaths. There exists, also, an epitome of the *Institutiones Divinae*, made by Lactantius. His Latinity is so pure that he is styled "the Christian Cicero." During the Middle Ages his writings were extremely popular, and the MSS. of them are very numerous. The first book ever printed in Italy (1465) was a Lactantius. The earlier texts are enumerated by Dufresnoy in his edition (2 vols. 1748). Lactantius has also been edited by Gersdorf, in the *Bibl. Pat. Eccles. Lat.* (Leipzig, 1842–1844); by Migne in vols. vi. and vii. of his *Patrologia* (Paris, 1844); and by Laubmann and S. Brandt (Vienna, 1891). On his life, see P. Brandt, *Das Leben des Lactantius* (Vienna, 1890). (2) PLACĬDUS. The author of a collection of scholia on the *Thebaïs* of Statius, probably the same as the glossator Luctatius (?) Placidus, who has left a book of glosses with Latin commentaries. They are chiefly on Plautus and Lucilius. See Goetz, *De Placidi Glossis* (Jena, 1886), Onions in the (Eng.) *Journal of Philology*, xi. 75, xii. 77, and xv. 167; and the article GLOSSA.

Lactarius. See PISTOR.

Lactarius Mons or **Lactis Mons.** A mountain in Campania near which the eunuch Narses defeated the Goths in A.D. 553.

Lacūna. The name given to a gap found in classical MSS., and due to erasures, accidental obliterations, the tearing of the pages, loss of pages, etc. On the importance of the lacunae as a means of determining the "family" to which a MS. belongs, see TEXTUAL CRITICISM.

Lacunaria, Lacuaria, or **Laquearia.** The Latin

name for the panelled ceilings of rooms which were formed by placing planks across the beams of the roof, whereby hollow spaces were produced. These spaces were covered with wood or ivory, or ornamented with sculptured reliefs or pictures; occasionally they were even gilded or inlaid with plates of gold (Hor. *Carm.* ii. 18, 1). In banqueting-rooms they were sometimes so formed that the panels could be slipped aside to let flowers, wreaths, and other complimentary presents fall in showers on the guests below. See Suet. *Nero*, 31; and the article PALATIUM.

Lacus. (1) See FONS. (2) A bath (*βαφή*) into which the armourer plunged the hot iron to give it a greater hardness (Verg. *Georg.* iv. 172). See Blümner, *Technologie*, iv. 342–350.

Lacȳdes (*Λακύδης*). A philosopher of Cyrené, who filled the chair of the Platonic School at Athens after the death of Arcesilaüs. He assumed this office about the year B.C. 245. He is said to have been the founder of a new school, not because he introduced any new doctrines, but because he changed the place of instruction, and held his school in the garden of Attalus, still, however, within the limits of the Academic grove. He died of a palsy occasioned by excessive drinking about B.C. 215 (Diog. Laërt. iv. 59 foll.; Aelian, *V. H.* ii. 41).

Ladas (*Λάδας*). A swift runner of Laconia, whose speed became proverbial. There were statues to him in Argos and Arcadia (Pausan. ii. 19, 7; Catull. lv. 25; Juv. xiii. 97).

Ladders. See SCALAE.

Ladé (*Λάδη*). An island off the west coast of Caria, opposite to Miletus and to the bay into which the Maeander falls (Herod. vi. 8).

Ladle. See COCLEAR; CYATHUS; TRULLA.

Ladon (*Λάδων*). (1) A dragon sprung from Typhon and Echidna (or from Phorcys and Ceto). He guarded the golden apples of the Hesperides, but was slain by Heracles. See HERACLES; HESPERIDES. (2) The husband of Stymphalis and father of Daphné and Metopé.

Ladon (*Λάδων*). (1) A river in Arcadia, rising near Clitor, and falling into the Alpheus, between Heraea and Phrixa. (2) A small river in Elis, rising on the frontiers of Achaia, and falling into the Peneus.

Laeëtani. A people on the eastern coast of Hispania Tarraconensis, near the mouth of the river Rubricatus, the same as the Laletani, whose country, Laletania, produced good wine, and whose chief town was Barcino.

Laelaps (*Λαίλαψ*). The storm-wind, personified as the swift dog, which Procris had received from Artemis and gave to her husband, Cephalus. When the Teumessian fox was sent to punish the Thebans, Cephalus sent the dog Laelaps against the fox. The dog overtook the fox, but Zeus changed both animals into a stone, which was shown in the neighbourhood of Thebes. See Hyg. *Fab.* 28; Ovid, *Met.* vii. 771; and TEUMESSUS.

Laeliānus. One of the Thirty Tyrants, who was proclaimed emperor in Gaul (A.D. 267), but was slain in the course of a few months by his own soldiers, who then set up Victorinus in his stead (Eutrop. ix. 7).

Laelius, GAIUS. (1) The friend of Scipio Africanus the elder. He fought under the latter in almost all his campaigns. He was consul B.C. 190. (2) Surnamed SAPIENS, son of the preceding. His intimacy with Scipio Africanus the younger was as remarkable as his father's friendship with the elder, and it obtained an imperishable monument in Cicero's treatise, *Laelius sive de Amicitia.* He was born about 186; was tribune of the plebs in 151, praetor in 145, and consul in 140. He was celebrated for his love of literature and philosophy, and cultivated the society and friendship of the philosopher Panaetius, of the historian Polybius, and of the poets Terence and Lucilius. Laelius is the principal interlocutor in Cicero's dialogue *De Amicitia*, and is one of the speakers in the *De Senectute* and in the *De Republica.* His two daughters were married—the one to Q. Mucius Scaevola, the augur, the other to C. Fannius Strabo.

Laena (*χλαῖνα*). An ancient Roman garment worn by the Flamines, fastened with a bronze clasp (Cic. *Brut.* 14, 56). It was a woollen mantle, of a coarse, shaggy material, twice as thick as an ordinary toga. Under the Empire it was very generally worn as an outer cloak by all classes of society, especially on going out to supper. It was sometimes scarlet, and sometimes violet, but in these colours it appears to have been used only by the rich. (Cf. Juv. iii. 283 with Mayor's note; and Pers. i. 32.)

Laenas. The name of a family of the gens Popilia, its members being distinguished for their sternness and haughty pride. The most famous of them was GAIUS POPILIUS LAENAS, consul in B.C. 172. He was afterwards sent as ambassador to Antiochus, king of Syria, whom the Senate wished to abstain from hostilities against Egypt. Antiochus was just marching upon Alexandria, when Popilius gave him the letter of the Senate, which the king read and promised to take into consideration with his friends. Popilius straightway described with his cane a circle in the sand around the king, and ordered him not to stir out of it before he had given a decisive answer. This boldness so impressed Antiochus that he at once yielded to the demand of Rome. (Livy, xlv. 12.)

Laërtes (*Λαέρτης*). King of Ithaca, son of Acrisius, husband of Anticlea, and father of Odysseus, who is hence called Laërtiades. Some writers call Odysseus the son of Sisyphus. (See ANTICLEA.) Laërtes took part in the Calydonian hunt, and in the expedition of the Argonauts. He was still alive when Odysseus returned to Ithaca, after the fall of Troy. See ODYSSEUS.

Laërtius, DIOGENES. See DIOGENES.

Laestrygŏnes (*Λαιστρυγόνες*). A savage race of cannibals, whom Odysseus encountered in his wanderings. (See Hom. *Od.* x. 119.) They were governed by Antiphates and Lamus. They belong to mythology rather than to history. The Greeks placed them on the east coast of Sicily, in the plains of Leontini, which are therefore called Laestrygonii Campi. The Roman poets, who regarded the promontory Circeium as the Homeric island of Circé, transplanted the Laestrygones to the southern coast of Latium, in the neighbourhood of Formiae, which they supposed to have been built by Lamus, the king of this people. Hence Horace speaks of *Laestrygonia Bacchus in amphora*—that is, Formian wine; and Ovid calls Formiae *Laestrygonis Lami urbs.* See FORMIAE.

Laetoria Lex. See LEX.

Laevi or **Levi.** A Ligurian people in Gallia Transpadana, on the river Ticinus, who, in conjunction with the Marici, built the town of Ticinum (Pavia).

Laevīnus, VALERIUS. (1) PUBLIUS, consul B.C. 280, defeated by Pyrrhus on the banks of the Siris. (See PYRRHUS.) (2) MARCUS, praetor in B.C. 215, when he carried on war against Philip in Greece; and consul in B.C. 210, when he carried on the war in Sicily, and took Agrigentum.

Lagōna, Lagūna, Lagoena, or **Lagēna** (λάγυνος). An earthenware jar having a long, narrow neck, a rather wide mouth and a swelling body, with one handle. It was used for wine and was set on the table like a modern decanter (Juv. v. 29), and in Gaul for beer.

Lagos. A town in Great Phrygia (Livy, xxxviii. 15).

Lagus (Λάγος). A Macedonian who married Arsinoë, a concubine of Philip of Macedon. She was said to be pregnant at the time of the marriage, so that their son Ptolemy, who afterwards founded the Egyptian monarchy, was by many regarded as the son of Philip (Pausan. i. 6, § 2). See PTOLEMAEUS.

Lagūsa. (1) An island in the Sinus Glaucus, near the northern coast of Lycia. (2) Or LAGUSSAE, an island, or, more properly, a cluster of islands off the coast of Troas, to the north of Tenedos (Pliny, v. 31).

Laïădes. A patronymic of Oedipus, son of Laïus (Ovid, *Met.* vi. 18).

Laïs (Λαΐς). The name of two celebrated Grecian hetaerae, or courtesans. (1) The elder, a native probably of Corinth, lived in the time of the Peloponnesian War, and was celebrated as the most beautiful woman of that age. She was notorious also for her avarice and caprice. One of her lovers was the Cyrenaic philosopher Aristippus, two of whose works were inscribed with her name. In her old age she took to drink. At her death she was buried in Corinth, and over her was placed a monument representing a lioness tearing a ram. So much was her reputation a part of that of her city that there arose the proverb *οὐ Κόρινθος οὔτε Λαΐς.* A number of anecdotes regarding her are preserved in Athenaeus. (2) The younger daughter of Timandra, probably born at Hyccara in Sicily. According to some accounts she was brought to Corinth when seven years old, having been taken prisoner in the Athenian expedition to Sicily, and bought by a Corinthian. This story, however, involves numerous difficulties, and seems to have arisen from a confusion between this Laïs and the other woman of the same name. She was a contemporary and rival of Phryné (q. v.). She became enamoured of a Thessalian named Hippolochus, or Hippostratus, and accompanied him to Thessaly, where, it is said, some Thessalian women, jealous of her beauty, enticed her into a temple of Aphroditē, and there stoned her to death (Pausan. ii. 2, 5).

Laïus (Λαΐος). King of Thebes, son of Labdacus, husband of Iocasta, and father of Oedipus, by whom he was slain. See OEDIPUS.

Lalăgē. A common name of courtesans, from the Greek λαλαγή, "prattling," used as a term of endearment—"little prattler." See Hor. *Carm.* i. 22, 23.

Laletāni. A people in the eastern part of Hispania Tarraconensis, whose country, Laletania, produced good wine. Their chief town was Barcino (Barcelona). The correct form of the name is probably LAEĒTANI.

Lamăchus (Λάμαχος). An Athenian, the colleague of Alcibiades and Nicias in the great Sicilian Expedition, B.C. 415. He fell under the walls of Syracuse, in a sally of the besieged. In Aristophanes he is represented as a brave but blustering soldier (*Acharn.* 565, etc.).

Lambīnus, DIONYSIUS. The pseudo-classical form of DENYS LAMBIN, one of the greatest of French scholars in the sixteenth century. He was born at Montreuil-sur-Mer in 1516, and after lecturing and teaching for many years in the provinces with much success, was called to Paris to take the chair of Greek Literature in the Collège Royal. In this office he achieved a great reputation for the soundness and accuracy of his scholarship, being, in fact, so noted for attention to minute details that his opponents coined from his name the verb *lambiner,* which is still retained in French to denote the work of a pedant. His chief published works are the *Oratio de Recta Pronunciatione Linguae Graecae* (1568); emendations on Cicero (1577); a life of Cicero (1578); and editions with notes of Horace (1561); Lucretius, his *magnum opus* (1564); Cicero, 4 vols. (1566); Nepos (1569); Demosthenes (1570); and Plautus (1577). Lambinus died in 1572, it is said of grief at the loss of his friend Ramus, who was killed in the affair of St. Bartholomew's Day.

Lambrus or **Lamber.** A river of Cisalpine Gaul, issuing from the Eupilis Lacus, and falling into the Olona, one of the tributaries of the Po. It is now the Lambro or Lambrone (Pliny, iii. 19).

Lamia. A town in Phthiotis, in Thessaly, situated on the small river Acheloüs, fifty stadia inland from the Maliac Gulf. It has given its name to the war which was carried on by the confederate Greeks against Antipater after the death of Alexander, B.C. 323. When Antipater was defeated by the confederates under the command of Leosthenes, the Athenian, he took refuge in Lamia, where he was besieged for some months. During the siege Leosthenes was killed, and soon after Antipater, being joined by Craterus, defeated the confederates at Cranon, ending the war (Polyb. ix. 29).

Lamia, AELIUS. A Roman family, which claimed descent from the mythical hero Lamus. L. AELIUS LAMIA, the friend of Horace (see *Carm.* i. 26, 8), was consul in A.D. 3, and the son of the Lamia who supported Cicero in the suppression of the Catilinarian conspiracy.

Lamiae (Λαμίαι). Fabulous monsters, the vampires of ancient legend, commonly represented with the head and breast of a woman and the body of a serpent. According to some, they changed their forms at pleasure, and, when about to ensnare their prey, assumed such appearances as were most seductive and calculated to please. The blood of young persons was believed to possess peculiar attractions for them, and for the purpose of quaffing this they were wont to take the forms of beautiful women, the better to allure young men. The Lamiae possessed also another means of accomplishing their object. This was a species of hissing sound emitted by them, so soothing and

attractive in its nature that persons found themselves irresistibly allured by it. When not in disguise and when they had sated their horrid appetites, their form was hideous, their visages glowed like fire, their bodies were besmeared with blood, and their feet appeared of iron or of lead. Sometimes they showed themselves completely blind; at other times they had a single eye, either in the forehead or on one side of the visage. The popular belief made them frequent Africa and Thessaly, in both of which countries they watched along the main roads and seized upon unwary travellers.

The fable of Queen Lamia has some analogy to this fiction, and both, in all probability, owe their origin to one and the same source. Lamia, according to Diodorus Siculus and other ancient authorities, was a queen of Africa, remarkable for beauty, who, on account of her cruel disposition, was eventually transformed into a wild beast. Having lost, it seems, her own children by the act of Heré, who was jealous of Lamia's intercourse with Zeus, she sought to console her sorrow by seizing the children of her subjects from their mothers' arms, and putting them to death. Hence the transformation inflicted upon her by the gods (Diod. Sic. xx. 41; Wesseling, *ad* Diod. l. c.). The Lamiae figured extensively in the nursery-legends of antiquity, and their names and attributes were standing objects of terror to the young (Diod. l. c.; cf. Hor. *A. P.* 340; Aristoph. *Vesp.* 1177). See also EMPUSA; LEMURES; MORMOLYCÉ.

Lampadedromia (λαμπαδηδρομία, also λαμπαδηφορία). A torch-race, such as were celebrated at Athens, Corinth, Ceos, Syros, Amphipolis, Byzantium, and other places, in honour of different deities, and probably at any great funeral games. At Athens it took place on five special occasions: at the Promethea, in honour of Prometheus; at the Panathenaea, in honour of Athené; after the Apaturia, in honour of Hephaestus; and in honour of Bendis.

Torch used in the race. (Coin in Mionnet, pl. 49, fig. 6.)

The race was run usually on foot, but sometimes on horses by *ephebi*. The torches were of two kinds—one a sort of candlestick, shown in the above illustration, and the other one of a more conventional kind, like that shown in the article FAX. There were two different methods of conducting the race. The first or earlier system required lines of runners (λαμπαδισταί or λαμποδηφόροι), posted at intervals, the first in each line who receives the torch, or takes it from the altar, running at his best speed and handing it to the second in his own line, and the second to the third, until the last in the line is reached, who runs with it up to the appointed spot. Of course, if any torch went out, the line to which it belonged was out of the race. The victory (νικᾶν λαμπάδι) fell to that line of runners whose torch first reached the goal alight. Assuming that all the gymnasiarchs contended on each occasion, there would be ten such lines (or, after B.C. 307, twelve), one for each tribe; but it is possible that each gymnasiarch performed his service only once a year, and that only a certain number were told off for each festival. All the runners in the winning line or chain contributed to the victory, and this may possibly be the explanation of the well-known line of Aeschylus (*Ag.* 314), "the last and the first (i. e. all alike in the chain) are successful." The beacons are all victorious, because all belong to the successful chain of light, as in the torch-race each person in the line shares the victory.

A different kind of torch-race is described by Pausanias (i. 30, § 2), in which there was no handing of the torch from one to another, but several torch-bearers started, possibly one for each tribe; the first who reached the goal with his torch alight won; the competition was individual, not one chain of runners against another; and it is no doubt to such a race that inscriptions, which speak of a single victor with a single prize, refer. The race in honour of Bendis was run on horseback.

The starting-point of the race at Athens was the altar of Prometheus in the Academy, and the course was through the Ceramicus to the city, a little more than a mile. The archon basileus presided and awarded the prize.

The origin of the custom is probably to be found in the honour paid to the giver of fire, Prometheus, and after him to the deities associated with the arts in which fire is used—Athené, Hephaestus, etc. See Preller, *Griech. Mythol.* p. 80 (1872).

Lampas (λαμπάς). A general term for any thing which shines or gives light, as a torch (see FAX), a lamp (see LUCERNA); but especially a light which was carried by the youth of Athens in the Lampadedromia (q. v.).

Lampĕdo. (1) A Lacedaemonian woman, wife of Archidamus II., king of Sparta, and mother of Agis. She was celebrated as being the daughter, wife, sister, and mother of a king. (2) A queen of the Amazons (Justin, ii. 4).

Lampetia (Λαμπετίη). Daughter of Helios (the sun) and sister of Phaëthon (*Odyss.* xii. 132).

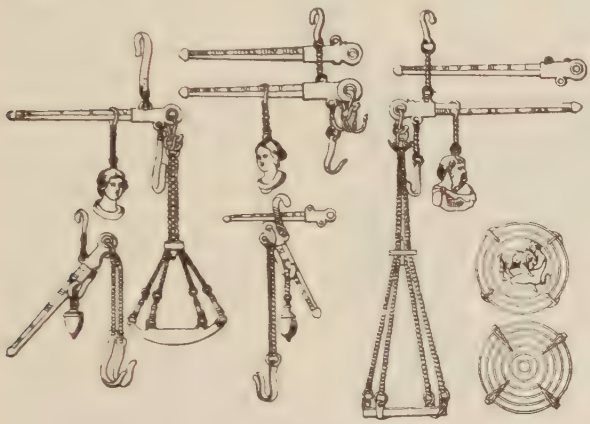
Lampon (Λάμπων). An Athenian soothsayer and interpreter of dreams and oracles. With Xenocritus, he founded Thurii in Italy B.C. 443 (Diod. xii. 10).

Lamponīa (τὰ Λαμπώνεια). A city of Mysia, in the interior of the Troad, near the borders of Aeolia.

Lampra (Λάμπρα). An Attic deme belonging to the tribe Erechtheïs.

Lampridius, AELIUS. A Latin historian, who flourished in the early part of the fourth century, under Diocletian and Constantine the Great. Of his works there are extant the lives of the emperors Antoninus, Marcus Aurelius, Lucius Verus, Pertinax, Albinus, Macrinus, etc. The life of Alexander Severus, which, according to the Palatine manuscript, is the work of Spartianus, has been by some authorities ascribed to him. The lives are to be found in the collection of the *Historiae Augustae Scriptores*. See AUGUSTAE HISTORIAE SCRIPTORES.

Lampsăcus (Λάμψακος). An important city of Mysia in Asia Minor, on the coast of the Hellespont; a colony of the Phocaeans; celebrated for its wine, and the chief seat of the worship of Priapus. Here were born Anaximenes, Charon, the historian, and the philosophers Adimantus and Metrodorus.



Lamus. Son of Poseidon and king of the Laestrygones, said to have founded Formiae in Italy. See FORMIAE; LAESTRYGONES.

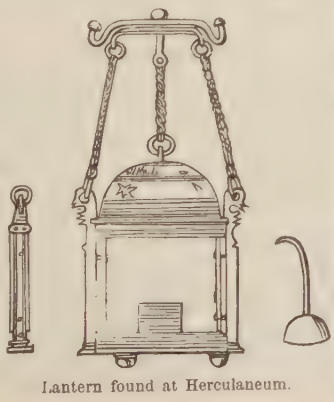
Lamus (Λάμος). A river and town of Cilicia.

Lancea (λόγχη). A lance. See ARMA; HASTA.

Lancia. The name of two towns in Lusitania, distinguished by the appellations of Oppidana and Transcudana. The first was on the frontiers of the Lusitani, near the sources of the river Munda (Mondego). It is now La Guarda. The latter lay to the east of the former, and is now Ciudad Rodrigo. It was called Transcudana, because it lay beyond the Cuda.

Lancŭla. Diminutive of *lanx* (q. v.); and especially the scale, which was appended when necessary to one end of a Roman steelyard (*statera*) (Vitruv. x. 3, 4).

Lances and Lanculae. (Pompeii.)



Langobardi or **Longobardi**, "those dwelling along the river-plains (Börde)," corrupted into Lombards, a German tribe of the Suevic race, dwelt originally on the banks of the Elbe, and after many migrations eventually crossed the Alps (A.D. 568), and settled in the north of Italy, which has ever since received the name of Lombardy. The kingdom of the Lombards existed for upwards of two centuries, till its overthrow by Charlemagne. In A.D. 643, the Lombard king, Rothari, and his successors, embodied the legal customs of the Lombards in a code written in Latin and called *Leges Lombardorum*. The earliest historian of the Lombards is Paulus Diaconus, whose works in Latin still survive. See PAULUS.

Lanīcé (Λανίκη). The nurse of Alexander the Great (Arrian, iv. 9).

Lanista. The Roman name for a fencing-master or trainer of gladiators. See GLADIATORES.

Lantern of Demosthenes. A mediæval name for the Monument of Lysicrates (q.v.).

Lanterna, and in late Latin, **Laterna** (ἰπνός, λυχνοῦχος; in late Greek, φανός). A lantern. Two bronze lanterns have been found in the ruins of Herculaneum and Pompeii. One of them is represented in the foregoing illustration. Its form is cylindrical. At the bottom is a circular plate of metal, resting on three balls. Within is a bronze lamp attached to the centre of the base, and provided with an extinguisher, shown on the right hand of the lantern. The plates of translucent horn, forming the sides, probably had no aperture; but the hemispherical cover may be raised so as to admit the hand and to serve instead of a door, and it is also perforated with holes through which the smoke might escape. To the two upright pillars supporting the frame-work, a front view of one of which is shown on the left hand of the lantern, chains are attached for carrying the lantern by means of the handle at the top.

Lantern found at Herculaneum.

We learn from Martial (xiv. 61, 62) that bladder was used for lanterns as well as horn. Some centuries later glass was also substituted. The most transparent horn lanterns were brought from Carthage (*lanternae Punicae*). When the lantern was required for use the lamp was lighted and placed within it. It was carried by a slave, who was called the *lanternarius* or *servus praelucens*. When a lantern was not at hand, a basket (σπυρίδιον), as a cheaper and commoner utensil, was taken to hold the lamp.

Lanuvium. The modern Lavigna; an ancient city in Latium, situated on a hill of the Alban Mount, not far from the Appia Via; possessed an ancient and celebrated temple of Iuno Sospita; and was the birthplace of the emperor Antoninus Pius.

Lanx. (1) Originally a large dish, probably flat. The name is thus generally applied to all sorts of plates and platters, of various forms and sizes. It was probably always of metal, often silver (Marquardt, *Privatleben*, 654). (2) The metal dishes of the Roman balance (*libra*) also received the name *lances;* and the balance itself is sometimes called *libra bilanx*. See LANCULA.

Laocoön (Λαοκόων). A son of Priam and Hecuba, or, according to others, of Antenor, and a priest of Apollo during the Trojan War. While offering, in the exercise of his sacerdotal office, a bullock to render Poseidon propitious to the Trojans, two enormous serpents issued from the sea, and, having first destroyed his two sons, whom he vainly endeavoured to save, attacked Laocoön himself, and, winding themselves round his body, crushed him to death in their folds. This dreadful punishment was inflicted by the goddess Athené for the part Laocoön had taken in endeavouring to dissuade the Trojans from admitting into Troy the famous wooden horse, which the Greeks had consecrated to Athené (Verg. *Aen.* ii. 40 foll.).

An enduring fame has been gained for the story of Laocoön, from its forming the subject of one of the most remarkable groups in sculpture which time has spared to us. It represents the agonized father and his youthful sons, one on each side of him, writhing and expiring in the folds of the serpents. The figures are naked, the drapery that is introduced being used only to support and fill up the composition. This superb work of art, which Pliny describes inaccurately as consisting of only

Laocoön. (Group in the Vatican.)

a single block of marble, originally ornamented the baths of Titus, among the ruins of which it was found in the year 1506. The names of the sculptors who executed it are also recorded. They are Agesander, Polydorus, and Athenodorus, natives of Rhodes. Pliny (*H. N.* xxxvi. 5) says: "The Laocoön, which is in the palace of the emperor Titus, is a work to be preferred to all others, either in painting or sculpture. Those great artists, Agesander, Polydorus, and Athenodorus, Rhodians, executed the principal figure and the sons and the wonderful folds of the serpents out of one block of marble."

This group is justly considered, by all competent judges, to be a masterpiece of art. It combines, in its class, all that sculpture requires, and both admits of, and may truly be studied as, a canon. The subject is of the most affecting and interesting kind; and the expression in every part of the figures reaches, but does not exceed, the limits of propriety. Intense mental suffering is portrayed in the countenances, while the physical strength of all the three figures is evidently sinking under the irresistible power of the huge reptiles wreathed around their exhausted limbs. One son, in whose side a serpent has fixed his deadly fangs, seems to be fainting; the other, not yet bitten, tries to disengage one foot from the serpent's embrace. The father, Laocoön, himself, is mighty in his sufferings: every muscle is in extreme action, and his hands and feet are convulsed with painful energy. Yet there is nothing frightful, disgusting, or contrary to beauty in the countenance. Suffering is faithfully and strongly depicted there, but it is rather the exhibition of mental anguish than of the repulsive and undignified contortions of mere physical pain. The whole of this figure displays the most intimate knowledge of anatomy and of outward form; the latter selected with care, and freed from any vulgarity of common individual nature. Indeed, the single figure of Laocoön may be fairly referred to as one of the finest specimens existing of that combination of truth and beauty which is so essential to the production of perfect sculpture, and which can alone insure for it lasting admiration. The sons are of a smaller standard than the proportion of the father — a liberty hardly justifiable, but taken, probably, with the view of heightening the effect of the principal figure by the so-called "pyramidal" arrangement. The right arm of Laocoön is a restoration; but so ably done, though only in plaster, that the deficiency is said to be scarcely a blemish. Some antiquarians have thought that the original action of the arm was not extended, but that this limb was bent back towards the head; and they have supported their hypothesis by the fact of there being a rough and broken surface where they think the hand, or perhaps a fold of the serpent, may have come in contact with the hair. This view is rendered still more probable by a smaller figure of Laocoön, now in the Museum at Naples. Though much mutilated, it is evidently copied from the famous group, and is sufficiently preserved to show that the arms were drawn back, as described above.

For a criticism of the work, see Lessing's *Laocoön* (1766, new ed. by Blümner, 1880); the monograph by Kekulé (1883); and Perry's *Greek and Roman Sculpture*, pp. 520–527 (1882).

Laodămas (Λαοδάμας). (1) The son of Alcinoüs, king of the Phaeacians, and Areté. (2) The son of Eteocles, and king of Thebes, in whose reign the Epigoni marched against Thebes. In the battle against the Epigoni he slew their leader Aegialeus, but was himself slain by Alcmaeon. Others related that after the battle was lost Laodamas fled to the Encheleans in Illyricum (Herod. v. 61).

Laodamīa (Λαοδάμεια). (1) A daughter of Acastus and Astydamia, and wife of Protesilaüs. (See Protesilaüs.) When she received intelligence of the death of her husband in the Trojan War, she caused an image of him to be formed, which she would never allow to be out of her sight. Her father ordered the image to be burned, that her

thoughts might be diverted from her loss; but Laodamia threw herself into the flames, and perished along with it. Thence probably the tradition adopted by some poets that the gods restored life to Protesilaüs for three hours, and that this hero, finding the decree irreversible, by which he was to return to the shades below, prevailed on Laodamia to accompany him thither. She was also called Phylacea (Verg. *Aen.* vi. 447; Ovid, *Her.* 13; Hyg. *Fab.* 104). (2) A daughter of Bellerophon by Achemoné, the daughter of king Iobates. She had a son by Zeus called Sarpedon. See SARPEDON.

Laodĭcé (Λαοδίκη). (1) Daughter of Priam and Hecuba, and wife of Helicaon (Pausan. x. 26). (2) The name given by Homer to the daughter of Agamemnon and Clytaemnestra, who is called Electra by the tragic poets (*Il.* ix. 146). (3) The name of several Greek princesses of the family of the Seleucidae, one of whom was the mother of Seleucus Nicator, the founder of the Syrian monarchy.

Laodicēa (Λαοδίκεια). The name of several Greek cities in Asia, called after the mother of Seleucus I., Nicator, and other Syrian princesses of this name. (1) LAODICĒA AD LYCUM, a city of Phrygia, near the river Lycus, a tributary of the Maeander, founded by Antiochus II. Theos. It became one of the most prosperous cities in Asia Minor, and was the seat of a flourishing Christian church as early as the apostolic age. (2) LAODICĒA CATACECAUMĔNĒ or COMBUSTA—i. e. the burned; the reason of which epithet is doubtful. A city of Lycaonia, north of Iconium. (3) LAODICĒA AD MARÉ, a city on the coast of Syria, about fifty miles south of Antioch, built by Seleucus I., and had the best harbour in Syria. (4) LAODICĒA AD LIBĂNUM, a city of Coelé-Syria, at the north entrance to the narrow valley, between Libanus and Anti-Libanus.

Copper Coin (medallion) of Laodicea, with Head of Commodus.

Laodŏcus (Λαοδόκος). The son of Bias and Pero. He took part in the Argonautic expedition and in that of the Seven against Thebes.

Laomĕdon (Λαομέδων). (1) King of Troy, son of Ilus, and father of Priam, Hesioné, and other children. Poseidon and Apollo, who had displeased Zeus, were doomed to serve Laomedon for wages. Accordingly, Poseidon built the walls of Troy, while Apollo tended the king's flocks on Mount Ida. When the two gods had done their work, Laomedon refused them the reward he had promised them, and expelled them from his dominions. Thereupon Poseidon sent a marine monster to ravage the country, to which the Trojans were obliged, from time to time, to sacrifice a maiden. On one occasion it was decided by lot that Hesioné, the daughter of Laomedon, should be the victim; but she was saved by Heracles, who slew the monster, upon Laomedon promising to give him the horses which Tros had once received from Zeus as a compensation for Ganymedes. But when the monster was slain, Laomedon again broke his word. Thereupon Heracles sailed with a squadron of six ships against Troy, killed Laomedon, with all his sons except Priam, and gave Hesioné to Telamon. Priam, as the son of Laomedon, is called Laomedontiades; and the Trojans, as the subjects of Laomedon, are called Laomedontiadae. (2) A general of Alexander the Great who after the king's death received the government of Syria, of which he was subsequently deprived by Nicanor, Ptolemy's general (Diod. xviii. 39).

Laomedontēus. An epithet applied to the Trojans from their king Laomedon (Verg. *Aen.* iv. 542, vii. 105, viii. 18).

Laomedontiădae. A patronymic given to the Trojans from Laomedon (q. v.) their king (Verg. *Aen.* iii. 248).

Lapēthus (Λάπηθος). A town on the northern coast of Cyprus on a river of the same name.

Laphria. A name given to Artemis as worshipped at a festival called Λάφρια, celebrated at Patrae in Achaia (Pausan. iv. 31, § 6).

Laphystium (Λαφύστιον). A mountain in Boeotia, about twenty stadia to the north of Coronea, on which Zeus had a temple, whence he was called Laphystius. It was here that Athamas prepared to immolate Phrixus and Hellé, whom Zeus saved by sending them a golden ram (Pausan. ix. 34, § 5).

Lapicidīnae. See LAUTUMIAE.

Lapidei Campi and **Lapidōsus Campus.** See HERACLES, p. 791.

Lapĭthae (Λαπίθαι). A mythical people inhabiting the mountains of Thessaly. They were governed by Pirithoüs, who, being a son of Ixion (q. v.), was a half-brother of the Centaurs. The latter, therefore, demanded their share in their father's kingdom; and, as their claims were not satisfied, a war arose between the Lapithae and Centaurs, which, however, was terminated by a peace. But when Pirithoüs married Hippodamia, and invited the Centaurs to the marriage feast, the latter, fired by wine, and urged on by Ares, attempted to carry off the bride and the other women. Thereupon a bloody conflict ensued, in which the Centaurs were defeated by the Lapithae. The Lapithae are said to have been the inventors of bits and bridles for horses.

Laquearia. See LACUNARIA.

Laquearius. See GLADIATORES.

Lar or **Lars.** An Etruscan praenomen, borne, for instance, by Porsena and Tolumnius. From the Etruscans it passed over to the Romans,

whence we read of Lar Herminius, who was consul B.C. 448. This word signified "lord," "king," or "hero" in the Etruscan. See LARES.

Lara. (1) See MANIA. (2) See LARES.

Laranda (*τὰ Λάρανδα*). A considerable town in the south of Lycaonia, at the northern foot of Mount Taurus, used by the Isaurian robbers as one of their strongholds.

Lararia. See LARES.

Lararium. A part of the Roman house set apart for the worship of the Lares (q. v.). Originally it was in the *atrium* (see DOMUS), but, in later times, in the kitchen, dining-room, or peristyle.

Larentalia. See ROMULUS.

Larentia. See ACCA LARENTIA; FRATRES ARVALES; ROMULUS.

Lares. Gods of inferior power worshipped at Rome, of human origin and presiding over houses and families. There were various classes of them, such as URBĀNI, to preside over the cities; FAMILIĀRES, over houses; RUSTĬCI, over the country; COMPITĀLES, over crossways; MARĪNI, over the sea; VIĀLES, over roads, etc. The Lares were originally human beings themselves, who lived upon the earth, and, becoming pure spirits after death, loved still to hover round the dwelling which they once inhabited, to watch over its safety, and to guard it with as much care as the faithful dog does the possessions of its master. They keep off, therefore, danger from without, while the Penates (q. v.), residing in the interior of the dwelling, pour forth benefits upon its inmates. The fundamental idea, on which rests the doctrine of the Lares, is intimately connected with all the psychology and pneumatology of the ancient Italians. According to Apuleius the *daemones* which once had inhabited, as souls, human bodies, were called Lemures: this name therefore designated, in general, the spirit separated from the body. Such a spirit, if it adopted its posterity—if it took possession, with favourable power, of the abode of its children—was called LAR FAMILIARIS. If on the contrary, by reason of the faults committed in life, it found in the grave no resting place, it appeared to men as a phantom; inoffensive to the good, but terrible to the wicked. Its name was in that case LARVA. As, however, there was no way of precisely ascertaining what had been the lot of a deceased person, whether he had become, for example, a Lar or a Larva, it was customary to give to the dead the general appellation of MANES. The mother of the Lares was called Lara or Larunda (Arnob. *Adv. Gent.* iii. 41; Macrob. i. 7). This conception of the Lares, as the souls of fathers and of forefathers, protectors of their children, and watching over the safety of their descendants, necessarily gave rise to the custom of burying the dead within the dwelling (Serv. *ad* Verg. *Aen.* v. 64; vi. 152; Isid. *Orig.* xv. 11). Men wished to have near them these tutelary genii, in order to be certain of their assistance and support. In process of time, however, this custom was prohibited at Rome by the laws of the Twelve Tables.

The Etrurians, and the Romans after them, had their LARES PUBLĬCI and LARES PRIVĀTI. The Lares were supposed to assist at all gatherings of men, at all public assemblies or reunions, in all transactions of men, and in all the most important affairs of State as well as of individuals. As each individual had his Lar, his genius, his guardian spirit, even the infant at the breast, so entire families, and whole races and nations, were equally under the protection of one of these tutelar deities. Here the Lares became in some degree confounded with the Heroes, that is, with the spirits of those who, having deserved well of their country while on earth, continued to watch over and protect it. It would seem, too, that at times the worship of these public Lares, like that of the public Penates, was not without some striking resemblance to that rendered to the great national divinities.

All that the house contained was confided to the superintending care of these vigilant genii: they were set as a watch over all things large and small, and hence the name of PRAESTĬTES, which is sometimes given them (Ovid, *Fast.* v. 128, 132). Hence the dog was the natural symbol of the Lares; an image of this animal was placed by the side of their statues, or else these were covered with the skin of a dog. The ordinary altar on which sacrifices were offered to the Lares was the domestic hearth. The victims consisted of a hog (Hor. *Carm.* iii. 23, 4) or a fowl; sometimes, with the rich, of a young steer; to them were also presented the first fruits of the season, and libations of wine were poured out. In all the family repasts, the first thing done was to cast a portion of all the viands into the fire that burned on the hearth, in honour of the Lares. In the form of marriage, called *coëmptio*, the bride always threw a piece of money on the hearth to the Lares of her family, and deposited another in the neighbouring cross-road, in order to obtain admission, as it were, into the dwelling of her husband. Young persons, after their fifteenth year, consecrated to the Lares the bulla which they had worn from infancy (Pers. v. 31). Soldiers, when their time of service was once ended, dedicated to them the arms with which they had fought (Ovid, *Trist.* iv. 8, 21). Captives and slaves restored to freedom consecrated to the Lares the fetters from which they had just been freed (Hor. *Sat.* i. 5). Before undertaking a journey, or after a successful return, homage was paid to these deities, their protection was implored, or thanks were rendered for their guardian care (Ovid, *Trist.* i. 3, 33). The new master of a house crowned the Lares, in order to render them propitious; a custom which was of the most universal nature, and which was perpetuated to the latest times (Plaut. *Trinum.* i. 2, 1). The proper place for worshipping the Lares, and where their images stood, was called Lararium, a sort of domestic chapel in the atrium, where were also to be seen the images and busts of the family ancestors. The rich had often two Lararia, one large and the other small; they had also "Masters of the Lares," and "Decuries of the Lares"—namely, slaves specially charged with the care of these domestic chapels and the images of their divinities. As to the poor, their Lares had to be content with the simple hearth, where honours not less simple were paid to them. Certain public festivals were also celebrated in honour of the Lares, called LARARIA and COMPITALIA. The period for their celebration fell in the month of December, a little after that of the Saturnalia. The Compitalia, dedicated to the Lares Compitales, were celebrated in the open air, in the cross-roads. The day of their celebration was not fixed. They were introduced at Rome by Servius Tullius, who left to the Senate the care of determining the period

when they should be held. In early times, children were immolated to the goddess Mania, the mother, according to some, of the Lares, to propitiate her favour for the protection of the family. This barbarous rite was subsequently abolished, and little balls of wool were hung up in the stead of human offerings at the gates of dwellings. Macrobius (*Sat.* i. 7, 34) informs us that it was Junius Brutus who, after the expulsion of the Tarquins, introduced a new form of sacrifice, by virtue of which heads of garlic and poppies were offered up in place of human heads, *ut pro capitibus capitibus supplicaretur*, in accordance with the oracle of Apollo.

As regards the forms under which the Lares were represented, it may be observed that it differed often but little from that of the Penates. Thus, on the coins of the Caesian family, they are represented as two young men, seated, their heads covered with helmets, and holding spears in their hands, while a dog watches at their feet. Sometimes, as has already been remarked, the heads of the Lares are represented as covered with, or their mantle as formed of, the skin of a dog. At other times we find the Lares resembling naked children, with the bulla hanging from the neck.

Lares. (Duruy.)

Largitio. See AMBITUS; FRUMENTARIAE LEGES.

Largus, SCRIBONIUS. See SCRIBONIUS.

Larīnum. A town of the Frentani (whence the inhabitants are sometimes called Frentani Larinates, on the river Tifernus, and near the borders of Apulia.

Larissa (Λάρισσα). The name of several Pelasgian places, whence Larissa is called in mythology the daughter of Pelasgus. (1) An important town of Thessaly in Pelasgiotis, situated on the Peneus, in an extensive plain, and once the capital of the Pelasgi. (2) Surnamed CREMASTÉ, another important town of Thessaly in Phthiotia, distant twenty stadia from the Maliac Gulf. (3) An ancient city on the coast of the Troad. (4) L. PHRICŌNIS, a city on the coast of Mysia, near Cymé, of Pelasgian origin, but colonized by the Aeolians. It was also called the Egyptian Larissa, because Cyrus the Great settled in it a body of his Egyptian mercenary soldiers. (5) LARISSA EPHESIA, a city of Lydia, in the plain of the Cayster. (6) In Assyria, an ancient city on the eastern bank of the Tigris, some distance north of the mouth of the river Zabatus or Lycus. It was deserted when Xenophon saw it. The name Larissa is in this case no doubt a corruption of some Assyrian name (perhaps Al-Assur), which Xenophon naturally confounded with Larissa, through his familiarity with the word as the name of cities in Greece.

Larissaeus. An epithet applied by Vergil (*Aen.* ii. 197, xi. 404) to Achilles, either with reference to the town of Larissa Cremasté, which lay within his dominions (see LARISSA), or as equivalent generally to Thessalicus.

Larissus (Λάρισσος). A small river, forming the boundary between Achaia and Elis, and flowing into the Ionian Sea (Xen. *Hell.* iii. 21, 23).

Larius Lacus. The modern Lake Como; a beautiful lake in Gallia Transpadanà (Northern Italy), running from north to south, through which the river Adda flows. Pliny had several villas on the banks of the lake (Pliny, *Epist.* ix. 7).

Lars or **Lartes Tolumnius.** See TOLUMNIUS.

Lartia Gens. A patrician gens, distinguished at the beginning of the Republic through two of its members, T. Lartius, the first dictator, and Sp. Lartius, the companion of Horatius Cocles (q. v.) on the wooden bridge.

Lartius Florus. (1) TITUS, a consul, who appeased a sedition raised by the poorer citizens, and was the first dictator ever chosen at Rome, B.C. 498 (Livy, ii. 18). (2) SPURIUS, one of the three Romans who withstood the fury of Porsenna's army at the head of a bridge while the communication was being cut down behind them. His companions were Cocles and Herminius (see COCLES; Livy, ii. 10, 18; Val. Max. iii. 2).

Larunda or **Lara.** Daughter of Almon, the nymph who informed Iuno of the connection between Iupiter and Iuturna: hence her name was connected with λαλεῖν. Iupiter deprived her of her tongue, and ordered Mercury to conduct her into the lower world. On the way thither Mercury fell in love with her, and she afterwards gave birth to two Lares (Ovid, *Fasti*, ii. 599 foll.; Macrob. i. 7, 34). See LARES.

Larvae. In Roman belief the Larvae, in contrast to the Lares (the good spirits of the departed), were the souls of dead persons who could find no rest, either owing to their own guilt, or from having met with some indignity, such as a violent death. They were supposed to wander abroad in the form of dreadful spectres, skeletons, etc., and especially to strike the living with madness. Similar spectres of the night are the LEMURES. To expel them from the house, peculiar expiatory rites were held on three days of the year, the 9th, 11th, and 13th of May, the Lemuria, when all the temples were closed, and marriages avoided.

Las (Λᾶς). An ancient town of Laconia, on the east side of the Laconian Gulf, ten stadia from the sea, and south of Gytheum (Thuc. viii. 91).

Lasaea (Λασαία). A town in the south of Crete,

not far from the Promontorium Samonium mentioned in the Acts of the Apostles (xxviii. 8).

Lasthĕnes (Λασθένης). An Olynthian who, with Euthycrates, betrayed his country to Philip of Macedon for a bribe in B.C. 347 (Demos. *Philip.* iii. p. 126; Diod. xvi. 53). See OLYNTHUS.

Lasus (Λᾶσος). A native of Hermioné in Argolis, a lyric poet and the teacher of Pindar. He lived at Athens under the patronage of Hipparchus. His works have perished See Herod. vii. 6.

Later (πλίνθος). A brick. For brickmaking, see FICTILÉ. The term *later crudus* signifies a brick dried in the sun; and *later coctus* a brick baked by fire.

Lateraria. A brick-field (Pliny, *H. N.* vii. 57). A painting at Thebes in Egypt represents an Egyptian brick-field, and shows exactly the same process as still pursued; the men at the bottom are digging up the brick earth, and loading it in baskets, while the one at the top lays the bricks already made in wooden moulds. See FICTILÉ.

Latercŭlus. See POLEMIUS SILVIUS.

Latiālis or **Latiāris.** A surname of Iupiter as the protecting divinity of Latium. The Latin towns and Rome celebrated to him every year the Feriae Latinae on the Alban Mount, which were conducted by one of the Roman consuls

Latifundium. The Latin term for an extensive landed estate which was worked by means of slaves. Lands of the State (see AGER PUBLICUS) taken into permanent use by *occupatio* formed the foundation of these properties, and their possessor enlarged them by obtaining contiguous property either by purchase or by forcible appropriation. This system of *latifundia* gradually caused the utter ruin of the Italian peasantry, and involved in it the general destruction of the community (*latifundia perdidere Italiam*, Pliny, *H. N.* xviii. 35).

Latin Language. See ITALIA.

Latin League. See LATIUM.

Latin, PRONUNCIATION OF Three methods of pronouncing Latin are in use in this country at the present time, described respectively as the English method, the Continental method, and the Roman or Phonetic method.

I. THE ENGLISH METHOD, in general, pronounces Latin words as though they were English. The tendency of this system is frequently to obscure the vowel sounds. Thus, before *r* final, or followed by another consonant, *e*, *i*, and *u* are scarcely distinguishable from one another. Between *qu* and *rt*, *a* receives a sound like *o*—e. g. in *quartus*. The quantities of unaccented syllables are not carefully rendered. The diphthongs *æ* and *œ* are sounded like *ē* in *be*; *au*, as in *author*; *eu*, as in *neuter*; *ui*, like *ī* in *like*—e. g. *cui*, *huic*, etc. *C* and *g* are pronounced soft (like English *s* and *j*) before *e*, *i*, *y*, *ae*, or *oe*. *Ch* is hard, like *k*; *c*, *s*, and *t*, in such words as *socius*, *militia*, *Alsium*, *anxius*, receive the sound of *sh*. *G* and *m* are silent before *n* (e. g. *Gnaeus*, *Mnemon*); *ch* and *ph* before a mute (e. g. *Chthonia*, *Phthia*); *p* before *s* or *t* (e. g. *Psyche*, *Ptolemaeus*); and *t* before *m* (e. g. *Tmolus*).

The English method is falling into desuetude in this country, and will probably soon be wholly obsolete. In England, the leading Latinists have long since repudiated it in theory, but the conservatism of the schools clings to it as being the old historic usage of English scholarship; whereas it is nothing of the kind, but a comparatively modern innovation, as shown below.

II. THE CONTINENTAL METHOD gives to the consonants in general the same sounds as in the English method, and to the vowels the following sounds: *a*, as in *father*; *e*, like *a* in *make*; *i*, as in *machine*; *o*, as in *go*; *u*, like *oo* in *moo*; *y*, like *e* in *me*; *ae* and *oe*, like *a* in *make*; *au*, like *ou* in *out*. The tendency of this method also is to neglect difference of quantity in unaccented syllables.

The name "Continental Method" is rather a misnomer, as there is on the continent of Europe no uniform system, the scholars of each nation pronouncing the consonants as in their own language. Thus, a German pronouncing *Cicero*, says *Tsitsĕro*; an Italian, *Chichĕro*; a Frenchman, *Sisĕro*; a Spaniard, *Thithĕro*, and so on. Yet the practical identity of the vowel-sounds in all the chief continental languages and the fact that only a few of the consonants vary in pronunciation, make the so-called Continental System, as used in this country, one that is easily intelligible to any Continental Latinist. It is used by the Catholic clergy and in a number of colleges, and is substantially the system that has always prevailed at the Scotch universities.

III. THE ROMAN or PHONETIC METHOD aims to reproduce, so far as our present knowledge makes such a thing possible, the pronunciation used by the Romans themselves in the classical period. It distinguishes very carefully between long and short vowels, even in syllables where the natural vocalic quantities are obscured by their position before two consonants.

ā, as in *father*; *ă*, as in *Cuba*.
ē, as in *they*; *ĕ*, like *a* in *Senate*.
ī, as in *machine*; *ĭ*, as in *pin*.
ō, as in *note*; *ŏ*, as in *obey*.
ū, like *oo* in *moo*; *ŭ*, like *oo* in *hood*.
ae = *ah-ee* quickly spoken.
au, like *ou* in *out*.
ei, as in *eight*.
oe = *oh-ee* quickly spoken.
ui, like *wee* in *sweet* (nearly).
eu, as in *feud* (nearly).
ȳ, like German *ü*; *ў*, the same sound short.

The pronunciation of the consonants is as follows:

b = *b* in English; before *s* or *t* = *p*.
c = *k* (always).
ch, as in German.
d = *d* in English; at the end of words nearly = *t*.
f = *f* in English.
g = *g* in *get* (always hard).
h = *h* in English.
j (*i*-consonant) = *y* in English.
l = *l* in English.
m = *m* in English.
n = *n* in English; but before *c*, *q*, *g*, or *x* = *ng* in *linger*.
p = *p* in English.
q = *q* in English. (It is always, in Latin, followed by *u*.)
r = *r* in English with a slight trill.
s = *s* in *sit*.
t = *t* in English, and never assibilated.
v (*u*-consonant) = *w* in English.
x = *x* in English.
z = *z* in English.

Our knowledge of how the Romans pronounced

their own language is derived from several sources: (*a*) from the statements of the Roman writers themselves, especially of the grammarians; (*b*) from the orthography of the language, which was, in the main, phonetic (Quint. i. 7, 11); (*c*) from the way in which the Greeks represented Roman sounds in Greek characters—spelling by ear; (*d*) from a comparison of all the modern languages derived from the Latin with reference to the points which they possess in common; (*e*) from the spelling of the Latin words taken into German, Gothic, and Anglo-Saxon at an early period; (*f*) from the traditions of scholars as set forth in the treatises of Erasmus, Lipsius, and others, as cited below; (*g*) from the traditions of the Roman Catholic Church, which has employed Latin in its rites from the first century to the present time; (*h*) from the general principles of the science of phonology. These sources were very carefully investigated, and the results they yield were correlated by Dr. Wilhelm Corssen (q. v.) in his great work, *Ueber Aussprache, Vokalismus, und Betonung der lateinischen Sprache*, 2 vols. (Leipzig, 1858–59; 2d ed. 1868–70), since the appearance of which the ancient system of pronunciation has made steady progress in gaining the acceptance of scholars all over the world. In 1859, Professor J. F. Richardson, of the University of Rochester, put forth an excellent little volume advocating the true method; and in 1872, Professors Munro and Palmer in England, at the request of the head-masters of the public schools, prepared and published a condensed statement of the Roman system, entitled *A Syllabus of Latin Pronunciation* (Oxford and Cambridge, 1872), which received the approval of the two great universities and of all the leading Latinists of England. The Roman system has now practically supplanted the other two in the leading schools, colleges, and universities of the United States. This is not due to the greater willingness of Americans to accept what is new, but to practical considerations that will readily occur to any one. In the United States, the inconveniences of having no standard system have been very great. New England, being wholly settled from Old England, long continued the English system of pronouncing Latin. In the Middle States, the Germans and Dutch introduced their own methods; in the South and West, the French pronunciation came in quite frequently; and all over the Union, the Catholic clergy in their schools and colleges have propagated the traditional usage of their Church. Hence, a Babel of pronunciations and systems existing and practised side by side in a picturesque confusion such as no European country ever knew; and hence the general willingness to accept a single method, especially one that is based upon historic truth.

The advantages of the Roman system, briefly stated, are these: (*a*) It is approximately the system used by the Romans themselves. (*b*) It is more musical and harmonious in sound, and makes the structure of Latin verse clear even to the beginner. (*c*) It is simpler than the English system, giving as it does but one sound to each alphabetical character, and thus always distinguishing words of different orthography and meaning by their sounds, while the English system often confuses them—e. g. *census* and *sensus; caedo, cedo*, and *sedo; circulus* and *surculus; cervus* and *servus; amici* and *amisi*. (*d*) It makes the connection of Latin words with their Greek cognates plain at once, and renders easier the study of Greek, of the modern Romance languages, and of the science of Comparative Philology.

Advocates of other systems have made their chief assault upon the Roman method because of its dictum regarding the pronunciation of *c* and *v*. They say that Latin *c* must have had a modified sound before *e* and *i*, because every modern language derived from the Latin has so modified it.

But it must be remembered that the modern Romance languages are the children, not of the classical Latin spoken in the days of Cicero, but of the provincial Latin spoken five or six centuries later. There is no doubt that at this late period Latin *c* had become modified before *e* or *i* so as to be equivalent to *s* or *z*. Latin words received into German at this time represent *c* before *e* or *i* by *z*. But had this modification been a part of the usage of the classical language, it would have been noticed by the grammarians, who discuss each letter with great minuteness. Now, no grammarian ever mentions more than one sound for Latin *c*. Again, if Latin *c* had ever had the sound of *s*, surely some of the Greeks, ignorant of Latin and spelling by ear, would at least occasionally have represented Latin *c* by σ—a thing which none of them has ever done, always using κ. It is probable that the modification of *c* which is noticed in the modern languages was a characteristic of the Umbrian and Oscan dialects (the Umbrian had a special character to denote the modified sound), and so prevailed to some extent in the provinces; but there is absolutely not the slightest evidence to show that it formed a part of the pronunciation of cultivated men at Rome. On the other hand, words taken into Gothic and Old High German from the Latin at an early period invariably represent Latin *c* by *k*: thus, Latin *carcer* gives the Gothic *karkara* and the German *Kerker;* Latin *Caesar* gives the German *Kaiser;* Latin *lucerna* gives the Gothic *lukarn;* the Latin *cellarium* gives the German *Keller;* the Latin *cerasus* gives the German *Kirsche*. Also in late Hebrew, Latin *c* is regularly represented in transliteration by the hard consonant *kôph*. In Latin inscriptions, also, *c* alternates with *k*, showing it to have had the same sound. Thus we find *Caelius* and *Kaelius, Cerus* and *Kerus, decembres* and *dekembres*. (See, also, Quint. i. 7, 10).

As to *v*, the Greeks transliterated it by ου, writing Ουαλήριος for *Valerius*, Ουόλσκοι for *Volsci*, etc., while it passes easily into *u* in such forms as *cautum* for *cavitum*, *fautor* for *favitor*, etc.

"It is not always remembered that only very gradually was the true pronunciation of Latin lost in Europe. Scholars long retained the essential features of it, and by the fact of their constant intercourse long prevented the growth of local and national variations from the established method. Great teachers like Erasmus passed from country to country, lecturing in Latin at the universities of Italy, Germany, Holland, France, and England; teaching pupils of all nationalities, and being everywhere understood without any difficulty, for Latin was the *lingua franca* of the educated, and one general pronunciation of it prevailed. Even in England, it was only after that country's isolation, political and religious, in the sixteenth century, that an 'English pronunciation' arose, and this was long protested against—e. g. by Cardinal

Wolsey, by Milton, and as late as the last century by Ainsworth (1746) and Philipps (1750). For the Continental traditions, see Justus Lipsius in his *Dialogus de Recta Pronunciatione Linguae Latinae;* and Erasmus, *De Recta Latini Graecique Sermonis Pronunciatione* (Basle, 1528). In Scotland, the Continental sound of the vowels was long retained, on which see the incident imagined by Sir Walter Scott in his novel *The Fortunes of Nigel*, ch. ix." (Peck).

Latin War. See LATIUM.

Latīnae Feriae. See FERIAE

Latīni. See LATINITAS.

Latinĭtas or Ius Latii designated, in the later republican and early imperial period, a special legal status conferred upon the inhabitants of many provincial municipalities — a status midway between that of Roman citizens (*cives*) and that of aliens (*peregrini*). Historically, the Latin allies of Rome had always enjoyed special treaty rights; and when the people of Latium received full citizenship, similar rights were bestowed upon certain colonies in other parts of Italy. After the Social War and the extension of Roman citizenship on the entire peninsula, *Latini colonarii* were found only in the provinces. Where *minus ius Latii* was conferred upon a municipality, all its citizens who were chosen as municipal magistrates became *ipso facto* Roman citizens; where *maius ius Latii* was given, the *decuriones* or municipal senators also became Roman citizens. In both cases all free inhabitants of the municipality enjoyed *commercium* with Rome, but not *conubium* —i. e. the Roman law of property could be invoked by them, but they had no part in Roman family law. With the edict of Caracalla, conferring citizenship upon all the free inhabitants of the Roman Empire, the *Latini colonarii* disappeared.

A second and distinct class of Latins was established in the early imperial period by a *lex Iunia* or *Iunia Norbana* (A.D. 19 †). This law enacted that freedmen (*liberti*) who had been informally manumitted from slavery, and who were free only by virtue of praetorian protection (*tuitione praetoris*) should have, with some exceptions, the status of *Latini colonarii*. These *Latini Iuniani* were not citizens, and had no political rights; they had no *conubium*, and their marriages, like those of slaves, were purely *de facto* matters, creating neither *manus* over the wife nor *patria potestas* over the children; and they had only a restricted *commercium—inter vivos*, but not *mortis causa*. Their contracts were perfectly valid, but they could neither take inheritances or legacies nor dispose of their property by testament. Their estates, in fact, were treated as *peculia* or slave-estates, and went at death to the former master or his heirs. There were, however, several methods in which this *Latina libertas* might be converted into full citizenship (cf. Ulpian, *Fragmenta*, iii. 1–6). The *Latini Iuniani* were unaffected by the edict of Caracalla, but disappeared under the legislation of Justinian (Gaius, *Inst.* i. §§ 23 foll., iii. §§ 85 foll.; Codex, 7, 6, 1, § 1).

Latīnus. (1) Son of Faunus and of the nymph Marica (or, according to another story, of Heracles and Fauna, or of Odysseus and Circé). He was king of Latium and father of Lavinia, the wife of Aeneas (q. v.). (2) A mime-player, a favourite of the emperor Domitian, mentioned by Juvenal and Martial (Juv. i. 35; Mart. ii. 72, etc.).

Latium (from *latus*, "the level land"). A country of Italy, lying south of Etruria, from which it was separated by the Tiber. The earliest records of Italian history, as we are assured by Dionysius of Halicarnassus (i. 9), represented the plains of Latium as first inhabited by the Siculi, a people of obscure origin, but who would be entitled to our notice from the circumstance above mentioned, even had they not acquired additional historical importance from their subsequent migration to the celebrated island from them named Sicily. (See SICULI.) Ancient writers do not seem agreed as to the name of the people who compelled the Siculi to abandon Latium. Dionysius informs us that Philistus ascribed their expulsion to the Umbri and Pelasgi. Thucydides refers the same event to the Opici; while Antiochus of Syracuse, a still more ancient writer, represents the Siculi as flying from the Oenotri. Notwithstanding this apparent discrepance, it is pretty evident that under these different names of Umbri, Opici, and Oenotri, the same people are designated whom Dionysius and the Roman historians usually term Aborigines (*Ant. Rom.* i. 10). The Aborigines, intermixing with several Pelasgic colonies, occupied Latium, and soon formed themselves into the several communities of Latini, Rutuli, Hernici, and Volsci, even prior to date of the supposed arrival of Aeneas.

The name Prisci Latini was first given to certain cities of Latium (see PAGUS), supposed to have been colonized by Latinus Silvius, one of the kings of Alba, but most of which were afterwards conquered and destroyed by Ancus Marcius and Tarquinius Priscus (Livy, i. 3). In the reign of Tarquinius Superbus the Latin nation was united under the form of a confederate Republic, and acknowledged that ambitious king as the protector of their league (Livy, i. 50). After the expulsion of the tyrant from Rome, we are told that the Latins, who favoured his cause, experienced a total defeat near the Lake Regillus, and were obliged to sue for peace (Dion. Hal. vi. 18). According to this historian, the Latins received the thanks of the Roman Senate, some years afterwards, for having taken no advantage of the disturbances at Rome, which finally led to the secession of the people to Mons Sacer, and for having, on the contrary, offered every assistance in their power on that occasion; he adds, also, that a perpetual league, known as the Latin League, was formed at that time between the Romans and the Latins. How-

ever, about 143 years afterwards, we find the latter openly rebelling, and refusing to supply the usual quota of troops which they had agreed to furnish as allies of Rome. Their bold demand, which was urged through L. Annius Setinus, in the Roman Senate, that one of the consuls at least should be chosen out of their nation, led to an open rupture. A war followed (B.C. 340–338), known as the Latin War, which was rendered remarkable from the circumstances of the execution of the young Manlius by order of his father, and the devotion of Decius. (See DECIUS.) After having been defeated in several encounters, the Latins were reduced to subjection, with the exception of a few towns, which experienced greater lenity, and Latium thenceforth ceased to be an independent State (Livy, viii. 14; Pliny, xxxiv. 5). At that time the rights of Roman citizens had been granted to a few only of the Latin cities; but at a later period the Gracchi sought to level all such distinctions between the Latins and the Romans. This measure, however, was not carried. The Social War followed; and though the confederates were finally conquered, after a long and desperate contest, the Senate thought it advisable to decree that all the Latin cities which had not taken part with the allies should enjoy the rights of Roman citizens. Many of these towns were, however, deprived of their privileges by Sulla; and it was not till the close of the Republic that the Latins were admitted generally to participate in all the rights and immunities enjoyed by the Quirites. See FOEDERATAE CIVITATES.

The name of Latium was at first given to that portion of Italy only which extends from the mouth of the Tiber to the Circeian promontory, a distance of about fifty miles along the coast; but subsequently this latter boundary was removed to the river Liris, whence arose the distinction of *Latium Antiquum* or *Vetus* and *Novum* or *Adiectum* (Pliny, *H. N.* iii. 59). At a still later period, the southern boundary of Latium was extended from the Liris to the mouth of the river Vulturnus and the Massic Hills See ITALIA.

Latmĭcus Sinus (Λατμικὸς κόλπος). A gulf on the coast of Ionia in Asia Minor, into which the river Maeander fell, named from Mount Latmus, which overhangs it.

Latmus (Λάτμος). A mountain in Caria, extending in a southeast direction from the Sinus Latmicus. It was the mythological scene of the story of Selenē (Luna) and Endymion, who is hence called by the Roman poets *Latmius heros* and *Latmius venator.*

Latobrĭgi. A people in Gallia Belgica, neighbours of the Helvetii, probably dwelling near the sources of the Rhine in Switzerland (Caes. *B. G.* i. 5, 29).

Latomiae. See LAUTUMIAE.

Latōna. See LETO.

Latopŏlis (Λατόπολις). A city of Egypt in the Thebaïd, between Thebes and Apollinopolis Magna. It derived its Greek name from the fish *latos* worshipped there, which was regarded as the largest of all the fishes of the Nile. The later writers drop the term πόλις, and call the place merely Laton (Λάτων, Hierocles); and therefore, in the *Itin. Anton.* and *Notitia Imperii*, the ablative form *Lato* occurs.

Latrīna. In early language the name for a bath or washing-place, corrupted from *lavatrina* (Varr. *L. L.* ix. 68; Lucil. *ap.* Non. s. v. p. 212); but subsequently also used to designate a water-closet in a private house (Columell. x. 85; Suet. *Tib.* 58; Apul. *Met.* i. p. 13), several of which are still to be seen at Pompeii; and all, like that shown in the article DOMUS, p. 546, contiguous to the kitchens. The two small arches on the right are the kitchen stove; four steps lead down to the room, and had a hand-rail by their side to assist the ascent or descent, the mark of which remains against the wall. The recess on the left is the *latrina*, originally closed by a wooden door, which has left the marks of its hinges and bolt on the edge of the door frame; and the mouth of the pipe through which the place was supplied with water is observable in the right-hand corner. See FORICAE.

Latro (cognate with λάτρις). An armed highwayman. The term for highway robbery was *latrocinium*, and was punishable with death. Unarmed robbers were called *grassatores*, but the distinction is not always observed (Juv. iii. 305).

Latrunculi (πεσσοί, ψῆφοι, *calces*, *calculi*). A game of skill not unlike our game of checkers or draughts. It was played in a variety of ways by both the Greeks and the Romans; and in Egypt there have been found paintings representing the game, while checkers of metal, glass, etc., have been taken from the tombs. Homer represents the suitors of Penelopé as playing the game (*Odyss.*

Egyptian Checker-player. (Papyrus at Leyden of B.C. 1700.)

i. 107), which was traditionally said to have been invented by Palamedes, to whom dice are also ascribed (Soph. *Frag.* 380, 381 Dind.). The older form of the Greek game was the game of five lines (πέντε γραμμαί, Poll. ix. 97). It is probable that in this the object of the player was to hem in the enemy's men or place one of them between two of his, in which case it could be removed from the board; and thus the game was won when all the enemy's pieces had been taken or else so hemmed in as to be unable to move. The men were perhaps moved along lines rather than squares; but Liddell and Scott suggests that the five lines marked off thirty-six squares (i. e. divided by five lines each way).

The other kind of Greek πεττεία was called πόλεις, this name indicating the χῶραι or squares, which in this form of the game are distinctly mentioned (Poll. ix. 98). Here, too, the pieces are of different colours and are called κύνες ("dogs"). The object in this form of the game was the same as in the other—to bring the opponent to a standstill or to capture all his men.

In the Roman forms of the game we find mention of some pieces more powerful than the others, like the "kings" of modern checkers. The latrunculi are sometimes called *latrones* and sometimes *milites*, and the game was regarded as representing a combat between two armies. The pieces stood on squares and not on lines (Varro, *L. L.* x. 22). The phrase for blocking an opponent's moves is *ad incitas* (*calces*) *redigere;* to attack his *ligare, obligare* or (more usually) *adligare*.

See Salmasius *ad* Vopisc. *Proc.* 13 (1671), where there is a copious citation of authorities; Becq de Fouquières, *Les Jeux des Anciens* (2d ed. 1873); and especially Falkener, *Games Ancient and Oriental* (1892).

Laughing Philosopher. See DEMOCRITUS.

Laureăcum. A fortified town of Noricum Ripensé, the station of a Roman fleet on the Danube, and the headquarters of the second legion. It lay to the east of the junction of the Oenus and Danube.

Laurentes Agri. The country in the neighbourhood of Laurentum (Tibull. ii. 5, 41).

Laurentia. See ACCA; FRATRES ARVALES; ROMULUS.

Laurentius Lydus. See LYDUS.

Laurentum. An ancient town of Latium, the residence of the mythical Latinus, situated on a height between Ostia and Ardea, not far from the sea, and surrounded by a grove of laurels, whence it was supposed to have derived its name. The younger Pliny and the emperor Commodus had villas at Laurentum. Later it was united with Lavinium, six miles distant, under the name LAUROLAVINIUM, a compound suggesting the American Texarkana.

Lauretānus Portus. A harbor of Etruria (Livy, xxx. 39).

Laurĭum (Λαύριον and Λαύρειον). A mountain in the south of Attica, a little north of the promontory Sunium, celebrated for its silver mines, which in early times were very productive, so that each Athenian citizen received ten drachmae ($1.60) annually; but in the time of Augustus they yielded nothing. See METALLUM.

Lauron. A town in the east of Hispania Tarraconensis, near the sea and the river Sucro. Here the younger Cn. Pompeius was put to death after the battle of Munda (Plut. *Pomp.* 18).

Lāus (Λᾶος). A Greek city in Lucania, near the mouth of the river Laüs, which formed the boundary between Lucania and Bruttium.

Laus Pompēia. A town of Cisalpine Gaul, next in importance to Mediolanum (Milan), and situated to the southeast of that place, near the river Lambrus. It was founded, as Pliny reports, by the Boii (iii. 17), and afterwards probably colonized by Pompeius Strabo, father of the great Pompey. In a letter of Cicero to his brother, it is simply called Laus (ii. 15).

Lausus. (1) Son of Mezentius (q. v.), king of the Etruscans, slain by Aeneas. (2) Son of Numitor and brother of Ilia, killed by Amulius.

Lautŭlae. A village of the Volsci in Latium, in a narrow pass between Tarracina and Fundi.

Lautumiae or **Latomiae.** A name properly denoting a quarry, and derived from the Greek λᾶας, "a stone," and *τέμνω*, "to cut" or "quarry." This appellation was particularly applied to certain quarries near Syracuse, one of which still bears the name of "The Ear of Dionysius," because it is said to have been used by that tyrant for a prison, and to have been so constructed that all the sounds uttered in it converged to and united in one particular point, termed, in consequence, the tympanum. This point communicated with an apartment (the famous "Ear of Dionysius"), where Dionysius placed himself, and thus overheard all that was said by his unsuspecting captives. There is no doubt that these quarries actually served as places of imprisonment, and Cicero reproaches Verres with having employed them for this purpose in the case of Roman citizens (Cic. *Verr.* v. 27). Aelian informs us that some of the workmen in the quarries near Syracuse remained so long there as to marry and rear families in them, and that some of their children, having never before seen a city, were terrified on their coming to Syracuse, and beholding for the first time horses and oxen (Aelian, *V. H.* xii. 44). See CARCER, p. 278.

Laverna. The Roman goddess of thieves and impostors (Hor. *Epist.* i. 16, 60), from whom the Porta Lavernalis derived its name. A grove on the Via Salaria was consecrated to her. See Petron. 140.

Lavernium. A temple of Laverna, near Formiae (Cic. *Ad Att.* vii. 8).

Lavīcum. See LABICUM.

Lavinia. The daughter of Latinus and Amata, betrothed to Turnus, but married to Aeneas (Livy, i. 1). See TURNUS.

Lavinium. An ancient town of Latium, three miles from the sea, and six miles east of Laurentum, on the Via Appia, founded by Aeneas, and called Lavinium in honour of his wife Lavinia (Livy, i. 1). It was the sanctuary of the Latin Penates. See LAURENTUM.

Leaena (Λέαινα). The mistress of Aristogiton or of Harmodius (q. v.). On the murder of Hipparchus she was tortured, but refused to betray her friends, and, according to one account, bit off her own tongue to make any revelation impossible. She died of her sufferings, and in her memory the Athenians erected on the Acropolis a bronze lioness (λέαινα) without a tongue (Pausan. i. 23, 2).

Leander (Λέανδρος or Λείανδρος). A youth of Abydos, who was in love with Hero, the priestess of Aphroditē in Sestus, and swam every night across the Hellespont to visit her, and returned before daybreak. Once during a stormy night he perished in the waves. Next morning his corpse was washed on the coast of Sestus, whereupon Hero threw herself into the sea. This story was the subject of the poem of Musaeus (q. v.), entitled *De Amore Herois et Leandri*, and is also mentioned by Ovid (*Her.* xviii. 19) and Vergil (*Georg.* iii. 258). In modern times the story has been used by Marlowe, Schiller, Leigh Hunt, and Grillparzer.

Learchus. See ATHAMAS.

Lebadēa (Λεβάδεια). A town in Boeotia, between Chaeronea and Mount Helicon, at the foot of a rock, in a cave of which was the celebrated oracle of Trophonius (Herod. viii. 34).

Lebĕdus (Λέβεδος). One of the twelve Ionic

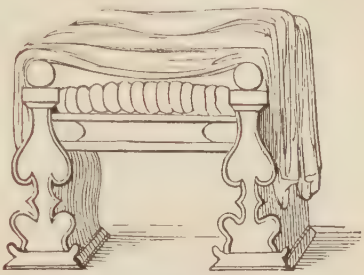
cities, situated on the coast of Lydia, between Colophon and Teos (Herod. i. 142). It was nearly deserted in the time of Horace.

Lebes (λέβης). (1) A kettle of iron or copper of any size, put over the fire to cook (Hom. *Il.* xxi. 362; Thuc. iv. 100). (2) A basin, usually of silver, used by guests at dinner for washing their hands, which were held over it while water was poured over them from above. (3) Any vessel, as an urn for ashes (Aesch. *Agam.* 444), a bath-tub, etc.

Lebinthus (Λέβινθος). An island in the Aegaean Sea, one of the Sporades (q. v.).

Lechaeum. See CORINTHUS, p. 413.

Lectica (*φορεῖον, σκιμπόδιον*). A sort of litter, or palanquin, introduced into Greece and Italy from the East; at first, as an article of luxury for women, but afterwards very generally used for men as well. The body consisted of a wooden case with low sides to it, like the bier (*capulus, ferentum*), upon which a corpse was carried out (Aul. Gell. x. 3, 2); with uprights which supported a wooden tester, like the *pluteus*. This roof was covered with leather (Mart. xi. 98), and curtains (*vela, plagae, plagulae*) were suspended from it, which might be closed all round (Suet. *Tit.* 10), or drawn back, as in the illustration, when it was said to be open (*aperta*, Cic. *Phil.* ii. 24);



Supposed form of Lectica. (Ginzrot.)

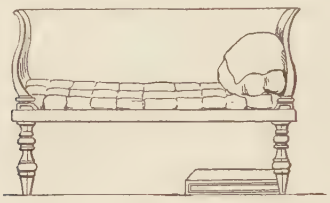
but in some cases it was a close conveyance (*clausa*), having the sides fitted with panels and windows, which could be opened or shut at pleasure (Juv. iii. 242). The inmate reclined upon a soft mattress or feather-bed (Juv. i. 159), with a bolster to support the back (*cervical*), so that he could read, write, or sleep within it. According to the wealth of the owner and the size of the *letica*, it was borne by two, four, six, or eight tall slaves (*lecticarii*). Fragments of a lectica were found at Rome on the Esquiline in 1874.

Lecticarii (*φορειαφόροι*). See LECTICA.

Lections. See TEXTUAL CRITICISM.

Lectisternium. A festival of Greek origin, first ordered at Rome by the Sibylline Books in B.C. 399. It was held on exceptional occasions, particularly in times of great distress. Images of the gods (probably portable figures of wood draped with robes, and with their heads made of marble, clay, or wax) were laid on a couch (called the *lectus* or *pulvinar*). A table was placed before them, on which was laid out a meal, always a free-will offering. At the first Lectisternia, there were three *lecti* arranged for three pairs of non-Roman divinities—Apollo and Latona, Heracles and Artemis (Diana), Hermes (Mercury), and Poseidon (Neptune). Afterwards, this sacrifice was offered to the six pairs of Roman gods, who corresponded to the twelve great gods of the Greeks: Iupiter, Iuno, Neptune, Minerva, Mars, Venus, Apollo, Diana, Vulcan, Vesta, Mercury, and Ceres. These banquets to the gods generally took place at festivals of prayer and thanksgiving, which were called Supplicationes (q. v.), and were performed in the market-places or at appointed temples, in which the arrangements for the purpose were on a permanent footing. It was customary to have connected with this a domestic feast, to which both strangers and friends were invited, and in which even those imprisoned for debt were allowed to participate. From the commencement of the third century B.C. a banquet was regularly given to the three Capitoline divinities, Iupiter, Iuno, and Minerva, on every 13th of November, in conjunction with the Plebeian Games. Under the Empire, the celebration was on the 13th of September, and was associated with the Roman games. From B.C. 196 it was provided by the college of Epulones (q. v.). The images of the three gods were decked with curls, and tricked out with colours. Iupiter was placed reclining on a cushion, with a goddess on each side of him seated on a chair; and the divinities were invited to a banquet, in which the whole Senate participated.

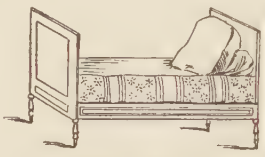
Pulvinar (Munich).



Lectisternium. (From a terra-cotta lamp.)

Lectonia. A land thought by some to have existed in the Mediterranean, and to have connected Greece with Asia. According to the Pseudo-Orphic account, Poseidon being angry with Zeus, struck Lectonia with his trident and buried it in the sea, leaving only scattered islands to recall its past. This tradition has been received with credence by some geographers and scholars, who regard the numerous small islands between Greece and Asia Minor as making probable a former land-connection which facilitated the early immigration from Asia into Europe. See Pliny, *H. N.* ii. 90; Diod. Sic. v. 47.

Lectum (*τὸ Λέκτον*). The southwestern promontory of the Troad, formed by Mount Ida jutting out into the sea (Herod. ix. 114).



Lectus (*λέκτρον*). (1) A bed to sleep upon was called LECTUS CUBICULĀRIS (Cic. *Div.* ii. 65). The ancient bedsteads were of considerable height, requiring a footstool (*scamnum*), or a set of steps

(*gradus*) to get into them; and were made like our largest-sized sofas, with a head-board (*anaclinterium*), sometimes a corresponding one against the feet, and a high back (*pluteus*) on the farther side, but entirely open on the one at which the occupants entered (*sponda*). The frame was strung with girths (*fasciae, restes, institae*), which supported a thick mattress (*torus, culcita*), on which were placed a bolster and pillow (*cubital, cervical*).

Lectus. (British Museum.)

A bed inferior in size and in materials was called by the diminutive name LECTŬLUS or LECTICŬLA, which also denoted a sofa, forming part of the usual furniture in a study (Pliny, *Ep.* v. 5, 5; Ovid, *Trist.* i. 11, 39), and on which it was a common practice to recline at length while reading, and even writing, the tablet being placed against one knee, which was raised up as a support for the purpose.

Lectulus. (Pompeii.)

The lectus was also used instead of seats in dining-rooms, the guests reclining at table. The usual number of couches at a table was three—*summus, medius,* and *imus.* For a full treatment of the table-arrangements, see TRICLINIUM.

(2) LECTUS GENIĀLIS or IUGĀLIS, denotes the marriage-bed (εὐνή), to which the wife was conducted on the eve of her marriage by the *pronuba,* after she had retired from the bridal feast. (See MATRIMONIUM.) It was a large bed, handsomely decorated, and raised to a very great height from the ground, as is indicated by the flight of steps at the foot in the illustration given in the article GRADUS, p. 744, which represents the *lectus genialis* of Dido, in the Vatican Vergil.

Lectus Funebris. (Rich.)

(3) LECTUS FUNĒBRIS is the name of the bier upon which dead bodies were carried out to the funeral pile, or to their place of sepulture, as shown by the annexed illustration from an ancient tombstone.

Lecȳthus (λήκυθος). See AMPULLA.

Lecȳthus (Λήκυθος). A town in the peninsula of Sithonia taken by Brasidas (Thuc. iv. 115).

Leda (Λήδα). A daughter of King Thestius and Eurythemis, who married Tyndareos, king of Sparta. According to the common account, she became, by Zeus (who assumed for that purpose the form of a swan), the mother of Pollux and Helen, and on the same night by her own husband, the parent of Castor and Clytaemnestra. Two eggs, it seems, were brought forth by her, from which respectively came the children just named, Pollux and Helen being in one, and Castor and Clytaemnestra in the other. Other versions, however, are given of the legend, for which consult Homer (*Od.* xi. 298) and the articles DIOSCURI and HELENA. See also Calverley's *Sons of Leda,* from Theocritus. The story of Leda and the swan has formed the subject of many beautiful works of art in both ancient and modern times.

Ledaea. An epithet given to Hermioné, and sometimes to Helen, and others, as related to Leda (Verg. *Aen.* iii. 328).

Ledaei Dii. Castor and Pollux, the sons of Leda.

Ledon (Λέδων). A town in Phocis, the birthplace of Philomelus, who led the Phocians in the Sacred War, at which time it was destroyed.

Ledus and **Ledum.** Now Lez or Les, a river of Gaul, near the modern Montpellier (Mela, ii. 5).

Legacies. See HERES; LEGATUM.

Legae (Λῆγαι) and **Leges** (Λῆγες). A people on the southern shore of the Caspian Sea.

Legātum. A legacy; a term of Roman law defined in the *Digest* (31, 1, 36), as *donatio testamento relicta*—i. e. a legatum implies a formal testament and universal succession. A legacy could only be given in the Latin language. If given unconditionally, it was said to be given *pure;* if otherwise, *sub condicione.*

There were four forms in which a legacy could be left: *per vindicationem, per damnationem, sinendi modo, per praeceptionem.*

A legatum *per vindicationem* was given in these words: *Hominem Stichum do, lego,* or the words might be with reference to the legatee, *Capito, sumito, sibi habeto.* A legatum *per vindicationem* was so called with reference to the legal means by which the legatee asserted his right to the legacy against the heir or any possessor, which was by a *vindicatio* (q. v.) or an *actio in rem* (see ACTIO); for as soon as the *hereditatis aditio* had taken place, the legatee had the quiritary (*ex iure Quiritium*) ownership of the legacy. If the same thing was given to more than one person, either jointly (*coniunctim*), so as to make them *collegetarii,* or severally (*disiunctim*), each took an equal share. A legatum was given *coniunctim,* thus: *Titio et Seio hominem Stichum do, lego; disiunctim,* thus: *Titio hominem Stichum do, lego; Seio eundem hominem do, lego.* If one *collegatarius* failed to take, his portion went to the others.

The formula *per damnationem* was this: *Heres meus Stichum servum meum dare damnas esto;* but the word dato was equally effective. A thing which belonged to another (*aliena res*) could be thus left, and the heres was bound to procure the thing for the legatee, or to pay him the value of it. A thing not in existence at the date of the will might be left by this form—i. e. the future produce of a female slave (*ancilla*). The legatee did not acquire the quiritary ownership of the legacy by virtue of the *hereditatis aditio;* the thing still remained the property of the heir, and the legatee could only sue for it by an *actio in personam.* If it was a thing *mancipi,* the legatee could only acquire the quiritary ownership of it by *mancipatio* or in *iure cessio* from the heir; if it was merely delivered, the *legatarius* only acquired the complete ownership (*plenum ius*) by *usucapion* (q. v.).

The form of legacy *sinendi modo* was *Haeres*

meus damnas esto sinere L. Titium hominem Stichum sumen sibique habere, by which formula the testator could bequeath anything that belonged to himself or to his heir, at the time of his decease; and as in the previous case, the legatee had merely an *actio in personam* against the heir, though it was doubted whether the form of bequest imposed any active duty on the latter, it being argued that his only obligation was to allow the legatee to "take" the object bequeathed to him.

The *legatum per praeceptionem* was in this form: *Lucius Titius hominem Stichum praecipito* — i. e. "take first." The Sabiniani were of opinion that a legacy could only thus be left to one who was also made an heir; but a *senatus consultum* of Nero made the legacy good, even if it was thus left to another than the heir, provided the legatee was a person to whom a legacy could be left in any of the three other modes.

By the Twelve Tables, a man could dispose of his property as he pleased, and he might exhaust (*erogare*) the whole *hereditas* by legacies and bequests of freedom to slaves, so as to leave the heir nothing. The consequence was that in such cases the heirs refused to take the *hereditas*, and there was, of course, an intestacy. The first legislative measure on this subject was the Lex Furia Testamentaria (B.C. 183), which did not allow a testator to give as a *donatio mortis causa* or as a legacy more than a thousand asses to one person, certain relatives excepted. But this measure did not prevent a man from giving as many several thousands to as many persons as he pleased, and so exhausting his estate. The Lex Voconia (B.C. 169) afterwards enacted that no person should take, by way of legacy or *donatio mortis causa*, more than the heirs (severally, as it seems); but this was also ineffectual; for, by distributing the *hereditas* among numerous legatees, the heir might have so small a portion as not to make it worth his while to assume the burdens attached to the inheritance. The Lex Falcidia (B.C. 40) at last took away all means of evasion by declaring that a testator should not give more than three fourths in legacies, and thus a fourth was secured to the heir. The Lex Falcidia applied to the wills of persons who died in captivity (*apud hostes*), for a previous Lex Cornelia had given to the wills of such persons the same force as if they had died *cives*.

Legata were *inutilia* or void if they were given before an heir was instituted by the will, for the will derived all its legal efficacy from such institution; there was the same rule as to a gift of freedom. It was void if in form the gift was given after the death of the heir, but it might be given on the event of his death; it was also void if given in form on the day before the death of the testator. A legatum could not be left in the way of a penalty (*poenae nomine*)—that is, for the purpose of compelling the heir to do, or restraining him from doing, any particular act. A legacy could not be left to an uncertain person (*incerta persona*). The notion of an uncertain person was not of a person who could never be ascertained, but the notion of the uncertainty was referred to the mind of the testator at the time of making his testament. Accordingly, the person was not considered uncertain where he was one of a certain class, such as *cognati*, though the individual of the class might be uncertain till the event happened which was to determine who out of the class was intended by the testator. Such a form of bequest was called a *certa demonstratio incertae personae*. A legacy could not be left to a *postumus alienus*, nor could such a person be a *heres institutus*, for he was an *incerta persona*. It has been explained elsewhere who is a *postumus* (see TESTAMENTUM); a *postumus alienus* is one who, when born, cannot be among the *sui heredes* of the testator.

Legātus. An envoy from one State to another; an ambassador. (1) Envoys were sent from Rome, in the regal period, by the king; in the republican period by the consuls, with the advice and authority of the Senate. In the later Republic the sending and receiving of *legati* was practically an exclusive function of the Senate. In the Empire these rights passed to the emperor. In the royal and early Republican periods envoys were always taken from the college of fetial priests. (See FETIALES; IUS FETIALE.) When the Senate gained substantial control of foreign affairs, *legati* were always chosen from the senatorial order. Like the fetials, the secular *legati* were neutral and inviolable persons (*iure gentium*). In the last century of the Republic, senators travelling on private business or for pleasure were frequently invested with the character of *legati* without the least pretence of an actual mission, the appointment assuring them not merely special consideration and protection, but also free transportation at the cost of the State.

(2) Envoys were also sent by the Senate to convey tidings or counsel to magistrates in the field. When an important treaty was to be concluded by such a magistrate, a board of senatorial legati was frequently sent, nominally to advise the general, actually to settle the terms of the treaty. When conquered territory began to be organized into provinces (see PROVINCIA), it became customary to send out one or more senatorial legati with the magistrate to whom the government of a province was intrusted. These legati were legally under the command of the governor, and served as his assistants in military, administrative, and judicial matters; but they also represented the authority of the Senate, and the necessity of hearing their advice operated as a check upon the governor's arbitrary powers. In the last two centuries of the Republic, legati were regularly appointed to accompany consuls or praetors charged with important military operations; and these legates, often nominated by the general in command, served as corps commanders. As the military power began to overshadow that of the Senate, the generals obtained free hand in selecting their legati (cf. the Lex Gabinia, B.C. 66, which gave Pompey the selection of his own legati for the conduct of the war against the pirates), and the way was prepared for the development of the imperial office of *legatus*. This whole evolution from envoy to officer is indicated, according to Mommsen, in the successive forms of expression: *legatus ad aliquem, legatus alicui, legatus alicuius*.

The Republican legatus had no *imperium* and bore no *fasces*. The symbol and credential of his office was a ring. Here again the Gabinian law marked an innovation: the legati of Pompey had propraetorian powers. The same was true of the legates of Iulius Caesar in Gaul (*B. G.* i. 21).

(3) In the Early Empire certain provinces were

assigned to the *princeps*, and these provinces he governed through legati of his own selection. These legates had propraetorian powers and bore *fasces* (not of twelve or six rods, like the consuls and praetors, but of five—*legati quinquefascales*). Similar powers and insignia were accorded to the legates in the senatorial provinces, who were now selected by the governor with the approval of the emperor. In the imperial system, accordingly, the *legati pro praetore* are vice-governors, subordinated in the provinces of Augustus to the emperor and in the other provinces to the senatorial governor. Besides these, the emperors appointed other *legati pro praetore* without fixed provinces and with purely military duties.

Still other legates were appointed for the provinces with special military or judicial duties, the *legati legionis* and the *legati iuridici*. These had no *imperium*, and were subordinated to the provincial governors and vice-governors. Cf. Mommsen's *Römisches Staatsrecht*, esp. ii. 675–701.

Leges. See LEX.

Legio. In the time of Romulus, the united armed forces of Rome went by the name of *legio*. The legion then consisted of 300 knights (*celeres*), under the command of a *tribunus celerum*, appointed by the king, and 3000 foot soldiers, under the command of three *tribuni militum*. Each of the three ancient tribes provided a third of this force and one tribune. With the increase of the military forces of Rome the name of *legio* was given to each of the subdivisions equivalent in numbers to the original army.

The military system of King Servius Tullius made the infantry the most important part of the military forces, instead of the cavalry as heretofore. The five classes included in the *census* (q. v.) were obliged to serve in the army at their own expense; those who were not comprised in these classes—viz. the *proletarii*—were freed from service, and, when they were enlisted, received their equipment from the State. The *iuniores*, those who were from 17 to 46 years old, were appointed for field service, and the *seniores*, those from 47 to 60, for the defence of the city.

The first and second lines of the legion, drawn up in unbroken order like the Greek phalanx, consisted of citizens of the first class, equipped with helmet, cuirass, round shield (*clipeus*), and greaves, all of bronze. The third and fourth lines were from the second class, and had no cuirass, but had the helmet and greaves and large oblong shields (*scutum*). The fifth and sixth were armed similarly, but without greaves, and were drawn from the third class. The fourth class was armed with the *scutum* as its only weapon of defence, but, like the others, provided with spear (*hasta*) and sword. It either filled the seventh and eighth lines, or, with the fifth class, formed the *rorarii*, who opened the battle with slings and other light missiles.

An important alteration, ascribed to Camillus (about B.C. 390), was the abolition of the phalanx and introduction of the manipular formation, which prevailed till the time of Marius (end of the second century B.C.). In the flourishing days of the Republic, the normal strength of a legion, which could be increased in time of need, consisted of 300 knights (*equites*) and 4200 foot soldiers (*pedites*). In respect to the weapons used, the latter were divided into four kinds, according to their length of service and familiarity with warfare: (1) 1200 *hastati*, all in early manhood; (2) 1200 *principes*, in the full vigour of life; (3) 600 *triarii*, who were proved veterans; and (4) 1200 *velites*, who were lightly armed, and were drawn from the lowest classes of the census. The first three classes had a bronze helmet (*cassis*) with a lofty plume of feathers, a *scutum*, a leathern cuirass (*lorica*, q. v.), greaves, and a sword (*gladius*), which, after the Second Punic War, was of the Spanish kind, being short, strong, and two-edged, fitted for thrusting rather than cutting, and worn on the right side. There was also a spear, which in the first two divisions was a *pilum* (q. v.), and among the *triarii* a lance (Polyb. vi. 23). The *velites* were armed with a leather helmet (*galea*), a light shield (*parma*), and a sword and several light javelins. The 3000 heavily armed men were divided into 30 *manipuli*, numbering 120 men each among the *hastati* and *principes*, and 60 each among the *triarii*, and were again subdivided into two bodies called *centuriae*, and led by centurions (q. v.). Of the 1200 *velites*, 20 were allotted to each century, and they formed the final complement of each maniple. On the field of battle the maniples were drawn up in open order, separated laterally from one another by intervals corresponding to the breadth of each maniple in front. The arrangement of the maniples would thus resemble that of the black squares on a chess-board. They fell into three divisions—the *hastati* in the front rank, with the *principes* behind them, and the *triarii* in the rear. If the first division, the *hastati*, were compelled to give way, then the second division, the *principes*, advanced through the intervals left by the maniples of the first division; if the *principes*, in their turn, had to retreat, then the third division, the *triarii*, who had been previously kneeling, protected by their shields, allowed the *hastati* and *principes* to fall back into the intervals separating the maniples of the *triarii*, and themselves, closing their ranks, pressed forward to meet the enemy. The 300 knights of the legion were divided into 10 *turmae* of 30 men each, and were equipped with a bronze cuirass, leathern greaves, helmet, shield, a long sword for attacking, and a long lance provided at both ends with an iron point. Each *turma* was under three decurions and three under-officers (*optiones*). The legion, as a whole, was under the command of six *tribuni militum* (q. v.).

The consular army consisted of two legions. Four legions were regularly levied in each year; in other words, 16,800 foot soldiers and 1200 cavalry. This levy of citizens was further swelled by the Italian allies (*socii*), a body of 20,000 foot soldiers and 3600 cavalry, thus adding to each of the two consular armies 10,000 foot soldiers and 1800 cavalry. The former were in twenty cohorts (see COHORS), each consisting of 420 men. Ten of these cohorts fought on the right wing and ten on the left wing of the legions. Besides these, four cohorts of 400 men each were formed into a picked body. The cavalry were in six squadrons (*alae*) of 300 men each. Four of these belonged to the main army, and two to the picked body. In wars beyond the limits of Italy there were also auxiliary forces (*auxilia*), consisting either of soldiers raised in the country where the war was being carried on, or of light-armed troops furnished by allied kings and nations. Besides the ordinary compo-

nent parts of the legion there was also the body-guard of the commander-in-chief, the *cohors praetoria*. See COHORS.

In the course of the first century B.C. the organization of the legion was essentially altered. In the first place, in the time of Marius, the census ceased to be the basis of the levy, and all the citizens collectively were placed on the same footing in respect to their military service and the uniform which they wore. All the soldiers of the legion alike received the heavy equipment and the *pilum*, while the light-armed *velites* were done away with. After the right of citizenship had been conferred on the Italian allies, these no longer formed a separate part of the legions, but were incorporated with them. Thus the Roman army now consisted only of heavy-armed legions and of light-armed auxiliary troops. The latter were partly raised in the provinces and divided into cohorts, and partly enlisted as slingers and archers. The cavalry of the legions ceased to exist. Like the light-armed soldiers, the whole of the cavalry consisted of auxiliary troops, who were partly enlisted and partly levied from the provinces, while some were supplied according to agreement by allied nations and princes. A further important novelty introduced by Marius was the use of the cohort-formation, instead of the maniple-formation, which broke up the front too much. The legion was now divided into ten cohorts, in each of which there were three maniples of *hastati*, *principes*, and *triarii*, designations which now only concerned the relative rank of the six centurions of the cohort. The customary battle array was in three divisions, the first being formed of four cohorts, and the second and third of three each. Again, while in earlier times the obligation of service extended at the most in the infantry to twenty campaigns and in the cavalry to ten, from the days of Marius the soldier remained uninterruptedly for twenty years with the army, an earlier dismissal being only exceptional. For this reason the well-to-do classes sought to withdraw themselves from the general military service, and it thus came to pass that the legions were for the greater part manned by means of conscriptions from the lowest ranks of the burgher population of Italy, in which the service was regarded simply as a means of livelihood. Thus from the original army of citizens there was gradually developed a standing army of mercenaries.

Under the Empire we find what is really a standing army, bound to the emperor by oath. (See SACRAMENTUM.) Apart from the legions this army consisted of the *auxilia* (q. v.), the guards stationed in Rome and the neighbourhood (see PRAETORIANI), and the city-cohorts (see COHORS), the artillery and the corps of workmen (see FABRI), the marines (see CLASSIARII), and the municipal and provincial militia. The legions are now once more provided with a corps of cavalry 120 strong, and are designated not only by numbers, but also by distinctive names. Together with the auxiliary troops they form the garrison of the imperial provinces under the command of the imperial *legati legionum* (see LEGATI), whose place was taken in the middle of the third century A.D. by the *praefecti legionum*. (See PRAEFECTI.) The strength of the legion now amounted to 5000–6000 men, raised partly by a regular levy, partly by drawing recruits from the Roman citizens of all the provinces beyond the bounds of Italy. As under the Republic, it was divided into 10 cohorts of 6 centuries each; the first cohort was, however, twice the strength of the remainder. It was not until the second half of the third century A.D. that a new division of the 10 cohorts into 55 centuries came into use, with 10 centuries in the first cohort, and 5 in each of the rest. At the death of Augustus, the number of the legions was 25; it was then increased to 30, and this number was maintained until the end of the second century, when three new legions were added by Septimius Severus. From the beginning of the fourth century it gradually rose to about 175, each of them, however, mustering a considerably smaller contingent. In course of time, and especially after the second century, owing to the conflicts with the barbarians, the legion was drawn up more and more after the manner of the Greek phalanx, without intervals in its line and with a division of troops in its rear. In its equipment there was an important alteration beginning with the second half of the third century, when all the soldiers of the legion carried long swords (*spathae*), and the first five cohorts two *pila*, one larger and another smaller, while the last five had *lanceae*, or javelins serving as missiles, and fitted with a leather loop to help in hurling them with precision. See Pfitzner, *Geschichte der röm. Kaiserlegionen* (Leipzig, 1881).

The military music of the Romans was provided by *tubicines* (see TUBA), *cornicines* (see CORNICEN), *bucinatores* (see BUCINA), and *liticines* (see LITUUS). The accompanying illustration from the Column of Trajan represents the soldiers of a legion on the

Roman Legionaries on the March. (Relief from the Column of Trajan, Rome.)

march, carrying their helmets close to the right shoulder, and their "kit" at the top of a pole resting on the left. On standards or ensigns, see SIGNUM; VEXILLUM. On levy, oath of allegiance, pay, and discharge from service, see DELECTUS; MISSIO; SACRAMENTUM; STIPENDIUM. For the army as a whole, see Brissaud, *De l'Organization Militaire chez les Romains* (Paris, 1891); and EXERCITUS.

Legio Septĭma Gemĭna. A Roman military colony in Spain among the Astures, northeast of

Asturica. It is now Leon. Ptolemy calls it Legio Septima Germanorum (ii. 6).

Legis Actio. See ACTIO.

Legislation. See COMITIA; LEX; SENATUS.

Lehrs, KARL. A German classical scholar, born at Königsberg in 1802. He studied at the university of his native place, in which he himself became, after teaching for some time in various gymnasia, Privat-Docent (1831), Extraordinary Professor (1835), and Ordinary Professor (1845). He died in 1878.

His most valuable work is the treatise on early Homeric criticism, *De Aristarchi Studiis Homericis* (Königsberg, 1833; 3d ed. 1882). Of his other writings it is most necessary to mention *Quaestiones Epicae* (1837); *Herodiani Tria Scripta Minora* (1848); *Die Pindarscholien* (1873); besides an edition of the Odes of Horace this is remarkable for the extreme length to which Lehrs carried his subjective criticism of the text. See Kammer, *Karl Lehrs* (Berlin, 1879); and TEXTUAL CRITICISM.

Leiturgia. See LITURGIA.

Lelantine War. A war waged between Eretria and Chalcis, probably for the possession of the plain of Lelantus (q. v.). E. Curtius has assumed as the date of this contest B.C. 704, which Professor Mahaffy thinks too early. Some of the most powerful States of Greece joined in the struggle, especially Samos and Miletus. See Strabo, pp. 58, 447; Herod. v. 99; Thuc. i. 15; Hermann in the *Rheinisches Museum*, i. p. 85; and especially Mahaffy in *Hermathena*, iv. p. 325.

Lelantus Campus (*τὸ Λήλαντον πεδίον*). A plain lying between the two cities of Eretria and Chalcis in Euboea and an object of contention to them. It was noted for its copper and iron mines and warm springs.

Lelegēïs. A name applied to Miletus, because once possessed by the Leleges (Pliny, *H. N.* v. 29).

Lelĕges (*Λέλεγες*). An ancient race, frequently mentioned with the Pelasgians as the prehistoric inhabitants of Greece. The Leleges were described as a warlike and migratory race, who first took possession of the coasts and the islands of Greece, and afterwards penetrated into the interior. Piracy was probably their chief occupation; and they are represented as the ancestors of the Teleboans and the Taphians, who were notorious for their piracies. The name of the Leleges was derived by the Greeks from an ancestor, Lelex, who is called king of either Megaris or Lacedaemon (Pausan. iii. 1, 1). They must be regarded as a branch of the great Indo-Germanic race, who became gradually incorporated with the Hellenes, and thus ceased to exist as an independent people. They are spoken of as inhabiting Acarnania and Aetolia, and afterwards Phocis, Locris, Boeotia, Megaris, Elis, and Laconia, which last was originally called Lelegia; also (in Asia Minor) Ionia, the southern part of the Troad, and Caria (Herod. i. 171). See Deimling, *Die Leleger* (Leipzig, 1862).

Lelex (*Λέλεξ*). See LELEGES.

Lemannus or **Lemānus Lacus.** The modern Lake of Geneva; a large lake formed by the river Rhodanus (Rhône), and constituting the boundary between the old Roman province in Gaul and the land of the Helvetii. It is fifty-five miles long, and its maximum width is six miles.

Lembus (*λέμβος*). A swift light vessel, also called *dromo*. The *lembus* varied in size from a mere cat-boat to a fast-sailing transport (Plaut. *Merc.* i. 2, 81; Polyb. li. 3).

Lemnia Terra, also called **Sigillāta.** A species of reddish earth found in Lemnos, and highly esteemed down to modern times for its supposed virtues as an antidote against snake-bites and as a remedy for dysentery. It was gathered on only one day of the year (Aug. 6) with religious ceremonies.

Lemniscus. See CORONA, p. 415.

Lemnos or **Lemnus** (*Λῆμνος*). One of the largest islands in the Aegaean Sea, situated nearly midway between Mount Athos and the Hellespont. Its area is about 180 square miles. It was sacred to Hephaestus, who is said to have fallen here when he was hurled down from Olympus. Hence the workshop of the god is sometimes placed in this island. The legend appears to have arisen from the volcanic nature of Lemnos. Its earliest inhabitants, according to Homer, were the Thracian Sinties, a name which probably signifies "robbers," from *σίνομαι*. When the Argonauts landed at Lemnos, they found it inhabited only by women who had murdered all their husbands, and had selected Hypsipylé as their queen. (See HYPSIPYLÉ.) By the Lemnian women some of the Argonauts became the fathers of the Minyae, who inhabited the island till they were expelled by the Pelasgians. Lemnos was conquered by one of the generals of Darius; but Miltiades delivered it from the Persians, and made it subject to Athens. Pliny (*H. N.* xxxvi. 13) speaks of a remarkable labyrinth in Lemnos, of which, however, no remains are to be found at the present day. See Tozer, *Islands of the Aegean* (1890).

Lemonia. One of the country tribes at Rome, named after a village Lemonium, situated on the Via Latina beyond the Porta Capena.

Lemonium. See LEMONIA.

Lemovīces. A people in Gallia Aquitanica, between the Bituriges and Arverni, whose chief town was Augustoritum, subsequently called Lemovices, the modern Limoges (Caes. *B. G.* vii. 4).

Lemovii. A people of Germany, mentioned together with the Rugii as inhabiting the shores of the Baltic in the modern Pomerania (Tac. *Germ.* 43).

Lemuralia. See LEMURES.

Lemŭres. The spectres or spirits of the dead. Some writers describe Lemures as the common name for all the spirits of the dead, and divide them into two classes: the Lares, or the souls of good men, and the Larvae, or the souls of wicked men. But the common idea was that the Lemures and Larvae were the same. They were said to wander about at night as spectres, and to torment and frighten the living. In order to propitiate them, the Romans celebrated the festival of the Lemuralia or Lemuria in the month of May (the 9th, 11th, and 13th). It was said to have been originally instituted by Romulus to appease the spirit of Remus (Ovid, *Fast.* v. 473, etc.). At this festival it was the custom to appease or expel the evil spirits by walking barefoot and throwing black beans over the shoulder at night (Ovid, *Fasti*, v. 473 foll.). Because of this festival to the dead, the whole month of May was supposed to be unlucky

for marriages, whence the proverb *Mense Maio malae nubent.* See Preller, *Röm. Myth.* 499.

Lemuria. See LARES; LEMURES.

Lenaea. See DIONYSIA.

Lenaeon (Ληναιών). The Ionic name of the Attic month Gamelion (q. v.), in which the Lenaea were held. (See DIONYSIA.) It was the fifth month of the Asiatic Greeks and the seventh of the Attic Greeks. See CALENDARIUM.

Lenaeus (Ληναῖος). A surname of Dionysus, derived from ληνός, the wine-press or the vintage.

Leno. A pimp. See MERETRIX.

Lenocinium. The trade of a procurer. See MERETRIX.

Lentia. The modern Linz; a town of Noricum on the Danube.

Lenticular Gems. See GEMMA.

Lentienses. A tribe of the Alemanni dwelling along the northern shore of the Lacus Brigantinus (Constance), in the modern Linzgau.

Lentŭlus. A haughty patrician family of the Cornelia gens (Cic. *Ad Fam.* iii. 7), of which the most important persons were: (1) P. CORNELIUS LENTULUS SURA, the person of chief note among Catiline's conspirators. He was quaestor to Sulla B.C. 81; praetor in 75; consul in 71. In the next year he was ejected from the Senate, with sixty-three others, for infamous life and manners. It was this, probably, that led him to join Catiline and his band. From his distinguished birth and high rank, he calculated on becoming chief of the conspiracy; and a prophecy of the Sibylline Books was applied by flattering haruspices to him. Three Cornelii were to rule Rome, and he was the third after Sulla and Cinna; the twentieth year after the burning of the Capitol, etc., was to be fatal to the city. To gain power and recover his place in the Senate, he became praetor again in 63. When Catiline quitted the city for Etruria, Lentulus was left as chief of the home conspirators, and his irresolution probably saved the city from being fired; for it was by his over-caution that the negotiation with the ambassadors of the Allobroges was entered into, and these unstable allies revealed the secret to the consul Cicero. The sequel will be found in the article CATILINA. Lentulus was deposed from the praetorship, and was strangled in the Capitoline prison on the 5th of December. (2) P. CORNELIUS LENTULUS SPINTHER, curule aedile in B.C. 63, praetor in 60, and consul in 57. In his consulship he moved for the immediate recall of Cicero, and afterwards received Cilicia as his province. On the breaking out of the Civil War in 49 he joined the Pompeian party. (3) L. CORNELIUS LENTULUS CRUS, praetor in 58, and consul in 49, when he took a very active part against Caesar. After the battle of Pharsalia, he fled to Egypt, and was put to death by the young Ptolemy's ministers. (4) GNAEUS, called GAETULĪCUS, consul in A.D. 26, commanded the imperial legions in Upper Germany. His great popularity with the soldiers excited the jealousy of the emperor Caligula, who had him put to death in A.D. 39. He was a writer of both verse and prose, and to him have been ascribed nine epigrams in the Greek anthology, inscribed with the name Gaetulicus.

Leo or **Leon** (Λέων). (1) Also called LEONĪDES (Λεωνίδης), of Heraclea on the Pontus, a disciple of Plato. He was one of the conspirators who, with their leader, Chion, assassinated Clearchus, tyrant of Heraclea, B.C. 353. (2) DIACŌNUS, or the Deacon, a Byzantine historian of the tenth century. His history, in ten books, includes the period from the Cretan expedition of Nicephorus Phocas, in the reign of the emperor Romanus II. (A.D. 959), to the death of Ioannes I. Zimisces (975). The style of Leo is corrupt; he employs unusual and inappropriate words, many of them borrowed from Homer, Agiathias the historian, and the Septuagint, in the place of common ones; and he abounds in tautological phrases. His history, however, is a valuable contemporary record of a stirring time, honestly and fearlessly written. It is edited by Migne (Paris, 1863). (3) GRAMMATĪCUS, one of the continuators of Byzantine history from the period when Theophanes leaves off. His work, entitled *Chronographia*, extends from the accession of Leo V. the Armenian (813) to the death of Romanus Lecapenus (944). (4) Archbishop of Thessalonica, an eminent Byzantine philosopher and ecclesiastic of the ninth century. His works are lost, but he is frequently mentioned in terms of the highest praise by the Byzantine writers, especially for his knowledge of geometry and astronomy. (5) MAGENTĒNUS, a commentator on Aristotle, flourished during the first half of the fourteenth century. He was a monk, and afterwards archbishop of Mitylené. Several of his commentaries on Aristotle are extant, and have been published. (6) Leo was also the name of six Byzantine emperors. Of these, Leo VI., "the philosopher," who reigned 886–911, is celebrated in the history of the later Greek literature. He wrote a treatise on Greek tactics, and several other works, which are still extant. He is also celebrated in the history of legislation. As the Latin language had long ceased to be the official language of the Eastern Empire, Basil, the father of Leo, had formed and partly executed the plan of issuing an authorized Greek version of Justinian's legislation. This plan was carried out by Leo. The Greek version is known under the title of Βασιλικαὶ Διατάξεις, or shortly, Βασιλικαί; in Latin, *Basilica*, which means "Imperial Constitutions," or "Laws." See BASILICA.

Leochăres (Λεωχάρης). A Greek sculptor, of Athens, who (about B.C. 350) was engaged with Scopas in the adornment of the Mausoleum (q. v.) of Halicarnassus. One of his most famous works was the bronze group of Ganymede and the Eagle, a work remarkable for its ingenious composition, which boldly ventures to the verge of what is allowed by the laws of sculpture, and also for its charming treatment of the youthful form as it soars into the air. It is apparently imitated in a well-known marble group in the Vatican, half life-size. See Perry, *Greek and Roman Sculpture*, ch. xxxix. (London, 1882).

Leonĭdas (Λεωνίδας). (1) A celebrated king of Lacedaemon, of the family of the Eurysthenidae, sent by his countrymen to maintain the pass of Thermopylae against the invading army of Xerxes (B.C. 480). A narrative of the affair will be found in the article THERMOPYLAE. (2) Son of Cleonymus, of the line of the Agidae, succeeded Areus II. on the throne of Sparta, B.C. 257. Agis, his colleague in the sovereignty, having resolved to restore the institutions of Lycurgus to their former

vigour, Leonidas opposed his views, and became the main support of those who were inclined to a relaxation of ancient strictness. He was convicted, however, of having transgressed the laws, and was obliged to yield the supreme power to Cleombrotus, his son-in-law. Not long after he was reestablished on the Spartan throne, and avenged the affront which he had received at the hands of Agis, by impeaching him and effecting his condemnation (Pausan. ii. 9; iii. 6). He died about B.C. 236. (3) A relative of Olympias, the mother of Alexander the Great. He had charge of Alexander's education before he became the pupil of Aristotle. Afterwards when king, Alexander said that Leonidas had furnished him with two excellent cooks — a night's march to give zest to his breakfast, and a scanty breakfast to give zest to his dinner. (4) A native of Alexandria, who flourished at Rome as a grammarian towards the close of the first century of the Christian era. He wrote, among other things, epigrams denominated *ἰσόψηφα*, arranged in such a manner that the numerical value of all the letters composing any one distich is equal to that of the letters of any other. He was very probably the inventor of this learned species of trifling. (5) A native of Tarentum, who flourished about B.C. 275. He left behind a hundred epigrams in the Doric dialect, and which belong to the best of those that have been preserved to modern times.

Leonidēa (*Λεωνιδεῖα*). A solemn feast annually celebrated in Sparta in honour of Leonidas and the three hundred Spartans who fell at Thermopylae. See THERMOPYLAE.

Leonīni Versus. A name given especially to a form of the Latin hexameter and pentameter rhymed in the middle and at the end. They are ascribed to Leoninus, Canon of the Church of St. Victor in Paris about the middle of the twelfth century, and by some to Pope Leo II.; but they occur in the classical Latin writers of the Augustan Age. Such is the line of Vergil:

"Limus ut hic durescit et haec ut cera liquescit;"

and this from Ovid:

"Quot caelum stellas, tot habet tua Roma puellas."

In the Middle Ages, however, they were systematically written and chiefly by poets who let their rhyme take the place of syllabic quantity. Many famous old couplets are leonine. Such is the original of "When the devil was ill," etc.—

"Daemon languebat, monachus tunc esse volebat:
Ast ubi convaluit, mansit ut ante fuit."

And the famous epitaph of Bede in Durham Cathedral:

"Hac sunt in fossa, Bedae venerabilis ossa."

And this skit on the legal profession:

"Dirue iuristas, Deus, ut Satanae citharistas;
O Deus extingues hos pingues atque bilingues!"

And the punning line on the Fair Rosamond:

"Hic iacet in hac tumba rosa mundi non rosa munda."

For a full account of the leonine verse, with abundant specimens, see J. Grimm, *Lat. Gedichte;* Trench's introduction to his *Sacred Latin Poetry;* Leyser, *Historia Poetarum Medii Aevi*, pp. 832–837; and, especially, Eberhard's *Labyrinthus*, a sort of mediæval *Ars Poetica*. Cf. also the article RHYME in this Dictionary.

Leonnātus (*Λεοννάτος*). A Macedonian of Pella, one of Alexander's generals. At the assault on the city of the Malli in India he saved Alexander's life. He crossed over into Europe in B.C. 322, to assist Antipater against the Greeks; but was defeated by the Athenians and their allies, and fell in battle (Diod. xviii. 12–15).

Leontiădes (*Λεοντιάδης*). (1) A Theban who commanded the forces sent by Thebes to the Greek army at Thermopylae, B.C. 480. (See THERMOPYLAE.) (2) A Theban who, in B.C. 382, aided the Spartans in seizing the citadel of Thebes, the Cadmea. He was slain by Pelopidas in 379 (Diod. xv. 25).

Leontīni (*Λεοντῖνοι*). The modern Lentini, a town in the east of Sicily, about five miles from the sea, northwest of Syracuse, founded by Chalcidians from Naxos, B.C. 730, but never attained much political importance in consequence of its proximity to Syracuse. The rich plains north of the city, called Leontini Campi, were some of the most fertile in Sicily, and produced abundant crops of most excellent wheat. It was the birthplace of Gorgias, "the Nihilist."

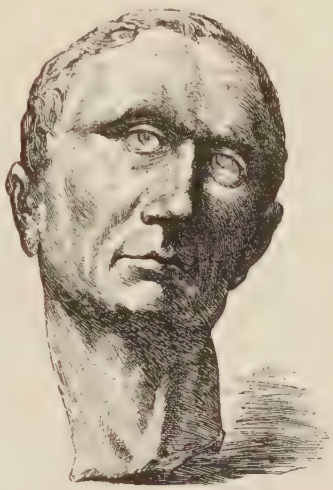
Leontium (*Λεόντιον*). An Athenian woman, originally a courtesan, although afterwards the wife of Metrodorus, the most eminent friend and disciple of Epicurus. Many slanders were circulated respecting her intercourse with the philosopher and his followers. She herself composed works on philosophy (Diog. Laert. x. 7; Cic. *N. D.* i. 33). Her daughter Danaë was a prostitute of some celebrity.

Leontium (*Λεόντιον*). A town in Achaia, between Pharae and Aegium.

Leontopŏlis (*Λεοντόπολις, Λεόντων πόλις*). (1) A city in the Delta of Egypt, the capital of the Nomos Leontopolites. (2) See NICEPHORIUM.

Leoprepĭdes. The poet Simonides, as son of Leoprepes (Herod. vii. 228).

Leos (*Λεώς*). An eponymous hero of Athens, who is described as son of Orpheus. Once, when Athens was suffering from famine or plague, the Delphic oracle demanded that the daughters of Leos should be sacrificed, and the father complied with the command of the oracle. The maidens were afterwards honoured by the Athenians, who erected the Leocorium (from *Λεώς* and *κόραι*) to them. Their names were Praxithea, Theopé, and Eubulé (Pausan. i. 5, 2; x. 10, 1). From Leos the tribe Leontis got its name.



Leosthĕnes (*Λεωσθένης*). An Athenian commander of the combined Greek army in the Lamian War, slain by a stone while besieging Antipater in the town of Lamia, B.C. 322. His funeral discourse was pronounced by Hyperides.

Leotychĭdes (*Λεωτυχίδης*). (1) King of Sparta, B.C. 491–469. He commanded the Greek fleet in 479, and defeated the Persians at the battle of Mycalé. (2) The reputed son of Agis II., excluded from the throne in consequence of his being suspected to be the son of Alcibiades by Timaea, the queen of Agis. His uncle, Agesilaüs II., was therefore substituted in his stead (Xen. *Hellen.* iii. 3).

Lepĭda. (1) AEMILIA, daughter of Manius Lepidus and wife of Drusus Caesar. She was engaged in an adulterous intercourse with Seianus, and was suborned by that ambitious and profligate minister to become the accuser of her own husband to Tiberius. Notwithstanding her crimes, she was protected during her father's life; but, being after-

wards made a subject of attack by the informers of the day, she put an end to her own existence (Tac. *Ann.* iv. 20; vi. 40). (2) DOMITIA, daughter of Drusus and Antonia. She was grandniece of Augustus and aunt of Nero, who destroyed her by poison (Tac. *Ann.* xiii. 19). (3) DOMITIA, daughter of Antonia the younger, by Lucius Domitius Ahenobarbus. She was the wife of Valerius Messala and mother of Messalina, and is described as having been a woman of debauched character and of a violent temper. In point of beauty and vice, she was the rival of Agrippina, Nero's mother. She was condemned to death through the influence of the same Agrippina (Tac. *Ann.* xi. 37, xii. 64; Suet. *Claud.* 26; *Ner.* 7).

Lepĭdus. (1) LUCIUS AEMILIUS PAULUS, brother of M. Lepidus, the triumvir. His surname of Paulus was probably given him by his father, in honour of the celebrated Aemilius Paulus, the conqueror of Macedonia; but since he belonged to the family of the Lepidi, and not to that of the Pauli, he is mentioned in this place and not under the title PAULUS. Aemilius Paulus commenced his public career by supporting the aristocratic party. His first public act was the accusation of Catiline in B.C. 63. He was quaestor in Macedonia in 59; aedile, 55; praetor, 53; and consul, 50, with M. Claudius Marcellus. Paulus was raised to the consulship, on account of his being one of the most determined enemies of Caesar, but Caesar gained him over to his side by a bribe of 1500 talents, which he is said to have expended on the completion of a magnificent basilica commenced by him in his aedileship. After the murder of Caesar (B.C. 44), Paulus joined the senatorial party. He was one of the senators who declared M. Lepidus a public enemy, on account of his having joined Antony; and, accordingly, when the Second Triumvirate was formed, his name was set down first in the proscription list by his own brother. The soldiers, however, who had been ordered to kill him, allowed him to escape. He passed over to Brutus in Asia, and after the death of the latter repaired to Miletus, where he remained, and refused to go to Rome, although he was pardoned by the triumvirs. (2) M. AEMILIUS, the triumvir, son of the M. Lepidus, consul B.C. 78, who took up arms to rescind the laws of Sulla, but was defeated by Pompey and Catulus. The son was praetor in 49, and supported Caesar in the Civil War. In 46 he was consul with Caesar, and in 44 he received from the latter the government of Narbonese Gaul and Nearer Spain. He was in the neighbourhood of Rome at the time of the dictator's death; and having the command of an army, he was able to render M. Antony efficient assistance. Lepidus was now chosen pontifex maximus, which dignity had become vacant by Caesar's death, and then repaired to his provinces of Gaul and Spain. Antony, after his defeat at Mutina (43), fled to Lepidus, who espoused his cause against the Senate. They crossed the Alps at the head of a powerful army, and were joined in the north of Italy by Octavian (afterwards Augustus). In the month of October the celebrated Second Triumvirate was formed, by which the Roman world was divided between Augustus, Antony, and Lepidus. In the fresh division of the provinces after the battle of Philippi (42), Lepidus received Africa, where he remained till 36. In this year Augustus summoned him to Sicily to assist him in the war against Sex. Pompey. Lepidus obeyed; but, tired of being treated as a subordinate, he resolved to make an effort to acquire Sicily for himself. He was easily subdued by Augustus, who spared his life, but deprived him of his triumvirate, his army, and his provinces; and commanded that he should live at

Lepidus, the Triumvir. (Duruy.)

Circeii, under strict surveillance. He allowed him, however, to retain the office of pontifex maximus. He was not privy to the conspiracy which his son formed to assassinate Augustus in 30. He died in 13. Augustus succeeded him as pontifex maximus.

Lepontii. An Alpine people, dwelling near the sources of the Rhine, on the southern slope of the St. Gothard and the Simplon. Their name is still retained in the Val Loventina. Their chief town was Oscela (Domo d'Ossola).

Lepreum (Λέπρεον). A town of Elis in Triphylia, situated forty stadia from the sea (Herod. iv. 148). Its name was derived from Leprea, daughter of Pyrgeus, or from Lepreus, son of Poseidon, and rival of Heracles, by whom he was slain (Pausan. v. 5, 4).

Leptĭnes (Λεπτίνης). An Athenian, known only as the proposer of a law taking away all special exemptions from the burden of public charges (*ἀτέλειαι τῶν λειτουργιῶν*), against which the oration of Demosthenes is directed, usually known as the Oration against Leptines, B.C. 355. The argument of Demosthenes is directed to the repeal of the law, and was successful in its object. See DEMOSTHENES.

Leptis (Λεπτίς). (1) LEPTIS MAGNA or NEAPŎLIS, a city on the coast of North Africa, between the Syrtes, east of Abrotonum, was a Phœnician colony, with a flourishing commerce, though it possessed no harbour. With Abrotonum and Oea it formed the African Tripolis. It was the birthplace of the emperor Septimius Severus. (2) LEPTIS MINOR or PARVA, usually called simply LEPTIS, a Phœnician colony on the coast of Byzacium in North Africa.

Lepton. See OBOLUS.

Leria. A variety of *limbus* (q. v.).

Lerĭna or **Planasia**. A small island in the Mediterranean, on the coast of Gallia Narbonensis, south of Nicaea (Nice) (Tac. *Ann.* i. 3).

Lerna (Λέρνα) or **Lerné** (Λέρνη). A district in Argolis, not far from Argos, in which was a marsh and a small river of the same name. It was celebrated as the place where Heracles (q. v.) killed the Lernaean Hydra.

Lernaea (τὰ Λερναῖα). Mysteries in honour of Dionysus and Demeter, celebrated at Lerna in Argolis (Pausan. ii. 36, 37; viii. 15).

Lernaean Hydra. See HERACLES.

Leros (Λέρος). A small island, one of the Sporades, opposite to the mouth of the Sinus Iassius, on the coast of Caria (Herod. v. 125). Here the sisters of Meleager were said to have been transformed into guinea-pigs (μελεαγρίδες). See MELEAGER.

Lesbia. See CATULLUS; CLODIA.

Lesbōnax (Λεσβῶναξ). (1) A Greek rhetorician who lived early in the first century of our era. He composed political declamations on imaginary topics. Two of these have come down to us, exhorting the Athenians in the Peloponnesian War to be bold in battle against the Thebans and the Spartans. They have been separately edited by Orelli (Leipzig, 1820). (2) A Greek grammarian of uncertain date, though later than the preceding. There exists a work of his on figures of grammar (Περὶ Σχημάτων). See R. Müller, *De Lesbonacte Grammatico* (1890).

Lesbos (Λέσβος). A large island in the Aegaean, off the coast of Mysia in Asia Minor. It was colonized by Aeolians, who founded in it an Hexapolis, consisting of the six cities Mitylené, Methymna, Eresus, Pyrrha, Antissa, and Arisbé, afterwards reduced to five through the destruction of Arisbé by the Methymnaeans. The chief facts in the history of Lesbos are connected with its principal city, Mitylené. (See MITYLENÉ.) The island is most important in the early history of Greece as the native region of the early school of lyric poetry. It was the birthplace of the poets Terpander, Alcaeus, Sappho, and Arion, of the sage Pittacus, of the historian Hellanicus, and of the philosophers Theophrastus and Phanias. See Newton, *Travels and Discoveries in the Levant*, 2 vols. (1865); Koldewey, *Die Antiken Baureste der Insel Lesbos;* and Tozer, *Islands of the Aegean* (1890).

Lesbus (Λέσβος). A son of Lapithus, grandson of Aeolus, who married Methymna, daughter of Macareus. He succeeded his father-in-law, and gave his name to the island over which he reigned.

Lesché (λέσχη). A word of uncertain etymology, perhaps connected with λέγω (Curt. *Gk. Etym.* 366), and denoting a lounging-place, a resort for idlers, such as the porticoes at Rome, the bake-shops, and the bath-houses. In the Dorian countries it was the name of a sort of club-room (Plut. *Lyc.* 25). See Curtius, *Hist. of Greece*, Engl. trans., i. p. 205.

Lesches (Λέσχης) or **Lescheus** (Λέσχευς). A Cyclic poet, a native of Mitylené or Pyrrha, in the island of Lesbos, and considerably later than Arctinus. The best authorities concur in placing him in the time of Archilochus, or about B.C. 708–676. Hence the account which we find in ancient authors, of a contest between Arctinus and Lesches, can only mean that the latter competed with the earlier poet in treating the same subjects. His poem, in four books, which was attributed by many to Homer, and, besides, to very different authors, was called the "Little Iliad" (Ἰλιὰς Μικρά), and was clearly intended as a supplement to the great *Iliad*. It is learned from Aristotle (*Poët.* 23) that it comprised the events before the fall of Troy, the fate of Aiax, the exploits of Philoctetes, Neoptolemus, and Odysseus, which led to the taking of the city, as well as the account of the destruction of Troy itself; which statement is confirmed by numerous fragments. The last part of this (like the first part of the poem of Arctinus) was called the "Destruction of Troy" (Ἰλίου Πέρσις), from which Pausanias makes several quotations with reference to the sacking of Troy and the partition and carrying away of the prisoners. See CYCLICI POETAE; HOMERUS.

Lethaeus (Λησθαῖος). (1) A river of Ionia emptying into the Menander. (2) A river of Crete.

Lethé (Λήθη, "the river of oblivion"). A river of Hades (q. v.), out of which the souls of the departed drink oblivion of all their early existence. Oblivion was also personified in a goddess called by Hesiod the daughter of Eris (*Theog.* 227).

Leto (Λητώ), called by the Romans **Latōna**. According to Hesiod, a daughter of the Titan Coeus and Phoebé, a sister of Asteria. She was the mother of Apollo and Artemis by Zeus, to whom she was married before Heré. Homer likewise calls her the mother of Apollo and Artemis by Zeus; he mentions her in the story of Niobé, who paid so dearly for her conduct towards Leto, and he also describes her as the friend of the Trojans in the war with the Greeks. In later writers these elements of her story are variously embellished, for they do not describe her as the lawful wife of Zeus, but merely as his mistress, who was persecuted by Heré during her pregnancy. All the world being afraid of receiving Leto on account of their dread of Heré, she wandered about till she came to Delos, which was then a floating island, and bore the name of Asteria or Ortygia. When Leto arrived there, Zeus fastened it by adamantine chains to the bottom of the sea, that it might be a secure resting-place for his beloved, and here she gave birth to Apollo and Artemis. The tradition is also related with various other modifications. Some said that Zeus changed Leto into a quail (ὄρτυξ), and that in this state she arrived in the floating island, which was hence called Ortygia. Others related that Zeus was enamoured of Asteria, but that she, being metamorphosed into a bird, flew across the sea; that she was then changed into a rock, which, for a long time, lay under the surface of the sea; and that this rock arose from the waters and received Leto when she was pursued by Python. Leto was generally worshipped only in conjunction with her children. Delos was the chief seat of her worship, and in the sanctuary devoted to her honour she was represented by a shapeless wooden image. See APOLLO; DAEDALA.

It is probable that the name of Leto belongs to the same class of words as the Greek λήθη and the *lateo*, as typifying night. Leto would therefore signify "the obscure" or "concealed," not as a physical power, but as a divinity yet quiescent and invisible, from whom issued the visible divinity with all his splendour and brilliancy. This view is supported by the account of her geneal-

ogy given by Hesiod. (See Preller, *Röm. Myth.* i. 190; Lang, *Myth, Ritual*, etc., ii. 199.) From their mother Apollo is frequently *Letoïus* or *Latoïus*, and Artemis (Diana), *Letoïa, Letoïs, Latoïs*, or *Latoë*.

Letter-carriers. See TABELLARIUS.

Letters. (1) See ALPHABET. (2) See EPISTOLA.

Leuca (*τὰ Λευκά*). A town at the extremity of the Iapygian Promontory in Calabria with a foul-smelling spring, under which tradition made the giants slain by Heracles to have been buried (Strabo, p. 281).

Leucae (*Λεῦκαι*) and **Leuca** (*Λεύκη*). A small town on the coast of Ionia in Asia Minor, near Phocaea, built by the Persian general Tachos in B.C. 352. Here was fought a battle between the Roman consul Licinius Crassus and Aristonicus in B.C. 131.

Leucas (*Λευκάς* sc. *πέτρα*) or **Leucadia** (*Λευκαδία*). The modern Santa Maura. An island in the Ionian Sea, off the western coast of Acarnania, about twenty miles in length and from five to eight miles in breadth. It derived its name from the numerous calcareous hills which cover its surface. It was originally united to the mainland at its northeastern extremity by a narrow isthmus. Homer speaks of it as a peninsula, and mentions its well-fortified town Nericus. It was at that time inhabited by the Teleboans and Leleges. Subsequently the Corinthians under Cypselus, between B.C. 665 and 625, founded a new town called Leucas. They also cut a canal through the isthmus, and thus converted the peninsula into an island. This canal was afterwards filled up by deposits of sand, but was opened again by the Romans. At present the channel is dry in some parts, and has from three to four feet of water in others. During the war between Philip and the Romans, Leucas was the place where the meetings of the Acarnanian League were held. The other towns of the island were Hellomenum and Phara.

At the southern extremity of the island, opposite Cephallenia, was the celebrated promontory, variously called LEUCAS, LEUCĀTAS, LEUCĀTES, or LEUCĀTĒ, on which was a temple of Apollo Leucadius. At the annual festival of the god it was the custom to cast down a criminal from this promontory into the sea; birds were attached to him in order to break his fall; and if he reached the sea uninjured, boats were ready to pick him up. This appears to have been an expiatory rite; and it gave rise to the well-known story that lovers leaped from this rock in order to seek relief from the pangs of love. Thus Sappho is said to have leaped down from this rock when in love with Phaon. See SAPPHO.

Leucātē (*Λευκάτας*). See LEUCAS.

Leucé (*Λευκή*). An island in the Euxine Sea, near the mouth of the Borysthenes. It derived its name from its white, sandy shores. According to the poets, the souls of the ancient heroes were placed here as in the Elysian fields, and enjoyed perpetual felicity. Here, too, the shade of Achilles is fabled to have been united to that of Helen.

Leuci. A people in the southeastern part of Gallia Belgica, south of the Mediomatrici, between the Matrona and Mosella. Their chief town was Tullum (Toul).

Leuci (Albi) Montes. A range of snow-covered mountains in the western part of Crete.

Leucippé. The sister of Alcithoë, and with her changed into a bat. See ALCITHOË.

Leucippĭdes (*Λευκιππίδες*). See LEUCIPPUS (2).

Leucippus (*Λεύκιππος*). (1) Son of Oenomaüs, the lover of Daphné. (2) Son of Perieres, prince of the Messenians, and father of Phoebé and Hilaïra, usually called Leucippides, who were betrothed to Idas and Lynceus, the sons of Aphareus, but were carried off by Castor and Pollux, who married them. (3) A Grecian philosopher, the founder of the atomic theory of philosophy, which was more fully developed by Democritus (Diog. Laërt. ix. 30, 34). His date is uncertain. See DEMOCRITUS; EPICURUS.

Leucon (*Λεύκων*). (1) The son of Poseidon or Athamas and Themisto, and father of Erythrus and Evippé. (2) A powerful king of Bosporus, who reigned B.C. 393–353. He was in close alliance with the Athenians, whom he supplied with corn in great abundance, and who, in return for his services, admitted him and his sons to the citizenship of Athens (Diod. xiv. 93). (3) An Athenian poet of the old comedy, a contemporary and rival of Aristophanes (Suidas, s. v.).

Leuconoë (*Λευκονόη*). The same as Leucippé (q. v.).

Leucopĕtra (*Λευκοπέτρα*). The modern Capo dell' Armi; a promontory in the southwest of Bruttium, on the Sicilian Strait, and a few miles south of Rhegium. It derived its name from the white colour of its rocks.

Leucŏphrys (*Λευκόφρυς*). (1) A city of Caria, close to a curious lake of warm water, and having a renowned temple of Artemis Leucophryné (Xen. *Hell.* iii. 2, 19). (2) Another name for the island of Tenedos (q. v.).

Leucosia (*Λευκωσία*) or **Leucasia.** The modern Piana; a small island in the south of the Gulf of Paestum, off the coast of Lucania, said to have been called after one of the Sirens.

Leucosўri (*Λευκόσυροι* — i. e. White Syrians). A name given by the Greeks to the inhabitants of Cappadocia, who were of the Syrian race, in contradistinction to the Syrian tribes of a darker colour beyond the Taurus. Later, the name was applied to the people in the north of the country between the rivers Halys and Iris (Xen. *Anab.* v. 6).

Leucothĕa (*Λευκοθέα*). The name of the deified Ino. See INO.

Leuctra (*τὰ Λεῦκτρα*). A small town in Boeotia, on the road from Plataeae to Thespiae, memorable for the victory of Epaminondas and the Thebans over the Spartans in B.C. 371. See EPAMINONDAS.

Leuctrum (*Λεῦκτρον*). (1) A town of Messenia, on the coast, sixty stadia from Cardamyle (Pausan. iv. 26). In consequence of its frontier situation, it became a source of dispute between the Messenians and Laconians. Philip, the son of Amyntas, who acted as umpire, awarded the place to the Messenians. It is called Leuctra by Thucydides (v. 54) and Xenophon. The latter informs us it was situated above the promontory of Malea. It was said to have been founded by Pelops. (2) A small town of Achaia, on the Sinus Corinthiacus, above Aegium, and in the vicinity of Rhypae, on which latter place it was dependent (Pausan. vii. 24). (3) A town of Arcadia, below Megalopolis (Pausan. viii. 27).

Levee. See SALUTATIO.

Levy. See DILECTUS; EXERCITUS.

Lex. (1) A statute; a rule of law (*ius*) laid down by some authorized organ of the State. In the royal period the kings are said to have exercised legislative power (whether the assent of the Comitia Curiata was required, is disputed; cf. Dionysius, 4, 13; *Dig.* 1, 2, 2, §§ 1, 2); but the so-called *leges regiae* seems to be mainly rules of the old religious law formulated by the priests. A collection of the *leges regiae*, made towards the end of the Republic by Sextus Papirius, was called, from its editor, the *ius Papirianum* (*Dig.* 1, 2, 2, § 2; 50, 16, 144). With the establishment of the Republic the initiative in legislation passed to the magistrates, but their proposals (*rogationes*) required the assent of the Comitia Centuriata (*uti rogas* = yes; *antiquo* = no). All the earlier leges of the Republic, including the Twelve Tables, were thus enacted. The tribunes might similarly propose bills to the assembly of the *plebs;* but these, if ratified (*plebiscita*), originally bound the plebeians only. By a *lex Hortensia* (B.C. 286) *plebiscita* became binding on the whole people, and the Comitia Tributa thus obtained concurrent legislative power. In the last centuries of the Republic the *plebiscita* were more numerous and more important than the leges voted by the Comitia Centuriata. Within the limits of their respective powers, resolves of the Senate and edicts of the magistrates had also the force of laws. In the Empire all legislative power was practically vested from the outset (by the *lex de imperio*, also called *lex regia*) in the emperor. Bills were still submitted by Augustus to the popular assembly and by his successors to the Senate; but the imperial measures were invariably approved, and the jurists often cited laws voted by the Senate not as *senatus consulta*, but as *orationes principis*. The emperors had also the full *ius edicendi*, or right of issuing edicts, which had been exercised by the republican magistrates. As late as the third century, however, the jurists confined the term *leges*, in the stricter sense, to the enactments of the Comitia Centuriata, distinguishing between these and all other forms of law (cf. Gaius Iust. i. 5; *Dig.* 1, 1, 7, pr.; 1, 4, 1, pr.). In a wider sense *plebiscita, Senatus consulta, edicta praetorum*, and *constitutiones principum* were all termed *leges* (cf. *Dig.* 9, 2, 1, § 1; 14, 6, 9, § 4; 38, 8, 1, § 2; 1, 4, 1, § 1). In the later Empire *leges* designated primarily the imperial constitutions, all the earlier statutes having become a part of the *ius* (cf. IUS [1]). A complete collection of all the older leges and fragments of leges that have come down to us in texts or inscriptions (including reconstructions of the *leges regiae* and the Twelve Tables) is to be found in Bruns and Mommsen, *Fontes Iuris Romani Antiqui* (5th ed. 1887).

(2) In a looser sense any rule of law, even of customary origin, is occasionally termed *lex* (cf. *Dig.* 1, 5, 24; 1, 3, 32, § 1); and in the later imperial constitutions *leges* is occasionally used in a collective sense, as equivalent to *ius* or the whole body of the law (so *legum scientia, legum prudentes*). (3) *Lex* was also used, from the earliest period, to denote the rule which private persons impose upon themselves and their successors by contracts or other legal acts. So *lex contractus* (*Dig.* 16, 3, 24), *lex donationis* (*ib.* 1, 5, 22), for the provisions or conditions of a contract, gift, etc., and *legum testamento dicere* (*ib.* 28, 1, 14). *Lex commissoria* was a clause in a contract by which one of the parties reserved the right of annulling the contract. So in sales it was frequently agreed that if the price were not paid at a certain time *res inempta fuerit*. In mortgages *lex commissoria* was an agreement that if the debtor failed to pay at a stipulated time the mortgagee need not sell the property and account for any surplus, but might simply appropriate it. Such an agreement Constantine declared null.

The following list of the principal laws is given for the convenience of the student:

ACILIA. See REPETUNDAE.

ACILIA CALPURNIA or CALPURNIA. See AMBITUS.

AEBUTIA, of about B.C. 170, which, with two *Iuliae leges*, put an end to the *legis actiones*, except in certain cases. See IUDEX; ACTIO.

This, or another law of the same name, prohibited the proposer of a law which created any office or power (*curatio ac potestas*) from having such office or power, and even excluded his colleague, *cognati* and *affines* (Cic. *De Domo*, 20, 51).

AELIA. This law, and a *Fufia lex*, passed about the end of the first century B.C., gave to all the magistrates the *obnuntiatio*, or power of preventing or dissolving the Comitia, by observing the omens and declaring them to be unfavourable.

AELIA SENTIA. This law (of A.D. 4) contained various provisions as to the manumission of slaves. See MANUMISSIO.

AEMILIA. A law passed in the dictatorship of Mamercus Aemilius (B.C. 433), by which the censors were elected for a year and a half instead of a whole *lustrum*. After this law they had accordingly only a year and a half allowed them for holding the census and farming out the public works.

AEMILIA BAEBIA. See CORNELIA BAEBIA.

AEMILIA LEPĪDI, AEMILIA SCAURI. See SUMTUARIAE LEGES.

AGRARIAE. See AGRARIAE LEGES.

AMBĪTUS. See AMBITUS.

ANNĀLES. Statutes prescribing the age at which a man might be a candidate for the various offices. The first law of this kind was a *lex Villia* (B.C. 80).

ANTIA. See SUMTUARIAE LEGES.

ANTONIAE, the name of various enactments proposed or passed by the influence of M. Antonius, after the death of the dictator I. Caesar. Another law that was promulgated allowed an appeal to the people after conviction for *vis* or *maiestas*. Various other measures proposed by M. Antonius are mentioned by Cicero, Dio Cassius, and Appian.

APULĒIA (of B.C. 102), gave a surety an action against his cosureties for whatever he had paid above his share.

APULĒIA AGRARIA, proposed by the tribune L. Apuleius Saturninus, B.C. 101 (Livy, *Epit.* 69).

APULĒIA FRUMENTARIA, proposed about the same time by the same tribune.

APULĒIA MAIESTĀTIS. See MAIESTAS.

AQUILIA. A law relating to *damnum* (q. v.).

ATERNIA TARPĒIA (B.C. 454). This law empowered all magistrates to fine persons who resisted their authority; but it fixed the highest fine at two sheep and thirty oxen. See MULTA.

ATIA DE SACERDOTIIS (B.C. 63), proposed by the tribune T. Atius Labienus, repealed the *lex Cornelia de sacerdotiis*.

ATILIA. See Iulia Lex et Titia; Tutor.

ATINIA (of perhaps B.C. 198), allowed no usucapion in a stolen thing. See Usucapio.

ATINIA, of uncertain date, was a *plebiscitum* which gave the rank of senator to a tribune. The measure perhaps originated with C. Atinius, who was tribune B.C. 130 (Gell. xiv. 8).

AURELIA. See Tribunus.

AURELIA IUDICIARIA. See Iudex.

BAEBIA (B.C. 192), enacted that four praetors and six praetors should be chosen alternately; but the law was not observed (Livy, xl. 44).

CAECILIA DE CENSORIBUS or CENSORIA (B.C. 52), proposed by Metellus Scipio, repealed a *Clodia lex* (B.C. 58) which had prescribed certain regular forms of proceeding for the censors in exercising their functions as inspectors of morals, and had required the concurrence of both censors to inflict the *nota censoria*. When a senator had been already convicted before an ordinary court, the law permitted the censors to remove him from the Senate in a summary way.

CAECILIA DE VECTIGALIBUS (B.C. 62), released lands and harbours in Italy from the payment of taxes and dues (*portoria*). The only vectigal remaining after the passing of this law was the *vicesima*. See Portorium.

CAECILIA DIDIA (B.C. 88) forbade the proposing of a *lex Satura*, on the ground that the people might be compelled either to vote for something which they did not approve, or to reject something which they did approve, if it was proposed to them in this manner. This law was not always operative.

CAELIA TABELLARIA. See Tabellariae Leges.

CALPURNIA DE AMBITU. See Ambitus.

CALPURNIA DE CONDICTIONE. See Actio.

CALPURNIA DE REPETUNDIS. See Repetundae.

CANULEIA (B.C. 445) established *conubium* between the patres and plebs, which had been refused by the law of the Twelve Tables (Livy, iv. 1, 6).

CASSIA (B.C. 104), proposed by the tribune L. Cassius Longinus, did not allow a person to remain a senator who had been convicted in a *iudicium populi*, or whose *imperium* had been abrogated by the people.

CASSIA, empowered the dictator Caesar to add to the number of the patricians, to prevent their extinction (Tac. *Ann.* xi. 25).

CASSIA AGRARIA, proposed by the consul Sp. Cassius, B.C. 486.

CASSIA TABELLARIA. See Tabellariae Leges.

CASSIA TERENTIA FRUMENTARIA (B.C. 73), for the distribution of corn among the poor citizens and the purchasing of it.

CINCIA or MUNERALIS, a plebiscitum carried by the tribune M. Cincius Alimentus in B.C. 204. It provided (1) that gifts beyond a maximum amount should not be made; but imposed no penalty for the violation of this provision, and was therefore a *lex imperfecta;* (2) it prescribed a set form of gift.

CLAUDIA, a law passed in the time of the emperor Claudius, taking away the *agnatorum tutela* in the case of women, not *in potestate* or *in manu* (Gaius, i. 57, 171–72).

CLODIAE, the name of various *plebiscita*, proposed by Clodius when tribune, B.C. 58.

Clodia de Auspiciis prevented the magistratus from dissolving the Comitia Tributa by declaring that the auspices were unfavourable. This law, therefore, repealed the Aelia and Fufia. It also enacted that a law might be passed on the *dies fasti*. See Aelia Lex.

Clodia de Censoribus. See Caecilia.

Clodia de Civibus Romanis Interemptis, to the effect that *qui civem Romanum indemnatum interemisset ei aqua et igni interdiceretur*. It was in consequence of this law that the interdict was pronounced against Cicero, who considers the whole proceeding as a *privilegium* (q. v.).

Clodia Frumentaria, by which the corn, which had formerly been sold to the poor citizens at a low rate, was given. See Frumentariae Leges.

Clodia de Sodalitatibus or De Collegiis, restored the *sodalicia*, which had been abolished by a *senatus consultum* of the year B.C. 64, and permitted the formation of new *sodalicia*.

There were other so-called *leges Clodiae*, which were, however, *privilegia*.

COELIA. See Tabellariae Leges.

CORNELIAE. Various leges passed in the dictatorship of Sulla, and by his influence, are so called.

Agraria, by which many of the inhabitants of Etruria and Latium were deprived of the complete *civitas* and retained only the *commercium*, and a large part of their lands were made *publicum* and given to military colonists.

De Falsis. See Falsum.

De Iniuriis. See Iniuria.

Iudiciaria. See Iudex.

Maiestatis. See Maiestas.

Nummaria. See Falsum.

De Proscriptione. See Proscriptio.

De Parricidio. See Cornelia Lex de Sicariis.

De Sacerdotiis. See Sacerdotium.

De Sicariis et de Venefiis. A law passed about B.C. 81 inflicting penalties not only for actual killing, but for carrying weapons with a murderous purpose, for arson, for selling poisons for the destruction of human life, for perjury in a capital case, etc. Under Antoninus Pius this law was further extended to cover the killing of slaves without just cause (see Servus), and the castration of men.

Sumtuariae. See Sumptuariae Leges.

Testamentaria. See Falsum.

Unciaria appears to have been a law which lowered the rate of interest, and to have been passed about the same time with the *leges sumtuariae* of Sulla.

De Vadimonio. See Vadimonium.

There are other *leges Corneliae*, such as that *de sponsoribus* (see Intercessio), which may be laws of L. C. Cinna.

There were also *leges Corneliae* which were proposed by the tribune C. Cornelius about B.C. 67, and limited the edictal power by compelling the praetors *ius dicere ex edictis suis perpetuis*. See Edictum.

Another law of the same tribune enacted that no one *legibus solveretur*, unless such a measure was agreed on in a meeting of the Senate at which two hundred members were present, and afterwards approved by the people; and it enacted that no tribune should put his veto on such a *senatus consultum*.

There was also a *lex Cornelia* concerning the wills of those Roman citizens who died in captivity (*apud hostes*). See LEGATUM.

DE VI PUBLĬCA. See VIS PUBLICA.

CORNELIA BAEBIA DE AMBĬTU, proposed by the consuls P. Cornelius Cethegus and M. Baebius Tamphilus, B.C. 181. This law is sometimes, but erroneously, attributed to the consuls of the preceding year, L. Aemilius and Cn. Baebius. See AMBITUS.

CORNELIA CAECILIA DE CN. POMPĒIO. A law of B.C. 57 giving Pompey extraordinary powers for five years for the management of the corn supply of Rome (Cic. *Ad Att.* iv. 1, 7).

DECEMVIRĀLIS. See TWELVE TABLES.

DIDIA. See SUMPTUARIAE LEGES.

DOMITIA DE SACERDOTIIS. See SACERDOTIUM.

DUILIA (B.C. 449), a *plebiscitum* proposed by the tribune Duilius, which enacted *qui plebem sine tribunis reliquisset, quique magistratum sine provocatione creasset, tergo ac capite puniretur* (Livy, iii. 55).

DUILIA MAENIA *de unciario fenore*, B.C. 357. The same tribunes, Duilius and Maenius, carried a measure which was intended in future to prevent such unconstitutional proceedings as the enactment of a law by the soldiers out of Rome, on the proposal of the consul.

DUODĔCIM TABULĀRUM. See TWELVE TABLES.

FABIA DE PLAGIO. See PLAGIUM.

FALCIDIA. See LEGATUM.

FANNIA. See SUMPTUARIAE LEGES.

FLAMINIA was an agrarian law for the distribution of lands in Picenum, proposed by the tribune C. Flaminius in B.C. 228 according to Cicero, or in B.C. 232 according to Polybius.

FLAVIA AGRARIA (B.C. 60), for the distribution of lands among Pompey's soldiers, proposed by the tribune L. Flavius, who committed the consul Caecilius Metellus to prison for opposing it.

FRUMENTARIAE. Various leges were so called which had for their object the distribution of grain among the people at a low price or gratuitously. See FRUMENTARIAE LEGES.

FUFIA DE RELIGIŌNE (B.C. 61) was a *privilegium* which related to the trial of Clodius.

FUFIA CANINIA (about A.D. 4) limited the number of slaves to be manumitted by testament. See MANUMISSIO.

FURIA TESTAMENTARIA. See LEGATUM.

GABINIA TABELLARIA. See TABELLARIAE LEGES.

There were various Gabinian laws, some of which were *privilegia*, as that for conferring extraordinary power on Cn. Pompeius for conducting the war against the pirates.

A Gabinian law (B.C. 58) forbade all loans of money at Rome to *legationes* from foreign parts (*Salaminii cum Romae versuram facere vellent, non poterant, quod lex Gabinia vetabat*). The object of the law was to prevent money being borrowed for the purpose of bribing the senators at Rome.

GELLIA CORNELIA (B.C. 72), which gave to Cn. Pompeius the extraordinary power of conferring Roman citizenship on Spaniards in Spain, with the advice of his council (*de consilii sententia*).

GENUCIA (B.C. 343) forbade altogether the taking of interest for the use of money. See FENUS.

HIERONĬCA was not a law properly so called. Before the Roman conquest of Sicily, the payment of the tenths of wine, oil, and other produce had been fixed by Hiero, and the Roman quaestors, in letting these tenths to farm, followed the practice which they found established. See DECUMA.

HORATIA, proposed by M. Horatius (B.C. 449), made the persons of the tribunes, the aediles, and others *sacrosancti*. Another *lex Horatia* mentioned by Gellius (vi. 7, 2–4) was a *privilegium*.

HORTENSIA DE PLEBISCĪTIS. See PLEBISCITUM.

Another *lex Hortensia* enacted that the *nundinae*, which had hitherto been *feriae*, should be *dies fasti*. This was done for the purpose of accommodating the inhabitants of the country.

ICILIA (B.C. 456), by which the Aventine Hill was assigned to the plebs as a dwelling-place. This was the first instance of the public land being assigned to the plebs.

Another *lex Icilia*, proposed by the tribune Sp. Icilius, B.C. 469, had for its object to prevent all interruption to the tribunes while acting in the discharge of their duties. In some cases the penalty was death.

IULIAE. Most of these were passed in the time of Iulius Caesar and Augustus. The following are the most important:

AGRARIA (B.C. 59), providing for the assignment of lands in Campania to the veterans of Pompey and to poor citizens, especially to those who had three children.

DE ADULTERIIS. See ADULTERIUM.

DE ANNŌNA, against those who tried to raise the price of grain—to "corner the market."

DE BONIS CEDENDIS. See BONORUM CESSIO.

DE FENŎRE (B.C. 49), compromising the claims of creditors and debtors (Caes. *B. C.* iii. 1).

DE MARITANDIS ORDINĪBUS. See IULIA ET PAPIA POPPAEA.

DE PROVINCIIS, limiting the praetorian governor of a province to one year and the consular to two.

IULIAE IUDICIARIAE, one depriving the *tribuni aerarii* of their share in the *iudicia publica* (Suet. *Iul.* 41) and the other instituting a select list of *iudices* for trying civil cases (Suet. *Aug.* 32).

IULIA MAIESTĀTIS. See MAIESTAS.

IULIA MUNICIPĀLIS, also called the TABŬLA HERACLEENSIS, found on a bronze in the fragments at Tarentum (Heraclea) in 1732 and 1735, and now in the Naples Museum. On one side is a Greek ψήφισμα of the town of Heraclea; on the other is a part of a Roman law containing various police regulations of the city of Rome, and rules for the constitution of colonies, municipalities, etc. A lithographed copy of the table is given by Ritschl, tab. xxxiii., xxxiv. For the text, see Spangenberg's *Monumenta Legalia* (1830).

IULIA ET PAPIA POPPAEA. Augustus appears in his sixth consulate (B.C. 28) to have issued an edict (Tac. *Ann.* iii. 28) on the subject of marriage, which he followed up (B.C. 18) by proposing a law to the Senate regulating certain marriages, imposing disabilities on unmarried persons (*caelibes*), and establishing rewards for those who had married and reared children (Dio Cass. liv. 16). This he carried, with difficulty, through the Senate; but, apparently owing to the organized resistance of the *equites*, it was rejected at the Comitia (Suet. *Aug.* 34). Towards the end of his reign, however (A.D.

3), he succeeded in passing it, with its rewards increased and its penalties mitigated; it is referred to in the *Carmen Saeculare* of Horace, which was written B.C. 17, and is mentioned under the name *lex Iulia de maritandis ordinibus* in *Dig.* 38, 11; 23, 2. The opposition of the knights was overcome by a provision that it should not come into force for three, a period subsequently extended to six, years; and taking advantage of this, Augustus passed, in A.D. 9, another statute (called Papia Poppaea from the *consules suffecti* for the year, M. Papius Mutilus and Q. Poppaeus Secundus: Dio Cass. lvi. 1–10), containing further enactments on the same subject. Sometimes they are cited by reference to their various chapters—e. g. *lex Caducaria*, *lex Decimaria*, *lex Miscella*, etc.

Many commentaries were written on these laws by the Roman jurists, of which considerable fragments are preserved in the Digest. Gaius wrote fifteen books, Ulpian twenty, and Paulus at least ten. The joint statute contained at least thirty-five chapters (*Dig.* 22, 2, 19); but, as a rule, it is impossible to say to which of the two laws, included under the general title of *lex Iulia et Papia Poppaea*, the several provisions, as now known to us, belong.

Among the enactments of these statutes are the following:

(*a*) Prohibition of certain marriages under penalties: viz. of *ingenui* and *infames* (e. g. actresses and prostitutes); and of senators or their children with freedwomen, freedmen, and actors' daughters. Marriages between a senator or his issue and *libertini* were declared void by a *senatus consult* passed under M. Aurelius, and the rule was subsequently extended to actors and actresses (*Dig.* 42, 1).

(*b*) Avoidance of conditions against marriage annexed to legacies and inheritances.

(*c*) Provisions to encourage marriage. *Caelibes* were disabled by the *lex Iulia* from taking either as heirs or as legatees under a will, unless the testator was related to them within the sixth degree, or unless they married within 100 days. *Spadones* and Vestal Virgins were exempted from the operation of the statute, as were widows for twelve months, and divorced women for six. Again, the penalty of the statute could be evaded by an engagement to marry, if carried out within two years (Suet. *Oct.* 34). Finally, males were released from its provisions in this respect on attaining sixty, women on attaining fifty years of age; but a *senatus consultum Persicianum*, passed under Tiberius, enacted that they should be regarded as *caelibes* in perpetuity if they postponed marrying till so late in life. A *senatus consultum Claudianum* so far modified the strictness of the new rule as to give a man who married after sixty the same advantage that he would have had if he had married under sixty, provided he married a woman who was under fifty; but it was enacted by a *senatus consultum Calvisianum* under Nero, that if a woman over fifty married a husband under sixty, even the latter should not escape the disabilities imposed by the statute. Similarly, by the *lex Papia, orbi* (persons who had married, but had no children living) were disqualified from taking more than half of what was left them by way of either inheritance or legacy, unless related to the testator within the sixth degree. Males escaped the penalties of *orbitas* by having a single (even adoptive) child (Iuv. xix. 83, 86–89), but by a *senatus consultum Memmianum* adoption was deprived of this effect when resorted to merely in order to evade the statute; but women were not so well off, *ingenuae* being released only by three, *libertinae* only by four children. There were exceptions to these rules if the wife was under twenty or over fifty, or the husband under twenty-five or over sixty, and also if the husband was residing away from the wife *reipublicae causa*. Legacies and inheritances which could not be taken either in whole or part, owing to these provisions of the *lex Iulia* or *lex Papia Poppaea*, became *caduca* (see BONA CADUCA), the law upon which subject was considerably modified by these statutes.

(*d*) Among other provisions may be noticed the rule giving a preference to candidates for office according to the number of their children; the release of *ingenuae* with three and *libertinae* with four children from tutela; and of *libertini* with a certain number of children from *operarum obligationes* (*Dig.* 38, 1). The exemption of persons from discharging the office of tutor or curator *iure liberorum* was based on these statutes.

After the enactment of the *lex Papia Poppaea*, it became not unusual to obtain a grant of a fictitious *ius liberorum* by special favour from the Senate, and later from the emperor, whereby those who had no children, or not enough, were enabled to escape its disabilities and even enjoy most of its benefits. This privilege is mentioned in some inscriptions, on which the abbreviation I. L. H. (*ius liberorum habens*) sometimes occurs. The emperor Marcus Aurelius enacted that children should be registered by name within thirty days of their birth with the Praefectus Aerarii Saturni.

The penalties of *caelibatus* and *orbitas* were abolished by Constantine and his sons, and little is left of these statutes in the law of Justinian.

IULIA ET TITIA (about B.C. 31), assigning to the *praesides* of provinces the duty of appointing guardians for women and *impaberes* who were not in *patria potestate*, or already provided with one.

PAPIRIA. See PAPIRIA.

SUMPTUARIA. See SUMPTUARIAE LEGES.

THEATRĀLIS, allowing Roman knights, in case either they or their parents had ever had a knight's fortune, to sit in the fourteen rows of seats at the theatre set apart for *equites* by the *lex Roscia theatralis* (Suet. *Aug.* 40).

VICESIMARIA. See VICESIMA.

IUNIA DE PEREGRĪNIS, proposed B.C. 126 by M. Iunius Pennus, a tribune, banished *peregrini* from the city.

A law of C. Fannius, consul, B.C. 122, contained the same provisions respecting the Latini and Italici; and a law of C. Papius, perhaps B.C. 65, contained the same respecting all persons who were not domiciled in Italy.

IUNIA LICINIA. See LICINIA IUNIA.

IUNIA NORBĀNA, of uncertain date, but probably about A.D. 19, enacted that when a Roman citizen had manumitted a slave without the requisite formalities, the manumission should not in all cases be ineffectual, but the manumitted person should have the status of a Latinus. See LATINITAS; LIBERTUS.

IUNIA REPETUNDĀRUM. See REPETUNDAE.

IUNIA VELLĒIA (A.D. 10) allowed a *posthumus* to be instituted *heres*, if he should be born in the life-time of the testator. It also so far modified the old law that a person who, by the death of a

heres institutus, after the testator had made his will, became a *heres quasi agnascendo*, did not break the will if he was instituted *heres*.

LAETORIA. See CURATOR.

Sometimes the law proposed by Volero for electing plebeian magistrates at the Comitia Tributa is cited as a lex Laetoria (Livy, ii. 56, 57).

LICINIA DE SODALICIIS. See AMBITUS.

LICINIA IUNIA or, as it is sometimes called, IUNIA ET LICINIA, passed in the consulship of L. Licinius Murena and Iunius Silanus, B.C. 62, enforced the Caecilia Didia, in connection with which it is sometimes mentioned.

LICINIA MUCIA DE CIVĬBUS REGUNDIS, passed in the consulship of L. Licinius Crassus and Q. Mucius Scaevola, B.C. 95, which enacted a strict examination as to the title to citizenship, and deprived of the exercise of civic rights all those who could not make out a good title to them. This measure partly led to the Marsic War.

LICINIA SUMTUARIA. See SUMPTUARIAE LEGES.

LICINIAE ROGATIŌNES. See ROGATIONES LICINIAE.

LIVIAE were various enactments proposed by the tribune M. Livius Drusus, B.C. 91, for establishing colonies in Italy and Sicily, distributing corn among the poor citizens at a low rate, and admitting the *foederatae civitates* to Roman citizenship. He is also said to have been the mover of a law for adulterating silver by mixing with it an eighth part of brass. Drusus was assassinated, and the Senate declared that all his laws were passed contrary to the auspices, and were therefore not at all.

MAENIA LEX is only mentioned by Cicero, who says that M. Curius compelled the patres *ante auctores fieri*, in the case of the election of a plebeian consul, "which," adds Cicero, "was a great thing to accomplish, as the *lex Maenia* was not yet passed." The law, therefore, required the *patres* to give their consent, at least to the election of a magistrate; or, in other words, to confer, or agree to confer, the *imperium* on the person whom the Comitia should elect. It was probably proposed by the tribune Maenius, B.C. 287.

MAIESTĀTIS. See MAIESTAS.

MANILIA, proposed by the tribune C. Manilius, B.C. 66, was a *privilegium*, by which was conferred on Pompey the command in the war against Mithridates. The law was supported by Cicero when praetor. See POMPEIUS.

The LEGES MANILIĀNAE, mentioned by Cicero, were evidently not leges proper, but probably forms which it was prudent for parties to observe in buying and selling.

MANLIA, also called LICINIA (B.C. 196), created the *triumviri epulones*.

MANLIA DE VICESĬMA. See VICESIMA.

MARCIA, probably about the year B.C. 352, against usury (Gaius, iv. 23).

MARIA, proposed by Marius when tribune, B.C. 119, for narrowing the *pontes* at elections. See PONS.

MENSIA. This law enacted that if a woman who was a Roman citizen (*civis Romana*) married a *peregrinus*, the offspring was a *peregrinus*. If there was *conubium* between the *peregrinus* and the woman, the children, according to the principle of *conubium*, were *peregrini*, as the legal effect of *conubium* was that children followed the condition of their father (*liberi semper patrem sequuntur*). If there were no *conubium*, the children, according to another rule of law, by which they followed the condition of the mother, would have been Roman citizens; and it was the object of the law to prevent this.

MINUCIA (B.C. 46) created the *triumviri mensarii*.

MUNERĀLIS. See CINCIA; IULIAE.

OGULNIA, proposed by the tribunes B.C. 300, increased the number of pontifices to eight and that of the augurs to nine; it also enacted that four of the pontifices and five of the augurs should be taken from the plebeians.

OPPIA (B.C. 215). See SUMPTUARIAE LEGES.

ORCHIA (B.C. 171). See SUMPTUARIAE LEGES.

OVINIA, of uncertain date, was a *plebiscitum*, which gave the censors certain powers in regulating the lists of the senators (*ordo senatorius*); the main object seems to have been to exclude all improper persons from the Senate, and to prevent their admission, if in other respects qualified.

PAPIA DE PEREGRĪNIS. See IUNIA DE PEREGRINIS.

PAPIA POPPAEA. See IULIAE LEGES.

A *lex Papia* on the manner of choosing the Vestal Virgins is mentioned by Gellius; but the reading appears to be doubtful, and perhaps it ought to be called *lex Popilia* (Gell. i. 12).

PAPIRIA or IULIA PAPIRIA DE MULTĀRUM AESTIMATIŌNE (B.C. 430) fixed a money value, as an equivalent for fines, which formerly were paid in sheep and cattle. Gellius and Festus make this valuation part of the Athenian law.

PAPIRIA (B.C. 89), by which the *as* was made *semuncialis*, one of the various enactments which tampered with the coinage.

PAPIRIA (B.C. 332), proposed by the praetor Papirius, gave the Acerrani the *civitas* without the *suffragium*. It was properly a *privilegium*, but is useful as illustrating the history of the extension of the *civitas Romana*.

PAPIRIA (B.C. 303) enacted that no *aedes* should be consecrated without a *plebiscitum* (*iniussu Plebis*).

PAPIRIA PLAUTIA, a *plebiscitum* of the year B.C. 89, enacted that all citizens and inhabitants of *foederatae civitatis* (q. v.) who at the date of the statute were domiciled in Italy should be qualified to obtain Roman citizenship on giving in their names to the *praetor urbanus* within sixty days (Cic. *Pro Archia*, 4, 7).

PAPIRIA POETELIA. See POETELIA.

PAPIRIA TABELLARIA. See TABELLARIAE LEGES.

PEDUCAEA (B.C. 114), a *plebiscitum*, seems to have been merely a *privilegium* relating to Vestal Virgins, and not a general law against incest.

PESULANIA provided that if an animal did any damage, the owner should make it good or give up the animal. There was a general provision to this effect in the Twelve Tables, and it might be inferred from Paulus that this law extended the provisions of the old law to dogs.

PETRĒIA, a law under this title, DE DECIMATIŌNE MILĬTUM, in case of mutiny, is mentioned by Appian. See DECIMATIO.

PETRONIA, probably passed in the reign of Augustus, and subsequently amended by various *senatus consulta*, forbade a master to deliver up

his slave to fight with wild beasts. If, however, the master thought that his slave deserved such a punishment, he might take him before the authorities (*iudex*), who might condemn him to fight if he appeared to deserve it.

PINARIA related to the giving of a *iudex* within a limited time (Gaius, iv. 15).

PLAETORIA. See CURATOR.

PLAUTIA or PLOTIA DE VI. See VIS.

PLAUTIA or PLOTIA IUDICIARIA (B.C. 89) is mentioned by Asconius as having enacted that fifteen persons should be annually taken from each tribe to be placed in the list of *iudices*.

POETELIA (B.C. 358), a *plebiscitum*, and noted as the first law against *ambitus*. See AMBITUS.

POETELIA PAPIRIA (B.C. 326) made an important change in the liabilities of the *nexi*. See NEXUM.

POMPĒIAE. There were various leges so called:

POMPĒIA, proposed by Cn. Pompeius Strabo, the father of Cn. Pompeius Magnus, probably in his consulship (B.C. 89), gave the *ius Latii* or *Latinitas* to all the towns of the Transpadani, and probably the *civitas* to the Cispadani.

POMPĒIA DE AMBĪTU. See AMBITUS.

POMPĒIA DE IURE MAGISTRATUUM forbade a person to be a candidate for public offices (*petitio honorum*) who was not at Rome; but Iulius Caesar was excepted. This was, doubtless, the old law, but it had apparently become obsolete (Suet. *Iul.* 28).

POMPĒIA IUDICIARIA. See IUDEX.

POMPĒIA DE PARRICIDIIS. See CORNELIA DE SICARIIS; PARRICIDIUM.

POMPĒIA TRIBUNICIA (B.C. 70) restored the old *tribunicia potestas*, which Sulla had nearly destroyed. See TRIBUNUS.

POMPĒIA DE VI was a *privilegium*, and only referred to the case of Milo (q. v.).

POPILIA. See PAPIA.

PORCIA DE CAPĪTE CIVIUM or DE PROVOCATIŌNE (B.C. 197) enacted that a Roman citizen should not be scourged or put to death.

PORCIA DE PROVINCIIS (about B.C. 198). The passage in Livy (*Sumptus quos in cultum praetorum*, etc.) is supposed to refer to a Porcian law, to which the *plebiscitum de thermensibus* refers; and the words quoted by Cicero (*Ne quis emat mancipium*) are taken, as it is conjectured, from this Porcian law.

PUBLICIA permitted betting at certain games which required strength, as running and leaping.

PUBLILIA DE SPONSŌRIBUS. See INTERCESSIO.

PUBLILIAE of the dictator Q. Publilius Philo, B.C. 339. See PUBLILIAE LEGES.

PUBLILIAE LEGES of the tribune Q. Volero Publilius, B.C. 472. See PUBLILIAE LEGES.

PUPIA (B.C. 224), mentioned by Cicero, seems to have enacted that the Senate could not meet on days when the Comitia were held.

QUINTIA was a law proposed by T. Quintius Crispinus, consul B.C. 9, and enacted by the *populus* for the preservation of the aqueducts.

REGIA. See REGIA LEX.

REGIAE. See LEX.

REPETUNDĀRUM. See REPETUNDAE.

RHODIA. The Rhodians had a maritime code which was highly esteemed. Some of its provisions were adopted by the Romans, and have thus been incorporated into the maritime law of European states. Strabo speaks of the wise laws of Rhodes and their admirable policy, especially in naval matters; and Cicero to the same effect. The *Digest* contains so much of the *lex Rhodiorum* as relates to *iactus*, or the throwing overboard of goods in order to save the vessel or remainder of the cargo. This *lex Rhodiorum de Iactu* is not a law in the proper sense of the term. See Schryver, *Sur la Loi Rhodia de Iactu* (Brussels, 1884).

ROSCIA THEATRĀLIS, proposed by the tribune L. Roscius Otho (B.C. 67), which gave the *equites* a special place at the public spectacles in fourteen rows or seats (*in quattuordecim gradibus sive ordinibus*) next to the place of the senators, which was in the orchestra. This law also assigned a certain place to spendthrifts (*decoctores*). The phrase, *sedere in quattuordecim ordinibus*, is equivalent to having the proper *census equestris* which was required by the law. There are numerous allusions to this law, which is sometimes simply called the law of Otho, or referred to by his name.

RUBRIA. The province of Gallia Cisalpina ceased to be a province, and became a part of Italia about the year B.C. 49 or 42. When this change took place, it was necessary to provide for the administration of justice, as the usual modes of provincial administration would cease with the determination of the provincial form of government. This was effected by a law, the name of which is unknown, but a large part of it, on a bronze tablet, is preserved in the Museum at Parma. This law arranged the judiciary establishment of the former province, and appointed *duo viri* and *quattuor viri iure dicundo*; a *praefectus Mutinensis* is also mentioned in the law. In two passages of this law a *lex Rubria* is mentioned, which, according to some, is an earlier law, by which Mutina was made a *praefectura*; and, according to others, the *lex Rubria* is this very *lex de Cisalpina*. This subject is discussed by Savigny and by Puchta.

This law has been published several times; the text is lithographed in Ritschl's volume of inscriptions, i. taf. 32.

RUPILIAE LEGES (B.C. 131) were the regulations established by P. Rupilius and ten *legati* for the administration of the province of Sicily after the close of the first Servile War. They were made in pursuance of a *consultum* of the Senate. Cicero speaks of these regulations as a *decretum* of Rupilius, which, he says, they call *lex Rupilia*; but it was not a law proper. The powers given to the commissioners by the *lex Iulia municipalis* were of a similar kind.

SACRĀTAE, mentioned by Livy (ii. 33) and by Cicero (*De Leg.* ii. 7, 18). Leges were properly so called which had for their object to make a thing or person *sacer*. The *consecratio* was, in fact, the sanction by which a law was to be enforced. In the latter case, it was the opinion of the *jurisconsults* that the law did not make *sacrosancti* the persons for whose protection it was designed, but that it made *sacer* (*sacrum sanxit*) any one who injured them; and this interpretation is consistent with the terms of the law. An example of a *lex sacrata* is that making the tribunes of the people sacred (Livy, ii. 8).

A *lex sacrata militaria* is also mentioned by Livy.

SATŬRA. See LEX.

SCANTINIA, proposed by a tribune. The date and contents are not known, but its object was to

suppress unnatural crimes. It existed in the time of Cicero. The *lex Iulia de adulteriis* considered this offence as included in *stuprum*, and it was punishable with a fine; but by the later imperial constitution the punishment was death (Suet. *Domit.* 8).

SCRIBONIA. The date and whole import of this law are not known; but it enacted that a right to *servitutes* should not be acquired by usucapion, from which it appears that the law was once different. See SERVITUS.

SEMPRONIA DE FENŎRE (B.C. 193) was a *plebiscitum* proposed by the tribune M. Sempronius, which enacted that the law (*ius*) about money lent (*pecunia credita*) should be the same for the Socii and Latini (*Socii ac nomen Latinum*) as for Roman citizens. The object of the law was to prevent Romans from lending money in the name of the *Socii*, who were not bound by the *fenebres leges*. The law could obviously only apply within the jurisdiction of Rome.

SEMPRONIAE. Various *leges* proposed by the Gracchi were so named. See AGRARIAE LEGES.

SEMPRONIA DE CAPĬTE CIVIUM, carried by C. Gracchus (B.C. 123), reaffirming the old principle that no judgment involving the life or freedom of a citizen should be valid without the assent of the Roman people (Gell. x. 3).

SERVILIA AGRARIA, proposed by the tribune P. Servilius Rullus in the consulship of Cicero (B.C. 63), was a very extensive agrarian law. It was successfully opposed by Cicero; but it was in substance carried by Caesar (B.C. 59), and is the law called by Cicero *lex Campana*, from the public land called Ager Campanus being assigned under this law.

SERVILIA GLAUCIA DE REPETUNDIS. See REPETUNDAE.

SILIA. The *legis actio* called *condictio* was established by this law in the case when the demand was a determinate sum of money (*certa pecunia*). See ACTIO.

SULPICIAE, proposed by the tribune P. Sulpicius Galba, a supporter of Marius (B.C. 88), enacted the recall of the exiles, the distribution of the new citizens and the *libertini* among the thirty-five tribes, that the command in the Mithridatic War should be taken from Sulla and given to Marius, and that a senator should not contract debt to the amount of more than 2000 *denarii* ($100). The last enactment may have been intended to expel persons from the Senate who should get into debt. All these laws were repealed by Sulla.

SULPICIA SEMPRONIA (B.C. 304). No name is given to this law by Livy, but it was probably proposed by the consuls. It prevented the dedication of a temple or altar without the consent of the Senate or a majority of the tribunes.

SUMTUARIAE. See SUMPTUARIAE LEGES.

TABELLARIAE. See TABELLARIAE LEGES.

TARPEIA ATERNIA. See ATERNIA TARPEIA.

TERENTILIA, proposed by the tribune C. Terentilius (B.C. 462) but not carried, was a *rogatio* which had for its object an amendment of the constitution, though in form it only attempted a limitation of the consular imperium. This rogatio probably led to the subsequent legislation of the Decemviri. See TWELVE TABLES.

TESTAMENTARIAE. Various laws, such as the Cornelia, Falcidia, Furia, and Voconia, regulated testamentary dispositions. See LEGATUM; TESTAMENTUM.

THORIA. The importance of this law requires that it should have a separate notice. See THORIA LEX.

TITIA. Similar in its provisions to the *lex Publicia*.

TITIA DE TUTŌRIBUS. See IULIA ET TITIA; and cf. Gaius, i. 195.

TREBONIA, a *plebiscitum* proposed by L. Trebonius (B.C. 448), which enacted that if the ten tribunes were not chosen before the Comitia were dissolved, those who were elected should not fill up the number (*coöptare*), but that the Comitia should be continued till the ten were elected.

TRIBUNICIA. See TRIBUNUS.

TULLIA DE LEGATIŌNE LIBĔRA. See LEGATUS.

VALERIA HORATIA. See PLEBISCITUM.

VARIA. See MAIESTAS.

VATINIA DE PROVINCIIS (B.C. 59) was the enactment by which Caesar obtained the province of Gallia Cisalpina with Illyricum for five years, to which the Senate added Gallia Transalpina. This *plebiscitum* was proposed by the tribune Vatinius. A *Trebonia lex* subsequently prolonged Caesar's *imperium* for five years.

VATINIA. See REPETUNDAE.

VATINIA DE COLŌNIS, under which the Latina Colonia (cf. LATINITAS) of Novum-Comum in Gallia Cisalpina was planted, B.C. 59.

LEGES DE VI. See VIS.

VICESIMARIA. See VICESIMA.

VILLIA ANNĀLIS. See ANNALES LEGES.

VISELLIA (A.D. 23) made a man liable to a criminal prosecution who, being a Latinus, assumed to exercise the rights of an *ingenuus*.

VOCONIA. See VOCONIA LEX.

Lexiarchi (λῃξίαρχοι). At Athens a board of six members, who, with thirty assistants, saw that only properly qualified persons attended meetings of the ἐκκλησία, and also compelled their attendance by the aid of the police (τοξόται). They also entered young citizens on the list of their deme when they came of age. See ECCLESIA.

Lexicography. See LEXICON.

Lexĭcon (λεξικόν, sc. βιβλίον). A Greek name for a word-book, probably first used in the ninth century A.D. The Latin equivalent *dictionarium* appears about three centuries later. Chinese writers pretend that lexicons have been known in their language for 3000 years. But the conception of a condensed digest of a branch of knowledge, classified and ordered for convenient reference, is traced by authentic records to that source of all ideas which have been fruitful of intellectual growth, the great age of Greece. In Plato's time, the Homeric poems were a text-book for the study of the youth of Athens, and collections of peculiar words and phrases, with explanations, were made for the use of teachers. At first the notes were written in the order of the text, but convenience soon dictated other arrangements, by subjects or by alphabetical sequence. Before B.C. 400 Democritus of Abdera discussed the vocabulary of Homer, and is even said to have compiled an Homeric dictionary. Clearchus of Soli, a pupil of Aristotle, prepared a treatise on the mathematical terms in Plato's *Republic*. Near the end of the fourth century B.C., Philetas of Cos, celebrated as a poet by Theocritus

and Propertius, wrote a famous book, *ἄτακτα* or *γλῶσσαι*, on the meanings of words, especially of poetical and dialectic forms. His successors of the Alexandrian school of grammarians industriously compiled special dictionaries or glossaries, now to particular authors, as Homer, Plato, and the dramatists, now of the language of tragedy or comedy, again of dialectic conceptions, which encroached on the province of good Attic words, and even of the technical terms of particular arts. Thus Zenodotus of Ephesus, about B.C. 280, prepared an elaborate glossary (*γλῶσσαι*) to Homer; Artemidorus of Byzantium soon after made a dictionary of cookery (*γλῶσσαι ὀψαρτυτικαί*); and scores of others collected extensive word-lists of Plato's writings, of tragedy, of comedy, of history, of medicine. Didymus of Alexandria, an indefatigable compiler of the first century B.C., published at least twenty-eight "books" (rolls?) on tragic diction (*περὶ τραγῳδουμένης λέξεως*), a work of similar extent on the language of comedy, seven "books" on words of ambiguous or doubtful meaning, and a treatise on corrupt expressions. Pollux and Athenaeus name twenty-one writers on terms peculiar to cookery. In short, through the many generations of grammatical activity which succeeded the creative period of Greek literature, the interpretation of words assumed ever greater prominence, until Zopyrion and Pamphilus, near the end of the reign of Augustus, attempted to bring together the rich materials thus furnished, in a comprehensive lexicon of the language (95 books, *περὶ γλωσσῶν*). An abridgment of this great work by Diogenianus of Heraclea (A.D. 130?) is said, on doubtful authority, to have been the basis of the dictionary ascribed to Hesychius of Alexandria (A.D. 380?), which is a principal source of information upon the Greek language and literature (best ed. by Moritz Schmidt, 4 vols. 4to, Jena, 1858–64). The important lexicon called that of Suidas, and ascribed to the eleventh century, is a miscellany of lexicographical and literary excerpts and comments made by many hands in successive ages (best editions by Gaisford, 3 vols. fol., Oxford, 1834; by Bernhardy, 4to, Halle, 1834). The first attempt systematically to explain Greek words in Latin was perhaps the glossary of Philoxenus, A.D. 550 (first printed, fol., Paris, 1573, included in Valpy's ed. of Stephens' *Thesaurus*, London, 1816), but for 800 years afterwards the Greek language was almost forgotten in Catholic Europe.

Upon the revival of learning an earnest demand for such helps was felt, and old vocabularies and glossaries were eagerly copied and enlarged. In 1483 the first Greek-Latin vocabulary was printed, that of John Crastenus. It passed through several editions, growing in size. In 1497 appeared a much more important work from the press of Aldus, Venice (*Dictionarium Graecum Copiosissimum cum Interp. Lat.*), and was rapidly followed by similar lexicons in the names of Julius Pollux, Budaeus, Münster, Gillius, Gessner, Grynaeus, Dasypodius, Constantine, and others. Each of these copied most of his work from his latest predecessor, but often with important, though irregular additions. Thus the dictionary of Budaeus (first published at Paris, 1529; reprinted at Basle, 1530; reëdited and much enlarged by Robert Stephens, Paris, 1548) was copious and exact in explaining legal and forensic terms. Montanus, in 1539, gave to scholars the first Latin-Greek vocabulary, for use in writing Greek. Robert Constantine's lexicon (Geneva, 1562: a marked improvement on earlier ones in accuracy) was especially valuable in illustrations of Thucydides. But in 1572 Henry Stephens published his *Thesaurus Linguae Graecae* (5 vols. fol., Paris), containing more than 100,000 Greek words, with references to authorities; a work of surpassing industry and scholarship, which remained unrivalled for nearly 250 years. It was reproduced in magnificent form, and with additions, by Valpy (London, 1816 foll.), and again by Hase and Dindorf (Paris, 1836 foll.). The Greek manuals of Scapula (Paris, 1579), Hederich (2 vols. 8vo, Leipzig, 1766), and others, in common use until the early years of this century, were hardly more than extracts of the great *Thesaurus*. Several special lexicons, however, such as those of Portus to Herodotus (Frankfort, 1603; reprinted London, 1825) and to Pindar (1606), of Scber to Homer (1604), of Damm to Homer and Pindar (1765–1774), of Ernesti for the technical terms of rhetoric (1795), of Reiske to Theocritus (1765), of Sturz to Xenophon (1801–4), of Schweighäuser to Herodotus (1824), and of Wyttenbach to Plutarch (Oxford, 1843), collected the results of more accurate criticism in parts of the field. The first general lexicon which exhibited a marked improvement upon Stephens in method, and the first which defined Greek words in a modern language, was the critical Greek-German lexicon of Schneider (2 vols. 8vo, 1797–98). It passed through three editions, besides abridgments, and was then reconstructed with admirable skill by Passow (1819–23). The latest revision of Passow's *Handwörterbuch*, by Rost and five well-equipped associates (3 vols. 4to, 1841–1857), is still the standard of Greek exegesis in Germany, though the rival works of Pape (1842–1845; 3d ed. by Sengebusch, 1880), of Jacobitz and Seiler (1839–46), and of Suhle and Schneidewin (Leipzig, 1875), have peculiar merits and strong eulogists. Students whose mother-tongue was English had no trustworthy general dictionary of Greek until 1848, when Liddell and Scott published at Oxford their Greek-English lexicon, drawn mainly from Passow; which was improved and enlarged, first by Drisler (N. Y. 1850), and later by the original editors, aided by several American scholars, so that it now renders the student for most purposes independent of the *Thesaurus* and of special lexicons to the Greek classics (7th ed. London and New York, 1883). Of such special lexicons, the most complete and accurate are Ast's dictionary to Plato (3 vols. Leipzig, 1835–38), Bétant's to Thucydides (2 vols. 1843–49), the index of Bonitz to Aristotle (Berlin, 1870), the Lexicon Sophocleum of Ellendt (best ed. Berlin, 1872), Bindseil's Concordantia to Pindar (1875), the Lexicon Aeschyleum of Dindorf (1876), the Lexicon Theocriteum (1879), the Lexicon Pindaricum (1883) of Rumpel, and, above all, the Lexicon Homericum of Capelle and several associates (1874–83).

The lexicography of the Greek Testament and of ecclesiastical writers has long formed a distinct and very extensive branch of the science, important epochs in which have been marked by Pasor's *Lexicon Graec.-Lat.* in *Novum Testamentum* (1636; best ed. by Fischer, Leipzig, 1767); Suicer's *Thesaurus Ecclesiasticus* (Amsterdam, 1682; often reprinted and abridged); Wahl's *Clavis Novi Testamenti* (1819; translated by Robinson, New York, 1825; best ed. Leipzig, 1853); Schirlitz, *Griech.-deutsches Wörter-*

buch zum N. T. (1851–58); Robinson's *Lexicon of the New Testament* (New York, 1836; rewritten, New York, 1850); Cremer's *Biblisches-theologisches Wörterb.* (3d and best ed. Gotha, 1881–82); Grimm's *Lexicon zum Neuen Testament* (Leipzig, 1862–68; best ed. 1879); translated and much improved by Thayer (New York, 1887). The Glossary of later and Byzantine Greek, by Sophocles (Cambridge, 1860), enlarged into a Greek lexicon of the Roman and Byzantine periods (Boston, 1870), is the standard in its department. By far the most complete and useful English-Greek lexicon is that by Yonge (London, 1849; best ed. New York, 1870).

The beginnings of Latin lexicography are ascribed to Verrius Flaccus, whom Augustus made the tutor of his grandsons. His great work, *De Significatu Verborum*, is supposed to have been abridged, some generations later, by Pompeius Festus, under the same title; and extensive fragments of the abridgment, besides unintelligent excerpts from it by Paulus Diaconus of the eighth century, are still preserved (best ed. by C. O. Müller, Leipzig, 1839; reprinted 1880). There are also curious remnants of verbal exegesis in the fragments of Nonius Marcellus (about A.D. 300; best eds. by Mercier, Leipzig, 1825; by Quicherat, Paris, 1871) and of Isidore (A.D. 600; best ed. by Arevalo, 7 vols. Rome, 1797–1803). Glossaries and vocabularies were common in the ages before printing; but were compiled as needed, copied, abridged, corrected, and enlarged, according to the knowledge or ignorance of each new compiler, or the special need to be met. None of them were regarded as literary works, to be studied and preserved, in deference to the author's authority, or in respect to his fame. Many of these remain in old libraries. One of the best, a glossary of the ninth century, in the national library at Paris, has been admirably edited, with a commentary containing the substance of twelve others, by Professor G. F. Hildebrand (Göttingen, 1854). A learned description of the works of this class, which were still unedited, was given by G. Löwe, in his *Prodromus Glossariorum Latinorum* (Leipzig, 1876), and much light was thrown by him upon their origin and value. His project for a collection of the extant glossaries has been carried on with energy since his death, under the auspices of the Royal Literary Society of Saxony, by George Goetz, who has published four volumes (*Corpus Glossariorum Latinorum*, II., III., IV., V., 1886–94) of the nine which are necessary to complete it. These vocabularies explained rare and obscure words, ambiguous terms, forms of doubtful authority, or of dialectic or foreign origin; and it was but slowly that the conception was formed of a complete vocabulary of the language. About A.D. 1063, Papias, the Lombard, finished his *Elementarium Doctrinae Erudimentum* (printed, Venice, 1491), intended for an encyclopaedia of instruction, a large part of which was devoted to defining words. A century later the monk Osborn of Gloucester followed with the *Panorama*, an attempt at an etymological dictionary (published in Mai's *Classicorum Auctorum*, tom. viii. Rome, 1836). About A.D. 1200, Hugutio, Bishop of Ferrara, wrote a *Liber Derivationum*. On the works of Papias and Hugutio was founded the famous *Catholicon*, by Balbi of Genoa (Joannes Januensis), finished A.D. 1286, and published at Mayence in 1460, containing, besides a manual of grammar, rhetoric, and criticism, a copious lexicon, especially of ecclesiastical Latin. Johann Reuchlin enlarged this in his *Vocabularius Breviloquus* (Basle, 1475), which passed through twenty-three editions, the last in 1504. The *Cornucopiae* of Nicholas Perotti, though in form a commentary on Martial, is lexicographical in substance, and has an alphabetic index (1482 and often). In 1502 appeared at Reggio, in Italy, the *Dictionarium* of Ambrosius Calepinus, the first attempt to represent the classical language as a whole, with illustrative citations from the literature. Its fame grew rapidly. For many years labourers in this department of learning accepted it as a standard, and sought only to supply its omissions. Twenty editions were published within a generation, and "Calepinus" became the common name for a lexicon. In 1539 Jacobus Montanus added to the definitions the Greek equivalents. In 1546 a Calepinus Pentaglottus was issued at Venice; in 1581 a Calepinus Septem Linguarum at Leyden; and successive editors added new languages, until the Calepinus of 1603 was a parallel lexicon of eleven. Meanwhile, in 1531, Robert Stephens, *princeps lexicographorum*, gave to the world his *Thesaurus Linguae Latinae;* but used it as the basis of a far more comprehensive and accurate work under the same title, which he completed in 1548. This long remained the unrivalled storehouse of the language, and every important dictionary of classical Latin was substantially a reprint (3 vols. Venice, 1551; 4 vols. Leyden, 1573), or an abridgment of it. From the first edition was compiled the *Promptuarium* of Trebellius (Basle, 1545); from the second, the extensive *Thesaurus Linguae Latinae* of Caelius Secundus (Basle, 1561), the useful *Thesaurus* of Faber Soranus (Leipzig, 1571; 2d ed. 1587; abridged, Leipzig, 1594, and Heidelberg, 1608), the *Lexicon Criticum* of Pareus (Nuremberg, 1645), and many more. The most important original work of this period in lexicography was the *Glossarium ad Scriptores Mediae et Infimae Latinitatis* of Du-Cange (Paris, 1678), which has been several times reprinted (ed. by Hendschel, 7 vols. Paris, 1840–1850; ed. by Favre, 10 vols. Niort, 1883–88; a good abridgment by Migne, Paris, 1866; and very important supplements by Diefenbach, Frankfurt, 1857 and 1867). (See DuCange.) An association of Cambridge scholars reëdited the great *Thesaurus*, at the end of its second century of preëminence, with large additions (4 vols. London, 1734–35). Antony Birrius recovered the collections Henry Stephens had made for a new edition of his father's work, and surpassed the English reprint in the accuracy of his reproduction (4 vols. Basle, 1740–43). Finally, J. M. Gessner, after preparing an enlarged edition of Faber (Leipzig, 1726), spent twelve years in revising the *Thesaurus* of Stephens, correcting and completing its classical citations, while excluding much ecclesiastical and semi-barbarous material (4 vols. Leipzig, 1749). But in Italy, Calepinus retained the primacy, undergoing many revisions and enlargements before that of Sartori (Padua, 1708), which brought its imperfections to the notice of two of the most eminent Latinists of the day, then at the University of Padua. With the supervision and aid of Facciolati, his pupil Forcellini devoted three years to its correction and extension (*Septem linguarum Calepinus, hoc est Lexicon Latinum, variarum linguarum interpretatione adiecta*, Pavia, 1718), and his important edition was eleven times reprinted. The last appearances of this lexi-

con, which held its place in the schools for nine generations, were at Venice, 1778, and at Pavia, 1779. But Forcellini's labours on Calepinus taught him the need of a more perfect dictionary, and he undertook to construct it mainly from the original texts. For forty years, with some interruptions from church-work, he toiled, with rare intelligence and persistence; and at his death, in 1768, left complete in manuscript the greatest contribution to this department of science ever achieved by a single hand (*Totius Latinitatis Lexicon*, 2 vols. fol. Padua, 1771). It has been several times reprinted (4 vols. Padua, 1805, etc.), sometimes with uncritical additions (ed. Bailey, London, 1827; ed. Schumann, Schneeberg, 1835), sometimes with diligence and literary skill (ed. Furnaletti, 4 vols. 4to, Padua, 1827–33; ed. De Vit, 5 vols. fol. Prato, 1858–75); but none of these editions has conformed the citations to the improved critical texts of the classical authors. The latest (ed. Corradini, Padua, 1864, completed to the word STELLIO, 1894) is by far the best in this respect, though still defective in etymology and arrangement. Scheller's Latin-German Lexicon (Leipzig, 1783) was at first an abridgment of Forcellini's, but was rapidly improved by the compiler in successive editions (3d ed. 5 vols. Leipzig, 1804). His condensed hand-lexicon (Leipzig, 1792) was reëdited many times by Lünemann, aided in the seventh edition (Leipzig, 1831) by Georges, who issued the eighth edition (Leipzig, 1837) alone, and then reconstructed the work, under his own name, in the *Ausführliches Handwörterbuch der lateinischen Sprache*, whose seventh edition (Leipzig, 1879–80) is the reliance and the delight of all who study Latin through German, though it omits, in most cases, specific local references to texts. Klotz's *Handwörterbuch der lateinischen Sprache* (2 vols. Brunswick, 1853–57) is distinguished for fulness of illustration in many articles, especially under the earliest letters of the alphabet; but it was hastily finished, and is defective in uniformity and in typographical accuracy. Freund's *Handwörterbuch* (4 vols. Leipzig, 1834), also founded on Forcellini, introduced a principle, the historical arrangement of meanings in each article, which has since been fruitful in all departments of lexicography. A revised translation by Andrews (New York, 1850), substantially reprinted as Dr. Smith's Latin Dictionary (London, 1853), was for many years the standard in the United States and Great Britain. An enlarged translation into French by Theil (2 vols. Paris, 1866) is valuable for its full notices of terms of natural history. The same work was revised and enlarged by Riddle and White (London, 1870), and entirely reconstructed by Lewis and Short (Harper's Latin Dictionary, New York, 1879). The best English-Latin dictionary is that of Smith and Hall (London, 1870; New York, 1871); the most complete and critical work in which a modern language is explained in Latin is the *Deutsches-latein. Wörterbuch* of Georges (6th ed. 2 vols. Leipzig, 1870). In recent years German scholars have shown new zeal in constructing complete word-books (concordances) to Latin classics. Merguet's *Lexicon zu den Reden des Cicero* (4 vols. 4to, Jena, 1877–84) has been followed by the full dictionaries to Caesar of Merguet (Jena, 1884–1886), Menge and Preuss (Leipzig, 1884–90), and Meusel (Berlin, 1884–93); by that of Preuss to the pseudo-Caesarian books of Hirtius and others (Erlangen, 1884); while complete verbal indexes to the fragments of Plautus, the works of Sallust, and those of several minor poets have been added to recent editions of the texts. A complete lexicon to the philosophical writings of Cicero by Merguet (Jena, vols. i. ii. 1887–93, vol. iii. in the press), one by Gerber and Greef to Tacitus (fasciculi i. to xi. Leipzig, 1887–93), and one on an enormous scale to Livy by Fügner (fasciculi i. to vi. Leipzig, 1889–94) are slowly appearing. The principles and methods of constructing a complete thesaurus of the language have been actively discussed in Germany for two generations. In 1857 the king of Bavaria offered to contribute 10,000 gulden if the completion of such a work could be insured; Carl Halm of Munich, with Ritschl and Fleckeisen, undertook to organize an association of scholars, and Bücheler was selected as editor-in-chief; but political and military troubles smothered the scheme. The critical restoration of many texts, the reform of orthography, the multiplication of special lexicons, and the great advances made in philology and in the study of inscriptions have since vastly increased and improved the materials available for a *Thesaurus*. In 1884 E. Wölfflin announced his *Archiv für lateinische Lexicographie und Grammatik . . . als Vorarbeit zu einem Thesaurus Linguae Latinae*, and under the patronage of the Bavarian Academy of Sciences began its publication in quarterly numbers, containing collections, notices, reviews, and model articles, as contributions to the most complete digest of a great language ever planned. With the aid of many competent scholars, this periodical has been continued through eight years, and has done much to awaken interest in the subject. The last number for 1893 contained a plan, *zur Begründung eines Thesaurus Linguae Latinae*, in twelve volumes of 1000 large quarto pages each, under the auspices of the five great academies of science in Berlin, Göttingen, Leipzig, Munich, and Vienna, to be finished in twenty years, at an estimated cost of 605,000 marks (about $150,000). The five academies have sanctioned the plan, with Messrs. Bücheler, Wölfflin, and Leo as editorial directors, and there is reasonable hope of its success.

(1843 foll.); Mahn, *Darstellung der Lexicographie nach allen ihren Seiten* (Rudolstadt, 1817); Hübner, *Grundriss zu Vorlesungen über die latein. Grammatik* (2d ed. Berlin, 1880), and *Grundriss zu Vorlesungen über Gr. Syntax* (Berlin, 1883); *Lexicographie der griechischen und lateinischen Sprache*, by Drs. G. Autenrieth and F. Heerdegen (in Iwan Müller's *Handbuch*, Nördlingen, 1885); Pökel, *Philolog. Schriftsteller-lexicon* (1882); Ebert, *Allgemeine Gesch. der Literatur des Mittelalters im Abendlande*, 2 vols. (Leipzig, 1884, 1880); De Vit, *Preface to the Lexicon of Forcellini* (Prato, 1879); Wölfflin, *Archiv für latein. Lexicographie* (Leipzig, 1884–93); "Greek Lexicography," by J. E. B. Mayor, in the *Journal of Philology*, vols. vi., vii. (Cambridge, 1876–77); "Notes on Latin Lexicography," by H. Nettleship, *Journal of Philology*, vol. xii. (Cambridge, 1883).

Lex Metalli Vipascensis. A summary of rules for the management of a mine, of which a fragment was found in 1876, at Aljustrel in the south of Portugal. It is engraved on bronze, and has been published by Hübner in the *Ephem. Epigraph.* iii. 165. See Soromenho, *La Table de Bronze d'Aljustrel* (Lisbon, 1877); Flack, *La Table d'Aljus-*

trel (Paris, 1880); and Wilmanns in the *Zeitschrift für Bergrecht* (1877).

Lexis (λῆξις). See DIKÉ.

Lexovii or Lexobii. A people in Gallia Lugdunensis, on the ocean, west of the mouth of the Sequana. Their capital was Noviomagus (Lisieux).

Lex Tappŭla. See VALENTINUS; VALERIUS.

Libanius (Λιβάνιος). A Greek rhetorician of Antioch in Syria, born A.D. 314. His education was begun in his native city and completed at Athens, where he became a public teacher at the early age of twenty-five. Called from Athens to Constantinople in 340, he met with extraordinary success; at the same time he excited the envy of his rivals, whose slanders led to his expulsion in 345. After being actively engaged for five years as a public teacher in Nicomedia in Bithynia, he was recalled to Constantinople, where he was again remarkably popular, but found himself compelled by the continued persecutions of his detractors to leave the capital once more in 353. He withdrew to his native city of Antioch, where he was for many years actively employed in the exercise of his profession and in promoting the interests of his fellow-citizens; but even here he was much persecuted by his opponents. Apart from bodily sufferings caused by his being struck by a flash of lightning, his old age was saddened by the decline of learning and the fall of paganism, which he had foreseen would follow the lamented death of his admirer and patron, Julian. He died about A.D. 393, honoured and admired by his pupils, among whom were included Christians such as Basil the Great and Iohannes Chrysostomus.

Libanius gives us information about his own life and work in a series of letters and in a speech "on his own fortune," written in his sixtieth year, but completed at a later date. There remains sixty-seven of his speeches, the majority of which refer to the events of his time; also fifty declamations; a considerable series of rhetorical exercises of various kinds, among them narratives, sketches of character and descriptions of works of art (some of them important in connection with the history of ancient art), and also arguments to the speeches of Demosthenes. There are, further, about 2000 letters addressed to friends, pupils, rhetoricians, scholars, statesmen, etc., which give us a vivid picture of his times. A fourth part of them, however, only exist in a Latin translation, and some of them are of doubtful genuineness. His style, which is formed on the best Attic models, is pure and has a certain elegance, although it is not always free from the affected and unnatural mannerism of his age.

The most complete edition of the orations and declamations is that of Reiske, 4 vols. (1791–97); of the letters, that of Wolf (1738). The life of Libanius has been written by Petri (Paris, 1866), and in German by Sievers (Berlin, 1868).

Libănus (Λίβανος). A range of mountains on the confines of Syria and Palestine, dividing Phoenicé from Coelé-Syria. Its highest summits are covered with perpetual snow, and its sides were in ancient times clothed with forests of cedars. It is considerably lower than the opposite range of Anti-Libanus. In the Scriptures the word Lebanon is used for both ranges and for either of them; but in classical authors the names Libanus and Anti-Libanus are distinctive terms, being applied to the west and east ranges respectively (Ptol. v. 15).

Libatio. See SACRIFICIUM.

Libella. (1) The diminutive of *libra*, the Roman pound, and used of the sum in silver, which expresses the value of the pound of copper. (See As.) It was, as a monetary term, originally equal to one-tenth of a denarius and later one-tenth of a sestertius. It was never coined, however, but was a mere "money of account," like the guinea in England to-day. The half of a libella was called *sembella* (Varr. v. 174). (2) (διαβήτης, σταφυλή). A carpenter's level (*libella fabrilis*). It is represented in the illustration under the article CIRCINUS (p. 350), in the left-hand lower corner, where it is partly inverted.

Libellus (in form the dim. of *liber*). (1) A small book, i. e. roll, usually a book of verse (cf. Birt, *Das antike Buchwesen*, p. 22 [Berlin, 1882]). (2) A memorial of any kind, whether an accusation or petition. (3) A pasquinade, lampoon, or satirical skit (whence our word "libel"), intended to ridicule or defame (*libellus famosus*). Such were severely punished by the Twelve Tables, and later they were often publicly burned (Dio Cass. lvi. 27); but they were always numerous at Rome, especially in times of political excitement. (See Rein, *Das Criminalrecht der Römer*, pp. 378 foll., 531.) (4) See ORATIONES PRINCIPUM. (5) A notice of appeal (*libellus appellatorius*; cf. *Dig.* 40, 1). (6) A hand-bill or programme of the gladiatorial games (*libellus gladiatorius* or *munerarius*). (7) A hand-bill or public notice of any sort posted up in the most frequented parts of the city (Cic. *Pro Quint.* 6, 15, 9; Sen. *De Benef.* iv. 12; Plaut. *Rud.* v. 2, 7).

Liber. The Italian god of wine, afterwards identified with the Greek Dionysus (q. v.). A feminine deity, Libera, was worshipped with him. See DIONYSIA; LIBERALIA.

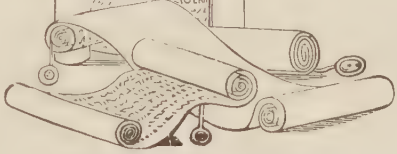
Liber. A free man. See CIVIS; DIMINUTIO CAPITIS; LIBERTUS; SERVUS.

Liber (βίβλος, βιβλίον). A book; but among the Greeks and Romans, until a very late period, to be understood as referring to a roll. The modern book shape was used for the *codex* (τεῦχος) only, as explained in the article CODEX. The Latin name *liber* meant originally the bark, rind, or bust of a tree, which was early used for writing material, as afterwards for the manufacture of paper (*charta*). (For an account of the writing materials used in ancient times, see PALAEOGRAPHY.) The same meaning is found in the Greek term βίβλος, properly "rind" or "bark" (βύβλος). For the preparation of papyrus of which the pages of books were made, see PAPYRUS. The pages (σελίδες, *paginae*) having been prepared, they were pasted together (*conglutinatae*) to form a long roll; but sometimes the pages were written first and pasted into a roll afterwards, for which purpose some people kept *glutinatores* (Cic. *Ad Att.* iv. 4). The writing was in columns, so that the lines of writing were parallel to the sides of the roll: on each page there was a column, and there was a blank space between each column. Down to the time of Caesar, however, it was the custom to write official documents *transversa charta*; that is to say, across the whole breadth of the roll, so that the lines of writing were at right angles to the sides of the roll. This explains the passage in Suet.

Iul. 56. The shape and appearance of Greek and Roman books will be understood from the following illustration.

Liber.

The roll was sometimes of considerable length. The Scholiasts, indeed, speak of Thucydides and Homer as being written each in one long roll. The roll of Thucydides is estimated at about 578 pages, nearly 100 yards—surely an incredible length; and a Homer roll, 120 yards in length, is said to have been in existence at Constantinople. But this was not the usual system, and the roll rarely exceeded 100 pages (cf. Mart. viii. 44), and was usually much smaller. It was customary to divide a long work (*opus* or *corpus*) into several books (*libri*), each *liber* being in one roll (*volumen;* in Greek, τομός or κύλινδρος). Greek writers sometimes called these *libri* or divisions of a work βίβλια, sometimes λόγοι, and in the later Empire συγγράμματα. Thus, in contrast to the huge roll of Homer, said to have been at Constantinople, we have the papyrus of the twenty-fourth book of the *Iliad* from Elephantiné, so that the complete *Iliad* would have been in twenty-four rolls or volumes. The pages were numbered, or at any rate the total number was usually put on the *titulus:* even the total number of verses, or of lines in a prose work, were sometimes written on it. The price of the book was in part estimated by this number (*C. I. L.* iii. p. 831).



The writing was usually only on one side of the paper. The other side in old books was utilized for school-boys' exercises (Mart. iv. 86); or as scribbling paper (Mart. viii. 62). Both sides were, however, sometimes used for the original work, and the books were then called *opisthographi* (Pliny, *Epist.* iii. 5). Sometimes the writing was sponged out (as in a parchment palimpsest) and the paper used over again.

The roll was protected against worms by being smeared with cedar oil, which gave the paper a yellow tinge (Ovid, *Trist.* iii. 1, 13; Mart. iii. 2; Hor. *A. P.* 331); then the last leaf was pasted on to a thin piece of wood called the *umbilicus* or ὄμφαλος (the *umbilicus* is found also made of tightly-folded paper). Hence the last page is called *eschatocollion* (Mart. ii. 6); and the expression *ad umbilicum adducere* means to finish (*ad cornua*, Mart. xx. 107). The edges (*frons*) of the roll were carefully cut, and also smoothed with pumice-stone (Ovid, *Trist.* iii. 1, 13; Mart. i. 67; viii. 72). As a further decoration, the ends (*cornua*) of the *umbilicus* were sometimes gilded as far as they projected (Mart. viii. 61). The edges themselves (*frons*) were also coloured. A strip of parchment on which the title or subject of the book, and sometimes its number of pages or even lines, was written, was pasted on to the roll. This strip was called *titulus* or *index* (σίττυβοι or σίττυβαι). This *titulus* or index was often painted a bright colour. Finally, a cover for the roll (*membrana*, διφθέρα) was made of parchment coloured red or yellow. If one work was in several *libri*, they were tied in a bundle (*fasces*, *fasciculus*, Gell. ix. 4, or δέσμη). The only other addition to be noticed is that occasionally the portrait of the author was placed on the first page of the book (Sen. *De Tranq. An.* 9; Mart. xiv. 186).

In reading, the roll (*liber* or *volumen*) was held in both hands and unrolled with one, while the other rolled it up. The unrolling was called *evolvere*, *revolvere*, or *volvere;* going right through was called *explicare;* rolling up again, *convolvere*, *replicare*, or *complicare*. In rolling it up tightly, it was convenient to do so by holding the *umbilicus* with both hands while the first page was pressed under the chin. This is the meaning of *quae trita duro non inhorruit mento* (Mart. i. 66; cf. x. 93). The apparatus of a book is given completely by Martial (iii. 2):

> "Cedro nunc licet ambules perunctus
> Et frontis gemino decens honore
> Pictis luxurieris umbilicis;
> Et te purpura delicata velet
> Et cocco rubeat superbus index."

The multiplication of books at Rome began after the conquest and pacification of Italy; but booksellers' shops were not known until the end of the Republic. The earliest mention of such shops is in Cicero (*Ad Q. Fr.* iii. 4) and Philo (ii. 9, 21); but they were then still uncommon, and we find Atticus selling books, for the copying of which he had a large number of slaves (Cic. *Ad Att.* ii. 4). Booksellers were called *librarii* and also *bibliopolae*, and in Greek βιβλιοκάπηλοι. Horace gives us the name of the Sosii Brothers (*Epist.* i. 20, 2). Martial names several, and specifies Argiletum as the booksellers' quarter (i. 3, 117); there were also the Vicus Sandaliarius and the Sigillaria. There were booksellers, too, in the provincial towns—e. g. at Lugdunum (Pliny, *Epist.* ix. 11) and at Brundisium (Gell. ix. 4). As to the price, we have no very clear information; but it would seem that a book was not necessarily, as regards the cost of production, very expensive, though it might, from special circumstances, command a large price. Gellius (ii. 3) speaks of the second book of the *Aeneid* being bought for *viginti aurei* = nearly $90; but it was an antiquarian curiosity, as being reputed Vergil's own copy; and as a literary tradition, possibly untrue, it was said that Aristotle gave three talents for an autograph MS. of Spensippus, and Plato nearly two for three books of Philolaüs (Gell. iii. 17). Such instances merely show that bibliophiles lived

Libri. (From paintings at Pompeii.)

then as now, and price was regulated by fashion and rarity. Trustworthy copies of Ennius, for instance, were so rare in the time of Gellius that one of undoubted authority was hired for a large sum to decide a dispute as to a reading (Gell. xvii. 5). That, on the other hand, the real cost of production was not great, may be seen from the fact that Statius (*Silv.* iv. 9, 9) speaks of a book in a neat purple cover costing about ten cents. The first book of Martial, in the shop of Atrectus, cost five *denarii* (Mart. i. 117); but even that was dear, for the bookseller Tryphon could sell it at a profit for two (Mart. xiii. 3). The author's profit could be made (1) by selling his original copy to a bookseller (Sen. *De Ben.* vii. 6; Suet. *Gram.* 8), (2) by sell-

ing copies made by his own slaves; but in the absence of all legal protection, the gains so to be made were very small, and the author who sought profit from his writing depended mainly on the liberality of rich patrons.

How early or to what extent booksellers existed at Athens is a matter of dispute. It is not unreasonable to deduce, from the mention of *βιβλιογράφοι* in Cratinus (Poll. vii. 211), that they existed as early as B.C. 430. This name, for which *βιβλιοπώλης* was afterwards used, would imply that the first booksellers were copyists who both copied and sold books. We have a book-market (*τὰ βιβλία*) at Athens in the time of Eupolis (Poll. ix. 47); and the same may be inferred from the mention of the book-collector Eudemus in Xenophon (*Mem.* iv. 2).

BIBLIOGRAPHY.—The standard work on ancient books is Birt's *Das antike Buchwesen* (Berlin, 1882); and the following are also valuable: Buchsenschutz, *Besitz und Erwerb im griechischen Alterthum* (Leipzig, 1879); Géraud, *Les Livres dans l'Antiquité* (Paris, 1840); Louisy, *Le Livre* (Paris, 1886); Wehle, *Das Buch* (Leipzig, 1879); Blümner, *Technologie*, 4 vols. (Leipzig, 1875–87); and Thompson, *Hand-book of Greek and Latin Palaeography* (London, 1893). For an account of the book-trade and literary property in antiquity, see the introduction to Clement's *Étude sur le Droit des Auteurs* (Grenoble, 1867); Haenny, *Schriftsteller und Buchhändler im alten Rom* (Leipzig, 1885); Romberg, *Études sur la Propriété Artistique et Littéraire* (Brussels, 1892); Schmitz, *Schriftsteller und Buchhändler in Athen* (Heidelberg, 1876); and the interesting but inaccurate work by Putnam, *Authors and their Public in Ancient Times* (New York, 1894).

Līber. The Italian Bacchus. See DIONYSUS.

Lĭbĕra. The wife of the Italian wine-god Liber, identified with the Greek Persephoné.

Liberāles Artes. The origin of the liberal arts is to be sought in the school education of the Greeks. As early as the time of Solon, the distinction between *γυμναστική*, the training of the body, and *μουσική*, the training of the soul, is to be met with. Out of *μουσική* was gradually developed the body of studies which embraced as its chief content the so-called liberal arts. By the time of Aristotle (B.C. 384–322) the educational doctrine of the Greeks reached its highest development, and his references to the liberal arts may be taken as exhibiting this doctrine in a representative and authoritative manner. He defines the liberal arts (*Politics*, viii. 1) as the proper studies for freemen who seek intellectual and moral excellence in general rather than what is immediately practical as the end of their education, thus drawing a distinction between liberal and technical education, and perhaps foreshadowing in his identification of liberal with general culture the contrast between a general and a specialized training.

No exclusive list of seven or any other definite number of arts is to be found in any Greek writer, nor any reference to seven as the proper number of the liberal arts. However, it is plain that grammar was the inevitable first study in the list, and that it was followed by instruction in rhetoric and dialectics (logic). After these came the study of one or more of the following subjects: Arithmetic, geometry, music, astronomy. Yet besides these seven, which long afterwards came to be known as the seven liberal arts, we find mention of medicine as a liberal art and of architecture as a liberal art, while philosophy, which was the goal and completion of all the arts, is sometimes styled the liberal art *par excellence* (Aristot. *Met.* i. 2).

By the time of Varro (B.C. 116–27) and Cicero (B.C. 106–43), the liberal arts of the Greeks had become the recognized ground-work for the education of the Roman *liber homo*, or gentleman, and were commonly known as *artes liberales*, *studia liberalia*, *liberales disciplinae*, or *liberales scientiae*—terms which are not always identical in meaning, but which were used loosely to indicate the school studies of the Greeks. Of these expressions, *artes liberales* is the chief. The repository of information for the Romans regarding the Greek studies was Varro's monumental work, now lost, entitled *Libri Novem Disciplinarum*. According to Ritschl (*Opusc.* iii. 371), Varro's nine "disciplines" were grammar, dialectics, rhetoric, geometry, arithmetic, astrology, music, medicine, and architecture. Astrology, of course, answers to astronomy, and Varro's list accordingly embraces medicine and architecture in addition to the seven arts previously enumerated.

Passing on to the time of the early Empire, the course of the liberal arts may be traced with considerable clearness in the writings of the younger Seneca (B.C. 4–A.D. 65) and Quintilian (A.D. 35–95), and in Philo Judaeus. By this time the liberal arts had become closely coördinated as a body of school instruction known as *ἐγκύκλιος παιδεία*, or "encyclical education;" and although we have no evidence that their number was then consciously limited to seven, it is quite possible that Alexandrian influences were beginning to operate towards such a limitation.

With the promulgation of Christianity the history of the liberal arts entered on a new phase. In the Western Church particularly there was a strong spirit of antagonism at the first, which gradually passed into qualified tolerance, and finally changed to active encouragement of the liberal arts on the ground that they ministered to higher spiritual truth. This transition is to be clearly seen in the writings of Augustine (A.D. 354–430), and it is also interesting to notice that although Varro is Augustine's great authority in all matters pertaining to the history of the liberal arts, he does not adhere to Varro's number of "disciplines." Instead of Varro's nine, we find that Augustine's enumeration embraces only seven and yet without expressly limiting the arts to that number. In the famous treatise of Martianus Capella of Carthage, written before A.D. 439 and entitled *De Nuptiis Philologiae et Mercurii*, we find for the first time an express limitation of the arts to seven, though without attaching any significance to that number. The book of Martianus was a popularized account of Varro's nine disciplines, and from this list of nine Martianus explicitly excludes medicine and architecture on the ground that they were not liberal but utilitarian studies (Eyssenhardt's edition, pp. 332, 336). No mention of the number of the arts is to be found in Boethius (A.D. 480–525), although the name *quadrivium* for the four later studies of arithmetic, geometry, music, and astronomy appears in his writings, and it is possible that the word *trivium* as the name for the three earlier studies—grammar, rhetoric, and dialectics—dates back to his time. Cassiodor(i)us (A.D. 480–575), in

his work *De Artibus ac Disciplinis Liberalium Litterarum*, not only follows Martianus in limiting the arts to seven, but finds a mystical hint of their excellence in the text, "Wisdom hath builded her house; she hath hewn out her seven pillars" (Prov. ix. 1). The liberal arts thus became the seven supports of *Sapientia*, the higher spiritual philosophy. Isidore of Seville (died A.D. 636) copies after Cassiodor(i)us and expressly recognizes the arts as seven. Alcuin (A.D. 735–804), in the preface to his *Grammatica*, presses the interpretation of the text suggested by Cassiodor(i)us and finds the liberal arts in the Scriptures as a matter of direct interpretation. Alcuin's pupil, Rabanus Maurus, in his book *De Clericorum Institutione* (iii. 27), written in the year 819, after a full description of each of the seven arts, calls them *septem artes liberales*, apparently the first instance in history of the use of this term. The *septem artes liberales* are thus the ancient *artes liberales* Christianized, and to the end of the Middle Ages they remained the substance of school instruction, not being disturbed until the Renaissance.

Grammar, rhetoric, and dialectics, which composed the *trivium*, were also named "arts" as distinguished from the four "disciplines" which made up the *quadrivium*. The term *artes sermocinales*, or the arts pertaining to expression, is another name for the *trivium*, and *artes reales*, or the substantial sciences, another name for the *quadrivium*. Still another name for the *quadrivium* is "mathematics." Moreover, inasmuch as the seven arts culminated in the higher study of philosophy, it is clear that the ancient and mediæval world not only entertained the distinction between literary studies, on the one side, and sciences, on the other, as well as the notion that both find their goal and completion in philosophical studies, but that in so doing they likewise laid down the lines upon which European university education was to be subsequently modelled.

Liberalia. A festival celebrated annually in honour of Liber, the Italian Bacchus, and not to be confounded with the Greek Dionysia. It took place on the 17th of March. It was on this day that boys who assumed the *toga virilis* (see TOGA) marched in procession to the Capitol, where they made an offering of cakes (*liba*). See Varr. *L. L.* vi. 4; Marquardt, *Staatsverwaltung*, iii. 363; and the article DIONYSUS.

Liberalĭtas. See AMBITUS.

Liberōrum Ius. See LEX IULIA ET PAPIA POPPAEA, p. 943.

Libertas. Among the Romans the personification of Liberty; she had a temple on the Aventine. Her name was also given to the Atrium Libertatis, a place of public business which served, among other purposes, as an office of the censors. After it had been burned down under Augustus, it was rebuilt by Asinius Pollio, and the first public library in Rome was established within its walls. On coins Libertas is represented as a beautiful and richly adorned matron. At the end of the Republic, after the assassination of Caesar, she appears with a dagger and a cap of Liberty, or laurel wreath.

Libertīnus. See LIBERTUS.

Libertus (*ἀπελεύθερος*). A freedman. I. GREEK. The Greeks had no special legal form for the process of emancipating slaves, and consequently no legal differences in the status of freedmen. At Athens they took the position of resident aliens (*μέτοικοι*), and lay under certain obligations to their liberators as patrons. They could be called to legal account for any injury done to their patrons, and if condemned could be given back to them as slaves, or sold by the State. In the latter case the price was paid to their liberators. Occasionally the State set free a slave or a body of slaves who had rendered an important public service, as in the case of those who fought in the battle of Arginusae and at Chaeronea (Aristoph. *Ran.* 33, 192, 693; Dio Chrys. xv. 21). In such cases the owners of the slaves received compensation. The Greek inscriptions record the emancipation of more female than male slaves.

II. ROMAN. As a class, freedmen were called by the Romans *libertini*, but in relation to their former masters *liberti* (i. e. *liberati*). Slaves were emancipated either formally or informally. There were four kinds of formal emancipation: (1) By the *manumissio vindicta*, according to which the owner brought the slave before the praetor or some other competent official. In his presence a free citizen (usually an officer of the court) laid a staff (*vindicta*) on the slave's head and declared him free. The master, who was holding the slave by the hand, thereupon released him as symbolizing his assent (*manu misit*). (2) The *manumissio censu*, when the master formally caused the slave's name to be enrolled in the official list of citizens. (3) The *manumissio testamento*, where the master either bequeathed his freedom to the slave by will, or stipulated that the heir to the estate should free him. (4) In later times, a form called *manumissio in ecclesia* was introduced by the emperor Constantine. Here the owner emancipated the slave in the presence of the congregation.

Informal manumission was emancipation brought about by a verbal statement of the master in the presence of friends (*manumissio inter amicos*), or by letter (*per epistulam*), or by an invitation to the slave to dinner (*in convivio*).

After formal emancipation freedmen at once became Roman citizens and members of the city tribes and of the lowest classes in the *centuriae*, with full right of voting; but, not being free born, they were not eligible to office, and were excluded from military service. The latter was, however, the case only till the first century B.C. They obtained the right to be enrolled in the country tribes several times in the republican period, but not permanently till the imperial age. Their descendants, however, were, as being free-born (*ingenui*), admitted into all the tribes, and in the second, or at least in the third generation, eligible to office. Informal emancipation conferred only practical freedom without civic rights. It was not until A.D. 17, under Tiberius, that freedmen of this kind won the *commercium*, or the right of acquiring and transferring property. Even then they had no power of testamentary bequest, and their property, at their death, went to their liberators. It was permissible, however, to pronounce a formal emancipation after their death.

To obviate abuses, and to check the excessive increase in the number of freedmen, the right of manumission was limited in several directions under Augustus. Among other things, if a slave under thirty years of age was to be manumitted *vin-*

dicta, a proof of sufficient reason was required; and, in case of testamentary manumission, the number was limited to a certain proportion of the whole number of slaves, and never allowed to exceed one hundred.

A mutual obligation continued to exist between the freedman and his liberator, based on the fact that the freedman belonged to the family of his patron. This is seen in the circumstance that the freedman assumed the *nomen* and the *praenomen* of his patron. In and after the first century B.C. we generally find a Greek *cognomen* added. A well-known freedman of Lucius Cornelius Sulla, for instance, was called Lucius Cornelius Epicadus. The *patronus* was bound on his side to care for his *libertus*, and in consequence either retained him altogether in his home and service, or supplied him with a farm and capital to start it; buried him in the family tomb after his death, and took charge of his children if not grown up. On the other side the freedman was bound to support his *patronus*, in case of need, out of his own resources, and if he was reduced to poverty to maintain him. If the freedman died childless, the patron inherited his property; but the rights of the patron in respect to his freedman did not pass to his patron's heirs. If a freedman neglected his duty towards his patron, he was liable to severe punishment, and in some cases might be sold for his patron's benefit, or re-enslaved to him.

The manumission of slaves was a source of much profit to the State, as a tax of five per cent. on the value of the slave was paid into the treasury after his liberation.

On the status of freedmen who were not full Roman citizens, see DEDITICII and LATINITAS. See also the articles MANUMISSIO; SERVUS.

Liberty Cap. See PILLEUS.

Libēthra (*τὰ Λείβηθρα* or *Λίβηθρα*). (1) A city of Macedonia, situated, according to Pausanias (ix. 30), on the declivity of Olympus, and not far from the tomb of Orpheus. An oracle declared that when the sun beheld the bones of the poet the city should be destroyed by a boar (*ὑπὸ συός*). The inhabitants of Libethra ridiculed the prophecy as a thing impossible; but the column of Orpheus's monument having been accidentally broken, a gap was made by which light broke in upon the tomb, when the same night the torrent named Sus, being prodigiously swollen, rushed down with violence from Mount Olympus upon Libethra, overthrowing the walls and all the public and private edifices, and every living creature in its furious course. Whether Libethra recovered from the devastation occasioned by this inundation is not stated in any writer, but its name occurs in Livy as a town in the vicinity of Dium before the battle of Pydna (xliv. 5). It would seem that the name of Libethrius was given to the summit of Olympus, which stood above the town, and probably transferred thence to the Boeotian Mountains, afterwards styled Libethrius Mons (Pausan. ix. 34). Hence the muses were surnamed Libethrides as well as Pierides (Verg. *Ecl.* vii. 21). (2) A fountain of Thessaly on Mount Homolé, in the district of Magnesia, at the northern extremity (Mela, ii. 3).

Libethrĭdes (*Λειβηθρίδες*). See LIBETHRA.

Libethrius Mons. See LIBETHRA.

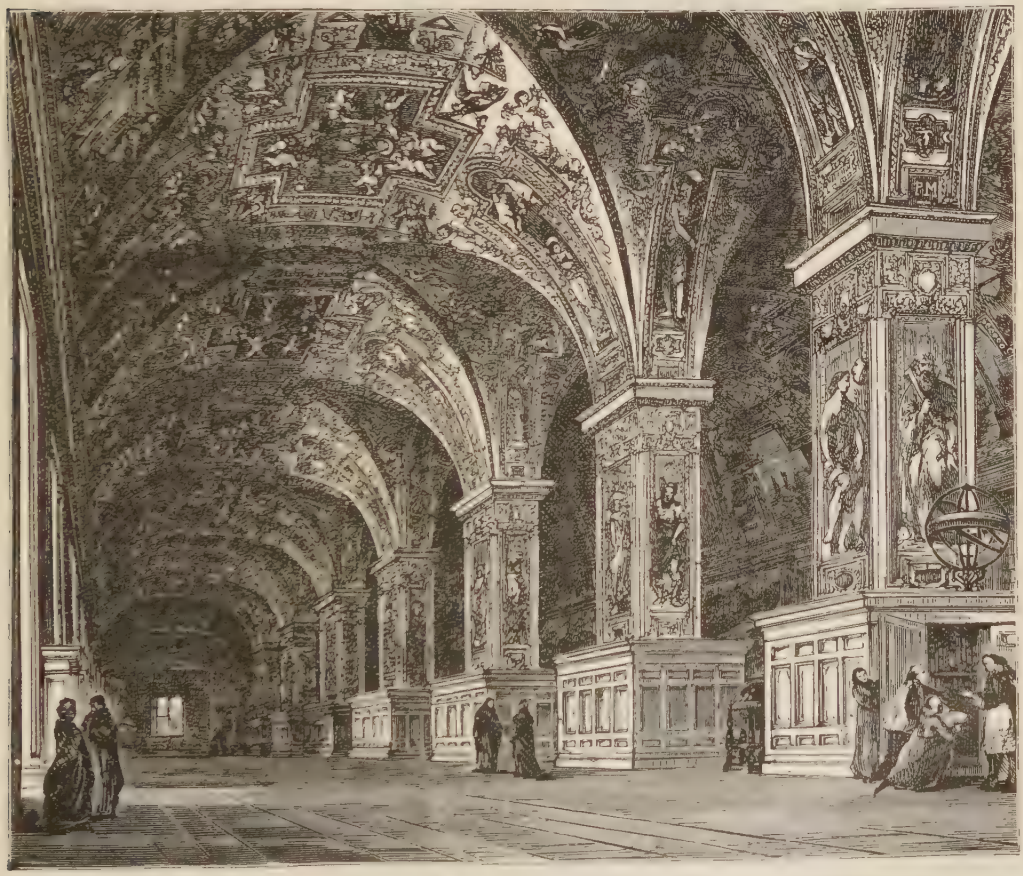
Libēthrum. The same as LIBETHRA (q. v.).

Libitīna. An ancient Italian goddess of voluptuous delight and of gardens, vineyards, and vintages, originally connected with Venus, and therefore often called Venus Libitina. She was also regarded as the goddess of death and of the departed, and was therefore afterwards identified with Proserpina. By an ancient ordinance, ascribed originally to Servius Tullius, for every person who died in Rome a piece of money was deposited in her temple. Everything requisite for burials was kept there, and had to be bought or borrowed from it. Hence a person undertaking the burial of a person (an undertaker) was called *libitinarius*, and his business *libitina;* whence the expression *libitina funeribus non sufficiebat*—i. e. they could not all be buried. Owing to the connection of Libitina with the dead, the Roman poets frequently employ her name in the sense of death itself.

Libitinarii. See FUNUS, p. 698; LIBITINA.

Libo, SCRIBONIUS, a plebeian family. (1) LUCIUS, tribune of the plebs, B.C. 149, accused Ser. Sulpicius Galba on account of the outrages which he had committed against the Lusitanians. (See GALBA [1]). It was perhaps this Libo who consecrated the *Puteal Scribonianum* or *Puteal Libonis*, of which we so frequently read in ancient writers (Hor. *Sat.* ii. 6, 35). (See PUTEAL.) (2) LUCIUS, the father-in-law of Sex. Pompey, the son of Pompey the Great. On the breaking out of the Civil War in B.C. 49, he naturally sided with Pompey, and was intrusted with the command of Etruria. Shortly afterwards he accompanied Pompey to Greece, and was actively engaged in the war that ensued. On the death of Bibulus (B.C. 48) he had the chief command of the Pompeian fleet. In the Civil Wars which followed Caesar's death, he followed the fortunes of his son-in-law Sex. Pompey. In B.C. 40 Octavianus married his sister Scribonia, and this marriage was followed by a peace between the triumvirs and Pompey (39). When the war was renewed in 36, Libo for a time continued with Pompey, but, seeing his cause hopeless, he deserted him in the following year. In 34 he was consul with M. Antonius.

Libon (*Λίβων*). An architect of Elis, who built the temple of Olympian Zeus, in the sacred grove Altis, out of the proceeds of the spoil taken from the Pisaeans and some other people (Pausan. v. 10, 3). This temple was built in the Doric style, and it must have been erected about B.C. 444–440. See OLYMPIA.



Libra. The Roman unit of weight, nearly equal to twelve ounces avoirdupois. The libra of copper was also the unit of value, and was called *as*. See AS; PONDERA.

Libra (*σταθμός*). (1) A balance or pair of scales, whose principal parts were (*a*) the beam, *iugum*, *ζυγόν*; (*b*) the scales, *lances*, *τάλαντα*. When the beam had a tongue working in an "eye" (*agina*), the tongue was called *examen* and *ligula*. This sort of balance was called TRUTĬNA (*τρυτάνη*). A steelyard was called STATĒRA. (2) A constellation (*Ζυγός*) placed in the Zodiac at the equinox when days and nights are equally balanced. (3) An instrument for ascertaining the level of the water in an aqueduct (Vitruv. viii. 5, 1).

Libra. (Millin, *Peint. de Vases Ant.*)

Libraries. (1) For ancient libraries see BIBLIOTHECA. (2) For the benefit of the student is given the following list of the great libraries that contain important collections of Greek and Latin MSS. or of early editions of the classic authors: (*a*) ITALY. The *Vatican Library* at Rome, founded by Pope Nicholas V. (1447–1455), the most magnificent collection in the world, though not the largest. Here are the majority of the MSS. from the convent at Bobbio, in the Middle Ages one of the richest collections in Europe. Here are also 3000 MSS. brought to the Vatican from Heidelberg in 1623. In 1655 the greater part of the library of Duke Federigo of Urbino was purchased by Pope Alexander VII. The collection of Queen Christina of Sweden added 1900 MSS. The last great addition was in 1856, when Pope Pius IX. added 40,000 volumes that had belonged to Cardinal Mai. In 1894, the whole number of MSS. of all kinds in the Vatican Library was more than 26,000, of which some 19,000 are Latin, 4000 Greek, and 2000 Oriental. The printed books number about 220,000. No complete catalogue has yet been made.—The *Laurentian Library* at Florence, founded in 1444 by Cosimo de Medici, contains some 10,000 Greek and Latin MSS., among them early codices of Vergil (fourth or fifth century), Tacitus, Cicero's letters *ad familiares*, the Pandects, and Aeschylus. It has however, only 4000 printed volumes.—The *Ambrosian Library* at Milan, founded in 1609 by the Cardinal Archbishop Federigo Borromeo, has 8000 MSS., among them some valuable palimpsests, and 170,000 printed books.—The *Marcian Library* or *Library of St. Mark* in Venice was founded in 1362, and established as a library by Cardinal Bessarion in the following century. Its Greek MSS. are very valuable, especially those of Aristophanes, Sophocles, Euripides, and Homer. (See HOMERUS.)—The *Biblioteca Nazionale* at Naples, opened as late as 1804 in conjunction with the remarkable *Museo*

Vatican Library

Nazionale, has over 4000 MSS. and 200,000 printed volumes, all catalogued. Among the former are codices of Lycophron, Quintus Smyrnaeus, the half-burned MS. of Festus, a Charisius, etc.—The *Biblioteca Casanatense* at Rome has lately been united with the *Biblioteca Vittorio Emanuelo*, which contains the great collections made by the Jesuits of the old Collegio Romano. The united library contains upwards of 6000 MSS. and 500,000 printed volumes.

(*b*) FRANCE. France possesses the largest library in the world in the great *Bibliothèque Nationale* at Paris, founded by Charles V. (d. 1380). It contains nearly 100,000 MSS. and over 3,000,000 printed volumes, not systematically catalogued. The library is arranged in four departments—(1) Books and Maps; (2) Manuscripts; (3) Engravings; (4) Medals and Antiques. The collection illustrative of Latin Palaeography is wonderfully complete; and among the MSS. are famous ones of Sophocles, Euripides, Theocritus, Herodotus, Xenophon (the best), Plato, Demosthenes, Lucian, Catullus, Cicero, Ovid, Caesar, Sallust (the best), Livy, etc.—Many of the provincial libraries in France have valuable MSS., which have been catalogued at the expense of the French government (1849 foll.).

(*c*) GERMANY AND AUSTRIA. The *Royal Library* at Berlin, founded by the Elector Frederick William in 1661, has over 15,000 MSS. and nearly 1,000,000 volumes.—The largest library in Germany is the *Royal Library* at Munich, founded by Duke Albrecht V. of Bavaria (1550–1579). It is particularly rich in first editions of the classics derived from the monasteries, and has 30,000 MSS. and over 1,000,000 printed volumes. Among the MSS. are important ones of Demosthenes (A), Ovid, and Sallust. The *University Library* at Munich has some 1800 MSS. and 250,000 volumes.—The *Royal Library* at Dresden, founded by the Elector Augustus (d. 1586), has 4000 MSS. and 475,000 printed volumes, besides a very remarkable collection of dissertations, numbering fully 400,000. It has also a set of incunabula, 2000 in number.—The *Royal Public Library* at Stuttgart, founded in 1765, has 3800 MSS. and nearly 500,000 volumes.—The *Ducal Library* of Gotha, dating from the seventeenth century, has more than 6000 MSS., many of which are of great value (see CODEX), and 250,000 volumes.—Most of the German universities have admirable collections of classical material, especially *Heidelberg* (400,000 volumes and many famous MSS.) and *Strassburg*, which, though founded as late as 1871, has over 500,000 volumes and some good codices.—The *Imperial Library* at Vienna, founded by the emperor Frederick III. (or by his son Maximilian) about 1440, has 20,000 MSS., among them the only codex containing the Fifth Decade of Livy's history. There are also 6800 incunabula, and 400,000 other volumes.—There are many monastic libraries in Austria with MSS. of importance, besides large collections of incunabula. Those at Salzburg, Kremsmünster, and Lembach are the best.

(*d*) BELGIUM AND HOLLAND. Brussels has in the *Bibliothèque Royale* one of the finest libraries of Europe, with 30,000 MSS. and 400,000 volumes. There are several famous *codices Bruxellenses*. The *University Library* at Ghent (1600 MSS., 275,000 volumes) and that at Liège (1550 MSS., 160,000 volumes) are also important.—In Holland the *Royal Library* at the Hague (4000 MSS., 250,000 volumes), the *University Library* at Leyden (founded by William I. of Orange, 1575; 5600 MSS., 350,000 volumes), and the *University Library* at Amsterdam have codices of great importance to classical scholars.

(*e*) DENMARK. The *Royal Library* at Copenhagen, founded in the sixteenth century by Christian III., has many important classical MSS. (*codices Haunienses*) and 500,000 volumes.

(*f*) ENGLAND. The library of the *British Museum* in London, founded by Sir Hans Sloane in 1753, is one of the largest in the world, and in point of system and accessibility the most admirable. It contains more than 1,500,000 printed volumes, and upwards of 50,000 MSS. of all kinds—Greek, Latin, Oriental, and Mediaeval. Most important among the classical MSS. are two codices of Homer, one containing the *Iliad* and one the *Odyssey* (*codices Townleiani*), both among the earliest in existence.—At Oxford is the *Bodleian Library*, founded by Sir Thomas Bodley in 1602. It contains nearly 500,000 printed volumes and 30,000 MSS., many of them Oriental. Its collection of *editiones principes* of Greek and Latin authors is one of the finest in Europe.—The *University Library* at Cambridge was established in the early part of the fifteenth century. It has nearly 6000 MSS. and a number of printed books with MS. notes, among them being some by Bentley (q. v.). Its printed volumes number about 250,000.—The library of Trinity College at the same university is also unusually rich in Greek and Latin MSS. and early editions.

(*g*) UNITED STATES. The American libraries that are richest in classical works are those of *Harvard University* (400,000 volumes) and *Yale University* (more than 200,000 volumes). In the library of *Columbia College* (200,000 volumes) the early and rare printed editions of Greek and Latin authors are well represented.

See Petzholdt, *Bibliotheca Bibliographica* (Leipzig, 1866); Madan, *Books in Manuscript* (London, 1893); Montfaucon, *Bibliothèque des Bibliothèques des Manuscrits* (Paris, 1739); and Reinach, *Manuel de Philologie Classique*, i. pp. 23, 24 (Paris, 1883).

Librarius. The Latin name for (1) a copyist of books (Hor. *A. P.* 354); and (2) for a bookseller. See LIBER.

Librātor. (1) An expert in the construction of sewers, aqueducts, etc., called so from the hydrostatic balance (*libra aquaria*) used by him (Pliny, *Epist.* x. 70; Frontin. *De Aquaed.* 105). (2) A soldier who worked the *tormentum* (q. v.).

Libri Lintei. See article in the Appendix.

Librĭpens. See COEMPTIO.

Libui. A Gallic tribe in Gallia Cispadana, to whom the towns of Brixia and Verona formerly belonged, from which they were expelled by the Cenomani (Livy, xxi. 38).

Libum. A sort of cake made of flour, milk, eggs, oil, and sometimes honey, used as an offering to the gods, or as a birthday present (Cato, *R. R.* 75; Mart. x. 24).

Liburna and **Liburnĭca** (λιβυρνίς). A kind of light war-vessel, with two banks of oars and of little draught, carrying a mast amidships. Its shape was long and narrow, pointed at both ends, with a heavy ram. The pattern was taken by the Romans from the Liburnians, a piratical tribe on the Dalmatic coast. They are described in Aul. Gell. xvii. 3. See LIBURNIA; NAVIS.

Liburnia (Λιβουρνία). A district of Illyricum, along the coast of the Adriatic Sea, separated from Istria by the river Arsia, and from Dalmatia by the river Titius. Its inhabitants, the Liburni, supported themselves chiefly by commerce and navigation. They were celebrated at a very early period as bold and skilful sailors. Their ships were remarkable for their swift sailing; and hence vessels built after the same model were called *Liburnicae* or *Liburnae naves*. It was to light vessels of this description that Augustus was mainly indebted for his victory over Antony's fleet at the battle of Actium. (See ACTIUM.) The Liburnians were the first Illyrian people who submitted to the Romans. See ILLYRICUM.

Liburnĭdes. Islands off the coast of Liburnia, said to amount to the number of forty.

Liburnus. A chain of mountains near Apulia, crossed by Hannibal in his march from Samnium and the Peligni into Apulia. It is stated that, before he arrived in the latter province, he crossed this chain; which probably answers to the branch of the Apennines bordering on the valley of the Tifernus to the north, and known by the name of Monte della Serra (Polyb. iii. 101).

Libya (Λιβύη). The Greek name for (1) the continent of Africa in general (see AFRICA); and (2) for a district of Northern Africa (Λιβύης νομός), between Egypt and Marmarica, once an Egyptian nomos. It also bore the Roman name of Libya Exterior. See D'Avezac, *Afrique* (Paris, 1883).

Libўcum Maré. That part of the Mediterranean which lies along the coast of Libya, extending eastward as far as the island of Crete (Mela, i. 4).

Libyphoenīces (Λιβυφοίνικες). The inhabitants of the cities founded by the Phœnicians on the coast of the Carthaginian territory, and so called from their being a mixed race of the Libyan natives with the Phœnician settlers. See CARTHAGO.

Libyssa (Λίβυσσα). A small village of Bithynia, west of Nicomedia, and near the shores of the Sinus Astacenus. It is rendered memorable for containing the tomb of Hannibal, whence, no doubt, its name (Pliny, *H. N.* v. 148).

Licātes. A people of Vindelicia, on the eastern bank of the Licus, in the modern Oberdonaukreis, to the northeast of Füssen (Pliny, iii. 20).

Lichădes. See LICHAS.

Līchas (Λίχας or Λείχας). An attendant of Heracles, who brought his master the poisoned garment of Nessus, and was hurled by him into the sea. The Lichades (Λιχάδες)—three small islands between Euboea and Locris—were believed to have derived their name from him. See HERACLES, p. 792.

Licinia Gens. A Roman house to which belonged the distinguished families of Crassus, Lucullus, and Murena.

Licinia Lex. See LEX.

Licinian Rogations. See ROGATIONES LICINIAE; LICINIUS (1).

Licinius. (1) C. LICINIUS CALVUS, surnamed STOLO, a name said to be derived from the care with which he dug up the shoots (*stolones*) from the roots of his vines. He brought the contest between the patricians and plebeians to a happy termination, and thus became the founder of Rome's greatness. He was tribune of the people from B.C. 376 to 367, and was faithfully supported in his exertions by his colleague, L. Sextius. The laws which he proposed were: (*a*) That in future no more consular tribunes should be appointed, but that consuls should be elected, one of whom should always be a plebeian. (*b*) That no one should possess more than 500 *iugera* of the public land, or keep upon it more than 100 head of large, and 500 of small cattle. (*c*) A law regulating the affairs between debtor and creditor. (*d*) That the Sibylline Books should be intrusted to a college of ten men (*decemviri*), half of whom should be plebeians. These rogations were passed after a vehement opposition on the part of the patricians, and L. Sextius was the first plebeian who obtained the consulship, 366. Licinius himself was elected twice to the consulship, 364 and 361. Some years later he was accused by M. Popilius Laenas of having transgressed his own law respecting the amount of public land which a person might possess. He was condemned and sentenced to pay a heavy fine (Livy, vi. 35; vii. 1, 9, 16; Val. Max. viii. 6, 3). (2) C. LICINIUS MACER, an annalist and orator, who was impeached of extortion by Cicero, and, finding that the verdict was against him, committed suicide, B.C. 66. (3) C. LICINIUS MACER CALVUS, son of the last, a distinguished orator and poet, was born B.C. 82, and died about 47 or 46, in his thirty-fifth or thirty-sixth year. His most celebrated oration was delivered against Vatinius, who was defended by Cicero, when he was only twenty-seven years of age. His elegies were very warmly extolled by Catullus, Propertius, and Ovid. All his works are lost. He was very short of stature, so that Catullus calls him (53) *Salaputium disertum*, "the eloquent Tom Thumb." (Cf. Quint. x. 1, 115.) (4) A Roman emperor, ruling A.D. 307–324. He was a Dacian peasant by birth, and was raised to the rank of Augustus by the emperor Galerius. He afterwards had the dominion of the East. He carried on war first with Maximinus II., whom he defeated A.D. 314, and subsequently with Constantine, by whom he was in his turn defeated, 315. A second war broke out between Licinius and Constantine in 323, in which Licinius was not only defeated, but deprived of his throne. In the following year he was put to death by Constantine, 324. See CONSTANTINUS.

Licĭnus. (1) A Gaul by birth, who was taken prisoner in war, and became a slave of Iulius Caesar, whose confidence he gained so much as to be made his *dispensator* or steward. Caesar gave him his freedom. He also won the favour of Augustus, who appointed him, in B.C. 15, governor of his native country, Gaul. By the plunder of Gaul and by other means, he acquired enormous wealth, and hence his name is frequently coupled with that of Crassus. He lived to see the reign of Tiberius. (2) CLODIUS, a Roman annalist, who lived about the beginning of the first century B.C., wrote the history of Rome from its capture by the Gauls to his own time. This Clodius is frequently confounded with Q. Claudius Quadrigarius (q. v.).

Lictor (ῥαβδοῦχος, ῥαβδοφόρος). An attendant who bore the *fasces* (q. v.) before such Roman magistrates as had a right to these insignia. The king had twelve; the officiating consul, twelve (see CONSUL); the dictator, twenty-four (Polyb. iii. 87). The *magister equitum* had six; the praetor at Rome,

two; the provincial praetor, six; proconsuls outside of Rome, twelve; the quaestor, five. They were generally freedmen, and formed in Rome a corps consisting of three *decuriae* under ten presidents. From these *decuriae*, the first of which was exclusively reserved for the consuls, the magistrates in office drew their lictors, while the provincial office-bearers nominated their own for their term of power. There was besides another decuria of thirty *lictores curiati* to attend on the public sacrifices, to summon the Comitia Curiata, and, when these meetings became little more than formal, to represent in them the thirty *curiae;* from this *decuria* probably were also chosen the lictors of the *flamen dialis* and of the Vestals. It was the duty of the lictors to accompany the magistrate continually, whenever he appeared in public. On these occasions they marched before him in single file, last in order and immediately preceding him being the *lictor proximus*, also called *lictor primus*, who was superior in rank. All passers-by, with the exception of matrons and Vestals, were warned by the lictors to stand aside and make due obeisance. The space required for official purposes was kept clear by them. Sentences of punishment were also executed by them. Their dress corresponded to that of the magistrate; inside the city the toga; outside, and in a triumph, the red military cloak (*sagulum*). See Mommsen, *Staatsrecht*, i. 374 foll.; and the articles ACCENSUS; VIATOR.

Lictors.

Licymnĭus (Λικύμνιος). (1) A son of Electryon and the Phrygian slave Midea, and consequently half-brother of Alcmené. He was married to Perimedé, by whom he became the father of Oeonus, Argeus, and Melas. He was a friend of Heracles, whose son Tlepolemus slew him, according to some unintentionally, and according to others in a fit of anger. (2) Of Chios, a distinguished dithyrambic poet, of uncertain date. Some writers place him before Simonides; but it is perhaps more likely that he belonged to the later Athenian dithyrambic school about the end of the fourth century B.C. (3) Of Sicily, a rhetorician, the pupil of Gorgias, and the teacher of Polus.

Lidé (Λίδη). A mountain of Caria, above Pedasus.

Ligarius, QUINTUS. A Roman who fought on the side of the Pompeian party in Africa, and was defended by Cicero before Caesar in a speech still extant, and which secured a pardon from the dictator. Ligarius joined the conspirators who assassinated Caesar in B.C. 44, and perished in the proscription by the triumvirs in 43.

Liger or **Ligĕris**. The modern Loire; a large river in Gaul, rising in Mount Cevenna, flowing through the territories of the Arverni, Aedui, and Carnutes, and falling into the ocean between the territories of the Namnetes and Pictones (Caes. *B. G.* vii. 5).

Light-armed Troops. See EXERCITUS; LEGIO.

Light-houses. See PHAROS.

Lighting. See CANDELABRUM; DOMUS; FAX; LAMPAS; LANTERNA; LUCERNA.

Ligo (δίκελλα, μάκελλα). A hoe made with either one or two prongs, and with a long handle, used in weeding, etc. (Colum. x. 89).

Ligŭla. (1) A Roman liquid measure containing one fourth of the *cyathus* (q. v.). The word is also used generically, like our "spoonful," of a small quantity. (2) A spoon larger than the *cochlear* (q. v.), and like our dessert-spoon. (3) The leather tongue of a shoe, also written LINGŬLA (Poll. ii. 109).

Ligŭres. The inhabitants of Liguria. See LIGURIA.

Liguria (ἡ Λιγυστικὴ and Λιγυστίνη). A district of Italy, bounded on the west by the river Varus and the Maritime Alps, which separated it from Transalpine Gaul; on the southeast by the river Macra, which separated it from Etruria; on the north by the river Po, and on the south by the Maré Ligusticum. The Maritime Alps and the Apennines run through the greater part of the country. The inhabitants were called by the Greeks Ligyes (Λίγυες) and Ligystini (Λιγυστῖνοι), and by the Romans LIGŬRES (sing. *Ligus*, more rarely *Ligur*). They were in early times widely spread, and inhabited the coasts of Gaul and Italy from the mouth of the Rhone to Pisae in Etruria. They were divided by the Romans into Ligures Transalpini and Cisalpini. The names of the principal tribes were: On the west side of the Alps, the Salyes or Salluvii, Oxybii, and Deciates; on the east side of the Alps, the Intemelii, Ingauni, and Apuani near the coast, the Vagienni, Salassi, and Taurini on the upper course of the Po, and the Laevi and Marisci north of the Po. The Ligurians were small of stature, but strong, active, and brave. In early times they served as mercenaries in the armies of the Carthaginians, and they were not subdued by the Romans till after a long and fierce struggle. Their chief city was Genua. The ethnic affinities of the Ligurians are uncertain; but they are regarded as having been a non-Aryan people, like the Iberians. See Bormann, *Ligustica* (3 pts. 1864–68).

Ligustĭcum Maré. See LIGUSTICUS SINUS.

Ligustĭcus Sinus. A gulf forming the upper part of the Maré Tyrrhenum. It is now the Gulf of Genoa (Flor. iii. 6). It was also called Ligusticum Maré (Colum. viii. 2).

Ligўes (Λίγυες). (1) A people of Asia, mentioned by Herodotus (vii. 72). The historian informs us that the Ligyes, Mariandyni, and Cappadocians, forming part of the army of Xerxes, were under the same commander. (2) See LIGURIA.

Lilaea (Λίλαια). An ancient town in Phocis, near the sources of the river Cephissus.

Lilybaeum (Λιλύβαιον). The modern Marsala; a town in the west of Sicily, with an excellent harbour, situated on a promontory of the same name, opposite to the Promontorium Hermaeum or Mercurii (Cape Bon) in Africa, the space between the two being the shortest distance between Sicily and Africa. The town was founded by the Car-

thaginians about B.C. 397, and was the strongest fortress possessed by them in Sicily, having massive walls surrounded by a huge moat forty feet in depth and some sixty feet wide. It was besieged by the Romans in the First Punic War, but they failed to take it, and it was only given up to them later as a part of the concessions made in the final treaty of peace.

Lima (*ῥίνη*). A file, practically identical with our own (Pliny, *H. N.* ix. 109).

Limaea, Limia, or **Limius.** Now the Lima; a river in Spain between the Durius (Douro) and the Minius (Minho), flowing into the Atlantic Ocean. It was also called Flumen Oblivionis or "River of Forgetfulness," from the legend that the Turduli and Kelts once lost their leader at this river and forgot the object of their expedition (Pliny, *H. N.* iv. 115; Sil. Ital. i. 235, xvi. 476; Plut. *Quaest. Rom.* 34).

Remains of a Roman Arch at Lincoln.

Limbus (*παρυφή*). The border of a tunic or a scarf, chiefly in a woman's dress. Various patterns were used in weaving of the limbus, which was usually of a piece with the garment itself. See Serv. *ad* Verg. *Aen.* ii. 676.

Limen. See IANUA.

Limes Germanĭcus. A part of the gigantic scheme of defence established by the Romans, and extending from the mouth of the Rhine to the mouth of the Danube. The *limes Germanicus* was the part which especially protected the Agri Decumates (q. v.). See Bury's *Student's Roman Empire*, pp. 403–405 (1893); and the article LIMITES ROMANI; RHAETIA.

Limes Rhaetĭcus. See RHAETIA.

Limĭtes Romāni. The name of a continuous series of fortifications, consisting of castles, walls, earthen ramparts, and the like, which the Romans erected to protect their possessions along the Rhine and the Danube from the attacks of the Germans. Its whole length was 350 miles, between Cologne and Ratisbon. Part of it was a huge stone wall, of which extensive portions still remain. See RHAETIA.

Limnae (*Λίμναι*). (1) A town in Messenia, on the frontiers of Laconia, with a temple of Artemis Limnatis. (2) See SPARTA.

Limnaea (*Λιμναία*). A town in the north of Acarnania, near the Ambracian Gulf, on which it had a harbour.

Limonum. See PICTONES.

Limus. The apron worn by the *popa*, or person who did the killing at sacrifices, and by other *servi publici*, who were in consequence spoken of as *limo cincti*. See Serv. *ad* Verg. *Aen.* xii. 120; *C. I. I.* v. 3401; Isid. *Orig.* xix. 33.

Limўra (*τὰ Λίμυρα*). A city in the southeast of Lycia, on the river Limyrus.

Lindum or **Lindum Colonia.** The modern Lincoln; a town of the Coritani in Britain, on the road from Londinium (London) to Eboracum (York), and a Roman colony. Among the Roman remains still to be seen at Lincoln are an altar (in St. Swithin's Church), part of a basilica, and part of a city gate, now known as "Newport Arch," etc. The modern name Lincoln has been formed out of Lindum Colonia (Ptol. ii. 3, 30).

Lindus (*Λίνδος*). One of the three Dorian cities in the island of Rhodes, situated on the eastern coast. Its modern name is Lindo. It is mentioned by Homer (*Il.* ii. 656), with its kindred cities, Ialysus and Camirus. These three cities, with Cos, Cnidus, and Halicarnassus, formed the original Hexapolis, in the southwest corner of Asia Minor. Lindus stood upon a mountain in a district abounding in vines and figs, and had two celebrated temples, one of Athenê surnamed *Λινδία* and one of Heracles. It was the birthplace of Cleobulus, one of the seven wise men. It retained much of its consequence even after the foundation of Rhodes. Inscriptions of some importance have been found in its Acropolis.

Linea. A thread. (1) (*ὁρμία*). A fish-line made of strong hair (*seta*) or flax (Mart. iii. 58, 28; Ovid, *Met.* xiii. 923). (2) (*στάθμη*). A carpenter's chalked line (Vitruv. 3, 5).

Lingŏnes. (1) A powerful people in Transalpine Gaul, bounded by the Treviri on the north and the Sequani on the south. Their chief town was Andematurinum, afterwards Lingones (Langres). (2) A branch of the above-mentioned people, who migrated into Cisalpine Gaul along with the Boii, and dwelt in the neighbourhood of Ravenna.

Linguistics. See GRAMMATICA; PHILOLOGY.

Lingŭla. See LIGULA.

Linter. (1) Originally a sort of "dug-out," a small flat-bottomed boat used in shallow water. It was rowed by oars and was chiefly used in ferrying people over small rivers, etc. (Livy, xxi. 27; Caes. *B. G.* vii. 60).

Linternum. See LITERNUM.

Linus (*Λίνος*). The personification of a dirge or lamentation, and therefore described as a son of Apollo by a Muse (Calliopé, or by Psamathé or Chalciopé) or of Amphimarus by Urania. Both Argos and Thebes claimed the honour of his birth. An Argive tradition related that Linus was exposed by his mother after his birth, and was

brought up by shepherds, but was afterwards torn to pieces by dogs. Psamathé's grief at the occurrence betrayed her misfortune to her father, who condemned her to death. Apollo, indignant at the father's cruelty, visited Argos with a plague; and, in obedience to an oracle, the Argives endeavoured to propitiate Psamathé and Linus by means of sacrifices and dirges, which were called *lini*. According to a Boeotian tradition, Linus was killed by Apollo because he had ventured upon a musical contest with the god. The Thebans distinguished between an earlier and later Linus; the latter is said to have instructed Heracles in music, but to have been killed by the hero.

Lions, Gate of. See Mycenae.

Lipăra and Liparenses Insŭlae. See Aeoliae.

Lipŏgram (from λιπογράμματος, "wanting a letter"). A name given to any literary work which is characterized by the exclusion of some particular letters of the alphabet. The first known writer of lipograms was the Greek poet Lasus (about B.C. 500). Tryphiodorus of Egypt, a writer of the same period, is said to have written an *Odyssey* in twenty-four books, from each of which in succession one of the letters of the Greek alphabet was excluded. A curious instance in Latin is found in the prose history (*De Aetatibus Mundi*) of the Christian writer Fulgentius (q. v.). In modern times this sort of fooling is found principally in Spanish literature—an inheritance, perhaps, from Rome. Lope de Vega wrote five novels from each of which one of the vowels is carefully excluded. See Wheatley, *Anagrams* (1862).

Lipography. See Haplography.

Liponautiou Graphé (λιποναυτίου γραφή). See Astrateias Graphé.

Lipostratiou Graphé (λιποστρατίου γραφή). See Astrateias Graphé.

Lipotaxiou Graphé (λιποταξίου γραφή). See Astrateias Graphé.

Lips (λίψ). The southwest wind (Herod. ii. 25), corresponding to the Latin Africus.

Lips. (Tower of the Winds, Athens.)

Lipsius, Justus, the Latinized form of Joest Lips. A great humanist, born at Overyssche in Brabant, October 18, 1547. Educated at the Jesuit College of Cologne and the University of Louvain, he obtained, at the age of twenty, the office of Latin Secretary to Cardinal Granvella, to whom he had dedicated his first work, *Variarum Lectionum Libri III.* (1567). With the cardinal he visited Rome, and for two years studied the Latin classics and collected inscriptions in that city. He also familiarized himself with the great collection of MSS. in the Vatican, and his book, published in 1575, *Antiquarum Lectionum Libri V.*, showed his familiarity with some of the greater principles and methods of text criticism—the collation, emendation, and classification of codices.

After making the acquaintance in Rome of such scholars as Muretus, Paulus Manutius, and Fulvio Orsini, he travelled in 1570 over Burgundy, Germany, Austria, and Bohemia, for the sake of meeting the great classicists of those countries. A little later he taught at the University of Jena for a year, and in 1579 received a call to the University of Leyden as Professor of History. This chair he held for eleven years, during which period his literary productiveness was very great, his numerous works being issued from the celebrated press of Plantin of Antwerp. In 1591 he left Leyden because of his failing health, and after travelling about from place to place, and refusing many calls from the courts and universities of Italy, Austria, and Spain, accepted the Latin chair at the Collegium Buslidianum at Louvain, with the understanding that he was not to be required to teach. With this appointment he coupled that of Privy-Councillor and Historiographer to the king of Spain. He died at Louvain, March 23, 1606.

Lipsius was the master of an epigrammatic and fascinating Latin style, and his writings were always readable. His great favourite of the classical authors was Tacitus, the whole of whose writings he could repeat from memory, and used to offer to do so with a dagger at his breast to stab him if he made a single error. His range as a scholar, however, was limited. He knew little Greek, though ostentatiously parading Greek quotations in his Latin letters, and he was wholly un-Ciceronian in his Latinity. He had no ear for metre and cared little for the poets. His general knowledge of classical antiquity was also comparatively slight. Nevertheless, he was ranked among the most noted scholars of his age, and with Scaliger and Casaubon formed the so-called "Triumvirate." His chief strength lay in his knowledge of the Roman histories and of Roman antiquities in the narrow sense of the word. His two most elaborate works are his edition of Tacitus (1574), which was five times revised by him, the last edition appearing in 1606; and of Seneca (Antwerp, 1605). The former work is almost epoch-making in the completeness and elaboration of its exhaustive commentary. He also edited Valerius Maximus (Antwerp, 1585) and Velleius Paterculus (Leyden, 1591, and 1607). His complete works appeared in 4 vols. at Antwerp in 1637, reprinted at Wesel in 1675 with his life by Le Mire. A bibliographical list of forty-eight separate publications is given by Nicéron in his *Mémoires*, xxiv. p. 118. See De Reiffenberg, *De Justi Lipsi Vita et Scriptis* (Brussels, 1823); and L. Müller, *Geschichte d. class. Phil. in den Niederlanden*, pp. 249 foll. (Leipzig, 1869).

Liquentia. The modern Livenza, a river in Venetia, in the north of Italy, flowing into the Sinus Tergestinus.

Liris. The modern Garigliano, more anciently called Clanis or Glanis; one of the principal rivers in Central Italy, rising in the Apennines west of Lake Fucinus, flowing into the Sinus Caietanus near Minturnae, and forming the boundary between Latium and Campania. Its stream was sluggish, whence the *Liris quieta aqua* of Horace (*Carm.* i. 31).

Lissus (Λισσός). A town in the south of Dalmatia, at the mouth of the river Drilon, founded by

Dionysius of Syracuse, B.C. 385, and possessing a strongly fortified acropolis called Acrolissus, which was considered impregnable.

Lista. The old capital of the Aborigines, in the country afterwards settled by the Sabines. The town was surprised by the Sabines in an expedition by night, and the inhabitants were driven out (Dion. Hal. i. 14).

Lita. Now Litani; a river of Syria rising near Heliopolis (Baalbek) and emptying into the Mediterranean a little north of Tyre.

Litai. See ATÉ.

Litāna Silva. A large forest on the Apennines in Cisalpine Gaul, southeast of Mutina. Here the Romans were defeated by the Gauls in B.C. 216. The modern name is Silva di Luge.

Liternum or **Linternum.** The modern Patria; a town on the coast of Campania, at the mouth of the river Clanis or Glanis, which in the lower part of its course takes the name of LITERNUS, and which flows through a marsh to the north of the town, called LITERNA PALUS. It was to this place that the elder Scipio Africanus retired when the tribunes attempted to bring him to trial, and here he is said to have died.

Litterārum Obligatio. See OBLIGATIO.

Little Iliad. See LESCHES.

Liturgia (*λειτουργία* — i. e. "service performed for the public"). A term applied at Athens to either an ordinary or extraordinary service, which the State imposed on its wealthier citizens in accordance with a regular rotation. The ordinary services, which citizens whose property amounted to more than three talents ($3500) were required to perform, are: (1) The CHOREGIA (*χορηγία*), the most expensive service of this kind, involving the equipment of a chorus (q. v.) for its musical competitions at public festivals, which were accompanied by theatrical and musical performances. (2) The GYMNASIARCHIA (*γυμνασιαρχία*), which imposed the obligation of training in the Gymnasia the competitors for the gymnastic contests, supplying them with proper diet while they were in training, and providing at the games themselves for the requisite arrangement and decoration of the scene of the contest. The most expensive type of this form of service was the lampadarchy (*λαμπαδαρχία*), the equipment of the torch race (q. v.), which in one instance (recorded in Lysias, *Or.* 21, § 3) cost twelve *minae* ($200). (3) The ARCHITHEORIA (*ἀρχιθεωρία*), or superintendence of the sacred embassies (*θεωρίαι*), sent to the four great national festivals, or to Delos and other holy places. In this case the State contributed part of the expense. There were other liturgies confined to the separate tribes and demes, such as the entertainment of members of the clan on festal occasions.

The most expensive of all was the extraordinary liturgy called the TRIERARCHIA (*τριηραρχία*), which was necessary mainly in times of war. This involved the equipment of a ship of war, and was required of the wealthiest citizen only. Before the Persian Wars the equipment of the forty-eight to fifty ships of the Athenian navy of that time devolved on the *naucrariae* (q. v.). When the number of the fleet was increased, the necessary number of trierarchs was nominated in each year by the strategi. The State provided the vessel—i. e. the hull and mast; and every trierarch had to fit out this vessel with the necessary equipment, to keep it in readiness for the year, and to man it with a complete crew of oarsmen and others. The State supplied pay and provision for the crew, though the sum paid did not always suffice for the purpose; it afterwards supplied the furniture of the vessel also. To lighten the expense, which amounted to between forty minae and a talent ($665–$1180), it became allowable, about B.C. 411, for two persons to share it. Afterwards, in 358, twenty *symmoriae* (q. v.) were instituted—i. e. companies consisting of sixty citizens each, with a committee of the 300 wealthiest citizens at their head; the 300 distributed the expense over the individual *symmoriae* in such sort that the cost of a single trireme was shared by a greater or less number of citizens. Lastly, about B.C. 340, the incidence of the burden was regulated by a law introduced by Demosthenes, whereby all citizens, with the exception of the poorer classes, bore the expense in proportion to their property. Thus property (or rather taxable capital) amounting to ten talents imposed the obligation of equipping one vessel, twenty talents two vessels, and so on. Those who had less than ten talents were to club together and to make up that amount among them.

The time of service lasted, as has been already stated, for one year. On its expiration, the trierarch, who had looked after the vessel, was responsible to the Logistae (q. v.) for the condition of the vessel, and had to hand in his account of the expenditure of the sums paid by the State. Another board, the *epimeletae* of the *neoria* (the inspectors of the dock-yards), superintended the regular fulfilment of the duties of the trierarchs, and were armed for this purpose with compulsory powers.

No one was compelled to undertake more than one liturgy at the same time, or two in two immediately successive years. The only persons exempt from the trierarchy were the archons, unmarried heiresses, and orphans up to the end of the first year after they had come of age. The obligation to see that the liturgy was discharged in each particular case fell on the tribe concerned. If any one considered that he had been unfairly chosen for this duty, and a wealthier person passed over, he could resort to the form of challenge to exchange properties known as the *antidosis* (q. v.). See the introduction to the oration of Demosthenes, *Adv. Leptinem*, in the edition of Sandys, pp. ii.–xviii.; and Wolf's *Prolegomena* to the same oration.

Lituus. A word probably containing the root of *clino*, *κλίνω*, and hence = *(c)lituus*, "the bent instrument." (1) The crooked staff used by the Roman augurs. With it they divided the expanse of heaven for purposes of divination, as explained in the articles AUGUR; DIVINATIO; TEMPLUM. It is probably the original of the archiepiscopal crosier of the Roman Church. On the derivation, see Müller, *Die Etrusker*, iv. 1, 5. An alternative etymology makes it from *litare*, "to get good omens."

Augur with Lituus. (Inghirami, *Mon. Etrusc.*)

(2) A trumpet slightly curved at the end (Gell. v. 8). It differs from both the *tuba*, which was straight, and the *cornu*, which was spiral. The *lituus* was chiefly used for cavalry-signals.

Lituus or Trumpet. (Fabretti.)

Lityerses (Λιτυέρσης). A son of Midas, said to have lived at Celaenae in Phrygia and to have forced all strangers who passed his fields to work at his harvest. If they failed to surpass him, he cut off their heads and hid their bodies in the sheaves, over which a reaping-song was sung. Heracles overcame him and killed him. His memory was preserved in a harvest-song called Lityerses (Suidas, s. v.; Schol. *ad* Theocr. x. 41).

Livia. (1) A sister of M. Livius Drusus, the celebrated tribune, B.C. 91. She was married first to M. Porcius Cato, by whom she had Cato Uticensis, and subsequently to Q. Servilius Caepio, by whom she had a daughter, Servilia, the mother of M. Brutus, who killed Caesar. (2) LIVIA DRUSILLA, the daughter of Livius Drusus Claudianus. She was married first to Tib. Claudius Nero, and afterwards to Augustus, who compelled her husband to divorce her in B.C. 38. She had already borne her husband one son, the future emperor Tiberius, and at the time of her marriage with Augustus was six months pregnant with another, who subsequently received the name of Drusus. She never had any children by Augustus, but she retained his affection till his death. On the accession of her son

Livia, wife of Augustus. (Naples Museum.)

Tiberius to the throne, she at first attempted to obtain an equal share in the government; but this the jealous temper of Tiberius would not brook, and he commanded her to cease meddling in public affairs. From that time he showed towards her only hatred, refusing even to visit her when she was dying. She died in A.D. 29, at the age of 82 or 86. (3) LIVILLA, the wife of the younger Drusus, son of the emperor Tiberius. She was seduced by Seianus, who persuaded her to poison her husband, A.D. 23. (4) IULIA LIVILLA, daughter of Germanicus and Agrippina. See IULIA.

Livia Gens. An important plebeian gens at Rome, whose most distinguished names are those of Drusus (q. v.) and Salinator (q. v.).

Liviae Leges. Laws proposed by M. Livius Drusus, a tribune, B.C. 92, about transplanting colonies to different parts of Italy and Sicily, and granting corn to poor citizens at a low price; also, that the *iudices* should be chosen indiscriminately from the senators and equites, and that the allied States of Italy should be admitted to the freedom of the city. Drusus was a man of great eloquence and of the most upright intentions; but, endeavouring to reconcile those whose interests were diametrically opposite, he was crushed in the attempt, being murdered by an unknown assassin in his own house, upon his return from the Forum, amid a number of clients and friends. No inquiry was made about his death. The States of Italy considered this event the signal for a revolt, and endeavoured to extort by force the privileges which they could not obtain voluntarily. Above 300,000 men fell in the contest in the space of two years. At last the Romans, although upon the whole they had the advantage, were obliged to grant the freedom of the city, first to the allies, and afterwards to all the States of Italy (Vell. Paterc. ii. 13 foll.; Flor. iii. 18).

Livius. (1) ANDRONĪCUS. An early writer who is regarded as the founder of Roman epic and dramatic poetry. He was by birth a Greek of Southern Italy, and was brought as a slave to Rome, after the conquest of Tarentum in B.C. 272, while still a young man. His master, a Livius (perhaps Livius Salinator), whose name he bears, gave him his liberty, and he became an instructor in the Greek and Latin languages. This employment probably gave occasion for his translation of the *Odyssey* into Saturnian verse, which, in spite of its imperfections, remained a school-book in Rome for centuries. The first verse runs as follows:

"Virum mihi, Camena, insece versutum."

In B.C. 240 he brought upon the Roman stage the first drama composed after a Greek model, and with such success that thenceforward dramatic poetry was well established in Rome. According to ancient custom he appeared as an actor in his own pieces. His dramatic compositions, tragedies, and comedies were faithful but undoubtedly imperfect translations of Greek originals. He attempted lyric poetry also, for he was commissioned by the State to write a march in honour of Iuno Regina. Scanty remains of his works are all that have come down to us; and these are collected by Ribbeck in his *Scaenicae Romanorum Poesis Fragmenta* (Leipzig, 1873), and Bährens, *Frag. Poetarum Romanorum*, pp. 37–43 (Leipzig, 1886). See, also, Wordsworth's *Fragments and Specimens of Early Latin* (Oxford, 1874). (2) TITUS. One of the greatest and certainly the most popular of the Roman writers of history. He was born at Patavium (B.C. 59), of good family, and, after being carefully educated, betook himself early (before B.C. 31) to Rome, where he soon became acquainted with the most distinguished men of the day. Even Augus-

tus entertained friendly relations towards him in spite of his openly expressed republican convictions, for which he called him a partisan of Pompey. He does not seem to have taken public office, but to have lived exclusively for literature. He was esteemed by his contemporaries so highly that a Spaniard is said to have travelled from Gades (Cadiz) to Rome merely to see him (Pliny, *Epist.* ii. 3). He died in his native town in A.D. 17. He must have begun his great historical work between B.C. 27 and 25; it can only have been completed shortly before his death, as he did not publish the first twenty-one books until after the death of Augustus (A.D. 14). It recounts the history of Rome in 142 books, extending from the foundation of the city (whence the title *Ab Urbe Condita Libri*) to the death of Drusus (A.D. 9). His own death must have prevented its continuation to the death of Augustus, as he doubtless had proposed. He published the work, called by himself *Annales* (xliii. 13), from time to time, in separate parts, arranging his material—at least for the first ninety books—as far as possible in decades (portions consisting of ten books), and half-decades; the division into decades was, however, first carried through in the fifth century, probably for convenience of handling so vast a series of books. There still remain only the first decade (to B.C. 293), the third, fourth, and half of the fifth decade (218–167); and of the remainder, with the exception of a fairly large portion of the ninety-first book, only inconsiderable fragments. We also possess from an unknown pen, epitomes (*periochae*) of all the books except 136 and 137, and a scanty extract from the account of the portents (*prodigia*), which appeared in B.C. 249 and following year. This is by a certain Iulius Obsequens, and perhaps dates from the fourth century.

Livy's importance rests more on the magnitude of his patriotic undertaking and the charm of his style than on his acquisitions as a scientific historian. He is, in fact, best regarded as a remarkable story-teller, who possessed a diction almost perfect in its way, and an unusual power of graphic narrative. For writing history, however, he had no special training, and his knowledge of Roman law and of the Roman military system was but slight. In selecting his authorities, also, he showed little discrimination, basing his judgment of them on *a priori* assumptions. Thus he follows Valerius Antias in the first decade with no mistrust (cf. vii. 36; ix. 27, 37, 43), but later denounces him as a falsifier (xxvi. 49; xxx. 19; xxxiii. 10, etc.). He does, however, use Polybius, besides Licinius Macer, Quadrigarius, and Caelius Antipater, but often draws different portions of his narrative from conflicting accounts, so that there are frequent inconsistencies to be noticed. It is evident that he had never read the *Leges Regiae* or even many important laws of later times. His purpose, however, was not at all to write a critical history, but rather, by a lively and brilliant narrative, to rekindle the patriotic spirit among his countrymen and to inspire them with a desire to emulate the deeds of their heroic ancestors. From this standpoint, his history deserves the highest praise, and justly won for him the name of "the Roman Herodotus." The only criticism of any account that has come down to us is that of Asinius Pollio recorded by Quintilian (i. 5, 56 and viii. 1, 3), which charges the historian with displaying in his writings a certain Patavinity (*Patavinitas*, from Patavium, Padua, Livy's birthplace). Just what this criticism was meant to imply is not clearly known. It may have been intended to characterize the style as being more florid than was consistent with the reserve of a Roman gentleman, or it may refer to the presence of provincialisms, which we are not now able to detect as such. It may, as some think, have marked the enthusiasm of the writer as opposed to the polished and self-contained *urbanitas* of the metropolis. On this point, see Wiedemann, *De Patavinitate Livii* (Görlitz, 1848–54); and Moritz Haupt, *Opuscula*, ii. 69.

Of Livy's history, the first decade (books one to ten) is entire. It embraces the period from the foundation of the city to the year B.C. 294, when the subjugation of the Samnites may be said to have been completed. The second decade (books eleven to twenty) is altogether lost. It embraced the period from 294 to 219, comprising an account, among other matters, of the invasion of Pyrrhus and of the First Punic War. The third decade (books twenty-one to thirty) is entire. It embraces the period from 219 to 201, comprehending the whole of the Second Punic War. The fourth decade (books thirty-one to forty) is entire, and also one half of the fifth (books forty-one to forty-five). These fifteen books embrace the period from 201 to 167, and develop the progress of the Roman arms in Cisalpine Gaul, in Macedonia, Greece, and Asia, ending with the triumph of Aemilius Paulus. Of the other books nothing remains except inconsiderable fragments, the most notable being a few chapters of the ninety-first book, concerning the fortunes of Sertorius. The composition of so vast a work necessarily occupied many years; and we find indications which throw some light upon the epochs when different sections were composed. Thus, in the first book (ch. 19), it is stated that the temple of Ianus had been closed twice only since the reign of Numa—for the first time in the consulship of T. Manlius (B.C. 235), a few years after the termination of the First Punic War; for the second time by Augustus Caesar, after the battle of Actium, in 29. But we know that it was shut again by Augustus, after the conquest of the Cantabrians, in 25; and hence it is evident that the first book must have been written between the years 29 and 25. Moreover, since the last book contained an account of the death of Drusus, it is evident that the task must have been spread over seventeen years, and probably occupied a much longer time.

The discovery of the lost books of Livy has been a dream of scholars for many centuries, and may yet be realized. In the sixteenth century a complete Livy was reported to be in existence in a monastery in Denmark, where two travellers independently professed to have seen it; but inquiry failed to verify the claim.

Among the most famous MANUSCRIPTS of Livy now in existence are a Codex Mediceus and a Codex Parisinus, each of the eleventh century. Portions of bks. iii.–vi. are preserved in a very old palimpsest at Verona. The third decade is preserved in a MS. now in Paris (the Codex Puteaneus) of the eighth century, and in a Mediceus of the eleventh century. The fourth decade is known from a Codex Moguntinus (Mayence), now lost, and from a MS. at Bamberg. What is preserved of the fifth decade is in a sixth-century MS. at Vienna.

The *editio princeps* of Livy appeared at Rome about 1469 (bks. xxxiii. and xli.–xlv. omitted). The first critical edition was that of J. F. Gronovius (Leyden, 1645). Great editions are those of Drakenborch with variorum notes and supplements (7 vols. Amsterdam, 1738–46; reprinted at Stuttgart, 1820–28, and edited by Bekker and Raschig, Berlin, 1829 foll.); Madvig, Ussing, and Luchs, not yet finished (Berlin, 1888 foll.); and Weissenborn and Müller, with German notes (Berlin, 1867–1888). Good editions of separate portions are the following: Bk. i., by Seeley (Oxford, 1876), Purser (Dublin, 1881), Stephenson (London, 1886); bk. iv., Stephenson (London, 1890); bk. v., Whibley (London, 1890), Prendeville, 13th ed. (London, 1890); bks. v.–vii., Cluer and Matheson (London, 1881); bks. vii.–viii., Luterbacher (Leipzig, 1890); bks. xxi.–xxii., Lord (Boston, 1891); bks. i., xxi.–xxii., Westcott (Boston, 1891); bks. xxi.–xxv., Harant (Paris, 1886); bks. xxvi.–xxx., Riemann (Paris, 1889).

On Livy's language, see Riemann, *Études sur la Langue et la Grammaire de Tite Live* (Paris, 1884). There is a vast lexicon to Livy, preparing by Fügner, of which in 1894 six parts had appeared. On the sources of Livy's history, see Lachmann, *De Fontibus Historiarum T. Livii* (Göttingen, 1821); H. Peter, *Hist. Reliquiae*, i. 89, 198, 225; and Kieserling, *De Rerum Romanarum Scriptoribus Quibus T. Livius Usus Est* (Berlin, 1858).

There is a translation of the whole of Livy into Elizabethan English by Philemon Holland (London, 1600); of bks. xxi.–xxv., by Church and Brodribb (2d ed. London, 1890); and of the whole into German by Klaiber and Teuffel, in 6 vols. (2d ed. Stuttgart, 1854–56). See HISTORIA.

Lixae. Sutlers or traders who followed the Roman army (Livy, v. 8; Hirt. *Bell. Afr.* 75). They bought up the plunder taken by the soldiers, and sold their own wares to the troops at bazaars or booths (*canabae*) outside the camp.

Lixus (Λίξος). A city on the west coast of Mauretania Tingitana in Africa, at the mouth of a river of the same name. It was a place of some commercial importance.

Lobeck, CHRISTIAN AUGUST. A distinguished Greek scholar, born at Naumburg, June 5, 1781. He was Corrector at Wittenberg, 1802; Professor Extraordinarius, 1810–14; and Professor Ordinarius and Librarian at Königsberg, 1814–60. His principal writings consist of contributions to the study of Greek grammar and mythology, including *Paralipomena Grammaticae* (2 vols. 1837); *Aglaophamus* (2 vols. 1829); and *Pathologiae Sermonis Graeci Prolegomena* (1843). The *Aglaophamus* treats especially of the Orphic sect and literature, and is a monument of accurate and exhaustive scholarship. He also edited some Greek texts, among them the *Ajax* of Sophocles, with a good commentary. See Bursian, *Geschichte der class. Philologie in Deutschland*, pp. 572–575, 711–713 (Berlin, 1883).

Locatio Conductio. Letting and hiring; one of the four forms of Roman contract. (1) *Locatio conductio rerum*, the letting or hiring of anything that can be bought or sold. (2) *Locatio conductio operarum*, the letting or hiring of a free man for his services. See Gaius, iii. 142–147.

Lochāgus (Λοχαγός). The commander of a λόχος. See LOCHUS.

Lochus (Λόχος). The Greek designation of a body of foot soldiers. Among the Spartans it denoted in early times the largest divisions into which the whole population capable of bearing arms was grouped. Each of these (according to Thuc. v. 66 and 68) comprised four πεντηκοστύες of four ἐνωμοτίαι each, an ἐνωμοτία containing on an average thirty-two men. The name also denoted the individuals comprised therein. Later (Xen. *Rep. Lac.* ii. 4) it was the name of the four subdivisions of a mora (q. v.). In Greek mercenary troops a lochus was a company of one hundred men under a separate commander. Several of these companies were united under the superior command of a στρατηγός (q. v.).

Locks. See CLAVIS.

Locri (Λοκροί), sometimes called LOCRENSES by the Romans. The inhabitants of two districts in Greece called LOCRIS (Λοκρίς). (1) EASTERN LOCRIS, extending from Thessaly and the pass of Thermopylae along the coast to the frontiers of Boeotia, and bounded by Doris and Phocis on the west. It was a fertile and well-cultivated country The northern part was inhabited by the LOCRI EPICNEMIDII, who derived their name from Mount Cnemis. The southern part was inhabited by the LOCRI OPUNTII, who derived their name from their principal town, Opus. The two tribes were separated by Daphnus, a small slip of land, which at one time belonged to Phocis The Epicnemidii were for a long time subject to the Phocians, and were included under the name of the latter people; whence the name of the Opuntii occurs more frequently in Greek history. (2) WESTERN LOCRIS, or the country of the LOCRI OZŎLAE, was bounded on the north by Doris, on the west by Aetolia, on the east by Phocis, and on the south by the Corinthian Gulf. The country is mountainous, and for the most part unproductive. Mount Corax from Aetolia and Mount Parnassus from Phocis occupy the greater part of it. The Locri Ozolae were a colony of the Western Locrians, and were more uncivilized than the latter. They resembled their neighbours, the Aetolians, both in their predatory habits and in their mode of warfare. Their chief town was Amphissa.

Locri Epizephyrii (Λοκροὶ Ἐπιζεφύριοι). An ancient Greek city in Lower Italy, situated in the southeast of Bruttium, north of the promontory of Zephyrium, from which it was said to have derived its surname Epizephyrii, though others suppose this name was given to the place simply because it lay to the west of Greece. It was founded by the Locrians from Greece, B.C. 683. The inhabitants regarded themselves as descendants of Aiax Oïleus; and as he resided at the town of Naryx among the Opuntii, the poets gave the name of Narycia Locri. For the same reason the pitch of Bruttium is frequently called Narycia. Locri was celebrated for the excellence of its laws, which were drawn up by Zaleucus soon after the foundation of the city. (See ZALEUCUS.) Near the town was an ancient and wealthy Temple of Persephoné.

Locris. See LOCRI.

Locŭli (dim. of *locus*). A small box, coffer, or casket with compartments, whence the word is used only in the plural. In Hor. *Sat.* i. 6, 74 the word is used of a schoolboy's satchel and=*capsa* (q. v.) or *theca*.

Locŭlus. See COLUMBARIUM.

Locuplētes, also called ADSIDUI. Roman freeholders of land who were included in the five classes of Servius as liable for summons to service or *tributum* (Cic. *De Rep.* ii. 22, 40).

Locusta, or more correctly, **Lucusta.** A famous female poisoner, employed by Agrippina in poisoning the emperor Claudius, and by Nero for dispatching Britannicus. She was put to death in the reign of Galba (Tac. *Ann.* xii. 66; xiii. 15).

Lodgings. See INSULA.

Lodix and **Lodicŭla** (*σάγιον*). A small, shaggy blanket used as a bed-covering (Suet. *Aug.* 83), or as a floor-covering (Petron. 20).

Logeion (*λογεῖον*, "speaking-place"). In the ancient theatre, the front of the stage occupied by the actors. In Latin it was called *pulpitum*. See THEATRUM.

Logistae (*λογισταί*, "auditors of accounts"). The name given at Athens to a board consisting originally of thirty, subsequently of ten members, who, in conjunction with another board, the ten *εὔθυνοι*, and their twenty assessors, received from magistrates, at the expiration of their term of office, the accounts of their administration. (See EUTHYNÉ.) This was especially important with those magistrates through whose hands public money passed. Both boards were originally chosen by show of hands; later by lot. One member was elected from each *φυλή*; the assessors of the *εὔθυνοι* were appointed by free choice. The logistae were the supreme authority to whom outgoing magistrates submitted their accounts The *εὔθυνοι* examined the several details, notified, when necessary, those who were liable, and returned the accounts to the logistae, with a report on their merits. Magistrates who had nothing to do with public money only gave an assurance to the logistae that they had received and paid nothing. If the accounts were approved, and no charge was brought after the public proclamation by the logistae, they gave the magistrate his discharge. In the other alternative they referred the case to a court of justice in which they were themselves presidents. The prosecution was intrusted to ten *συνήγοροι*, or counsel for the State, who were chosen by lot and sat with the logistae. The final decision rested with the Heliastic court. See HELIAEA.

Logistĭca (*λογιστική*, sc. *τέχνη*). The art of reckoning. See NUMERI.

Logogrăphi (*λογογράφοι*, i. e. writers in prose). The name given to the oldest Greek historians, who by their first attempts at disquisitions in prose marked the transition from narrative poetry to prose history (Thuc. i. 21). As in the case of epic poetry, so these earliest historical writings emanated from Ionia, where the first attempts at an exposition of philosophic reflections in prose were made at about the same time by Pherecydes, Anaximander, and Anaximenes; and, in both cases alike, it was the Ionic dialect that was used. This class of writing long preserved in its language the poetic character which it inherited from its origin in the epic narrative. It was only by degrees that it approached the tone of true prose. It confined itself absolutely to the simple telling of its story, which was largely made up of family and local traditions. It never classified its materials from a more elevated point of view, or scrutinized them with critical acumen. The logographers flourished from about B.C. 550 down to the Persian Wars. Their latest representatives extend, however, down to the time of the Peloponnesian War. When true history arose with Herodotus, they soon lapsed into oblivion, whence they were rescued in Alexandrian days. Many of the works ascribed to them were, however, believed to be spurious, or at least interpolated. There remain fragments only of a few. The larger number of the historic writers who are described as logographers were Asiatic Greeks, e. g. Cadmus of Miletus, author of a history of the founding of Miletus and the colonization of Ionia (he lived about B.C. 540, and was considered the first writer of historic prose); further, Dionysus of Miletus, a writer of Persian history; Hecataeus (q. v.) of Miletus (550–476); Xanthus of Sardis (about 496), a writer of Lydian history; Hellanicus (q. v.) of Lesbos (about 480–400); Charon of Lampsacus (about 456), a compiler of Persian history and annals of his native town; Pherecydes of the Carian island Leros (died about B.C. 400), who lived at Athens, and in his great collection of myths in ten books treated chiefly of the early days of Attica. Some belonged to the colonies in the West—e. g. Hippys of Rhegium, at the time of the Persian War the oldest writer on Sicily and Italy. The only representative from Greece itself is Acusilaüs of Argos in Boeotia, the author of a genealogical work. The scanty remains of the logographers are collected by Müller in his *Fragmenta Historicorum Graecorum* (Paris, 1856). See HISTORIA.

Loidorias Diké (*λοιδορίας δίκη*). See KAKEGORIAS DIKÉ.

Lollia Paulīna. A granddaughter of M. Lollius, mentioned below, and heiress to his immense wealth. She was married to C. Memmius Regulus; but the emperor Caligula sent for her, divorced her from her husband, and married her, and soon divorced her again. After Claudius had put to death his wife Messalina, Lollia was one of the candidates for the vacancy, but she was put to death by means of Agrippina. Pliny the Elder speaks of her magnificent jewels (*H. N.* ix. 58).

Lollius, MARCUS. A Roman who was consul, B.C. 21, governor of Gaul, B.C. 16, and appointed by Augustus as tutor to his grandson, C. Caesar, whom he accompanied to the East, B.C. 2. Horace addressed an Ode (iv. 9) to Lollius, and two Epistles (i. 2 and 18) to the eldest son of Lollius.

Lonché (*λόγχη*). A lance. See HASTA.

Londinium or **Londīnum.** The modern London, the capital of the Cantii in Britain, originally situated on the southern bank of the Thames in the modern Southwark. It afterwards spread over the north side of the river, and was hence called a town of the Trinobantes. It is first mentioned in the reign of Nero as a flourishing and populous town, much frequented by Roman merchants. It was taken and its inhabitants massacred by the Britons when they revolted under Boadicea, A.D. 62. The quarter on the north side of the river was surrounded with a wall and ditch by Constantine the Great or Theodosius, the Roman governor of Britain. This wall probably commenced at a fort near the present site of the Tower, and continued along the Minories to Cripplegate, Newgate, and Ludgate. London was the

Remains of a Roman Wall, London.

central point from which all the Roman roads in Britain diverged. It possessed a *Milliarium Aureum*, from which the miles on the roads were numbered; and a fragment of this Milliarium, the celebrated London Stone, may be seen affixed to the wall of St. Swithin's Church in Cannon Street. This is almost the only monument of the Roman Londinium still extant, with the exception of coins, tesselated pavements, and the like, which have been found buried under the ground.

Roman Tesselated Pavement, London

The Roman name Londinium represents the early Keltic *Llyn din*, "fort on the pool," the pool being a widening of the Thames at this point. The British London was probably a collection of huts on a dry spot surrounded by a marsh, and defended by an earthwork and a ditch. London is mentioned by Ptolemy (Λονδίνιον, ii. 3, 27), Tacitus (*Ann.* xiv. 33), Eumenius (*Paneg. Const.* 17), and Ammion. Marc. (xx. 1; xxviii. 3). See Besant, *London* (1892).

Longimănus (the Roman rendering of Μακρόχειρ). A surname of Artaxerxes I. Plutarch states that this appellation was given him because his right hand was longer than his left; but Strabo says that he was so called from the extraordinary length of his arms, which, on his standing upright, could reach his knees. See Artaxerxes.

Longīnus. (1) Dionysius Cassius (Λογγῖνος). A Greek rhetorician, born at Athens about A.D. 213, who studied Neoplatonism at Alexandria, and practised as teacher of philosophy, grammar (i. e. literary criticism), and rhetoric, in his native city, from about 260, until the accomplished queen Zenobia of Palmyra summoned him as minister to her court. As he persuaded her to resist the Roman yoke, the emperor Aurelian caused him to be executed after Zenobia's overthrow in 273. He possessed such an extent of learning that Eunapius called him a living library and a walking museum. His versatility is proved by compositions on philosophy, grammar, rhetoric, chronology, and literature. Of these, only fragments are extant, for example, the introduction to a commentary on Hephaestion's handbook of metres, and a short Rhetoric incomplete at the beginning. A brief treatise *On the Sublime* (Περὶ Ὕψους), commonly ascribed to him, is more probably to be assigned to an unknown writer about the Christian era. It treats and illustrates by classic examples the characteristics of the lofty style from a philosophical and aesthetic point of view. It is written in a vigorous manner. Good editions are those of Weiske (1820), Egger (1837), both with excellent notes; and Jahn (1867; revised by Vahlen, 1887). On the question of authorship, see Buchenau, *De Scriptore Libri* Περὶ ὕψους (Marburg, 1849); Martens, *De Libello* Περὶ ὕψους (Bonn, 1877); and Egger, *Essai sur l'Histoire de la Critique chez les Grecs* (Paris, 1886). (2) See Cassius.

Longobardi. See Langobardi.

Longŭla. A town of the Volsci in Latium, not far from Corioli

Longus (Λόγγος). A writer who probably lived in the third century A.D. He was the author of a Greek pastoral romance, *Daphnis and Chloë*, in four books. It is considered the best of all ancient romances which have come down to us, on account of its deep and natural feeling, its grace of narrative, and the comparative purity and ease of its language. It has suggested many imitations by Italian, French, German, and English writers, the more famous being Bernardin de St. Pierre's *Paul et Virginie*. The rare translation by John Day of the French version of Amyot was reprinted in 1890. The Greek text is edited by Hirschig with a Latin version in the *Erotici Scriptores* of the Didot collection (Paris, 1856). Translation by Smith (London, 1855). See Novels and Romances.

Longus, P. Considius. A propraetor in Africa, who left his province shortly before the breaking out of the Civil War, B.C. 49, intrusting the government to Q. Ligarius. He returned to Africa soon afterwards, and held Adrumetum for the Pompeian party. After the defeat of the Pompeians at Thapsus, he attempted to fly into Mauretania, but was murdered by the Gaetulians (Pseud. Caes. *Bell. Afr.* 93).

Lophos (λόφος). A helmet-crest See Galea.

Lorarii. Persons who wielded the thong (*lorum*) in the punishment of slaves. See Servus.

Lorīca. (1) The leathern corselet of the Roman legionary. It consisted of thongs (*lora*) of shoe-leather faced with metal. These were fastened one upon another in such a way that they formed a covering for the body with two shoulder-pieces. Below the latter a plate of iron 9½ inches square was placed over the region of the heart. Of the early citizen-soldiers, the more wealthy wore also coats of chain-armour (*lorica hamata*) and corselets of mail (*lorica squamata*), in which the joints were further covered with metal plates; the latter were also worn by the praetorians in imperial times. (2) The breastworks on walls and on redoubts.

Legionary with Lorica. (Arch of Severus.)

Lorium or **Lorii**. A small place in Etruria on the Via Aurelia, where Antoninus Pius was brought up and where he died.

Lorȳma (*τὰ Λώρυμα*). A city on the southern coast of Caria, opposite Ialysus in Rhodes.

Lotis. A nymph, who, to escape the embraces of Priapus, was metamorphosed into a tree, called after her *lotus* (Ovid, *Met.* ix. 347).

Lotophăgi (*Λωτοφάγοι*—i. e. lotus-eaters). Homer, in the *Odyssey*, represents Odysseus as coming in his wanderings to a coast inhabited by a people who fed upon a fruit called *lotus*, the taste of which was so delicious that every one who ate it lost all wish to return to his native country. Afterwards, in historical times, the Greeks found that the people on the north coast of Africa, between the Syrtes, used to a great extent, as an article of food, the fruit of a plant which they identified with the lotus of Homer, and they called these people Lotophagi (Herod. iv. 177). They carried on a commercial intercourse with Egypt and with the interior of Africa by the very same caravan routes which are used to the present day. The legend in the *Odyssey* suggested Tennyson's exquisite poem, *The Lotus Eaters*.

Lotus (*λωτός*). The lotus. (1) A plant known to botanists as the *Zizyphus lotus*, or jujube. See LOTOPHAGI. (2) A species of water-lily (*Nymphaea lotus*) found on the Nile and regarded by the ancient Egyptians as sacred. It appears as a symbol of the Egyptian deities and is very prominent in works of art, especially in the capitals of columns, the prows of vessels, etc. See Goodyear, *A Grammar of the Lotus* (N. Y. 1892).

Lotus Capital. (Goodyear.)

Loutron (*λουτρόν*). See BALNEAE.

Loxias (*Λοξίας*). A title given to Apollo as the god of oracles, from the base of *λέγειν* or perhaps from *λόξα*.

Lua, also called **Lua Mater** or **Lua Saturni**. One of the early Italian divinities, to whom were dedicated the arms taken in battle (Gell. xiii. 23, 1).

Luca. The modern Lucca; a Ligurian city in Upper Italy, at the foot of the Apennines and on the river Ausus, northeast of Pisae.

Lucāni. The inhabitants of Lucania. See LUCANIA.

Lucania. A district in Lower Italy, bounded on the north by Campania and Samnium, on the east by Apulia and the Gulf of Tarentum, on the south by Bruttium, and on the west by the Tyrrhene Sea. It was separated from Campania by the river Silarus, and from Bruttium by the river Laus. Lucania was celebrated for its excellent pastures; and its oxen were the finest and largest in Italy. Hence the elephant was at first called by the Romans a Lucanian ox (*Lucas bos*). The coast of Lucania was inhabited chiefly by Greeks, whose cities were numerous and flourishing. The interior of the country was originally inhabited by the Chones and Oenotrians. The Lucanians proper were Samnites, a brave and warlike race, who left their mother country and settled both in Lucania and Bruttium. They not only expelled or subdued the Oenotrians, but they gradually acquired possession of most of the Greek cities on the coast. They were subdued by the Romans after Pyrrhus had left Italy. The chief cities of Lucania were Heraclea, Metapontum, Thurii, Elea or Velia, Paestum (Posidonia), and Buxentum.

Lucanĭca. A sort of sausage, a favourite article of food among the Lucani. Its composition is given by Apicius (ii. 4).

Lucānus, OCELLUS. See OCELLUS.

Lucānus, M. ANNAEUS, usually called LUCAN, a Roman poet, was born at Corduba in Spain, A.D. 39. His father was L. Annaeus Mella, a brother of M. Seneca, the philosopher. Lucan was carried to Rome at an early age, where his education was superintended by the most eminent preceptors of the day. His talents developed themselves at a very early age, and excited such general admiration as to awaken the jealousy of Nero, who, unable to brook competition, forbade him to recite in public. Stung to the quick by this prohibition, Lucan embarked in the famous conspiracy of Piso, was betrayed, and, by a promise of pardon, was induced to turn informer. He began by denouncing his own mother, Acilia or Atilia, and then revealed the rest of his accomplices without reserve. He received, however, a traitor's reward. After the more important victims had been despatched, the emperor issued a mandate for the death of Lucan, who, finding escape hopeless, caused his veins to be opened. When, from the rapid effusion of blood, he felt his extremities becoming cold, he began to repeat aloud some verses which he had once composed, descriptive of a wounded soldier perishing by a like death; and, with these lines upon his lips, expired A.D. 65, in the twenty-sixth year of his age.

Lucan wrote various poems, the titles of which

are preserved, and also prose works; but the only extant production is an epic poem, in ten books, entitled *Pharsalia*, in which the progress of the struggle between Caesar and Pompey is fully detailed, the events, commencing with the passage of the Rubicon, being arranged in regular chronological order. The tenth book is imperfect, and the narrative breaks off abruptly in the middle of the Alexandrian War; but it is not known whether the conclusion has been lost, or whether the author ever completed his task. The whole of what now remains was certainly not composed at the same time, for the different parts do not by any means breathe the same spirit. In the earlier portions we find liberal sentiments expressed in very moderate terms, accompanied by open and almost fulsome flattery of Nero; but as we proceed, the blessings of freedom are loudly proclaimed, and the invectives against tyranny are couched in language the most offensive, evidently aimed directly at the emperor. The work contains great beauties and great defects. It is characterized by copious diction, lively imagination, and a bold and masculine tone of thought; but it is at the same time disfigured by extravagance, far-fetched conceits, and forced similes. The hero of the poem is Cato, of whom the following very famous line of Lucan is written:

Victrix causa diis placuit sed victa Catoni.

The oldest MS. of Lucan is a palimpsest, perhaps as early as the fourth century, the leaves of which are distributed between Vienna, Naples, and Rome. There are editions of the *Pharsalia* with notes by Grotius (Antwerp, 1614); Oudendorp (Leyden, 1728); Burmann (Leyden, 1740); Weber (3 vols. Leipzig, 1821–31); Lemaire (2 vols. Paris, 1830); and Haskins (London, 1889). It was translated into English verse by N. Rowe (London, 1719); and there are German versions by Bothe (Stuttgart, 1855) and Krais (Stuttgart, 1863). On the style, etc., see Körber, *De Lucani Usu Syntactico* (St. Petersburg, 1874); Berthold, *De Elocutione Poetica* (Grimma, 1879); and Obermeier, *Sprachgebrauch des Lucanus* (Munich, 1886). See also the introduction by Heitland to the edition of Haskins cited above.

Lucar. Money paid from the Roman treasury to the persons who presided over the *ludi scaenici*, as a contribution towards the expense. It was originally the money derived from the sacred groves (*luci*); but, because it was used for the expenses of the *ludi*, the word *lucar* usually bears the secondary meaning of money devoted to the payment of actors, etc. (Tac. *Ann.* i. 77). By a regulation of Servius Tullius, on each death a piece of money had to be presented to the goddess Libitinae (*lucar Libitinae*, cf. Dionys. iv. 15).

Luccēius. (1) Lucius. An old friend and neighbour of Cicero, was an unsuccessful candidate for the consulship with Iulius Caesar, in B.C. 60. He wrote a contemporaneous history of Rome, commencing with the Social or Marsic War. (2) Hirrus. A tribune who in B.C. 53 proposed that Pompey be made dictator. He afterwards fought in the Civil War on the side of Pompey (Caes. *B. C.* i. 15; iii. 82).

Lucenses. See Hispania, p. 828.

Lucĕres. One of the three old patrician tribes in Rome. See Patricii.

Luceria. A city of Apulia, about twelve miles to the west of Arpi. It was a place of great antiquity, and was said to have been founded by Diomedes.

Lŭcerna (λύχνος). An oil-lamp. The Greeks and Romans originally used candles, but in later times candles were chiefly confined to the houses of the lower classes. A large number of ancient lamps have come down to us, the greater part of which are made of terra-cotta (*τροχήλατοι*), but also a considerable number of bronze. Most of the lamps are of an oval form and flat upon the top, on which there are frequently figures in relief. In the lamps there are one or more round holes, according to the number of wicks (*ellychnia*)

Dimyxos Lucerna. (*Museo Borbonico*, iv. 14.)

burned in it; and as these holes were called, from an obvious analogy, *μυκτῆρες* or *μύξαι*, literally, nostrils or nozzles, the lamp was also called *monomyxos*, *dimyxos*, *trimyxos*, or *polymyxos*, according as it contained one, two, three, or a greater number of nozzles or holes for the wicks.

The next illustration of a lamp, with a figure of Silenus, represents one of the most beautiful bronze lamps that have yet been found.

Lucerna. (*Museo Borbonico*, i. 10.)

The lamps sometimes hung in chains from the ceiling of the room (Verg. *Aen.* i. 726), but generally stood upon a stand. (See Candelabrum.) Sometimes a figure holds the lamp, which also exhibits the needle or instrument which served to trim the wick, and is attached to the figure by means of a chain.

We read of *lucernae cubiculares*, *balneares*, *tricliniares*, *sepulcrales*, etc., which were named from the places where they were used, but were not distinguished in their shapes.

Having no contrivance like ours for consuming the smoke of their lamps, the ancients were much troubled by the resulting soot and smell. To obviate this they often used perfumed oils (Petron. 70). See Becker-Göll, *Charicles*, iii. 86; id. *Gallus*, ii. 390.

Lucĭānus (Λουκιανός), usually called LUCIAN. A Greek writer, born at Samosata, the capital of Commagené, in Syria. The dates of his birth and death are uncertain; but it has been conjectured, with much probability, that he was born about A.D. 120, and that he lived till towards the end of that century. We know that some of his more celebrated works were written in the reign of M. Aurelius. Lucian's parents were poor, and he was at first apprenticed to his maternal uncle, who was a statuary. He afterwards became an advocate, and practised at Antioch. Being unsuccessful in this calling, he employed himself in writing speeches for others, instead of delivering them himself. But he did not remain long at Antioch; and at an early period of his life he set out upon his travels, and visited the greater part of Greece, Italy, and Gaul. At that period it was customary for professors of the rhetorical art to proceed to different cities, where they attracted audiences by their displays, much in the same manner as musicians or itinerant lecturers in modern times. He appears to have acquired a good deal of money as well as fame. On his return to his native country, probably about his fortieth year, he abandoned the rhetorical profession, the artifices of which, he tells us, were foreign to his temper. He now devoted most of his time to the composition of his works. He still, however, occasionally travelled; for it appears that he was in Achaia and Ionia about the close of the Parthian War, 160–165, on which occasion, too, he seems to have visited Olympia, and beheld the self-immolation of Peregrinus. About the year 170, or a little previously, he visited the false oracle of the impostor Alexander, in Paphlagonia. Late in life he obtained the office of procurator of part of Egypt, which office was probably bestowed upon him by the emperor Commodus.

The nature of Lucian's writings inevitably made for him many enemies, by whom he has been painted in the darkest colours. According to Suidas, he was surnamed "the Blasphemer," and was torn to pieces by dogs, as a punishment for his impiety; but to this account no credence can be given. Other writers state that Lucian apostatized from Christianity; but there is no proof in support of this charge; and the dialogue entitled *Philopatris*, which would appear to prove that the author had once been a Christian, was certainly not written by Lucian, and was probably composed in the reign of Julian the Apostate.

As many as eighty-two works have come down to us under the name of Lucian; but some of these are spurious. The most important of them are his *Dialogues*. They are of very various degrees of merit, and are treated in the greatest possible variety of style, from seriousness down to the broadest humour and buffoonery. Their subjects and tendency, too, vary considerably; for while some are employed in attacking the heathen philosophy and religion, others are mere pictures of manners without any polemic drift. Our limits only allow us to mention a few of the more important of these dialogues: The *Dialogues of the Gods* (Θεῶν Διάλογοι), twenty-six in number, consist of short dramatic narratives of some of the most popular incidents in the heathen mythology. The reader, however, is generally left to draw his own conclusions from the story, the author only taking care to put it in the most absurd point of view.—In the *Zeus Convicted* (Ζεὺς Ἐλεγχόμενος) a bolder style of attack is adopted; and the cynic proves to Zeus's face that everything being under the dominion of fate, he has no power whatever. As this dialogue shows Zeus's want of power, so the *Zeus the Tragedian* (Ζεὺς Τραγῳδός) strikes at his very existence, and that of the other deities.—The Βίων Πρᾶσις, or *Sale of the Philosophers*, is an attack upon the ancient philosophers. In this humorous piece the heads of the different sects are put up for sale, Hermes being the auctioneer.—*The Fisherman* (Ἁλιεύς) is a sort of apology for the preceding piece, and may be reckoned among Lucian's best dialogues. The philosophers are represented as having obtained a day's life for the purpose of taking vengeance upon Lucian, who confesses that he has borrowed the chief beauties of his writings from them.—*The Banquet* (Συμπόσιον) is one of Lucian's most humorous attacks on the philosophers. The scene is a wedding feast, at which a representative of each of the principal philosophic sects is present. A discussion ensues, which sets all the philosophers by the ears, and ends in a pitched battle.—The *Nigrinus* is also an attack on philosophic pride; but its main purpose is to satirize the Romans, whose pomp, vainglory, and luxury are unfavourably contrasted with the simple habits of the Athenians.

The more miscellaneous class of Lucian's dialogues, in which the attacks upon mythology and philosophy are not direct but incidental, or which are mere pictures of manners, contains some of his best. At the head must be placed *Timon*, which may perhaps be regarded as Lucian's masterpiece.—The *Dialogues of the Dead* (Νεκρικοὶ Διάλογοι) are perhaps the best known of all Lucian's works. The subject affords great scope for moral reflection and for satire on the vanity of human pursuits. Wealth, power, beauty, strength, not forgetting the vain disputations of philosophy, afford the materials. Among the moderns these dialogues have been imitated by Fontenelle, Lord Lyttelton, and Walter Savage Landor.—The *Icaro-Menippus* is in Lucian's best vein and a masterpiece of Aristophanic humour. Menippus, disgusted with the disputes and pretensions of the philosophers, resolves on a visit to the stars for the purpose of seeing how far their theories are correct. By the mechanical aid of a pair of wings he reaches the moon, and thence surveys the miserable passions and quarrels of men. Thence he proceeds to Olympus, and is introduced to the Thunderer himself. Here he is witness of the manner in which human prayers are received in heaven. They ascend by enormous vent-holes, and become audible when Zeus removes the covers. Zeus himself is represented as a partial judge, and as influenced by the largeness of the rewards promised to him. At the end he pronounces judgment against the philosophers, and threatens in four days to destroy them all.—*Charon* is a much admired dialogue, but of a graver turn than the preceding. Charon visits the earth to see the course of life there, and what it is that always makes men weep when they enter his boat. Hermes acts as his cicerone. For his *True History* (Ἀληθὴς Ἱστορία) and *Asinus* (Λούκιος ἢ Ὄνος), see NOVELS AND ROMANCES.

Lucian's merits as a writer consist in his knowledge of human nature, his strong common-sense, the fertility of his invention, the raciness of his humour, and the simplicity and Attic grace of his diction. There was very much to justify his at-

tacks in the systems against which they were directed. Yet he establishes nothing in their stead. His aim is only to pull down; to spread a universal scepticism. Nor were his assaults confined to religion and philosophy, but extended to everything old and venerated, the poems of Homer and Hesiod, and the history of Herodotus.

The best editions of Lucian are by Hemsterhuis and Reitz, 4 vols. (Amsterdam, 1743); by Lehmann, 9 vols. (Leipzig, 1822–29); by Dindorf, with a Latin version, but without notes (Paris, 1840); critical text by Jacobitz (1874); Fritzsche (incomplete, 1882–85); Sommerbrodt (in progress, 1892 foll.); select dialogues edited by Abbott (1877); Heitland (1878); and Jerram (1879).

Lucifer or **Phosphŏrus** (Φωσφόρος, "the bringer of light"). The name of the planet Venus, when seen in the morning before sunrise. The same planet was called Hesperus, Vesperugo, Vesper, Noctifer, or Nocturnus, when it appeared in the heavens after sunset. Lucifer as a personification is called a son of Astraeus and Aurora or Eos, of Cephalus and Eos, or of Atlas By Philonis he is said to have been the father of Ceÿx. He is also called the father of Daedalion and of the Hesperides. Lucifer is also a surname of several goddesses of light, as Artemis, Aurora, and Hecaté.

Lucilius, Gaius. (1) The creator of the Roman satire. He was born at Suessa Auruncorum, B.C. 180, of good family; served in the Numantine War in Spain, under Scipio; and, returning to Rome, lived on familiar terms with that general and with his friend Laelius (Hor. *Sat.* ii. 1). He was the maternal uncle or (less probably) the maternal grandfather of Pompey the Great. He died at Naples, B.C. 103.

It was Lucilius that first developed the *satira*, which had before his time been a name applied to miscellaneous verse (see Satira) into the form in which it is afterwards found in Horace, Persius, and Juvenal. He boldly and even fiercely assailed the faults of living contemporaries (Hor. *Sat.* i. 4, 6; i. 10, 1; Pers. i. 114; Juv. i. 165). Horace criticises him for the carelessness and haste with which he wrote, and which always left something to be desired.

"Cum flueret lutulentus, erat quod tollere velles."

Of his thirty books of satires, some 300 lines are preserved in a fragmentary state, giving us but a slight clue to his style and method; yet it is evident that he was a boldly original, almost eccentric, genius. He affected a cosmopolitanism unusual in a Roman of his time. "I write for the people of Cosentia and Tarentum and Sicily," he says; and his Latin is liberally interlarded with Greek in a macaronic fashion. His vocabulary, in fact, is a very unusual one, abounding in strange words, disgusting expressions, and plebeian forms.

The fragments are collected by L. Müller (Leipzig, 1872); Lachmann and Vahlen (Berlin, 1876); and Bährens (Leipzig, 1886). See also L. Müller's *Leben und Werke des Gaius Lucilius* (Leipzig, 1876); and for the language, Fischer, *De Vocibus Lucilianis* (Halle, 1881).

(2) Lucilius Iunior. Probably the author of a poem entitled *Aetna* (q. v.). He was procurator of Sicily and a friend of Seneca the philosopher, who addresses to him his *Epistolae*, *Quaestiones Naturales*, and his *De Providentia*.

Lucilla. A daughter of the emperor Marcus Aurelius and of Faustina, born A.D. 146. At the age of seventeen she was given in marriage to Lucius Verus, at that time commanding the Roman armies in Syria. Verus came as far as Ephesus to meet her, and the union was celebrated in that city, but, habituated to debauchery, Verus soon relapsed into his former mode of life; and Lucilla, finding herself neglected, took a woman's revenge, and entered on a career of similar licentiousness. Returning subsequently with her husband to Rome, she caused him to be poisoned there; and afterwards, in accordance with her father's directions, contracted a second marriage with Claudius Pompeianus, an aged senator, of great merit and probity. Her licentious conduct, however, underwent no change, and she was banished to the island of Capreae by her brother Commodus, against whom she had formed a conspiracy Not long after, Commodus sent a centurion to her place of exile, who put her to death, in the thirty-eighth year of her age, A.D. 184 (Dio Cass. lxxi. 1; lxxii. 4; Iul. Cap. *Aurel.* 7).

Lucīna. The goddess of light (*lux*), or rather the goddess that brings to light, and hence the goddess that presides over the birth of children. It was therefore used as a surname of both Iuno and Diana. Lucina corresponded to the Greek goddess Ilithyia (q. v.). See Hor. *Carm. Saec.* 15.

Lucretia. See Tarquinius.

Lucretĭlis. A mountain range in the country of the Sabines. It is now Monte Corrignaleto.

Lucretius Carus, Titus. A Roman poet and philosopher who was born probably in B.C. 98 or 96; the year is uncertain. Of his birthplace and parentage nothing is known. St. Jerome is authority for the statement that he was made insane by a love-philter, and finally committed suicide, having composed some books in the intervals of his madness. According to Donatus, he died on the same day that Vergil assumed the *toga virilis*—October 15, B.C. 55.

Lucretius left but one work, the *De Rerum Natura*, a didactic poem in six books containing in all nearly 7500 hexameter lines. The purpose of the poem is to set forth the Epicurean system of philosophy, particularly those portions dealing with the origin of the world and the operations of natural forces. The poet's aim in writing was, as he tells us, to free men's minds from the baneful influence of superstition and of the belief in the hereafter, to which he attributed the greater portion of the fears and troubles of life. He endeavoured to explain how, without the direction or intervention of supernatural agencies in any degree, all natural phenomena may be accounted for. In Book I. he lays down as fundamental truths the propositions that nothing can come from nothing, and that to nothing nought returns. The universe is made up of matter and void, or space. It has no centre; for matter exists in infinite quantity, and space is without limit. Matter is composed of atoms, which are inconceivably minute, perfectly solid, and indestructible. Book II. is devoted to an elaborate discussion of the atoms, treating of their movements, shapes, and combinations. Sensation and feeling are declared to be an accident of atomic combination, a result of the coming together of atoms of certain shapes in cer-

tain ways. The subject of the third book is the mind and soul, which, according to the poet, are inseparably united and of material nature, being composed of the finest and roundest atoms. Many reasons are brought forward to prove that the soul perishes at the same time with the body. Book IV. deals with the phenomena of sense-perception. From the surface of all objects thin films of matter are continually flying off, preserving the general outline of that from which they come. These impinge upon our senses, and perception is an immediate result. Yet in the adaptation of the senses to their functions there is no evidence of design, no sign of creative intelligence. The fifth book sets forth the perishable nature of the world, its formation from a fortuitous concourse of atoms, the origin of life by spontaneous generation, the preservation of animal life in accordance with the law of the survival of the fittest, and the development of man in civilization out of a condition of brutish savagery. In Book VI. the poet attempts to explain the natural phenomena which seem most terrible and inexplicable, particularly thunder and lightning, earthquakes, volcanic eruptions, the changes of the Nile, and the power of the magnet. The poem ends abruptly with a description of the plague at Athens, and was evidently given to the world before it had received the final revision of the author.

In the matter of the poem Lucretius followed closely the teachings of Epicurus, whom he revered as guide and master. With a truly Roman spirit he laid more emphasis upon the reign of law in the universe than his teacher; but he made no contribution in the way of doctrine to the Epicurean system. Whether he intended to bring his work to a close with a presentation of the ethical views of Epicurus it is impossible to determine; but numerous references show that in these, also, the poet was fully in sympathy with his master. The form of the *De Rerum Natura* was perhaps suggested by that of the poem of Empedocles, *On Nature*. The thought and manner of expression reveal the influence of several Greek poets besides Empedocles (notably Homer and Euripides), and of the early Roman poets (particularly Ennius), as well as of Cicero's *Aratea*. Yet the poem throughout bears the stamp of a marked individuality. Believing deeply himself in the mission of Epicureanism as a cure-all for human ills, Lucretius proclaimed its teachings with an almost religious fervor. Previous to his time this system of philosophy had received only scanty treatment in Latin, that, too, in barbarous prose. From the multitude of its technical details and the absence of a supernatural element, it seemed incapable of poetic handling. Nevertheless, Lucretius succeeded not only in presenting the main features of Epicurean physics and psychology with admirable clearness, but even in clothing them with a highly poetic form. There are, indeed, passages of unequal merit, and now and then the lack of the poet's finishing touches becomes unpleasantly apparent; yet from beginning to end the poem carries the reader along with a kind of epic movement and interest. It possesses a unity and continuity inconsistent with the tradition that it was composed "in lucid intervals;" still it is not impossible that the story of the poet's insanity and self-destruction may reflect some tragic event of his life. The legend of the madness of Lucretius was elaborated by Tennyson in a well-known poem.

The *De Rerum Natura* ranks not only as one of the finest poems in the Latin language, but also as undoubtedly the greatest didactic poem of all literature. It is masterly in its grasp and handling of the subject-matter, elevated in tone, and finely poetic in expression and suggestion. As an earnest attempt to adapt Epicureanism to the needs of the Roman life, the *De Rerum Natura* — apart from its value and inspiration as literature — is of especial interest at the present time, when atomic materialism under a new form is again challenging the attention of the philosophic world. Its doctrines form a curious and instructive parallel to those of the advocates of materialistic evolution, and sometimes foreshadow in a striking manner the conclusions of modern science.

The existing manuscripts of Lucretius are all derived from a single archetype, which has long since disappeared. From this at least three copies were made. One of these, a beautiful folio of the ninth century, is now at Leyden (called A by Munro). Another was the parent of a quarto MS. of the tenth century (B), also at Leyden, and of two others of which there are considerable fragments at Copenhagen and Vienna. The third copy was taken by Poggio to Italy in the fifteenth century, and became the ancestor of the numerous Italian MSS. of the *De Rerum Natura*. The *editio princeps* of the poem was published about 1473 by Ferandus of Brescia. The most important of the early editions are the first Aldus (1500), edited by Avancius, the Junta (1512) by Candidus, and those by Lambinus (Paris, 1563; 2d ed. 1565; 3d ed. 1570, often reprinted). Recent editions are those by Lachmann (Berlin, 1850; 4th ed. of the text, 1871; of the commentary, 1882), Bernays (text, Leipzig, 1852), Bockemüller (text with commentary, 2 vols., Stade, 1873–74), Kelsey (text of Munro, with notes to Books I., III., and V., Boston, 1884), but especially by H. A. J. Munro (text, commentary, translation; 4th ed. 3 vols., London, 1886). For the poet's philosophy, see Masson, *The Atomic Theory of Lucretius contrasted with Modern Doctrines of Atoms and Evolution* (London, 1884); Woltjer, *Lucretii Philosophia cum Fontibus Comparata* (Groningen, 1877); Bruns, *Lucrez-Studien* (Freiburg, 1884); Royer, *Les Arguments du Matérialisme dans Lucrèce* (Paris, 1883); Lange, *History of Materialism*, vol. i. For his language, see Holtze, *Syntaxis Lucretianae Lineamenta* (Leipzig, 1868); Städler, *De Sermone Lucretiano* (Jena, 1869); Kühn, *Quaestiones Lucr. Grammaticae et Metricae* (Breslau, 1869); Kraetsch, *De Abundanti Dicendi Genere Lucretiano* (Berlin, 1881). For his rank as a poet, see Sellar's *Roman Poets of the Republic* (3d ed. 1889); Martha, *Le Poème de Lucrèce—Morale, Religion, Science* (Paris, 4th ed. 1885).

Lucrīnus Lacus. Properly the inner part of the Sinus Cumanus or Puteolanus, a bay on the coast of Campania, between the promontory Misenum and Puteoli, running a considerable way inland. But at a very early period the Lucrine Lake was separated from the remainder of the bay by a dike eight stadia in length, and thus assumed the character of an inland lake. Its waters still remained salt, and were celebrated for their oyster beds. Behind the Lucrine Lake was another lake called Lacus Avernus. In the time of Augustus,

Agrippa made a communication between Lake Avernus and the Lucrine Lake, and also between the Lucrine Lake and the Sinus Cumanus, thus forming out of the three the celebrated Julian Harbour. The Lucrine Lake was filled up by a volcanic eruption in 1538, when a conical mountain rose in its place, called Monte Nuovo.

Lucullus, L. LICINIUS. A Roman celebrated as the conqueror of Mithridates. He fought on the side of Sulla in the Civil Wars with the Marian party, was praetor B.C. 77, and consul in 74. In the latter year he received the conduct of the war against Mithridates, which he carried on for eight years with great success (see MITHRIDATES), but being unable to bring the war to a conclusion in consequence of the mutinous disposition of his troops, he was superseded in the command by Acilius Glabrio, B.C. 67. Glabrio, however, never

Lucullus. (Duruy.)

took the command; but in the following year (66) Lucullus had to resign the command to Pompey, who had been appointed by the Manilian law to supersede both him and Glabrio. On his return to Rome, Lucullus devoted himself to a life of indolence and luxury, and lived in a style of extraordinary magnificence. He died in B.C. 57 or 56. He was the first to introduce cherries into Italy, which he had brought with him from Cerasus in Pontus.

The name of Lucullus became and has continued proverbial for extravagant and studied luxury. His gardens in the suburbs of the city were extraordinary for their splendour; his villas at Tusculum and Naples were laid out with such lavish disregard of expense in constructing fishponds (*piscinae*), cutting through hills and rocks, and throwing out moles into the sea, that Pompey called him, in derision, "the Roman Xerxes." His domestic service was on a scale of equal magnificence. A single dinner cost him $10,000.

Lucullus was not, however, a mere sensualist. He collected a fine library, which was open to the public; he enjoyed the conversation of philosophers and scholars, and himself wrote a work on the history of the Marsic War, composed in Greek. He was also the patron of the poet Archias, the friend of Cicero. His life was written by Plutarch, and in it may be found many curious anecdotes of this very remarkable and interesting man.

Lucŭmo. The title applied to the hereditary chiefs who ruled over each of the twelve independent tribes of the Etrurian nation. It would seem, also, to have been given to the eldest sons of noble families, who, by their right of primogeniture, would have a fairer claim to public offices and the honours of the State. The original Etruscan term was *Lauchmė*, and hence among the Latin writers we sometimes meet with the form *Lucmo*, as in Propertius (iv. 1, 29). See ETRURIA; TARQUINIUS.

Ludi. A term applied to the various contests and spectacles held in the Roman Circus and amphitheatre (*ludi circenses*) and those of the theatre (*ludi scaenici*) and stadium.

Games were either public (*publici*) or private (*privati*). PUBLIC GAMES were originally ceremonials connected with religion, the oldest being the Equirria, in honour of Mars, and the Consualia, in honour of Consus. (See EQUIRRIA; CONSUALIA.) Games were frequently exhibited in fulfilment of a vow (*ludi votivi*). Such were the seven great celebrations of the republican period—the Ludi Magni (or Maximi), the Ludi Plebeii, the Ludi Cereales, the Ludi Apollinares, the Ludi Megalenses, the Ludi Florales, and the Ludi Victoriae Sullanae. (See below.) Under the Empire many new games were introduced—in honour of the emperor's birthday (*ludi natalicii*) and games instituted at the conclusion of a great war (e. g. *ludi Parthici*, *ludi Alemannici*, *ludi Sarmatici*, etc.).

PRIVATE GAMES were those given by private individuals, and not by the emperor or by the State. The most usual private games were the *ludi funebres*, celebrated on the ninth day after death, and hence called *ludi novendiales*. Private games were also given by persons of high rank on any occasion of public thanksgiving (*ludi honorarii*.) Games given by the emperor for the benefit of invited guests alone were also classed as *ludi privati*.

Games were given in the Circus and amphitheatre, or in the theatre. Those in the Circus were races (see CIRCUS); those in the amphitheatre were gladiatorial contests (see GLADIATORES), or beast-baiting (see VENATIONES). (For the theatrical games and contests, see COMOEDIA; HISTRIO; MIMUS; PANTOMIMUS; THEATRUM; TRAGOEDIA.) There were also contests imported from Greece and called *agones*, either musical or athletic in their nature, for which, see ATHLETAE; CURSUS; HIPPODROMUS; PALAESTRA; PUGIL; STADIUM.

The games originally lasted for one day only; but in the later days of the Republic the duration of them was greatly extended — e. g. the Ludi Magni, or Romani, to sixteen days, the Ludi Plebeii to fourteen, the Ludi Cereales to eight, etc. Under the Empire the games were often continued through the night—a custom which probably began with the Floralia (Ovid, *Fasti*, v. 361 foll.).

The observance opened with a regular ritual, which was carefully carried out; and if it appeared that the *instauratio* had been in any way defective in form, the games were repeated (see Weissenborn on Livy, xxiii. 30, 16). The great games were administered by the consuls until B.C. 366, the date of the first creation of curule aediles. Down to the Empire, the praetors had charge of the Ludi Apollinares. The gladiatorial contests were frequently given under the direction of the quaestors.

The cost of the games was partly defrayed by the State from a special fund (*lucar*) originally formed from the income received from the sacred groves. The rest of the expense was borne by the giver of the games—i. e. the officials whose duty it was to administer them. The outlay was often so great as to deter many persons from aspiring to the curule offices (Dio Cass. liii. 2). Martial tells us that the chariot-races sometimes cost 400,000 sesterces ($16,000). Symmachus spent nearly $400,000 in this way; and Justinian's games cost $1,000,000. For an account of the magnificence of these exhibitions, see Calpurnius, *Ecl.* vii.; Dio Cass. lxviii. 15; Gibbon, ii. 58–60; and Friedländer, *Sittengeschichte*, ii. 319 foll. (2d ed.).

At the games, the emperor occupied a private box (*cubiculum*), and it is probable that seats were reserved by law for magistrates (consuls, praetors, tribunes, etc.) and priests and Vestals. Free seats were sometimes given in perpetuity to a distinguished man and his descendants (Cic. *Philipp.* ix. 7, 16). At ordinary games seats were (1) sold by the exhibitor to those who wished to avoid the crush; (2) given by him to his friends and to those who had by law a right to reserved places; or (3) opened free to the general public. Tickets for the first class of seats were often secured by speculators (*locarii*) and sold at a considerable advance. In early times, slaves were not allowed to attend the games; but this prohibition was afterwards either withdrawn or ignored. Roman citizens were obliged to wear the toga at the games; magistrates appeared in official costume. The exhibitor often gave presents to the spectators in the shape of things to be scrambled for (*missilia*). Cloaks could be worn over the toga in bad weather, and hats (*causiae*) as a protection from the sun. When the weather was bad and the wind so high that the awning (*velarium*) could not be used, the spectators were allowed to hold up their umbrellas (*umbracula*).

The following are the principal games mentioned by the ancient writers:

(1) Ludi Actiăci (Ἄκτια). Games in honour of the Actian Apollo, decreed by Augustus in B.C. 31 after his victory over Antony at Actium. They consisted at Rome of horse-races, gymnastic contests, and occasionally of gladiatorial contests. They were held every fourth year (Dio Cass. li. 19). See Actia.

(2) Ludi Apollinares. Games established in B.C. 212, in accordance with a prophecy of the seer Marcius, in honour of Apollo, the averter of evil. They were originally *ludi votivi*, and were given by the *praetor urbanus* (Livy, xxv. 12, 2). They were, to a large degree, a Greek festival. The *decemviri sacris faciundis* sacrificed with victims after the Greek fashion; the State supplied the victims, and also gave 12,000 *asses* to defray the expenses of the games, and the people aided with a small subscription (Livy, xxv. 12, 12–14). The next year the praetor L. Calpurnius Piso proposed that the games should be vowed each year, and hence the Calpurnii have the head of Apollo on their denarii (Mommsen, *Röm. Münzwesen*, pp. 580, 626). After this they were celebrated every year, but till B.C. 208 on no definite day. In consequence of a pestilence in that year, the praetor P. Licinius Varus voted that they should be held every year on a fixed day. That day was July 13, which always continued to be the last day on which these games were held. The number of days gradually increased from one till it finally reached eight, or perhaps nine. They were, for the most part, theatrical exhibitions from the very beginning (see the interesting story in Festus, s. v. *Thymelici*, p. 326 Müller); but sometimes there was a *venatio*, and Dio Cassius (xlviii. 33) speaks of a horse-race. In the Apollinarian games, held by Agrippa in B.C. 40, two days were given to the games of the Circus, during one of which the *ludus Troiae* was exhibited (Dio Cass. xlviii. 20).

(3) Ludi Augustales. See Augustales.

(4) Ludi Capitolini. Livy states (v. 50, 4) that in the year B.C. 390 (better 388), after the defeat of the Gauls, on the motion of Camillus, a decree of the Senate was passed that Ludi Capitolini should be instituted, inasmuch as Iupiter, the best and greatest, had preserved his settlement and citadel in a serious crisis, and that the dictator M. Furius should appoint for that purpose a *collegium*, consisting of those who dwelt in the Capitol and citadel (cf. Livy, v. 52, 11). As being administered by a *collegium*, the Capitoline games were like the Circensian games of the Fratres Arvales. After B.C. 384, when Marius Capitolinus was condemned, a motion was brought before the people that no patrician should dwell in the citadel or the Capitol (Livy, vi. 20, 3), so that from this time only plebeians could be members of this *collegium*.

For the guild of the Capitolini, see Cic. *Q. Fr.* ii. 5, 2. They had *magistri* of their own. Preller (*Röm. Myth.* 202) thinks this is a very old festival in honour of Iupiter Capitolinus, so old that it was attributed to Romulus (cf. Tert. *Spect.* 5). A curious ceremony was performed at these Capitoline games, from their supposed connection with a triumph of Romulus over Veii; or, as Mommsen holds, with the capture of Veii by Camillus in B.C. 396. An old man, who was considered to represent the king of Veii, was led through the Forum to the Capitol, dressed in regal attire and wearing a *bulla* suspended from his neck; and a herald accompanying him proclaimed the "sale of the Sardians," because the Veientines, being Etruscans, were supposed to have come from Sardis, in Lydia (Plut. *Quaest. Rom.* 53, p. 227).

(5) Ludi Cereāles or Ceriāles. See Ceres.

(6) Ludi Compitalicii. See Compitalia.

(7) Ludi Floralēs. See Floralia.

(8) Ludi Funebres. See above, p. 972.

(9) Ludi Honorarii. See above, p. 972.

(10) See Iuvenalia.

(11) Ludi Liberāles. See Dionysia, p. 521.

(12) Ludi Magni. See above, p. 972.

(13) Ludi Martiāles or Martis Ultōris. Games celebrated annually by the consuls (Dio Cass. lx. 5; lvi. 46), in honour of Mons Ultor. They included sometimes a mock sea-fight, *venationes*, etc.

(14) Ludi Megalenses. See Megalesia.

(15) Ludi Natalicii. See above, p. 972.

(16) Ludi Novendiāles. See above, p. 972.

(17) Ludi Palatīni. Theatrical exhibitions held on the 21st, 22d, and 23d of each January in a private theatre and before a specially invited audience, in honour of the divinity of Augustus (Dio Cass. lvi. 46; lix. 16; Tac. *Ann.* i. 73).

(18) Ludi Plebeii. Games held in the Circus Flaminius, and mentioned as early as B.C. 216 (Livy, xxiii. 30, 17). Now, as the Circus Flaminius was built in B.C. 220 (Livy, *Epit.* xx.), we may assign the establishment of the Ludi Plebeii to the same date, and also the *Iovis epulum* on the Ides (for all Ides were sacred to Iupiter) which is connected with these games (Livy, xxv. 2, 10; xxvii. 3, 9). We find from the Calendar of Philocalus (A.D. 354) that the Ludi Plebeii lasted till the fourth century. The date of them was originally Nov. 15, just as that of the Ludi Romani was Sept. 15 (*C. I. L.* i. 401). They were celebrated by the plebeian aediles; and already in B.C. 207 they lasted for more than one day (Livy, xxviii. 10, 7). In some early calendars — e. g. the Fasti Maffeiani—they are put down as lasting from Nov. 4 to Nov. 17. Dramatic performances formed a part of these games, as is seen from the didascalia to the *Stichus* of Plautus.

(19) Ludi Pontificāles. The same as the Ludi Actiaci. See above, p. 973.

(20) Ludi Romāni. Games held in honour of Iupiter, and said to have been established by Tarquinius Priscus on the occasion of his conquest of the Latin Apiolae (Livy, i. 35, 9); though Dionysius and Cicero refer their establishment to the victory over the Latins at Lake Regillus. At first they lasted for one day only; a second day was added on the expulsion of the kings in B.C. 509; a third after the first secession, B.C. 494. From the year 191 to 171 they lasted ten days (Livy, xxxvi. 2; xxxix. 22, 1), and shortly before Caesar's death they appear to have been a fifteen-day festival—from Sept. 5 to 19. After Caesar's death a day was added: this day must have been Sept. 4; and so it appears in the calendars of the Augustan period, the days of the games being Sept. 4 to 19. There was the *epulum Iovis* on the 13th, and the *equorum probatio* on the 14th. The games in the Circus lasted from the 15th to the 19th. In the Calendar of Philocalus (A.D. 354) they run from Sept. 12 to 15. The celebration was in the hands, at first, of the consuls; afterwards of the curule aediles.

We must not suppose that these games were regularly established as annual from the beginning. Games, as already stated, in many cases began from a vow made by the commander, and were celebrated as a special festival after his triumphal procession. As the army, however, used to go forth, as a general rule, each summer, it became customary, when it returned in autumn, to celebrate such games, though connected with no triumph, and though no signal victory had been gained. But still, in all cases, they were celebrated as extraordinary games, and not as games regularly established by law. They were *sollemnes*, "customary," but had not yet become *annui*. *Ludi magni* is the term applied to extraordinary games originating in a vow (*ludi votivi*), while *ludi Romani* is that applied to the games when they were regularly established as annual (*ludi stati*). The latter term—i. e. *ludi Romani*—is first used by Livy in viii. 40, 2 (see Weissenborn *ad loc.*); and after that the terms varied according as the games are *stati* (e. g. x. 47, 7; xxv. 2, 8) or *votivi* (xxii. 9, 10; 10, 7; xxvii. 33, 8; xxxvi. 2, 2; xxxix. 22, 2, etc.; Suet. *Aug.* 23). The final establishment of these games must lie between B.C. 367 and B.C. 322; and the year B.C. 367, when so many changes were effected, and when we are told a day was added to these games and curule aediles appointed to superintend them, seems most reasonable to assume.

The actual Ludi Romani consisted of, first a solemn procession (*pompa*); then a chariot-race, in which each chariot, in Homeric fashion, carried a driver and a warrior, the latter, at the end of the race, leaping out and running on foot (Dionys. vii. 72). This was a practice confined to the Ludi Romani. In the exhibitions of riding, each rider had a second horse led by the hand, as it appears the Roman horsemen, in early times, were in the habit of using two horses in battle (cf. Gran. Licinian. bk. xxvi.), like the Tarentini in Greek warfare (Livy, xxxv. 28, 8). Such riders were called *desultores* (Livy, xxiii. 29, 5). Originally, in all probability, there was only one contest of each kind, and only two competitors in each contest, as "may be inferred from the circumstance that, at all periods in the Roman chariot-race, only as many chariots competed as there were so-called factions; and of these there were originally only two—the white and the red" (Mommsen, *R. H.* i. 301, note). These few events allowed further minor exhibitions, such as boxers, dancers, competition in youthful horsemanship (*ludus Troiae*), etc. It was allowed that the wreath the victor won should be put on his bier when dead (Twelve Tables, 10, 7). During the festival, too, the successful warrior in real warfare wore the spoils he had won from the enemy, and was crowned with a chaplet. After the introduction of the drama in B.C. 364, plays were acted at the Ludi Romani. In B.C. 161 the *Phormio* of Terence was given at these games. See Mommsen, *Römische Forschungen*, ii. 42–57.

(21) Ludi Saeculāres. Games originally known as Ludi Terentīni. *Terentum* (from *terere*) was a volcanic cleft in the Campus Martius, at which even under the monarchy the Valerian gens sacrificed dark victims to Dis and Proserpina. Valerius Maximus (ii. 5, 2) tells a story of a certain Valesius who got his sons cured of a serious illness by giving them water from the Tiber boiled over this cleft; and these sons saw in the sleep that restored them to health a vision which ordered the sacrifice of dark-coloured victims to Dis and Proserpina on an altar to be found in the Terentum, and the celebration of *lectisternia* and nocturnal games for three nights in their honour. The altar was found deep buried, the sacrifice was offered, and from this sacrifice date the Ludi Terentini. We are told that P. Valerius Poplicola, first consul, in a case of pestilence offered the same sacrifice and held the same games, and thereby saved the State (Val. Max. l. c.). But this latter is a very old mistake, due to the confusion of the first consul with the L. Valerius Poplicola, consul in B.C. 449; for though we cannot be certain of any celebration of these games in B.C. 349, we have the most distinct evidence for their being held in B.C. 249 (cf. Varro *ap.* Censor. *De Die Natali*, 17, 18). The next celebration was not in B.C. 149, but in 146 (Censor. *op. cit.* 17, 11, who quotes contemporary authorities, Piso, Gellius, and Hemina). In the year

B.C. 49 religion was silent amid the turmoil of the Civil War, and the games were not solemnized till the well-known celebration of Augustus in B.C. 17. But why in that year?

There were many Greek myths (Lobeck, *Aglaoph.* 791 foll.) of certain ages of the world—the Golden Age, the Silver Age, etc.—mixed up with astronomical theories of the whole order of the universe beginning anew when the planets returned to their original positions after what was called the *magnus annus*. The same series of people would reappear on earth and repeat again the various exploits of their lives (cf. Verg. *Ecl.* iv. 34 foll.). Among these myths was one that the cycle began anew after four periods of 110 years each (cf. Probus *ad* Verg. l. c.; and Varro *ap.* St. August., *De Civ. Dei*, xxii. 28). Again, there was an influence from Etruria. Just as at Rome at the end of every five years there was a propitiatory offering made to the gods for the people, so in Etruria a similar sacrifice was made at the beginning of what they considered a *saeculum*—i. e. that space of time which embraced even the longest life. The propitiatory offering was made for all alive at the time: when that whole race had passed away, the gods signified that the cycle was over by sending prodigies, and a new sacrifice had to be offered (Censor. *op. cit.* 17, 5). The first four *saecula* of the Etruscans lasted 100 years each, the fifth 123, the sixth and seventh 119 (Varro *ap.* Censor. l. c.): so that something over 100 years was the average *saeculum*. The definite Greek theory that the *saeculum* lasted 110 years was taken up by the Quindecimviri (Hor. *Carm. Saec.* 21), and in the interest of Augustus they proceeded to invent celebrations for B.C. 456, 346, 236, 126, Augustus's games being celebrated in the last year of the *saeculum*, B.C. 17.

The successors of Augustus celebrated the secular games according to different kinds of computation. Claudius, says Gibbon, did not treat the oracle with implicit respect. He celebrated the games, "which none had ever seen before," in the eight hundredth year of the city (A.D. 47), with an actor who had taken part in the secular games of Augustus (Pliny, *H. N.* vii. § 159). Domitian celebrated them in A.D. 87, six years too early if they were to be 110 years after those of Augustus. (See Suet. *Domit.* 4; Tac. *Ann.* xi. 11.) Antoninus Pius in the year 900 of the city (A.D. 147) celebrated them (Aurel. Vict. *Caes.* 15, 4), while Sept. Severus held them 220 years after Augustus, in A.D. 204. The last celebration was in the thousandth year of the city (A.D. 247) by the emperor Philip (Eutrop. 9, 3; Eckhel, vii. 323, 324). It may be that Gallienus in A.D. 257 (Eckhel, vii. 409; viii. 22) held them as an extraordinary solemnity in a period of great trouble (Trebell. Pollio, *Gall.* 5), and Maximian, in A.D. 304, certainly intended to hold them, but does not appear to have carried out his intention: so from Philip's time we may say that the secular games disappear till they were revived in the Middle Ages as the Papal Jubilees instituted by Pope Boniface VIII. in the year 1300 (Gibbon, i. 327, 328; viii. 217, ed. Smith).

The Ludi Terentini, then, and their continuation, the Ludi Saeculares, are not a really genuine Roman ceremony. They rest on reference to the Sibylline Books (Hor. *Carm. Saec.* 5), are celebrated by the Quindecimviri outside the Pomoerium (that the gods of the lower world might not be brought inside the city), the gods honoured are not Roman, and the Roman antiquarians considered the solemnities to be derived from Etruria (Censor. *l. c.*).

The rites of the celebration are given by Zosimus (ii. 5), who also quotes *verbatim* the Sibylline oracle ordering the celebration. His account is as follows: Heralds summoned the people to the spectacle they had never seen before and never would see again. Then in the Capitoline temple of Iupiter and the Palatine temple of Apollo, the Quindecimviri gave to all present (slaves excluded) purificatories (*καθάρσια, suffimenta*), consisting of torches, sulphur, and bitumen; and in the same temples, and that of Diana on the Aventine, wheat, barley, and beans were given to the people to make an offering with, though Zosimus says these were to be given to the actors in the games. Then began the feast, which lasted three nights and three days. Offerings were made to Iupiter, Iuno Lucina, Apollo, Latona and Diana, the Fates, Demeter (*Tellus*, Hor. *Carm. Saec.* 29), Pluto, and Proserpina. On the first night, at the second hour, the emperor, with the assistance of the Quindecimviri, sacrificed to the Fates, at the Terentum, on the border of the Tiber, three rams on three altars, letting the blood flow all over the altars, and then thoroughly burned the victims. A stage was then erected, the people lighted torches, a newly-composed hymn was sung, and splendid shows exhibited: for the oracle had said that the grave was to be mingled with the gay. On the next day a sacrifice was made on the Capitol of white bulls to Iupiter and a white cow to Iuno, in accordance with the oracle, and then in the theatre there were dramatic representations in honour of Apollo. On the second night a white pig and a white sow were sacrificed to Tellus, in accordance with the oracle, and dark victims offered to Dis and Proserpina, at an altar of which some remains were discovered in the winter of 1886–87. On the second day the matrons offered supplications and sang hymns to Iuno on the Capitol; and on the third day in the Palatine temple of Apollo there was a sacrifice of white oxen, and thrice nine noble boys and maidens whose parents were still alive (*ἀμφιθαλεῖς, patrimi ac matrimi*) sang hymns in Greek and Latin for the preservation and prosperity of the Roman Empire. Such a hymn was called *Carmen Saeculare*, and we still possess the one which Horace wrote for the celebration of the games by Augustus.

A most interesting inscription containing an official report of the Augustan pageant was discovered September 20, 1890. It was cut upon a block of marble and contained 168 lines of minute writing. The inscription has been edited by Prof. Mommsen (Rome, 1891), and is the subject of an excellent popular article by Prof. Lanciani in the *Atlantic Monthly* for February, 1892.

(22) LUDI SEVIRALES. The same as the Ludi Martiales.

(23) LUDI TAURII. Games in honour of the infernal gods (*Fest.* p. 350, Müller). They included a chariot-race in the Circus. The name is possibly derived from *taura* or *taurea*, a barren cow sacrificed to Proserpina. For an absurd etymology, see Varro, p. 351.

(24) LUDI TERENTĪNI. See LUDI SAECULARES above.

(25) LUDI VICTORIAE CAESĂRIS or LUDI VENĔRIS GENETRĪCIS. Games first celebrated by Iulius Caesar in B.C. 46, on the dedication of the temple of Venus Genetrix, which had been vowed at the

battle of Pharsalia. (See Suet. *Aug.* 10; Dio Cass. xlix. 42.) They were held in July, from the 20th to the 30th. Venus Genetrix was in these identified with Victoria, on which see Gellius, x. 1, 7, and Mommsen in the *C. I. L.* i. 397.

(26) Ludi Victoriae Sullānae. Games established by Sulla in B.C. 82 (Vell. Paterc. ii. 27).

(27) Ludi Volcanalĭci. Games established probably after the recovery of the standards of Crassus from the Parthians by Augustus. They were celebrated in the temple of Vulcan outside the city, on the 23d of August (Plut. *Quaest. Rom.* 47; Mommsen, *C. I. L.* i. 400).

(28) Ludi Votīvi. See above, p. 972.

On the games in general, see Friedländer's *Sittengeschichte*, ii. 263–289, 3d ed.; id. in Marquardt, *Röm. Staatsverwaltung*, iii. 462–475; and Mommsen in the *C. I. L.* i. pp. 293–412.

Ludi Actiăci. See Actia.

Ludias. See Lydias.

Ludus Litterarius (*διδασκαλεῖον*). A school.

I. Greek. Of education in the Homeric Age one cannot affirm anything with certainty. Achilles is represented as having a sort of rhetorical training under Phoenix (*Il.* ix. 414), and in music and the healing art under the Centaur, Chiron; and noble youths are spoken of as undergoing a course of instruction in arms and martial exercises. Cf. Plut. *De Educ. Liberis*, 12.

In later times, the Ionic States of Greece paid great attention to literary as well as to physical culture. Herodotus (vi. 27) speaks of a boys' school at Chios as early as B.C. 500 with 120 pupils. A decree of the Mitylenaeans is given by Aelian (vii. 15) in which the prohibition of schools is made a punishment for disloyal allies. Diodorus (xii. 12) states that Charondas (*circa* B.C. 550) passed a law for Thurii giving to all boys a literary training at the public cost. (See Polyb. xxxi. 17; Hirschfeld in *Hermes*, ix. 501; and Plato, *Crit.* 50 D.) The Spartans, on the other hand, and in fact the Dorians in general, paid much more attention to physical than to mental training, and any literary education was given to a boy at the expense of his parents and not by the State. Cf. Plato, *Hipp. Maior*, p. 285 C; and the articles Bidiaei; Education; Paedonomi.

For the purposes of the present article we may take the schools of Athens as representing the higher development of secondary education in ancient Greece. There is no positive evidence that at Athens the State exercised any direct control over the schools, though a law of Solon required parents and guardians to provide boys with a suitable education (Plato, *Crit.* 50 D). There were no girls' schools at Athens, but such training as the daughters of a family received was from their mothers, and consisted chiefly of the domestic arts of sewing, spinning, etc.

School Period.—From the age of six, a boy was intrusted to a *paedagogus* (q. v.), who conducted him everywhere—to school, to the palaestra, etc.—carrying his books, tablets, and other school requisites. This is explained by Plato, who says that, if animals have care-takers, of course the boy must, "being the most unmanageable of all animals" (*De Leg.* vii. 808 D). The school began early in the morning, and ended at sunset, according to Solon's law, but there was an interval for luncheon at mid-day. In grammar-schools the Musea was a school festival, and there were holidays at great festivals, so much so that in the month Anthesterion there was comparatively little time for school (Theophr. 22).

Subjects of Study.—The regular school course (*ἐγκύκλιος παιδεία*) was intended to convey, besides mere reading and writing, a knowledge of the poets, and proficiency in music and gymnastics. In the time of Socrates some mathematical training was added, and at least a knowledge of simple arithmetic was universally imparted. This mere reckoning, however, was taught mainly at home by means of a calculating-table (see Abacus; Mathematica); and accordingly Aristotle (*Pol.* v. or viii. 1) speaks of three usual subjects, *γράμματα*, *γυμναστική*, and *μουσική*, the last including *γράμματα*. The elementary reading-lesson was sometimes made easy and attractive by methods like those of the modern kindergarten, the use of ivory letters, etc. (Cf. Plato, *De Leg.* vii. 819 D.) Grasberger cites from Philostratus (*Vit. Soph.* ii. p. 240) a device of Herodes, who gives to a dull pupil twenty-four companions named from the letters of the alphabet to aid his memory.

For the method of teaching writing, see Plato, *Protag.* 326 D. The literary course consisted of reading and explaining the best poets, such as Homer, Hesiod, Theognis, Phocylides; but more especially Homer. In Xen. *Symp.* iii. 5, Niceratus says, "My father, to make me a good man, compelled me to learn all the poems of Homer, and now I could say by heart the whole *Iliad* and *Odyssey*." This poetical training was intended to impart a knowledge of mythology and philosophy (especially through the maxims), as well as taste and power of expression. Of course time was less occupied than now, since there was no language, natural science, or history to be learned.

To this literary course was sometimes added special teaching in tactics and strategy for those who looked to a military career; and drawing was taught before the time of Aristotle, having been, according to Pliny, introduced by Pamphilus (the teacher of Apelles), first at Sicyon, whence it spread over Greece, and was regarded for all sons of citizens a most important branch of education—slaves might not learn it (Pliny, *H. N.* xxxv. § 77). It was chiefly correct outline drawing without colour, on boxwood tablets. The musical teaching began at twelve or thirteen, and was so managed that the pupils might appreciate and accompany lyric poetry. It should be observed that the instrument taught was the lyre: the flute, a favourite instrument at Thebes, and once commonly learned at Athens, was tabooed, except for professionals, about the time of the Peloponnesian War. The *διδασκαλεῖα* lasted till *ἥβη*—i. e. till sixteen; and afterwards for those of the richer classes, who wished for advanced learning, came the schools of the rhetoricians and sophists, who taught various departments of knowledge.

Place of Education.—The school-room itself was called *διδασκαλεῖον* or *παιδαγωγεῖον*; also *φωλεόν*, or *φωλεός*. Some, indeed, maintain that the *παιδαγωγεῖον* was only an ante-room, where the paedagogi sat and waited; but Grasberger (vol. ii. 207) remarks that it was unlikely that so poor a school as that of Elpias would have an ante-room, and cites Philostratus (*Vit. Soph.* ii. 263) to show that the paedagogi sat with their charges. In Roman times certainly we have Remmius Palae-

Athenian School. (From the Duris Vase.)

mon, as paedagogus, learning more than the schoolboys from the lesson (Suet. *Gr.* 23). Some schools had not even one room, but were held in the open air, as by Dionysius the Younger (Gell. xxi. 5). This, however, is only in the case of the very poor; even the father of Aeschines is described by Demosthenes as in a school-room, and Demosthenes contrasts that establishment with the respectable (*προσήκοντα*) schools to which he went himself. The boys sat on benches (*βάθρα*), the master on a chair (*θρόνος*). See the rather unattractive picture in Libanius (iv. p. 868), where we are told that the master "sits aloft, like a dicast, with an awful frown and an expression of implacable wrath, before which the pupil must tremble and cringe." In the vase-picture given above we see the various departments, each group representing a class: (1) repetition of poetry; (2) music lesson on the lyre (where both teacher and pupil sit, and both have laid aside the *himation* to give free play to the arms); (3) the writing-master with a tablet (or possibly a master correcting an exercise); (4) a singing-lesson, where the master is not teaching the forbidden flute (see above), but giving a note from it. On the walls are articles of the school apparatus — book-roll, tablets, lyre, geometrical instrument (?), drinking-vessel, basket for books. It is a disputed question whether the seated spectators are government inspectors, paedagogi, or parents, and the question is so impossible to decide that the picture unfortunately cannot be made an argument for the presence of any one of the three at the lesson.

School-fees. — The poor status of the Athenian school-master (*γραμματιστής*) is sufficiently established. He was ill-paid, and often did not receive his payment at all. This does not apply to the sophists in the more advanced schools, who were able to charge as much as 100 minae ($1800) for their complete course to each pupil; and the chairs founded in later times by Hadrian had a stipend of 100 minae a year attached to them. See EDUCATION, p. 572.

II. ROMAN. At Rome, education, though not made obligatory by any law, was always considered important. In early days, however, the father himself generally taught his son (Pliny, *Ep.* viii. 14; cf. Plaut. *Most.* i. 2, 42). So Servius Tullius is said to have been taught by King Tarquin; and of Cato the Elder it is said, as part of his conservatism, that he taught and trained his own son (Plut. *Cat. Mai.* 20). This old training no doubt consisted much in living with the father and learning his business of public life; but there was also direct instruction in reading, writing, and arithmetic (i. e. reckoning), and in saying by heart the Twelve Tables (q. v.), which formed a sort of catechism to the Roman of the old school. But it of course often happened that the father lacked either the ability or the inclination to teach his son, and so arose the custom of wealthy parents employing educated slaves or freedmen as private tutors at home. Livius Andronicus, late in the third century B.C., was so employed by Livius Salinator; Augustus so employed the freedman Verrius Flaccus to teach his grandsons; and in some cases, when the teacher was a slave, his master let him teach a class of outsiders and so made a profit (Plut. *Cat. Mai.* 20). It is probable, however, that even in the earliest times there were schools to which those who could neither teach themselves, nor provide competent slaves as teachers, sent their children, boys and girls alike. Plutarch (*Rom.* 6) represents Romulus and Remus as learning at a school at Gabii; and, in less purely legendary times, there is no reason to discredit the account of Virginia going to school (Livy, iii. 44), or of the schools at Falerii (Livy, v. 44) and Tusculum (Livy, vi. 25) early in the fourth century B.C.

Against this has been adduced by some the passage of Plutarch (*Quaest. Rom.* 59), which states that Spurius Carvilius was the first person who opened a school (*γραμματοδιδασκαλεῖον*) at Rome, B.C. 231; but Plutarch probably only means that Carvilius was the first *grammaticus* or teacher of the more advanced literary schools, which came in along with the influence of Greek literature, and he does not thereby negative the elementary schools mentioned by Livy (and indeed by himself elsewhere) as existing much earlier. It is necessary, therefore, to distinguish (1) *litterator*, or *magister litterarius* (= *γραμματιστής*), the elementary school-master; (2) *grammaticus* (also *litteratus*), a more advanced teacher; (3) *rhetor* (Apul. *Flor.* 20). Private teachers were employed in later as in older times by many men of high station; but still, except the imperial family, it was common for those of the highest rank to send their sons to schools. Thus we find Sulla sending his son Faustus to the school in which Cassius also was being educated; and Ausonius, a man of the highest rank in the State, recommends school education in a passage cited below. The question whether home or school education is to be preferred is discussed by Quintilian (*Inst. Or.* i. 2), with a result in favour of the latter, and the arguments on either side have a striking resemblance to those which are used at the present day.

Place.—The elementary schools and those of the *grammatici* were usually in a veranda partly open to the street, and the school-room is accordingly called *pergula*, *taberna*, or *porticus* (Suet. *Gr.* 18; Juv. xi. 137; Livy, iii. 44, vi. 25; Eumen. *Pro Inst. Schol.* 20). Hence the noise of teaching and of punishing was audible through the street and annoying to the neighbours (Mart. xii. 57). Boys and girls were taught in the same school, as is shown alike by passages such as Mart. viii. 3, ix.

68; Ovid, *Trist.* ii. 369, and by old paintings which have been discovered.

School-hours.—The school began early, even before dawn (Mart. ix. 68); so that the boys brought lamps with them (Juv. vii. 226). There was a break for the prandium, after which the school was continued. Each boy was accompanied from his home by his paedagogus, or slave, who acted as a sort of private tutor both in regard to control and not unfrequently in teaching, also called *custos*, and by an inferior slave called *capsarius*, carrying the books and tablets. Juvenal (vii. 222 foll.) describes for us the school-room; the busts of the poets blackened by smoke from the scholars' lamps, the master seated on his chair (*cathedra*), while his class stood before him or sat on benches (*subsellia*). We hear also of wall-maps in a remarkable passage of Eumenius, a teacher at Autun at the end of the third century: "The boys should have daily before their eyes on the walls all lands and seas, all cities and peoples, comprehended under our Empire; for the name and position of places, the distances between them, the source and outflow of rivers, the coast-line with all its sea-board, its gulfs and its straits, are better taken in by the eye than by the ear" (*Pro Inst. Schol.* 20; cf. Propert. v. 3, 37). There were also tables of authors and of dates hung up (see Marquardt, *Privatleben*, 109).

Discipline.—That this was generally severe may be seen from the line of Juvenal (i. 15), *et nos ergo manum ferulae subduximus*, and from the abundant illustrations given by Professor Mayor on that passage. Zonaras mentions that the prince Arcadius was flogged by Arsenius without apparently any objection from the emperor Theodosius. Arsenius, however, seems to have been a private tutor, teaching only the emperor's children. Quintilian (i. 3, 14) argues against corporal punishment altogether. On the other hand, prizes were given to encourage the industrious—some valuable or prettily got-up book (Suet. *Gr.* 17). Prizes are mentioned also at Athens in the Roman period for the best ἐγκώμιον or essay. Few passages will

School Flogging.

better give an idea of a Roman school than the idyl (iv.) which Ausonius (once tutor to Valentinian's sons, but afterwards a count of the Empire and consul) addresses to his grandson, just going to school.

School-time and Holidays.—The Roman school year began on March 24, after the Quinquatria, when the new boy brought his entrance-fee (*Minerval*). Sometimes the money for the whole previous year was brought then (Juv. vii. 242), but (as appears from Hor. *Sat.* i. 6, 72) it was usually paid each month; and this is prescribed by an edict of Diocletian (*C. I. L.* iii. 831). The regular holidays or vacation were the week at the Saturnalia in December and the five days at the Quinquatria in March, but there was also a holiday on each of the *nundinae* (Suet. *Gr.* 7), and at the time of the important games.

Subjects of Study.—The school life began usually at seven years of age (Quint. i. 1, 15); but no doubt in most cases there was some earlier home instruction. Tacitus (*Dial.* 29) mentions, with no approval, the custom of having a Greek maid, like a *bonne*, for children to give them an early familiarity with the Greek language. In the elementary schools the course consisted of reading, writing, and simple arithmetic. Quintilian mentions the system of making the reading-lesson attractive by using ivory letters, as mentioned above in Greek schools. The writing-lesson was on a wax tablet, with lines or furrows (*sulci*) to guide the hand (Quint. i. 1, 27). Arithmetic was of great importance in the Roman judgment, and we find from an edict of Diocletian that the arithmetic master (*calculator*) was paid more highly than the teacher of reading and writing. In the schools of the grammarians came the study of poets. This school differed from the elementary school, because that was training merely for the bare necessities of practical life, while the grammar school (if we may so term it) was nearer the ideal Greek training, an *eruditio liberalis* or "liberal education" (Cic. *Tusc.* ii. 11, 27). The central point was to read with full explanation Greek and Latin poets; the boy must first learn to read the poet with understanding and with correct emphasis. It is clear that the Romans, like the Greeks, laid the greatest stress on elocution, for eloquence under the Republic was the only avenue to power (Tac. *Dial.* 37), and the school was intended to train the utterance as well as to supply a flow of words.

With this object the master read over the passage and made the class repeat it (*reddere dictata*); expressed also by the word *praelegere* (Mart. i. 36; Quint. i. 8, 8). Besides this, however, the passage was thoroughly threshed out as to its meaning, its metre, and the questions of geography, history, mythology, and ethics connected with it (Quint. i. 4, 4; Cic. *Verr.* i. 18, 47; Tac. *Dial.* 30). The questions raised were, however, often extremely trivial, "the name of Anchises' nurse," etc. (Juv. vii. 235, with Mayor's note). There were also learning by heart and practice in verse composition: prose belonged to the rhetorical school, when that was established as separate from the grammatical. As regards the authors read, Homer universally held the first place (Hor. *Epist.* ii. 2, 42; Quint. i. 5, 8; Pliny, *Epist.* ii. 14), and next, perhaps, the favourite was Menander (Ovid, *Trist.* ii. 23), and then the great tragedians. We have an account of the books read in the school kept by the father of Statius at Naples, and the list comprises Homer, Hesiod, Theocritus, Pindar, Ibycus, Stesichorus, Sappho, Corinna, Callimachus. It is possible, as Friedländer remarks, that at Naples, as a town preserving Greek life and habits, Greek literature might be more deeply studied than elsewhere. The Latin authors most read in the first century were Vergil, Horace, and Lucan. A reaction took place

as to the literature in vogue about A.D. 100, and, in place of the authors of the Augustan Age, the older prose writers and the poets of the third century B.C. —Gracchus, Naevius, Ennius, Plautus, Attius, and Lucilius—were adopted as school-books. This was at the time when Hadrian preferred Cato to Cicero, Ennius to Vergil. Fronto, the teacher of Marcus Aurelius, was a leader in the depreciation of the Augustan writers. Music began to be studied towards the end of the first century—a mark of Greek influence (Sen. *Epist.* 88, 9; Suet. *Tit.* 3); and the above course, with the addition of geometry, formed what Quintilian calls the ἐγκύκλιος παιδεία, with which the majority were content. Many, however, proceeded to the school of the *rhetor*. Like the school of the *grammaticus*, this was originally formed after the Greek pattern. The early Latin rhetors, Plotius, etc., were not approved, and the censors in B.C. 92 closed the Latin schools of rhetoric, because, as they alleged, they were a pretence for idleness (Suet. *Rhet.* 1). In these schools prose authors took the place of poets; but the principal part was the prose exercise, which, for the beginner a mere prose narrative, passed on to the *declamatio*. The easier kind of *declamatio* was *suasoria*, on some historical and mythological subject, adopting some view on this or that story or point of history and arguing it. They advanced to *controversiae* or declamations on some legal point.

The status and emoluments of the school-masters, *grammatistae* and *grammatici* alike, were low. What their ordinary fee was, cannot, however, be determined. In Diocletian's time (when their position was probably better than when Juvenal wrote), the maximum fee for the *grammatistes* from each pupil was 50 denarii a month, and for the *grammaticus* 200 (*C. I. L.* iii. 831). The *rhetor* seems to have received twice as much as the *grammaticus*, and his emoluments were increased by the State endowments begun by Vespasian (Suet. *Vesp.* 18). Remmius Palaemon is cited as an instance of a wealthy *grammaticus*, and by a *rhetor* wealth was more often acquired. There were, besides, the turns of fortune, of which Juvenal speaks (vii. 197, with Mayor's note), and of which the emperor Pertinax (once a *grammaticus*) and Ausonius afford instances.

See Grasberger, *Erziehung und Unterricht im classischen Alterthum* (Würzburg, 1864–80), which is the most complete modern authority; with the works cited at the end of the article EDUCATION in this Dictionary.

Ludus Troiae. See TROIAE LUDUS.

Lugdunensis Gallia. A part of Gaul, which received its name from Lugdunum (Lyons), the capital city of the province. See GALLIA.

Lugdūnum. (1) A city of Gaul, situated near the confluence of the Rhodanus (Rhône) and the Arar (Saône) (Pliny, *H. N.* iv. 18). It was one of the places conquered by Caesar, and, a short time after his death, Munatius Plancus received orders from the Roman Senate to re-assemble at Lugdunum the inhabitants of Vienna (Vienne), who had been driven out of their city by the Allobroges (Dio Cass. xlvi. 50). In a little while it became very powerful, so that Strabo says it was not inferior to Narbo (Narbonne) in the number of its inhabitants. The ancient city did not occupy exactly the same spot as the modern one, but lay on the west side of the Rhône and Saône, while the chief part of Lyons is on the east side, at the very confluence of the two streams. At the extremity of the point of land formed by the two streams, and, of course, precisely corresponding with the southern extremity of the modern city, stood the famous altar erected by sixty Gallic nations in honour of Augustus (Livy, *Epit.* 137). At Lugdunum was established the gold and silver coinage of the province, and from this city, as a centre, the main roads diverged to all parts of Gaul. Here, too, was an immense aqueduct, remains of which still exist. The Palais des Arts of the modern city contains many specimens of Roman bronzes and other antiques found in the vicinity. The city was the seat of Irenaeus when bishop, and had witnessed severe persecutions of the Christians. In the third century it declined in importance, on account of the vicinity and rapid growth of Arelaté and Narbo. Lugdunum is said by Strabo to have been situate at the foot of a hill. In Keltic, *dun* signifies "a hill," and from this comes the Latin termination *dunum*. The earlier name is said by Dio Cassius (*l. c.*) to have been Lugudunum (Λουγούδουνον). (2) A city of the Batavi, in Germania Inferior, now Leyden. The modern name is said to be derived from that of Leithis, which it took in the Middle Ages. (See BATAVA.) (3) CONVENĀRUM. The chief town of the Convenae in Aquitania, now St. Bertrand de Comminges. See CONVENAE.

Luggage. See IMPEDIMENTA.

Lumĭna. See SERVITUTES.

Luna. The goddess of the Moon. See SELENÉ.

Luna. Now Luni; an Etruscan town, situated on the left bank of the Macra, about four miles from the coast, that once formed part of Liguria, but became the most northeasterly city of Etruria when Augustus extended the boundaries of the latter country as far as the Macra. It possessed a large and commodious harbour at the mouth of the river called LUNAE PORTUS (Gulf of Spezzia). In B.C. 177 Luna was made a Roman colony. It was celebrated for its white marble, from the time of Iulius Caesar. The quarries now take their name from the neighbouring town of Carrara.

Lunae Montes. Mountains believed by ancient geographers to extent through the interior of Africa, covered with snow, and containing the sources of the Nile (Ptol. iv. 8, 3, 6).

Lunch. See CENA; PRANDIUM.

Lupa. A she-wolf; an animal held in great veneration at Rome, because Romulus and Remus were fabled to have been suckled by one. See ROMULUS.

Lupa. A prostitute. See MERETRIX.

Lupānar. A brothel. See MERETRIX.

Lupātum. A curb-bit with sharp prickers resembling the teeth of a wolf (*lupus*); hence the name. See FRENUM.

Luperca. See LUPERCALIA.

Lupercal. A cave at the foot of the Palatine Hill, consecrated by Evander to the god Pan, who was identified with Lupercus by the Latins, as protecting the flocks from wolves (*lupos arcens*) (Serv. *ad Aen.* viii. 343). See LUPERCALIA.

Lupercalia. A festival held in Rome from time immemorial on February 15. It was in honour of Faunus, who was worshipped under the name Lu-

percus in the Lupercal, a grotto in the Palatine Mount. His wife LUPERCA or LUPA was sometimes identified with Acca Larentia. (See ACCA LARENTIA; FRATRES ARVALES.) The object of the festival was, by expiation and purification, to give new life and fruitfulness to fields, flocks, and people. The cult was originally administered by two confraternities, which were chosen from the members of the Fabian and Quintilian families, and were named in consequence Luperci Fabiani and Luperci Quintiliani. To these was added in B.C. 44 that of the Luperci Iulii in honour of Caesar. In consequence of the Civil Wars the cult fell into desuetude, but was renewed by Augustus. In imperial times the members of these *collegia* were commonly of equestrian standing, and retained the name of Luperci even after leaving the body. The festival was observed until A.D. 494, in which year Bishop Gelasius I. changed it into the Feast of the Purification. See Fleury, *Hist. Ecclés.* xxx. 41.

The procedure at the Lupercalia was as follows: After the Flamen Dialis had sacrificed some he-goats and a dog, two youths were touched on the forehead with a knife, smeared with the blood of the goats. It was then immediately wiped off with wool dipped in milk, whereupon they were bound to laugh. After the sacrificial feast the Luperci, crowned and anointed, and naked, except for an apron of goat-skin, ran round the ancient city on the Palatine with thongs cut from the skin of the sacrificed goats in their hands. On their course, women used to place themselves in their way to receive blows from the thongs, which was believed to be a charm against barrenness. (See Mannhardt, *Mythologische Forschungen*, pp. 113 foll.) The thongs were called *februa*, from the old word *februare*, "to purify"; the day, *dies februatus*, "the day of purification"; and the whole month, *Februarius*, "the month of purification." For the possible connection with totem-worship, see A. Lang, *Myth, Ritual, and Religion*, ii. 177 and 213.

Luperci. See LUPERCALIA.

Lupercus or Sulpicius Lupercus Servastus Iunior. A poet, who appears to have lived during the latter period of the Western Empire. He has left an elegy on cupidity and a sapphic ode on old age, printed in the *Poetae Latini Minores* of Bährens, iv. 107.

Lupiae or Luppiae. A town in Calabria between Brundisium and Hydruntum.

Luppia or Lupia. The modern Lippe; a river in the northwest of Germany, falling into the Rhine at Wesel in Westphalia, and on which the Romans built a fortress of the same name.

Lupus Ferreus. A grappling-iron used in repelling the attacks of a ram. See Livy, xxxiii. 3.

Lupus, RUTILIUS. The author of an extant rhetorical treatise in two books, entitled *De Figuris Sententiarum et Elocutionis.* He appears to have lived in the time of Nero. His work is chiefly valuable for well-translated extracts from Greek orations now lost. It is probably an abridged translation of one of the rhetorical works of Gorgias, but in its present shape is incomplete. It is printed in the *Rhetores Latini Minores* of C. Halm, pp. 3–21 (Leipzig, 1863), and has been edited with explanatory notes by Jacob (Lübeck, 1837) and Draheim (Berlin, 1874). See C Schmidt, *De Rutilio Lupo* (Breslau, 1865).

Lurco, M. AUFIDIUS. The maternal grandfather of Livia, wife of Augustus Caesar. He was tribune of the plebs in B.C. 61, and is also remembered for having been the first person at Rome who dealt in peacocks on a large scale, fattening them for food.

Luscīnus. See FABRICIUS.

Luscius Lavinius or Lanuvīnus. A Roman playwright only known to us as the bitter critic of Terence, who calls him *malevolus vetus poeta.* See Ter. *Andr.* prol. 15; *Heaut.* 16; *Phorm.* prol. 1; *Eun.* prol. 9; *Adelph.* 1.

Lusitania, Lusitāni. See HISPANIA.

Lusōnes. A tribe of the Celtiberi in Hispania Tarraconensis.

Lustratio (*κάθαρσις*). A purification (1) as preliminary to entering holy places; (2) to remove the taint of blood-guiltiness; (3) at birth, marriage, and death; (4) a purification of houses, temples, cities, or people on special occasions—e. g. in Greece at each meeting of the Ecclesia (q. v.), at the Mysteries (see ELEUSINIA), and at Rome at the Lupercalia (q. v.) or the formal *lustrum* (q. v.). See Tylor, *Primitive Culture*, ii. 388, and LUSTRUM.

Lustrum, among the Romans, was the purification, or absolution from sin, of the entire people. It took place at the close of each census (q. v.), commonly in May of the year following the censors' accession to office. The host of the people, horse and foot, in their newly constituted classes, was drawn up in full armour on the Campus Martius under the leadership of the censor to whom this duty fell by lot. The *Suovetaurilia*—a pig, ram, and bull—were carried three times round the whole army, and thereupon sacrificed to Mars, accompanied by a prayer of the censor in which he besought that the power of the Roman people might be increased and magnified, or, as it ran later, might be maintained entirely undiminished. The censor then led the army under his banner to the city gate, where he dismissed them, while he himself, as a token of the completed *lustrum*, drove a nail into the wall of a temple and deposited the new roll of citizens in the Aerarium. The last *lustrum* took place in A.D. 74, under Vespasian.

Lutatius Catŭlus. See CATULUS.

Lutatius Cerco, QUINTUS. A Roman consul who in B.C. 241 subdued a revolt of the Falisci.

Lute. See TIBIA.

Lutetia, or, more commonly, **Lutetia Parisiōrum** (Paris). The capital of the Parisii in Gallia Lugdunensis, was situated on an island (now La Cité) in the Sequana (Seine), and was connected with the banks of the river by two wooden bridges. Under the emperors it became a place of importance, and the chief naval station on the Sequana. Here Julian was proclaimed emperor, A.D. 360, at which time the name of the place was changed to Parisii. Remains of a great Roman bath belonging to a palace still exist near the Boulevard St. Michel. See Caes. *B. G.* vi. 3; vii. 58; Ammian. Marcel. xvii. 2, 8; xx. 4; and Hoffbauer, *Paris à travers les Ages* (1891 foll.).

Luxorius (also written **Luxurius**, and **Lusorius**). A Roman epigrammatic poet, who lived in Africa about the beginning of the sixth century A.D., during the Vandal domination. He sought to imitate Martial. We still possess eighty-eight

of his epigrams, mostly in elegiac metre, which are often coarse and always dull. He also wrote a Vergilian cento, and *versus serpentini*. See the *Poetae Latini Minores* of Bährens, iv. 267, 331, and 386 foll.; and the monograph by Klapp, *De Anthologiae Lat. Carminibus Nonnullis* (Wandsbeck, 1874).

Lyaeus (Λυαῖος, "care-dispeller"). A name of Dionysus (q. v.).

Lycabettus (Λυκαβηττός). The modern Mount St. George, a mountain in Attica, belonging to the range of Pentelicus, close to the walls of Athens on the northeast of the city. See ATHENAE.

Lycaea (τὰ Λύκαια). A festival celebrated in honour of Zeus on the Lycaean Mount in Arcadia. In the sacred enclosure on its highest peak, where, according to popular belief, no object cast a shadow, there was an altar of heaped-up earth, and before it two columns with gilt eagles on top of them, looking to the east. At the festivals, probably celebrated every ninth year, the priests, who alone were allowed to enter the precincts, offered mysterious sacrifices to the god, including a human sacrifice. These were said to have been instituted by Lycaon (q. v.), and were kept up till the second century A.D. The man who had been chosen by lot to perform the sacrifice was afterwards compelled to flee, and wandered about for nine years; like Lycaon, in the shape of a wolf, so the people believed. In the tenth he was allowed to return and regained his human form—i. e. the taint was removed. Besides the festival there were also athletic contests. See Pausan. viii. 38.

Lycaeus (Λυκαῖος) or **Lycēus**. A lofty mountain in Arcadia, northwest of Megalopolis, one of the chief seats of the worship of Zeus and of Pan, each of whom was therefore called Lycaeus. See LYCAEA.

Lycambes (Λυκάμβης). See ARCHILOCHUS.

Lycaon (Λυκάων). A mythical king of Arcadia, son of Pelasgus and Meliboea (daughter of Oceanus) or Cyllené, and father of Callisto. He is said to have founded on Mount Lycaeum the town Lycosura, the oldest that the sun looked upon, and to have sacrificed a child to Zeus on the altar he had raised on the highest peak of the mountain, on account of which he was changed into a wolf. (See LYCAEA.) Another legend relates that he had fifty impious sons. When Zeus came to them in the guise of a beggar, in order to put their contempt of the gods to the test, they followed the advice of Maenalus, the eldest, and set before him the entrails of a boy which had been mixed with the sacrifice. The god, however, threw the table over and killed Lycaon and his sons with lightning, with the exception of Nyctimus, the youngest, whom Gaea saved by firmly holding the right hand of Zeus. During the reign of Nyctimus the deluge connected with the name of Deucalion covered the land as a punishment for the impiety of Lycaon and his sons. See Pausan. viii. 2.

Lycaonia (Λυκαονία). A district of Asia Minor, forming the southeastern part of Phrygia. The people were, so far as can be traced, an aboriginal race, speaking a language which is mentioned in the Acts of the Apostles (xiv. 4) as a distinct dialect; they were warlike, and especially skilled in archery. Lycaonia belonged successively to the Persians, Syrians, Greeks, and Romans. Under Trajan it was united with the province of Cappadocia, but in the fourth century was made a separate province. Its chief town was Iconium.

Lycēum (Λύκειον). A sacred enclosure at Athens, dedicated to Apollo, where the polemarch originally held his court. It was decorated with fountains, plantations, and buildings, by Pisistratus, Pericles, and Lycurgus, and became the usual place of exercise for the Athenian youths who devoted themselves to military pursuits (Pausan. i. 19). Nor was it less frequented by philosophers, and those addicted to retirement and study. We know that it was more especially the favourite walk of Aristotle and his followers, who thence obtained the name of Peripatetics (Cic. *Acad.* i. 4). Here was the fountain of the hero Panops, and a plane-tree of great size and beauty, mentioned by Theophrastus (*Hist. Pl.* i. 11). The position commonly assigned to the Lyceum is on the right bank of the Ilissus. See GYMNASIUM.

Lycēus (Λύκειος). A surname of Apollo, the meaning of which is not quite certain. Some derive it from λύκος, a wolf, so that it would mean "the wolf-slayer;" others from λύκη, light, according to which it would mean "the giver of light;" and others again from the country of Lycia. See APOLLO.

Lychnĭdus (Λύχνιδος), more rarely **Lychnidium** (Λυχνίδιον) or **Lychnis** (Λυχνίς). The ancient capital of the Dessaretii in the interior of Illyricum, situated on a height on the northern bank of Lake Lychnitis. In the Middle Ages it was the residence of the Bulgarian kings. The modern name is Achrita.

Lychnītis (Λυχνῖτις). See LYCHNIDUS.

Lycia (Λυκία). A small district on the south side of Asia Minor, between Caria and Pamphylia. According to tradition, the most ancient name of the country was Milyas, and the earliest inhabitants were called Milyae, and afterwards Solymi; subsequently the Termilae, from Crete, settled in the country; and lastly, the Athenian Lycus, the son of Pandion, fled from his brother Aegeus to Lycia, and gave his name to the country. Homer, who gives Lycia a prominent place in the *Iliad*, represents its chieftains, Glaucus and Sarpedon, as descended from the royal family of Argos (Aeolids). He speaks of the Solymi as a warlike race, inhabiting the mountains, against whom the Greek hero Bellerophontes is sent to fight by his relative the king of Lycia. Besides the legend of Bellerophon and the Chimaera, Lycia is the scene of another popular Greek story, that of the Harpies and the daughters of Pandareos; and memorials of both are preserved on the Lycian monuments now in the British Museum. On the whole, it is clear that Lycia was colonized by the Greeks at a very early period, and that its historical inhabitants were Greeks, though with a mixture of native blood. The earlier names were preserved in the district in the north of the country called Milyas, and in the mountains called Solyma. The Lycians always kept the reputation they have in Homer as brave warriors. They and the Cilicians were the only people west of the Halys whom Croesus did not conquer, and they were the last who resisted the Persians. The principal rivers are the Xanthus (Echen-Chai) and the Limyrus. The principal cities were Xanthus, Patara, Pinara, Olympus, Mira, and Tlos. Since 1840 much has been done in the

way of exploration and excavation among the ruined cities of Lycia, especially by Sir Charles Fellows, who in 1846 brought back the remarkable sculptures now in the Lycian Room at the British Museum. The linguistic affinities of the Lycian language are as yet not certainly determined. See Savelsberg, *Beiträge zur Erklärung der lykischen Sprache* (1875–78). The few Lycian inscriptions are collected in the *Corpus Inscript. Lyc.* of Schmidt (1868). See Treuber, *Geschichte der Lykier* (1887).

Lycius. See Apollo.

Lycomēdes (*Λυκομήδης*). A king of Scyros, an island in the Aegean Sea, son of Apollo and Parthenopé. He was secretly intrusted with the care of young Achilles, whom his mother Thetis had disguised in feminine attire to prevent his going to the Trojan War, where she knew he must perish. (See Achilles.) Lycomedes rendered himself infamous for his treachery to Theseus, who had implored his protection when driven from the throne of Athens by the usurper Mnestheus. Lycomedes, as it is reported, either envious of the fame of his illustrious guest, or bribed by the emissaries of Mnestheus, led Theseus to an elevated place on pretence of showing him the extent of his dominions, and perfidiously threw him down a precipice, where he was killed. According to another account, however, his fall was accidental (Plut. *Thes.*; Pausan. i. 17; vii. 4; Apollod. iii. 13). See Theseus.

Lycon (*Λύκων*) (1) of Troas. A distinguished Peripatetic philosopher and the disciple of Straton, whom he succeeded as the head of the Peripatetic school, B.C. 272. (2) An orator and demagogue who, with Anytus and Meletus, accused Socrates. He was afterwards banished for his share in the prosecution. See Socrates.

Lycŏphron (*Λυκόφρων*). A grammarian and poet who was a native of Chalcis in Euboea, and lived at Alexandria under Ptolemy Philadelphus (B.C. 285–247). He was the author of an extant poem in 1474 iambic lines, entitled *Cassandra* or *Alexandra*, in which Cassandra is made to prophesy the fall of Troy, with numerous other events. The obscurity of this work is proverbial, and it is filled with obsolete words and long compounds. Among the numerous ancient commentaries on the poem, the most important are the scholia of Isaac and John Tzetzes, which are far more valuable than the poem itself. The earliest edition is that which appeared at Venice in 1513. It has since been edited by Bachmann (Leipzig, 1828), Kinkel (1880), and Scheer (1881). There is an English version by Lord Royston.

Lycophron also wrote a work on the history of Greek comedy and the comic poets, and composed tragedies now lost.

Lycopŏlis (*ἡ Λύκων πόλις*). A city of Upper Egypt, on the west bank of the Nile, between Hermopolis and Ptolemaïs. Its name was said to be derived from the fact that in its vicinity an Aethiopian army was once routed by wolves (Diod. ii. 88; Ael. *H. A.* x. 28), but more probably from its worship of the jackal (wolf) god Anubis.

Lycorēa (*Λυκώρεια*). An ancient town at the foot of Mount Lycorea, which was the southern of the two peaks of Mount Parnassus. (See Parnassus.) Hence Apollo derived the name of Lycoreus.

Lycŏris. See Cytheris.

Lycosūra (*Λυκόσουρα*). A town of Arcadia, on the slope of Mount Lycaeus, regarded by Pausanias (viii. 2, 4, 38) as the most ancient city in the world. It still contained some few inhabitants when he made the tour of Arcadia.

Lyctus (*Λύκτος*) or **Lyttus** (*Λύττος*). An important town in the east of Crete, situated on a height, eighty stadia from the coast. It is said to have been a Spartan colony.

Lycurgus (*Λυκοῦργος*). (1) A king of Thrace, who, when Bacchus was passing through his country, assailed him so furiously that the god was obliged to take refuge with Thetis. Bacchus avenged himself by driving Lycurgus mad, and the latter thereupon killed his own son Dryas with a blow of an axe, taking him for a vine-branch. The land became, in consequence, sterile; and his subjects, having been informed by an oracle that it would not regain its fertility until the monarch was put to death, bound Lycurgus, and left him on Mount Pangaeus, where he was destroyed by wild horses (Apollod. iii. 5, 1). (2) King in Arcadia, son of Aleus and Neaera, brother of Cepheus and Augé, husband of Cleophilé, Eurynomé, or Antinoë, and father of Ancaeus, Epochus, Amphidamas, and Iasus. Lycurgus killed Areïthoüs, who used to fight with a club. Lycurgus bequeathed this club to his slave Ereuthalion, his sons having died before him. (3) Son of Pronax and brother of Amphithea, the wife of Adrastus. He took part in the war of the Seven against Thebes, and fought with Amphiaraüs. He is mentioned among those whom Aesculapius called to life again after their death. (4) King of Nemea, son of Pheres and Periclymene, brother of Admetus, husband of Eurydicé or Amphithea, and father of Opheltes.

(5) A Spartan legislator of whose personal history we have no certain information; and there are such discrepancies respecting him in the ancient writers that many modern critics have denied his real existence altogether. The more generally received account about him was as follows: Lycurgus was the son of Eunomus, king of Sparta, and brother of Polydectes. The latter succeeded his father as king of Sparta, and afterwards died, leaving his queen with child. The ambitious woman proposed to Lycurgus to destroy her offspring if he would share the throne with her. He seemingly consented; but when she had given birth to a son (Charilaüs), he openly proclaimed him king, and as next of kin acted as his guardian. But to avoid all suspicion of ambitious designs, with which the opposite party charged him, Lycurgus left Sparta, and set out on his celebrated travels, which had been magnified to a fabulous extent. He is said to have visited Crete, and there to have studied the wise laws of Minos. Next he went to Ionia and Egypt, and is reported to have penetrated into Libya, Iberia, and even India. In Ionia he is said to have met either with Homer himself, or at least with the Homeric poems, which he introduced into the mother-country. The return of Lycurgus to Sparta was hailed by all parties. Sparta was in a state of anarchy and turbulence, and he was considered as the man who alone could cure the growing diseases of the State. He undertook the task; yet before he set to work he strengthened himself with the authority of the Delphic oracle and with a strong party of influen-

tial men at Sparta. The reform seems not to have been carried altogether peaceably. The new division of the land among the citizens must have violated many existing interests. But all opposition was overborne, and the whole constitution, military and civil, was remodelled. After Lycurgus had obtained for his institutions an approving oracle of the national god of Delphi, he exacted a promise from the people not to make any alterations in his laws before his return, and then he left Sparta to finish his life in voluntary exile, in order that his countrymen might be bound by their oath to preserve his constitution inviolate forever. Where and how he died nobody could tell. He vanished from the earth like a god, leaving no traces behind him but his spirit; and he was honoured as a god at Sparta with a temple and yearly sacrifices down to the latest times. The date of Lycurgus is variously given, but it is impossible to place it later than B.C. 825. Lycurgus was regarded through all subsequent ages as the legislator of Sparta, and therefore almost all the Spartan institutions were ascribed to him as their author. See SPARTA.

(6) An Athenian orator, and one of the warmest supporters of the democratic faction in the contest with Philip of Macedon. The time of his birth is uncertain, but he was older than Demosthenes; and if his father was put to death by order of the Thirty Tyrants, he must have been born previous to B.C. 404. But the words of the biographer are, as Clinton has justly remarked, ambiguous (*Fast. Hell.* ii. p. 151), and may imply that it was his grandfather who was put to death by the Thirty. Lycurgus is said to have derived instruction from Plato and Isocrates. He took an active part in the management of public affairs, and was one of the Athenian ambassadors who succeeded (B.C. 343) in counteracting the designs of Philip against Ambracia and the Peloponnesus. He filled the office of treasurer of the public revenue for three periods of five years (Diod. Sic. xvi. 88); and was noted for the integrity and ability with which he discharged the duties of his office. Böckh considers that Lycurgus was the only statesman of antiquity who had a real knowledge of the management of finance. He raised the revenue to twelve hundred talents, and also erected, during his administration, many public buildings, and completed the docks, the armory, the theatre of Bacchus, and the Panathenaic course. So great confidence was placed in the honesty of Lycurgus that many citizens confided to his custody large sums; and, shortly before his death, he had the accounts of his public administration engraved on stone, and set up in a part of the wrestling-school. An inscription, preserved to the present day, containing some accounts of a manager of the public revenue, is supposed by Böckh to be a part of the accounts of Lycurgus. After the battle of Chaeronea (B.C. 388), Lycurgus conducted the accusation against the Athenian general Lysicles. He was one of the orators demanded by Alexander after the destruction of Thebes (B.C. 335). He died about B.C. 323, and was buried in the Academia (Pausan. i. 29, 15). Fifteen years after his death, upon the ascendency of the democratic faction, a decree was passed by the Athenian people that public honours should be paid to Lycurgus. A brazen statue of him was erected in the Ceramicus, which was seen by Pausanias (i. 8, 3), and the representative of his family was allowed the privilege of dining in the Prytaneum. This decree, which was proposed by Stratocles, has come down to us at the end of the lives of the Ten Orators. Lycurgus is said to have published fifteen orations, of which only one has been preserved. This oration, which was delivered B.C. 331, is an accusation of Leocrates (*Κατὰ Λεωκράτους*), as Athenian citizen, for abandoning Athens after the battle of Chaeronea, and settling in another Grecian State. The best editions of Lycurgus are those of Osann (Jena, 1821), Mätzner (1836), Kiessling and Meier (1847), Rehdantz (1876), and Thalheim (1880). See also Dürrbach, *L'Orateur Lycurgue* (1890). Another excellent text is that of Bekker, in his *Oratores Attici*. The oration of Lycurgus is also found in the collections of Reiske and Dobson.

Lycus (*Λύκος*). (1) Son of Poseidon and the Pleiad Celaeno, married to Dircé. He assumed the government of Thebes after his brother Nycteus, for Labdacus, who was a minor; and, after the death of Labdacus, for his son Laïus. He was either killed by Amphion (q. v.) and Zethus, or (according to another account) handed the government of Thebes over to them at the behest of Hermes. (2) Son of Poseidon, tyrant of Thebes, killed by Heracles for murdering his father-in-law Creon during his absence and for plotting against his wife Megara and his children.

Lydda (*τὰ Λύδδα*). A town of Palestine, southeast of Joppa and northwest of Jerusalem, subsequently called Diospolis. Here St. George was said to have been born.

Lydia (*Λυδία*). A district of Asia Minor, in the middle of the western side of the peninsula, between Mysia on the north and Caria on the south, and between Phrygia on the east and the Aegean Sea on the west. Its boundaries varied so much at different times that they cannot be described with any approach to exactness till we come to the time of the Roman rule over western Asia. At that time the northern boundary, towards Mysia, was the range of mountains which form the northern margin of the valley of the Hermus, called Sardené, a southwestern branch of the Phrygian Olympus; the eastern boundary, towards Phrygia, was an imaginary line; and the southern boundary, towards Caria, was the river Maeander, or, according to some authorities, the range of mountains which, under the name of Messogis (Kastane Dagh), forms the northern margin of the valley of the Maeander, and is a northwestern prolongation of the Taurus. From the eastern part of this range, in the southeast corner of Lydia, another branches off to the northwest, and runs to the west far out into the Aegean Sea, where it forms the peninsula opposite to the island of Chios. This chain, which is called Tmolus (Kisilja Musa Dagh), divides Lydia into two unequal valleys, of which the southern and smaller is watered by the river Caÿster, and the northern forms the great plain of the Hermus; these valleys are very beautiful and fertile, and that of the Hermus especially is one of the most delicious regions of the earth. The eastern part of Lydia and the adjacent portion of Phrygia, about the upper course of the Hermus and its tributaries, is an elevated plain, showing traces of volcanic action, and hence called Catacecaumené (*κατακεκαυμένη*). In early times the country had another name, MAEONIA (*Μηονίη, Μαιονία*),

by which alone it is known to Homer, who is himself sometimes spoken of as Maeonides; and this name was afterwards applied specifically to the eastern and southern part of Lydia; and then, in contradistinction to it, the name Lydia was used for the northwestern part.

In the mythical legends the common name of the people and country, Lydi and Lydia, is derived from Lydus, the son of Atys, the first king. The Lydians appear to have been a race closely connected with the Carians and the Mysians, with whom they observed a common worship in the temple of Zeus Carius at Mylasa; they also practised the worship of Cybelé, and other Phrygian customs. Amid the uncertainties of the early legends, it is clear that Lydia was a very early seat of Asiatic civilization, and that it exerted a very important influence on the Greeks. The Lydian monarchy, which was founded at Sardis before the time of authentic history, grew up into an Empire, under which the many different tribes of Asia Minor west of the river Halys were for the first time united. Tradition mentioned three dynasties of kings: the Atyadae, which ended (according to the backward computations of chronologers) about B.C. 1221; the Heraclidae, which reigned 505 years, down to 716; and the Mermnadae, 160 years, down to 556. Only the last dynasty can be safely regarded as historical, and the fabulous element has a large place in the details of their history; their names and computed dates were: (1) Gyges, B.C. 716–678; (2) Ardys, 678–629; (3) Sadyattes, 629–617; (4) Alyattes, 617–560; (5) Croesus, 560 (or earlier) – 546, under whose names an account is given of the rise of the Lydian Empire in Asia Minor and of its overthrow by the Persians under Cyrus. Under these kings the Lydians appear to have been a highly civilized, industrious, and wealthy people, practising agriculture, commerce, and manufactures, and acquainted with various arts; and exercising, through their intercourse with the Greeks of Ionia, an important influence on the progress of Greek civilization. Among the inventions or improvements which the Greeks are said to have derived from them were the weaving and dyeing of fine fabrics; various processes of metallurgy; the use of gold and silver money, which the Lydians are said first to have coined, the former from the gold found on Tmolus and from the golden sands of the Pactolus (now Sarabat); and various metrical and musical improvements, especially the scale or mode of music called the Lydian, and the form of the lyre called the *magadis*. (See LYRA; MUSICA.) The Lydians had, also, public games similar to those of the Greeks. Their high civilization, however, was combined with a lax morality; and after the Persian conquest, when they were forbidden by Cyrus to carry arms, they sank gradually into a by-word for effeminate luxuriousness, and their very name and language had almost entirely disappeared by the commencement of our era. Under the Persians, Lydia and Mysia formed the second satrapy. After the Macedonian conquest Lydia belonged first to the kings of Syria, and next (after the defeat of Antiochus the Great by the Romans) to those of Pergamus, and so passed, by the bequest of Attalus III., to the Romans, under whom it formed part of the province of Asia.

The chief cities of Lydia were Sardes (Sart), Magnesia (Manissa), Thyatira (Ak Hissar), Philadelphia (Ala Shehir), and Hypaipa (Birghé). See Stark, *Nach dem griechischen Orient* (1874); Prof. Sayce, in the *Journal for Hellenic Studies* (1880); and Gregorovius, *Kleine Schriften zur Geschichte und Cultur*, vol. i. (1887). For the art of Lydia, see Perrot and Chipiez, *Hist. of Art in Phrygia, Lydia*, etc., pp. 232–301 (Lond. and N. Y. 1892). For Lydian numismatics, see Head, *The Coinage of Lydia and Persia* (London, 1874–77). For the supposed connection of the Lydians with the Etruscans, who were sometimes called Lydi (e. g. Verg. *Aen.* ii. 781), see the article ETRURIA, p. 625.

Lydiădes (Λυδιάδης). A citizen of Megalopolis, who, though of an obscure family, raised himself to the sovereignty of his native city about B.C. 244. In 234 he voluntarily abdicated the sovereignty, and permitted Megalopolis to join the Achaean League as a free State. He was elected several times general of the Achaean League, and became a formidable rival to Aratus. He fell in battle against Cleomenes in B.C. 226.

Lydias or **Ludias** (Λυδίας; Ion. Λυδίης, Λουδίας). Now Mavronero; a river in Macedonia which rises in Eordaea, passes Edessa, and, after flowing through the lake on which Pella is situated, falls into the Axius a short distance from the Thermaic Gulf. In the upper part of its course it is called the Eordaean River (Ἐορδαϊκὸς ποταμός) by Arrian.

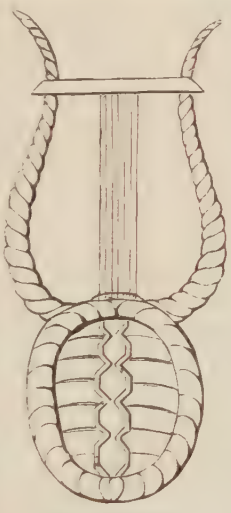
Lydus (Λυδός). A son of Atys and Callithea, and brother of Tyrrhenus. He is said to have been the mythical ancestor of the Lydians.

Lydus, IOANNES LAURENTIUS. A Greek writer, born at Philadelphia in Lydia, A.D. 490. At the age of twenty-one he went to Constantinople in order to study philosophy, entered the service of the State, and rose to high office. About 552 he was dismissed by Justinian, and took a post as teacher in the imperial school. Here he devoted himself to literature, and died in 565. We still possess some of his writings, which are derived from ancient sources now lost: (1) on the State offices of Rome (Περὶ Ἀρχῶν, *De Magistratibus*); (2) on portents in the sky, etc., and the doctrine of auguries (Περὶ Διοσημειῶν, *De Ostentis*); (3) extracts from a work on the Roman months and the festivals held in them (Περὶ Μηνῶν, *De Mensibus*). Edition by Becker (Bonn, 1837).

Lygdămis (Λύγδαμις). (1) A Naxian, who aided Pisistratus in recovering his authority at Athens, and received as a recompense the government of his native island (Herod. i. 61, 64). (2) The father of Artemisia, the celebrated queen of Halicarnassus (Herod. vii. 99). (3) A tyrant of Caria, son of Pisindelis, who reigned in the time of Herodotus at Halicarnassus. He put to death the poet Panyasis. Herodotus fled from his native city in order to avoid his tyranny, and afterwards aided in deposing him. See HERODOTUS.

Lygii or **Ligii**. An important people in Germany, between the Viadus (Oder) and the Vistula (Tac. *Germ.* 43).

Lygŷes. See LIGURIA.



Lyncestis (Λυγκηστίς). A district in the southwest of Macedonia, upon the frontiers of Illyria, inhabited by the Lyncestae, an Illyrian people. The ancient capital of the country was Lyncus, though Heraclea at a later time became the chief town in the district. Near Lyncus was a river,

whose waters are said to have been as intoxicating as wine (Ovid, *Met.* xv. 329).

Lynceus (Λυγκεύς). (1) The son of Aphareus, was among the hunters of the Caledonian boar, and was also one of the Argonauts. According to the old legend, he was so sharp-sighted as to have been able to see through the earth, and also to distinguish objects at the distance of many miles. He was slain by Pollux. (See DIOSCURI.) (2) One of the fifty sons of Aegyptus. He obtained Hypermnestra for his bride, and was the only one of the fifty whose life was spared by his spouse. (See DANAÜS; HYPERMNESTRA.) (3) A Samian pupil of Theophrastus who was a rival of Menander as a writer of comedy (Suid. s. v.).

Lyncus. A king of Scythia, who endeavored to murder Triptolemus, who came to him with the gifts of Demeter. He was metamorphosed by the goddess into a lynx (Ovid, *Met.* v. 650).

Lyra (λύρα, pure Latin, *fides*). A stringed musical instrument, said to have been invented by Hermes, who stretched four strings across the shell of a tortoise. In historical times a whole tortoise-shell was used for the sounding-bottom, the curved horns of a goat or pieces of wood of a similar shape were inserted in the openings for the front legs, and joined near the upper ends by a transverse piece of wood called the yoke. On the breast-plate of the shell was a low bridge, across which the strings (usually seven) ran all at the same height to the yoke, and were either simply wound round it or fastened to pegs; at the other end they were tied in knots and fastened to the sounding-board. It was ordinarily played with the left hand, while to produce louder and longer notes the strings were struck by the right hand with the *plectrum*, the point of which was usually like the leaf of a tree, and sometimes in the shape of a heart or like a little hammer.

Lyra. (Bianchini.)

The cithara differed from the lyra in replacing the shell by a wooden case either square or angular, and instead of the so-called horns (*cornua*) the sides of the case were prolonged upwards, as shown in the accompanying illustration. The cithara, therefore, represents an advance in point of construction over the lyre. The φόρμιγξ of Homer is probably the lyre rather than the cithara, though the word λύρα is post-Homeric; and the κίθαρις does not appear to have been different (Ammon. *De Diff. Voc.* p. 82). In later times, the cithara took on a form not unlike the modern guitar, the word guitar, in fact, being a derivation of *cithara* through the Italian *chitarra*. See Von Jan, *De Fidibus Graecorum* (Berlin, 1859), and the works mentioned in the article MUSICA.

Cithara. (Guhl and Koner.)

Lyrcēa (Λυρκεία) or **Lyrcēum** (Λύρκειον). A small town in Argolis, situated on a mountain of the same name.

Lyre. See LYRA.

Lyric Poetry. While among the GREEKS the elegiac and iambic poetry, which forms the transition from epic to lyric composition, was practised by the Ionians, lyric poetry proper, or, as it was more commonly called, melic poetry (μέλος, "a song")—viz., the song accompanied by music, was cultivated by the Aeolians and Dorians. This is due to the talent for music peculiar to these races. That playing on stringed instruments and singing were cultivated even in mythical times in Aeolia, in the island of Lesbos, is shown by the legend that the head and lyre of Orpheus, who had been torn to pieces by Thracian women, were washed ashore on that island, and that the head was buried in the Lesbian town of Antissa. Antissa was the native place of Terpander (q. v.), who gave artistic form to the νόμος, or hymn to Apollo, by elaborating the laws of its composition. Settling at Sparta in B.C. 676, he laid the foundation of the Dorian music. While he had closely followed Homeric poetry in the texts which he wrote for his musical compositions, there afterwards arose a greater variety in the kinds of songs, corresponding to the greater variety of musical forms, springing from the foundation laid by him. In the AEOLIAN lyric the pathetic prevails, as might be expected from the passionate nature of the people; the feelings of love and hatred, joy and sorrow are their principal themes. As to the metrical form we find short lines with a soft, melodious rhythm, which make up a small number of short strophes. They are written in the Aeolic dialect; we may suppose that they were solos sung to the accompaniment of stringed instruments. In Lesbos the Aeolian lyric was brought to its highest perfection by Alcaeus of Mitylenē (about 600), and by his contemporary Sappho, also a Lesbian, and teacher of the poetess Erinna. The joyous poems of Anacreon of Teos (born about 550), whose subjects are love and wine, were also in the Aeolian style, but in the Ionic dialect. An echo of the Aeolian lyric are the *scolia*. See SCOLIUM.

It was among the DORIANS, however, that the lyric poetry of the Greeks reached the highest degree of its development. It is also called choral lyric, because the Dorian songs were intended to be sung at the public festivals, especially those of the gods, by a dancing choir to the accompaniment of stringed instruments and flutes. Intended, therefore, to be public, it naturally had on the whole an earnest, objective character, and is thus distinguished from the Aeolian lyrics that expressed the personal feelings of the poet. Their form shows further points of difference. Instead of the diminutive Aeolian strophes of short lines, unsuitable for dancing, the Dorian lyrics have ampler strophes, usually with longer lines, and the combination of strophes is again subdivided into strophe, antistrophe, and epode, of which the first two are exactly parallel, while the last differs from both in its structure. While the number of the Aeolian metres is fixed, every Dorian song has its own metre, the rhythm of which depends on the

tune suitable to the subject. As to the kinds of songs, there is also a great variety in the Dorian lyric: there are paeans, *hyporchemata*, hymns, *prosodia*, *parthenia*, dithyrambs, *encomia*, *epinicia*, *hymenaea*, *epithalamia*, *threnoi*; drinking-songs and love songs are also not wanting. They are written in the old epic dialect, influenced by Doric.

With regard to their historical development, Alcman (about 660), a Lydian who had become a citizen of Sparta, was the first to compose longer and more varied poems on the lines laid down by Terpander and his school. The Dorian lyric received its later artistic form from the Sicilian Stesichorus of Himera (about 600), whose contemporary Arion first gave a place in literature to the dithyramb. (See DITHYRAMBUS.) In the sixth century choral poetry became the common property of all Greeks, and so flourished more and more. Of its older representatives we have still to mention Ibycus of Rhegium (about 540), in whose choral songs the erotic element prevails. This class of poetry was brought to its greatest perfection at the time of the Persian Wars by Simonides of Ceos, by his nephew, Bacchylides, and above all by Pindar of Thebes. Besides these, Timocreon of Ialysus, and the poetesses Myrtis, Corinna, Praxilla, and Telesilla deserve mention. Of the productions of Aeolian and Dorian lyric poetry, only fragments have been preserved, except the epinician odes of Pindar. (See PINDARUS.) These fragments are edited by Bergk, *Poetae Graeci Lyrici* (1878).

With the ROMANS, the first attempts to imitate the forms of the Greek "melic" date from the last years of the Republic. Laevius wrote mythological poems in a great variety of metres, the *Erotopaegnia* ("Diversions of Love"), which, however, seem to have attracted little attention. Catullus also wrote some poems in melic measures. This kind of poetry was perfected in the age of Augustus by Horace, who introduced the forms of Aeolian lyric. None of the succeeding poets were of even secondary importance, in spite of the great skill with which they handled the various melic metres; one of them, the Christian poet Prudentius, wrote as late as the fourth century. The Dorian lyric never obtained a footing among the Romans.

See Deventer, *Zu den griechischen Lyrikern* (1887); Führer, *Sprache u. Entwicklung d. griech. Lyrik* (1885); Mattel, *Die griechischen Lyriker* (1892); and for the Christian lyrics, the article HYMNUS.

Lyrnessus (Λυρνησσός). A town in the Troad, the birthplace of Briseïs, and often mentioned by Homer (*Il.* ii. 690).

Lysander (Λύσανδρος). (1) A Spartan, who rose to eminence towards the end of the Peloponnesian War, and was placed in command of the Lacedaemonian troops, on the coast of Asia Minor, B.C. 407. Having about him little of the old Spartan severity, and being ready to sacrifice that personal and national pride and inflexibility, which were the peculiar characteristics of the Spartan institutions, to personal or national interests, he gained in an unusual degree the regard and confidence of his Persian allies. This he used to the best advantage, by seizing a favourable moment to obtain from the younger Cyrus, the Persian viceroy in Asia Minor, in place of any personal advantage, the addition of an obolus daily (somewhat more than two cents of our money) to every seaman in the Peloponnesian fleet. During his year's command he defeated the Athenian fleet commanded by Antiochus, as lieutenant of Alcibiades, at Notium. In September, B.C. 406, he was superseded by Callicratidas, who was defeated and slain in the memorable battle of Arginusae. The allies then petitioned that Lysander might be reappointed. It was contrary to Spartan law to intrust a fleet twice to the same person; but this difficulty was evaded by nominating another individual as commander-in-chief and sending Lysander as lieutenant with the command in Asia. He soon justified the preference by gaining the decisive victory of Aegospotami, in the Hellespont, where 170 Athenian ships were taken. This, in effect, finished the war. Receiving, as he went, the submission of her allies, Lysander proceeded leisurely to Athens, and blockaded her ports, while the Spartan kings marched into Attica and invested the city, which, unassaulted, was reduced by the sure process of famine. The capitulation being settled, B.C. 404, Lysander had the proud satisfaction of entering as victor the Piraeus or harbour of Athens, which had been unviolated by the presence of an enemy since the Persian invasion. His services and reputation gained for him corresponding weight at Sparta; and, on occasion of the contested succession, his influence was powerful in raising Agesilaüs to the throne. He accompanied that eminent statesman and soldier during his first campaign in Asia, where his popularity and renown threw his superior into the shade and an estrangement resulted, in which Lysander conducted himself with temper and wisdom. About B.C. 396 he returned to Sparta. In the following year, on occasion of a quarrel with Thebes, he was sent into Phocis to collect contingents from the northern allies, a task for which his name and popularity rendered him peculiarly fit. Having done this, and being on his way to join the Lacedaemonian army, he was surprised and slain by the Thebans at Haliartus in Boeotia. The force which he had collected was dispersed, and the war at once came to an end, with no credit to the Lacedaemonians, B.C. 395.

It is said that, urged by ambitious hopes, he meditated a scheme for abolishing the hereditary right of the descendants of Heracles, and rendering the Spartan throne elective, and that he had tampered largely with different oracles to promote his scheme. Xenophon, however, a contemporary historian, makes no mention of this rumour. The subject has been discussed by Thirlwall, in an appendix to the fourth volume of his *History of Greece*. This writer thinks that Lysander actually formed such a project; and that the same motive which induced the Spartan government to hush up the affair would certainly have led Xenophon carefully to avoid all allusion to it. There is a life of Lysander by Plutarch, and another by Nepos. (2) One of the ephori in the reign of Agis. (3) A grandson of Lysander (Pausan. iii. 6).

Lysĭas (Λυσίας). One of the ten Athenian orators. He was born at Athens, B.C. 458 or 459. His father, Cephalus, was a native of Syracuse, who settled at Athens during the time of Pericles. Cephalus was a person of considerable wealth, and lived on intimate terms with Pericles and Socrates; and his house is the supposed scene of the celebrated dialogues related in Plato's *Republic*. Lysias, at the

age of fifteen, went to Thurii in Italy, with his brother Polemarchus, at the first foundation of the colony. Here he remained for thirty-two years; but, in consequence of his supporting the Athenian interests, he was obliged to leave Italy after the failure of the Athenian expedition to Sicily. He returned to Athens, B.C. 411, and carried on, in partnership with his brother Polemarchus, an extensive manufactory of shields, in which they employed as many as 120 slaves. Their wealth excited the cupidity of the Thirty Tyrants; their house was attacked one evening by an armed force while Lysias was entertaining a few friends at supper; their property was seized, and Polemarchus was taken to prison, where he was shortly after executed (B.C. 404). Lysias, by bribing some of the soldiers, escaped to the Piraeus, and sailed thence to Megara. He has given us a graphic account of his escape in his oration against Eratosthenes, who had been one of the Thirty Tyrants. Lysias actively assisted Thrasybulus in his enterprise against the Thirty; he supplied him with a large sum of money from his own resources and those of his friends, and hired a considerable body of soldiers at his own expense. In return for these services Thrasybulus proposed a decree by which the rights of citizenship should be conferred upon Lysias; but, in consequence of some informality, this decree was never carried into effect. He was, however, allowed the peculiar privileges which were sometimes granted to resident aliens (namely, *ἰσοτέλεια*). Lysias appears to have died about B.C. 378.

The author of the *Life of Lysias*, attributed to Plutarch, mentions 425 orations of his, 230 of which were considered to be genuine. There remain only 34, which are all forensic, and remarkable for the method which reigns in them. The purity, the perspicuity, the grace and simplicity which characterize the orations of Lysias, would have raised him to the highest rank in the art had they been coupled with the force and energy of Demosthenes. His style is elegant without being overornate, and is regarded as a model of the "plain" style. In the art of narration, Dionysius of Halicarnassus considers him superior to all orators in being distinct, probable, and persuasive; but, at the same time, admits that his composition is better adapted to private litigation than to important causes. The text of his harangues, as we now have it, is extremely corrupt. His masterpiece is the funeral oration in honour of those Athenians who, having been sent to the aid of the Corinthians under the command of Iphicrates, perished in battle. Lysias is said to have delivered only one of the orations which he wrote—that against Eratosthenes.

Lysias has been edited by Reiske (1772), Bekker (1828), Baiter and Sauppe (1850), Cobet (1863), and Scheibe (1886); and there are selections edited by Rauchenstein-Fuhr (with German notes), Frohberger, and (with English notes) by Shuckburgh, Stevens, and Bristol. There is an English translation by Gillies. See Jebb's *Attic Orators*, i. pp. 142–312.

Lysicrătes, Monument of. One of the most graceful relics of Greek antiquity, raised in memory of a victory in the dramatic contests won by Lysicrates when he was *choregus* (see Chorus) in B.C. 334. From a slender square basement, 12 feet high by 9 feet wide, rises a small but elegant round temple. Six engaged Corinthian columns surround its circular wall and support the entablature, on the frieze of which there is a delicate and life-like representation of a scene in the legend of Dionysus —the changing of the Tyrrhenian pirates into dolphins, for having by mistake laid hands on the god. Over the entablature is a flat dome made of a single block of marble, and from the centre of the roof rises a finial of acanthus leaves, formerly crowned by the tripod which was the prize of victory. The monument is 35 feet high, and the diameter of the inside is about 6 feet. The reliefs of the frieze are of great value, as they belong to the new Attic school of Scopas and Praxiteles. According to a tradition (which is without foundation) that Demosthenes used to study here, the monument used to be called the Lantern of Demosthenes—a name familiar to Michael Acominatos, in the second half of the twelfth century (Gregorovius, *Mirabilien der Stadt Athen*, p. 357). The true name was first restored by Transfeldt about 1674 (id. *Athen im Mittelalter*, ii. 357). See Perry's *Greek and Roman Sculpture*, pp. 473–475.

Lysimachĭa (*Λυσιμαχία* or *Λυσιμάχεια*). An important town of Thrace, on the Gulf of Melas, and on the isthmus connecting the Thracian Chersonesus with the mainland, founded B.C. 309 by Lysimachus, who removed to his new city the inhabitants of the neighbouring town of Cardia.

Lysimăchus (*Λυσίμαχος*). One of Alexander's generals, who obtained Thrace in the division of the provinces after Alexander's death (B.C. 323), and assumed the title of king in B.C. 306. He joined the other generals of Alexander in opposing Antigonus, and it was he and Seleucus who gained the decisive victory at Ipsus over Antigonus, in which the latter fell (B.C. 301). In B.C. 291 Lysimachus was taken prisoner by Dromichaetes, king of the Getae, whose country he had invaded, but he was restored to liberty by the latter. In B.C. 287 Lysimachus and Pyrrhus expelled Demetrius from Macedonia. Pyrrhus, for a time, obtained possession of the Macedonian throne; but in the following year he was driven out of the country by Lysimachus, who now became king of Macedonia. Towards the end of his reign the aged Lysimachus put to death his son Agathocles, at the instigation of his wife, Arsinoë, daughter of Ptolemy Soter. This bloody deed alienated the minds of his subjects, and Seleucus invaded the dominions of Lysimachus. The two monarchs met in the plain of Corus (Corupedion), and Lysimachus fell in the battle that ensued, B.C. 281, in his eightieth year.

Lysippus (*Λύσιππος*). A native of Sicyon, and one of the most famous Greek artists, a contemporary of Alexander the Great. He was originally a worker in metal, and taught himself the art of the sculptor by studying nature and the *canon* of Polyclitus (q. v.). His works, which were said to amount to 1500, were all statues in bronze, and were remarkable for their lifelike characterization and their careful and accurate execution, shown particularly in the treatment of the hair. He aimed at representing the beauty and harmony more especially of the male human body; and substituted for the proportions of Polyclitus a new ideal, which kept in view the effect produced, by giving the body a more slender and elegant shape, and by making the head smaller in comparison with the trunk, than is the case with the actual average man. The most famous among his stat-

Marble Copy of the Apoxyomenos of Lysippus. (Vatican Museum, Rome.)

nes of gods were the colossal forms of Zeus and Heracles, at Tarentum of which the former was second in size only to that at Rhodes, while the latter was afterwards brought to the Capitol at Rome, and then to the Hippodrome at Constantinople, where it was melted down in A.D. 1022; and, lastly, the sun-god on the four-horse chariot at Rhodes (Pliny, *H. N.* xxxiv. §§ 40, 63).

The first example of pure allegory in Greek art was his Καιρός, the "Favourable Moment"—a delicate youth with modest look standing on a ball, with his foot winged, and holding shears and a balance in his hands. The hair hung down in front, while it was so short behind that it could not be grasped (*Anthol. Gr.* ii. 49, 13; Callist. *Statuae*, 6).

By far the greater number of his statues were portraits. Of these the various representations of Alexander the Great from boyhood onwards were of marked excellence (Pliny, *H. N.* xxxiv. 64). Indeed, the king would have no sculptor but Lysippus to represent him, even as he would have no other painter than Apelles (Pliny, *H. N.* vii. 125; Hor. *Epist.* ii. 1, 240; Cic. *Ad Fam.* v. 12, 13).

Among his large groups were Craterus saving the life of Alexander chasing the lion (Pliny, *H. N.* xxxiv. 64), and the portraits of twenty-five horsemen and nine foot soldiers who fell at the first assault in the battle of the Granicus (Arrian, *Anab.* i. 16, § 7; Plut. *Alex.* 16). The excellent copy in marble, at the Vatican, of the *Apoxyomenos*, a youth removing the dust of the palaestra with a strigil, affords an idea of his skill in representing beautiful and perfectly developed bodies of delicate elasticity and graceful suppleness (Pliny, *H. N.* xxxiv. 62). See Perry's *Greek and Roman Sculpture*, pp. 478–488.

Lysis (Λῦσις). An eminent Pythagorean philosopher, the teacher of Epaminondas (Pausan. ix. 13).

Lysistrătus (Λυσίστρατος). A statuary of Sicyon, who flourished in the 114th Olympiad. He was the brother of the celebrated Lysippus (Pliny, *H. N.* xxxv. 12, 44). He is said to have been the first artist who made use of gypsum moulds for casts of the human face.

Lystra (ἡ Λύστρα). A city of Lycaonia, on the confines of Isauria, celebrated as one chief scene of the preaching of Paul and Barnabas (Acts, xiv. 8). See Sterrett, *The Wolfe Expedition to Asia Minor* (Boston, 1888).

M

M, as a symbol.

In Greek.—

M = μιλιάριον (*Bull. de Corr. Hell.* ii. 597), μηνός (*Mittheil d. ath. Inst.* iii. 57), μέσος (*Arch. Zeit.* 1876, p. 57), μνημεῖον (*C. I. G.* 5628), μονάρψου (*Bull. de Corr. Hell.* viii. 43), Μάρκος. As a numeral = 12 (old system), or 40 (M̄). Also = μυριάς or μυριάς μία (M). ,μ = 40,000.

MNΔ = μέγας νέος Διόνυσος (*C. I. G.* 2278).

In Latin.—

M = Macedonica, magister, maiestas, maiora, Manes, manu, Marcus, marmora, Martia (legio), mas, maritus, Mars, mater, Mercurius, metalla, miles, Minerva, minus, missus, modius, muliebris, municipium.

MM = Marci (duo), memoriae.

M·A = Mercurius Augustus, militavit annos.

M·C = mater castrorum, memoriae causa.

M·D = Manibus diis, Mater deum, mater dulcissima.

M·E = merita eius.

M·F = magister fani, mater (monumentum, memoriam) fecit, miles factus, munere functus.

M·L = miles legionis.

M·L = mulieris libertus.

M·M = magister Mercurialis, malis male, Mater magna, municipes municipii.

M·N = metalla nova, milia nummum.

M·O = matri optimae.

M·P = magister pagi, maior pars, mater (memoriam) posuit, mille passus (milia passuum).

M·A·G·S = memor animo grato solvit.

M·B·M·F = maritus bene merenti fecit.

M·D·A·N = metalla domini Augusti nostri.

M·D·M·A = monumento dolus malus abesto.

M·D·M·I = mater deum magna Idaea.

M·H·F·C = memoriam (monumentum) heres faciundum curavit.
M·H·N·S = monumentum heredem non sequetur.
M·P·D·M = monumentum positum dis Manibus.
As a numeral, M = 1000. See NUMERI.

Macae (*Μάκαι*). (1) A people on the eastern coast of Arabia Felix, probably near Muscat. (2) An inland people of Libya, in the part of northern Africa between the Syrtes.

Macalla (*Μάκαλλα*). A town on the eastern coast of Bruttium. Here Philoctetes was said to have been buried (Lycophron, *Alex.* 927).

Macăreus (*Μακαρεύς*). A son of Aeolus, who committed incest with his sister Canacé. (See CANACÉ). Hence Issé, the daughter of Macareus, is called Macareïs. After the suicide of Canacé, Macareus fled to Delphi, where he became the priest of Apollo. His story is told by Ovid in the *Heroides*, xi.

Macaria (*Μακαρία*). The daughter of Heracles and Deïanira. When Eurystheus, after the death of Heracles, made war upon the Heraclidae and their allies, the Athenians, an oracle declared that the descendants of Heracles would be victorious if one of them should devote himself to death. This lot Macaria voluntarily accepted, and the oracle was fulfilled in the success of the Athenians by whom Macaria was therefore held in great honour. A fountain at Marathon was called by her name (Pausan. i. 32).

Macaria (*Μακαρία*). (1) A name used by the poets for several of the Grecian islands—e. g. Cyprus, Rhodes, and Lesbos. (2) An island in the southern part of the Red Sea.

Maccabaei. See IUDAEI, p. 894.

Macĕdo (*Μακεδών*). A son of Osiris (q. v.), and worshipped by the Egyptians, who represented him as clothed in a wolf's skin. The hero who gave his name to Macedonia (q. v.) was by some regarded as identical with this Egyptian, but by some was held to be the grandson of Deucalion (q. v.). His name is also given as Macednus. See Apollod. iii. 8, 1.

Macedonia (*Μακεδονία*). A country in Europe, north of Greece, said to have been originally named EMATHIA. Its boundaries before the time of Philip, the father of Alexander, were, on the south, Olympus and the Cambunian Mountains, which separated it from Thessaly and Epirus; on the east, the river Strymon, which separated it from Thrace; and on the north and west, Illyria and Paeonia. Macedonia was greatly enlarged by the conquests of Philip. He added to his kingdom Paeonia on the north; a part of Thrace on the east as far as the river Nestus, which Thracian district was usually called Macedonia Adiecta; the peninsula Chalcidicé on the south; and on the west a part of Illyria as far as Lake Lychnitis. On the conquest of the country by the Romans, B.C. 168, Macedonia was divided into four districts, independent of one another; but the whole country was formed into a Roman province after the conquest of the Achaeans in 146.

Macedonia may be described as a large plain, surrounded on three sides by lofty mountains. Through this plain, however, run many smaller ranges of mountains, between which are wide and fertile valleys, extending from the coast far into the interior. The chief mountains were Scordus, or Scardus, on the northwest frontier, towards Illyria and Dardania; further east Orbelus and Scomius, which separated it from Moesia; and Rhodopé, which extended from Scomius in a southeasterly direction, forming the boundary between Macedonia and Thrace. On the southern frontier were the Cambunii Montes and Olympus. The chief rivers were in the direction of east to west—the Nestus, the Strymon, the Axius, the largest of all, the Ludias or Lydias, and the Haliacmon. The chief cities were Aegae and Pella, the capitals, and Pydna, Potidaea, Olynthus, Amphipolis, and Philippi. The great bulk of the inhabitants of Macedonia consisted of Thracian and Illyrian tribes. At an early period some Greek tribes settled in the southern part of the country. They are said to have come from Argos, and to have been led by the three sons of Temenus, the Heraclid. Perdiccas, the youngest of the three, was looked upon as the founder of the Macedonian monarchy. A later tradition, however, regarded Caranus, who was also a Heraclid from Argos, as the founder of the monarchy. These Greek settlers intermarried with the original inhabitants of the country. The dialect which they spoke was akin to the Doric, but it contained many barbarous words and forms; and the Macedonians accordingly were never regarded by the other

Silver Coin of Macedonia after the Roman Conquest.

Greeks as genuine Hellenes. Moreover, it was only in the south of Macedonia that the Greek language was spoken. See Brugmann, *Comp. Gram.* vol. i. p. 7.

Very little is known of the history of Macedonia till the reign of Amyntas I., who was a contemporary of Darius Hystaspis; but from that time their history is more or less intimately connected with that of Greece, till at length Philip, the father of Alexander the Great, became the virtual master of the whole of Greece. The conquests of Alexander extended the Macedonian supremacy over a great part of Asia; and the Macedonian kings continued to exercise their sovereignty over Greece till the conquest of Perseus by the Romans, in B.C. 168, brought the Macedonian monarchy to a close. See Abel, *Makedonien vor König Phillipp* (Leipzig, 1847); Döll, *Geographie der alt. Makedoniens* (1891); Henzey and Daumet, *Mission Archéologique de Macédonie*, 2 vols. (Paris, 1876); Curteis, *Rise of the Macedonian Empire* (N. Y. 1878); and the articles ALEXANDER; PERDICCAS; PHILIPPUS.

Macedonĭcus. A name given to Q. Caecilius Metellus, who made Macedonia a Roman province. See Vell. Peterc. i. 11, and the article METELLUS.

Macella (*Μάκελλα*). A small fortified town in the west of Sicily, southeast of Segesta.

Macellarii. See MACELLUM.

Macellum (*ὀψοπωλία*, *ὀψοπωλεῖον*, and *κρεοπωλεῖον*). A market for provisions of all kinds—

meat, fish, poultry, fruit, etc. At Athens, the separate kinds of wares were sold in the divisions of the market-place, called κύκλοι. The opening of a sale was announced by the ringing of a bell. See Mahaffy, *Social Life in Greece*, ch. x., and the article AGORA.

At Rome, there were originally separate markets for the sale of each kind of food, thus the Forum Boarium for meat, Olitorium for vegetables, Piscatorium for fish, etc., but in B.C. 179 a great Macellum, or general market, was built north of the Forum Romanum (Fest. s. v. *macellum*), and afterwards, a number of other macella arose, such as the Macellum Augusti mentioned on a coin of Nero (Eckhel, vi. 273), and the Macellum Livianum near the Porta Esquilina. The market-men were called *macellarii* (Suet. *Iul.* 26).

Macer, AEMILIUS. (1) A Roman poet, a native of Verona, who died in Asia, B.C. 16. He wrote a poem upon birds, snakes, and medicinal plants, the fragments of which are given in Bährens, *Frag. Poet. Rom.* 345. (2) We must distinguish from Aemilius Macer of Verona, a poet Macer who wrote on the Trojan War, and who must have been alive in A.D. 12, since he is addressed by Ovid in that year (*Epist. ex Pont.* ii. 10, 2). (3) A Roman jurist of the time of Alexander Severus.

Macer, LICINIUS. See LICINIUS.

Macestus (Μάκηστος). A river of Mysia, rising in Phrygia and flowing north through Mysia into the Rhyndacus.

Macĕtae (Μακέται). Another name of the Macedonians (Μακεδόνες). See MACEDONIA.

Machaera (μάχαιρα). See CULTER; PUGIO.

Machaerus (Μαχαιροῦς). A fortified place in the southern part of Peraea in Palestine. Tradition makes John the Baptist to have been beheaded here.

Machanĭdas (Μαχανίδας). A tyrant of Lacedaemon, who succeeded Lycurgus about B.C. 210. He was defeated and slain by Philopoemen, acting for the Achaean League, in 207.

Machāon (Μαχάων). A son of Aesculapius, and surgeon of the Greeks in the Trojan War. He led, with his brother Podalirus, troops from Trica, Ithomé, and Oechalia. He was killed by Eurypylus, the son of Telephus, and received divine honours after his death in Messenia, of which he was by some called the king. See Verg. *Aen.* ii. 263, 426.

Machon (Μάχων). A comic poet, who flourished at Alexandria about B.C. 175. He was a native of Corinth (or Sicyon), and is said to have taught the grammarian Aristophanes of Byzantium.

Macistus (Μάκιστος). A town of Elis, originally called PLATANISTUS.

Macorāba (Μακοράβα). Now Mecca; a city in the western part of Arabia Felix. Even before the time of Mohammed it appears to have been regarded with veneration by the Arabs, who worshipped the Deity there in the shape of a meteoric stone. The town before the time of Mohammed was held by the Kosuites and then by the Koreish, from whom the Prophet took it in A.D. 627. See the article by Prof. Robertson Smith in the *Encyclopaedia Britannica* (1883).

Macra. The modern Magra; a small river rising in the Apennines and flowing into the Ligurian Sea near Luna, which, from the time of Augustus, formed the boundary between Liguria and Etruria.

Macrae Petrae (Μακραὶ Πέτραι). "The Long Rocks;" on the northwestern side of the Athenian Acropolis at its foot, with a grotto sacred to Apollo and Pan (Eurip. *Ion*, 13).

Macri Campi (Μακροὶ Κάμποι). "The Long Plains." A strip of country between Parma and Modena in Italy, famous for the fine wool of its sheep.

Macriānus. One of the (Roman) Thirty Tyrants (q. v.); slain by Aureolus, A.D. 262.

Macrīnus, MARCUS OPILIUS SEVĒRUS. A Roman emperor from April, A.D. 217, to June 218. Born of humble parentage at the Mauretanian Caesarea, he became praetorian praefect under Caracalla, whom he accompanied against the Parthians, and whose death he procured, in order that he might become his successor. As emperor he won considerable popularity by the remission of certain oppressive taxes, but suffering at Nisibis a defeat at the hands of the Parthians, and losing the love of his soldiers by his severe discipline, he was attacked by the forces who had proclaimed Elagabalus as emperor and defeated by them. Escaping in disguise, he was taken prisoner in Chalcedon and put to death. His life has come down to us written by Capitolinus.

Macro, NAEVIUS SERTORIUS. A favourite of the emperor Tiberius, whose minister Seianus (q. v.) he undermined and finally destroyed. By prostituting his wife Eunia to Caligula he won, for a time, the tolerance of that emperor; but, becoming disliked, he was finally forced to take his own life in the year A.D. 38 (Suet. *Tib.* 73).

Macrobii (Μακρόβιοι, "long-lived"). An Aethiopian people in Africa, placed by Herodotus (iii. 17) on the shores of the Southern Ocean, and said to live to the age of 120 years (Herod. iii. 23).

Macrobius, AMBROSIUS THEODOSIUS. A grammarian probably of Greek extraction, since he says in the preface to his *Saturnalia* that Latin was to him a foreign tongue. He lived in the fourth century A.D., and was probably a pagan. His extant works are: (1) *Saturnaliorum Conviviorum Libri VII.*, consisting of a series of discussions on history, mythology, criticism, and various points of antiquarian research, supposed to have been delivered during the holidays of the Saturnalia at the house of Vettius Praetextatus, who was invested with the highest offices of State under Valentinian and Valens. The form of the work is avowedly copied from the dialogues of Plato, especially the *Banquet:* in substance it bears a strong resemblance to the *Noctes Atticae* of Gellius; and the material of it is drawn from a great variety of sources, such as Suetonius, Seneca, Plutarch, and Athenaeus. The first book treats of the festivals of Saturnus and Ianus, of the Roman calendar, etc. The second book commences with a collection of bon mots, ascribed to the most celebrated wits of antiquity; to these are appended a series of essays on matters connected with the pleasures of the table. The following four books are devoted to criticisms on Vergil. (See VERGILIUS.) The seventh book is of a more miscellaneous character than the preceding. The *Saturnalia* contains the first pagan mention of the Slaughter of the Innocents at Bethlehem (ii. 4). (2) *Commenta-*

rius ex Cicerone in Somnium Scipionis, a work in his book much studied during the Middle Ages. The Dream of Scipio, contained in the sixth book of Cicero's *De Republica*, is taken as a text, which suggests a succession of discourses on the physical constitution of the universe, according to the views of the New Platonists, together with notices of some of their peculiar tenets on mind as well as matter. (3) *De Differentiis et Societatibus Graeci Latinique Verbi*, a treatise purely grammatical, of which only an abridgment is extant, compiled by a certain Ioannes.

The best editions of the works of Macrobius are by Gronovius (Leyden, 1670); Jan (Quedlinburg, 1848–52); Eyssenhardt (Leipzig, 1868; rev. 1893). There is no English version of Macrobius, but a French translation by De Rosoy appeared at Paris in 1826.

Macrocōlum. Paper of a large size. See PAPYRUS.

Macrōnes (Μάκρωνες). A powerful and warlike Caucasian people on the northeastern shore of the Pontus Euxinus.

Madaura, also MEDAURA, AD MEDĒRA. A town on the confines of Numidia and Gaetulia, the birthplace of Apuleius (q. v.).

Madyes (Μαδύης). A Scythian chief who conquered Cyaxares in the year B.C. 623, and for a long time held sway over portions of Asia Minor (Herod. i. 103).

Madȳtus (Μάδυτος). A sea-port town on the Thracian Chersonesus.

Maeander (Μαίανδρος). A river in Asia Minor, proverbial for its wanderings, rising in the south of Phrygia, close to the source of the Marsyas, flowing between Lydia and Caria, of which it forms the boundary, and at last falling into the Icarian Sea between Myus and Prienē. Its chief tributaries are the Marsyas, Cludrus, Lethaeus, and Gaeson on the right (northern) side; and the Obrimas, Lycus, Harpasus, and a second Marsyas on the left (southern) side. In its course it was said to describe the Greek letters ε, ζ, ξ, σ, and ω; and from it Daedalus was imagined to have received the idea of his famous Labyrinth. (See Herod. ii. 29; Verg. *Aen.* v. 254; Lucan, v. 208; vi. 471; Ovid, *Met.* viii. 105; Mela, i. 17.) As a god, Maeander is described as the father of the nymph Cyanē, who was the mother of Caunus. Hence the latter is called by Ovid, *Maeandrius iuvenis*.

Maecēnas, GAIUS CILNIUS. A famous statesman, courtier, and patron of literature of the Augustan Age at Rome. The date of his birth is uncertain, but is to be placed between the years B.C. 73 and 63, on the 13th of April (Hor. *Carm.* iv. 11). His family was of Etruscan origin—a great subject of boasting in a society where Etruscomania was as great a fad as is Anglomania in certain American communities to-day—and was even traced to Porsena, so that we find Augustus addressing him in his somewhat ironical style as *berylle Porsenae* (Macrob. *Sat.* ii. 4).

He received a careful education, and was well versed in both Greek and Roman literature, to which he himself contributed in verse as well as prose. He is thought to have been with Octavius in Apollonia at the time of the assassination of Iulius Caesar, perhaps as the director of his studies; and from this time his name appears continually in conjunction with that of the future emperor. He assisted in arranging a marriage between Augustus and Scribonia, the daughter of Libo, and negotiated the peace of Brundisium by which Antony and Augustus were temporarily reconciled, and which led to the marriage of Antony with Octavia, the sister of Augustus (Dio Cass. xlviii. 16; App. *B. C.* v. 64). In B.C. 36 he accompanied Augustus to Sicily in the campaign against Sextus Pompeius, from which he was twice sent back to Rome to suppress revolts that had there broken out. So well did he discharge the task that he was soon after placed in charge first of Rome and then of the administration of all Italy. In this capacity he crushed out the dangerous conspiracy of the younger Lepidus, which contained the germs of a disastrous civil war; and in every way he so justified the confidence reposed in him as to have received from Augustus his seal and a commission to act with Agrippa as the personal representative of the young Caesar in all negotiations with the Senate.

After the establishment of the Empire he continued for a long time to exercise a supreme influence in the counsels of Augustus. By his advice, against that of Agrippa, Augustus decided not to restore the Republic (Dio Cass. lii. 14); and it was Maecenas who brought about the marriage of Iulia, the daughter of Augustus, with Agrippa. The influence of Maecenas over his master continued undiminished until about the year B.C. 18, when by his own choice the former withdrew from any active participation in matters of State. This withdrawal was coincident with a coolness that arose between the two men, which rendered their personal intercourse one of much restraint, and which, though it has been often explained as due to the predominance of Agrippa in the favour of the emperor, is much more certainly to be ascribed to the seduction by Augustus of Terentia, the wife of Maecenas. This woman, beautiful and accomplished, was the object of her husband's passionate love, and to a nature such as his—sensitive, ardent, and honourable—the thought of her continued infidelity was not to be endured with the complaisant toleration that so many Roman husbands appear to have exhibited. The city was filled with the pasquinades in which the wits of the day jeered at the progress of this amour. Even Augustus, who was remarkably thick-skinned, is said by Tacitus to have made a journey to Gaul on one occasion (B.C. 16) to escape the shower of epigrams, jests, and lampoons, and it is easy to surmise what torture they must have inflicted upon the statesman who felt himself to be at once injured and made a public laughing-stock. (See Dio Cass. liv. 19; lv. 7; Suet. *Aug.* 68, in which last passage the Terentilla alluded to in Antony's indecent letter is undoubtedly Terentia.) Maecenas died in B.C. 8, leaving no children.

Maecenas is best known as the fosterer of literature and literary men, so much so that his very name has passed into all languages as a generic term for a munificent patron of letters. His enormous fortune (Tac. *Ann.* xiv. 53, 55) made it possible for him to give a princely protection and support to poets, wits, and, in fact, to all the virtuosi of distinction, who were received with magnificent hospitality at his mansion on the Esquiline, with its beautiful gardens, in which he spent nearly all the year, visiting the country but seldom

(Tac. *Ann.* xiv. 53). So lavish was his entertainment that it became open to the charge of being too indiscriminate, so that Augustus called his table *mensa parasitica* (Suet. *Vit. Horat.*). It must be recollected, however, that he drew the line very sharply between his general hospitality and his private friendship, which last was reserved for the select few, such as Vergil and Horace, who were possessed of the fine culture and delicate feeling so essential to familiar intercourse among gentlemen.

Much of the personal eccentricity which Maecenas exhibited must be ascribed to the condition of his health. He suffered for many years from insomnia and nervous prostration, and resorted to many devices to secure sleep, listening to soft music and to the plash in his house of artificial waterfalls; and his luxurious indolence was perhaps only the self-indulgence of an invalid, seeking distraction from the thought of his own condition. His passionate clinging to life is best expressed in a short verse of his that has come down to us in the pages of Seneca, and whose frantic eagerness is at once pathetic and repulsive:

> "Debilem facito manu
> Debilem pede, coxa;
> Tuber adstrue gibberum
> Lubricos quate dentes:
> Vita dum superest, bene est.
> Hanc mihi vel acuta
> Si sedeam cruce sustine."

The life of Maecenas has been many times written: in Latin by Meibom (Leyden, 1653), Lion (Göttingen, 1846); in Italian by Cenni (Rome, 1684), Dini (Venice, 1704), Santa Viola (Rome, 1816); in German by Bennemann (Leipzig, 1744), Frandsen (Altona, 1843); in French by Richer (Paris, 1746); and in English by Schomberg (London, 1766). See, also, Weber's *Horaz* (Jena, 1844); Friedländer, *Sittengeschichte Roms* (iii. 389). His poetical fragments are collected in the *Fragmenta Poetarum Romanorum* by Bährens (Leipzig, 1886). See also Harder, *Fragmente des Mäcenas* (Berlin, 1889); and the article HORATIUS.

Maecius Tarpa. See TARPA.

Maedi (*Μαῖδοι*). See MAEDICA.

Maedĭca (*Μαιδική*). The country of the Maedi, a powerful people in the west of Thrace, on the western bank of the Strymon (Livy, xxvi. 25).

Maelius, SPURIUS. The richest of the plebeian knights, who employed his fortune in buying up corn in Etruria in the great famine at Rome in B.C. 439. This corn he sold to the poor at a small price, or distributed it gratuitously. The patricians accused him of aiming at the kingly power, and appointed L. Quinctius Cincinnatus, then eighty years of age, as dictator. C. Servilius Ahala, the master of the horse, summoned Maelius to appear before the tribunal of the dictator; but as he refused to go, Ahala rushed into the crowd and slew him. His property was confiscated and his house pulled down; its vacant site, which was called the Aequimaelium, continued to subsequent ages a memorial of his fate. See Mommsen, *Hist. of Rome*, i. p. 378.

Maenădes (*Μαινάδες*). A name of the Bacchantes, from *μαίνομαι*, "to rave," because they were frenzied in the worship of Dionysus. See BACCHANTES.

Maenălus (*τὸ Μαίναλον*). A mountain in Arcadia, extending from Megalopolis to Tegea, celebrated as the favourite haunt of the god Pan. The Roman poets frequently use the adjectives Maenalius and Maenalis as equivalent to Arcadius.

Maeniānum. See MAENIUS; DOMUS, p. 542.

Maenius. (1) GAIUS. Consul B.C. 338, with L. Furius Camillus. The two consuls completed the subjugation of Latium; they were both rewarded with a triumph, and equestrian statues were erected to their honour in the Forum. The statue of Maenius was placed upon a column, called Columna Maenia, which appears to have stood near the end of the Forum, on the Capitoline. Maenius, in his censorship (B.C. 318), allowed balconies to be added to the various buildings surrounding the Forum, in order that the spectators might obtain more room for beholding the games which were exhibited there: these balconies were called after him MAENIANA (sc. *aedificia*). (2) The proposer of a law, about B.C. 286, which required the *patres* to give their sanction to the election of the magistrates before they had been elected, or, in other words, to confer, or agree to confer, the imperium on the person whom the comitia should elect. (3) A contemporary of Lucilius. He was a great spendthrift, who squandered all his property, and afterwards supported himself by playing the buffoon. He possessed a house in the Forum, which Cato in his censorship (184) purchased of him for the purpose of building the Basilica Porcia. Some of the scholiasts on Horace relate that when Maenius sold his house, he reserved for himself one column, the Columna Maenia, from which he built a balcony that he might thence witness the games. The true origin of the Columna Maenia and of the balconies called Maeniana has been explained above.

Maenŏba. A town in the southeastern part of Hispania Baetica, near the coast.

Maenus. A river in Germany, now the Main, emptying into the Rhine at Mainz (Mogontiacum).

Maeon (*Μαίων*). The son of Haemon of Thebes. With Lycophontes he led a band which lay in ambush for Tydeus in the war of the Seven against Thebes. Tydeus spared his life, and was in return buried by Maeon after Tydeus had been slain (*Il.* iv. 394).

Maeonia (*Μαιονία*). The ancient name of Lydia. Hence Vergil gives the name of Maeonia to Etruria, because the Etruscans were said to be descended from Lydians. Hence also Homer, as a native of Maeonia, is called *Maeonides* and *Maeonius senex*, and his poems the *Maeoniae chartae*, or *Maeonium carmen*. (See LYDIA.) *Maeonis* likewise occurs as a surname of Omphalé and of Arachné, because both were Lydians.

Maeonĭdes. See MAEONIA.

Maeŏnis. An epithet applied to Omphalé (q. v.) as queen of Lydia or Maeonia.

Maeōtae (*Μαιῶται*). See MAEOTIS PALUS.

Maeōtis Palus (*Μαιῶτις Λίμνη*). The modern Sea of Azov; an inland sea on the borders of Europe and Asia, north of the Pontus Euxinus (Black Sea), with which it communicates by the Bosporus Cimmerius. The Scythian tribes on its banks were called by the collective name of Maeotae or Maeotici. The sea had also the names of Cimmerium or Bosporicum Mare. The Amazons are called Maeotides, as living near by.

Maera (*Μαῖρα*). (1) The dog of Icarius, the father

of Erigoné. See Icarius. (2) The daughter of Proetus and Antea and companion of Artemis, by whom she was killed after becoming the mother of Locrus by Zeus (*Odyss.* xi. 325).

Maesa, Iulia. The sister-in-law of Septimius Severus, aunt of Caracalla, and grandmother of Elagabalus and Alexander Severus. She was a native of Syria, born at Emesa, and after her sister Iulia Domna had married Septimius Severus, lived at the Roman court until the death of Caracalla. Being a woman of remarkable force and ability, and possessed of great wealth, she conceived and carried out a plot for the overthrow of Macrinus (q. v.), and the enthroning of her grandson Elagabalus. Her courage and pertinacity did much to bring her plan to its successful issue. When the downfall of Elagabalus became certain, she persuaded him to adopt her other grandson, his cousin, Alexander Severus. By the latter, after his accession to the throne, she was treated with great respect and received the title Augusta.

Maevius or **Mevius.** See Bavius; Vergilius.

Magăba. A mountain in Galatia, east of Ancyra.

Magădis (*μάγαδις*). A lyre with frets so that the player could divide the notes. It had twenty strings. See Lyra.

Magalia and **Mapalia.** Words said to be borrowed from the Punic language, in which they denoted the cottages, huts, and hovels of the peasants, made of reeds or canes (Serv. *ad* Verg. *Aen.* i. 420; iv. 259; Sil. Ital. xvii. 88–89). They are described as being sometimes conical or circular

Magalia. (Column of Antoninus.)

in shape, and sometimes oblong with bulging sides. Both these forms are common in the primitive structures of other peoples, and the circular variety is represented in the accompanying illustration, reproduced from the Column of Antoninus. See Sall. *Iug.* 211.

Magas (*Μάγας*). A king of Cyrené. He was the stepson of Ptolemy Soter, being the son of Berenicé by a former husband. In B.C. 308 he received the command of an expedition to recover Cyrené after the death of Ophellas (q. v.), and, being successful, was made by Ptolemy governor of the country. He ruled it at first as a dependency of Egypt, but after the death of Ptolemy Soter he not only assumed the character of an independent monarch, but even made war on the king of Egypt. He married Apama, daughter of Antiochus Soter, by whom he had a daughter, Berenicé, afterwards the wife of Ptolemy Euergetes. He died B.C. 258 (Pausan. i. 7; Just. xxvi. 3).

Magazine. See Horreum.

Magdăla (*Μάγδαλα*). A village of Palestine on the Sea of Galilee.

Magdŏlum (*Μάγδολος*, Old Test. Migdol). A city of Lower Egypt, near the northeastern frontier, where Pharaoh Necho defeated the Syrians (Herod. ii. 159).

Magella. A town in the central part of the island of Sicily.

Magetobria. The modern Moigte de Broie, on the Saône. A town on the western frontiers of the Sequani, near which the Gauls were defeated by the Germans shortly before Caesar's arrival in Gaul (Caes. *B.G.* i. 31).

Magi (*Μάγοι*). A religious sect or class among the Persians, devoted to the worship of fire. See Persia; Zoroaster; and for their share in the politics of Persia, Smerdis.

Magister. A Latin word very generally applied to any person who has command or authority as the chief over a number of others. The following are the principal officials and others who were styled *magistri:*

(1) Magister Admissiōnum. See Admissio.

(2) Magister Bibendi. See Symposium.

(3) Magister a Censĭbus. An official who examined the qualifications of candidates for enrolment among the *equites.*

(4) Magister Collegii. The presiding officer of a *collegium* (q. v.).

(5) Magister Epistolārum or ab Epistŏlis. The emperor's private secretary (Orelli, *Inscr.* 2352).

(6) Magister Equĭtum. The assistant to the Roman dictator appointed by him immediately on taking office and bound to obey him in everything implicitly. In the absence of the dictator he acted as his representative. In battle he commanded the cavalry, as the dictator did the infantry, whence his peculiar title. He was attended by six lictors, and had the *sella curulis* and the *praetexta.* See Dictator.

(7) Magister Libellōrum or a Libellis. A clerk or secretary who read and replied to petitions (*libelli*) addressed to the emperor.

(8) Magister Memoriae. An official who made known the emperor's pleasure on any subject (Ammian. Marc. xv. 5).

(9) Magister Milĭtum. The title of two officers under Constantine. They had command of all the imperial forces, one taking charge of the infantry and one of the cavalry. Later, their number was increased and their functions modified (Zosim. ii. 33; iv. 27).

(10) Magister Officiōrum. See Admissio.

(11) Magister Pagi. See Pagus.

(12) Magister Popŭli. See Dictator.

(13) Magister a Rationĭbus, also called *procurator.* One who had charge of the emperor's private expenses. See Fiscus.

(14) Magister Societatis. See Societas.

(15) Magister Vicōrum. See Vicus.

Magistrātus, at Rome, designated alike the office and the office-holder, the magistracy and the magistrate.

I. The Republican Magistrates. In the widest sense the term *magistratus* included all the governmental officers of the State, elected and appointed, civil and military. In a narrower sense it was restricted to the officials elected by the Roman people, excluding the promagistrates (proconsuls, propraetors, etc.), whose authority rested on decrees of the Senate, and the subordinate officers with delegated powers who were appointed by the magistrates. In the narrowest and most usual

sense the term was not extended to include the subordinate military officers (*tribuni militum*) or the city officials below the rank of quaestor (*vigintisexviri, curatores*, etc.), in spite of the fact that these were elected by the people. On the other hand the dictator or *magister populi* and his lieutenant, the *magister equitum*, although not elected, were always regarded and described as magistrates.

1. *Historical Development.* In the early Republic the only regular or ordinary magistrates were the consuls and the quaestors; the only extraordinary magistrates the dictator and his lieutenant. The tribunes and aediles of the plebs, officials whose right and duty it was to protect their order against the regular magistrates, were not regarded as magistrates until the struggle between the orders had come to an end. The *decemviri legibus scribendis* (B.C. 451–449) and the military tribunes (B.C. 444–367), who for a time replaced the consuls and exercised consular powers, were regarded as magistrates; and so also were the censors, praetors, and curule aediles, officials who were first elected during or at the close of the conflict between the orders. With the termination of this conflict and the recognition of the plebeian tribunes and aediles as representatives of the whole people, the list of magistrates, as the term was commonly employed, was closed. For fuller description, see the special article upon each magistracy. For the promagistracy, fully developed only towards the end of the Republic, see PROVINCIA.

From the period of the conflict between the orders dates the division of magistracies into "patrician" and "plebeian." In the later Republic the term patrician magistracy was merely an historical reminiscence: it designated the offices from which the plebeians had formerly been excluded. The term plebeian magistracy, on the other hand, continued to express a fact; the offices of tribune and of plebeian aedile were never thrown open to the patricians.

2. *The Relation of the different Magistrates to each other* was not determined, at Rome, by assigning to each office special and distinct powers and duties; nor were the different magistrates protected against each other's interference. The earliest magistrates, the consuls, held an undifferentiated complex of military, judicial, and administrative powers; and the creation of new magistracies was not at first accompanied (except in the case of the censors) by any logical separation of these powers. The trend of development, especially in the later Republic, was towards a division of *provinciae* or spheres of power; but the separation never became complete. Powers of interference were so general as to amount to a fundamental principle of the constitution—a principle which found its extreme expression in the tribunate.

The Romans themselves classed their magistrates not according to the kind of power, but according to the degree of power, which each exercised. Their term for general power was *imperium*. The dictator and his lieutenant, the consuls and the praetors, all had imperium. The consular imperium was *minus* as regarded the dictator and his lieutenant, *maius* as compared with that of the praetors. The other magistrates (censors, tribunes, aediles, quaestors, etc.) had not imperium — i. e. their powers were not general, but special. These, therefore, strictly speaking, were all lower or lesser magistrates (*magistratus minores*). The censors, however, by reason of the importance of their duties, were regularly classed among the *magistratus maiores;* and so also, on more technical grounds, were the curule aediles.

Maior potestas. In principle, any magistrate with imperium might issue commands and prohibitions to any magistrate without imperium. The exceptions to this rule were as follows: neither the tribunes nor the censors were subject to the commands or prohibitions of the magistrates with imperium; and the tribunes might intervene negatively, by prohibitions, against the acts of all magistrates except the dictator, his lieutenant, and the censors. The exceptional position of the censors was due to their possession of a distinct field of duties. They had no occasion to interfere with other magistrates, and no other magistrates were permitted to interfere with them. The peculiar position of the tribunes was a survival from the period of the conflict between the orders. Negatively the tribunes had *maior potestas* as against the consuls; but no Roman would have so expressed it, for the Romans meant by *potestas* power to act rather than power to prevent.

In principle, again, a magistrate with *maius imperium* might issue commands to a magistrate with *minus imperium;* so that a dictator might command and restrain a consul, and a consul might similarly direct or check a praetor.

Par potestas. Further possibilities of interference resulted from the fact that every magistracy except the dictatorship was held by two or more persons. Between such colleagues there was, in principle, no division of power; each possessed all the powers of the office. Each, therefore, might act alone, and without regard to the views or wishes of his colleague or colleagues; and if they remained passive, his act was valid and effective. But if a colleague stepped in (*intercessit*) and forbade the act, then equal power stood opposed to equal power and the result was a deadlock. This was true not merely as between two colleagues, but also when a larger number held the same magistracy; majority rule was not recognized; the negative will of one was as powerful as the positive will of any larger number. A veto, therefore, could not be vetoed—a rule which was of peculiar importance in the tribunate. In that body one tribune could prevent the other nine from doing any positive act—e. g. from presenting a bill to the people; but nine tribunes could not prevent one from vetoing the act of a consul or other magistrate.

Provinciae. In principle, therefore, the positive powers of each magistracy could be exercised only when the colleagues were of one mind; and this unanimity was necessary for each single act. In fact, however, some division of power, by agreement or by lot, was customary from the earliest period of the Republic (e. g. one consul sometimes took the field with an army while the other governed the city); but it does not appear that in the early Republic any such division of the field of consular duties was made for the year. The assignment to a single magistrate of a distinct field of power for his full annual term apparently dates from the establishment of the praetorship. The praetor was not simply a judicial officer, nor was his authority limited to the city; but by force of constant custom civil jurisdiction within the city

became his peculiar "province." When a second praetorship was instituted, B.C. 242, a division of the judicial field became usual; but the assignment to each praetor of his special competence was made after election and by lot. The same system prevailed when the number of praetors was successively increased to four, six, and eight, and when such distinct functions as the government of subject provinces and the presidency of special criminal courts (*quaestiones*) were attached to the office. No Roman was ever elected to a special praetorship; he was simply elected praetor, and his special duties were determined by lot. The same system was extended to the quaestors, and gradually, in the later Republic, to the consuls. For some time after the establishment of the city praetorship the consuls acted jointly. They even took the field together, the supreme command alternating day by day. But as foreign wars became more numerous they began, often by the advice of the Senate, but technically, in every case, by agreement, to divide the legions and the field of military operations, and to draw lots for their respective armies and "provinces." The Senate indeed might recommend or the people decree the assignment of a particular campaign or territory to a particular magistrate *extra sortem;* but this was unusual.

From the fact that all magistrates of equal rank were colleagues with equal powers and that the division of functions here described was primarily a *de facto* rather than a legal division, it followed, in principle, that either consul could interfere with the other in the field of military operations, and that any praetor could intercede against the act of any other praetor in the city. Such interference was practically impossible outside of the city, if different fields of activity had been assigned to the consuls, because of the rule that intercession must be made in person; and within the city it was regularly excluded by custom (but see Cicero, *Verr.* i. 46, 119).

3. *Powers of the Magistrates.* The imperium conferred upon the higher magistrates was, in principle, the same sort of power that had been exercised by the kings (*imperium regium*). It was primarily military power (*imperium militiae*), and was understood to include all governmental power not distinctly withheld by custom or law. Special limitations were first imposed in the field of justice, criminal and civil. The royal power of capital punishment has been practically annulled, according to Roman tradition, by the recognition of a right to appeal to the assembly (*provocatio*); and in the early Republican period this power passed wholly to the people, the magistrate retaining only the power to investigate and accuse. The power of the magistrates to fine was also limited by law. Civil cases were regularly referred, for decision, to a private *iudex* or *arbiter*, or a board of elected *iudices*. All these limitations, however, were confined to the city; and the restrictions afterwards imposed upon imperium out of the city (e. g. right of appeal in capital cases) were less extensive. Outside of the city, moreover, the magistrates with imperium were freed from the interference of the tribunes. The Romans accordingly came to distinguish *imperium militiae* from *imperium domi*, the complete power exercised beyond the city limits from the restricted power exercised within the city. The dictator alone had *imperium militiae* within the city—i. e. by the appointment of a dictator the city was placed under martial law.

Practically, of course, the governmental power of the higher magistracy was lessened by the multiplication of magistrates, by their short terms of office, and by their accountability to the people after the expiration of their terms. The power of the single magistrates was also practically diminished, in the later Republic, by the assignment of special fields of action to special magistrates; but in spite of all these facts, no magistrate clothed with imperium was ever regarded as an officer of special, designated powers. Imperium was always, in theory, general power; and every magistrate with imperium had, as against the people, all powers not legally denied him. The consuls, by virtue of their higher imperium, had residuary governmental power, not only as against the people, but also as against the magistrates with lower imperium and those without imperium—i. e. a consul could do whatever law and custom had neither forbidden to him nor assigned to the exclusive competence of another magistrate.

Special powers included in imperium, many of which were exercised also by magistrates without imperium, were as follows: (1) *Ius agendi cum populo*—i. e. the right of summoning and presiding over the meetings of the people (*comitia centuriata*), submitting proposals to them, causing a vote to be taken and announcing the result. Whether the business of the meeting was legislation, criminal justice, or the election of magistrates for the ensuing year, the initiative was wholly in the magistracy. The magistrates determined the form of a bill and accepted or rejected proposed amendments. They decided whether accusation should be brought against a person suspected of crime, and what penalty the people should be asked to impose. They submitted the list of candidates to be voted for, and no names could be brought before the people without their assent. This *ius agendi cum populo* belonged exclusively to the magistrates with imperium. The tribunes, however, had similar control over the meetings of the plebeians; and when the *concilia plebis* had developed into the *comitia tributa* and had obtained concurrent powers of legislation, a limited criminal jurisdiction and the right of electing the lower magistrates, the *ius agendi cum plebe* gave the tribunes an initiative similar to that of the consuls and praetors. The analogous right of summoning the Senate and obtaining an expression of its opinion, originally an exclusive right of the magistrates with imperium, was also extended to the tribunes. In the field of legislation the power of the tribunate thus became legally equivalent to that of the magistrates with imperium. Practically it was greater; for if a consul or a praetor proposed a bill to the popular assembly or a resolution to the Senate, the tribunes could veto the proposal and thus arrest legislative action, while they themselves were not subject to such interference from the other magistrates. It is therefore not surprising that the most important laws of the later Republic were *plebiscita* proposed by the tribunes.

(2) *Ius edicendi.* The people alone could establish a law (*lex*); but all magistrates had power to issue commands and prohibitions (*edicta, interdicta*) and means of punishing disobedience. Their ordinances, therefore, had the force of law (*legis vicem*), at least during the terms of the magistrates who

issued them. In principle there was nothing to prevent a magistrate from invading by his edicts the field of general legislation. In the later Republic the development and the reform of the private law were chiefly accomplished by the edicts of the praetors, and important contributions to the law of sale were made by the aediles. As a rule, however, the ordinances of the magistrates were not intended to override the general law, but to secure its observance; and the edicts and interdicts of each set of magistrates were commonly confined to that sphere of administration which law and custom allotted them.

(3) *Ius coercendi.* The means by which the magistrates enforced obedience to their commands were as follows: (*a*) *prensio*, arrest; (*b*) *in vincula ductio*, imprisonment; (*c*) *verberatio*, scourging; (*d*) *multae dictio*, imposition of a fine; (*e*) *pignoris captio*, seizure of movable property. All of these powers were included in imperium; the second and third were accorded only to magistrates with imperium. Imprisonment ordered by a magistrate was probably limited to his term of office; from a sentence of scourging *in urbe* a *lex Valeria* authorized an appeal to the people. The power to arrest was held by the tribunes and by the censors. The powers of fining and of seizing property were apparently exercised by all the magistrates,* and constituted the ordinary and normal method of coercion. That it was a very ancient method is shown by numerous Aryan analogies, and by the fact that among the Romans fines were originally levied in sheep and oxen. The power to fine was first limited by the rule that the fine must not exceed the half of the estate of the delinquent; later laws (*Aeternia Tarpeia, Menenia Sestia* [?]) confined *multae dictio* to a definite maximum (two sheep and thirty oxen; two sheep and five oxen. For an ingenious explanation of these numbers, see Karlowa, pp. 167–169). The magistrate who wished to fine beyond the legal maximum had to obtain the consent of the assembly (*multae irrogatio*). By the *lex Iulia Papiria* money fines were introduced and a pecuniary maximum substituted, the sheep being reckoned at ten as, the ox at one hundred. *Pignoris captio*, like imprisonment, might be employed to secure the payment of a fine; but it was often (and perhaps originally) used as a milder means of constraint, the property being restored to the owner if he promptly purged himself of contempt and subjected himself to the commands of the magistrate.

The fact that the tribunes could arrest (*prendere*) other magistrates, while the *leges sacratae* protected them against all coercion, was the key to their peculiar position in the Roman State.

(4) *Auspicia.* Before taking any important step, it was the right and the duty of the magistrates to ascertain whether the act in contemplation was favoured by the gods. (See AUGUR.) The magistrate who acted without proper auspices, or in defiance of unfavourable auspices, took the risk of punishment at the end of his term; and if his act was of a legal nature (e. g. the calling of *comitia*), it was the right and duty of the Senate, after obtaining the expert opinion of the augurs, to rescind the act and annul its results (e. g. the passage of a *lex* or the choice of magistrates). Auspices were regularly taken, at least in the earlier Republic, by the augurs; but the answer of the gods, as interpreted by these priests, referred to the inquiry of the magistrate at whose instance the auspices were taken. It was, of course, possible that the gods should be consulted on the same matter by different magistrates, and that different answers should be obtained. The result was then determined by the relative authority of the magistrates: *maiora auspicia* (i. e. auspices taken at the instance of a magistrate with *maior potestas*) overrode *minora*. As between colleagues with *par potestas*, unfavourable auspices prevailed over those of a favourable character.

It is a plausible hypothesis that in the early Republic, when the entire constitution had a sacral colour, the doctrine of *maior* and *par potestas* was worked out by the priests in the form of a doctrine of auspices. It accords with this theory that the lower patrician magistrates were under the auspices of the higher, and that the non-magistrate, who exercised delegated powers, was said to act under the auspices of the magistrate who appointed him.

4. *Responsibility.* The lower magistrates, as we have seen, were generally subject to the control of the higher, and the higher magistrates to the negative control of the tribunate; but the magistracy, as a whole, was not subject to the direct control of the people, or even to the control of the law. It enjoyed regal irresponsibility. During their terms of office the higher magistrates could not be made defendants in civil actions (*in ius vocari*), nor could criminal proceedings be instituted against them. In the later Republic magistrates were occasionally deposed by a vote of the assembly which had created them, but such action was contrary to the spirit of the constitution.

An indirect control of a moral character was exercised by the *consilia* of the magistrates (see below) and by the Senate (q. v.); and a very strong indirect control lay in the unlimited responsibility of the magistrates after their terms of office had expired. Not only did they then become liable to ordinary civil and criminal proceedings, but they might be punished by the people on purely political grounds.

5. *Expenses.* The republican magistrates received no pay; the technical term for office was *honour;* but they were not expected to waste their substance in the service of the State. They were provided with an ample force of paid assistants and attendants. (See APPARITORES; SCRIBAE.) If their duties called them out of the city, they received a liberal outfit from the treasury, and were entitled to transportation and sustenance *sumptu publico*. What they could not obtain by requisition from the subjects of Rome, they paid for; and for such outlays they were reimbursed from the treasury. In the later Republic it was not unusual to grant round sums by way of allowance for expenses, without requiring any account to be rendered.

6. *Insignia, attendants,* etc. The quasi-royal position held by the magistrates was strikingly expressed in the ceremonial and formal distinctions accorded them. The years were designated by the names of the consuls. The higher magistrates were accompanied, within and without the city, by numerous public attendants. Before the

* The power of the quaestors to fine is disputed by Mommsen. But even *curatores* could fine. (See Karlowa, *Rechtsgeschichte*, p. 171.)

highest magistrates, those clothed with imperium, marched lictors, bearing the symbols of punitive power. When a magistrate approached, the citizens rose from their seats, dismounted from their horses, descended from their carriages. The lower magistrates observed the same respect towards those of higher authority. Public business was transacted by a seated magistracy in the presence of a standing people. Magistrates who acted singly had chairs or stools (*sellae*); those who, like the tribunes, acted collectively, as a board, sat on benches (*subsellia*). The higher magistrates had stools of a special pattern (the *sella curulis*), and their garments were distinguished from those of the ordinary citizens. On ceremonial occasions ex-magistrates were permitted to resume the distinctive apparel of their office, and it was ostentatiously associated with their memory by their descendants (*ius imaginum*). For details, see APPARITORES; INSIGNIA.

7. *Consilia.* It was a principle of Roman law, private and public, that he who exercised power over others should not act unadvised. It was equally a principle of the law that advice was not binding. The power to act was not impaired by the dissent of advisers, nor did their assent diminish or divide responsibility.

The Senate, which had been the council of the kings, was also, in a broad sense, the council of the whole higher magistracy; but each magistrate had a special *consilium*. This always included any lower magistrates who were assigned to the same "province," or field of administration, and the principal assistants or deputies selected by the magistrate himself; but it also included persons chosen by him as advisers simply. The choice was limited, by custom, to the senatorial and equestrian orders. It was often based on personal friendship, but chiefly on the reputation of the persons chosen for knowledge and experience of affairs. In the administration of justice the urban and peregrine praetors and the provincial governors were regularly assisted by the counsel of the most eminent Roman jurists.

8. *Election, terms,* etc. All the magistrates, except the dictator, were elected (*creati*) by the people; the higher magistrates, including the censors and curule aediles, by the *comitia centuriata;* the tribunes, plebeian aediles, quaestors, vigintisexviri, curatores, and military tribunes, by the *comitia tributa.* All except the censors were elected annually; the censors every fifth year. All were elected during the year preceding their assumption of office, the magistrates in office (consuls, praetors, or tribunes) summoning and directing the *comitia* in which their successors were chosen. The election of tribunes took place in July; that of the other magistrates later in the year. See COMITIA.

The term of office, except in the case of the dictator and in that of the censors, was one year. The dictatorship was limited to six months. The censors originally held office until their work was done; later, the rule was established that their work must be done in eighteen months. The annual terms, in the early Republic, did not begin at any fixed date; in case of abdication or death of both consuls, their successors were chosen, not for the residue of the term, but for a full year. In the later Republic the practice was changed; at the close of the third century B.C. the official year began on the 15th of March; in the second century it began on the 1st of January. The quaestors, however, took office December 5th, and the tribunes December 10th.

Lex curiata de imperio. According to Roman tradition, the king-elect had no imperium until it was granted him by a special law. Under the Republic the consuls and praetors, at the beginning of their terms of office, were obliged to summon the old patrician assembly (*comitia curiata*) and obtain from it a similar grant. The necessary law seems always to have been voted as a matter of course; and in the late Republic its adoption was a singularly empty form, the *curiae* being represented by lictors. At some intermediate period the theory that a formal grant of power should follow election and accompany the assumption of office was extended to some of the officials without imperium—e. g. a *lex curiata* was regularly passed for the benefit of the quaestors. In the case of the censors, a law authorizing them to enter upon the discharge of their duties was voted by the centuriate assembly. No *lex curiata* or other confirmatory law was ever passed in the case of the plebeian magistrates.

9. *Eligibility* (*ius honorum*). The power of the magistrates to strike unfit persons from the list of candidates could never have been exercised on purely political grounds without serious risk of subsequent punishment; and in the course of the republican period the grounds of exclusion were defined, by custom or statute, with considerable exactness. Non-citizens, lunatics, and persons afflicted with serious bodily infirmities were, of course, excluded; so also were women. Condemnation for political offences (and for ordinary crimes and torts when the condemnation carried with it *infamia*) operated as a bar to office; and it lay in the power of the magistrate to exclude those whose occupations made them infamous. Freedmen and their sons were ineligible, and originally their grandsons also; but in the later Republic the grandsons were eligible. Tradesmen were regularly excluded, trade on a small scale being regarded as an illiberal occupation.

At different periods in the history of the Republic candidacy for office was made conditional on the previous performance of military duty, upon the observance of a definite order of advancement with intervals between the different offices, and upon the attainment of certain age limits. For details, see HONORES.

Re-election. As early as B.C. 342 a plebiscite forbade re-election to the same office until ten years had elapsed; but from this rule frequent dispensations seem to have been granted. Re-election to the censorship was absolutely forbidden. In the year B.C. 151 the same rule was established for the consulate, but it was abrogated seventy years later.

10. *Vacancies and Representatives.* The fact that every magistracy was held by a number of persons, each of whom possessed all the powers of the office, and the further fact that the consuls possessed residuary governmental power, excluded the assumption that a vacancy was created by the death or resignation of any single magistrate. Even when a distinct field of administration had been allotted to such a magistrate, his duties could be assigned to a colleague or assumed by one of the consuls. Cases even occurred where

the duties associated with one magistracy were temporarily assigned by the Senate to another (e. g. duties of an aedile to a praetor).

The death or abdication of both consuls (if at the time there was no dictator) meant more than a mere vacancy in the consular office: it meant the temporary disappearance of the ordinary government. By the sacral tradition praetors, curule aediles, and even quaestors were bound to resign their offices; the auspices under which they held their respective positions were extinguished, and it was necessary to institute a new administration with new auspices. The situation was the same as that produced in the royal period by the death of the king: there was an *interregnum*. As in the royal period, the auspices were with the Senate, and the Senate designated the temporary holders of supreme power—one *interrex* after another, each holding for five days—until the centuries could be assembled and new magistrates elected. As soon as a single consul was chosen, the *interregnum* was at an end. The *interregnum* exercised no influence upon the plebeian magistrates, for they were not under the same auspices.

In case of the simultaneous absence from the city of both consuls, it was customary, in the early Republic, for them to appoint a temporary governor. See PRAEFECTUS URBI.

II. THE REPUBLICAN MAGISTRATES UNDER THE EMPIRE. According to the official theory, promulgated by Augustus and accepted by his successors, the establishment of the *principatus* left the republican constitution intact, and in the early Empire republican forms were scrupulously observed. The magistrates were elected, during the reign of Augustus, by the people; under Tiberius and his successors they were "created" by the Senate and "announced" in the popular assembly. Under both systems they were selected by the *princeps*, and however independent they might be in theory, in fact they were unable to cross the imperial purposes. They were not, however, the real agents of the imperial government. The emperors preferred to exercise the more important powers of sovereignty through officers whom they appointed openly and directly, and whose authority was theoretically as well as actually a delegated authority. The real officials of the Empire were the prefects and legates of Augustus. The republican magistrates were loaded with honours, but they were quietly deprived, from the start, of all their political powers and confined to the exercise of judicial and administrative functions; and, later on, these functions also were gradually absorbed by the imperial officials—police powers and criminal justice first, minor administrative duties and civil jurisdiction last. The development of the new official hierarchy was practically completed in the second century. The republican magistracies became mere titles, earned by heavy outlays for the amusement of the people. In this form they continued to exist throughout the principate, and were even transferred to the Eastern Empire. Allusions to the tribunate occur in the fifth century; and as late as 541 an "Oriental consul" was elected at Constantinople, and for a quarter of a century the years were officially dated from his consulate.

III. MUNICIPAL MAGISTRATES. With the development of self-governing colonies and the extension to allied and subject cities of Roman citizenship and municipal autonomy, there appeared, at the close of the republican period, a municipal magistracy closely modelled on that of Rome. (See MUNICIPIUM.) Under the principate, this system, first worked out for Italy, was gradually extended throughout the Empire, until the municipal magistrates became everywhere the regular organs of local government. In the legal literature of the Empire, therefore, *magistratus* regularly refers to the municipal magistracy, the titular dignitaries of Rome being distinguished as *magistratus populi Romani*.

See Madvig, *Verfassung und Verwaltung des römischen Staates* (1881–82); Herzog, *Geschichte und System der römischen Staatsverfassung* (1884–87); Mommsen, *Römisches Staatsrecht* (3d ed. 1887–88); Karlowa, *Römische Rechtsgeschichte*, Bd. I. (1885); Willems, *Droit Public Romain* (6th ed. 1889).

Magna Graecia. See GRAECIA MAGNA.

Magna Mater. A Roman name of the goddess Cybelé or Rhea (q. v.).

Magnentius. A German by birth who conspired against the life of the emperor Constans, whom he caused to be murdered in his bed. Subsequently, being pursued by the vengeance of Constantius, and defeated by him at the battle of Mursa (A. D. 351), he took his own life by falling on his sword. His reign lasted from A.D. 350 to 353. His full name was Flavius Popilius Magnentius. See Victor, *Caes.* 41 and 42.

Magnes (*Μάγνης*). (1) One of the first founders of Attic comedy, B.C. 460. See COMOEDIA. (2) A youth said by some to have been the slave of Medea and to have been changed by her into a magnet. The more generally accepted story states that once, while walking over a mine, he found himself detained by the iron nails in his shoes which became attached to the lodestones over which he was attempting to pass. From him, as the first discoverer, the magnet received its name (Orph. *De Lapid.* x. 7).

Magnesia (*Μαγνησία*). (1) A narrow strip of country along the eastern coast of Thessaly, extending from the Peneus on the north to the Pagasaean Gulf on the south. Its inhabitants, the Magnetes, are said to have founded the two cities in Asia mentioned below. (2) MAGNESIA AD SIPŸLUM, a city in the northwest of Lydia, at the foot of Mount Sipylus, and on the south bank of the Hermus, famous as the scene of the victory gained by Scipio Asiaticus over Antiochus the Great, B.C. 190. (3) MAGNESIA AD MAEANDRUM, a city in the southwest of Lydia, situated on the river Lethaeus, a tributary of the Maeander. It was destroyed by the Cimmerians (probably about B.C. 700), and rebuilt by colonists from Miletus. It was celebrated for its beautiful temple of Artemis, ruins of which still exist.

Magnopŏlis (*Μαγνόπολις*) or **Eupatoria Magnopŏlis.** A city of Pontus in Asia Minor near the union of the rivers Lycus and Iris. It was begun by Mithridates Eupator and finished by Pompey the Great (Appian, *Mithr.* 78, 115).

Mago (*Μάγων*). (1) A Carthaginian general sent against Dionysius, the Sicilian tyrant, over whom he obtained a victory, but was subsequently slain in battle. (2) A son of the preceding, who succeeded his father in command of the Carthaginian army. He laid siege to Syracuse, but fled on the

approach of Timoleon. Being impeached for cowardice by the Senate of Carthage, he escaped execution by committing suicide. After his death, his body was gibbeted and exposed in public. (3) See PUNIC WARS.

Magontiăcum. See MOGONTIACUM.

Maharbal (*Μαάρβας*). A son of Himilco, and one of the most distinguished officers of Hannibal in the Second Punic War. He is first mentioned at the siege of Saguntum. After the battle of Cannae he urged Hannibal to push on at once with his cavalry upon Rome itself; and on the refusal of his commander, he is said to have observed that Hannibal knew how to gain victories, but not how to use them (Livy, xxi., xxii.; Florus, ii. 6).

Maia (*Maîa*). The daughter of Atlas and Pleioné, one of the Pleiades (q. v.), and mother of Hermes by Zeus. The Romans identified her with an old Italian goddess of spring, Maia Maiestas (also called Fauna, Bona Dea, Ops), who was held to be the wife of Vulcan, and to whom the flamen of that god sacrificed a pregnant sow on the first of May.

Maiestas, in Roman criminal law, meant the inviolable dignity or sovereignty of the State; and all conduct derogatory to the dignity or power of the people, or of those to whom the people had intrusted power, was *crimen imminutae maiestatis* (Cic. *De Invent.* ii. 17, 53). This particular conception of treason appeared late in the history of the Republic, and was at first supplementary to the older conception of *perduellio*. An attack upon the existence of the State was *perduellio;* anything less than this was the crime of impaired majesty. The Republican laws *de maiestate* were all passed in a period of bitter, and often bloody, political strife, and all the prosecutions under these laws were essentially partisan. The expression *imminuta maiestas* seems first to have been used in the *lex Apuleia* (B.C. 103 ?); and the principal object of this law, apparently, was to protect the sovereignty of the people as incorporated in the tribunate. The conception was further developed by a *lex Varia* (B.C. 90 ?) and (in the conservative interest) by a *lex Cornelia* of Sulla (B.C. 80), until the crime against majesty practically covered and included *perduellio*. In a *lex Iulia* (ascribed by some authorities to Julius Caesar, by others to Augustus, while others again hold that there were two *leges Iuliae de maiestate*), the two crimes were fused, and *perduellio* thenceforward meant simply a grave case of lese-majesty (cf. *Inst.* 3, 1, 5; *Dig.* 48, 4, 11; Codex, 9, 50, 2). This *lex Iulia* remained the basis of the law of treason through the Imperial period, but the number of possible offences against majesty was greatly increased by succeeding statutes. The *maiestas publica* was primarily and chiefly embodied in the person of the emperor (*maiestas principatus, augusta*); and the *crimen laesae maiestatis* included not only acts injurious to the State, but all plots against the emperor and his family, and all acts derogatory to his dignity and honour. Thus libels upon the emperor, destruction of his statues, false or violated oaths *per genium principis*, and, under some of the more tyrannic rulers, hostile and even disrespectful speech were punished as lese-majesty. Arcadius, who repealed all laws of the last-mentioned character, extended the law of treason to include plots against the higher officials of the Empire (A.D. 397).

Trials for *perduellio*, under the Republic, were always *in comitiis*—i. e. prosecution took the form of a bill, and the decision lay with the popular assembly. Prosecutions *de maiestate*, on the other hand, were conducted before special courts (*quaestiones*). In the early Imperial period cases of treason were tried by the Senate; later by the emperor himself or his praefects. Accusation could be brought, even under the Republic, by slaves, infamous persons, and others who were debarred in ordinary criminal cases; and under the emperors torture was applied to freemen and even to persons of rank (*honorati*) for the purpose of obtaining evidence.

The penalty in the Republican period was exile, or rather outlawry (*aquae et ignis interdictio*). In the Empire it varied, according to the gravity of the offence, the social position of the offender, and the temper of the reigning emperor, from death in various forms (*humiliores vestiis obiiciuntur vel vivi exuruntur, honestiores capite puniuntur*, Paul, v. 29, 1) to scourging or simple *relegatio*. In both periods the extreme penalty carried with it the escheat or confiscation of the criminal's property, and, under the Empire, attainder of the blood, so that the sons of the criminal could neither hold office nor take inheritances or legacies (Codex, 9, 8, 5). The same results attached to condemnation when prosecution was instituted after the death of the criminal (*damnatio memoriae*). See Zumpt, *Das Criminalrecht der röm. Republik* (1868), ii. 1, 226–237, 249–258, 376–392; and Rein, *Das Criminalrecht der Römer* (1844), 506–597.

Maiūma. A May-day festival celebrated at Rome by the inhabitants, who on this occasion made up excursion parties to visit the sea-shore at Ostia and bathe in the salt-water. The name is not found in the early Latin writers, but the *Cod. Theod.* (xv. 6, 1 and 2) speaks of it as an old custom revived in later times.

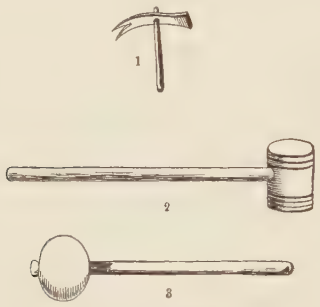
Malăca. The modern Malaga; an important town on the coast of Hispania Baetica and on a river of the same name, founded by the Phœnicians. Near Malaca was found in 1851 a bronze tablet containing the LEX MALACENSIS, a statute regulating the city's municipal constitution. It was granted by Domitian (A.D. 81–84). It is given in the *C. I. L.* ii. 1964, and in Bruns. See SALPENSA.

Malchus (*Μάλχος*). A Byzantine historical writer and rhetorician of Philadelphia in Syria. He wrote a history of the Eastern Empire covering a short period in the fifth century. The remains are edited by Bekker and Niebuhr (Bonn, 1829).

Malĕa (*Μαλέα*). (1) A promontory on the south-east of Laconia, separating the Argolic and Laconic gulfs. At this point the sea is so rough as to give rise to the proverb, *Cum ad Maleam deflexeris, obliviscere quae sunt domi* (Mela, ii. 3). (2) A promontory on the coast of Lesbos.

Malĕlas or **Malălas**, IOANNES (*Ἰωάννης ὁ Μαλέλα* or *Μαλάλα*). A Byzantine historian born at Antioch who flourished in the sixth century A.D. He was the author of a universal history from the creation of the world through the reign of Justinian. It has been edited by Dindorf (Bonn, 1831).

Malia. A city of Phthiotis, near Thermopylae. In its vicinity were hot mineral springs, and from it the neighbouring gulf was called Maliacus Sinus.



MARSHALL HIGH SCHOOL
LIBRARY
MINNEAPOLIS

Maliăcus Sinus. See MALIS.

Malis (*Μαλίς, Μηλίς*). A district in the south of Thessaly, on the shores of the Maliacus Sinus, and opposite the northwestern point of the island of Euboea. It extended as far as the pass of Thermopylae. Its inhabitants, the Malienses, were Dorians, and belonged to the Amphictyonic League.

Malleŏlus. A sort of rocket or torch, used in naval warfare, having a mass of lighted pitch or tar at one end. It was employed to set fire to the enemy's rigging; or in sieges, like the more modern fire-ball. See Cic. *Cat.* i. 13, 32; Livy, xlii. 64.

Malleus, dimin. **Malleŏlus** (*σφῦρα*). A hammer or mallet. In Greek, *σφῦρα* is the generic term, and *ραιστήρ* and *κέστρα* denote the heavy hammer used by smiths, while *κροταφίς* is a hammer with one end sharpened like a pick. In Latin, the heavy hammer is called *marcus*, and the

Ancient Hammers.
(1) Carpenter's Hammer. (2) Smith's Hammer. (3) Butcher's Hammer.

smaller varieties *marculus* and *marcellus*. The smith's hammer, shown in no. 2, is of wood, bound with iron. The butcher's hammer or mallet in no. 3 was used in slaughtering oxen, and also by the *popa* (q. v.) at sacrifices.

Malli (*Μαλλοί*). An Indian people on both sides of the Hydraotes. Their capital is supposed to have been on the site of the celebrated fortress of Mooltan (Arrian, *Anab.* vi. 7–14).

Mallophŏra (*Μαλλοφόρα*). "Wool-bearing." An epithet of Demeter, as worshipped at Megara, whose inhabitants she was fabled to have taught the use of wool (Pausan. i. 44).

Mallus (*Μαλλός*). A very ancient city of Cilicia, on a hill east of the mouth of the river Pyramus, said to have been founded at the time of the Trojan War by Mopsus and Amphilochus.

Malluvia (from *manus* + *luo*). A basin used for washing the hands, and called by the Greeks *χειρόνιπτρον* and *χέρνιβον* (*Il.* xxiv. 304). The accompanying illustration shows the basin upon its stand, with a towel beside it.

Malluvia. (Aldobrandini fresco, Vatican.)

Mālus. The mast of a ship. See NAVIS.

Malus Ocŭlus. See FASCINUM.

Mamaea, Iulia. A Syrian, a native of Emesa, the daughter of Iulia Maesa and mother of the emperor Alexander Severus, whom he reared with much care. When her son was put to death by the soldiers in A.D. 235, she shared his fate. See ELAGABALUS; MAESA; SEVERUS.

Mamercus. The name of a distinguished family of the Aemilia gens in the early times of the Roman Republic (Livy, iv. 17–34).

Mamers. The Oscan name of the god Mars (q. v.).

Mamertine Prison. See CARCER, p. 278.

Mamertīni. See MESSANA; PUNIC WARS.

Mamertīnus, Claudius. A Latin panegyrist, the author of a speech addressed to the emperor Iulian on January 1, A.D. 362, at Constantinople, thanking him for conferring the consulate on him. It gives a pretty accurate picture of the personality of the emperor and of his administration. An older Mamertinus is assumed to be the author of two panegyrics in praise of Maximianus, co-regent with Diocletian, which were delivered in A.D. 289 and 291 at Trèves. See PANEGYRICUS.

Mamilius. The name of a distinguished family in Tusculum. It was to a member of this family, Octavius Mamilius, that Tarquinius betrothed his daughter; and on his expulsion from Rome his son-in-law roused the Latin people against the infant Republic, and perished in the great battle at Lake Regillus. The Mamilii afterwards removed to Rome.

Mamurius. The mythical maker of the *ancilia*. See ANCILÉ; SALII.

Mamurra. A Roman knight, born at Formiae. He was the commander of the engineers (*praefectus fabrum*) in Iulius Caesar's army in Gaul, and amassed great riches. Horace calls Formiae, in ridicule, *Mamurrarum urbs*, from which we may infer that the name of Mamurra had become a by-word of contempt (*Sat.* i. 5, 37).

Manceps. One who acquired possession of a thing by the form of conveyance known as *mancipatio* (q. v.).

Mancīnus, C. Hostilius. A Roman who was consul in B.C. 137. He was defeated by the Numantines, and purchased his safety by making a peace with them. The Senate refused to recognize it, and went through the hypocritical ceremony of delivering him over to the enemy, who refused to accept him. On his return to Rome he was expelled from the Senate by the tribune P. Rutilius on the ground that he had lost his citizenship, as being still technically a prisoner (see POSTLIMINIUM); but his rights were restored by a special law (Vell. Pat. ii. 1).

Mancipatio (from *manus* + *capio*, "a taking with the hand"). A formal mode of purchase among the Romans, which seems to go back to a time when the price of purchase was weighed out in bars of copper. In the presence of six Roman citizens of the age of puberty, one of whom, called the *libripens* (weigher), held a copper balance, the purchaser took hold of the thing and uttered certain prescribed words. He then struck the balance (*libra*) with a small piece of copper (*aes* or *raudusculum*), which he gave to the seller as symbol of the price. This mode of purchase *per aes et libram* was employed in the case of *res mancipi*—i. e. estates in Italy or provinces with Italian law, in the country or in towns, slaves, and domestic animals and beasts of burden needed for agricultural purposes; also in a certain kind of testaments, in the form of marriage called *coëmptio*, and in transferring one's power over a person (*manus*) to another. See ADOPTIO; EMANCIPATIO; MANCIPIUM; MANUS.

Mancipium. The right of possession obtained through *mancipatio* (q. v.), and the possession itself, which none but the head of the family has a right to dispose of. *Homines liberi in mancipio* are free men, whom their father has given into the power of another man by *mancipatio*—e. g. in compensation for some damage they have done to the latter. Their position differed from that of slaves in this, that they retained the right of personality, could complain if their masters treated them badly, and regained all the rights of a free-born man on leaving their position of dependence. This was effected in the same way as the liberation of slaves *vindicta*, *censu*, and *testamento*. (See LIBERTUS.) After the repeal of the severe laws making imprisonment the penalty of convicted debtors, the same relation as that mentioned above existed between debtor and creditor until the money was paid. See NEXUM.

Mandānē. The mother of Cyrus the Great of Persia. See CYRUS.

Mandonius and **Indibĭlis.** Two brothers, and chiefs of the Spanish tribe of the Ilergetes, who played an important part in the war between the Romans and Carthaginians in Spain during the Second Punic War. For some years they were faithful allies of the Carthaginians; but in consequence of the generous treatment which the wife of Mandonius and the daughters of Indibilis received from P. Scipio, when they fell into his hands, the two brothers deserted the Carthaginian cause, and joined Scipio in B.C. 209 with all the forces of their nation. But in B.C. 206 the illness and reported death of Scipio gave them hopes of shaking off the yoke of Rome, and they excited a general revolt not only among their own subjects, but the neighbouring Celtiberian tribes also. They were defeated by Scipio, and upon suing for forgiveness were pardoned. But when Scipio left Spain in the next year (B.C. 205) they again revolted. The Romans attacked them; Indibilis was slain in battle, and Mandonius was soon after captured and put to death (Livy, xxix. 1; Appian, *Hisp.* 38).

Mandra. A checker-board. See LATRUNCULI.

Mandubii. A people in Gallia Lugdunensis, in the modern Burgundy, whose chief town was Alesia.

Manduria. A town in Calabria, on the road from Tarentum to Hydruntum (Livy, xxvi. 15).

Mānes (from *mānus*, "good"). A name euphemistically given by the Romans to the spirits of the dead, which were held to be immortal like the gods, and hence designated as such (*dii manes*). They dwelt below the earth, and only came forth at certain seasons of the year. On the Mons Palatinus at Rome, there was, as in other Italian towns, a deep pit with the shape of an inverted sky, known as *mundus*, the lowest part of which was consecrated to the infernal gods and also to the Manes, and was closed with a stone, *lapis manalis*, thought to be the gate of the nether world. This stone was lifted up three times a year (August 24, October 5, November 8), and the Manes were then believed to rise to the upper world; on this account those days were *religiosi*—i. e. no serious matter might be undertaken on them. Sacrifices were made to the Manes as to the dead; water, wine, warm milk, honey, oil, and the blood of black sheep, pigs, and oxen were poured on the grave; ointments and incense were offered; and the grave was decked with flowers, roses and violets by preference. Oblations, which chiefly consisted of beans, eggs, lentils, bread and wine, were placed on the grave, and the mourners partook of a meal in its neighbourhood. Besides the private celebrations there was also a public and universal festival, the Parentalia, which lasted from the 13th to the 21st of February, the last month of the older Roman year; the last day had the special name Feralia. During these days all the temples were closed, marriages were prohibited, and the magistrates had to appear in public without the tokens of their office. The festival of the dead was followed by that of the relations on February 22, called Caristia (q. v.). This was celebrated throughout the town by each individual family, the members of which exchanged presents and met at festal banquets. See Ovid, *Fasti*, ii. 617; LARES; and PARENTALIA.

Manĕtho (*Μανεθώς* or *Μανεθών*). An Egyptian, a priest at Heliopolis in the reign of the first Ptolemy (B.C. 283–246), and who was the first Egyptian to give in Greek an account of the history and religion of his native country. One work was entitled *Τῶν Φυσικῶν Ἐπιτομή*, dealing with the theology of the Egyptians and with the origin of the world; the second was styled *Αἰγυπτιακὴ Ἱστορία*, and in three books treated of Aegyptian chronology and history. The first book covers the mythical period prior to the eleventh dynasty; the second, from the eleventh to the twentieth; the third, from the twentieth dynasty to the reign of Nectanebus, the last native Egyptian king. The original works of Manetho are lost, but copious extracts remain preserved by the ecclesiastical writers, especially Iulius Africanus, Eusebius, and Georgius Syncellus. The sources of Manetho's history were the early archives and sacred books of Egypt, and in recent years much corroborative evidence of the truth of what he wrote has been derived by Egyptologists from the hieroglyphics and other sources. The fragments of Manetho are collected and edited by C. Müller in his *Frag. Hist. Graec.* (Paris, 1856). A long astrological poem in six books and entitled *Ἀποτελεσματικά*, once ascribed to Manetho, is now regarded as written several centuries later than his time. It is edited by Axt and Rigler (Cologne, 1832), and Köchly (1858).

Mango. A slave-dealer. See SERVUS.

Mania. See LARES.

Manĭca (*χειρίς*). (1) A sleeve worn either separately (Pallad. *R. R.* i. 43) or sewn to the tunic (Curt. iii. 7). The latter was long regarded as effeminate (Verg. *Aen.* ix. 616; Gell. vi. 12), but in the later Empire was regularly worn. It appears to have been developed from a species of

Manicae. (Rich.)

glove with gauntlets, originally used by hedgers and huntsmen to protect the hands and arms from briars and thistles. Such were probably the χειρίδες of Homer (*Od.* xxiv. 228, 229), differing only from gloves in not having fingers. (See DIGITALIA.) (2) A handcuff, generally spoken of in the plural (*manicae*), of which the preceding illustration gives an example (Plaut. *Most.* v. 1, 17). (3) A grappling-iron used in naval battles (Lucan. iii. 565). See HARPAGO.

Manilius. (1) GAIUS, a tribune of the plebs (B.C. 66), who proposed the law (Manilia Lex) granting to Pompey the command of the war against Mithridates, and which Cicero supported in an extant oration. (2) The reputed author of a Latin didactic poem upon astronomy and astrology (*Astronomica*), in five books, the first of which was written under Augustus, after the battle in the Saltus Teutoburgiensis (A.D. 9), and the fifth under Tiberius. The first two books treat of astronomy as the foundation of astrology; the rest of the influence of constellations on human destiny. The author certainly intended to write a sixth book, but it has either been lost or was never written. The poet, who shows extensive knowledge, frequently boasts of having been the first among Roman poets to treat the subject, and handles his difficult theme with a dexterity and a moral earnestness that recall Lucretius, whose language he has frequently imitated. In metrical skill he is on a par with the best poets of the Augustan Age. The *editio princeps* of Manilius appeared at Nüremberg about 1472; the best texts are those of Bentley (London, 1739), and Jacob (Berlin, 1846). See Woltjer, *De Manilio Poeta* (Groningen, 1881); Lauson, *De Manilio Poeta eiusque Ingenio* (Paris, 1887); and Kraemer, *De Manilii Astronomicis* (Marburg, 1890).

Manipŭlus (literally, "a handful"). A subdivision of the Roman legion (q. v.), which had thirty of them (three in each of the ten cohorts). The manipulus consisted of two centuries. The name is derived from *manus* + *plenus*, and originally signified those who rallied around the handful of hay or grain carried at the end of a pole, which formed the primitive standard. See SIGNUM.

Manipulus. (From a terra-cotta lamp.)

Manlia Gens. A Roman patrician family, of which the chief branches were those of Acidinus, Torquatus, and Vulso.

Manlius, MARCUS. A Roman who was consul in B.C. 392, took refuge in the Capitol when Rome was taken by the Gauls in 388 (Mommsen). One night, when the Gauls endeavored to ascend the Capitol, Manlius was roused from his sleep by the cackling of the geese; collecting hastily a body of men, he succeeded in driving back the enemy, who had just reached the summit of the hill. From this heroic deed he is said to have received the surname of Capitolinus. In 385 he defended the cause of the plebeians, who were suffering severely from the harsh and cruel treatment of their patrician creditors. In the following year he was charged with high treason by the patricians; and being condemned to death by the people, he was hurled down the Tarpeian Rock by the tribunes. The members of the Manlia gens accordingly resolved that none of them should ever bear in future the praenomen of Marcus. See Mommsen, *Hist. of Rome*, i. pp. 380, 381, 429 (Amer. ed. 1888).

Manlius Torquātus. See TORQUATUS.

Mannus. A god of the ancient Germans, and by them regarded as one of the founders of the race. See GERMANIA, p. 726.

Mannus. A familiar Latin word for a horse, derived from the Keltic, and used like our "nag" or perhaps even more slangily like "plug."

Mansio (σταθμός). A posting-station. See CURSUS PUBLICUS.

Mansions. See DOMUS.

Mantēlé. (1) A towel or napkin used by the Roman priests in their sacrificial rites (Ovid, *Fast.* iv. 933). (2) In imperial times a table-cloth (Mart. xii. 29. 12). In this sense it is not employed earlier than the time of Martial, and in an earlier age the table was not covered, the grain of the wood being an object of admiration. See MAPPA.

Mantiāna Palus. A great lake in the southern part of Armenia Maior. It was also called Arsissa.

Mantĭca (πήρα, θύλακος). A wallet, satchel, or travelling-bag carried by hand, or slung over the shoulder, or strapped on behind the saddle of a horse (Hor. *Sat.* i. 6, 106). A larger kind of bag was called *averta* (*Cod. Theod.* viii. 5, 47).

Mantĭké (μαντική, sc. τέχνη). The name given by the Greeks to the gift or art of divination. The belief of the ancients that it was possible to find out what was hidden or what was going to happen sprang from the idea that the gods, when implored by prayer, or even when unimplored, graciously communicated revelations to men by means of direct inspiration or through signs requiring interpretation. Hence the ancients distinguished between natural and artificial divination.

Divination is natural when a man receives the supposed inspiration in a dream or in an ecstatic state. The belief in divine inspiration in dreams is of the greatest antiquity, and continued to be held when the natural causes of dreams had been ascertained. The meaning of prophetic dreams cannot, however, always be immediately comprehended; they are mostly symbolical, and therefore require an interpretation. As a guide to this, there arose in the course of time certain rules resulting from experience, which produced a special art—that of interpreting dreams—of which some idea is given by the Ὀνειροκριτικά, on the interpretation of dreams, by Artemidorus (q. v.). Similarly, the dreams obtained by sleeping at holy places (*incubatio*), which were always considered prophetic, usually needed a priest to interpret them.

The power of more or less clearly seeing in waking hours things concealed from ordinary vision was believed by the Greeks to be a special gift of Apollo. It is from him that Homer makes Calchas receive his revelations, although no mention is made of his being in the ecstatic state usually connected with this kind of soothsaying. At the oracles this state was usually produced by external influences (see ORACULUM); women were held to be particularly susceptible to them. Besides oracles and persons reputed to be inspired, use

was made of various collections of older oracular sayings and pretended predictions of prophets and prophetesses of former times, such as the Branchidae of Miletus, the Iamidae of Olympia, the Eumolpidae of Athens, and the Sibyls. Such collections were not only in the possession of States and priesthoods, but also in that of private individuals, called χρησμολόγοι, who drew on their store when paid to do so by those who believed in them, and often also explained the dark sayings. Like the prophets by immediate inspiration, those also were called seers who interpreted according to certain rules the divine signs which formed the subject of the artificial variety of the art of divination.

From the very oldest times special importance was attached to omens of birds (whether in answer to prayer or not), which were discriminated from one another by various rules, with regard partly to the kind of birds, partly to the manner of their appearing — e. g. direction (favourable from the right, unfavourable from the left), flight, alighting, singing, and anything else they did. The principal birds consulted were the birds of prey that fly highest and alone—the eagle (the messenger of Zeus), the heron, the hawk, the falcon, and the vulture; in the case of ravens and crows, the cawing was an omen.

Second in importance were the various phenomena of the sky considered as divine signs. Whether thunder and lightning were favourable or not was also decided by the direction, right or left, from which they came. At Sparta, shooting stars were thought to show that the gods were displeased with the kings. Eclipses of the sun and moon, comets, and meteors were signs that inspired terror. Prophesying from the stars, however, did not become known in Greece till the time of Alexander the Great.

In important enterprises, especially in war, recourse was had to an examination of the condition of sacrificed animals or ἱεροσκοπία—oxen, sheep, and also pigs being most frequently the victims. The points observed were: normal or abnormal nature of the entrails, especially the liver, with the gall-bladder, and also the heart, spleen, and lungs. The various kinds of entrails and their abnormal conditions were made the subject of a highly elaborate system, so that no Greek army could dispense with a skilled interpreter of signs. When the omens were unfavourable, the sacrifice was repeated till they were favourable, or the enterprise was postponed. The manner, too, in which animals went to be sacrificed, whether willingly or with reluctance (Juv. xii. 5, with Mayor's note), was looked upon as an omen, as also the way in which the sacrifice burned on the altar, the burning of the flame itself, the rising or sinking of the smoke, etc. These signs drawn from fire were the subject of πυρομαντεία.

There was, indeed, a general inclination to regard all striking and unusual events as hints from the gods, and to interpret them one's self, or to have them interpreted by skilled seers. From ancient times the chance utterances of others were thought to be prophetic in so far as they applied to the circumstances of the moment. For such omens also the gods were asked. Besides these, lots and dice were used for predictions. There were many other artificial varieties of the art of divination, some of them very strange, which were in special favour in the lower classes of the people and in later times; as, for instance, soothsaying with a sieve suspended by threads, for the purpose of finding out thieves, or remedies for illness, etc., that name being thought the one required, at mention of which the sieve ceased to turn round. As early as Aristotle allusion is made to chiromancy, or palmistry. See Bouché-Leclercq, *Histoire de la Divination dans l'Antiquité*, 4 vols. (Paris, 1879–82); and the articles AUGUR; DIVINATIO; ORACULUM; SIBYLLA; SORTES VERGILIANAE.

Mantinēa (Μαντίνεια). One of the most ancient and important towns in Arcadia, situated on the small river Ophis, near the centre of the eastern frontier of the country. It is celebrated for the great battle fought under its walls between the Spartans and Thebans, in which Epaminondas fell, B.C. 362. In consequence of its treachery to the Achaeans, Aratus put to death its leading citizens, sold the rest of its inhabitants as slaves, and changed its name into ANTIGONIA, in honour of Antigonus Doson. The emperor Hadrian restored to the place its ancient name.

Mantius (Μαντίος). A son of Melampus (q. v.).

Manto (Μαντώ). (1) The daughter of the seer Tiresias, and herself a prophetess, at first of the Ismenian Apollo at Thebes. After the capture of the town by the Epigoni she was presented to the oracle at Delphi as part of the booty, and sent by the god to Asia, in order to found the oracle of the Clarian Apollo in the neighbourhood of what was afterwards Colophon. Here she bore Mopsus (q. v.) to the Cretan seer Rhacius. (2) The daughter of Heracles and also a prophetess. From her the town of Mantua received its name (Verg. *Aen.* x. 199).

Mantua. A town in Gallia Transpadana, on an island in the river Mincius. It was not a place of importance; but is celebrated because Vergil, who was born at the neighbouring village of Andes, regarded Mantua as his birthplace. See VERGILIUS.

Mantuan Vase. See GEMMA.

Manubiae. See SPOLIA.

Manum, CONVENTIO IN. See MANUS; MATRIMONIUM.

Manumissio. The legal act by which slaves and persons *in mancipii causa* were released from the *manus* of their masters and presented with freedom. There were three kinds of manumission: (*a*) *vindictā*, (*b*) *censu*, (*c*) *testamento*, on which classification see Gaius, i. 17.

(*a*) Manumissio by *vindicta* was probably the earliest form (Livy, ii. 5), and was the assertion before a magistrate of the slave's freedom to which the owner made no defence, whereupon the magistrate declared the slave a freeman. The ceremony was as follows: The master brought his slave before the praetor, since it was his province to exercise jurisdiction in civil causes. The praetor's lictor, who came to be used as *adsertor libertatis*, in order to save the trouble of bringing a person to take this part, holding a rod (*vindicta* or *festuca*) with one hand, and with the other laying hold of the slave, said, *Hunc ego hominem ex iure Quiritium liberum esse aio*, at the same time touching him with the rod; the master then using the same formalities, and turning the slave round and releasing his hold of him, as seems to have been the

custom (Pers. *Sat.* v. 78), admitted his freedom, either expressly or by his silence, which was followed by the *pronuntiatio* of the magistratus, *Quandoque Numerius Nigidius non contra vindicat, hunc ego hominem ex iure Quiritium liberum esse dico.*

Addicere is the technical term to express this act of a magistrate by which he pronounced in favour of a right, in this case a right to freedom (Cic. *Ad Att.* vii. 2). This form of manumission derived its name from the *vindicta* or rod, otherwise called *festuca*, which was used in the proceeding (Plaut. *Mil.* iv. 1, 15).

(*b*) Ulpian (1, 8) thus describes manumissio by the *census:* "Slaves were formerly manumitted by census, when at the lustral census (*lustrali censu*) at Rome they gave in their census at the bidding of their masters." The slave must of course have had a sufficient *peculium*, or the master must have given him property, so that he might become a taxpayer.

(*c*) The Twelve Tables confirmed freedom that was granted by will (*testamento*). There were three kinds of testamentary manumission—when the master freed the slave by will and made him a *heres;* when the master gave his slave his freedom as a direct legacy; and when a person requested his heir or legatee to manumit the slave.

Manumission according to legal form not only freed a slave, but made him a citizen. There were other informal ways of manumitting—e. g. *inter amicos*, which was a declaration by the master in the presence of witnesses that the slave was free. An invitation to dinner sent to a slave was regarded as such a declaration. For restrictions on manumission, see SERVUS.

The legal act of manumission was often followed by a religious ceremony in the temple of Feronia, where the freedman appeared clad in the toga or dress of a Roman citizen, and with a *pileus*, or particular kind of cap, on his shaven head. This last circumstance explains the expression *servos ad pileum vocare* (Liv. xxiv. 32), which means to promise slaves their liberty in order to induce them to join in some civil disturbance (cf. Plaut. *Amph.* iii. 4, 16; *Poen.* v. 2, 2; Serv. *Ad Aen.* viii. 564). The *pileus* was still worn in the time of Justinian, since he declares that slaves who attend the funeral of their master with the cap of freedom on their heads (*pileati*) become Roman citizens.

Manus. In its wider sense, the name given by the Romans to the power of the chief of a family over the whole of that family, especially the power of the husband over his wife, whose person and property were so completely his own that he was legally responsible for her actions, but at the same time had the right to kill, punish, or sell her. As in this respect, so also with respect to the right of inheritance, the wife was placed on a level with the children, as she obtained the same share as they. For marriages without manus, see MATRIMONIUM.

Manus Ferrea. See HARPAGO.

Manūs Iniectio (laying on of the hand). In the oldest Roman legal procedure a kind of execution levied on the person of one who had been condemned to pay a certain sum. If this was not done within thirty days of the condemnation, the plaintiff could seize the debtor and bring him before the praetor, who handed him over to the creditor with the word *addico* (I hand over), unless he paid there and then, or a *vindex* came forward to pay for him or to show there was no ground for complaint. The creditor kept the debtor in chains at his house for sixty days; if his claims had not been satisfied during this period, he might kill him or sell him as a slave in foreign parts. From the fourth century onwards a less severe arrangement was usual; the relation of the *addictus* to his creditor was that of a *homo liber in mancipio.* See Bekker, *Die Actionen des röm. Privatrechts*, vol. i.; Karlowa, *Der röm. Civilprocess*, i. § 45; and MANCIPIUM.

Manuscripts. See CODEX; PALAEOGRAPHY; TEXTUAL CRITICISM.

Mapalia. See MAGALIA.

Mappa (*χειρόμακτρον*). (1) A table-napkin used by the Romans, as in modern times. It was considered vulgar to fasten it under the chin to protect the clothes from stains (Petron. 32). As a rule, the guests brought their own *mappae* to an entertainment (Mart. xii. 29, 11), and occasionally carried away from the table such dainties as they did not consume at the time (id. vii. 20). (2) A cloth which the magistrate presiding over the Circensian races threw down as a signal for the start (Juv. xi. 191; Suet. *Nero*, 22). The custom is said by Cassiodorus (Varro, *Ep.* iii. 51) to have originated with the emperor Nero; but Quintilian (i. 5, 57) ascribes it to the Phœnicians, and it is doubtless of great antiquity.

Mappa. (From a Pompeian Painting.)

Maps. See GEOGRAPHIA; ICHNOGRAPHIA; ITINERARIA.

Maracanda (*τὰ Μαράκανδα*). The modern Samarcand; the capital of Sogdiana, where Alexander the Great killed his friend Clitus.

Maraphii (*Μαράφιοι*). One of the noble tribes of the ancient Persians, the other two being the Maspii and Pasargadae.

Marătha (*Μάραθα*). A town of Arcadia at the source of the Buphagus.

Marathesium (*Μαραθήσιον*). A town of Ionia, between Ephesus and Neapolis. It originally belonged to the people of Samos, but they gave it to the Ephesians in exchange for Neapolis, which was nearer to Samos.

Marăthon (*Μαραθών*). A deme of Attica, belonging to the tribe Leontis, was situated near a bay on the east coast of Attica, twenty-two miles from Athens by one road, and twenty-six miles by another. It originally belonged to the Attic tetrapolis, and is said to have derived its name from the hero Marathon. This hero, according to one account, was the son of Epopeus, king of Sicyon, who having been expelled from Peloponnesus by the violence of his father, settled in Attica; while, according to another account, he was an Arcadian who took part in the expedition of the Tyndaridae against Attica, and devoted himself to death before the battle.

The site of the ancient town of Marathon was probably not at the modern village of Marathon, but at a place called Vraná, a little to the south of Marathon. Marathon was situated in a plain, which extends along the sea-shore, about six miles

in length, and from three miles to one mile and a half in breadth. It is surrounded on the other three sides by rocky hills and rugged mountains. Two marshes bound the extremity of the plain; the northern is more than a square mile in extent, but the southern is much smaller, and is almost dry at the conclusion of the great heats. Through the centre of the plain runs a small brook. In this plain was fought the celebrated battle between the Persians and Athenians, August 12th, B.C. 490. The Persians, numbering some 100,000 men, were drawn up on the plain, and the Athenians, 10,000 strong, under Miltiades, on some portion of the high ground above the plain; but the exact ground occupied by the two armies cannot be identified, notwithstanding the investigations of modern travellers. The Athenians lost 192 men, the Persians 6400. The tumulus or mound, raised over the Athenians who fell in the battle, is still to be seen. It is an isolated knoll in the plain, about 40 feet in height and 600 feet in circumference. Excavations made by Schliemann and others yielded nothing until 1890, when, under the direction of the Greek Archaeological Society, a number of vases of the fifth century B.C. and burned bones were found, undoubtedly those of the Athenians slain in the battle. The mound is now called the Sorós. On the battle, see Herod. vi. 106, 107; and Schauer, *Die Schlacht bei Marathon* (1893).

Marăthus (*Μάραθος*). An important city on the coast of Phœnicia, opposite to Aradus and near Antaradus.

Marble. See STATUARIA ARS.

Marcella. (1) The sister of Augustus Caesar, and married first to M. Vipsanius Agrippa; next to Iulius Antonius, son of the triumvir; at last to Sextus Apuleius, consul A.D. 14. (2) The second wife of the poet Martial.

Marcellīnus. See AMMIANUS MARCELLINUS.

Marcellus. The name of an illustrious plebeian family of the Claudia gens. (1) M. CLAUDIUS MARCELLUS, celebrated as having been five times consul and commander of Syracuse. In his first consulship, B.C. 222, Marcellus distinguished himself by slaying in battle with his own hand Britomartus or Virdomarus, the king of the Insubrian Gauls, whose spoils he afterwards dedicated as *spolia opima* in the temple of Iupiter Feretrius. This was the third and last instance in Roman history in which such an offering was made. Marcellus was one of the chief Roman generals in the Second Punic War. He took Syracuse in B.C. 212, after a siege of more than two years, in which all his powerful military engines were rendered wholly unavailing by the superior skill and science of Archimedes, who directed those of the besieged. On the capture of the city Archimedes was one of the inhabitants slain by the Roman soldiers. Marcellus fell in battle against Hannibal in 208, and was buried by the enemy with military honours. (2) M. CLAUDIUS MARCELLUS, consul B.C. 51 and a bitter enemy of Caesar. In B.C. 46 he was pardoned by Caesar on the intercession of the Senate; whereupon Cicero returned thanks to Caesar in the oration *Pro Marcello*, which has come down to us. Marcellus, who was then living at Mitylené, set out on his return; but he was murdered at the Piraeus by one of his own attendants, P. Magius Chilo. (3) C. CLAUDIUS MARCELLUS, brother of the preceding and also an enemy of Caesar. He was consul in 49, when the Civil War broke out. (4) C. CLAUDIUS MARCELLUS, first cousin of the two preceding and, like them, an enemy of Caesar. He was consul in 50, but he did not join Pompey in Greece, and was therefore readily pardoned by Caesar. (5) M. CLAUDIUS MARCELLUS, son of the preceding and of Octavia, the daughter of C. Octavius and sister of Augustus. He was born B.C. 43. Augustus, who had probably destined him for his successor, adopted him as his son, and gave him his daughter Iulia in marriage (B.C. 25). In 23 he was curule ædile, but died in the same year, to the great grief of Augustus as well as of his mother Octavia. The memory of Marcellus is immortalized by the well-known passage of Vergil (*Aen.* vi. 860–886), which was recited by the poet to Augustus and Octavia. In his honour, Augustus built the great theatre near the Forum Olitorium, remains of which still exist. See VERGILIUS.

Marcellus Empirĭcus (so called from his empirical work on medical remedies), of Burdigala (Bordeaux). Marshal of the household (*magister officiorum*) to Theodosius I., he compiled about A.D. 410 a dispensatory for the poor (*De Medicamentis*), which is chiefly founded on Scribonius Largus (q. v.), with many superstitious additions. It has a poetical epilogue of seventy-eight hexameters. The text is given in Ackermann's *Parabilium Medicamentorum Script. Antiq.* (Nürnberg, 1788), and lately edited by Helmreich (Leipzig, 1889). On Marcellus Empiricus, see Helmreich in the *Blätter für das bayerische Gymnasialschulwesen*, xviii. 392, 460.

Marcellus, NONIUS. See NONIUS.

March. See CALENDARIUM.

Marcia. (1) The wife of M. Regulus (q. v.). (2) The wife of Cato Uticensis. (3) The daughter of Cremutius Cordus (q. v.). (4) The favourite mistress of Commodus (q. v.).

Marcia Aqua. See AQUAEDUCTUS.

Marcia Gens. A Roman gens which claimed descent from Ancus Marcius, fourth king of Rome, so that one of its branches afterwards took the name of Rex. The name of its most distinguished families are Censorinus, Philippus, Rex, and Rutilus.

Marciāna Carmĭna. See MARCIUS.

Marcianopŏlis (*Μαρκιανούπολις*). A city in the interior of Moesia Inferior, west of Odessus (Varna). It was founded by Trajan, and named in honour of his sister Marciana.

Marciānus (*Μαρκιανός*). (1) A Greek geographer, who lived at Heraclea in Bithynia. With the aid of the best sources of information from Hanno and Scylax down to Ptolemaeus he compiled, about A.D. 400, a description of the Western and Eastern Ocean in two books, not completely preserved. Edition by Hoffmann (Leipzig, 1841). It is of particular importance for ancient geography, as the distances in stadia are given. (2) AELIUS. A Roman jurist, who lived under Caracalla and Alexander Severus, and who is frequently cited in the *Digest*. (3) Emperor of the East, A.D. 450–457. He was a native of Thrace or Illyricum, and served for many years as a common soldier in the imperial army. Of his early history we have only a few particulars; but he had attained such distinction at the death of Theodosius II. in 450 that the widow of the latter, the celebrated Pulcheria, of-

fered her hand and the imperial title to Marcian, who thus became emperor of the East. Marcian was a man of resolution and bravery; and when Attila sent to demand the tribute which the younger Theodosius had engaged to pay annually, the emperor sternly replied, "I have iron for Attila, but no gold." Attila swore vengeance; but he first invaded the Western Empire, and his death, two years afterwards, saved the East. In 451 Marcian assembled the Council of Chalcedon, in which the doctrines of the Eutychians were condemned. He died in 457, and was succeeded by Leo. (4) Marciánus Capella. See Capella.

Marcius. (1) See Marcia Gens. (2) An Italian seer, whose prophetic verses (*Carmina Marciana*) were discovered in B.C. 213, and were preserved in the Capitol with the Sibylline Books. Some writers mention only one person of this name, but others speak of two brothers—the Marcii. See Livy, xxv. 12; Symmach. *Epist.* 4, 34.

Marcomanni. "Men of the marches (borders)." One of the divisions of the Suevi (q. v.).

Marcus. See Malleus.

Marcus Aurelius. See Antoninus.

Mardēné (Μαρδηνή) or **Mardyēné** (Μαρδυηνή). A district of Persis extending from Taocené to the sea-coast.

Mardi (Μάρδοι). A warlike tribe dwelling on the southern shore of the Caspian Sea.

Mardonius (Μαρδόνιος). A distinguished Persian, son of Gobryas and son-in-law of Darius Hystaspis. In B.C. 492 he was sent by Darius to punish Eretria and Athens for the aid they had given to the Ionians; but his fleet was destroyed by a storm off Mount Athos, and the greater part of his land forces was destroyed on his passage through Macedonia by the Brygians, a Thracian tribe. On the accession of Xerxes he was one of the chief instigators of the expedition against Greece. After the defeat of the Persians at Salamis (480) he was left by Xerxes with a large army to conquer Greece; but he was defeated in the following year (479), near Plataeae, by the combined Greek forces under the command of Pausanias, and was slain in the battle (Herod. vi. 43, 94; vii. 5, 9, 82; viii. 100–144; ix. 165).

Mardyēné. See Mardené.

Marĕa (Μάρεια, Μαρία, Μαρέη). A town of Lower Egypt, which gave its name to the district and lake of Mareotis. The lake was separated from the Mediterranean by the neck of land on which Alexandria stood, and supplied with water by the Canopic branch of the Nile and by canals. It served as the port of Alexandria for vessels navigating the Nile.

Mareōtis (Μαρεῶτις). See Marea.

Mares (Μᾶρες). An Asiatic people dwelling on the southern coast of the Euxine, mentioned by Herodotus as serving in the army of Xerxes.

Marēsa (Μαρησά) or **Maresca** (Μαρεσχά). An ancient fortress of Palestine, in the south of Judaea, of some importance in the history of the early kings of Judah and of the Maccabees.

Margiāna (Μαργιανή). A province of the ancient Persian Empire, bounded on the east by Bactriana, on the northeast and north by the river Oxus, and on the west by Hyrcania. It received its name from the river Margus, which flows through it. On this river stood the capital of the district, Antiochia Margiana, which was founded by Alexander the Great and rebuilt by Antiochus I. Margiana corresponds to the southern part of Khiva and Bokhara and the northeastern part of Khorassan. Its chief inhabitants were the Derbices, Dahae, and Mardi.

Margītes. See Homerus, p. 835.

Margum or **Margus.** A fortified place in Moesia Superior on the river Margus where it joins the Danube.

Margus (Μάργος). See Margiana.

Maria. See Marea.

Mariaba (Μαρίαβα). A town of the Sabaei in the southwestern part of Arabia.

Mariamma (Μαριάμμη). A city of Coele-Syria, west of Emesa.

Mariamné. See Herodes.

Mariamné Turris. See Hierosolyma.

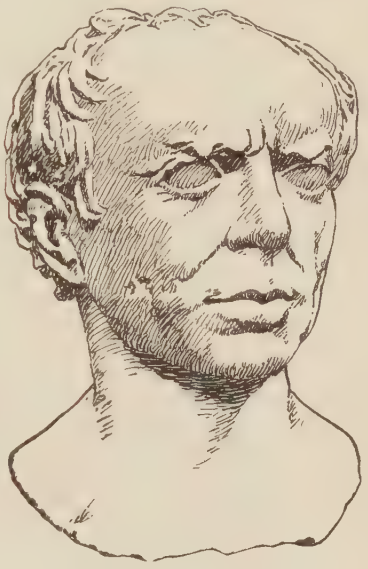
Mariānae Fossae. See Fossa.

Mariandȳni (Μαριανδυνοί). An ancient people living in the northeast of Bithynia in Asia Minor.

Mariānus Mons. Now the Sierra Morena; a range in Hispania Baetica, the eastern part of which was called the Saltus Castulonensis from the town Castulo.

Marīca. A nymph, the mother of Latinus by Faunus, according to the Roman legend. She was worshipped by the people of Minturnae on the river Liris (Hor. *Carm.* iii. 17, 7).

Marīnus (Μαρῖνος). (1) A Tyrian geographer, who lived about the middle of the second century A.D. He was the first mathematical geographer, and was largely followed by Ptolemy. (See Ptolemaeus.) (2) A philosopher and rhetorician of Flavia Neapolis in Palestine. He succeeded Proclus (q. v.), and wrote his life, which is still extant. Edited by Boissonade (Leipzig, 1814).



Marius. (1) Gaius, a distinguished Roman general and statesman, who was born near Arpinum in B.C. 157 of an obscure family in humble circumstances. His father's name was C. Marius, and his mother's Fulcinia; and his parents, as well as Marius himself, were clients of the noble plebeian house of the Herennii. So indigent, indeed, is the family represented to have been, that young Marius is said to have worked as a common peasant for wages, before he entered the ranks of the Roman army. (Cf. Juv. viii. 246.) The meanness of his origin has probably been somewhat exaggerated; but, at all events, he distinguished himself so much by his valour at the siege of Numantia in Spain (134) as to attract the notice of Scipio Africanus, who is said to have foretold his future greatness. His name does not occur again for fifteen years; but in 119 he was elected tribune of the plebs, when he was thirty-eight years of age. In this office he came forward as a popular leader, and proposed a law to give greater freedom to the people at the elections; and when the Senate attempted to overawe him, he commanded one of his officers to carry the consul Metellus to prison.

Marius now became a marked man, and the aristocracy opposed him with all their might. He lost his election to the aedileship, and with difficulty obtained the praetorship; but he acquired influence and importance by his marriage with Iulia, the sister of C. Iulius Caesar, who was the father

of the future ruler of Rome. In 109 Marius crossed over into Africa as lieutenant of the consul Q. Metellus. Here, in the war against Iugurtha, the military genius of Marius had ample opportunity of displaying itself, and he was soon regarded as the most distinguished officer in the army. He also ingratiated himself with the soldiers, who praised him in the highest terms in their letters to their friends at Rome. His popularity became so great that he resolved to return to Rome, and become at once a candidate for the consulship; but it was with great difficulty that he obtained from Metellus permission to leave Africa. On his arrival at Rome he was elected consul with an enthusiasm which bore down all opposition before it; and he received from the people the province of Numidia and the conduct of the war against Iugurtha (107). On his return to Numidia he carried on the war with great vigour; and in the following year (106) Iugurtha was surrendered to him by the treachery of Bocchus, king of Mauretania. (See IUGURTHA.) Marius sent his quaestor Sulla to receive the Numidian king from Bocchus. This circumstance sowed the seeds of the personal hatred which afterwards existed between Marius and Sulla, since the enemies of Marius claimed for Sulla the merit of bringing the war to a close by obtaining possession of the person of Iugurtha.

Meantime Italy was threatened by a vast horde of barbarians, who had migrated from the north of Germany. The two leading nations of which they consisted were called Cimbri and Teutoni, the former of whom are supposed to have been Celts, and the latter Gauls. To these two great races were added the Ambrones, and some of the Swiss tribes, such as the Tigurini. The whole host is said to have contained three hundred thousand fighting men, besides a much larger number of women and children. They had defeated one Roman army after another, and it appeared that nothing could check their progress. The utmost alarm prevailed throughout Italy; all party quarrels were hushed. Every one felt that Marius was the only man capable of saving the State, and he was accordingly elected consul a second time during his absence in Africa. Marius entered Rome in triumph on the first of January, 104, the first day of his second consulship. Meanwhile, the threatened danger was for a while averted. Instead of crossing the Alps, the Cimbri marched into Spain, which they ravaged for the next two or three years. But as the return of the barbarians was constantly expected, Marius was elected consul a third time in 103, and a fourth time in 102. In the latter of these years the Cimbri returned into Gaul. The barbarians now divided their forces. The Cimbri marched round the northern foot of the Alps, in order to enter Italy by the northeast, crossing the Tyrolese Alps by the defiles of Tridentum (Trent). The Teutoni and Ambrones, on the other hand, marched against Marius, who had taken up a position in a fortified camp on the Rhône. The decisive battle was fought near Aquae Sextiae (Aix). The carnage was dreadful. The whole nation was annihilated, for those who did not fall in the battle put an end to their own lives. The Cimbri, meantime, had forced their way into Italy. Marius was elected consul a fifth time (101), and joined the proconsul Catulus in the north of Italy. The two generals gained a great victory over the enemy on a plain called the Campi Raudii, near Vercellae (Vercelli). The Cimbri met with the same fate as the Teutoni; the whole nation was destroyed. Marius was received at Rome with unprecedented honours. He was hailed as the saviour of the State; his name was coupled with the gods in the libations and at banquets, and he received the title of third founder of Rome.

Hitherto the career of Marius had been a glorious one; but the remainder of his life is full of

Gaius Marius. (Duruy.)

horrors, and brings out the worst features of his character. In order to secure the consulship the sixth time, he entered into close connection with two of the worst demagogues that ever appeared at Rome, Saturninus and Glaucia. He gained his object, and was consul a sixth time in 100. In this year he drove into exile his old enemy Metellus; and shortly afterwards, when Saturninus and Glaucia took up arms against the State, Marius crushed the insurrection by command of the Senate. (See SATURNINUS.) His conduct in this affair was greatly blamed by the people, who looked upon him as a traitor to his former friends. For the next few years Marius took little part in public affairs. He possessed none of the qualifications which were necessary to maintain influence in the State during a time of peace, being an unlettered soldier, rude in manners, and arrogant in conduct. The Social War again called him into active service (90). He served as legate of the consul P. Rutilius Lupus; and after the latter had fallen in battle, he defeated the Marsi in two successive engagements. Marius was now sixty-seven, and his body had grown stout and unwieldy; but he was still as greedy of honour and distinction as he had ever been. He had set his heart upon obtaining the command of the war against Mithridates, which the Senate bestowed upon the consul Sulla at the end of the Social War (88). In order to gain his object, Marius allied himself to the tribune, P. Sulpicius Rufus,

who brought forward a law for distributing the Italian allies, who had just obtained the Roman franchise, among all the Roman tribes. As those new citizens greatly exceeded the old citizens in number, they would of course be able to carry whatever they pleased in the Comitia. The law was carried, notwithstanding the violent opposition of the consuls; and the tribes, in which the new citizens now had the majority, appointed Marius to the command of the war against Mithridates. Sulla fled to his army, which was stationed at Nola; and when Marius sent thither two military tribunes, to take the command of the troops, Sulla not only refused to surrender the command, but marched upon Rome at the head of his army. Marius was now obliged to take to flight. After wandering along the coast of Latium, and encountering terrible sufferings and privations, which he bore with unflinching fortitude, he was at length taken prisoner in the marshes formed by the river Liris, near Minturnae. The magistrates of this place resolved to put him to death, in accordance with a command which Sulla had sent to all the towns in Italy. A Gallic or Cimbrian soldier undertook to carry their sentence into effect, and with a drawn sword entered the apartment where Marius was confined. The part of the room in which Marius lay was in the shade; and to the frightened barbarian the eyes of Marius seemed to dart out fire, and from the darkness a terrible voice exclaimed, "Man, durst thou murder C. Marius?" The barbarian immediately threw down his sword, and rushed out of the house. Straightway there was a revulsion of feeling among the inhabitants of Minturnae. They got ready a ship, and placed Marius on board. He reached Africa in safety, and landed at Carthage; but he had scarcely put his foot on shore before the Roman governor sent an officer to bid him leave the country. This last blow almost unmanned Marius; his only reply was, "Tell the praetor that you have seen C. Marius a fugitive sitting on the ruins of Carthage." Soon afterwards Marius was joined by his son, and they took refuge in the island of Cercina.

During this time a revolution had taken place at Rome, in consequence of which Marius was enabled to return to Italy. The consul Cinna (87), who belonged to the Marian party, had been driven out of Rome by his colleague Octavius, and had subsequently been deprived by the Senate of the consulate. Cinna collected an army, and resolved to recover his honours by force of arms. As soon as Marius heard of these changes he left Africa, and joined Cinna in Italy. Marius and Cinna now laid siege to Rome. The failure of provisions compelled the Senate to yield, and Marius and Cinna entered Rome as conquerors. The most frightful scenes followed. The guards of Marius stabbed every one whom he did not salute, and the streets ran with the blood of the noblest of the Roman aristocracy. Among the victims of his vengeance were the great orator M. Antonius and his former colleague Q. Catulus. Without going through the form of an election, Marius and Cinna named themselves consuls for the following year (86). But he did not long enjoy the honour: he was now in his seventy-first year; his body was worn out by the fatigues and sufferings he had recently undergone; and eighteen days after his assumption of the consulate he died of an attack of pleurisy. See Plutarch's life of Marius; Beesly, *The Gracchi, Marius, and Sulla* (N. Y. 1878); and Mommsen, *Hist. of Rome*, vol. iii.

(2) GAIUS, son of the preceding by adoption. He was consul in B.C. 82, when only twenty-seven years of age. He resisted Sulla for some time, but at last, being defeated, took his own life (Vell. Pat. ii. 26, 27).

(3) M. AURELIUS MARIUS, one of the Thirty Tyrants (q. v.).

(4) MARIUS MAXĬMUS, a Roman historian, who is repeatedly cited by the Augustan historians. He probably flourished under Alexander Severus, and appears to have written the biographies of the Roman emperors, beginning with Trajan and ending with Elagabalus.

(5) MARIUS MERCĂTOR, an ecclesiastical writer, distinguished as a zealous antagonist of the Pelagians and the Nestorians. He appears to have commenced his literary career during the pontificate of Zosimus, A.D. 418, at Rome, and he afterwards repaired to Constantinople. The works of Mercator refer exclusively to the Pelagian and Nestorian heresies.

(6) MARIUS VICTORĪNUS. See VICTORINUS.

Marius Maxĭmus. A Latin historian. See SUETONIUS.

Market. See AGORA; MACELLUM.

Market, CLERKS OF THE. See AGORANOMUS.

Markland, JEREMIAH. An English classicist and text-critic, born October 29, 1693, and educated at London and Cambridge. He died July 7, 1776. His work included a number of emendations of the text of Lysias and of Euripides, and a great edition of the very difficult *Silvae* of Statius (London, 1728; last ed. Dresden, 1824). He attacked the authenticity of Cicero's letters to Brutus, and of the Ciceronian orations *Pro Domo Sua*, *Post Reditum in Senatu*, *Ad Quirites*, and the *De Haruspicum Responsis*, in which he was afterwards followed by F. A. Wolf. See Wolf, *Analecten*, ii. 370–391.

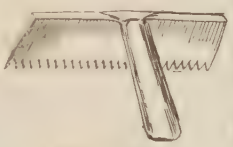
Marmarĭca (Μαρμαρική). A district of Northern Africa, between Cyrenaïca and Egypt, extending inland as far as the Oasis of Ammon. Its inhabitants were called Marmaridae.

Marmarium (Μαρμάριον). A place in the southwestern part of Euboea with celebrated quarries of marble and a temple of Apollo Marmarius.

Maro, VERGILIUS. See VERGILIUS.

Maroboduus (Marbod). King of the Marcomanni, a Suevian by birth, and brought up at the court of Augustus. After his return to his native country he succeeded in establishing a powerful kingdom in Central Germany along the northern bank of the Danube. (See SUEVI.) Having become an object of suspicion to the other German tribes, he was expelled from his dominions by the Goth Catualda about A.D. 19, and took refuge in Italy, where Tiberius allowed him to remain until his death, which took place at Ravenna in A.D. 35 (Tac. *Ann.* ii. 44–46; Vell. Pat. ii. 108).

Maron. In Homer, the hero of sweet wine, son of Evanthes and priest of Apollo in Maronea in Thrace. He gave Odysseus the cask which the hero carried with him to the Cyclops (*Odyss.* ix. 197).



Maronēa (Μαρώνεια). A town on the southern coast of Thrace, on the lake Ismaris, belonged originally to the Cicones, but afterwards colonized

from Chios. It was celebrated for its excellent wine, and is mentioned by Homer as the residence of Maron, son of Evanthes, grandson of Dionysus and Ariadné, and priest of Apollo.

Marpessa (*Μάρπησσα*). Daughter of Evenus and Alcippé. See IDAS.

Marpessa (*Μάρπησσα*). A mountain in Paros, from which the celebrated Parian marble was obtained. Hence Vergil speaks of *Marpesia cautes* (i. e. Parian).

Marra. A hoe or rake with a broad head and teeth, used in Roman husbandry for clearing the ground of weeds and other encumbrances (Columella, x. 70, 88; Juv. xv. 166.)

Marra. (Rich.)

Marriage. See CONUBIUM; MATRIMONIUM.

Marrucīni or **Marucīni.** A brave and warlike people in Italy, of the Sabellian race, occupying a narrow slip of country along the right bank of the river Aternus, and bounded on the north by the Vestini, on the west by the Peligni and Marsi, on the south by the Frentani, and on the east by the Adriatic Sea. Their chief town was Teaté. With their neighbours the Marsi, Peligni, etc., they submitted to the Romans in B.C. 304 (Livy, ix. 41).

Marruvium or **Maruvium.** The chief town of the Marsi (who are therefore called *gens Maruvia* by Vergil), situated on the east bank of the lake Fucinus.

Mars (also MAVORS, MAMERS). After Jupiter the principal deity of the inhabitants of Italy, and therefore honoured with particular reverence by the Latins and Romans from the very earliest times, especially as the latter regarded him as the father of Romulus, the founder of Rome. He was held to be the son of Juno, who bore him in consequence of touching a wonderful spring-flower, and the husband of Nerio or Neriené, a goddess of strength. Through the emphasizing of one of his attributes he gradually came to be considered as, above all, the god of war; for originally he was at the same time one of the mightiest gods of nature, the Vedic Marut, who accords fertility and protection to fields and herds.

The first month of the old Roman year was dedicated to him as the fertilizing god of spring; in the very ancient chant of the Arval Brothers (see FRATRES ARVALES), at the May-day festival of the Dea Dia, the help and protection of Mars were demanded. In earlier times he was also invoked at the hallowing of the fields (see AMBARVALIA), that he might bless the family, the field, and the cattle, and keep off sickness, bad weather, and all else that did harm. (Cf. ROBIGUS.) In later times the names of Ceres and Bacchus were substituted for his on this particular occasion. At the festival on 15th October a horse was sacrificed to him to insure the fair growth of the seed that had been sown. As god of war (cf. QUIRINUS), his symbols were the ravenous wolf, the prophetic and warlike woodpecker, and the lance. When war broke out, the general solemnly invoked his aid, by smiting his holy lance and the holy shields (*ancilia*; see SALII) with the cry, "Mars, awake!" (*Mars vigila!*) Many sacrifices were also offered to him during the campaign and before battle; and in his name military honours were conferred. The Field of Mars (Campus Martius) was dedicated to him as the patron god of warlike exercises; contests with battle-steeds, called Equirria, were there held in his honour on the 27th February, 14th March, and 15th October. On the last-mentioned day the horse on the right of the victorious team was sacrificed on his altar in the Field of Mars; it was known as the horse of October (*October equus*), and its blood was collected and preserved in the temple of Vesta, and used at the Palilia for purposes of purification. The cult of Mars was entrusted to a special priest, the flamen Martialis (see FLAMEN), and the college of the Salii (q. v.), which worshipped him more particularly as god of war. His principal festival was in March, the month sacred to him. As early as the time of King Tullus Hostilius, Pavor and Pallor (Fear and Pallor) are said to have been worshipped as his companions in the fight, in sanctuaries of their own. Augustus caused him to be honoured in a new form, as Mars Ultor (the avenger of Caesar), in the magnificent temple in the Forum Augusti, consecrated B.C. 2, where statues of him and of Venus, as the two divine ancestors of the Julian family, were set up. In later times he was identified completely with the Greek Ares. See ARES.

Mars, FIELD OF. See CAMPUS MARTIUS.

Mars' Hill. See AREOPAGUS.

Marsacii. A people in Gallia Belgica, on one of the islands formed by the Rhine.

Marsi. (1) An Italian people of Sabellian race, living on the high land in which Lake Fucinus is situated, and surrounded by the Apennines. Their chief town was Marruvium. Owing to their knowledge of herbs, which they used medicinally, they got a reputation for a skill in magic (Verg. *Aen.* vii. 750–758; Gell. xvi. 11), and were said to be descended from the enchantress Circé. In B.C. 304, the Marsi, Peligni, and others concluded a peace with Rome, but later took a prominent part in the Social War for the Roman franchise, which from their bravery is often called the Marsic War. In imperial times they furnished a valuable contingent to the Roman army (Hor. *Carm.* ii. 20, 18; iii. 5, 9). (2) A German people, dwelling by the Amisia (Ems). They were allied with the Cherusci.

Marsigni. A people in the southeast of Germany, of Suevic extraction (Tac. *Germ.* 43).

Marsupium.

Marsupium (*μαρσύπιον*). A money-bag or purse, often represented in ancient works of art in the hands of Mercury, the god of gain (cf. Plaut. *Rud.* v. 2, 26).

Marsus, DOMITIUS. A Roman poet of the Augustan Age, who wrote a collection of epigrams (*Cicuta*), a treatise on the use of wit in oratory (*De Urbanitate*), and in epic (*Amazonis*). He died about B.C. 4. He is mentioned several times by Martial (e. g. iv. 29, 7; and vii. 29, 7). The few fragments of his works that remain will be found in the *Fragmenta Pöet. Lat.* of Bährens, 346 (Leipzig, 1886).

Marsÿas (*Μαρσύας*). A Silenus of Phrygian legend (really god of the river of the same name near the old Phrygian town Celaenae), son of Hyagnis or of Olympus. He was the typical player on the

flute. Among the Phrygians the flute entered into the worship of Cybelé and Dionysus, and Marsyas is said to have instructed Olympus in playing upon that instrument. According to a Greek legend, Athené had invented the flute, and then cast it aside because it distorted the features of the player. Marsyas took it up, and became so skilful as to challenge Apollo, the patron god of the lyre. The Muses having declared him vanquished, the god flayed him; his skin was hung up in the cave from which the river Marsyas issued, and was said to move about joyfully when a flute was played. King Midas, who had decided in his favour, received as punishment from Apollo a pair of ass's ears. The contest was a favourite subject in art. See MIDAS.

Marsyas (*Μαρσύας*). (1) A small but rapid river of Phrygia, emptying into the Maeander at Celaenae. (2) A river of Caria, falling into the Maeander nearly opposite Tralles. (3) A tributary of the Orontes in Syria. (4) The plain of Syria, through which the upper Orontes flows.

Martiālis. (1) M. VALERIUS, a writer of Latin epigrams, was born at Bilbilis in Spain, in the third year of Claudius, A.D. 43. He came to Rome in the thirteenth year of Nero, 66; and after residing in the metropolis thirty-five years, he returned to the place of his birth, in the third year of Trajan, 100. He lived there for upwards of three years at least, on the property of his wife, a lady named Marcella, whom he seems to have married after his return to Bilbilis. His death cannot have taken place before 104. His fame was extended, and his books were eagerly sought for not only in the city, but also in Gaul, Germany, and Britain; he secured the patronage of the emperors Titus and Domitian, obtained by his influence the freedom of the State for several of his friends, and received for himself, although apparently without family, the privileges accorded to those who were the fathers of three children (*ius trium liberorum*), together with the rank of tribune and the rights of the equestrian order. His circumstances appear to have been easy during his residence at Rome, for he had a mansion in the city, whose situation he describes, and a suburban villa near Nomentum, to which he frequently alludes with pride.

The extant works of Martial consist of a collection of short poems, all included under the general appellation *Epigrammata*, upwards of 1500 in number, divided into fourteen books. Those which form the last two books, usually distinguished respectively as *Xenia* and *Apophoreta*, amounting to 350, consist of couplets, descriptive of a vast variety of small objects, chiefly articles of food or clothing, such as were usually sent as presents among friends during the Saturnalia and on other festive occasions. In addition to the above, nearly all the printed copies include thirty-three epigrams, forming a book apart from the rest, which has been commonly known as *Liber de Spectaculis*, because the contents relate to the shows exhibited by Titus and Domitian; but there is no ancient authority for the title. The different books were collected and published by the author, sometimes singly and sometimes several at one time. The *Liber de Spectaculis* and the first nine books of the regular series involve a great number of historical allusions, extending from the games of Titus (80) down to the return of Domitian from the Sarmatian expedition, in January, 94. All these books were composed at Rome, except the Third, which was written during a tour in Gallia Togata. The Tenth Book was published twice: the first edition was given hastily to the world; the second, that which we now read (x. 2), celebrates the arrival of Trajan at Rome, after his accession to the throne (99). The Eleventh Book seems to have been published at Rome, early in 100, and at the close of the year he returned to Bilbilis. After keeping silence for three years (xii. prooem.), the Twelfth Book was despatched from Bilbilis to Rome (xii. 3, 18), and must therefore be assigned to 104. Books xiii. and xiv., *Xenia* and *Apophoreta*, were written chiefly under Domitian, although the composition may have been spread over the holidays of many years. It is well known that the word epigram (*ἐπίγραμμα*), which originally denoted simply "an inscription," was, in process of time, applied to any brief metrical effusion, whatever the subject might be, or whatever the form under which it was presented. Martial, however, first placed the epigram upon the narrow basis which it now occupies, and from his time the term has been in a great measure restricted to denote a short poem, in which all the thoughts and expressions converge to one sharp point, which forms the termination of the piece. See EPIGRAMMA.

Martial's epigrams are distinguished by singular fertility of imagination, prodigious flow of wit, and delicate felicity of language; and from no source do we derive more copious information on the national customs and social habits of the Romans during the first century of the Empire. But, however much we may admire the genius of the author, we can feel no respect for one whose fulsome servility towards the great is equalled only by the frightful obscenity of much that he has written — an obscenity scarcely conceivable in modern times. He himself seems to feel a certain shame for so pandering to the corrupt tastes of his rich and dissolute patrons, and in one epigram he tries to draw the line between his life and his writings. "My Muse is wanton, but my life is pure" (i. 4, 8); and in the prose dedication to the First Book he explains that he is only following out the traditions of this form of literature; but these are excuses which, to many minds, only heighten the enormity of his offence.

The principal value of Martial's epigrams is in the insight they give us into the daily life of the times, since they abound in personal details, and are an indispensable contribution towards the *Culturgeschichte* of Ancient Rome. In modern literature they have been continually imitated and translated, but rarely equalled except now and then by the French.

The MSS. fall into three "families," of which the typical representatives are a Paris Codex (T) of the ninth century, a Codex Palatinus (P) of the fifteenth century, and an Edinburgh Codex (E) of the tenth century. See the critical account in the editions of Schneidewin and Friedländer. The best texts are those of Schneidewin (Grimma, 1842), Friedländer, 2 vols. (Leipzig, 1886), with a list of words; Gilbert (Leipzig, 1886). Friedländer's edition contains explanatory notes, but the best commentary on the subject-matter is his *Sittengeschichte Roms*, 3 vols (6th ed. Leipzig, 1888–1890). Editions of selected epigrams with English

notes are those of Paley and Stone (London, 1881); Sellar and Ramsay (Edinburgh, 1884); Stephenson (2d ed. London, 1888); and one (announced) by C. Knapp (N. Y. 1895). See Brandt, *De Martialis Poetae Vita* (Berlin, 1853); Van Stockum, *De Martialis Vita et Scriptis* (The Hague, 1884); and on his language, etc., Paukstadt, *De Martiale Catulli Imitatore* (Halle, 1876); Zingerle, *Martials Ovidstudien* (Innsbruck, 1877); and Stephani, *De Martiale Verborum Novatore* (Breslau, 1889).

(2) Q. Gargilius Martiālis, a Roman writer and a contemporary of Alexander Severus, who is cited by Vopiscus (*Prob.* ii. 7). There are extant some fragments on veterinary surgery and husbandry, bearing the name of Gargilius Martialis; and Angelo Mai discovered on a Neapolitan palimpsest a part of a work on gardens. The fourth book of the *Medicina Plinii*, or extracts on medicine from Pliny, was made up of citations from Gargilius Martialis. The same person also wrote a sketch of Alexander Severus. The greater part of the botanical fragments was printed in Lüneburg in 1832; and the veterinary fragments by Schuch (Donaueschingen, 1857).

Martiālis Flamen. See Flamen.

Martiānus Capella. See Capella.

Martiniānus. A Roman allied with Licinius during the last struggle of the latter with Constantine. Constantine put him to death in A.D. 323. See Constantinus.

Martius Campus. See Campus Martius.

Martyria (*μαρτυρία*). Testimony given by witnesses; a deposition. The following legal terms are those most used with reference to the act of giving testimony: *μαρτυρεῖν τινι*, to testify in one's favour; *κατὰ μαρτυρεῖν τινος*, to testify against one; *μαρτύρεσθαι*, to call a witness; *διαμαρτύρεσθαι*, to call upon those present to notice what is transpiring, so as to swear to it afterwards; *κλητεύειν*, to subpœna a witness; *ἐξόμνυσθαι*, to swear that one knows nothing of the facts in question; *ἐπιορκεῖν*, to perjure one's self; *ψευδομαρτυρεῖν*, to testify falsely (not on oath); *μάρτυς*, a witness; *νόμιμος ὅρκος*, a legal oath. See Anacrisis; Diké; Iusiurandum; Judicial Procedure.

At Athens only freemen, males, and adults were legally entitled to bear witness in court; except that a slave could testify in a case of murder, and their evidence could also be accepted after torture. A woman could take an oath if offered her as a challenge (*πρόκλησις*). Disfranchised citizens (*ἠτιμωμένοι*) could not appear as witnesses; and neither party to a suit could testify on his own behalf, but must answer such questions as were asked him by the other side. No other persons could refuse to testify, as this duty was regarded as one claimed by the State. As to depositions made by those unable to attend in court, see Ecmartyria. A person thrice convicted of giving false witness was *ipso facto* disfranchised. For examination after torture (*βάσανος*), see Tormentum.

Martyropŏlis (*Μαρτυρόπολις*). A city of Sophenê in Armenia Maior, strongly fortified under Justinian.

Marullus, Gaius Epidius. A tribune of the people who, with his colleague L. Caesetius Flavus, removed the diadem that had been placed upon the statue of Iulius Caesar. He also tried to bring to trial the persons who had saluted Caesar as king, but the dictator deprived him of the tribunician power and expelled him from the Senate (Suet. *Iul.* 79).

Maruvium. See Marruvium.

Masăda (*Μάσαδα*). A fortress on the Dead Sea built by Jonathan Maccabaeus and strengthened by Herod. After the capture of Jerusalem it fell into the hands of the Romans after the garrison had all committed suicide.

Mascas (*Μασκᾶς*). An eastern tributary of the Euphrates in Mesopotamia.

Masinissa (*Μασσανάσσης*). A king of the Numidians, son of Gala, king of the Massylians, the easternmost of the two great tribes into which the Numidians were at that time divided. In the Second Punic War he at first fought on the side of the Carthaginians in Spain (B.C. 212), but afterwards deserted their cause and joined the Romans. On his return to Africa he was attacked by the Carthaginians and his neighbour Syphax, and with difficulty maintained his ground till the arrival of Scipio in Africa (B.C. 204). He rendered important service to Scipio, and reduced Cirta, the capital of Syphax. Among the captives that fell into his hands on this occasion was Sophonisba, the wife of Syphax, who had been formerly promised in marriage to Masinissa himself. The story of his hasty marriage with her, and its tragical termination, is related elsewhere. (See Sophonisba). In the decisive battle of Zama (B.C. 202) Masinissa commanded the cavalry of the right wing. On the conclusion of the peace between Rome and Carthage he was rewarded with the greater part of the territories which had belonged to Syphax, in addition to his hereditary dominions. For the next fifty years Masinissa reigned in peace. He died in the second year of the Third Punic War, B.C. 148, at the advanced age of 90, having retained in an extraordinary degree his bodily strength and activity to the last. He left three sons—Micipsa, Mastanabal, and Gulussa—among whom Scipio Africanus the Younger divided the kingdom.

Masks. See Persona.

Massa, Baebius or Bebius. A Roman accused by Pliny the Younger and Herennius Senecio of plundering the province of Baetica, of which he had been governor, A.D. 93. He was condemned, but escaped punishment by the favour of Domitian; and from this time became one of the informers and favourites of the tyrant.

Massa (*Μάσσα*). (1) A river on the western coast of Libya Interior. (2) Massa Veternensis. A city of Etruria northeast of Populonium.

Massaesȳli. See Mauretania; Numidia.

Massăga (*τὰ Μάσσαγα*). The capital of the Indian people called the Assaceni.

Massagĕtae (*Μασσαγέται*). A wild and warlike people of Central Asia, north of the Iaxartes (the Araxes of Herodotus) and the Sea of Aral, and on the peninsula between this lake and the Caspian. Herodotus appears to include under the name all the nomad tribes of Asia east of the Caspian. It was in an expedition against them that Cyrus the Great was defeated and slain. See Cyrus.

Massĭcus Mons. A mountain in the northwest of Campania, near the frontiers of Latium, celebrated for its excellent wine, the produce of the vineyards on the southern slope of the moun-

tain. The famous Falernian wine came from the eastern side of this mountain. See VINUM.

Massicȳtus and **Massicȳtes** (*Μασσικύτης*). An extensive mountain chain of Lycia.

Massilia, called by the Greeks *Μασσαλία* (Marseilles). A Greek city in Gallia Narbonensis, on the coast of the Mediterranean, in the country of the Salyes, founded by the Phocaeans of Asia Minor about B.C. 600. It was situated on a promontory, connected with the mainland by a narrow isthmus, and washed on three sides by the sea. Its excellent harbour (Lacydon) was formed by a small inlet of the sea, about half a mile long and a quarter of a mile broad. This harbour had only a narrow opening, and before it lay an island, where ships had good anchorage. At an early period the Massilienses cultivated the friendship of the Romans, to whom they always continued faithful allies. Massilia was for many centuries one of the most important commercial cities in the ancient world, and founded a number of other towns, such as Antipolis (Antibes) and Nicaea (Nice). In wealth and power it even excited the jealousy of Carthage, which led to a war between the two cities, in which the Massilienses won a naval victory (Thuc. i. 13). Because of its friendship for Rome, the Romans left it independent with its own constitution and government, which was aristocratic or oligarchic, the city being ruled by a Senate of 600 called Timuchi, who acted through smaller councillors (Cic. *De Rep.* i. 27, 43). In the civil war between Caesar and Pompey (B.C. 49) it espoused the cause of the latter, but after a protracted siege, in which it lost its fleet, it was obliged to submit to Caesar. Its inhabitants had long paid attention to literature and philosophy; and under the early emperors it became one of the chief seats of learning, to which the sons of many Romans resorted in order to complete their studies.

Massīva. (1) A Numidian, grandson of Gala, king of the Massylians, and nephew of Masinissa, whom he accompanied into Spain. (2) Son of Gulussa, and grandson of Masinissa. He was assassinated at Rome by order of Iugurtha, because he had put in a claim to the kingdom of Numidia.

Massurius Sabīnus. See SABINUS.

Massȳli (*Μασσυλεῖς*). See MAURETANIA; NUMIDIA.

Mastanăbal or **Manastăbal**. The youngest of the three legitimate sons of Masinissa (q. v.). He was the father of Iugurtha (q. v.).

Master. See DOMINUS; SERVUS.

Mastiffs. See CANIS.

Masts. See NAVIS.

Masurius Sabīnus. See SABINUS.

Matches. See IGNIARIA.

Materialists. See EPICURUS; PHILOSOPHIA.

Mater Matūta. See MATUTA.

Maternus Firmĭcus. See FIRMICUS.

Matho. A leader of the Carthaginian mercenaries in their revolt after the First Punic War, B.C. 241. He was at last made prisoner and put to death. See CARTHAGO; HAMILCAR.

Matiāna (*Ματιανή*). The southwesternmost district of Media Atropatenê, along the mountains separating Media from Assyria, inhabited by the Matiani.

Matīnus. A mountain in Apulia, running out into the sea, one of the offshoots of Mount Garganus, and frequently mentioned by Horace, in consequence of his being a native of Apulia.

Matisco. The modern Mâcon; a town of the Aedui in Gallia Lugdunensis, on the Arar.

Matius Calvēna, GAIUS. A Roman knight, the friend of Caesar and Cicero, and after Caesar's death, an adherent of Augustus. It is possibly this person who translated the *Iliad* of Homer into Latin verse; and he certainly wrote a gastronomic work in three books, entitled respectively *Cocus*, *Cetarius*, and *Salmagarius*, the fragments of which were edited by Zell (Stuttgart, 1829). A letter of his to Cicero will be found in the collection *Ad Familiares* (xi. 28). A hash was named after him (*minutal Matianum*). Cf. Apic. iv. 174; Pliny, *H. N.* xv. 49.

Matrālia. The festival of mothers at Rome. See MATUTA.

Matrimonium, also **Nuptiae** (*γάμος*). Marriage.

I. GREEK.—Athenian tradition ascribed the introduction of the marriage relation to Cecrops (Athen. xiii. 2), before whose time men were said to have had wives in common, as was the case in historic times among the non-Hellenic tribes on the borders of the Greek world—e. g. the Massagetae, Nasamones, and Ausenses (Herod. i. 126, iv. 172, 180). In the rest of Greece monogamy was of slow growth as against promiscuity of sexual relation; yet in the *Iliad* and *Odyssey* the households described are monogamistic, even though concubines are mentioned. (See CONCUBINA.) Throughout the greater part of Greece the position of the married women was a very subordinate one, the chief exception being found in the usage of Sparta, and to a less degree of Crete and Cyrenê and, in general, the Doric States. (See Aristot. *Polit.* ii. 9; Plut. *Lac. Apophtheg.*) As to illicit relations between the sexes, see MERETRIX.

We may now consider the subject of Athenian marriage. Marriage at Athens was made compulsory by Solon (Plut. *De Amore Prol.* 2); but the law fell into disuse. A youthful citizen was not allowed to marry until his name was entered in the tribal register (*ληξιαρχικὸν γραμματεῖον*). The restrictions as to whom he might marry differed from those imposed in modern times, being in part looser, in part more severe. Prohibitions on the ground of consanguinity were less numerous than with us. A man might not marry a direct ancestor or descendant; nor might he marry step-mother or step-daughter, mother-in-law or daughter-in-law; nor, with an exception to be noticed, his sister. The marriage of Oedipus was looked on with horror, and the fact that it was accidental was not regarded as an alleviation. On the other hand, the marriage of a brother with a half-sister on the father's side did sometimes occur (Demosth. *c. Eubul.* p. 1304, § 20; Plut. *Themist.* 32). Marriage with a niece was common; with an aunt naturally less so, but there was nothing to forbid it.

The prohibition of marriage between a citizen and an alien belongs to a different class from the prohibition by reason of relationship. It would hardly seem to have existed in the early period of Athenian history (Herod. vi. 130). The influx of foreigners into Athens in the time of Pericles was doubtless the cause that necessitated a more

stringent law—namely, that both the parents of a citizen must be citizens; whence it resulted that marriage with an alien was forbidden (Plut. *Pericl.* 37).

Marriage at Athens took place in two ways: either by *ἐγγύησις* or by *ἐπιδικασία*. Ἐγγύησις was the ordinary method, and meant the act of the father or guardian (*κύριος*) of a maiden in giving her in betrothal to her future husband. The act was a solemn one, the relatives of either side being witnesses. Whenever any woman had a *κύριος*, marriage could take place by no other method than this. If, however, a woman were left an heiress (*ἐπίκληρος*) without having a *κύριος*, then the next of kin might claim her in marriage, preference being given to kindred on the father's side; such a claim was called *ἐπιδικασία*, and was brought in the first instance before the archon. (See EPICLERUS.) The public interest in such a claim being allowed lay in the danger of dissensions being caused by rival suitors, of which Aristotle (*Polit.* v. 4) gives instances. If the heiress were poor (*θῆσσα*), it was likely that no claimant would come forward; in this case the archon was bound to compel the next of kin either himself to marry the heiress or to portion her and give her in marriage (Demosth. *c. Macart.* p. 1067, § 51). It is to be inferred that the next of kin was regarded as *κύριος* of the heiress in such a case as this. Legitimate children at Athens were invariably the offspring of a marriage ratified according to one of these forms.

At the time of the betrothal the dowry of the bride was settled, and this was a most important point for her future welfare. For the wife was reckoned to have no claim at all on her husband's property. Supposing her husband died, even the most distant cousin might inherit from him; but the wife, never. Nay, she might not even continue to reside in his house after his death, unless she pleaded pregnancy; in that case she would come under the protection of the archon, and would remain undisturbed until the child was born (Demosth. *c. Macart.* p. 1076, § 75). Hence the dowry was the only security to the wife against extreme poverty in the event of her husband's death, or if she were divorced; the husband, therefore, had to give a guarantee for its return in the shape of some piece of landed property. It would, however, be incorrect to suppose that the dowry would ever become the wife's absolute property; it would in the case supposed revert to her *κύριος*, who would either support her from it or give her in marriage again. But as against her husband or his creditors, it was absolutely hers. The dowry, as has been said, did not exist in Homer's time, and was a gradual growth; Plato disapproved of it (*De Leg.* vi. 777 A) as tending to produce avarice; in early times it was small.

The marriage ceremonial at Athens, among the higher classes, was more elaborate than with us. The consecration of all girls to Artemis, when they were ten years old, at the festival Brauronia, stood in intimate relation with it. When the marriage itself drew near, the sacrifice to the tutelar gods of marriage (*θεοὶ γαμήλιοι*) took place. This was performed by the father, and might take place some days before the marriage, or on the day itself. As to who the tutelary deities were, custom appears to have varied. Diodorus Siculus (v. 73) names Zeus and Heré; but Pollux names Heré, Artemis, and the Fates (iii. 38): Artemis is also mentioned in relation to Boeotia and Locris in Plutarch (*Aristid.* 20); and the Nymphs are mentioned in Plutarch (*Amat. Narr.* 1). The sacrifice itself was called *προτέλεια γάμων*, or *προγάμεια*, and it was regarded as a dedication of the bride to the deities named, some locks of the bride's hair (*ἀπαρχαί*) being offered as a symbol of the dedication. On the wedding day itself bride and bridegroom bathed in water drawn from a particular fountain of running water: at Athens this was the fountain Callirrhoë, also called *ἐννεάκρουνος* (Thuc. ii. 15). The water from this fountain was carried either by a boy or a girl, from which custom was probably derived that other custom of placing over the tombs of those who died unmarried the image of a girl carrying water. Late in the evening of the wedding day the bridegroom brought his bride from her parents' house on a car (*ἅμαξα*) drawn by horses, mules, or oxen; on either side of her sat the bridegroom and his "best man" (*παράνυμφος* or *πάροχος*, Arist. *Av.* 1735). In front of the car went the torch-bearing procession (*δᾷδες νυμφικαί*), the nuptial torch having been lit by the mother of the bride or of the bridegroom; bride and bridegroom were crowned with chaplets, and clothed in festal attire, as also were the attendants, the bride being covered with a long veil; congratulations were poured out by relations, friends, and well-wishers, and the cry Ὑμὴν Ὑμέναι' ὦ resounded to the sweet melody of flutes (Aristoph. *Pax*, 1316–1356). On their reaching the bridegroom's house, a peculiar custom prevailed in Boeotia: the axle of the car was burned, to symbolize the irreversible step taken. The bridegroom who had been married before could not bring his bride home in this exultant way; a friend (*νυμφαγωγός*) in that case brought the bride to him from her house. At the entrance to the bridegroom's house sweetmeats (*καταχύσματα*) were thrown upon the wedded pair; the doors of the house were covered with garlands, as were those of the bride's house.

Then followed the wedding-feast (*θοίνη γαμική*), usually in the house of the bridegroom—one of the most important parts of the entire ceremonial; for the guests were in fact witnesses to the marriage, and their testimony was the final and single proof that it had taken place, since documentary evidence was not looked for or provided (Demosth. *c. Onet.* p. 869, § 20; Athen. v. p. 185 a). At the wedding-feast women were allowed to be present, though at different tables from the men (Lucian, *Conviv.* 8). Sesame-cakes, symbolical of a fertile marriage, formed a part of the feast. At the conclusion of the feast the bride was conducted, veiled, into the bridal-chamber; the bridegroom closed the door; and a law of Solon enjoined that the bride and bridegroom should eat a quince together, to symbolize the sweetness of their conversation (Plut. *Sol.* 20). The epithalamium (q. v.) was then sung before the door of the bridal-chamber by a chorus of maidens, and the song was accompanied with dancing. But the Scholiast on this passage tells us that some epithalamia were sung in the early morning to wake the wedded pair, the two kinds being called *κατακοιμητικά* and *διηγερτικά* respectively.

On the second or third day after the marriage the bride for the first time showed herself without a veil, and the gifts which she on that day received from her relatives were thence called *ἀνα-*

καλυπτήρια or ὀπτήρια. Among them was a garment (ἀπαυλιστηρία) presented by the bride to the bridegroom, who, on the succeeding night, did not sleep with his bride, but in his father-in-law's house, the bride being unveiled, and the ἀνακαλυπτήρια presented the day after.

An offering to Aphrodité was made by the wedded pair, either on the wedding-day or on the day after. Another ceremony observed after marriage was the sacrifice which the husband offered up on the occasion of his bride being registered among his own phrateres.

Marriages generally took place in the winter (Aristot. *Polit.* vii. 16); and the month Gamelion (our January) derived its name from the favour in which it was held for this purpose. The fourth day of the month, according to Hesiod (*Op.* 800), was the most favourable day; and as in a lunar month this would be the day on which the first crescent of the new moon appeared, the interpretation of Proclus seems correct: that the day when sun and moon met in the same quarter of the heavens was the day when man and woman might best meet in wedlock. Pindar, however (*Isthm.* vii. 44), and Euripides (*Iph. in Aul.* 717) prefer the full moon.

After marriage the wife lived with the other female inmates of the house in the γυναικωνῖτις, or women's apartments: in a large house these would be a separate building, connected by a passage with the men's rooms. The wife then had the superintendence of the entire household: she had charge of the education of the boys till they were put under a master, of the girls till they were married; she tended the sick, whether free or slave; the kitchen, the furniture, the stores came under her; and last, not least, the ταλάσια ἔργα (Xen. *Oecon.* vii. 6), all that related to the spinning and weaving of wool and the making of clothes, for it must be remembered that the clothes of an ancient household were mostly made within the house itself. If the establishment were a large one, the wife would have a house-keeper (ταμία) to assist her. If the husband were alone, the wife would dine with him, and familiar jesting would pass between them (Lysias, l. c.), or perhaps even serious conversation on politics (Demosth. *c. Neaera*, p. 1382, § 142); but if the husband had other male friends with him, it was thought indecorous for the wife to appear.

It will be seen that the wife had no lack of duties, but they were duties that would naturally be felt to be monotonous; and it is interesting to find that religious exercises were then, as in later times, one of the chief resources of the married woman.

II. Roman.—Marriage was among the Romans a complete union for life between a man and one woman, which had for its main object the procreation of children (*liberûm quaesundûm gratia*). To marry and beget children, who could keep up the *sacra familiaria*, was the religious duty of a Roman, and also a duty to the State.

The only marriage recognized in early Roman law was that which was conformable to the Ius Civile, and which was called *iustae nuptiae*, in later times also *iustum matrimonium* (Ulpian, v. 1, 2). To this marriage of *ius civile* the *matrimonium iuris gentium*, or marriage according to gentile law, came to be opposed (Gaius, i. 87). The word *matrimonium* seems to have been used originally to signify a marriage which was not a civil marriage, the child of such marriage following the condition of his mother instead of that of his father, as would have been the case if he had been born from *iustae nuptiae*.

A Roman civil marriage was either *cum conventione uxoris in manum viri*, or it was *sine in manum conventione* (Ulpian, xxvi. 7). The marriage *cum conventione in manum* differed from that *sine conventione*, in the effect which it had on the condition of the wife.

By the marriage *cum conventione*, the wife came into the power (*manus*) of her husband, or, if he were a *filiusfamilias*, of his *paterfamilias*; leaving her own *familia*, she passed into the *familia* of her husband, and was to him in the relation of a *filiafamilias* (Cic. *Top.* 3, 14; Gaius, ii. 159). In marriage *sine conventione* the wife did not pass into the power of her husband; she was, as it were, a stranger (*extranea*) in his household, her relation to her own family remaining as before the marriage; she did not share in the *familiaria sacra* of her husband, and bore no civil relation to her own children. See Manus.

A marriage *cum conventione* was a necessary condition to make a woman a materfamilias in the strict sense of the word. In the marriage *sine conventione* the wife was merely *uxor*; that is, a wife and nothing more (Cic. l. c.).

The right of entering into a valid civil marriage is called the *ius conubii*. The *ius conubii* belonged only to Roman citizens; the cases in which it at any time existed between parties not both Roman citizens, were exceptions to the general rule. "Roman men citizens," says Ulpian (*Fragm.* 5, 4, 11), "have *conubium* with Roman women citizens (*Romanae cives*), but with Latinae and Peregrinae only in those cases where it has been permitted. With slaves there is no *conubium*."

Originally there was no *conubium* between the patricians and plebeians, but this was granted by the Lex Canuleia. See Lex, p. 941.
